

# National Metadata Structure (NMDS)

A Standard Set of Guidelines for Ensuring Quality of Statistical Products Released

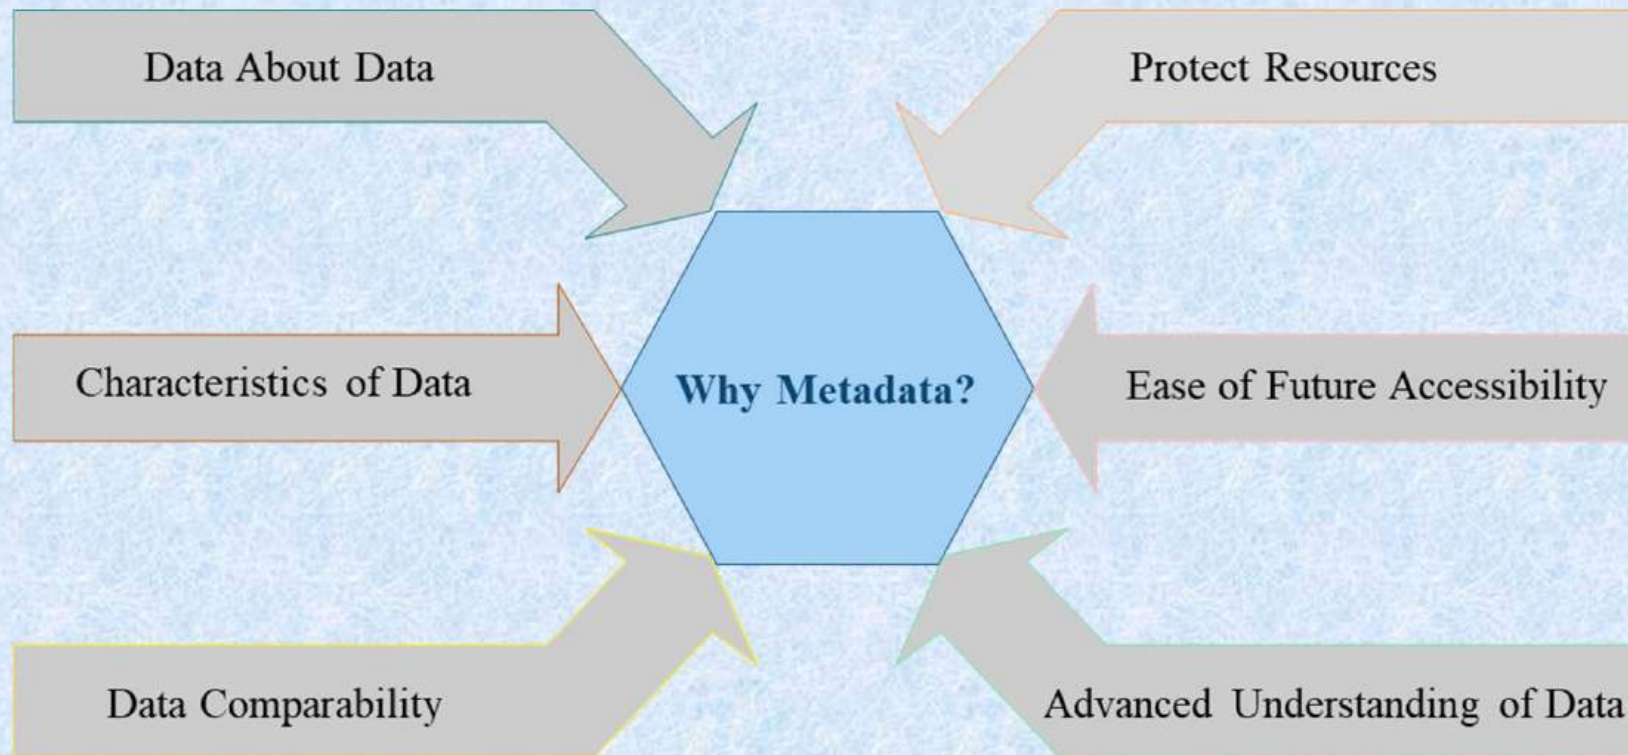

# Objectives

- Promote reporting for each type of statistical process and its outputs across different Ministries/Divisions/Departments of NSO, hence facilitating comparisons across processes and outputs;
- Ensure that producer reports contain all the information required to facilitate identification of quality issues and potential improvements in statistical processes and their outputs; and
- Ensure that user reports contain all the information required by users to assess whether statistical outputs are fit for the purposes they have in mind.

## What is metadata?

- It is structured information or documentation about data which:
  - informs users about the content, quality and condition of data;
  - describes the structure of datasets, explains, locates, or makes it easier to retrieve, use, or manage data;
  - provides information on the processes of data production;
  - guides on proper usage or interpretation of data.
- “Data that define and describe other data” (ISO definition)
- “Information about information” (Dion, 2006)

# Why Metadata

## What does metadata do?

- Assist in retrieving and processing data
- Support correct use of data
- Provide transparency in data
- Enhance interoperability
- Improve archiving, preservation, institutional memory over time

## Types of metadata

- **Structural metadata**
  - provide information about the structure of the dataset
  - act as identifiers and descriptors of the data, making it possible to properly identify, retrieve and browse the data
- **Reference metadata**
  - allow a thorough understanding and interpretation of the corresponding statistical data
  - Describe the concepts, definitions, methodology and quality of data; production and dissemination process, data access conditions, release policy, confidentiality, etc

## Metadata standards (cont'd)

Two international metadata standards are becoming well established:

- **SDMX (Statistical Data and Metadata Exchange)**

a number of international agencies have endorsed SDMX;  
supported by the UN Statistical Commission

- **DDI (Data Dissemination Initiative)**

*Microdata Management Toolkit* of WB uses the DDI  
metadata standard

## Users of metadata

Metadata support the knowledge of potential user of statistical information. The major users include:

- Users of statistical data
- Producers of statistical data
- Researchers on the development of statistical systems

# Metadata Structure: International Organisations

# UN SDG Metadata Concept

- **SDG metadata concepts (7):**

- Indicator information
- Data reporter
- Definition, concepts and classifications
- Data source type and data collection method
- Other methodological considerations
- Comparability/deviation from international standards
- References and documentation

**Figure 2. The Euro SDMX Metadata Structure**

|          | Concept Name                         |
|----------|--------------------------------------|
| <b>1</b> | <b>Contact</b>                       |
| 1.1      | Contact organisation                 |
| 1.2      | Contact organisation unit            |
| 1.3      | Contact name                         |
| 1.4      | Contact person function              |
| 1.5      | Contact mail address                 |
| 1.6      | Contact email address                |
| 1.7      | Contact phone number                 |
| 1.8      | Contact fax number                   |
| <b>2</b> | <b>Metadata update</b>               |
| 2.1      | Metadata last certified              |
| 2.2      | Metadata last posted                 |
| 2.3      | Metadata last update                 |
| <b>3</b> | <b>Statistical presentation</b>      |
| 3.1      | Data description                     |
| 3.2      | Classification system                |
| 3.3      | Sector coverage                      |
| 3.4      | Statistical concepts and definitions |
| 3.5      | Statistical unit                     |
| 3.6      | Statistical population               |
| 3.7      | Reference area                       |
| 3.8      | Time coverage                        |
| 3.9      | Base period                          |
| <b>4</b> | <b>Unit of measure</b>               |
| <b>5</b> | <b>Reference period</b>              |
| <b>6</b> | <b>Institutional mandate</b>         |
| 6.1      | Legal acts and other agreements      |
| 6.2      | Data sharing                         |

|           | Concept Name                          |
|-----------|---------------------------------------|
| <b>7</b>  | <b>Confidentiality</b>                |
| 7.1       | Confidentiality - policy              |
| 7.2       | Confidentiality - data treatment      |
| <b>8</b>  | <b>Release policy</b>                 |
| 8.1       | Release calendar                      |
| 8.2       | Release calendar access               |
| 8.3       | User access                           |
| <b>9</b>  | <b>Frequency of dissemination</b>     |
| <b>10</b> | <b>Dissemination format</b>           |
| 10.1      | News release                          |
| 10.2      | Publications                          |
| 10.3      | On-line database                      |
| 10.4      | Micro-data access                     |
| 10.5      | Other                                 |
| <b>11</b> | <b>Accessibility of documentation</b> |
| 11.1      | Documentation on methodology          |
| 11.2      | Quality documentation                 |
| <b>12</b> | <b>Quality management</b>             |
| 12.1      | Quality assurance                     |
| 12.2      | Quality assessment                    |
| <b>13</b> | <b>Relevance</b>                      |
| 13.1      | User needs                            |
| 13.2      | User satisfaction                     |
| 13.3      | Completeness                          |
| <b>14</b> | <b>Accuracy and reliability</b>       |
| 14.1      | Overall accuracy                      |
| 14.2      | Sampling error                        |
| 14.3      | Non-sampling error                    |

|           | Concept Name                      |
|-----------|-----------------------------------|
| <b>15</b> | <b>Timeliness and punctuality</b> |
| 15.1      | Timeliness                        |
| 15.2      | Punctuality                       |
| <b>16</b> | <b>Comparability</b>              |
| 16.1      | Comparability - geographical      |
| 16.2      | Comparability - over time         |
| <b>17</b> | <b>Coherence</b>                  |
| 17.1      | Coherence - cross domain          |
| 17.2      | Coherence - internal              |
| <b>18</b> | <b>Cost and burden</b>            |
| <b>19</b> | <b>Data revision</b>              |
| 19.1      | Data revision - policy            |
| 19.2      | Data revision - practice          |
| <b>20</b> | <b>Statistical processing</b>     |
| 20.1      | Source data                       |
| 20.2      | Frequency of data collection      |
| 20.3      | Data collection                   |
| 20.4      | Data validation                   |
| 20.5      | Data compilation                  |
| 20.6      | Adjustment                        |
| <b>21</b> | <b>Comment</b>                    |

# MoSPI's Metadata Structure

# Brief Concepts of Metadata Structure

| Item No  | Concept name                                    | Item No  | Concept name                       | Item No  | Concept name                  |
|----------|---|----------|------------------------------------|----------|-------------------------------|
| <b>1</b> | <b>Contact</b>                                  | 3.2      | Data sharing                       | 7.2      | Coherence                     |
| 1.1      | Contact Organisation                            | 3.3      | Release policy                     | <b>8</b> | <b>Statistical processing</b> |
| 1.2      | Compiling Agency                                | 3.4      | Release calendar                   | 9.1      | Source data type              |
| 1.3      | Contact Details                                 | 3.5      | Frequency of dissemination         | 9.2      | Frequency of data collection  |
| <b>2</b> | <b>Statistical presentation and description</b> | 3.6      | Data access                        | 9.3      | Data collection method        |

# Elements of Metadata Structure: Comparison amongst selected NSOs

# Detailed Concepts of Metadata

# Contact

 [Back to Brief Concepts](#)

| Item No | Concept name         | Definition   | Guidelines   |
|---------|----------------------|--|--|
| 1       | Contact              | <b>Individual or organisational contact points for the data or metadata, including information on how to reach the contact points.</b> |  |
| 1.1     | Contact Organisation | The name of the organisation for data or metadata.   | Provide the full name (not just acronym) of the organisation responsible for the processes and outputs (data and metadata) that are the subject of the report  |
| 1.2     | Compiling Agency     | Organisation collecting and/or elaborating the data being reported   | Provide the full name of the Division under the organisation responsible for the processes and outputs (data and metadata) that are the subject of the report  |
| 1.3     | Contact Details      | The details of the contact points for the data or metadata.  | <p>Provide contact details of contact point(s) in following format:</p> <ul style="list-style-type: none"> <li>a. Organisation Name owning the processes and outputs:</li> <li>b. Author (if different from (a))</li> <li>c. Disseminating Agency (if different from (a) and (b))</li> <li>d. Name (first and last names):</li> <li>e. Designation:</li> <li>f. Postal address:</li> <li>g. email address (preferably designation based):</li> <li>h. Contact number:</li> <li>i. Fax number:</li> </ul> <p>If more than one name is provided, the details of main contact should be indicated. If the author of the report is different from the person(s) responsible for process and its outputs, provide this name also with his/her details</p> |

# Statistical Presentation and Description

 [Back to Brief Concepts](#)

| 2   | Statistical presentation and description | Description of the disseminated data which can be displayed to users as tables, graphs or maps                     |  |
|-----|--|--|--|
| 2.1 | Data description                         | Main characteristics of the data set, referring to the data and indicators disseminated.                           | Describe briefly the main characteristics of the data in an easily and quickly understandable manner, referring to the main variables disseminated.  |
| 2.2 | Classification system                    | Arrangement or division of objects into groups based on characteristics which the objects have in common           | List all classifications and breakdowns that are used in the data (with their detailed names) and provide links (if publicly available).<br><br>Type of dis-aggregation available in the data sets - for example rural-urban, male-female, etc. and whether data is available at the sub-national level or not, should be clearly specified. |
| 2.3 | Sector coverage                          | Main economic or other sectors   | List the main economic or other sectors covered by the data and the size classes used, for example, Health/ Education/ Manufacturing etc   |
| 2.4 | Statistical concepts and definitions     | Statistical characteristics of statistical observations, variables   | Define and describe briefly the main statistical variables that have been observed or derived. Indicate their types.   |
| 2.5 | Statistical unit                         | Entity for which information is sought and for which statistics are ultimately compiled.                           | Define the type of statistical unit about which data are collected, e.g. enterprise, household, etc.   |
| 2.6 | Statistical population                   | The total population of a defined class of people, objects or events   | Define the target population of statistical units for which information is sought  |
| 2.7 | Reference Period                         | The length of time for which data are available  | State the time period(s) for which data is collected   |
| 2.8 | Base period                              | The period of time used as the base of an index number, or to which a constant series refers.                      | Note that this concept applies only to certain types of outputs, such as indexes, for which a base period is defined and used. Eg, CPI, IIP, etc.  |
| 2.9 | Data Confidentiality                     | Rules applied for treating the datasets to ensure statistical confidentiality and prevent unauthorised disclosure. | Describe the procedures that are used in protecting confidentiality.   |

# Institutional Mandate

| 3   | Institutional mandate           | Law, set of rules or other formal set of instructions assigning responsibility as well as the authority to an organisation for the collection, processing, and dissemination of statistics |   |
|-----|---------------------------------|--|---|
| 3.1 | Legal acts and other agreements | Legal acts or other formal or informal agreements that assign responsibility as well as the authority to an agency for the collection, processing, and dissemination of statistics         | State the national legal acts and/or other reporting agreements   |
| 3.2 | Data sharing                    | Arrangements or procedures for data sharing and coordination between data producing agencies.  | Describe the arrangements, procedures or agreements to facilitate data sharing and exchange between data producing agencies within the national statistical system  |
| 3.3 | Release policy                  | Rules for disseminating statistical data to all interested parties   | State if the release of the products is governed by some policy etc.  |
| 3.4 | Release calendar                | The schedule of statistical release dates.   | State whether there is a release calendar for the statistical outputs from the process being reported, and if so, whether this calendar is publicly accessible and if yes, give a link or reference.  |
| 3.5 | Frequency of dissemination      | The time interval at which the statistics are disseminated over a given time period.   | State the frequency with which the data are disseminated, e.g. monthly, quarterly, yearly.  |
| 3.6 | Data access                     | The conditions and modalities by which users can access, use and interpret data  | <p>State the conditions and link on website from where the user can access the data</p> <p>For easy access of users, following details should also be mentioned about the dataset:</p> <p><b>Title:</b> Name by which the data is known</p> <p><b>Dataset Edition:</b> Edition of data (ex: first, second, final etc)</p> <p><b>Dataset Reference data type:</b> Type of data entered in the field (ex: .txt, .dbf, .xls)</p> <p><b>Presentation Format:</b> Presentation format of the data (ex: document, map, table, etc.)</p> <p><b>Dataset Language:</b> language of any text in the data</p> <p><b>Status/Version:</b> How updated is the data?</p> |

# Quality Management

 [Back to Brief Concepts](#)

|     |                              |  |   |
|-----|------------------------------|--|---|
| 4.  | <b>Quality management</b>    | <b>Systems and frameworks in place within an organisation to manage the quality of statistical products and processes.</b>                                       |   |
| 4.1 | Documentation on methodology | Descriptive text and references to methodological documents available.   | List reference metadata files, methodological papers, summary documents and handbooks relevant to the statistical process.  |
| 4.2 | Quality documentation        | Documentation on procedures applied for quality management and quality assessment.   | List relevant quality related documents, for example, other quality reports, studies.   |
| 4.3 | Quality assurance            | All systematic activities implemented that can be demonstrated to provide confidence that the processes will fulfil the requirements for the statistical output. | Describe the procedures (such as use of a general quality management system based on ISO 9000 series) to promote general quality management principles in the organisation.   |
|     |                              |  | Describe the quality assurance framework used to implement statistical quality principles.  |
|     |                              |  | Describe the quality assurance procedures specifically applied to the statistical process for which the report is being prepared, for example training courses, process monitoring, benchmarking, assessments, and use of best practices. |
|     |                              |  | Describe any ongoing or planned improvements in quality assurance procedures.   |
| 4.4 | Quality assessment           | Overall assessment of data quality, based on standard quality criteria.  | Summarise the results of the most recent quality assessments and cross reference to the chapters in the report where the results are presented in more detail.  |

# Accuracy and Reliability

 [Back to Brief Concepts](#)

|     |                          |  |  |
|-----|--------------------------|--|--|
| 5   | Accuracy and reliability | Accuracy of data is the closeness of computations or estimates to the exact or true values that the statistics were intended to measure. Reliability of the data, defined as the closeness of the initial estimated value to the subsequent estimated value. |  |
| 5.1 | Sampling error           | That part of the difference between a population value and an estimate thereof, derived from a random sample, which is due to the fact that only a subset of the population is enumerated.   | <p>If probability sampling is used:</p> <ul style="list-style-type: none"><li>• for user reports-provide the range of variation of the A1 indicator among key variables at user report level of detail;</li><li>• for producer reports-provide the range of variation of the A1 indicator among key variables at producer report level of detail;</li><li>• indicate the impact of sampling error on the overall accuracy of the results;</li><li>• state how the calculation of sampling error is affected by adjustments for nonresponse, misclassifications and other sources of uncertainty, such as outlier treatment.</li></ul> <p>If non-probability sampling is used:<br/>provide an assessment of representativeness, a motivation for the invoked model for estimation and risk of sampling bias</p> |

# Timeliness and Punctuality

 [Back to Brief Concepts](#)

|     |                   |  |   |
|-----|-------------------|--|---|
| 6   | <b>Timeliness</b> | <b>The timeliness of the data collection release to be compiled.</b>   |   |
| 6.1 | Timeliness        | Length of time between data availability, the event or phenomenon the data describe, and final release to its users. | Outline the reasons for the time lag, if any. Outline efforts to reduce time lag in future. |

# Coherence and Comparability

 [Back to Brief Concepts](#)

| 7   | Coherence and comparability | Adequacy of statistics to be reliably combined in different ways and for various uses and the extent to which differences between statistics can be attributed to differences between the true values of the statistical characteristics |  |
|-----|-----------------------------|--|--|
| 7.1 | Comparability – over time   | The extent to which statistics are comparable or reconcilable over time  | <p>Provide information on possible limitations in the use of data for comparisons over time. Distinguish three broad possibilities:</p> <ol style="list-style-type: none"> <li>1. There have been no changes, in which case this should be reported.</li> <li>2. There have been some changes but not enough to warrant the designation of a break in series.</li> <li>3. There have been sufficient changes to warrant the designation of a break in series.</li> </ol> |
| 7.6 | Coherence                   | The extent to which statistics are reconcilable with System of National Accounts.  | For producer reports only. Where relevant, the results of comparisons with the System of National Account framework / Other Statistical Standards and feedback from System of National Accounts / Other Statistical Standards with respect to coherence and accuracy problems should be reported and should be a trigger for further investigation.  |

# Statistical Processing

 [Back to Brief Concepts](#)

| 8   | Statistical processing       | Any statistical processing undertaken to finalise the data  |   |
|-----|------------------------------|---|---|
| 8.1 | Source data type             | Characteristics and components of the raw statistical data used for compiling statistical aggregates. | <p>Indicate if the data are based on a survey, administrative data, multiple data sources, or macro-aggregates.</p> <p>In the event of multisource or macro-aggregate processes describe each source.</p> <p>For each dataset from an administrative source, summarise the source, its primary purpose, and the most important data items acquired</p>  |
| 8.2 | Frequency of data collection | Time interval at which the source data are collected  | Indicate the frequency of data collection (e.g. monthly, quarterly, annually, or continuous).   |
| 8.3 | Data collection method       | Method applied for gathering data for official statistics.  | <p>For each source of survey data:</p> <ul style="list-style-type: none"> <li>• describe the method(s) used to gather data from respondents;</li> <li>• annex or hyperlink the questionnaires(s).</li> </ul> <p>For each source of administrative data:</p> <ul style="list-style-type: none"> <li>• describe the acquisition process and how it was tested.</li> </ul> <p>For all sources:</p> <ul style="list-style-type: none"> <li>• describe the types of checks applied at the time of data entry.</li> </ul> |

# Statistical Processing (Contd...)

 [Back to Brief Concepts](#)

|     |                  |   |  |
|-----|------------------|---|--|
| 8.4 | Data validation  | Process of monitoring the results of data compilation and ensuring the quality of statistical results | <p>Describe the procedures for checking and validating the source data and how the results are monitored and used.</p> <p>Describe the procedures for validating the aggregate output data (statistics) after compilation, including checking coverage and response rates, and comparing with data for previous cycles and with expectations.</p> <p>List other output datasets to which the data relate and outline the procedures for identifying inconsistencies between the output data and these other datasets</p>   |
| 8.5 | Data compilation | Operations performed on data to derive new information according to a given set of rules.             | <p>Describe the procedures for imputation, the most common reasons for imputation and imputation rates within each of the main strata.</p> <p>Describe the likely impact of imputation.</p> <p>Describe the procedures to derive new variables and to calculate aggregates and complex statistics.</p> <p>Describe the procedures for adjustment for non-response and the corrections to the design weights to account for differences in response rates.</p> <p>Describe the calculation of design weights, including calibration (if used).</p> <p>Describe the procedures for combining input data from different sources.</p> <p>Provide the ratio of the number of replaced values to the total number of values for a given variable.</p> <p>Specific reference to formula shall be made. The formula or mathematical equation used while computing different variables in the report may be described here in a structured format showing the Numerator; Denominator and Multiplier used for computing the same</p> |

# Metadata Update

 [Back to Brief Concepts](#)

| 9   | Metadata update      | The date on which the metadata element was inserted or modified in the database. |   |
|-----|----------------------|--|---|
| 9.1 | Metadata last posted | Date of the latest dissemination of the metadata                                 | The date when the complete set of metadata was last disseminated as a block should be provided (manually, or automatically by the metadata system). |
| 9.2 | Metadata last update | Date of last update of the content of the metadata.                              | The date when any metadata were last updated should be provided (manually, or automatically by the metadata system).                                |

**Data Dissemination: National Metadata Structure (NMDS) For  
Statistical Products (Revised)**

July 2024

**Foreword**

## Introduction

*National Statistical Office (NSO), Ministry of Statistics & Programme Implementation, presents and disseminates data and metadata through different products like Census data (Economic Census); Survey data such as NSS Surveys viz. Household Surveys, etc, Annual Survey of Industries (ASI), Consumer Price Indices (CPI), and macro-economic aggregates like National Income, Index of Industrial Production (IIP). In addition, statistical data is presented in analytical publications such as NSS Reports, Annual Survey of Industries Reports, National Indicator Framework (NIF) for monitoring SDGs, Energy Statistics, EnviStats India, Women & Men in India etc., which provide analysis of data, supported by the visual presentation of that data in the form of graphs and maps.*

The production of data and presentation of metadata structure requires an overview of the arrangements, technical infrastructure and skills required for a holistic and integrated approach to the presentation and dissemination of statistical data and metadata to different user groups. National Metadata Structure (NMDS) is to provide guidelines for the data producer to adhere to a basic minimum quality standard in order to establish and maintain the quality of data and enhance ease in sharing data. The specific objectives of this document are:

- to promote reporting for each type of statistical process and its outputs across different Ministries/Divisions/Departments of NSO, hence facilitating comparisons across processes and outputs;
- to ensure that producer reports contain all the information required to facilitate identification of quality issues and potential improvements in statistical processes and their outputs; and
- to ensure that user reports contain all the information required by users to assess whether statistical outputs are fit for the purposes they have in mind.

## A. What is Metadata?

A.1. Metadata should contain all the information users need to analyse a dataset and draw conclusions. It increases data accessibility by summarizing the most important information (i.e. methodology, sampling design, interview mode, etc.) required for analyzing a dataset which alleviates the need for users to search for supporting documents and reports. Furthermore, good metadata clearly articulates the potential uses for a dataset, preventing potential misuses. Metadata is also a tool for rendering complex microdata structures into something meaningful, navigable, and user-friendly. Finally, the adoption of well-known metadata schemas and vocabularies allows for semantic interoperability.

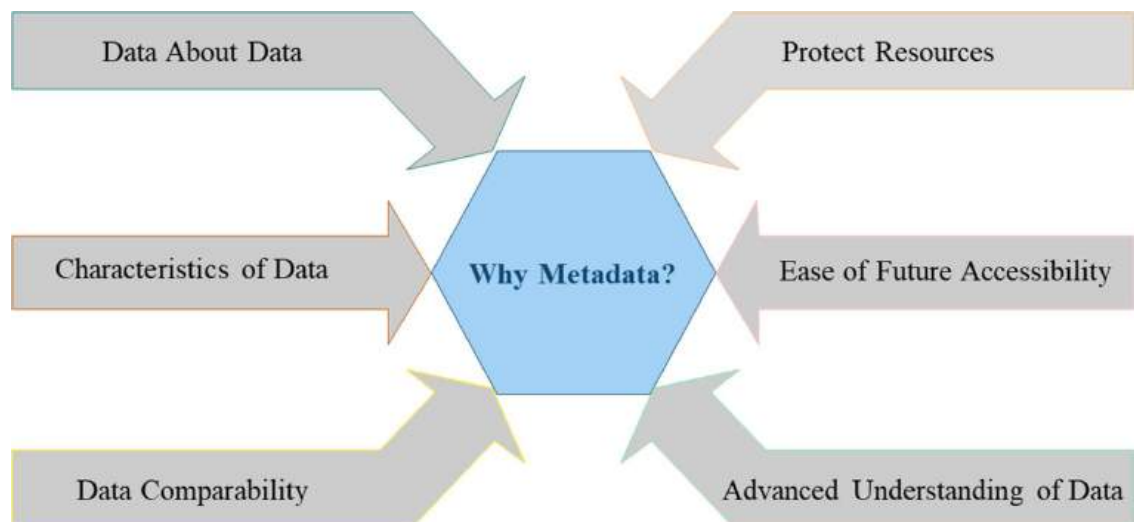

The Metadata process is fully integrated in the Generic Statistical Business Process Model<sup>1</sup> (GSBPM) which has metadata as one of the key elements in the version 5.1.

<sup>1</sup> UNECE: United Nations Economic Commission for Europe,  
<https://statswiki.unece.org/display/GSBPM/GSBPM+v5.1>

## B. Why Metadata?

- B.1. In most information technology usages, the prefix of meta conveys “an underlying definition or description.” So it is that, at its most basic, metadata is data about data. More precisely, however, metadata describes data containing specific information like type, length, textual description and other characteristics. Metadata makes it much easier to find relevant data and to use a dataset, users need to understand how the data is structured, definitions of terms used, how it was collected, and how it should be read.
- B.2. Metadata is an important way to protect resources and their future accessibility. For archiving and preservation purposes, it takes metadata elements that track the object’s lineage, and describe its physical characteristics and behaviour so it can be replicated on technologies in the future.

- B.3. In today’s modern data driven world and in the era of digital transactions, huge amount of data is generated on real time basis, and lately, a large number of organisations/agencies have started producing data, the quantum of which is huge, and thus arises a need of standard regulatory framework to be laid down to assure the quality of data produced by different producers. It will also serve the purpose of ensuring data

comparability across time horizons so as to enable better understanding of different social and economic movements.

- B.4. Although metadata may not seem exciting or impressive, the true importance of metadata can never be underrated and hence, is important to take a concerted effort to build sound metadata structure to draw maximum gains from varied data sets.

### **C. Role of MoSPI in Building Metadata Structure**

- C.1. MoSPI being a nodal agency for planned development of the statistical system in the country is also responsible for maintaining the highest standards of data quality which adhere to basic guidelines of International Agencies so as to ensure India's statistical system is one of the frontrunners in quality data producer. MoSPI aims at raising the National Statistical System (NSS) to the epitome of being one of the best professionally equipped government data producing agencies by building the best of IT infrastructure among others in the system, and Metadata is one of the building blocks to achieve the objective.
- C.2. The document presents the NMDS in two formats- the first one is the indexed version as NMDS concepts (Section F), and the second one presents details of concepts through definition and guidelines (Section G).

### **D. Metadata Management**

- D.1 It is advisable to put in place a metadata policy by the official statistical producing agencies, ab initio. The policy is a set of broad, high level principles that form the guiding framework within which metadata management can operate.
- D.2 Once the metadata policy is put in place, for an organisation, metadata should be compiled and maintained actively. Otherwise, the currency, and thus use of Metadata will degrade with time. To realise the full capabilities of Metadata, it is necessary that the Metadata are maintained over a long period of time. Even with investment in

technically sophisticated search tools, such systems may find little stakeholders acceptance, if the data are incomplete or is not updated regularly.

While preparing the NMDS, the following core principles should be borne in mind:

- i. Metadata Handling:
  - a. Statistical Business Process Model
  - b. Active, not Passive
  - c. Reuse for Efficiency
  - d. Version Preservations
  
- ii. Metadata Authority
  - e. Registration
  - f. Single Source
  - g. One Entry/Update
  - h. Standards Variations
  
- iii. Relationship to Statistical Business Processes
  - i. Integrity
  - j. Matching Metadata
  - k. Describe Flow
  - l. Capture at Source
  - m. Exchange and Use
  
- iv. Users
  - n. Identify Users
  - o. Variant Formats
  - p. Availability

## **E. Retention, Preservation, and Destruction**

National Statistics constitute valuable and irreplaceable assets whose value can increase through widespread and long-term use. National Statistics should thus be backed by the Data Management Policy eliciting the arrangements it has in place for the retention, long term preservation, and destruction of its resources including Metadata.

## F. National Metadata Structure (NMDS) Concepts - Index

| Item No    | Concept name  |
|------------|---|
| <b>1</b>   | <b><u>Contact</u></b>                                       |
| 1.1        | Contact Organisation  |
| 1.2        | Compiling Agency  |
| 1.3        | Contact Details   |
| <b>2</b>   | <b><u>Statistical Presentation and Description</u></b>      |
| 2.1        | Data description  |
| 2.2        | Classification system                                       |
| <b>2.3</b> | <b>International/National Standards Classification etc.</b> |
| 2.4        | Sector coverage   |
| 2.5        | Statistical concepts and definitions                        |
| 2.6        | Statistical unit  |
| 2.7        | Statistical population                                      |
| 2.8        | Reference Period  |
| 2.9        | Data Confidentiality  |
| <b>3</b>   | <b><u>Institutional Mandate</u></b>                         |
| 3.1        | Legal acts and other agreements                             |
| 3.2        | Data sharing  |
| 3.3        | Release policy  |
| 3.4        | Release calendar  |
| 3.5        | Frequency of dissemination                                  |
| 3.6        | Data access   |
| <b>4</b>   | <b><u>Quality Management</u></b>                            |
| 4.1        | Documentation on methodology                                |
| 4.2        | Quality documentation                                       |
| 4.3        | Quality assurance   |
| 4.4        | Quality assessment  |
| <b>5</b>   | <b><u>Accuracy and Reliability</u></b>                      |
| 5.1        | Sampling error  |

| Item No    | Concept name                                 |
|------------|--|
| <b>6</b>   | <b><u>Timeliness</u></b>                     |
| 6.1        | Timeliness                                   |
| <b>7</b>   | <b><u>Coherence and Comparability</u></b>    |
| 7.1        | Comparability – over time                    |
| 7.2        | Coherence                                    |
| <b>8</b>   | <b><u>Statistical Processing</u></b>         |
| 8.1        | Source data type                             |
| 8.2        | Frequency of data collection                 |
| 8.3        | Data collection method                       |
| 8.4        | Data validation                              |
| 8.5        | Data compilation                             |
| <b>8.6</b> | <b>Identifier of a statistical indicator</b> |
| <b>9</b>   | <b><u>Metadata Update</u></b>                |
| 9.1        | Metadata last posted                         |
| 9.2        | Metadata last update                         |

## G. Details of NMDS Concepts

| Item No  | Concept name                                    | Definition   | Guidelines   |
|----------|---|--|--|
| <b>1</b> | <b>Contact</b>                                  | <b>Individual or organisational contact points for the data or metadata, including information on how to reach the contact points.</b> |  |
| 1.1      | Contact Organisation                            | The name of the organisation of the contact points for the data or Metadata.   | Provide the full name (not just acronym/code name) of the organisation responsible for the processes and outputs (data and metadata) that are the subject of the report  |
| 1.2      | Compiling agency                                | Organisation collecting and/or elaborating the data being reported   | Provide the full name of the Department/Division under the organisation responsible for the processes and outputs (data and metadata) that are the subject of the report   |
| 1.3      | Contact Details                                 | The details of the contact points for the data or metadata.  | <p>Provide contact details of contact point(s) in following format:</p> <ol style="list-style-type: none"> <li>a. Name of Organisation owning the processes and outputs</li> <li>b. Author (if different from (a))</li> <li>c. Disseminating Agency (if different from (a) and (b))</li> <li>d. Name (first and last names)</li> <li>e. Designation</li> <li>f. Postal address</li> <li>g. email address (preferably designation based)</li> <li>h. Contact number</li> <li>i. Fax number</li> </ol> <p>If more than one name is provided, the details of main contact should be indicated. If the author of the report is different from the person(s) responsible for process and its outputs, provide this name also with his/her details</p> |
| <b>2</b> | <b>Statistical Presentation and Description</b> | <b>Description of the disseminated data which can be displayed to users as tables, graphs or maps</b>                                  |  |

| Item No | Concept name  | Definition   | Guidelines   |
|---------|---|--|--|
| 2.1     | Data description                                      | Main characteristics of the data set, referring to the data and indicators disseminated.   | Describe briefly the main characteristics of the data in an easily and quickly understandable manner, referring to the main variables disseminated.  |
| 2.2     | Classification system                                 | Arrangement or division of objects into groups based on characteristics which the objects have in common   | List all classifications and breakdowns that are used in the data (with their detailed names) and provide links (if publicly available).<br><br>Type of dis-aggregation available in the data sets - for example rural-urban, male-female, etc. and whether data is available at the sub-national level or not, should be clearly specified. |
| 2.3     | Sector coverage                                       | Main economic or other sectors   | List the main economic or other sectors covered by the data and the size classes used, for example, Health/ Education/ Manufacturing etc for sectors and classes based on number of employees for size classes.  |
| 2.4     | International/ National Standards Classification etc. | International/ National standard classification, is the primary tool for collecting and presenting internationally comparable statistics by economic activity. | Mention the International/ National Standard classification used.  |
| 2.5     | Statistical concepts and definitions                  | Statistical characteristics of statistical observations, variables   | Define and describe briefly the main statistical variables that have been observed or derived. Indicate their types.   |
| 2.6     | Statistical unit                                      | Entity for which information is sought and for which statistics are ultimately compiled.   | Define the type of statistical unit about which data are collected, e.g. enterprise, household, etc.   |
| 2.7     | Statistical population                                | The total population of a defined class of people, objects or events   | Define the target population of statistical units for which information is sought. For example, agricultural household, general household, industrial unit, etc.   |

| Item No  | Concept name                      | Definition  | Guidelines   |
|----------|-----------------------------------|---|--|
| 2.8      | Reference Period                  | The length of time for which data are available   | State the time period(s) for which data is collected   |
| 2.9      | Data Confidentiality <sup>2</sup> | Rules applied for treating the datasets to ensure statistical confidentiality and prevent unauthorised disclosure.  | Describe the procedures that are used in protecting confidentiality, viz., anonymisation, legal provision, if any.   |
| <b>3</b> | <b>Institutional Mandate</b>      | <b>Law, set of rules or other formal set of instructions assigning responsibility as well as the authority to an organisation for the collection, processing, and dissemination of statistics</b> |  |
| 3.1      | Legal acts and other agreements   | Legal acts or other formal or informal agreements that assign responsibility as well as the authority to an agency for the collection, processing, and dissemination of statistics                | State the national legal acts and/or other reporting agreements  |
| 3.2      | Data sharing                      | Arrangements or procedures for data sharing and coordination between data producing agencies.   | Describe the arrangements, procedures or agreements to facilitate data sharing and exchange between data producing agencies within the national statistical system                                   |
| 3.3      | Release policy                    | Rules for disseminating statistical data to all interested parties  | State if the release of the products is governed by some policy etc.   |
| 3.4      | Release calendar                  | The schedule of statistical release dates.  | State whether there is a release calendar for the statistical outputs from the process being reported, and if so, whether this calendar is publicly accessible and if yes, give a link or reference. |

<sup>2</sup> All statistical information published by any agency shall be arranged in such a manner so as to prevent any particulars becoming identifiable by any person (other than the informant by whom those particulars were supplied) as the particulars relating to the informant who supplied it, even though the process of elimination (Source: Collection of Statistics Act, 2008).

| Item No | Concept name                 | Definition   | Guidelines  |
|---------|------------------------------|--|---|
| 3.5     | Frequency of dissemination   | The time interval at which the statistics are disseminated over a given time period.                                       | State the frequency with which the data are disseminated, e.g. monthly, quarterly, yearly.  |
| 3.6     | Data access                  | The conditions and modalities by which users can access, use and interpret data  | <p>State the conditions and link on website from where the user can access the data</p> <p>For easy access of users, following details should also be mentioned about the dataset:</p> <p><b>Title:</b> Name by which the data is known</p> <p><b>Dataset Edition:</b> Edition of data (ex: first, second, final etc)</p> <p><b>Dataset Reference data type:</b> Type of data entered in the field (ex: .txt, .dbf, .xls)</p> <p><b>Presentation Format:</b> Presentation format of the data (ex: document, map, table, etc.)</p> <p><b>Dataset Language:</b> language of any text in the data</p> <p><b>Status/Version:</b> How updated is the data?</p> |
| 4       | <b>Quality Management</b>    | <b>Systems and frameworks in place within an organisation to manage the quality of statistical products and processes.</b> |   |
| 4.1     | Documentation on methodology | Descriptive text and references to methodological documents available.   | List reference metadata files, methodological papers, summary documents and handbooks relevant to the statistical process.  |
| 4.2     | Quality documentation        | Documentation on procedures applied for quality management and quality assessment.   | List relevant quality related documents, for example, other quality reports, studies.   |

| Item No | Concept name                    | Definition  | Guidelines   |
|---------|---------------------------------|---|--|
| 4.3     | Quality assurance               | All systematic activities implemented that can be demonstrated to provide confidence that the processes will fulfil the requirements for the statistical output.  | <p>Describe the procedures (such as use of a general quality management system based on ISO 9000 series) to promote general quality management principles in the organisation.</p> <p>Describe the quality assurance framework used to implement statistical quality principles.</p> <p>Describe the quality assurance procedures specifically applied to the statistical process for which the report is being prepared, for example training courses, process monitoring, benchmarking, assessments, and use of best practices.</p> <p>Describe any ongoing or planned improvements in quality assurance procedures.</p> |
| 4.4     | Quality assessment              | Overall assessment of data quality, based on standard quality criteria.   | Summarise the results of the most recent quality assessments and cross reference to the chapters in the report where the results are presented in more detail.   |
| 5       | <b>Accuracy and Reliability</b> | <b>Accuracy of data is the closeness of computations or estimates to the exact or true values that the statistics were intended to measure. Reliability of the data, defined as the closeness of the initial estimated value to the subsequent estimated value.</b> |  |
| 5.1     | Sampling error                  | That part of the difference between a population value and an estimate thereof, derived from a random sample, which is due to the fact that only a subset of the population is enumerated.  | <p>If probability sampling is used:</p> <ul style="list-style-type: none"> <li>• for user reports-provide the range of variation of the A1<sup>3</sup> indicator among key variables at user report level of detail;</li> <li>• for producer reports-provide the range of variation of the A1 indicator among key variables at producer report level of detail;</li> </ul>   |

<sup>3</sup> In international terminology, A1 is simply used for Sampling Errors. In other words, indicator for Sampling Errors is denoted by A1. For further details, refer to: <https://ec.europa.eu/eurostat/documents/64157/4373903/02-ESS-Quality-and-performance-Indicators-2014.pdf/5c996003-b770-4a7c-9c2f-bf733e6b1f31>

| Item No  | Concept name                       | Definition  | Guidelines  |
|----------|------------------------------------|---|---|
|          |                                    |   | <ul style="list-style-type: none"> <li>• indicate the impact of sampling error on the overall accuracy of the results;</li> <li>• state how the calculation of sampling error is affected by adjustments for nonresponse, misclassifications and other sources of uncertainty, such as outlier treatment.</li> </ul> <p>If non-probability sampling is used: provide an assessment of representativeness, a motivation for the invoked model for estimation and risk of sampling bias</p> |
| <b>6</b> | <b>Timeliness</b>                  | <b>The timeliness of the data collection release to be compiled.</b>  |   |
| 6.1      | Timeliness                         | Length of time between data availability, the event or phenomenon the data describe, and final release to its users.  | Outline the reasons for the time lag, if any. Outline efforts to reduce time lag in future.   |
| <b>7</b> | <b>Coherence and Comparability</b> | <b>Adequacy of statistics to be reliably combined in different ways and for various uses and the extent to which differences between statistics can be attributed to differences between the true values of the statistical characteristics</b> |   |
| 7.1      | Comparability – over time          | The extent to which statistics are comparable or reconcilable over time   | <p>Provide information on possible limitations in the use of data for comparisons over time. Distinguish three broad possibilities:</p> <ol style="list-style-type: none"> <li>1. There have been no changes, in which case this should be reported.</li> <li>2. There have been some changes but not enough to warrant the designation of a break in series.</li> <li>3. There have been sufficient changes to warrant the designation of a break in series.</li> </ol>                  |

|----------|-------------------------------|---|---|
| 7.2      | Coherence                     | The extent to which statistics are reconcilable with System of National Accounts                      | For producer reports only. Where relevant, the results of comparisons with the System of National Account framework / Other Statistical Standards and feedback from System of National Accounts / Other Statistical Standards with respect to coherence and accuracy problems should be reported and should be a trigger for further investigation.   |
| <b>8</b> | <b>Statistical Processing</b> | <b>Any statistical processing undertaken to finalise the data</b>                                     |   |
| 8.1      | Source data type              | Characteristics and components of the raw statistical data used for compiling statistical aggregates. | <p>Indicate if the data are based on a survey, administrative data, multiple data sources, or macro-aggregates.</p> <p>In the event of multisource or macro-aggregate processes describe each source.</p> <p>For each dataset from an administrative source, summarise the source, its primary purpose, and the most important data items acquired</p>  |
| 8.2      | Frequency of data collection  | Time interval at which the source data are collected  | Indicate the frequency of data collection (e.g. monthly, quarterly, annually, or continuous).   |
| 8.3      | Data collection method        | Method applied for gathering data for official statistics   | <p>For each source of survey data:</p> <ul style="list-style-type: none"> <li>• describe the method(s) used to gather data from respondents;</li> <li>• annex or hyperlink the questionnaires(s).</li> </ul> <p>For each source of administrative data:</p> <ul style="list-style-type: none"> <li>• describe the acquisition process and how it was tested.</li> </ul> <p>For all sources:</p> <ul style="list-style-type: none"> <li>• describe the types of checks applied at the time of data entry.</li> </ul> |

| Item No | Concept name     | Definition  | Guidelines  |
|---------|------------------|---|---|
| 8.4     | Data validation  | Process of monitoring the results of data compilation and ensuring the quality of statistical results | <p>Describe the procedures for checking and validating the source data and how the results are monitored and used.</p> <p>Describe the procedures for validating the aggregate output data (statistics) after compilation, including checking coverage and response rates, and comparing with data for previous cycles and with expectations.</p> <p>List other output datasets to which the data relate and outline the procedures for identifying inconsistencies between the output data and these other datasets</p>  |
| 8.5     | Data compilation | Operations performed on data to derive new information according to a given set of rules.             | <p>Describe the procedures for imputation, the most common reasons for imputation and imputation rates within each of the main strata.</p> <p>Describe the likely impact of imputation.</p> <p>Describe the procedures to derive new variables and to calculate aggregates and complex statistics.</p> <p>Describe the procedures for adjustment for non-response and the corrections to the design weights to account for differences in response rates.</p> <p>Describe the calculation of design weights, including calibration (if used).</p> <p>Describe the procedures for combining input data from different sources.</p> <p>Provide the ratio of the number of replaced values to the total number of values for a given variable.</p> <p>Specific reference to formula shall be made. The formula or mathematical equation used while computing different</p> |

|--|
| <b>Definition</b>  |
| An entity primarily responsible for making the resource.   |
| A point or period of time associated with an event in the life of the resource                                     |
| Date (often a range) that the resource became or will be available.  |
| Date of creation of the resource   |
| Date of copyright of the resource.   |
| Date a license was applied or became effective   |
| Date of formal issuance (e.g. publication) of the resource   |
| Date on which the resource was changed.  |
| Date (often a range) of validity of a resource.  |
| A name given to the resource.  |
| An alternative name for the resource.  |
| How the resource can be obtained or accessed, or contact information for obtaining the resource                    |
| An unambiguous reference to the resource within a given context.   |
| A bibliographic reference for the resource.  |
| An entity responsible for making the resource available.   |
| An account of the resource.  |
| The business function to which the resource relates.   |
| A language of the resource.  |
| The topic of the resource.   |
| The nature or genre of the resource.   |
| The level of aggregation of the described resource   |
| The generic type of the resource being described   |
| The form of the described resource where the value of category is 'document'.                                      |
| The form of the described resource where the value of category is 'service'.                                       |
| A class of entity for whom the resource is intended or useful.   |
| An entity responsible for making contributions to the resource.  |
| The spatial or temporal topic of the resource, the spatial applicability of the resource, or the jurisdiction      |
| The name of the political/administrative entity covered by the described resource.                                 |
| Spatial characteristics of the resource.   |
| Temporal characteristics of the resource.  |
| The file format, physical medium, or dimensions of the resource.   |
| The size or duration of the resource.  |
| The material or physical carrier of the resource.  |
| A specific legal instrument which requires or drives the creation or provision of the resource.                    |
| A specific piece of legislation which requires or drives the creation or provision of the resource.                |
| A specific piece of case law which requires or drives the creation or provision of the resource.                   |
| A specific regulation which requires or drives the creation or provision of the resource.                          |
| A related resource.  |
| An established standard to which the described resource conforms.  |
| A related resource that is substantially the same as the pre-existing described resource, but in a different form. |
| A related resource that is included either physically or logically in the described resource.                      |

|  |
|--|
| A related resource that is a version, edition or adaptation of the described resource.             |
| A related resource that is a performance, production, derivation, translation or interpretation of |
| A related resource of which the described resource is a performance, production, derivation, tra   |
| A related resource that is substantially the same as the described resource, but in another forma  |
| A related resource in which the described resource is physically or logically included.            |
| A related resource that references, cites or otherwise points to the described resource.           |
| A related resource that supplants, displaces or supersedes the described resource.                 |
| A related resource that requires the described resource to support its function, delivery or coher |
| A related resource of which the described resource is a version, edition or adaptation.            |
| A related resource that is supplanted, displaced or superseded by the described resource.          |
| A related resource that is required by the described resource to support its function, delivery or |
| Information about rights held in and over the resource.  |
| Information about who can access the resource.   |
| A legal document giving official permission to do something withthe resource.                      |
| A protective marking applied to the described resource.  |
| A person or organisation owning or managing rights over the resource.                              |
| Information about a resource from which the described resource is derived.                         |
| Name of the responsible corporation or organisation.   |
| Country of the postal address.   |
| Address of the electronic mailbox of the responsible party.  |
| Telephone number(s) of a facsimile machine for the responsible party.                              |
| City, suburb, town or other locality of the postal address.  |
| Name of the responsible person.  |
| Physical location of the responsible party.  |
| Position of the responsible person.  |
| Address line for the postal address.   |
| Postal code of the postal address.   |
| Function performed by the responsible party in relation to the described resource.                 |
| Sector of the agent.   |
| State or Territory of the postal address.  |
| Telephone number(s) at which the responsible party may be contacted.                               |
| Location (address) for online access using a Uniform Resource Indicator.                           |
| Name of the responsible corporation or organisation.   |
| Cost of obtaining the resource.  |
| Country of the postal address.   |
| Address of the electronic mailbox of the responsible party.  |
| Telephone number(s) of a facsimile machine for the responsible party.                              |
| Time period (including time zone) when individuals can contact the responsible party.              |
| Supplemental instructions about accessing the resource.  |
| City, suburb, town or other locality of the postal address.  |
| Name of the responsible person.  |
| Information about physical access to premises and services for people with disabilities.           |
| Physical address line of the responsible party.  |

## **0. Prerequisites**

0.1.1 Responsibility for collecting, processing, and disseminating statistics

0.1.2 Data sharing and coordination among data producing agencies

0.1.3 Confidentiality of individual reporters' data

0.1.4 Ensuring statistical reporting

0.2.1 Staff, facilities, computing resources, and financing

0.2.2 Ensuring efficient use of resources

0.3.1 Monitoring user requirements

0.4.1 Quality policy

0.4.2 Quality monitoring

0.4.3 Quality planning

## **1. Integrity**

1.1.1 Impartiality of statistics

1.1.2 Selection of sources, methodology, and modes of dissemination

1.1.3 Commenting on erroneous interpretation and misuse of statistics

1.2.1 Disclosure of terms and conditions for statistical collection, processing, and dissemination

1.2.2 Internal governmental access to statistics prior to release

1.2.3 Attribution of statistical products

1.2.4 Advance notice of major changes in methodology, source data, and statistical techniques

1.3.1 Guidelines for staff behavior

## **2. Methodology**

2.1.1 Concepts and definitions

2.2.1 Scope

2.3.1 Classification/sectorization

2.4.1 Valuation

2.4.2 Recording basis

2.4.3 Grossing/netting procedures

## **3. Accuracy and reliability**

3.1.1 Source data collection programs

3.1.2 Source data definitions, scope, classifications, valuation, and time of recording

3.1.3 Source data timeliness

3.2.1 Source data assessment

3.3.1 Source data statistical techniques

3.3.2 Other statistical procedures

3.4.1 Validation of intermediate results

3.4.2 Assessment of intermediate data

3.4.3 Assessment of discrepancies and other problems in statistical outputs

3.5.1 Revision studies and analyses

## **4. Serviceability**

4.1.1 Periodicity

4.1.2 Timeliness

4.2.1 Internal consistency

4.2.2 Temporal consistency

4.2.3 Intersectoral and cross-domain consistency

|   |
|---|
| 4.3.1 Revision schedule   |
| 4.3.2 Identification of preliminary and/or revised data                                       |
| 4.3.3 Dissemination of revision studies and analyses  |
| <b>5. Accessibility</b>   |
| 5.1.1 Statistical presentation  |
| 5.1.2 Dissemination media and format  |
| 5.1.3 Advance release calendar  |
| 5.1.4 Simultaneous release  |
| 5.1.5 Dissemination on request  |
| 5.2.1 Dissemination of documentation on concepts, scope, classifications, basis of recording, |
| 5.2.2 Disseminated level of detail  |
| 5.3.1 Dissemination of information on contact points  |
| 5.3.2 Availability of documents and services catalogs   |

| <b>Definition</b>   |
| A summary of the resource.  |
| Information about who access the resource or an indication of its security status.                            |
| The method by which items are added to a collection.  |
| The frequency with which items are added to a collection.   |
| The policy governing the addition of items to a collection.   |
| An alternative name for the resource.   |
| A class of agents for whom the resource is intended or useful.  |
| Date that the resource became or will become available.   |
| A bibliographic reference for the resource.   |
| An established standard to which the described resource conforms.   |
| An entity responsible for making contributions to the resource.   |
| The spatial or temporal topic of the resource, the spatial applicability of the resource, or the jurisdiction |
| Date of creation of the resource  |
| An entity primarily responsible for making the resource.  |
| A point or period of time associated with an event in the life of the resource                                |
| Date of acceptance of the resource.   |
| Date of copyright of the resource.  |
| Date of submission of the resource.   |
| An account of the resource.   |
| A class of agents, defined in terms of progression through an educational or training context, for            |
| The size or duration of the resource.   |
| The file format, physical medium, or dimensions of the resource.  |
| A related resource that is substantially the same as the pre-existing described resource, but in a            |
| A related resource that is included either physically or logically in the described resource.                 |
| A related resource that is a version, edition or adaptation of the described resource.                        |
| An unambiguous reference to the resource within a given context.  |
| A process, used to engender knowledge, attitudes and skills, that the described resource is designe           |
| A pre-existing related resource that is substantially the same as the described resource, but in a            |
| A related resource in which the described resource is physically or logically included.                       |
| A related resource that references, cites or otherwise points to the described resource.                      |
| A related resource that supplants, displaces or supersedes the described resource.                            |
| A related resource that requires the described resource to support its function, delivery or coher            |
| Date of formal issuance (e.g. publication) of the resource  |
| A related resource of which the described resource is a version, edition or adaptation.                       |
| A language of the resource.   |
| A legal document giving official permission to do something with the resource.                                |
| An entity that mediates access to the resource.   |
| The material or physical carrier of the resource.   |
| Date on which the resource was changed.   |
| A statement of any changes in ownership and custody of the resource since its creation that are s             |
| An entity responsible for making the resource available.  |

|   |
|---|
| A related resource that is referenced, cited, or otherwise pointed to by the described resource     |
| A related resource  |
| A related resource that is supplanted, displaced, or superseded by the described resource.          |
| A related resource that is required by the described resource to support its function, delivery, or |
| Information about rights held in and over the resource.   |
| A person or organization owning or managing rights over the resource.                               |
| Information about a resource from which the described resource is derived.                          |
| Spatial characteristics of the resource.  |
| The topic of the resource.  |
| A list of subunits of the resource.   |
| Temporal characteristics of the resource.   |
| A name given to the resource.   |
| The nature or genre of the resource.  |

|  |
|--|
| Contact person, title, unit, organisation, phone number, fax, number, email, city, country, postal code [non-MCV]  |
| List original data source(s) used (administrative data, household survey, enterprise/establishment survey, etc).   |
| Refers to full title of the original survey collection, administrative source, database or publication from where the data were obtained.  |
| Refers to the source from where the data was directly collected  |
| The time distance between observations in source (whether stock or flow). Values: Yearly, Quarterly, monthly, irregular  |
| Reference or link to metadata from source  |
| Refers to the date on which the data was last received from the source, e.g. national agency or international organisation. [non-MCV]  |
| Refers to the unit in which associated values are measured, e.g. USD [non-MCV]   |
| Power of 10 by which the reported statistics should be multiplied, e.g. "6" indicating millions of USD. [non-MCV]  |
| List of variables collected or provision of questionnaire [non-MCV]  |
| Refers to information on sample size, sample frame, sample updating, sample (other)  |
| The time distance between observations (whether stock or flow). Values: Yearly, Quarterly, monthly, irregular <other?>   |
| Period of time the data refer to. For business tendency or consumer opinion surveys this field could also refer to the forecasting horizon   |
| The period of time for which data used as the base of an index number, constant prices data or other ratio, have been collected.   |
| Refers to the date on which the data was last updated. [non-MCV]   |
| Refers to a general statement on the schedule of release of data.  |
| OECD contact person, title, unit, phone number, number, email [non-MCV]  |
| Target population (the statistical universe about which information is sought).  |
| The geographic area covered by the data. [non-MCV]   |
| The range of sectors covered by the data [non-MCV]   |
| The range of institutions covered by the data [non-MCV]  |
| The range of items covered by the data [non-MCV]   |
| The population covered by the data [non-MCV]   |
| The range of products covered by the data [non-MCV]  |
| Other issues and information concerning the coverage of the data [non-MCV]   |
| A statistical concept is a statistical characteristic of a time series or an observation. This item should define key statistical concepts included in the domain of study   |
| A classification is a set of discrete, exhaustive and mutually exclusive observations which can be assigned to one or more variables to be measured in the collation and/or presentation of data. This item should list the name of all classifications  |
| Aggregation is the combination of related categories, usually within a common branch of a hierarchy, to provide information at a broader level to that at which detailed observations are taken  |
| Estimation is concerned with inference about the numerical value of unknown population values from incomplete data such as a sample  |
| Refers to procedures for entering a value for a specific data item where the response is missing or unusable.  |
| Mention of interpolations, and other transformations, indicating method used including, if relevant, formulas employed for transformation  |
| A procedure which provides, by reference to independent sources, evidence that an enquiry is free from bias or otherwise conforms to its declared purpose. It may be applied to a sample investigation with the object of showing that the sample is reasonably representative of the population and that the information collected is accurate. Refers to processes applied for the   |
| Index type   |
| Refers to information on sources of weights, nature of weights, period of current index weights, frequency of weight updates, weight   |
| Seasonal adjustment is a statistical technique to remove the effects of seasonal calendar influences operating on a series. Seasonal effects usually reflect the influence of the seasons themselves either directly or through production series related to them, or social conventions. Should provide information to enable users to make an assessment of the validity of the seasonal adjustment applied. Such information would comprise: a short description of the method (software) used; the main parameters of the adjustment (e.g. additive v. multiplicative decomposition) and some of the derived information (e.g. trading-day |
| Manipulation and adjustments not mentioned under the headings Aggregation & consolidation, Estimation, Imputation, Validation, Index type, Weights, Sampling, Seasonal adjustment  |
| Refers to the different dissemination media used to disseminate the data, e.g. news release, paper publication, on-line or database, CD-ROM or other. [non-MCV]  |
| Gives links or references to web sites and publications where the data has been published, used for analytical purposes, etc   |

**Data Dissemination: National Metadata Structure (NMDS) For  
Statistical Products**

August 2021

## Introduction

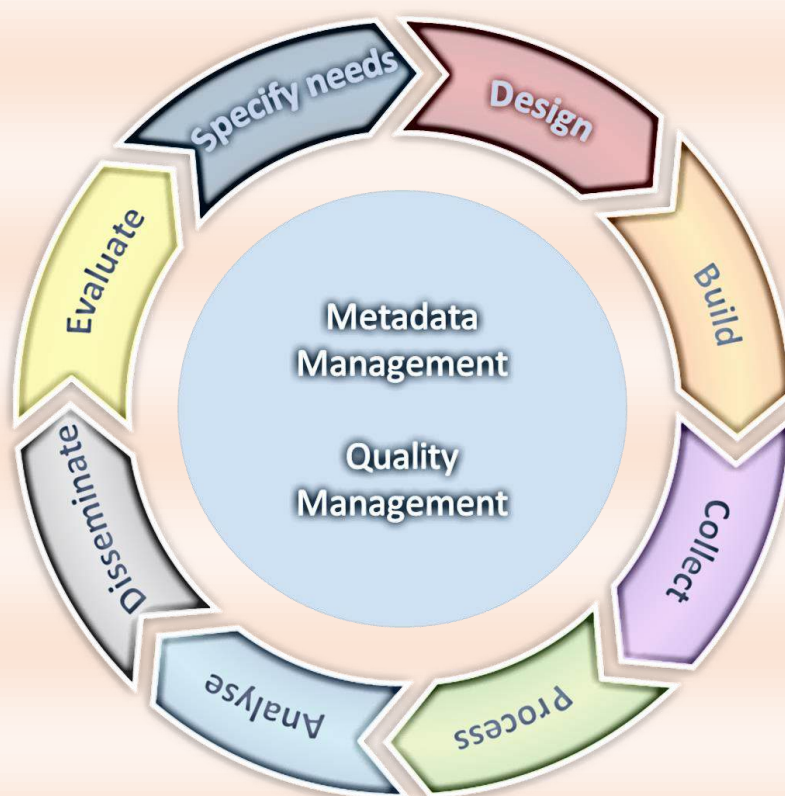

*National Statistical Office (NSO), Ministry of Statistics & Programme Implementation, presents and disseminates data and metadata through different products like Census data (Economic Census); Survey data such as NSS Surveys viz. Household Surveys, etc, Annual Survey of Industries (ASI), Consumer Price Indices (CPI), and macro-economic aggregates like National Income, Index of Industrial Production (IIP). In addition, statistical data is presented in analytical publications such as NSS Reports, Annual Survey of Industries Reports, National Indicator Framework (NIF) for monitoring SDGs, Energy Statistics, EnviStats India, Women & Men in India etc., which provide analysis of data, supported by the visual presentation of that data in the form of graphs and maps.*

The production of data and presentation of metadata structure requires an overview of the arrangements, technical infrastructure and skills required for a holistic and integrated approach to the presentation and dissemination of statistical data and metadata to different user groups. National Metadata Structure (NMDS) is to provide guidelines for the data producer to adhere to a basic minimum quality standard in order to establish and maintain the quality of data and enhance ease in sharing data. The specific objectives of this document are:

- to promote reporting for each type of statistical process and its outputs across different Ministries/Divisions/Departments of NSO, hence facilitating comparisons across processes and outputs;
- to ensure that producer reports contain all the information required to facilitate identification of quality issues and potential improvements in statistical processes and their outputs; and
- to ensure that user reports contain all the information required by users to assess whether statistical outputs are fit for the purposes they have in mind.

## A. What is Metadata?

A.1. Metadata should contain all the information users need to analyse a dataset and draw conclusions. It increases data accessibility by summarizing the most important information (i.e. methodology, sampling design, interview mode, etc.) required for analyzing a dataset which alleviates the need for users to search for supporting documents and reports. Furthermore, good metadata clearly articulates the potential uses for a dataset, preventing potential misuses. Metadata is also a tool for rendering complex microdata structures into something meaningful, navigable, and user-friendly. Finally, the adoption of well-known metadata schemas and vocabularies allows for semantic interoperability.

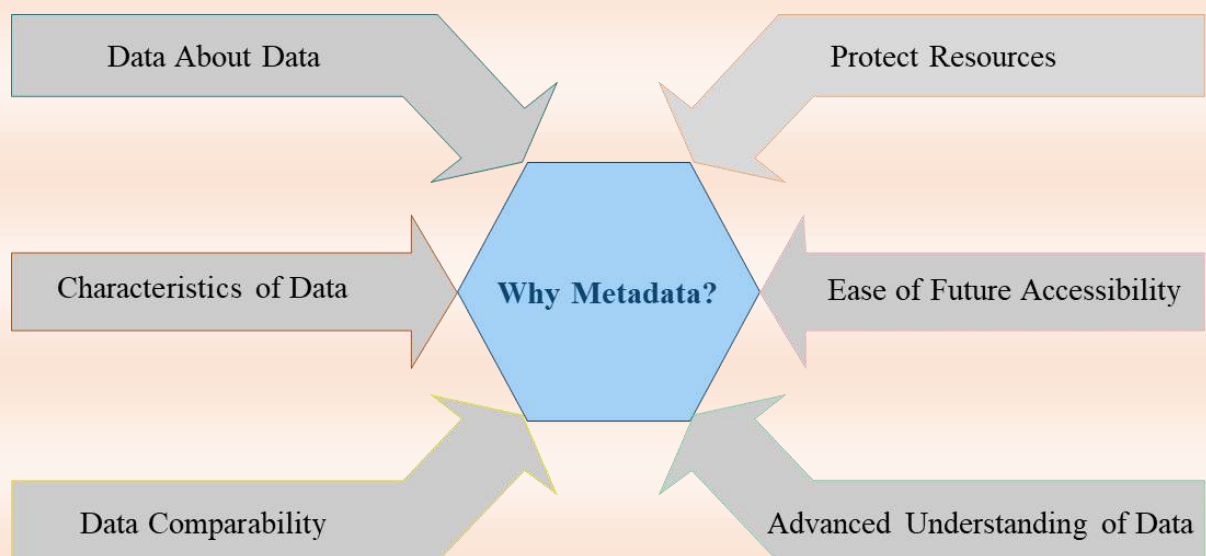

The Metadata process is fully integrated in the Generic Statistical Business Process Model<sup>1</sup> (GSBPM) which has metadata as one of the key elements in the version 5.1.

<sup>1</sup> UNECE: United Nations Economic Commission for Europe, <https://statswiki.unece.org/display/GSBPM/GSBPM+v5.1>

## B. Why Metadata?

- B.1. In most information technology usages, the prefix of meta conveys “an underlying definition or description.” So it is that, at its most basic, metadata is data about data. More precisely, however, metadata describes data containing specific information like type, length, textual description and other characteristics. Metadata makes it much easier to find relevant data and to use a dataset, users need to understand how the data is structured, definitions of terms used, how it was collected, and how it should be read.
- B.2. Metadata is an important way to protect resources and their future accessibility. For archiving and preservation purposes, it takes metadata elements that track the object’s lineage, and describe its physical characteristics and behaviour so it can be replicated on technologies in the future.

- B.3. In today’s modern data driven world and in the era of digital transactions, huge amount of data is generated on real time basis, and lately, a large number of organisations/agencies have started producing data, the quantum of which is huge, and thus arises a need of standard regulatory framework to be laid down to assure the quality of data produced by different producers. It will also serve the purpose of ensuring data comparability across time horizons so as to enable better understanding of different social and economic movements.

- B.4. Although metadata may not seem exciting or impressive, the true importance of metadata can never be underrated and hence, is important to take a concerted effort to build sound metadata structure to draw maximum gains from varied data sets.

### **C. Role of MoSPI in Building Metadata Structure**

- C.1. MoSPI being a nodal agency for planned development of the statistical system in the country is also responsible for maintaining the highest standards of data quality which adhere to basic guidelines of International Agencies so as to ensure India's statistical system is one of the frontrunners in quality data producer. MoSPI aims at raising the National Statistical System (NSS) to the epitome of being one of the best professionally equipped government data producing agencies by building the best of IT infrastructure among others in the system, and Metadata is one of the building blocks to achieve the objective.
- C.2. The document presents the NMDS in two formats- the first one is the indexed version as NMDS concepts (Section F), and the second one presents details of concepts through definition and guidelines (Section G).

### **D. Metadata Management**

- D.1 It is advisable to put in place a metadata policy by the official statistical producing agencies, ab initio. The policy is a set of broad, high level principles that form the guiding framework within which metadata management can operate.
- D.2 Once the metadata policy is put in place, for an organisation, metadata should be compiled and maintained actively. Otherwise, the currency, and thus use of Metadata will degrade with time. To realise the full capabilities of Metadata, it is necessary that the Metadata are maintained over a long period of time. Even with investment in technically sophisticated search tools, such systems may find little stakeholders acceptance, if the data are incomplete or is not updated regularly.

While preparing the NMDS, the following core principles should be borne in mind:

- i. Metadata Handling:
  - a. Statistical Business Process Model
  - b. Active, not Passive
  - c. Reuse for Efficiency
  - d. Version Preservations
  
- ii. Metadata Authority
  - e. Registration
  - f. Single Source
  - g. One Entry/Update
  - h. Standards Variations
  
- iii. Relationship to Statistical Business Processes
  - i. Integrity
  - j. Matching Metadata
  - k. Describe Flow
  - l. Capture at Source
  - m. Exchange and Use
  
- iv. Users
  - n. Identify Users
  - o. Variant Formats
  - p. Availability

## **E. Retention, Preservation, and Destruction**

National Statistics constitute valuable and irreplaceable assets whose value can increase through widespread and long-term use. National Statistics should thus be backed by the Data Management Policy eliciting the arrangements it has in place for the retention, long term preservation, and destruction of its resources including Metadata.

## F. National Metadata Structure (NMDS) Concepts - Index

| Item No  | Concept name   | Item No  | Concept name                         |
|----------|--|----------|--------------------------------------|
| <b>1</b> | <b><u>Contact</u></b>                                  | 7.2      | Coherence                            |
| 1.1      | Contact Organisation                                   | <b>8</b> | <b><u>Statistical Processing</u></b> |
| 1.2      | Compiling Agency                                       | 8.1      | Source data type                     |
| 1.3      | Contact Details  | 8.2      | Frequency of data collection         |
| <b>2</b> | <b><u>Statistical Presentation and Description</u></b> | 8.3      | Data collection method               |
| 2.1      | Data description                                       | 8.4      | Data validation                      |
| 2.2      | Classification system                                  | 8.5      | Data compilation                     |
| 2.3      | Sector coverage  | <b>9</b> | <b><u>Metadata Update</u></b>        |
| 2.4      | Statistical concepts and definitions                   | 9.1      | Metadata last posted                 |
| 2.5      | Statistical unit                                       | 9.2      | Metadata last update                 |
| 2.6      | Statistical population                                 |          |                                      |
| 2.7      | Reference Period                                       |          |                                      |
| 2.8      | Data Confidentiality                                   |          |                                      |
| <b>3</b> | <b><u>Institutional Mandate</u></b>                    |          |                                      |
| 3.1      | Legal acts and other agreements                        |          |                                      |
| 3.2      | Data sharing   |          |                                      |
| 3.3      | Release policy   |          |                                      |
| 3.4      | Release calendar                                       |          |                                      |
| 3.5      | Frequency of dissemination                             |          |                                      |
| 3.6      | Data access  |          |                                      |
| <b>4</b> | <b><u>Quality Management</u></b>                       |          |                                      |
| 4.1      | Documentation on methodology                           |          |                                      |
| 4.2      | Quality documentation                                  |          |                                      |
| 4.3      | Quality assurance                                      |          |                                      |
| 4.4      | Quality assessment                                     |          |                                      |
| <b>5</b> | <b><u>Accuracy and Reliability</u></b>                 |          |                                      |
| 5.1      | Sampling error   |          |                                      |
| <b>6</b> | <b><u>Timeliness</u></b>                               |          |                                      |
| 6.1      | Timeliness   |          |                                      |
| <b>7</b> | <b><u>Coherence and Comparability</u></b>              |          |                                      |
| 7.1      | Comparability – over time                              |          |                                      |

## G. Details of NMDS Concepts

| Item No | Concept name         | Definition   | Guidelines   |
|---------|----------------------|--|--|
| 1       | Contact              | <b>Individual or organisational contact points for the data or metadata, including information on how to reach the contact points.</b> |  |
| 1.1     | Contact Organisation | The name of the organisation of the contact points for the data or Metadata.   | Provide the full name (not just acronym/code name) of the organisation responsible for the processes and outputs (data and metadata) that are the subject of the report  |
| 1.2     | Compiling agency     | Organisation collecting and/or elaborating the data being reported   | Provide the full name of the Department/Division under the organisation responsible for the processes and outputs (data and metadata) that are the subject of the report   |
| 1.3     | Contact Details      | The details of the contact points for the data or metadata.  | <p>Provide contact details of contact point(s) in following format:</p> <ul style="list-style-type: none"> <li>a. Name of Organisation owning the processes and outputs</li> <li>b. Author (if different from (a))</li> <li>c. Disseminating Agency (if different from (a) and (b))</li> <li>d. Name (first and last names)</li> <li>e. Designation</li> <li>f. Postal address</li> <li>g. email address (preferably designation based)</li> <li>h. Contact number</li> <li>i. Fax number</li> </ul> <p>If more than one name is provided, the details of main contact should be indicated. If the author of the report is different from the person(s) responsible for process and its outputs, provide this name also with his/her details</p> |

| Item No  | Concept name                                    | Definition   | Guidelines   |
|----------|---|--|--|
| <b>2</b> | <b>Statistical Presentation and Description</b> | <b>Description of the disseminated data which can be displayed to users as tables, graphs or maps</b>    |  |
| 2.1      | Data description                                | Main characteristics of the data set, referring to the data and indicators disseminated.                 | Describe briefly the main characteristics of the data in an easily and quickly understandable manner, referring to the main variables disseminated.  |
| 2.2      | Classification system                           | Arrangement or division of objects into groups based on characteristics which the objects have in common | List all classifications and breakdowns that are used in the data (with their detailed names) and provide links (if publicly available).<br>Type of dis-aggregation available in the data sets - for example rural-urban, male-female, etc. and whether data is available at the sub-national level or not, should be clearly specified. |
| 2.3      | Sector coverage                                 | Main economic or other sectors   | List the main economic or other sectors covered by the data and the size classes used, for example, Health/ Education/ Manufacturing etc for sectors and classes based on number of employees for size classes   |
| 2.4      | Statistical concepts and definitions            | Statistical characteristics of statistical observations, variables                                       | Define and describe briefly the main statistical variables that have been observed or derived. Indicate their types.   |
| 2.5      | Statistical unit                                | Entity for which information is sought and for which statistics are ultimately compiled.                 | Define the type of statistical unit about which data are collected, e.g. enterprise, household, etc.   |
| 2.6      | Statistical population                          | The total population of a defined class of people, objects or events                                     | Define the target population of statistical units for which information is sought. For example, agricultural household, general household, industrial unit, etc.   |

| Item No  | Concept name                      | Definition  | Guidelines   |
|----------|-----------------------------------|---|--|
| 2.7      | Reference Period                  | The length of time for which data are available   | State the time period(s) for which data is collected   |
| 2.8      | Data Confidentiality <sup>2</sup> | Rules applied for treating the datasets to ensure statistical confidentiality and prevent unauthorised disclosure.  | Describe the procedures that are used in protecting confidentiality, viz., anonymisation, legal provision, if any.   |
| <b>3</b> | <b>Institutional Mandate</b>      | <b>Law, set of rules or other formal set of instructions assigning responsibility as well as the authority to an organisation for the collection, processing, and dissemination of statistics</b> |  |
| 3.1      | Legal acts and other agreements   | Legal acts or other formal or informal agreements that assign responsibility as well as the authority to an agency for the collection, processing, and dissemination of statistics                | State the national legal acts and/or other reporting agreements  |
| 3.2      | Data sharing                      | Arrangements or procedures for data sharing and coordination between data producing agencies.   | Describe the arrangements, procedures or agreements to facilitate data sharing and exchange between data producing agencies within the national statistical system |

<sup>2</sup> All statistical information published by any agency shall be arranged in such a manner so as to prevent any particulars becoming identifiable by any person (other than the informant by whom those particulars were supplied) as the particulars relating to the informant who supplied it, even through the process of elimination (Source: Collection of Statistics Act, 2008).

| Item No | Concept name               | Definition   | Guidelines  |
|---------|----------------------------|--|---|
| 3.3     | Release policy             | Rules for disseminating statistical data to all interested parties                   | State if the release of the products is governed by some policy etc.  |
| 3.4     | Release calendar           | The schedule of statistical release dates.   | State whether there is a release calendar for the statistical outputs from the process being reported, and if so, whether this calendar is publicly accessible and if yes, give a link or reference.  |
| 3.5     | Frequency of dissemination | The time interval at which the statistics are disseminated over a given time period. | State the frequency with which the data are disseminated, e.g. monthly, quarterly, yearly.  |
| 3.6     | Data access                | The conditions and modalities by which users can access, use and interpret data      | <p>State the conditions and link on website from where the user can access the data</p> <p>For easy access of users, following details should also be mentioned about the dataset:</p> <p><b>Title:</b> Name by which the data is known<br/> <b>Dataset Edition:</b> Edition of data (ex: first, second, final etc)<br/> <b>Dataset Reference data type:</b> Type of data entered in the field (ex: .txt, .dbf, .xls)<br/> <b>Presentation Format:</b> Presentation format of the data (ex: document, map, table, etc.)<br/> <b>Dataset Language:</b> language of any text in the data<br/> <b>Status/Version:</b> How updated is the data?</p> |

| Item No | Concept name                 | Definition   | Guidelines   |
|---------|------------------------------|--|--|
| 4       | Quality Management           | Systems and frameworks in place within an organisation to manage the quality of statistical products and processes.  |  |
| 4.1     | Documentation on methodology | Descriptive text and references to methodological documents available.   | List reference metadata files, methodological papers, summary documents and handbooks relevant to the statistical process.   |
| 4.2     | Quality documentation        | Documentation on procedures applied for quality management and quality assessment.   | List relevant quality related documents, for example, other quality reports, studies.  |
| 4.3     | Quality assurance            | All systematic activities implemented that can be demonstrated to provide confidence that the processes will fulfil the requirements for the statistical output. | <p>Describe the procedures (such as use of a general quality management system based on ISO 9000 series) to promote general quality management principles in the organisation.</p> <p>Describe the quality assurance framework used to implement statistical quality principles.</p> <p>Describe the quality assurance procedures specifically applied to the statistical process for which the report is being prepared, for example training courses, process monitoring, benchmarking, assessments, and use of best practices.</p> <p>Describe any ongoing or planned improvements in quality assurance procedures.</p> |

| Item No | Concept name             | Definition  | Guidelines  |
|---------|--------------------------|---|---|
| 4.4     | Quality assessment       | Overall assessment of data quality, based on standard quality criteria.   | Summarise the results of the most recent quality assessments and cross reference to the chapters in the report where the results are presented in more detail.  |
| 5       | Accuracy and Reliability | <b>Accuracy of data is the closeness of computations or estimates to the exact or true values that the statistics were intended to measure. Reliability of the data, defined as the closeness of the initial estimated value to the subsequent estimated value.</b> |   |
| 5.1     | Sampling error           | That part of the difference between a population value and an estimate thereof, derived from a random sample, which is due to the fact that only a subset of the population is enumerated.  | <p>If probability sampling is used:</p> <ul style="list-style-type: none"> <li>• for user reports-provide the range of variation of the A1<sup>3</sup> indicator among key variables at user report level of detail;</li> <li>• for producer reports-provide the range of variation of the A1 indicator among key variables at producer report level of detail;</li> <li>• indicate the impact of sampling error on the overall accuracy of the results;</li> <li>• state how the calculation of sampling error is affected by adjustments for nonresponse, misclassifications and other sources of uncertainty, such as outlier treatment.</li> </ul> <p>If non-probability sampling is used:<br/>provide an assessment of representativeness, a motivation for the invoked model for estimation and risk of sampling bias</p> |

<sup>3</sup> In international terminology, A1 is simply used for Sampling Errors. In other words, indicator for Sampling Errors is denoted by A1. For further details, refer to: <https://ec.europa.eu/eurostat/documents/64157/4373903/02-ESS-Quality-and-performance-Indicators-2014.pdf/5c996003-b770-4a7c-9c2f-bf733e6b1f31>

| Item No | Concept name                       | Definition  | Guidelines   |
|---------|------------------------------------|---|--|
| 6       | Timeliness                         | <b>The timeliness of the data collection release to be compiled.</b>  |  |
| 6.1     | Timeliness                         | Length of time between data availability, the event or phenomenon the data describe, and final release to its users.  | Outline the reasons for the time lag, if any. Outline efforts to reduce time lag in future.  |
| 7       | <b>Coherence and Comparability</b> | <b>Adequacy of statistics to be reliably combined in different ways and for various uses and the extent to which differences between statistics can be attributed to differences between the true values of the statistical characteristics</b> |  |
| 7.1     | Comparability over time            | The extent to which statistics are comparable or reconcilable over time   | Provide information on possible limitations in the use of data for comparisons over time. Distinguish three broad possibilities:<br>1. There have been no changes, in which case this should be reported.<br>2. There have been some changes but not enough to warrant the designation of a break in series.<br>3. There have been sufficient changes to warrant the designation of a break in series. |
| 7.2     | Coherence                          | The extent to which statistics are reconcilable with System of National Accounts  | For producer reports only. Where relevant, the results of comparisons with the System of National Account framework / Other Statistical Standards and feedback from System of National Accounts / Other Statistical Standards with respect to coherence and accuracy problems should be reported and should be a trigger for further investigation.  |

| Item No  | Concept name                  | Definition  | Guidelines  |
|----------|-------------------------------|---|---|
| <b>8</b> | <b>Statistical Processing</b> | <b>Any statistical processing undertaken to finalise the data</b>                                     |   |
| 8.1      | Source data type              | Characteristics and components of the raw statistical data used for compiling statistical aggregates. | <p>Indicate if the data are based on a survey, administrative data, multiple data sources, or macro-aggregates.</p> <p>In the event of multisource or macro-aggregate processes describe each source.</p> <p>For each dataset from an administrative source, summarise the source, its primary purpose, and the most important data items acquired</p>  |
| 8.2      | Frequency of data collection  | Time interval at which the source data are collected  | Indicate the frequency of data collection (e.g. monthly, quarterly, annually, or continuous).   |
| 8.3      | Data collection method        | Method applied for gathering data for official statistics   | <p>For each source of survey data:</p> <ul style="list-style-type: none"> <li>• describe the method(s) used to gather data from respondents;</li> <li>• annex or hyperlink the questionnaires(s).</li> </ul> <p>For each source of administrative data:</p> <ul style="list-style-type: none"> <li>• describe the acquisition process and how it was tested.</li> </ul> <p>For all sources:</p> <ul style="list-style-type: none"> <li>• describe the types of checks applied at the time of data entry.</li> </ul> |

| Item No | Concept name     | Definition  | Guidelines  |
|---------|------------------|---|---|
| 8.4     | Data validation  | Process of monitoring the results of data compilation and ensuring the quality of statistical results | <p>Describe the procedures for checking and validating the source data and how the results are monitored and used.</p> <p>Describe the procedures for validating the aggregate output data (statistics) after compilation, including checking coverage and response rates, and comparing with data for previous cycles and with expectations.</p> <p>List other output datasets to which the data relate and outline the procedures for identifying inconsistencies between the output data and these other datasets</p>  |
| 8.5     | Data compilation | Operations performed on data to derive new information according to a given set of rules.             | <p>Describe the procedures for imputation, the most common reasons for imputation and imputation rates within each of the main strata.</p> <p>Describe the likely impact of imputation.</p> <p>Describe the procedures to derive new variables and to calculate aggregates and complex statistics.</p> <p>Describe the procedures for adjustment for non-response and the corrections to the design weights to account for differences in response rates.</p> <p>Describe the calculation of design weights, including calibration (if used).</p> <p>Describe the procedures for combining input data from different sources.</p> |

| Item No  | Concept name           | Definition  | Guidelines   |
|----------|------------------------|---|--|
|          |                        |   | <p>Provide the ratio of the number of replaced values to the total number of values for a given variable.</p> <p>Specific reference to formula shall be made. The formula or mathematical equation used while computing different variables in the report may be described here in a structured format showing the Numerator; Denominator and Multiplier used for computing the same</p> |
| <b>9</b> | <b>Metadata Update</b> | <b>The date on which the metadata element was inserted or modified in the database.</b> |  |
| 9.1      | Metadata last posted   | Date of the latest dissemination of the metadata  | The date when the complete set of metadata was last disseminated as a block should be provided (manually, or automatically by the metadata system).  |
| 9.2      | Metadata last update   | Date of last update of the content of the metadata.                                     | The date when any metadata were last updated should be provided (manually, or automatically by the metadata system).   |

**Conference of Central and State Statistical Organizations(CoCSSO)  
New Delhi**

**State Participation  
in conducting National Sample Survey**

**Directorate of Economics &  
Statistics,Karnataka**

**Date:12-08-2024**

## **State's Participation**

- **Till the 8th round ( 1954-55 ), only GOI was involved in survey work.**
- **Karnataka has been participating in the National Sample Surveys since 1963 i.e. 18<sup>th</sup> round on an equal matching basis.**
- **The main idea of State participation in the NSS Programme is to provide more desegregated results at the regional level by pooling the results related to central and state samples.**

## FIELD WORK

- **Sample design, selection of sample, preparation of questionnaire, instructions, etc., are the responsibility of the NSSO in respect State Sample**
- **NSSO also provides blank Schedules, training, technical guidance for conducting the survey.**
- **The State shall adopt uniform concepts, definitions and field procedures.**

# **FIELD WORK**

- **DES conduct the state level training for district staff for field work, data entry and first phase validation**
- **Two Statistical Inspectors (with minimal variation in some districts) and Assistant Statistical Officers in District Statistical Offices are trained for the purpose of carrying out field work.**

# **DATA ENTRY & VALIDATION**

- **Data entry, Validation and Tabulation software is provided by the NSSO and is used in the State.**
- **In Karnataka, the responsibilities range from field operations to publication of survey results conducted by the Directorate of Economics and Statistics**
- **DES conduct the State level training for District Staff for data entry and first stage validation.**

## **Processing of data & publication of reports**

- **DES brought out the publications related to state sample data.**
- **Since the 66th round, DES has been pooling the data of the central and state samples and brought out the publications of the pooled results.**
- **DES has published the pooled data results till the 76th round.**
- **State sample reports are hosted on the Department's website.**

## **Pooling of Central and State Samples Data of NSS**

- **Two data sets (one from NSSO and the other by DES) were pooled together to obtain reliable and acceptable (free from agency bias) estimates.**
- **Pooling results in greater accuracy of estimates.**
- **To fill data gaps at district level on socio-economic indicators.**
- **Derivation of weighting diagram based on pooled data for construction of proposed CPI Numbers for rural and urban areas at sub-state level**

# National Sample Survey

- The 76<sup>th</sup> round has been completed and results have been published.
- For rounds 77 and 78, fieldwork and validation completed, pooling software is awaited.
- The 77th and 78th round results are yet to be declared.

# National Sample Survey -79<sup>th</sup> Round

- The present NSS 79th round of National Sample Survey is devoted for collection of data on **Comprehensive Annual Modular Survey & AYUSH**.
- Period of survey : July 2022 - June 2023
- Till 78<sup>th</sup> round State was conducting survey through Paper Assisted Personnel Interview (PAPI).
- 79<sup>th</sup> Round: DES was conducted through Computer Assisted Personnel Interview (CAPI) mode.
- DES used the software provided by the NSSO.

# **National Sample Survey -79<sup>th</sup> Round**

- **BY using CAPI in the field the survey is completed on time and it reduce time.**
- **Due to the inbuilt software the error is reduced and some data is validated automatically.**
- **DES has taken the steps to use CAPI for the 79<sup>th</sup> NSS Survey, which results in all samples i.e. 632 completed on time.**
- **Every data saved in CAPI, awaiting the software for validation, tabulation and pooling from NSSO**

*Thank you*

# National Metadata Structure (NMDS)

A Standard Set of Guidelines for Ensuring Quality of Statistical Products Released

# Objectives

- Promote reporting for each type of statistical process and its outputs across different Ministries/Divisions/Departments of NSO, hence facilitating comparisons across processes and outputs;
- Ensure that producer reports contain all the information required to facilitate identification of quality issues and potential improvements in statistical processes and their outputs; and
- Ensure that user reports contain all the information required by users to assess whether statistical outputs are fit for the purposes they have in mind.

## What is metadata?

- It is structured information or documentation about data which:
  - informs users about the content, quality and condition of data;
  - describes the structure of datasets, explains, locates, or makes it easier to retrieve, use, or manage data;
  - provides information on the processes of data production;
  - guides on proper usage or interpretation of data.
- “Data that define and describe other data” (ISO definition)
- “Information about information” (Dion, 2006)

# Why Metadata

## What does metadata do?

- Assist in retrieving and processing data
- Support correct use of data
- Provide transparency in data
- Enhance interoperability
- Improve archiving, preservation, institutional memory over time

## Types of metadata

- **Structural metadata**
  - provide information about the structure of the dataset
  - act as identifiers and descriptors of the data, making it possible to properly identify, retrieve and browse the data
- **Reference metadata**
  - allow a thorough understanding and interpretation of the corresponding statistical data
  - Describe the concepts, definitions, methodology and quality of data; production and dissemination process, data access conditions, release policy, confidentiality, etc

## Metadata standards (cont'd)

Two international metadata standards are becoming well established:

- **SDMX (Statistical Data and Metadata Exchange)**

a number of international agencies have endorsed SDMX;  
supported by the UN Statistical Commission

- **DDI (Data Dissemination Initiative)**

*Microdata Management Toolkit* of WB uses the DDI  
metadata standard

## Users of metadata

Metadata support the knowledge of potential user of statistical information. The major users include:

- Users of statistical data
- Producers of statistical data
- Researchers on the development of statistical systems

# Metadata Structure: International Organisations

# UN SDG Metadata Concept

- **SDG metadata concepts (7):**

- Indicator information
- Data reporter
- Definition, concepts and classifications
- Data source type and data collection method
- Other methodological considerations
- Comparability/deviation from international standards
- References and documentation

**Figure 2. The Euro SDMX Metadata Structure**

# Elements of Metadata Structure: Comparison amongst selected NSOs

# Detailed Concepts of Metadata

# Contact

 [Back to Brief Concepts](#)

| Item No | Concept name         | Definition   | Guidelines   |
|---------|----------------------|--|--|
| 1       | Contact              | <b>Individual or organisational contact points for the data or metadata, including information on how to reach the contact points.</b> |  |
| 1.1     | Contact Organisation | The name of the organisation for data or metadata.   | Provide the full name (not just acronym) of the organisation responsible for the processes and outputs (data and metadata) that are the subject of the report  |
| 1.2     | Compiling Agency     | Organisation collecting and/or elaborating the data being reported   | Provide the full name of the Division under the organisation responsible for the processes and outputs (data and metadata) that are the subject of the report  |
| 1.3     | Contact Details      | The details of the contact points for the data or metadata.  | <p>Provide contact details of contact point(s) in following format:</p> <ul style="list-style-type: none"> <li>a. Organisation Name owning the processes and outputs:</li> <li>b. Author (if different from (a))</li> <li>c. Disseminating Agency (if different from (a) and (b))</li> <li>d. Name (first and last names):</li> <li>e. Designation:</li> <li>f. Postal address:</li> <li>g. email address (preferably designation based):</li> <li>h. Contact number:</li> <li>i. Fax number:</li> </ul> <p>If more than one name is provided, the details of main contact should be indicated. If the author of the report is different from the person(s) responsible for process and its outputs, provide this name also with his/her details</p> |

# Statistical Presentation and Description

 [Back to Brief Concepts](#)

| 2   | Statistical presentation and description | Description of the disseminated data which can be displayed to users as tables, graphs or maps                     |  |
|-----|--|--|--|
| 2.1 | Data description                         | Main characteristics of the data set, referring to the data and indicators disseminated.                           | Describe briefly the main characteristics of the data in an easily and quickly understandable manner, referring to the main variables disseminated.  |
| 2.2 | Classification system                    | Arrangement or division of objects into groups based on characteristics which the objects have in common           | List all classifications and breakdowns that are used in the data (with their detailed names) and provide links (if publicly available).<br><br>Type of dis-aggregation available in the data sets - for example rural-urban, male-female, etc. and whether data is available at the sub-national level or not, should be clearly specified. |
| 2.3 | Sector coverage                          | Main economic or other sectors   | List the main economic or other sectors covered by the data and the size classes used, for example, Health/ Education/ Manufacturing etc   |
| 2.4 | Statistical concepts and definitions     | Statistical characteristics of statistical observations, variables   | Define and describe briefly the main statistical variables that have been observed or derived. Indicate their types.   |
| 2.5 | Statistical unit                         | Entity for which information is sought and for which statistics are ultimately compiled.                           | Define the type of statistical unit about which data are collected, e.g. enterprise, household, etc.   |
| 2.6 | Statistical population                   | The total population of a defined class of people, objects or events   | Define the target population of statistical units for which information is sought  |
| 2.7 | Reference Period                         | The length of time for which data are available  | State the time period(s) for which data is collected   |
| 2.8 | Base period                              | The period of time used as the base of an index number, or to which a constant series refers.                      | Note that this concept applies only to certain types of outputs, such as indexes, for which a base period is defined and used. Eg, CPI, IIP, etc.  |
| 2.9 | Data Confidentiality                     | Rules applied for treating the datasets to ensure statistical confidentiality and prevent unauthorised disclosure. | Describe the procedures that are used in protecting confidentiality.   |

# Institutional Mandate

| 3   | Institutional mandate           | Law, set of rules or other formal set of instructions assigning responsibility as well as the authority to an organisation for the collection, processing, and dissemination of statistics |   |
|-----|---------------------------------|--|---|
| 3.1 | Legal acts and other agreements | Legal acts or other formal or informal agreements that assign responsibility as well as the authority to an agency for the collection, processing, and dissemination of statistics         | State the national legal acts and/or other reporting agreements   |
| 3.2 | Data sharing                    | Arrangements or procedures for data sharing and coordination between data producing agencies.  | Describe the arrangements, procedures or agreements to facilitate data sharing and exchange between data producing agencies within the national statistical system  |
| 3.3 | Release policy                  | Rules for disseminating statistical data to all interested parties   | State if the release of the products is governed by some policy etc.  |
| 3.4 | Release calendar                | The schedule of statistical release dates.   | State whether there is a release calendar for the statistical outputs from the process being reported, and if so, whether this calendar is publicly accessible and if yes, give a link or reference.  |
| 3.5 | Frequency of dissemination      | The time interval at which the statistics are disseminated over a given time period.   | State the frequency with which the data are disseminated, e.g. monthly, quarterly, yearly.  |
| 3.6 | Data access                     | The conditions and modalities by which users can access, use and interpret data  | <p>State the conditions and link on website from where the user can access the data</p> <p>For easy access of users, following details should also be mentioned about the dataset:</p> <p><b>Title:</b> Name by which the data is known</p> <p><b>Dataset Edition:</b> Edition of data (ex: first, second, final etc)</p> <p><b>Dataset Reference data type:</b> Type of data entered in the field (ex: .txt, .dbf, .xls)</p> <p><b>Presentation Format:</b> Presentation format of the data (ex: document, map, table, etc.)</p> <p><b>Dataset Language:</b> language of any text in the data</p> <p><b>Status/Version:</b> How updated is the data?</p> |

# Quality Management

 [Back to Brief Concepts](#)

|     |                              |  |   |
|-----|------------------------------|--|---|
| 4.  | <b>Quality management</b>    | <b>Systems and frameworks in place within an organisation to manage the quality of statistical products and processes.</b>                                       |   |
| 4.1 | Documentation on methodology | Descriptive text and references to methodological documents available.   | List reference metadata files, methodological papers, summary documents and handbooks relevant to the statistical process.  |
| 4.2 | Quality documentation        | Documentation on procedures applied for quality management and quality assessment.   | List relevant quality related documents, for example, other quality reports, studies.   |
| 4.3 | Quality assurance            | All systematic activities implemented that can be demonstrated to provide confidence that the processes will fulfil the requirements for the statistical output. | Describe the procedures (such as use of a general quality management system based on ISO 9000 series) to promote general quality management principles in the organisation.   |
|     |                              |  | Describe the quality assurance framework used to implement statistical quality principles.  |
|     |                              |  | Describe the quality assurance procedures specifically applied to the statistical process for which the report is being prepared, for example training courses, process monitoring, benchmarking, assessments, and use of best practices. |
|     |                              |  | Describe any ongoing or planned improvements in quality assurance procedures.   |
| 4.4 | Quality assessment           | Overall assessment of data quality, based on standard quality criteria.  | Summarise the results of the most recent quality assessments and cross reference to the chapters in the report where the results are presented in more detail.  |

# Accuracy and Reliability

 [Back to Brief Concepts](#)

|     |                          |  |  |
|-----|--------------------------|--|--|
| 5   | Accuracy and reliability | Accuracy of data is the closeness of computations or estimates to the exact or true values that the statistics were intended to measure. Reliability of the data, defined as the closeness of the initial estimated value to the subsequent estimated value. |  |
| 5.1 | Sampling error           | That part of the difference between a population value and an estimate thereof, derived from a random sample, which is due to the fact that only a subset of the population is enumerated.   | <p>If probability sampling is used:</p> <ul style="list-style-type: none"><li>• for user reports-provide the range of variation of the A1 indicator among key variables at user report level of detail;</li><li>• for producer reports-provide the range of variation of the A1 indicator among key variables at producer report level of detail;</li><li>• indicate the impact of sampling error on the overall accuracy of the results;</li><li>• state how the calculation of sampling error is affected by adjustments for nonresponse, misclassifications and other sources of uncertainty, such as outlier treatment.</li></ul> <p>If non-probability sampling is used:<br/>provide an assessment of representativeness, a motivation for the invoked model for estimation and risk of sampling bias</p> |

# Timeliness and Punctuality

 [Back to Brief Concepts](#)

| 6   | Timeliness | The timeliness of the data collection release to be compiled.  |   |
|-----|------------|--|---|
| 6.1 | Timeliness | Length of time between data availability, the event or phenomenon the data describe, and final release to its users. | Outline the reasons for the time lag, if any. Outline efforts to reduce time lag in future. |

# Coherence and Comparability

 [Back to Brief Concepts](#)

| 7   | Coherence and comparability | Adequacy of statistics to be reliably combined in different ways and for various uses and the extent to which differences between statistics can be attributed to differences between the true values of the statistical characteristics |  |
|-----|-----------------------------|--|--|
| 7.1 | Comparability – over time   | The extent to which statistics are comparable or reconcilable over time  | <p>Provide information on possible limitations in the use of data for comparisons over time. Distinguish three broad possibilities:</p> <ol style="list-style-type: none"> <li>1. There have been no changes, in which case this should be reported.</li> <li>2. There have been some changes but not enough to warrant the designation of a break in series.</li> <li>3. There have been sufficient changes to warrant the designation of a break in series.</li> </ol> |
| 7.6 | Coherence                   | The extent to which statistics are reconcilable with System of National Accounts.  | For producer reports only. Where relevant, the results of comparisons with the System of National Account framework / Other Statistical Standards and feedback from System of National Accounts / Other Statistical Standards with respect to coherence and accuracy problems should be reported and should be a trigger for further investigation.  |

# Statistical Processing

 [Back to Brief Concepts](#)

| 8   | Statistical processing       | Any statistical processing undertaken to finalise the data  |   |
|-----|------------------------------|---|---|
| 8.1 | Source data type             | Characteristics and components of the raw statistical data used for compiling statistical aggregates. | <p>Indicate if the data are based on a survey, administrative data, multiple data sources, or macro-aggregates.</p> <p>In the event of multisource or macro-aggregate processes describe each source.</p> <p>For each dataset from an administrative source, summarise the source, its primary purpose, and the most important data items acquired</p>  |
| 8.2 | Frequency of data collection | Time interval at which the source data are collected  | Indicate the frequency of data collection (e.g. monthly, quarterly, annually, or continuous).   |
| 8.3 | Data collection method       | Method applied for gathering data for official statistics.  | <p>For each source of survey data:</p> <ul style="list-style-type: none"> <li>• describe the method(s) used to gather data from respondents;</li> <li>• annex or hyperlink the questionnaires(s).</li> </ul> <p>For each source of administrative data:</p> <ul style="list-style-type: none"> <li>• describe the acquisition process and how it was tested.</li> </ul> <p>For all sources:</p> <ul style="list-style-type: none"> <li>• describe the types of checks applied at the time of data entry.</li> </ul> |

# Statistical Processing (Contd...)

 [Back to Brief Concepts](#)

|     |                  |   |  |
|-----|------------------|---|--|
| 8.4 | Data validation  | Process of monitoring the results of data compilation and ensuring the quality of statistical results | <p>Describe the procedures for checking and validating the source data and how the results are monitored and used.</p> <p>Describe the procedures for validating the aggregate output data (statistics) after compilation, including checking coverage and response rates, and comparing with data for previous cycles and with expectations.</p> <p>List other output datasets to which the data relate and outline the procedures for identifying inconsistencies between the output data and these other datasets</p>   |
| 8.5 | Data compilation | Operations performed on data to derive new information according to a given set of rules.             | <p>Describe the procedures for imputation, the most common reasons for imputation and imputation rates within each of the main strata.</p> <p>Describe the likely impact of imputation.</p> <p>Describe the procedures to derive new variables and to calculate aggregates and complex statistics.</p> <p>Describe the procedures for adjustment for non-response and the corrections to the design weights to account for differences in response rates.</p> <p>Describe the calculation of design weights, including calibration (if used).</p> <p>Describe the procedures for combining input data from different sources.</p> <p>Provide the ratio of the number of replaced values to the total number of values for a given variable.</p> <p>Specific reference to formula shall be made. The formula or mathematical equation used while computing different variables in the report may be described here in a structured format showing the Numerator; Denominator and Multiplier used for computing the same</p> |

# Metadata Update

 [Back to Brief Concepts](#)

| 9   | Metadata update      | The date on which the metadata element was inserted or modified in the database. |   |
|-----|----------------------|--|---|
| 9.1 | Metadata last posted | Date of the latest dissemination of the metadata                                 | The date when the complete set of metadata was last disseminated as a block should be provided (manually, or automatically by the metadata system). |
| 9.2 | Metadata last update | Date of last update of the content of the metadata.                              | The date when any metadata were last updated should be provided (manually, or automatically by the metadata system).                                |

Metadata Structure for Statistical Products  
as Available in Public Domain

# Use Cases of Metadata Compliance of MoSPI

# What Next

- From "paper" to database
- Information in the word document

# Revised NMDS

## Introduction of Two new Concepts

- **2.3 International/National Standards Classification etc.**
- **8.6 Identifier of a statistical indicator**

# Loading metadata into India Integrated Metadata Base (IIMDB)

The screenshot displays the 'Statistical Activity' form in the IIMDB software. The form is titled 'Statistical Activity' and contains the following fields and sections:

- ID:** 10293
- Version:** 1.0
- Name:** Health and Activity Limitation Survey
- Directive:** (Empty field)
- Navigation Tabs:** Identification, Description, Time Frame, Documentation, Classification, Organization, Context
- Sub-sections:** Identification, Administration
- Name (English):** Health and Activity Limitation Survey
- Name (French):** Enquête sur la santé et les limitations d'activités
- Acronym (English):** HALS
- Acronym (French):** ESLA
- Version Revision Section:**
  - Revision Description (English):** (Empty field)
  - Revision Description (French):** (Empty field)
- Buttons:** Close, Delete, Save, Cancel

# Data visualizations: Look Before You Leap

Anscombe's Quartet

# Data visualizations: the Advantages

- Ease of data understanding
- User empowerment
- Adds Value to data
- To enhance statistical Analysis

# Data visualizations: the Approach

- Follow global best practices
  - The Chartmaker directory
  - [datavizcatalogue.com/](http://datavizcatalogue.com/)
  - OurWorldinData
  - World Bank Data Bank
  - FRED Web site
- Create in-house capacity of ISS and SSS officers for sustainability
- Use tools such as Flourish, Datawrapper, Tableau, Dash etc.
- Create in continuum

# Data Visualizations Features

- Separate DataViz section on MoSPI website
- Consists of 1400+ visualizations
- Categorized as per themes- NAS, CPI, IIP, ASI, PLFS, HCES, MIS Covered
- Filter and Search options
- Tree map, sunburst, streamgraph, radial tree, bubble chart, heatmap and many more...

# Employment Indicators in India

Age: 15 years and above; Status : Usual status (ps+ss)

Indicators :

Unemployment Rates (UR)
Labour Force Participation Rates (LFPR)
Worker Population Ratio (WPR)

# Bottleneck in Realising True Potential of Data

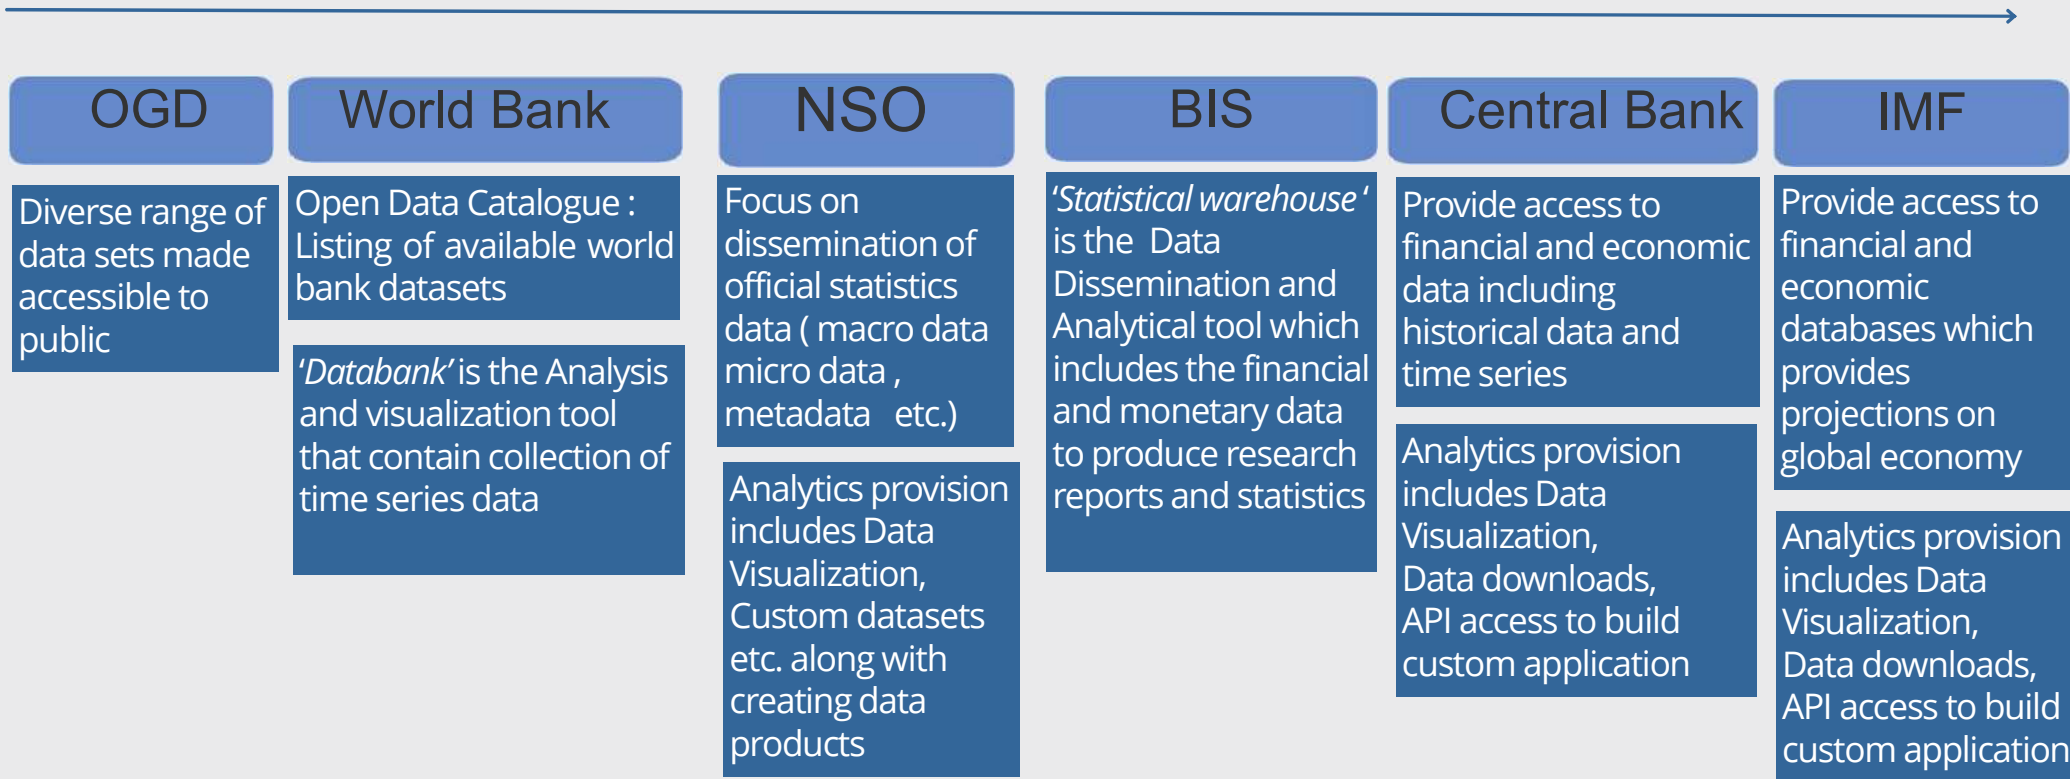

## Data Portal maturity model

Source – Paris 21 Discussion Paper no:8 ; April 2016

# Portals world over

Increasing focus on analytics

Increasing focus on data accessibility

# Background Work

Desk  
Research

- UNSD, PARIS21 , Dr Rangarajan Committee report/ Publications etc.

Meetings and  
Consultations

- With various expert institutions/ stakeholders viz. World Bank, Federal Reserve Economic Data (US), MeitY, RBI etc.

Report  
collation

- Metadata details across various ministries/ departments
- Report on alternate data sources by NSC

Examination  
of existing  
portals

- Multilateral organizations, Central Reserve banks, NSO and Open data portals of various countries, including India.

## Key Takeaways

Focus on data access and management

Unified portal a necessity to lessen burden on user to explore multiple sites for data

Lend value to disseminated data by building trust

# eSankhyiki portal Launched on 29th June, 2024

Scan to access eSankhyiki

# eSankhyiki portal

## Macro Indicators

Searchable time series data of 4 products consisting of more than 27 Lakh records with custom download, visualization and API facility

## Data Catalogue

More than 2300 data assets of 7 MoSPI products with facility for search, preview, visualization and download along with metadata.

# Data Catalogue

Listing of data assets of key MoSPI indicators

Intuitive navigation with **search**, **filtering** and **download** options

Dataset specific metadata, visualizations and searchable tables

The screenshot displays the 'DATA CATALOGUE' page of the Government of India's Ministry of Statistics and Programme Implementation. The page features a header with the ministry's name and logo, and social media icons. The main content area includes a definition of a data catalogue, a 'Find Datasets' button, and a grid of dataset tiles. The tiles are arranged in two rows and four columns, each representing a different indicator with its name, a small icon, and a 'Click to View All Datasets' link. The right side of the page has a blue background with a word cloud graphic containing terms like 'search', 'PLFS', 'IIP', 'interoperable', 'GPI', 'navigation', 'data', 'access', 'ble', 'metadatas', and 'Indicators'.

| Indicator                                | Icon  | Link |
|--|---|------|
| CONSUMER PRICE INDEX                     |    | CPI  |
| INDEX OF INDUSTRIAL PRODUCTION           |    | IIP  |
| NATIONAL ACCOUNTS STATISTICS             |    | NAS  |
| PERIODIC LABOUR FORCE SURVEY             |    | PLFS |
| ANNUAL SURVEY OF INDUSTRIES              |  | ASI  |
| HOUSEHOLD CONSUMPTION EXPENDITURE SURVEY |  | HCES |
| MULTIPLE INDICATOR SURVEY                |  | MIS  |
| ALL DATASETS                             |  | ALL  |

# Data Catalog Features

1

Constitutes all tables of  
key products in a single  
place

2

Search tables as per  
keywords/ table no/  
unique table title in Data  
Catalog

3

Access to metadata  
pertaining to each table  
displayed alongside

4

Downloadable data in MS  
Excel formats

5

Access to data/  
visualization/ preview table  
in Single click

6

# National Metadata Structure (NMDS)

A Standard Set of Guidelines for Ensuring Quality of Statistical Products Released

# Objectives

- Promote reporting for each type of statistical process and its outputs across different Ministries/Divisions/Departments of NSO, hence facilitating comparisons across processes and outputs;
- Ensure that producer reports contain all the information required to facilitate identification of quality issues and potential improvements in statistical processes and their outputs; and
- Ensure that user reports contain all the information required by users to assess whether statistical outputs are fit for the purposes they have in mind.

## What is metadata?

- It is structured information or documentation about data which:
  - informs users about the content, quality and condition of data;
  - describes the structure of datasets, explains, locates, or makes it easier to retrieve, use, or manage data;
  - provides information on the processes of data production;
  - guides on proper usage or interpretation of data.
- “Data that define and describe other data” (ISO definition)
- “Information about information” (Dion, 2006)

# Why Metadata

## What does metadata do?

- Assist in retrieving and processing data
- Support correct use of data
- Provide transparency in data
- Enhance interoperability
- Improve archiving, preservation, institutional memory over time

## Types of metadata

- **Structural metadata**
  - provide information about the structure of the dataset
  - act as identifiers and descriptors of the data, making it possible to properly identify, retrieve and browse the data
- **Reference metadata**
  - allow a thorough understanding and interpretation of the corresponding statistical data
  - Describe the concepts, definitions, methodology and quality of data; production and dissemination process, data access conditions, release policy, confidentiality, etc

## Metadata standards (cont'd)

Two international metadata standards are becoming well established:

- **SDMX (Statistical Data and Metadata Exchange)**

a number of international agencies have endorsed SDMX;  
supported by the UN Statistical Commission

- **DDI (Data Dissemination Initiative)**

*Microdata Management Toolkit* of WB uses the DDI  
metadata standard

## Users of metadata

Metadata support the knowledge of potential user of statistical information. The major users include:

- Users of statistical data
- Producers of statistical data
- Researchers on the development of statistical systems

# Metadata Structure: International Organisations

# UN SDG Metadata Concept

- **SDG metadata concepts (7):**

- Indicator information
- Data reporter
- Definition, concepts and classifications
- Data source type and data collection method
- Other methodological considerations
- Comparability/deviation from international standards
- References and documentation

**Figure 2. The Euro SDMX Metadata Structure**

# Elements of Metadata Structure: Comparison amongst selected NSOs

# Detailed Concepts of Metadata

# Contact

 [Back to Brief Concepts](#)

| Item No | Concept name         | Definition   | Guidelines   |
|---------|----------------------|--|--|
| 1       | Contact              | <b>Individual or organisational contact points for the data or metadata, including information on how to reach the contact points.</b> |  |
| 1.1     | Contact Organisation | The name of the organisation for data or metadata.   | Provide the full name (not just acronym) of the organisation responsible for the processes and outputs (data and metadata) that are the subject of the report  |
| 1.2     | Compiling Agency     | Organisation collecting and/or elaborating the data being reported   | Provide the full name of the Division under the organisation responsible for the processes and outputs (data and metadata) that are the subject of the report  |
| 1.3     | Contact Details      | The details of the contact points for the data or metadata.  | <p>Provide contact details of contact point(s) in following format:</p> <ul style="list-style-type: none"> <li>a. Organisation Name owning the processes and outputs:</li> <li>b. Author (if different from (a))</li> <li>c. Disseminating Agency (if different from (a) and (b))</li> <li>d. Name (first and last names):</li> <li>e. Designation:</li> <li>f. Postal address:</li> <li>g. email address (preferably designation based):</li> <li>h. Contact number:</li> <li>i. Fax number:</li> </ul> <p>If more than one name is provided, the details of main contact should be indicated. If the author of the report is different from the person(s) responsible for process and its outputs, provide this name also with his/her details</p> |

# Statistical Presentation and Description

 [Back to Brief Concepts](#)

| 2   | Statistical presentation and description | Description of the disseminated data which can be displayed to users as tables, graphs or maps                     |  |
|-----|--|--|--|
| 2.1 | Data description                         | Main characteristics of the data set, referring to the data and indicators disseminated.                           | Describe briefly the main characteristics of the data in an easily and quickly understandable manner, referring to the main variables disseminated.  |
| 2.2 | Classification system                    | Arrangement or division of objects into groups based on characteristics which the objects have in common           | List all classifications and breakdowns that are used in the data (with their detailed names) and provide links (if publicly available).<br><br>Type of dis-aggregation available in the data sets - for example rural-urban, male-female, etc. and whether data is available at the sub-national level or not, should be clearly specified. |
| 2.3 | Sector coverage                          | Main economic or other sectors   | List the main economic or other sectors covered by the data and the size classes used, for example, Health/ Education/ Manufacturing etc   |
| 2.4 | Statistical concepts and definitions     | Statistical characteristics of statistical observations, variables   | Define and describe briefly the main statistical variables that have been observed or derived. Indicate their types.   |
| 2.5 | Statistical unit                         | Entity for which information is sought and for which statistics are ultimately compiled.                           | Define the type of statistical unit about which data are collected, e.g. enterprise, household, etc.   |
| 2.6 | Statistical population                   | The total population of a defined class of people, objects or events   | Define the target population of statistical units for which information is sought  |
| 2.7 | Reference Period                         | The length of time for which data are available  | State the time period(s) for which data is collected   |
| 2.8 | Base period                              | The period of time used as the base of an index number, or to which a constant series refers.                      | Note that this concept applies only to certain types of outputs, such as indexes, for which a base period is defined and used. Eg, CPI, IIP, etc.  |
| 2.9 | Data Confidentiality                     | Rules applied for treating the datasets to ensure statistical confidentiality and prevent unauthorised disclosure. | Describe the procedures that are used in protecting confidentiality.   |

# Institutional Mandate

| 3   | Institutional mandate           | Law, set of rules or other formal set of instructions assigning responsibility as well as the authority to an organisation for the collection, processing, and dissemination of statistics |   |
|-----|---------------------------------|--|---|
| 3.1 | Legal acts and other agreements | Legal acts or other formal or informal agreements that assign responsibility as well as the authority to an agency for the collection, processing, and dissemination of statistics         | State the national legal acts and/or other reporting agreements   |
| 3.2 | Data sharing                    | Arrangements or procedures for data sharing and coordination between data producing agencies.  | Describe the arrangements, procedures or agreements to facilitate data sharing and exchange between data producing agencies within the national statistical system  |
| 3.3 | Release policy                  | Rules for disseminating statistical data to all interested parties   | State if the release of the products is governed by some policy etc.  |
| 3.4 | Release calendar                | The schedule of statistical release dates.   | State whether there is a release calendar for the statistical outputs from the process being reported, and if so, whether this calendar is publicly accessible and if yes, give a link or reference.  |
| 3.5 | Frequency of dissemination      | The time interval at which the statistics are disseminated over a given time period.   | State the frequency with which the data are disseminated, e.g. monthly, quarterly, yearly.  |
| 3.6 | Data access                     | The conditions and modalities by which users can access, use and interpret data  | <p>State the conditions and link on website from where the user can access the data</p> <p>For easy access of users, following details should also be mentioned about the dataset:</p> <p><b>Title:</b> Name by which the data is known</p> <p><b>Dataset Edition:</b> Edition of data (ex: first, second, final etc)</p> <p><b>Dataset Reference data type:</b> Type of data entered in the field (ex: .txt, .dbf, .xls)</p> <p><b>Presentation Format:</b> Presentation format of the data (ex: document, map, table, etc.)</p> <p><b>Dataset Language:</b> language of any text in the data</p> <p><b>Status/Version:</b> How updated is the data?</p> |

# Quality Management

 [Back to Brief Concepts](#)

|     |                              |  |   |
|-----|------------------------------|--|---|
| 4.  | <b>Quality management</b>    | <b>Systems and frameworks in place within an organisation to manage the quality of statistical products and processes.</b>                                       |   |
| 4.1 | Documentation on methodology | Descriptive text and references to methodological documents available.   | List reference metadata files, methodological papers, summary documents and handbooks relevant to the statistical process.  |
| 4.2 | Quality documentation        | Documentation on procedures applied for quality management and quality assessment.   | List relevant quality related documents, for example, other quality reports, studies.   |
| 4.3 | Quality assurance            | All systematic activities implemented that can be demonstrated to provide confidence that the processes will fulfil the requirements for the statistical output. | Describe the procedures (such as use of a general quality management system based on ISO 9000 series) to promote general quality management principles in the organisation.   |
|     |                              |  | Describe the quality assurance framework used to implement statistical quality principles.  |
|     |                              |  | Describe the quality assurance procedures specifically applied to the statistical process for which the report is being prepared, for example training courses, process monitoring, benchmarking, assessments, and use of best practices. |
|     |                              |  | Describe any ongoing or planned improvements in quality assurance procedures.   |
| 4.4 | Quality assessment           | Overall assessment of data quality, based on standard quality criteria.  | Summarise the results of the most recent quality assessments and cross reference to the chapters in the report where the results are presented in more detail.  |

# Accuracy and Reliability

 [Back to Brief Concepts](#)

|     |                          |  |  |
|-----|--------------------------|--|--|
| 5   | Accuracy and reliability | Accuracy of data is the closeness of computations or estimates to the exact or true values that the statistics were intended to measure. Reliability of the data, defined as the closeness of the initial estimated value to the subsequent estimated value. |  |
| 5.1 | Sampling error           | That part of the difference between a population value and an estimate thereof, derived from a random sample, which is due to the fact that only a subset of the population is enumerated.   | <p>If probability sampling is used:</p> <ul style="list-style-type: none"><li>• for user reports-provide the range of variation of the A1 indicator among key variables at user report level of detail;</li><li>• for producer reports-provide the range of variation of the A1 indicator among key variables at producer report level of detail;</li><li>• indicate the impact of sampling error on the overall accuracy of the results;</li><li>• state how the calculation of sampling error is affected by adjustments for nonresponse, misclassifications and other sources of uncertainty, such as outlier treatment.</li></ul> <p>If non-probability sampling is used:<br/>provide an assessment of representativeness, a motivation for the invoked model for estimation and risk of sampling bias</p> |

# Timeliness and Punctuality

 [Back to Brief Concepts](#)

|     |                   |  |   |
|-----|-------------------|--|---|
| 6   | <b>Timeliness</b> | <b>The timeliness of the data collection release to be compiled.</b>   |   |
| 6.1 | Timeliness        | Length of time between data availability, the event or phenomenon the data describe, and final release to its users. | Outline the reasons for the time lag, if any. Outline efforts to reduce time lag in future. |

# Coherence and Comparability

 [Back to Brief Concepts](#)

| 7   | Coherence and comparability | Adequacy of statistics to be reliably combined in different ways and for various uses and the extent to which differences between statistics can be attributed to differences between the true values of the statistical characteristics |  |
|-----|-----------------------------|--|--|
| 7.1 | Comparability – over time   | The extent to which statistics are comparable or reconcilable over time  | <p>Provide information on possible limitations in the use of data for comparisons over time. Distinguish three broad possibilities:</p> <ol style="list-style-type: none"> <li>1. There have been no changes, in which case this should be reported.</li> <li>2. There have been some changes but not enough to warrant the designation of a break in series.</li> <li>3. There have been sufficient changes to warrant the designation of a break in series.</li> </ol> |
| 7.6 | Coherence                   | The extent to which statistics are reconcilable with System of National Accounts.  | For producer reports only. Where relevant, the results of comparisons with the System of National Account framework / Other Statistical Standards and feedback from System of National Accounts / Other Statistical Standards with respect to coherence and accuracy problems should be reported and should be a trigger for further investigation.  |

# Statistical Processing

 [Back to Brief Concepts](#)

| 8   | Statistical processing       | Any statistical processing undertaken to finalise the data  |   |
|-----|------------------------------|---|---|
| 8.1 | Source data type             | Characteristics and components of the raw statistical data used for compiling statistical aggregates. | <p>Indicate if the data are based on a survey, administrative data, multiple data sources, or macro-aggregates.</p> <p>In the event of multisource or macro-aggregate processes describe each source.</p> <p>For each dataset from an administrative source, summarise the source, its primary purpose, and the most important data items acquired</p>  |
| 8.2 | Frequency of data collection | Time interval at which the source data are collected  | Indicate the frequency of data collection (e.g. monthly, quarterly, annually, or continuous).   |
| 8.3 | Data collection method       | Method applied for gathering data for official statistics.  | <p>For each source of survey data:</p> <ul style="list-style-type: none"> <li>• describe the method(s) used to gather data from respondents;</li> <li>• annex or hyperlink the questionnaires(s).</li> </ul> <p>For each source of administrative data:</p> <ul style="list-style-type: none"> <li>• describe the acquisition process and how it was tested.</li> </ul> <p>For all sources:</p> <ul style="list-style-type: none"> <li>• describe the types of checks applied at the time of data entry.</li> </ul> |

# Statistical Processing (Contd...)

 [Back to Brief Concepts](#)

|     |                  |   |  |
|-----|------------------|---|--|
| 8.4 | Data validation  | Process of monitoring the results of data compilation and ensuring the quality of statistical results | <p>Describe the procedures for checking and validating the source data and how the results are monitored and used.</p> <p>Describe the procedures for validating the aggregate output data (statistics) after compilation, including checking coverage and response rates, and comparing with data for previous cycles and with expectations.</p> <p>List other output datasets to which the data relate and outline the procedures for identifying inconsistencies between the output data and these other datasets</p>   |
| 8.5 | Data compilation | Operations performed on data to derive new information according to a given set of rules.             | <p>Describe the procedures for imputation, the most common reasons for imputation and imputation rates within each of the main strata.</p> <p>Describe the likely impact of imputation.</p> <p>Describe the procedures to derive new variables and to calculate aggregates and complex statistics.</p> <p>Describe the procedures for adjustment for non-response and the corrections to the design weights to account for differences in response rates.</p> <p>Describe the calculation of design weights, including calibration (if used).</p> <p>Describe the procedures for combining input data from different sources.</p> <p>Provide the ratio of the number of replaced values to the total number of values for a given variable.</p> <p>Specific reference to formula shall be made. The formula or mathematical equation used while computing different variables in the report may be described here in a structured format showing the Numerator; Denominator and Multiplier used for computing the same</p> |

# Metadata Update

 [Back to Brief Concepts](#)

| 9   | Metadata update      | The date on which the metadata element was inserted or modified in the database. |   |
|-----|----------------------|--|---|
| 9.1 | Metadata last posted | Date of the latest dissemination of the metadata                                 | The date when the complete set of metadata was last disseminated as a block should be provided (manually, or automatically by the metadata system). |
| 9.2 | Metadata last update | Date of last update of the content of the metadata.                              | The date when any metadata were last updated should be provided (manually, or automatically by the metadata system).                                |

Metadata Structure for Statistical Products  
as Available in Public Domain

# Use Cases of Metadata Compliance of MoSPI

# What Next

- From "paper" to database
- Information in the word document

# Revised NMDS

## Introduction of Two new Concepts

- **2.3 International/National Standards Classification etc.**
- **8.6 Identifier of a statistical indicator**

# Loading metadata into India Integrated Metadata Base (IIMDB)

The screenshot displays the 'Statistical Activity' form within the IIMDB Administration application. The form is titled 'Statistical Activity' and contains the following fields and sections:

- ID:** 10293
- Version:** 1.0
- Name:** Health and Activity Limitation Survey
- Directive:** (Empty field)
- Navigation Tabs:** Identification, Description, Time Frame, Documentation, Classification, Organization, Context
- Sub-sections:** Identification, Administration
- Name (English):** Health and Activity Limitation Survey
- Name (French):** Enquête sur la santé et les limitations d'activités
- Acronym (English):** HALS
- Acronym (French):** ESLA
- Version Revision Section:**
  - Revision Description (English):** (Empty field)
  - Revision Description (French):** (Empty field)
- Buttons:** Close, Delete, Save, Cancel

# National Data and Analytics Platform (NDAP)

13.08.2024

1  DATA ECOSYSTEM

2  ABOUT NDAP

3  KEY FEATURES OF NDAP

4  Other DATA Aggregators

5  State Data Analytics Platform

6  Way Forward

01

## Data Ecosystem

# Data Ecosystem: Key Elements

---

Identification of Data Sources & Collection

Data Processing  
(transforming raw data into a usable format)

Data Dissemination

Data Analysis

## Key challenges in the present ecosystem

Public government data are difficult to find, understand, and download

Datasets do not speak to each other across space, time and sector, which makes cross-sectoral analysis difficult

Existing platforms are complex, cluttered, unintuitive, and difficult to navigate

Visualizations and analytics are largely static and inflexible; dashboards are not interactive

Public versions of government data are often less-useful aggregates

**NDAP addresses these challenges in the data ecosystem**

**Substantial amount of data available in the system without necessary discovery or means to draw insights**

**NDAP provides access to standardized data at a single platform; allowing users to search, merge, visualize & download datasets easily**

# What is NDAP?

A platform that has intuitive features given its user-centric approach

Streamlines published datasets with the mission to host the entire universe of identifiable published datasets (est. 5000) in a standardized schema at one platform making data inter-operable

## What it covers

- Published government data

## What it does not cover

- Individual Data
- Transactional Data
- Unpublished data

## COLLABORATION WITH STATES

Development of State specific data platform under State Support Mission (e.g., Karnataka)

## TECHNOLOGY ADOPTION

Analytical tools, Visualization, Dashboards and AI based models for NITI and other lineministries.

## USE-CASE BASED IDENTIFICATION

Compile use-cases suggested by users and identify relevant datasets to solve these use-cases.

## PROACTIVE OUTREACH

Outreach activities with all stakeholders to enable an interactive development approach.

# Key features of NDAP

Datasets on NDAP are interoperable, which can be merged on the platform using **in-built Merge tool** to do cross sectoral analysis

**Interoperability of data**

**Standardized data**

NDAP hosts published government data in machine-readable formats which are standardized using the LGD directory

**Feedback/Suggestion**

Inbuilt process of time-bound redressal of user feedback

**User-Friendly UI/UX and Intuitive Search engine**

NDAP has simple, intuitive search and coherent organization of datasets to allow easy browsing

**Interactive Visualization**

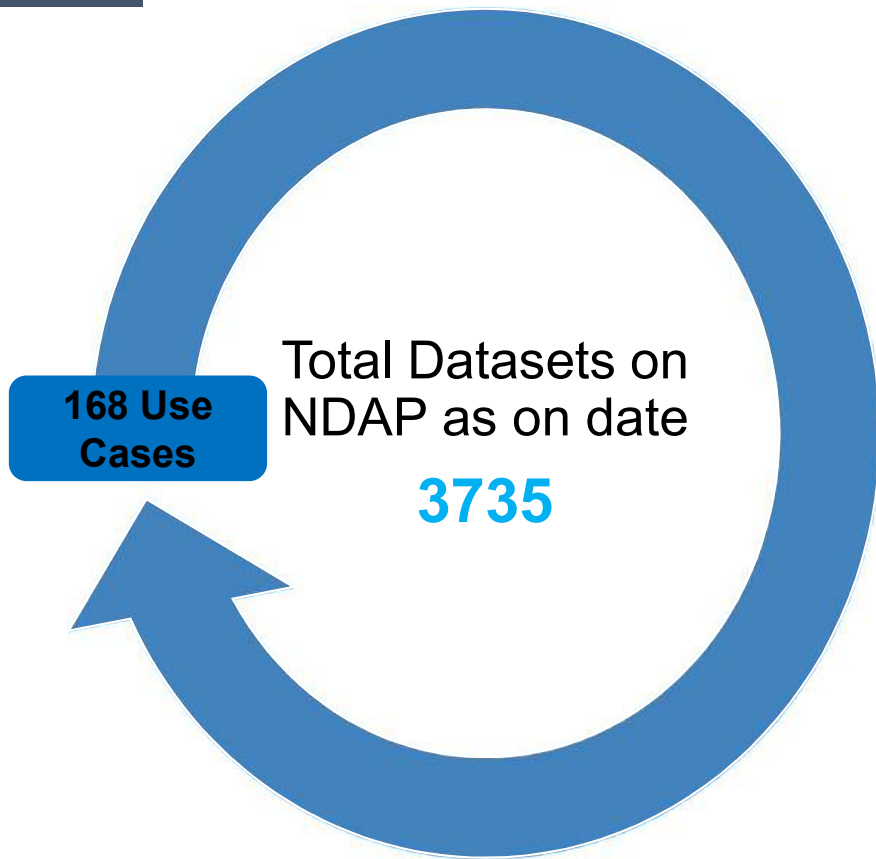

Users can create maps, bar charts, line charts, pie charts, and scatter plots using any dataset and indicator on NDAP

**Use Case based approach**

168 use cases are hosted on the platform to guide users on data analytics

## Current Status

53 Ministries  
31 Sectors  
3400+ Datasets

Tracking Users,  
Sessions, Queries ...

Self-Service  
Visualizations

Vector DB with  
NLU Search

- Every quarter datasets are onboarded on NDAP as per agreement and priorities and feedback
- 4217 – No. of Datasets will be on NDAP by end of September 2024
- Data on NDAP is available through APIs

# NDAP streamlines datasets

Combines data from multiple tables into single dataset

e.g.

UDISE

Datasets

At source: 73  
On NDAP: 6

Makes indicators available through key word search

HMIS

198 Indicators

Makes data accessible in machine readable formats

NFHS

Format  
At source: pdf, csv, web tables  
On NDAP: Machine readable formats

# Other DATA Aggregators

## Major sources of data at national level

| Platform                       | Owner                       | Data Coverage  | Accessibility   |
|--------------------------------|-----------------------------|--|---|
| <b>Data.gov.in</b>             | NIC & MeitY                 | Central ministries and state specific data   | Open access   |
| <b>Esankhyiki. mospi</b>       | MoSPI                       | Mostly statistical data  | Open access   |
| <b>RBI</b>                     | RBI                         | Indian Economy   | Open as per Special Data Dissemination Standards (SDDS) |
| <b>Ministries/ Departments</b> | Central or State Government | Ministry or Department specific data   | Open Access/ Login based                                |
| <b>NDAP</b>                    | NITI Aayog                  | <b>Published Government data</b><br><br>Currently <b>3000+</b> datasets from <b>31</b> sectors | <b>Open access</b>                                      |

\* NDAP is not the source of the data and it refreshes data in real-time where API is in place and within 20 days after updation at the source in other cases.

## State Data Analytics Platform (SDAP)

## Benefits to State

- Customized State Data and Analytics Portal will be developed by NITI for respective state governments with all functionalities of NDAP
- User will be able to view both State and National level data on the same platform for doing cross-sectorial analysis

- Standardized, interoperable datasets for policy planning, monitoring of Central/ State Government flagship schemes, prepare reports, visualization and dashboards.
- A State-specific interface having datasets with all functionalities of NDAP

- Comparing data at pan-India level along with ease of access to all stakeholders/ users within and beyond the State boundary.
- Identify and solve use-cases suggested by various users through relevant datasets

Platform

Datasets

Analytics

- Availability of State/ District/ Block/ Village level datasets on NDAP

- NDAP is enriched with more datasets from various sectors/ schemes

- Leverage the State specific datasets for creation of various indices and dashboards at NITI
- Opportunity to promote data analysis & policy insights at all levels of government

## Benefits to NITI

## Major Achievements

**More than 3700 datasets from 53 Ministries across various 31 sectors have been onboarded on NDAP**

**SDAP (State Data and Analytics Platform) for 2 States, Karnataka and Meghalaya went live in Feb, 2023 and April, 2024 respectively**

**Workshop conducted with States in Lucknow, on 17<sup>th</sup> November 2023 on 'Leveraging State Data Ecosystems for State and District Level Policy and Planning**

# Way Forward

## Initiatives under NDAP 2.0

---

### **Natural Language (NL) model based Analytical Layer**

- When the user asks a question on the platform, the system will respond with appropriate output or response based on the data available on NDAP

### **Indicator Pages on NDAP**

- Indicator pages will provide quick insights on the indicator and enable users to access commonly sought indicators and pre-made visualization and charts.
- Update UI/ UX of NDAP

### **Harmonized Microdata on NDAP**

- Micro Data published by various government sources, harmonized at a single platform

### **Building State Data Analytics Platform (SDAP) for States**

- Customized SDAP with all functionalities of NDAP along with unique state-specific requirements E.g. Karnataka Data Analytics Platform (KADAP) & Meghalaya Data Analytics Platform (MegDAP )

“All users are provided a worldwide, royalty free, non-exclusive license to use, adapt, publish, create derivative works (including products and services) for all lawful commercial and non-commercial purposes.”

# Journey of OGD Platform: 2012-2014

2012

- **Policy:** 1. Gazette Notification of NDSAP 2. Implementation Guidelines Drafted through Consultations with Key Stakeholders
- **Software:** Alpha Release of OGD Platform

2013

- **Software:** 1. Beta Release of OGD Platform 2. Visualization Engine Launch
- **Events:** 1. 12th Plan Hackathon 2. In Pursuit of an Idea 3. Open Data Apps Challenge 4. CMA Hackathon

2014

- **Policy:** Implementation Guidelines Updated
- **Software:** 1. Stable Version of OGD Platform 2. Data Access via APIs Started 3. Sharing of Community-created Apps Started
- **Events:** 1. National Conference of Open Data and Open API 2. Code for Honor

# Journey of OGD Platform: 2015-2018

2015

- **Policy:** Implementation Guidelines Updated
- **Software:** Community Portal Launch
- **Events:** Workshops with Data Contributors & Chief Data Officers

2016

- **Policy:** 1. Government Open Data License – India Approved 2. Implementation Guidelines Updated
- **Software:** 1. Events Portal Launch, 2. SaaS Instance Deployments for Sikkim & Surat
- **Events:** Workshops with Chief Data Officers

2017-2018

- **Policy:** Gazette Notification of Government Open Data License – India
- **Software:** SaaS Instance Deployment for Tamil Nadu
- **Events:** 1. #OpenGovDataHack  
2. National Award to Students & Startups

# Journey of OGD Platform: 2019-2024

2019

**Software:** SaaS Instance Deployment for Smart Cities Mission, Odisha, Karnataka & Kerala

**Events:** 1. 2nd Edition of #OpenGovDataHack (Chandigarh, Raipur, Rajkot, Kozhikode, etc.)  
2. DARPG Hackathon for AI-driven Public Grievance Redressal Solution

2020-2021

**Software:** 1. Transition to Microservices Architecture & Data Migration 2. Catalog-level APIs Feature Added 3. SaaS (Microservices) Instance Deployment for Punjab

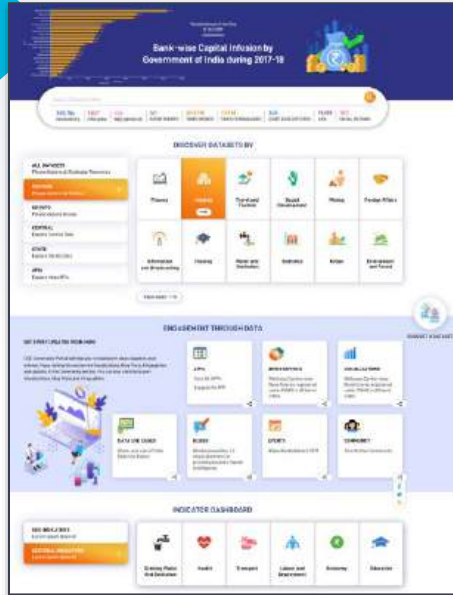

2022-2024

**Software:** 1. Bulk Download Feature 2. Migration of Earlier SaaS Instances to Microservices Architecture 3. SaaS (Microservices) Instance Deployments for AP, J&K & UK 4. Large Datasets, such as AgMarkNet, eShram & Kisan Call Center (KCC), Published via APIs

**Events:** 1. DARPG Hackathon on Data-driven Innovation for Citizen Grievance Redressal 2. GSTN Analytics Hackathon on Developing a Predictive Model (Upcoming)

## EMPOWERING CITIES THROUGH DATA

Smart cities continuously strive towards making the right data available to the right people at the right time to help build solutions to complex urban challenges. With the deployment of IoT devices and other methods to 'sense' the city, real-time data is increasing every day, offering cities the chance to address these challenges in smarter ways.

The Smart Cities Mission-Ministry of Housing & Urban Affairs intends to harness this potential through its 'DataSmart' Cities Strategy.
