FOREWORD

In developing countries like India where 'self-employment' in household economy is a dominant phenomenon and the economy of wage-employment is restricted to a relatively small area, measurement of employment and unemployment is a complex problem. It is known that the concept and measurement kit used for the purpose in the wage-based economy of the industrially advanced countries cannot be applied wholly in developing countries for the reason that the categories used for measurement in the wage-based economies of developed countries often lose their meaning and identity when applied to the household-based economies of developing countries. Despite this, attempts to quantify 'employment' and 'unemployment' using the same concepts as used in developed countries were initiated in this country by the National Sample Survey (NSS) in 1953, and the first countrywide survey on employment and unemployment was carried out in its Ninth Round (1955). In the subsequent Rounds of the NSS, some experimentation was made with a view to making the apparatus suitable to the Indian conditions without, of course, changing the basic frame, and in this process several estimates of employment, unemployment and underemployment, in quantitative terms, were attempted. These results, while being used, were also critically appraised by expert users who emphasised the need for a complete reorientation of the concepts of measurement taking cognizance of the extremely heterogeneous characters of labour supply available in the Indian economy. A Committee of Experts (Dantwala Committee) set up by the planning Commission studied the problem and made certain recommendations for an alternative approach for quantification of the nature and extent of the employment unemployment situation in the country.

The Governing Council for NSS Organisation decided in 1971 to conduct, in the 27th Round (1972-73), a countrywide comprehensive household survey on employment and unemployment keeping in view the main recommendations of the Expert Committee. For the first time, an attempt was made in the NSS to quantify the various facets of the phenomenon of employment-unemployment in the country by adopting four different approaches: first, through usual status (i.e. over a long period) classification of persons; second, through probing questions to identify the extent of activity or inactivity among the persons in the usual status group of employed or unemployed; third, through their current status (i.e., over a week) classification; and, fourth, through their labour time disposition during the week. These approaches enabled to bring out, in quantitative terms, both the long-term (or usual) pattern of gainful utilisation (or under utilisation) of labour supply and its seasonal or intermittent fluctuations to have a clear picture of the different layers of the entire employment-unemployment spectrum of the country.

About 2,00,000 households covering both the rural and urban sectors of the country were surveyed. As the analysis of the huge mass of data collected during the survey was found to be time consuming, tabulation was done in phases. This series of reports now being released separately for each State and Union Territory—presents the results based on the data collected in the first two Sub-Rounds of the survey.

It is evident from the survey results that the quantum of open or overt unemployment is not as massive as was often feared. The main problem appears to be of finding appropriate work or job opportunities, suitably located, for person engaged in household farm and non-farm activities or in casual work but not having enough remunerative work throughout the year, who constitute a much larger magnitude of the population. The extent of the problem, however, varies from State to State; it appears to be acute particularly in States like Andhra Pradesh, Bihar, Kerala, Karnataka, Maharashtra, Tamil Nadu, Orissa and West Bengal.

The sample design, the schedules of enquiry and the tabulation programmes were prepared by the Survey Design and Research Division (SDRD) of the NSSO and finalised by the Governing Council. The work of data collection was done by the Field Operations Division (FOD), who also undertook their manual tabulation. Final tables were prepared at the Data processing Centres of Data Processing Division at Nagpur and Delhi. The editing and scrutiny of the final tables were carried out at the pooling Centre of D.P. Division at Calcutta.

Drafting of the report was done by Shri Sudhir Bhattacharyya, Officer-on-Special Duty, who was assisted by S/Shri Paresh Bhattacharyya and Prevash Mukherjee, Statisticians of the SDR Division. Procedures for Manual Tabulation were worked out by Shri R. P. Saha, Officer-on Special Duty, Shri N. C. Dutta and Shri T. Sen, Statisticians of the D.P. Division of NSSO. The final tables were prepared at the Delhi and Nagpur operation Centres of the D.P. Division under the technical guidance of S/Shri V. R. Sarma, Deputy Director, M.T. Jacob, M.G. Bhattacharya and Roy Choudhury, Assistant Directors. Punching and Mechanical tabulation at Delhi Centre were carried out under the charge of S/Shri I.B. Dev and F.M. Rao, Sectional Heads, respectively, and the overall supervision of computation work at Nagpur Centre was done by S/Shri D. K. Nandi, B. N. Prasad and P. Ravindran, Superintendents. The editing and scrutiny of the final tables were carried out under the supervision of Shri M. Chanda, Computing Supervisor. I take this opportunity to record my appreciation of the work done by them.

Section I : INTRODUCTION, CONCEPTS & DEFINITION

Introduction

1·0 In the twenty-seventh round of the National Sample Survey (NSS) a country-wide comprehensive survey on the nature and extent of employment and unemployment was conducted. Since 1962-63 the NSS discountinued having in its annual programme, the survey on employment and unemployment in rural areas[1]. The labour force survey in Urban areas, however, continued till the twentythird round (1968-69). The conceptual frame-work of the preceding series of employment--unemployment surveys in rural and urban areas was based on the Standard ON LABOUR FORCE SURVEYS prescribed by the Central Statistical Organisation (C.S.O.)

1·1 Since 1960 the users of the data on NSS employment surveys started questioning their reliability. There were "considerable divergence of opinion regarding appropriate definitions of yardsticks for measuring unemployment and under employment". Doubts were raised in regard to the applicability of the CSO Standard in the surveys to be conducted in developing countries like India. These doubt and queries became the cause of concern in view of the fact that the estimates of the employment and under-employment worked out on the basis of the Census, the NSS and the Employment Exchange data were widely differing from one another and the NSS estimates, compared to other estimate, were consistently lower. The necessity, therefore, workingly felt for suitable re-orientation of the concepts and approach of the enquiry that would lead to the recognition and proper reflection in the survey of the "extremely heterogeneous" character of "the labour supply available to the Indian Economy" which the Standard Concept (C.S.O.) could not adequately satisfy.

1·2 The Planning Commission set up in August 1968 an expert Committee on Unemployment Estimates with Prof. M.L. Dantwalla as its Chairman and asked the Committee to go into all the relevant issues involved in the measurement of Unemployment and under-employment and to recommend, for adoption in surveys, an alternative conceptual frame-work and a changed procedure of enquiry. The Expert Committee submitted its Report in March 1970.

1·3 The NSSO Governing Council in its meeting held on 16-17 April 1971 decided to conduct a household survey on employment and unemployment as the principal subject of enquiry in the twenty seventh round of NSS keeping in view the main recommendations of the Expert Committee. A technical working Group set up by the NSSO Governing Council framed an appropriate schedule for the enquiry and also worked out the procedure of data collection which were finally approved by the Governing Council in its meeting held in November 1971. The draft Schedule was put to a pre-survey trial by the survey staff of Field Operations Division (FOD), NSSO before it was made ready for the actual survey.

1·4 All the states (except Nagaland and West Bengal) and some Union Territories participated in the NSS 27th round programme on at least equal matching basis to get more reliable estimates for their respective states. Some states, for this particular survey, took more than equal matching sample to improve their respective State estimtes. The Survey extended over the whole of rural and urban areas of Indian Union excepting Ladakh district of Jammu & Kashmir state; rural areas of Pal and Samri tehsils of district Surguja and

[1]The NSS employment and unemployment surveys in rural areas were discontinued after the 17th round, although in the 18th, 19th and also in some subsequent rounds some broad information on the subject were collected through the integrated household schedules 16 and 17.

Prijapur, Dantewara, Konta and Narainpur tehsils of district Chanda and Melghat tehsil of district Amravati of Maharashtra; rural areas of Nagaland; disturbed villages of Tripura, rural areas of the Union Territories of Arunachal Pradesh; Andaman and Nicobar Islands, Mijoram, Lacadive, Minicoy and Amindivi Islands and Dadra & Nagar Haveli.

1·5 The sampling design of the survey was stratified two stage with villages and urban blocks being the first stage units respectively in rural and urban sectors. In both the sectors, the households were the second stage units.[1] In the Central sample altogether 9088 villages and 4832 urban blocks were selected as the first stage units. The design was made self-weighting at the sub-stratum and region level for rural areas an sub-stratum and state level for urban areas.[2] On an average 12 household per sample village/block were selected in each of which the schedule of enquiry was canvassed.

1·6 The survey work was started in October 1972 and continued upto September 1973.[3] The survey period was divided into 4 sub-rounds (which together covers one full year i.e. four agricultural seasons, obviously both peak and lean period having been included) each being of three months duration. The sample units were so staggered over 4 sub-rounds that valid estimates could be built up for each of the sub-rounds separately. [Presentation of subroundwise estimates for different characteristics of population has, therefore, been possible].

1·7 The NSSO Governing Council set up a working Group to draw and finalise the tabulation plan of this survey. The approved (by the NSSO Governing Council) tabulation plan provided cross tabulation of different characteristics of population so that the tabulated data could be made amenable to "in-depth" study of the anatomy of employment and unemployment for the country as a whole at regional and state levels. The Working Group also decided so tabulate the survey material to only by states but also by 66 different geographical regions.

1·8 Quite a massive information from about 8 lakhs individual members belonging to about 1·7 lakhs of sample household of the country (in the Central sample) have been collected. In view of the shortage of mechanical tabulation resources, the tabulation of these huge survey materials (by states and by regions) was taken up by the 22 newly set up Manual Tabulation Centres located at the different FOD Block Offices under the administrative control of FOD, NSSO. The Pre-tabulation processing of the central sample data was started at these Manual Tabulation Centres from August 1973.[4] To expedite completion of tabulation work, the Manual Tabulation Centres were subsequently asked to complete tabulation upto an intermediate stage and the work relating to the final stage of tabulation was entrusted to the Data Processing Division of NSSO. Till now, tabulation of data relating to sub-round one and two only has been completed. Considering the urgency and necessity of quick presentation of Survey results and also in view of much interest evinced by different users of the results of this survey, State estimates (in percentage) as per approved tabulation plan for all States are being presented in separate volumes. As the volume of total tabulation work is quite substantial, higher priorities have been assigned to the preparation of some tables while the other tables got lesser priorities in tabulation. The publication of the full survey results will, therefore, be made in phases. The present volume contains data for the state of Uttar Pradesh.

Conceptual frame-work of Data Collection

1·9 The CSO Standard on Labour Force Surveys, which was considered as the guide line for the earlier NSS employment and unemployment surveys, prescribed classification of population into categories such as Employed, Unemployed and not in labour force on the basis of the recorded data on activity (or inactivity) of the household members during the varying (or moving) reference weeks.

1·10 The Expert Committee particularly recommended to abandon this procedure of classification, as the Committee argued that "the percentage of unemployed reported in a given NSS round is an

[1] A Note on Sample design and Estimation procedure is given in Appendix I.

[2] How sub-stratum and Regions were formed has been explained in the Note given in Appendix I.

[3] It may be noted that in the NSS 25th round (1970-71), some information on employment and unemployment were collected only for a truncated population (weaker sections i. e. small cultivators and non-cultivating wage-earners) in the rural area as more or less in the same line as suggested by Dantwala Committee.

[4] The responsibility of technical direction regarding tabulation of survey data, however, rested with the Survey Design and Research and Data Processing Divisions of NSSO.

average of the varying weekly situations recorded for different periods during the year over which the investigation is spread. There is no reason to believe that those classified as unemployed during the specific reference week preceding the date of survey of a household or households would necessarily be without work throughout the year. The act that the sample is spread over the entire year does not remove this limitation; it means an aggregation of the weekly situations in regard to the unemployment status of individuals rather than the continuing unemployment of the same set of individuals".[1] As an alternative approach, they recommended that on the basis of the recorded data on varying weekly situations of different individuals some meaningful measure of the level or rate of unemployment/under-employment during different periods of time or seasons in a year might be built up and that too in further disaggregated form. In view of the limitation of the current status approach for quantitative measurement of the employment-unemployment situation as pointed out by the Expert Committee, three different methods were adopted in this survey to study three different facts of the phenomenon. Since condition of unemployment—underemployment is in-built in the country's economic structure and it is of an endemic character, the attempt to obtain the rate or level of unemployment and under-employment measured in terms of man-weeks was made in this survey through the classification of population on the basis of current status obtaining in the week preceding the date of survey. Secondly, the condition of our economy is such that even within a short span of one week, the level of employment (or unemployment) fluctuates. In this survey the measurement of the extent of such fluctuation with day as the unit of measurement had also been attempted by the method of collection of information on activity status separately for all the seven days of the reference week of persons who were classified as belonging to labour force through the current status approach. A large volume of built-in under-employment notwithstanding, a hard core of chronically unemployed, who over a long period do not get any gainful work to do and continue to seek work or record themselves as available for work, also co-exist in the economy. An attempt to estimate the number of such chronically unemployed persons was also made in the survey through the classification of population by usual status approach. By usual status classification one can obtain an estimate of; (a) number of persons usually employed (or working) (b) number of persons usually unemployed (or usually seeking or available for work) and (c) number of persons usually out of labour force (or usually not available for work). Besides adopting the three approaches mentioned above, some probing enquiry regarding other relevant aspects of employment or of the condition of unemployment was also made in this survey. The answers to the proving questions recorded in the survey would further help to make a realistic assessment of the employment—unemployment situation. How the three approaches and the probing questions were used in the survey is described in the succeeding paragraphs.

1·11 *Classification of population on the basis of current status*: Every individual member of the household was classified either as : (a) working (b) seeking work—(c) not seeking but available for work or (d) not available for work on the basis of one's activity position during the week preceding the date of survey. For assigning the appropriate current status code to a particular person, the status of working got priority over the status of seeking and available for work and the status of seeking and available for work over the status of being not available for work. Obviously, in applying this priority scale a person working very little (say 1 hour) for even one day of the reference week was considered working. But for assigning the current status of a seeking or being available for work during the reference week to a person the necessary pre-condition was that the persons must not be working for any of the seven days of the week. The status of being out of labour force was the residual category in the sense that those who did not get the status of 'working' or 'seeking or available for work' would automatically be assigned that status. Moreover, for assigning the appropriate current status code to a particular person who was having concurrently two different status during the reference week the status which occupied relatively more labour time than the other was considered as his or her current status for recording enteries in the Schedule. In this survey, the data on the classification of individual members of the households during the varying reference weeks by current status has been interpreted as (*a*) working person-weeks (*b*) seeking person-weeks, (*c*) not seeking but available person-weeks (*d*) not available person-weeks. In the earlier NSS employment survey, the working person-weeks were interpreted as number of working (or gainfully employed) persons; the seeking and not seeking but available person-weeks were interpreted as number of persons seeking and available (or unemployed) and not available person-weeks were interpreted as number of persons not available for work (or persons out of

[1]Report of the Committee of experts on Unemployment Estimates, Planning Commission, Government of India 1970 page 16.

labour force). As by the current status approach one individual has been classified on the basis of only one week's activity status and the data of different man weeks have been aggregated, the resultant estimate will obviously be expressed in terms of 'person-week' and not in terms of 'persons'. The Expert Committee rightly felt that the method of working out 'equivalent full time unemployment' from partial period of unemployment was arbitrary. Of course, on the basis of some valid assumptions, one may either equate or deflate the data on person-weeks under different status as described into number of persons, employed, unemployed or number out of labour force But the straightway equating of the data on person-weeks under each activity category into the number of persons under each of such categories and projecting that as valid for the entire population will be rather an unrealistic portrayal of the exact situation.

1·12 *Weekly day-to-day labour time disposition :* Data on labour time disposition of persons reported as working or seeking and also persons not seeking but available for gainful work during the reference week have been collected in this Survey. In the earlier NSS employment-unemployment surveys, similar data on day-to-day labour time disposition of only those individual members who were classified as working (or employed) during the reference week were collected. The purpose of collection of such data was to get a quantitative measure of the extent of under-employment (and not unemployment, as some of these individuals already reported themselves as employed during the reference week). In this survey the data on day-to-day labour time disposition were collected for both individuals recorded as working and also for those seeking or available for work. Thus the base population for data on day-to-day labour time disposition were those reported as belonging to labour force (persons working seeking and not seeking but available taken together) during the reference week. Secondly, in the present survey (as also in the earlier NSS employment survey) data on current status of very individual of the base population collected for each day of the week or in other words, day instead of one week was the unit of classification and measurement. Alternatively it may be explained that since for every individual data on activity status separately for seven days in a week have been collected, for each such individual seven person day's data on activity status have thereby been accumulated and the aggregation of these data can only be expressed in terms of persons-days. All these information on the day-to-day labour time disposition of persons reported as belonging to labour force will give ; (1) the rate of or level of the net employment content of the population in labour force during the week, (2) the unemployment content of the same population during the week and also (3) the rate of withdrawal from the economic activity of labour force population during the reference week.

1·13 As for the estimation of the rates described above, the unit of measurement is day, the respective rates have been measured in terms of person-days and not in terms of persons (as was done in tabulation and presentation of data of earlier NSS employment—unemployment surveys). The data on day-to-day labour time disposition of persons who belonged to labour force during the varying reference weeks will have four different components : (*a*) person-days working during the week, (*b*) person-days seeking, (*c*) person-days available during the week and (*d*) person-days not available for gainful work (out of labour force) during the reference week.

1·14 As intensity of work on a particular day might be different for different individuals, a further probing enquiry was made in this survey in regard to the work content of each activity status that one was having on each day of the reference, week and accordingly data on intensity of work in qualitative terms, were collected. In the earlier NSS Surveys, similar data on intensity expressed in terms of hours in a day were collected. But in view of criticism that intensity in terms of hours carry very little meaning when they are used as a yardstick for measuring the work content in rural agriculture, the usefulness of their use in Urban areas notwithstanding, a qualitative measure, such as, full and half-'full' for a full day work and 'half' for a half day work was used for the measurement of intensity of work in a day. The criterion to decide what was 'full' and what was 'half' was rested on the judgement of the informant. Of course, restriction was imposed that persons working for less than 1 hour of work in a day should not be treated as working with 'half' intensity on that day. It was also implied, in the adoption of the above procedure, that one person might have 'half' intensity in two different kinds of status on a single day but cannot have three different kinds of status with 'half' intensity on the same day.

1·15 *Classification of population on the basis of enduring status (usual status)* : Besides collection of data for the purpose of measuring the rate or level of employment, unemployment and under-employment in the country, the data on enduring status of the population i.e. the status which prevailed over a long period in the past and which is also likely to continue in future, have been collected in this survey for each individual member of the households. Thus every individual member of the household was classified uniquely under one usual status and appropriate usual status code

was assigned to him. But for those persons whose last enduring status ceased in the recent past and they assumed a new status which was likely to continue in future, the status which they assumed lately were considered as their usual status. For a developing country having her mainstay in traditional agriculture with preponderance of household as economic units, a bench-mark data on the employment—unemployment pattern can only be built-up on the basis of classification of individuals by their enduring status. The terminology used in this survey for this enduring status is Usual Status. This was not a new terminology that was used in this survey. Indian Census had been using this concept till the 1951 Census. Subsequently of course, in the Census a sort of mixed current-cum-usual status concept has been in use. NSS also, along with current status concept (or labour force concept), adopted the usual status concept for the classification of population in the first countrywide survey on employment and unemployment in the NSS. Ninth Round (1956). The data that will be thrown up from the current survey on the basis of classification of individuals by usual status will give the estimate of number of persons employed, unemployed and not in the labour force with reference to a long period in the past, say, one year. The *estimates of unemployed* obtained on the basis of Usual Status Classification will perhaps indicate the number of persons who are chronically unemployed for a long period.

1·16 *Probing Questions* : With a view to having a realistic analysis and study of the data on the classification of population by Usual Status, a kind of ancillary information on different aspects of the usual work-pattern of persons categorised under one usual status or the other, are collected through an additional probing enquiry. Sets of probing questions were formulated, each set being relevant for a particular set of individuals classified under a particular usual status category. The data on usual status, read and analysed concurrently with the tabulated answers of such probing questions will bring into clearer relief the exact employment—unemployment situation of the country. As an illustration some of the probing questions asked to individuals who were assigned a particular usual status code are given below :

Usual status category	Description of probing question
(*a*) 11 and 12 (working in own farm/ in household non-farm enterprise or profession)	1. Whether worked regularly throughout the year?
	2. Whether also working in own non-farm/ enterprise, profession/own farm?
	3. Whether also seeking or available for work as wage or salary earners?
	4. Whether seeking work within or outside village/town?
(*b*) 13 and 14 (working as regular salaried employee or wage labourer in farm/ regular salaried employee or wage labourer in non-farm enterprise or profession either in public or domestic sector)	1. Whether full-time or part-time wage paid/ salaried employee?
	2. Whether in temporary or permanent employment?
	3. Whether also seeking work and if seeking, whether seeking within or outside village/ town?
(*c*) 15 (working as casual wage labourer)	1. Whether seeking or available for wage/ salaried employment?
	2. Whether seeking employment in agriculture or in non-agricultural activity?
	3. If seeking, how long seeking and what efforts have been made in search of work?
	4. Whether willing to accept employment outside village/town or within village/town?
(*d*) 21 (not working but seeking or available for employment)	1. Whether seeking work for the first time? How long seeking? What efforts have been made in search of work?
	2. Whether farm or non-farm employment sought? Whether sought employment within/ outside village/town?

1·17 The answers to the probing questions were sought in such a manner that those were either in

categorical affirmative negative. It would obviously be seen that classificat of the population by Usual Status ould pre only the broad nto rns of thei ork pattern. But this classification when analysed with the respec to the probing que , of persons belonging to different Usual Status categories will unfold the oal co of thei ork-pattern profile.

1·18 Thus, instead of making a lop-sided i fere only on the basi of partial information ivity pattern averaged out frot varying weekly obtaining for different individual members of households, the inferenc drawn after collation of four different kinds of information—(1) classiftcation of population by ren eekly status (2) weekly labour time disposition of population n labour force, (3) distribution of population by usual status and (4) the ers to the relevant probing questions put to persons hav ng a particular ial s us will re ean ngful and will perhaps reflect the reality of the nplo mploymen tion in the try.

1·19 *D finition of e important terms adopted the Survey* : The definition of terr ed he rvey are as follow

(*a*) *Household* : The *Household* w as defined group of individuals ally living together under the s roof and taking meal in the same kitchen

(*b*) *Industry* : The sector of econo tivity in which a per n works is the *Industry* of the person.

(*c*) *Occupation* : The nature of type of work performed by a person is termed n the *Occupation* of the person.

(*d*) *Normal member* : The *Normal members* constituted of those who sually resided in th same household and took food in thes me kitchen. They included temporary stay-away and excluded temporary v tors

(*e*) *Working* : In this survey a person was treated as *currently working* (during reference period of one week) or *usually working* (over a long period) if he or she pursued some gainful activity during the period of reference. The labou tim utilised for pursuing the activity may be e no hour per day on an average. During a short period, the person attached to some gainful work may not be attending to that work for a few days or even for the entire period of reference due ckness or for other reasons, such i enjoyment of holiday, leave a , but nc notheless he or she would be considered as working. The current activity category codes 41—53 have been assigned for all currently working persons (*i.e.* idered working during th reference period of one week). Th usual activity category codes 1—17 ha been assigned for all usually rking persons (*i. e.* considered work g u ually over a long period).

(*f*) *Currently Working* : A person found to be engaged in his wn farm/enterprise/ profess n tc. or was n employment in others farm/enterprise/profession etc. vas casual employment in agricultural/non-agricultural activities or v working as helper in household fa n/non-farm enterprise during the reference week was termed *Currently Working* (or currently in gainful employment). Included in the above category were those persons who mporarily abstained from work on any day of the reference week or during the whole period of the week lue to sickness or other reasons without having been disengaged or left from the work or employment.

(*g*) *Usually Working* : A person found to be usually (*i.e.*, over a long period) engaged in his own farm/enterprise/professi etc. or was usually in employmen n other's farm/enterprise/profession et or was usually on casual employm nt in agricultural/non-agriculti al a tivities or had been working in household farm/non-farm enterprise as helper was termed *Usually Working* (or Usually in gainful employment).

(*h*) *Currently seeking employment* : A person who was h ing no work and made some tangible effort in search of employment on any day of the reference week or during the whole reference week was termed as *Currently seeking employment* (or currently unemployed).

(*i*) *Currently not seeking but available for employment* : A person who was having no work and though did not actively sought work or employment but was

available for employment at the prevailing rate of remuneration was termed *not-seeking but available for* employment (or Currently Unemployed).

(*j*) *Usually seeking employment* : A person who was having no work or employment for a long period and had been making some efforts in search of employment for fairly long time was termed *usually seeking employment* (or usually unemployed).

(*k*) *Usually not seeking but available for employment*: A person who was having no work or employment for a long period and though had not been actively seeking work or employment but had been available for employment at the prevailing rate of remuneration was termed *usually not seeking but available for employment* (or usually unemployed).

(*l*) *Currently not available for work* : A person who was having no work or employment and at the same time was not either seeking or available for work or employment for various reasons in any day of the reference week or for the whole period of the week was termed *as currently not available for work* (or currently out of labour force).

(*m*) *Usually not available for work* : A person who was having no work or employment and at the same time had neither been seeking nor available for work for various reasons during the long period in the past was termed *as usually not available for work* (or usually out of labour force).

(*n*) *Economically active population* : Normally the economically active population or the labour force consists of persons working and also those seeking and available for work. In this survey, since data have been collected using both the current status and the usual status concepts, the economically active in the population should be considered as :

(*i*) person weeks working plus person weeks seeking and available when classification of population has been done by the current activity categories with week as the reference period ;

(*ii*) persons usually working plus persons usually seeking and available when classification of population has been done by the usual activity categories with a long reference period (say one year).

(*o*) *Monthly per capita consumer expenditure* : The figure of monthly per capita consumer expenditure used in this survey was actually transferred from the Schedule on Household Consumer Expenditure which was canvassed in the same sample households. This was worked out as the ratio of total consumer expenditure to the household size which included only normal members of the household.

(*p*) *Earnings* : The data on earnings collected in this survey relate to the *cash and kind earnings* received or to be received for the work done by wage and salary earners among the members of the household during the reference work. Earnings in kind received together with perquisites (bonus included) if any were considered as earnings in kind and formed part of the total earnings.

Section 2 : EXPLANATORY NOTE ON TABLES

2·0 General : Out of a total of 47 tables (9 tables on household characteristics and 38 on employment—unemployment characteristics of individual household members) of the approved tabulation plan, only 21 tables (1 on household characteristics and 20 on employment unemployment characteristics of individual household members) are being presented in this Report. The present Report contains estimates for the state of Uttar Pradesh.

2·1 The numbering of the tables presented in this Report is different from that in the approved tabulation plan. The correspondence of the table number on this Report with the respective number of the approved tabulation plan can be seen in the List of Tables. For technical reasons in calculating percentage by various classificatory items some tables in the approved tabulation plan have been split into two or more sub-tables.

2·2 While tables number 2 to 16, 31 to 34 present estimates for each of the sub-rounds 1 & 2, the remaining tables contain estimates for sub-rounds 1 & 2 combined. All the tables, excepting tables number 12, 13, 24, 25, & 26 are presented separately for Rural and Urban areas. Tables number 12, 13 & 26 are only for Rural areas and the tables number 24 & 25 are for Urban areas.

2·3 In all the tables excepting table number 1 (on household characteristics), the population of ages 5+ (years) have only been covered. As no data relating to different employment—unemployment characteristics have been recorded for the population of ages 0—4 (years), they have been excluded for compiling the aforesaid tables. The proportion of population (according to N.S.S. 27th Round Survey) in the age-bracket 0—4(years) for the State Uttar Pradesh are 15·87 percent and 13·00 percent in Rural and Urban areas respectively.

2·4 Table number (1) : This table presents the following :

(*i*) percentage distribution of households by monthly per-capita expenditure group, (*ii*) percentage distribution of normal members separately for households of each monthly per-capita expenditure group by sex, (*iii*) percentage of economically active persons to total persons in each household monthly per-capita expenditure group.

2·5 Table number (2) : This is a general table providing distribution of population by skill and by some of demographic variables like age and general-cum-technical education. In all thirty types of skill were considered for the study for all persons irrespective of whether a person was in labour force or not. The different types of skill have been listed in Appendix II. It may be noted that the total of 25 general-cum-technical education combination codes (shown in Appendix II) have been grouped into five for the purposes of this table only. The 5 general-cum-technical education code combinations are :

(*i*) upto primary-cum-non-technical

(*ii*) above primary but upto secondary-cum-non-technical education

(*iii*) upto secondary-cum-additional diploma or certificate in all subjects

(*iv*) graduate and above in all subjects-cum-non technical education

(*v*) graduate and above in all subjects-cum-additional diploma or certificate in all subjects

Code combination appearing in the table should be taken as codes reported in the survey.

2·6 Table number (3) : Current activity particulars of each member of the households were collected for a (moving) reference period of one week. The distribution of these persons by the current activity reported, further classified by the sex, age and general-cum-technical education, has been shown in this table. For each combination of sex, age and general-cum-technical education the percentage distribution has been shown over the different activity categories. The list of activities, used in the survey, has been shown in Appendix II.

2·7 Table number (4) : This table also shows the percentage distribution of person-weeks as in the preceding table but the base chosen for percentage calculation pertains to each combination of current activity category, sex and general-cum-technical education while the percentage distribution has been calculated over the different age-groups.

2·8 Table number (5) : This table also gives the percentage distribution of person-weeks by the same classificatory variables as the preceding table with the difference that the variable of current principal industry division has been introduced in place of general-cum-technical education. The percentage distribution of person-weeks has been shown over different current activity categories for each combination of sex, age, current principal industry division.

2·9 Table number (6) : This table shows the percentage distribution of person-weeks by the same classificatory variables as in the preceding table but with the only difference that the base for percentage calculation has been changed to each combination of sex, current activity category and current principal industry division.

2·10 Table number (7) : Further particulars like labour-time disposition, in respect of persons already categorised as either working or not working but seeking or available for work using the moving reference period of one week, have been collected in the survey. These persons were thus further categorised as (a) working or (b) not working but seeking work or (c) neither working nor seeking but available for work or (d) not available for work for each day of the reference week. This table gives the percentage distribution of total person-days which is obtained as the product of the total number of persons categorised as working as also not working but seeking or available for work (on the basis of weekly reference period) and the number 7. The classificatory variables used have been sex, age, general-cum-technical education and current activity category. These total person-days have been distributed over current activity categories with each combination of sex, age and general-cum-technical education as base (=100·00).

2·11 Table number (8) : This table also shows the percentage distribution of person-days with the same classificatory variables as in the preceding table but the base has been changed to each combination of sex, current activity and general-cum-technical education.

2·12 Table number (9) : This table shows whether sex, age and general education of a person have any bearing on the intensity of work reported for each day of the reference week. This is revealed through figures of percentage distribution of person-days over different current activity categories, which has been worked out for each combination of sex, age and general education.

2·13 Table number (10) : This table reveals the association between per-capita monthly expenditure group to which the person belongs on the one hand and intensity of work and current activity categories on the other. This is brought out through percentage distribution of person-days over different current activity categories for each sex, intensity and age-group combinations.

2·14 Table number (11) : This table is a summary table of the preceding table avoiding the classification by household per-capita expenditure group. For each of the categories to which persons belong distribution of person-days over the different age-group has been worked out so as to bring out the difference in age-group distribution, if any, between person-days with full and half intensity and also between different current activity categories. Whether the age-group distribution differs between males and females for person-days with full or half intensity can also be seen from this table.

2·15 Table number (12) : The information whether activity pattern in a village is governed by the type of irrigation facilities available in the village can be obtained from this table. The various types of irrigation facilities considered have been shown in Appendix II. Additionally whether person-days with full intensity are likely to predominate in villages with particular irrigation types can be ascertained from this table. These different patterns are presented for the different sex and age-group combinations. For each category of sex, age-group and intensity combinations the percentage of person-days in different current activities to total person-days in the category have been furnished in this table.

2·16 Table number (13) : While the preceding table gives the differences in activity pattern and intensity of days worked for villages with different irrigation types, this table presents similar percentage distributions for different village crop patterns.

2·17 Table number (14) : Whether activity pattern and intensity of days worked are different for households belonging to different groups of land possessed is shown in this table. The table also brings out the dissimilarities in the percentage distributions of person-days due to sex and age-group.

2·18 Table number (15) : This table is a continuation of the distribution of person-days by activity pattern and intensity of days worked for different industry division (only main divisions) in addition to the classification by sex and age.

2·19 Table number (16) : The earnings received by all persons who had at any time during the reference week worked for wages or salaries were collected in this survey. This income included all the wages or salaries either received or to be received for work done during the reference week. This included also the cash and kind earnings received or receivable. The average for such wage and salary earners has been presented in this table for groups of persons classified by sex, age and general-cum-technical education.

2·20 Table number (17) : This table shows the percentage distribution of persons by their usual activity and by demographic variables of sex, age and general-cum-technical eductaion. The usual activity categories actually used for collecting data have been shown in Appendix II.

2·21 Table number (18) : This table is a derived table of the preceding table. This also show the percentage distribution of persons by different age-groups with each combination of sex, usual activity and general-cum-technical education as base (100·00).

2·22 Table number (19) : This is a summarised form of the preceding table No. (18) avoiding the classification by general-cum-technical education.

2·23 Table number (20) : This is again a summarised form of table number (17) avoiding the classification by general-cum-technical education.

2·24 Table number (21) : In this survey persons reporting different usual activities had been subjected to further probing questions in order to ascertain the different patterns of work associated with different activity categories. This table presents the additional information on (i) whether working throughout the year and whether also working in non-farm ascertained from those reporting 'working in own farm' as usual activity and (ii) whether working throughout the year and whether also worked in own farm obtained from those reporting 'working in household non-farm enterprise/profession' as usual activity.

2·25 Table number (22) : This table gives the percentage distribution of all persons by sex and age-group who worked throughout the year among those categorised as (i) working in own farm (ii) working in household non-farm enterprise.

2·26 Table number (23) : The extent of idle time of persons having the usual activity categories—worked in own-farm, worked in household non-farm enterprise/profession, has been shown in this table. The table has two sections, the one showing the proportion of those who had idle time in their own farm/household non-farm enterprise or profession and did not work seek work or were not available for work; and the other showing the proportion of those who worked, sought work or were available for work by various number of days group. This has been cross-classified by four broad general education categories formed out of the nine categories for which the data were collected. However, for rural tables, classification by general education has not been done.

2·27 Table number (24) : For category of persons who worked as (*i*) wage and salary earners in farm/non-farm enterprise or profession under (*ii*) regular salaried employee/wage labourer, this table presents some aspects of employment such as rates of full-time wage/salary paid employment, 'not trying to change employment' as well as 'trying to change employment.' The later category of persons who tried to change employment has been split into seeking or available for wage paid salaried employment and not seeking or available for wage paid employment. This has been furnished separately by sex, age and general education categories.

2·28 Table number (25) : This table analyses persons reporting full-time employment among those (*i*) working as regular salaried employee/wage labourer in farm and (*ii*) working as regular salaried employee/wage labourer in non-farm enterprise by sex, age and general education.

2·29 Table number (26) : This table presents the following : (*i*) proportion of wage and salary earners who did not try to change present employment and (*ii*) in the residual group of persons who tried to change employment (a) the proportion who sought or were available for wage/salaried employment (b) the proportion who did not seek or were not available for wage/salaried employment.

2·30 Table number (27) : This table presents the percentage of persons who did not seek or were not available for wage paid/salaried employment and those who sought or were available for wage paid/salaried employment among casual wage labourers. The percentage of those who were seeking or available has been split into those who were seeking or available in (*i*) agricultural activities and (*ii*) non-agricultural activities. All these percentages have been given by sex, age and general education. However, for rural tables, classification by general education has not been done.

2·31 Table number (28) : In this table all the persons who were seeking or available for work have been classified into different periods of seeking or available for work as well as the types of

ffort made to get employment. In addition, the ercentage estimate of persons seeking work not or the first time amongst all persons seeking avail- ible for employment has also been presented. he complementary part of this category com- rises of persons seeking or available for work for he first time. All these estimates have been classi- ied by sex, age and general education groups.

2·32 Table number (29) : This table brings out the information on the percentage for persons ought employment in farm or non-farm among ersons who sought or available for work and whe- her this job seeking was restricted to within illage/town or extended outside the place of stay. his percentage distribution has been presented y age, sex and general education.

2·33 Table number (30) : In this table the dis- ribution of the persons who were seeking or vailable for employment by the minimum level f acceptable daily wage group separately for em- loyment sought was within and outside village/ own has been presented. This has been cross- lassified by sex, age and general education.

2·34 Table number (31) : This table furnishes nformation on the usual members of the household who happened to be absent from the village/town n the date of survey. Whether the tendency to migrate temporarily (or during a season) is selec- tive of a particular sex, age-group or of the ex- pected duration of such absence has been shown in this table. This information has been cross-classified by reason for absence and general education. The percentage distribution of stay aways (temporary absentees) by sex has been provided for each age-group, general education, place of stay and reason for absence.

2·35 Table number (32) : This table also presents the information regarding stay aways. The percentage distribution given has been over the different places of stay (rural/urban) for each combination of sex, age, general education, expected duration of stay and reason for absence as base (100·00).

2·36 Table number (33) : While the previous two tables deal with the distribution of temporary stay aways this and the following table bring out the percentage distribution of visitors by the broad demographic characteristics of sex, age and general education. Also information on whether these visitors came from rural or urban areas and how this has a bearing on reason for such a visit and expected duration of stay can be obtained from this table. This percentage distributions have been presented by sex for each of the combinations of remaining variables.

2·37 Table number (34) : This is a table derived from the preceding table, presenting the percentage distribution over places from where came (rural/urban) for each of the combinations of sex, age, expected duration of stay, general education and reason for stay.

APPENDIX I

NATIONAL SAMPLE SURVEY

TWENTYSEVENTH ROUND : OCTOBER 1972—SEPTEMBER 1973

A NOTE ON SAMPLE DESIGN AND ESTIMATION PROCEDURE

1. Sample Design and Sample Size

1·1 Sample Design : The general sample design is stratified with two stage selection within each stratum. The first stage units are *villages* in rural areas and blocks in urban areas ; the second-stage units are *households* in both rural and urban areas. The sample design has been *self-weighting* for all the households enquiries at the region and sub-stratum level in rural areas and at the state and sub-stratum level in urban areas. The sample villages and blocks have been selected as usual in the form of two independent and interpenetrating sub-samples.

1·2 Sample Size (Central Sample) : The all-India sample size for household enquiries is 9088 villages and 4832 blocks. The rural price enquiry will be conducted in another sample of 419 villages which are the same villages as taken up for this enquiry in earlier rounds. The average sample size in a sample village/block is 12 households for schedule 10.

2. Work Programme

Sub-round : The survey period of 12 months is divided into 4 sub-rounds of 3 months each. One-fourth of sample villages and blocks will be surveyed in each sub-round. Each sample village and block will be visited once only according to the sub-round arrangement described below :

sub-round	period	sample village nos	sample block nos
1	October-December 1972	1, 5 & 9	1, 5, 9 .....
2	January-March 1973	2, 6 & 10	2, 6, 10 .....
3	April-June 1973	3, 7 & 11	3, 7, 11 .....
4	July-September 1973	4, 8 & 12	4, 8, 12 .....

3. Rural Sample Design

3·1 Sampling Frame : The frame is the list of villages as per 1971 population census.

3·2 Stratification : The country has been divided into 66 agricultural regions by grouping, within each state or union territory, districts having similar population density and crop pattern. Then within each region, strata have been formed by grouping *tehsils* which are (*i*) contiguous, (*ii*) having similar crop pattern, population density and altitude, and (*iii*) having good transport and communication facilities amongst them. The total rural population is about the same for each stratum within a region. The number of strata formed within a state/union territory is given by the number of sample villages allocated to it divided by 24 except in Uttar Pradesh where each district is a stratum. The total number of rural strata is 392.

3·3 Allocation (Central Sample) : The all-India sample size of 9088 villages has been allocated to the states on a joint consideration of their rural population, area under cereal crops available investigator strength. This is modified to (*i*) ensure a minimum of 360 villages in a state excepting some smaller states and the union territories, (*ii*) take account of state-wise variation in work-load and number of investigators, and (*iii*) make the sample size a multiple of 24 in order to facilitate selection of 2 sub-samples of 12 villages in each stratum except in some areas (see para 3·4). Generally the participating states are surveying the same number of sample villages as in the central sample. However, the states of Uttar Pradesh, Gujarat, Rajasthan, Delhi and Goa-Daman-Diu are having enlarged samples.

3·4 Selection of Villages : Two independent sub-samples of 24 villages each are selected circular systematically with equal probability in each stratum, after arranging the tehsils of the stratum in a serpentine order. In each sub-sample, the villages with odd order of selection form the 'Central Sample' and the rest form the 'State Sample'.

Thus generally, each sub-sample of a rural stratum contains 12 sample villages. But a sub-sample has only 8 villages in Delhi, 3 villages in central sample of Goa-Daman-Diu. And in Uttar Pradesh, the sub-sample size varies from stratum to stratum and also between central and state samples. The central and state samples have been independently drawn in U.P. and Goa-Daman-Diu.

3·5 Investigation Zone : If a stratum is very large and/or if transportation among different parts of a stratum is extremely difficult, then it has been divided into two or more investigation zones which are manageable in area and transport. Two such zones are selected independently with probabilty proportional to the total number of villages in them. Sub-sample 1 is selected from one zone and sub-sample 2 from the other.

3·6 Unit of Survey : As mentioned earlier, the 1971 census villages are first stage units of selection. They are also the units of survey in this round.

3·7 Hamlet-group Selection : To control the workload at the listing stage in case of large villages, the method of hamlet-group (hg) selection is adopted. The investigator divides the village into two or more areal sub-divisions (called hamlet-groups) of nearly equal population content and selects one of them at *random* for survey. When the number of hamlet groups is specified as 1 (one), then the whole village is surveyed.

3·8 Selection of Households : For schedules 1·0 and 10, all households in a sample village/hamlet-group are divided into three sub-strata on the basis of their means of livelihood as follows : (1) self-employed in non-agriculture, (2) rural labour, and (3) others. On an average, 12 sample households are selected in a sample village (2, 5 and 5 households, on the average from sub-strata 1, 2 and 3 respectively) both the schedules 1·0 and 10 are canvassed in the same set of the sample households. Sampling of households is done linear systematically and independently from each sub-stratum using the interval and random start specified for the purpose so as to make the design *self weighting* at the region level for each sub-stratum.

4. Urban Sample Design

4·1 Sampling Frame : The list of NSS areal Urban Frame Survey (UFS) blocks supplemented by the list of 1971 census blocks 1981 (census blocks in Tamil Nadu and West Bangal) have been used as the sampling frames, the latter for those towns only where UFs has not yet been done.

4·2 Stratification : In each state/union territory, towns with 1971 census population less than 50,000 form stratum 1, and the remaining towns and cities form stratum 2 except the four big cities viz., Bombay, Calcutta, Delhi and Madras. Each one of them forms a stratum 3 of its respective state. The total number of urban strata in all-India is 50.

4·3 Allocation (Central Sample) : The all-India sample size of 4832 blocks has been allocated to the States in proportion to their 1961 census urban population. The allocations have been modified (*i*) to ensure a minimum of 144 sample blocks in a state excepting some smaller states and union territories, (*ii*) to take account of state-wise variation of work-load and number of investigators, and (*iii*) to make the allocations multiples of 8 in order to facilitate having 2 sub-samples and 4 sub-rounds. Sample size for a state is allocated to the strata in it in proportion to their total urban population ; final stratum allocations also are made multiples of 8.

Generally, the participating states are having the same sample size as the central sample. However, the states of Gujarat, Maharashtra, Rajasthan, Uttar Pradesh, Delhi and Goa-Daman-Diu are surveying additional samples.

4·4 Arrangement of Blocks : Before sampling of blocks, the towns are arranged by stratum and region within each stratum. The blocks in a town are arranged by geographical contiguity.

4·5 Selection of Blocks : In each stratum blocks have been selected circular systematically with probability proportional to size (pps), the size of a block being taken as its population rounded off to the next multiple of 1,000. Generally, the blocks have been selected in the form of two independent and interpenetrating sub-samples of equal size; within each sub-sample the 'central sample' and the 'state sample' are formed as for sample villages.

Some of the 'state samples' are having more than two sub-samples due to increased sample size. In Uttar Pradesh and Goa-Daman-Diu sampling of blocks for central and state samples has been done independently.

4·6 Sub-block Selection : This is similar to the procedure of hamlet-group selection in villages. In a large sample block, the investigator forms the specified number of sub-blocks of nearly same population, selects one of them at random and conducts the survey in the selected sub-block only.

4·7 Selection of Households : All households of a sample block/sub-block are divided into two sub-strata : (1) self-employed and (2) not self-employed. Further, the households of sub-stratum 1 are arranged in two classes viz., (*a*) self-employed in manufacture, and (*b*) self-employed in other activities. Then from each sub-stratum households are sampled linear systematically using the interval and random start specified in the sample list. The average sample size for a block will be 12 households-8 from each sub-stratum. Schedules 1·0 and 10 are canvassed in the same set of sample households. The design is self-weighting at the state and sub-stratum level.

5. Estimation Procedure

5·1 Notations

r : subscript for r^{th} region in a state

s : subscript for s^{th} stratum in a state

t : subscript for the sub-stratum within a sample village block

i : subscript for i^{th} sample village/block selected part of village of block

j : subscript for j^{th} sample household

k : number of strata in the state

z : block size used for selection

I : interval used for sampling of blocks in the concerned state

N_s : total number of villages in the sth rural stratum of the state

n_s : number of selected villages/blocks in a sub-sample of the sth rural/urban stratum for the whole round

m_s : number of surveyed villages/blocks in a sub-sample of the sth rural/urban stratum for the whole round including uninhabited villages/blocks and zero cases

D : number of hamlet-groups/sub-blocks formed in a village/block (D=1 if no such division was made)

h : number of households selected for the enquiry

y : value of the characteristic

In the following, Y stands for estimate of the State total for the characteristic y in the concerned scheduled from a sub-sample for the whole round.

5·2 Rural Area

$$\text{Schedule } 0.1 : Y = \sum_{s=1}^{K} \frac{N_s}{n_s} \sum_{i=1}^{m} D_{si}\, y_{si} \qquad (1)$$

For items relating to the whole villages D_{si} will be taken as unity.

Schedule 1·0 and 10 (Rural)

$$Y = \sum_{t=1}^{3} \sum_{s=1}^{K} M_{st} \sum_{i=1}^{n_s} \sum_{j=1}^{h_{sit}} y_{sit} \qquad (2)$$

Where M_{st} is the constant multiplier for the sth stratum and t^{th} sub-stratum for schedules 1·0 and 10. It may be noted that M_{st} is same for all strata within a region.

5·3 Urban area

$$\text{Schedule } 0.2 : Y = I \sum_{s=1}^{K} \frac{n_s}{m_s} \sum_{i=1}^{m_s} D_{si}\, y_{si}/z_{si} \qquad (3)$$

Where I is the specified interval.

Schedule 1·0 and 10 (Urban)

$$Y = \sum_{t=1}^{2} M_t \sum_{s=1}^{K} \sum_{i=1}^{n_s} \sum_{j=1}^{h_{sit}} y_{sitj} \qquad (4)$$

where M_t is the constant multiplier for t^{th} sub-stratum and schedules 1·0 and 10.

6. Maintenance of the Self-weighting Nature of the Design

6·1 In order to retain the self-weighting nature of the design for schedules 1·0 and 10, the cases of casualty villages, blocks and households and the cases of revision of intervals for household sampling will be taken care of by adjusting the multipliers in the following manner.

Rural Area

6·2 The adjustment of multipliers for the rural area will be done separately for each region, sub-sample, sub-stratum and schedule. At first the following four quantities will be

calculated for each region, sub-sample sub-stratum and schedule.

n = number of villages selected in a region and sub-sample

m = number of villages surveyed including un-inhabited villages and zero cases in a region and sub-sample.

P = expected total number of schedules in a sub-stratum of all the surveyed villages of a region and sub-sample P will be calculated as the sum of the products of c_i for sample village and the number of households finally selected for the concerned schedule type (say schedule 10) in i^{th} sub-stratum of that village, the summation being taken over all the *surveyed* villages. The factor c_i for a village is equal to D'I'/I where D' is the number of hamlet-groups actually formed in that village, I is the *specified* sampling interval for schedule 10 for i^{th} the sub-stratum of that village and I' is the interval *actually* used.

Q = total number of filled-in schedules *available for tabulation* for the concerned region, sub-sample and sub-stratum.

6·3 Then the constant multiplier M (at the region and sub-stratum level) willl be adjusted as M' where

$$M' = \frac{n}{m} \cdot \frac{P}{Q} \cdot M \qquad (5)$$

Urban Area

6·4 The procedure of adjusting the urban multipliers would be the same as described above with the two changes mentioned below.

(1) The adjustment will be done separately for each state, sub-sample sub-stratum and schedule. Hence the word 'region' wherever it occurs in paras 6·2 and 6·3 would be replaced by the word 'state'.

(2) The factor C_i for a sample block will be equal to D 'I'/D.I. where D is the *specified* number of sub-blocks and I is the *specified* sampling intreval for i^{th} sub-stratum for that sample block, and D' and I' are the corresponding *actually* used figures.

6·5 Sub-round-wise estimates: estimates of aggregates based on sample villages/blocks surveyed during a sub-round may be obtained by using the adjusted multiplier as per formula (5) where m will be the number of villages/blocks surveyed during that sub-round, in the concerned sub-sample, region (for villages) or state (for blocks).

APPENDIX II

DESCRIPTION OF CODES USED IN THE TABLES

A. Skill Codes (for table no 2) :

code no.	description
01	typist, stenographer
02	fisherman
03	miner, quarryman
04	spinner including charkha operator
05	weaver
06	tailor, cutter
07	shoe-maker cobbler
08	carpenter
09	mason, bricklayer
10	moulder
11	machineman
12	fitter, die-maker
13	welder
14	blacksmith
15	goldsmith
16	silversmith
17	electrician
18	motor vehicle driver, tractor driver
19	boatman
20	potter
21	nurse, midwife
22	basketmaker, wicker product maker
23	toy maker
24	brick maker, tile maker
25	bidi maker
26	book binder
27	barber
28	mud house builder & thatcher
29	others (specify)
99	no skill

B. Current Activity Category Codes (for tables no. 8 to 15)

sl no	current activity category code	description
1	41	worked in own family farm
2	42	worked in own family farm as exchange labour
3	43	worked as helper in family farm
4	44	worked in non-farm household enterprise/business/profession
5	45	worked as helper in non/farm household enterprise/business/profession
6	46	worked in agriculture as regular salaried employee/wage labourer
7	47	worked in non-farm enterprise/business/profession or in public sector as regular salaried employee/wage labourer
8	48	worked in agriculture as casual employee/wage labourer
9	49	worked in non-farm enterprise/business/profession/service/public domestic sector as casual employee/wage labourer
10	51	did not work due to sickness though there was work to do
11	52	did not work for reasons other than sickness but had salaried/wage employment
12	53	did not work for reasons other than sickness though there was work in the household farm/non-farm enterprise
13	61	did not work but sought work
14	62	did not work nor sought work but was available for work
15	71	attended educational institution
16	72	attended domestic duties
17	73	too young to work/to attend school/to seek employment
18	74	old and disabled
19	75	did not work due to temporary sickness (applicable only for casual workers)
20	76	Others (included are pensioners, remittance recipients, beggars, prostitutes etc).

C. Usual Activity Category Codes (for tables 17—30) .

sl. no.	usual activity category code	description
1	1	working in own farm
2	12	working in household non-farm enterprise/profession
3	13	working as regular salaried employee/wage labourer in farm
4	14	working as regular salaried employee/wage labourer in non-farm enterprise/business/profession/service/public/domestic enterprise
5	15	working as casual wage labourer

sl. no.	usual activity category code	description
6	16	working in household farm as helper
7	17	working in non-farm household enterprise as helper
8	21	not working but seeking or available for employment
9	31	attending educational institution
10	32	engaged in domestic work
11	33	too young to work/to attend school/to seek employment
12	34	old and disabled
13	35	others (included are pensioners, remittance recipients, beggars, prostitutes, etc.)

D. Expected duration of stay codes (for tables no. 31 to 34) :

code no.	description
0	less than one month
1	one month & above but less than two months
2	two months & above but less than three months
3	three months & above but less than four months
4	four months & above but less than five months
5	five months & above but less than six months

and so on for further completed months

E. Reason for absence from village/town codes (for tables no. 31 & 32) :

On work-1, in search of work-2 & for other reason-3.

F. Reason for temporary stay in the household codes (for tables no. 33 & 34) :

On work-1, in search of work-2 & for other reasons-3.

G. General-cum-technical education group codes (for tables 2, 3, 4, 7, 8·16, 17 & 18) :

sl. no.	general education code	technical education code	description
1	1	1	illiterate-cum-no technical education
2	1	2—6	illiterate-cum-addl. diploma or certificate in engineering technology, crafts, medicine and other subjects.
3	2 & 3	1	literate but below primary and primary-cum-no technical education
4	2 & 3	2—6	literate but below primary and primary-cum-addl. dip.or cert. in engineering, technology, crafts, medicine & other subjects
5	4	1	middle-cum-no technical education
6	4	2—6	middle-cum-addl. dip. or cert. in engineering, technology, crafts, medicine and other subjects
7	5	1	secondary-cum-no technical education
8	5	2	secondary-cum-addl. dip. or cert. in engineering.
9	5	3	secondary-cum-addl. dip. or cert. in technology
10	5	4	secondary-cum-addl. dip. or cert. in crafts
11	5	5	secondary-cum-addl. dip. or cert. in medicine
12	5	6	secondary-cum-addl. dip. or cert. in other subjects.
13	6	1	graduate & above in agricultural-cum-no technical education
14	6	2	graduate & above in agricultural-cum-addl. dip. or cert. in engineering
15	6	3	graduate & above in agriculture-cum-addl. dip. or cert. in technology
16	6	4—6	graduate & above in agriculture-cum-addl. dip. or cert. in crafts, medicine and other subjects
17	7	1	graduate & above in engineering & technology cum-no technical education
18	7	2	graduate & above in engineering & technology cum-addl. dip. or cert. in engineering
19	7	3	graduate & above in engineering & technology cum-addl. dip. or cert. in technology

TABULATION PLAN ON HOUSEHOLD CHARACTERISTICS

SCHEDULE 10 : EMPLOYMENT AND UNEMPLOYMENT : NSS, 27TH ROUND

LIST OF TABLES

1. Distribution of estimated no. of households by occupation divisions/groups showing the number of economically active persons and total number of normal members in households by sex (Ref. : Block 3).

*2. Distribution of estimated no. of households by per capita expenditure group showing the number of economically active persons and total number of normal members in households by sex (Ref. : Block 3).

3. Distribution of estimated no. of households by land possessed size class showing the number of households reporting possibility (any one or none included) of improvement of land in different fields of improvement (Ref. : Q.1.1. of block 9.1).

4. Distribution of estimated no. of households (reporting in affirmative with respect of possibility of improvement of land) by cost of improvement group and different fields of improvement (Ref. : Qs. 1·1 and 1·2 of block 9·1).

5. Distribution of estimated no. of households reporting possibility of getting loan for development by land possessed size class and different agencies contacted for loan (Ref.: Qs. 1·3 and 1·4 of block 9·1).

6. Distribution of estimated no. of households by occupation group showing the number of households reporting possibility of taking up supplementary activities (any one or none included) and the number of households for which taking up of such supplementary activities is dependent in initial finance (Ref. : Qs. 2·1 and 2·2 of block 9·2).

7. Distribution of estimated no. of households by occupation group showing the number of households having knowledge of any trade/occupation for setting up an enterprise and the number of households which would take up the trade/occupation if initial finance is provided (Ref. : Qs. 2·3 and 2·5 of block 9·2).

8. Distribution of estimated no. of household (possessing no land for cultivation) by occupation groups, willingness to possess land for cultivation and the size of land desired (Ref. : Qs. 3·1, 3·2 and 3·3 of block 9·3).

9. Distribution of estimated no. of hired labour days (adult male, adult female, child) by category of hired labour (farm, non-farm, domestic) and respective wages (cash, kind, total) paid (Ref. : Block 6.)

Note: (1) The above tables may be generated for each state/region/union-territory and for all India.

(2) Separate sub-round/sub-sample estimates are not required at any stage of tabulation for all tables except table 2 for which sub-sample estimates are required at the intermediate stages.

(3) For rural and urban sectors separate tables may be prepared.

SCHEDULE 10 : EMPLOYMENT AND UNEMPLOYMENT NSS, 27TH ROUND

A. On Demographic Particulars (Ref. : Block 4).

1. Distribution of persons by sex, age-group, membership type and marital status.

**2. Distribution of persons by sex, age-group, skill and general-cum-technical education.

B. On Current Activity Pattern in a Week (Ref. : Block 4).

*3. Distribution of person-weeks by sex, age-group, current activity category and general-cum-technical education.

**4. Distribution of person-weeks by sex, age-group, current activity category and current principal industry division.

C. On Weekly Labour Time Disposition (Ref. : Block 3, 4 & 5).

*5. Distribution of person-days in a week by sex, age-group, general-cum-technical education and current activity category.

**6. Distribution of person-days (by intensity) in a week by current activity category, sex, age-group and general education.

**7. Distribution of person-days (by intensity) in a week by current activity category, sex and age-group separately *for different household per-capita expenditure group.*

**8. Distribution of person-days (by intensity) in a week by current activity category, sex and group separately *for different village irrigating type category.*

**9. Distribution of person-days (by intensity) in a week by current activity category, sex and age-group separately *for different village crop-pattern category.*

**10. Distribution of person-days (by intensity) in a week by current activity category, sex and age-group separately for *different household land possessed class.*

**11. Distribution of person-days (by intensity) in a week by current activity category, sex and age-group separately *for different current principal industry division.*

*12. Distributon of total earnings and total wage and salary earners by sex, age-group and general-cum-technical education group.

D. On Usual Activity Pattern (Ref. : Blocks 4 & 7).

*13. Distribution of persons by usual activity category sex, age-group and general-cum technical education.

14. Distribution of gainfully employed persons (persons getting either of the usual activity category codes 11 to 17) by usual activity category, age-group sex and principal industry group (usual)

15. Distribution of gainfully employed (persons getting either of the usual activity category codes 11 to 17) by usual activity category, age-group, sex and principal occupation group (usual).

16. Distribution of gainfully employed persons (persons getting either of the usual activity category codes 11 to 17) by age-group (5-9 and 10 & above) sex, principal industry division (usual) and subsidiary industry division (usual).

17. Distribution of gainfully employed persons (persons getting either of the usual activity category codes 11 to 17) by sex, age-group (5-9 and 10 & above), principal occupation division (usual) and subsidiary occupation division (usual).

18. Distribution of gainfully employed persons (persons getting either of the usual activity category code 11 to 17) by age, sex, age-group (5-9 and 10 & above), current industry and usual industry division.

19. Distribution of gainfully employed persons (persons getting either of the usual activity category codes 11 to 17) by sex, and age-group (5-9 and 10 & above-current occupation and usual occupation division.

E. On Proving Questions for Persons getting Usual Activity Category Code 11 or 12 (Ref. : Block 3·1)—Separate Tables for each of the Category 11 and 12.

*20. Distribution of persons by sex, age-group whether working through the year or not, also working in town farm/non-farm enterprise or profession (Qs. 1·1, 1·2, & 1·3) and usual activity category.

*21. Distribution of persons by sex, age-group, (general education only for urban households), whether work, seek work or available for work during the idle time in farm or non-farm enterprise and no. of days-group for which such work was performed/sought/been available (Qs. 1·4 & 1·5a).

22. Distribution of persons (reporting as working or seeking or been available for wage for salaried employment in farm or non-farm enterprise during some period of the year) by sex, age-group (general education only for urban households), nature of employment and amount of daily wage/monthly salary expected (Qs. 1·4, 1·5b and 1·5c.)

F. On Probing Questions for Persons getting Usual Activity Category Code 13 or 14 (Ref. : Block 3.2)—Separate Tables for each of the Category 13 and 14.

23. Distribution of persons ; by sex, age-group and answers to probing questions 2·1, 2·2 & 2·3.
