

**Employment and Unemployment Situation
among Social Groups in India
1999-2000**

**NSS 55th ROUND
(July 1999 – June 2000)**

National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India

September 2001

Preface

The National Sample Survey Organisation (NSSO) has been carrying out all- India household surveys on employment and unemployment with a large sample usually once in five years. The sixth such survey was conducted in the 55th round (July 1999 - June 2000). The previous five quinquennial surveys were conducted during the 27th (October 1972 - September 1973), the 32nd (July 1977 -June 1978), the 38th (January- December 1983), the 43rd (July 1987 -June 1988) and the 50th (July 1993-June 1994) rounds. Among the quinquennial rounds, data on various characteristics of Other Backward Class (OBC) households were collected as a separate social group for the first time in this quinquennial round.

The report contains the results based on nineteen selected tables of the tabulation plan of the NSS 55th round (July, 1999 -June, 2000) generated for different social groups viz. scheduled tribe, scheduled caste, other backward class and the rest. It contains four Chapters and an Appendix. Chapter 1 is introductory and Chapter 2 deals with the concepts and definitions of important terms used in the survey and which are relevant to his report. Chapter 3 describes the sample design and estimation procedure followed in the survey. Chapter 4 deals with the summary findings of the survey relating to the different social groups.

The schedule of enquiry for the survey is broadly similar to that adopted in previous quinquennial rounds. The Field Operations Division (FOD) of the Organisation conducted the fieldwork for the survey. The collected data were processed and tabulated by the Data Processing Division (DPD) of the NSSO. The Survey Design & Research Division (SDRD) of the NSSO developed the survey design and prepared the report. I am grateful to the Chairman and members of the Governing Council and Heads of various Divisions of the NSSO and their colleagues for the contribution made in preparing the report.

Comments/suggestions from the readers will be most welcome.

Highlights

- During 1999-2000 'self-employment in agriculture' and 'agricultural labour' were the two major activities (i.e. accounting for a major share of income) of the Scheduled Tribe (ST) households living in rural areas – the former being pursued by 36% and the latter by 40% of such households. 'Agricultural labour' was the major activity for 51% of the rural Scheduled Caste (SC) households and 'self-employment in agriculture' for 41% of the rural households in the category other than Other Backward Class (OBC), SC or ST. In urban India, regular wage/salaried employed were more frequent in each social category of households except the OBCs, among whom self-employed were more. 'Casual labour' as the major source of income was more frequent among the SC and ST households than among the non-SC or non-ST households.
- Proportion of rural households possessing less than 0.01 hectare of land was higher among SC households (10%) than among ST or OBC households (7% each). On the other hand, the proportion of households possessing more than 4.00 hectares of land was higher among the 'other' households (7%) than among OBC households (4%) or scheduled category households (3% for ST and 1% for SC).
- Proportion of households with no literate adult member/ no literate adult female member was higher among households belonging to scheduled categories than among those in the non-scheduled category in both rural and urban areas. Between the two scheduled categories, proportion of such households was higher among the STs in rural India and among the SCs in urban India.
- In both rural and urban India proportions of persons in lower MPCE classes were higher among the scheduled categories of households than among the non-scheduled category. Between the two scheduled categories, proportions of persons in the lower MPCE classes were higher among STs in both rural and urban India.
- Proportion of persons employed as per usual status (according to principal status or according to principal and subsidiary status taken together) was the highest among STs, followed by SCs, OBCs and 'other' category of persons, except for urban males, among whom the proportion was the highest among OBCs, followed by the category other than SC,ST or OBC and then by SCs and STs. For rural males, the proportion was the same for SCs and OBCs.
- Proportion of unemployed among males and females was considerably higher in the urban areas than in the rural areas of the country. Proportion of unemployed as per usual status was higher among 'other's for both males and females in rural India. In urban India, the proportion was higher among the scheduled caste males while there was little difference in this regard for females belonging to different social groups.

List of Appendix Tables

table no.*	title	page no.
1S	Per thousand distribution of persons by principal usual activity category for each age-group	A-1
2S	Per thousand distribution of persons by usual activity category taking also into consideration the subsidiary economic status of persons categorised 'not working' for each age-group	A-25
3S	Per thousand distribution of persons by current weekly activity for each age-group	A-49
4S	Per thousand distribution of persons days by current daily activity	A-73
28S	Number of households with no literate member/female member of age 15 years and above per 1000 households by mpce class	A-97
41R	School attendance rates per thousand persons (5-14) by household type and household social group for rural areas	A-107
41U	School attendance rate per 1000 persons (5-14) by household type and household social group for urban areas	A-110
45S	Per thousand distribution of persons by age-group for each principal usual activity category and	A-113
46S	Per thousand distribution of persons by age-group for each principal usual activity category taking also into consideration the subsidiary economic status of persons categorised 'not working'	A-137
47AS	Per thousand distribution of persons of age 15 years and above by general education category for each principal usual activity category	A-161
47BS	Per thousand distribution of persons of age 15 years and above by principal usual activity category for each general education category and	A-185
48AS	Per thousand distribution of persons of age 15 years and above by general education for each usual activity category taking also into consideration the subsidiary economic status of persons categorised 'not working'	A-209
48BS	Per thousand distribution of persons of age 15 years and above by usual activity category taking also into consideration the subsidiary economic status of persons categorised 'not working' for each general education category	A-233
96R	Per thousand distribution of households by size class of land possessed for each household social group for rural areas	A-257
97R	Per thousand distribution of households by size class of land cultivated for each household social group for rural areas	A-258
98R	Per thousand distribution of households by household type for each household social group for rural areas	A-259
98U	Per thousand distribution of households by household type for each household social group for urban areas	A-260
99R	Per thousand distribution of persons by size class of land cultivated for each household social group for rural areas	A-261
100	Per thousand distribution of persons by household monthly per capita expenditure class for each household social group	A-262
101	Per thousand distribution of persons of age 15 years & above by general education for each household social group	A-264
102	School attendance rates per thousand persons of age up to 30 years by age-group for each household social group	A-268

* All tables with suffix 'S' and bearing numbers of tabulation plan were specially generated for each household social group and the remaining table numbers are as per the tabulation plan.

Chapter 1

Introduction

1.1 The report in perspective

1.1.1 An all-India survey on the situation of employment and unemployment in India during the period July, 1999-June, 2000 was carried out as part of the 55th round of the National Sample Survey Organisation (NSSO). In this survey, a nation-wide enquiry was conducted to provide estimates on various characteristics pertaining to employment and unemployment in India and some characteristics associated with them at the national and state levels. In this survey, information on various facets of employment and unemployment in India was collected through a schedule of enquiry (schedule 10). Based on the data collected during the entire period, estimates pertaining to employment-unemployment of people belonging to different social groups in India, along with certain features associated with them have been presented in this report. Tables have been generated for each of the four household social groups viz. scheduled caste (SC), scheduled tribe (ST), other backward class (OBC) and the others.

1.2 Background

1.2.1 One of the important surveys conducted by the NSSO is the quinquennial survey on employment-unemployment. The first such survey was done during September 1972-October 1973 corresponding to the 27th round of NSSO. The present survey is the sixth in the series.

1.2.2 To assess the volume and structure of employment and unemployment, starting with the 9th round (May-September, 1955), NSSO conducted a number of surveys on employment and unemployment. To give a firm conceptual framework for conducting such surveys, the Planning Commission, in the year 1970, set up an "Expert Committee on unemployment estimates", (popularly known as the Dantwala Committee), which reviewed these surveys and the indicators generated from such surveys. Based on concepts and definitions recommended by this committee, the first quinquennial survey on employment and unemployment was conducted in the 27th round of NSS. Since then, four quinquennial comprehensive surveys on employment and unemployment situation in India have been carried out by the NSSO, in which concepts and procedures were based primarily on the recommendations of the Dantwala Committee. These four surveys were conducted during the 32nd round (July, 1977-June, 1978), 38th round (January, 1983-December, 1983), 43rd round (July, 1987-June, 1988) and 50th round (July, 1993-June, 1994), respectively.

1.3. Scope

1.3.1 *Items of enquiry:* As in the past, in the present survey too, NSSO collected data on some characteristics, based on which, estimates of employment and unemployment, measured in terms of 3 basic approaches viz. usual status, current weekly status and current daily status can be obtained. The reference period for these approaches differ - it was 365 days preceding the date of survey for "usual status", 7 days preceding the date of survey for "current weekly status" and each day of the 7 days preceding the date of survey for "current daily status". Among the quinquennial rounds, data on Other Backward Class (OBC) households were collected as a separate social group for the first time in this quinquennial round. For each household surveyed, the social group of the head of the household viz. SC, ST, OBC or otherwise was collected. The social group of all the remaining members of the household was taken as the social group to which the head of the household

belonged. The information recorded in this regard was based entirely on the response of the informant and not based on any state level list of social group.

1.3.2 The present report discusses some aspects of employment and unemployment and some other features pertaining to people belonging to different social groups in India. It is the seventh report in the series of reports brought out based on the detailed information on various items of inquiry on the employment and unemployment survey of the 55th round of NSSO. The first report, viz. Report No.455, presented the key results on employment and unemployment in India 1999-2000. The second report, (Report No. 458) dealt, in some detail, with the employment-unemployment estimates measured in terms of the three basic approaches of usual status, current weekly status and current daily status and their patterns along with their correlates. It also covered some aspects of underemployment. The report also gave the results generated at all-India level and some important results for different states/union territories. The third report, viz. Report No.460, dealt with non-agricultural workers by their various attributes with special emphasis on workers in the informal sector, i.e. those working in proprietary or partnership type of enterprises. The fourth report (Report no.462) discussed some features of employment and unemployment in cities and towns of India. The fifth report (Report no.465) dealt with participation of women in household work and other specified household activities. The sixth report (Report no. 468) discussed certain aspects of the persons in different religions with reference to their employment-unemployment situation etc.

1.3.3 *Geographical Coverage*: The survey covered the whole of the Indian Union excepting (i) Leak & Kargil districts of Jammu and Kashmir, (ii) 768 interior villages of Nagaland situated beyond 5 kms. of the bus route and (iii) 172 villages of Andaman & Nicobar Islands which remain inaccessible throughout the year. A few other areas of Jammu & Kashmir were also excluded from the survey coverage owing to unfavorable field conditions.

1.3 The survey in brief

1.4.1. *Method of data collection*: The survey used the interview method of data collection from a sample of randomly selected households. The sample design on the basis of which such selection was made is stated in brief in the following sub-section.

1.4.2 *Period of survey and work programme*: The fieldwork of 55th round of NSSO started from 1st July, 1999 and continued till 30th June, 2000. As usual, the survey period of this round was divided into four sub-rounds, each with a duration of three months, the 1st sub-round period covering from July to September 1999, the 2nd sub-round period from October to December 1999 and so on. Equal number of sample FSU's was allotted for survey in each of these four sub-rounds.

1.5. Sample design

1.5.1 *An outline of the sampling design*: The sampling design adopted for the survey was essentially a stratified multi-stage one for both rural and urban areas. The first stage units (FSUs) were villages (panchayat wards for Kerala) for rural areas and NSS Urban Frame Survey (UFS) blocks for urban areas. The ultimate stage units (USUs) were households. The procedures for selection of fsus/usus are given in detail in chapter 3 of this report. Large FSUs were subdivided into hamlet-groups (rural)/sub-blocks (urban). Details of the formation of hamlet-group/sub-blocks and procedure of selection of households are also given in chapter 3.

1.5.2 *Sampling Frame for FSUs*: The list of villages (panchayat wards for Kerala) as per 1991 Census and latest lists of UFS blocks of NSSO were respectively used for selection of rural and

urban sample FSUs. For selection of sample villages from the State of Jammu & Kashmir, the list of villages as per 1981 Census was used as the sampling frame. Moreover, all the uninhabited villages of the country as per 1991 Census, interior villages of Nagaland situated beyond 5 kms. of a bus route and inaccessible villages of Andaman & Nicolas Islands were left out of the survey coverage of the NSS 55th round.

1.5.3 *Sample Size – first stage units:* A total number of 10,384 FSUs (6,208 villages and 4,176 urban blocks) was selected for survey in the central sample at the all-India level in the 55th round for canvassing schedule 10. Sample size for the whole round for each State/UT x Sector (i.e. rural/urban) was allocated equally among the 4 sub-rounds. Sample FSUs for each sub-round were selected afresh in the form of 2 independent sub-samples. Thus, there were 8 such sub-samples.

1.5.4. *Sample size – second stage units:* For schedule 10, in each of the eight sub-samples, from each selected village in rural areas and from each selected urban block in urban areas, a sample of 12 households were surveyed. In the central sample for schedule 10, the number of households actually surveyed was 1,20,578, of which 71,417 were in rural areas and the remaining 49,161 in urban areas. The actual number of persons surveyed were 3,71,188 in rural areas and 2,25,500 in urban areas.

1.6. Contents of the Report

1.6.1 As stated earlier, this report deals with various estimates with regard to employment and unemployment and related topics for people belonging to different social groups in India as obtained from tables generated on data collected on relevant items for the entire round. Consequently, all discussions in this report are limited to only such items/concepts, based on which estimates have been generated. Detailed explanation of these is given in the next chapter entitled ‘Concepts and Definitions’.

1.6.2 This report contains four chapters, including the present introductory chapter, and appendix tables. Chapter 2 states in detail the concepts and definitions of only those terms used in the survey in connection with various items covered in this report. Chapter 3 gives a fairly detailed description of the sample design and estimation procedure used for the survey. Chapter 4 discusses the main findings of the survey with respect to the different social groups. The detailed all-India tables based on which this report is brought out are presented in the Appendix.

1.6.3 *Tables in Appendix:* Appendix of the report contains 19 tables for each of the four different social groups. Of these, four tables provide various estimates on employment and unemployment for persons belonging to different social groups following different approaches of measuring them, 7 tables pertain to their various population characteristics such as age-group and education level while the remaining 8 are on various household characteristics like size class of monthly per capita consumer expenditure or of land possessed/cultivated, household type etc.

1.6.4 All the estimates presented in this report are based on Central sample data only. Further, the cell-level figures in any of the detailed tables, when added up, may not exactly be equal to the figure shown against the “total” column (or line) due to (i) rounding off and/or (ii) presence of non-response cases. It may be noted that the estimates of aggregates given in the detailed tables help only to combine ratios. To arrive at the absolute number in any category, the survey estimates of ratios are to be applied to the projected populations as on 01.01.2000, the mid-point of the 55th round survey period (July 1999 to June 2000).

Chapter 2

Concepts and Definitions

2.0 The concepts and definitions of some important terms used in the survey and which are relevant to this report viz., those used to generate the tables and various estimates on employment-unemployment are explained in the following paragraphs.

2.1 **Household:** A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb “normally” means that temporary visitors were excluded but temporary stay-aways were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident employee or a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer’s/host’s household. “Living together” was given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person’s family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household except that a family living in a hotel (say) was considered one household only. The same principle was applicable for the residential staff of such establishments.

2.1.1 For each household surveyed, the social group to which the head of the household belonged to was collected. The social group of the head of the household was considered as the social group of all the members of the household irrespective of the actual social group to which the individual members belonged to. Four social groups viz. Scheduled Caste, Scheduled Tribe, Other Backward Class and the rest referred to as ‘Other’ were considered for data collection.

2.2 **Economic activity:** Any activity resulting in production of goods and services that add value to national product was considered as an economic activity. Such activities included production of all goods and services for market (market activities), i.e. production for pay or profit, and, the production of primary commodities for own consumption and own account production of fixed assets, among the non-market activities.

2.2.1 The entire spectrum of human activity falls into two categories—economic and non-economic activities. The economic activities have two parts - market activities and non-market activities. Market activities are those that involve remuneration to those who perform it i.e., activity performed for pay or profit. These are essentially production of goods and services for the market including those of government services, etc. Non-market activities are the production for own consumption of primary products including own account processing of primary products and own account production of fixed assets.

2.2.2 The full spectrum of economic activities as defined in the UN system of National Accounts (1968) was not covered in the definition adopted for the NSS 55th round survey of Employment and Unemployment. The former included activities like own account processing of primary products among other things. In the NSS surveys, activities relating to the production of primary goods for own consumption, was restricted to the agriculture sector only and did not include the activities in mining

and quarrying sector. The coverage of economic activities was, however, the same as in the 50th round.

The term 'economic activity', therefore, included:

- (i) all the market activities performed for pay or profit which result in production of goods and services for exchange.
- (ii) of the non-market activities,
 - (a) all the activities relating to the agricultural sector (industry Divisions 01 to 05 of NIC 1998) which result in production (including gathering of uncultivated crops, forestry, collection of firewood, hunting, fishing etc.) of agricultural produce for own consumption
and
 - (b) the activities relating to the own-account production of fixed assets. Own account production of fixed assets include construction of own houses, roads, wells etc., and of machinery, tools etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction either in the capacity of a labourer or a supervisor.

As per the practice followed in earlier rounds, certain activities like prostitution, begging, smuggling etc., which though fetched earnings, were not considered as economic activities.

2.3 Activity status: It is the activity situation in which a person was found during a reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during a reference period:

- (i) working or being engaged in economic activity (work) as defined above,
- (ii) being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if the 'work' is available and
- (iii) being not engaged in any economic activity (work) and also not available for 'work'.

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employment' and 'unemployment', respectively.

2.3.1 Categories of activity status: Identification of each individual into a unique situation could pose a problem when more than one of the three broad activity statuses listed above were concurrently obtained for a person. In such an eventuality, the identification uniquely under any one of the three broad activity statuses was done by adopting *either the major time or priority criterion*. The former was used for classification of persons according to the 'usual activity status' approach and the latter for classification of persons according to the 'current activity status' approach. Each of the three broad activity statuses was further sub-divided into several detailed activity categories. If a person categorised as engaged in economic activity by adopting one of the two criteria mentioned above was

found to be pursuing more than one economic activity during the reference period, the appropriate detailed activity status code related to that activity in which relatively more time had been spent. A similar procedure was adopted for assigning detailed activity code for persons categorised as engaged in non-economic activity and pursuing more than one non-economic activity. The detailed activity categories under each of the three broad activity statuses used in the survey (along with the codes assigned to them as indicated in brackets) are stated below:

- (i) situation of working or being engaged in economic activities (employed):
 - (a) worked in household enterprise (self-employed) as own account worker (11);
 - (b) worked in household enterprise (self-employed) as employer (12);
 - (c) worked as helper in household enterprises (unpaid family worker) (21);
 - (d) worked as regular salaried/wage employee (31);
 - (e) worked as casual wage labour (i) in public works (41), (ii) in other types of work (51);
 - (f) had work in household enterprise but did not work due to: (i) sickness (61), (ii) other reasons (62); and
 - (g) had regular salaried/wage employment but did not work due to: (i) sickness (71), (ii) other reasons (72);
- (ii) situation of being not engaged in work but seeking or available for work (unemployed):
 - (a) sought work (81) and
 - (b) did not seek but was available for work (82)
- (iii) situation of being not available for work (not in labour force):
 - (a) attended educational institutions (91);
 - (b) attended domestic duties only (92);
 - (c) attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle-feed, etc.) sewing, tailoring, weaving, etc. for household use (93);
 - (d) rentiers, pensioners, remittance recipients, etc. (94);
 - (e) not able to work due to disability (95);
 - (f) beggars, prostitutes (96);
 - (g) others (97) and
 - (h) did not work due to sickness (for casual workers only) (98).

2.4 Workers (or employed): Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non-farm activities were also considered as workers. All the workers were assigned one of the detailed activity statuses under the broad activity category 'working' or 'being engaged in economic activity' (or employed).

2.5 Seeking or available for work (or unemployed): Persons, who owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those who were 'seeking or available for work' (or unemployed).

2.6 Labour force: Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. Persons who were neither 'working' nor 'seeking or available for work' for various reasons during the reference period were considered as 'out of labour force'. The persons under this latter category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young or too old persons, etc. and casual labourers not working due to sickness.

2.7 Self-employed: Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on own-account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (i.e., how, where and when to produce) and *economic independence* (i.e., market, scale of operation and money) for carrying out their operation. The fee or remuneration received by them comprised two parts - share of their labour and profit of the enterprise. In other words, their remuneration was determined wholly or mainly by sales or profits of the goods or services which were produced.

2.7.1 Categories of self-employed persons: Self-employed persons were categorised as follows:

- (i) **own-account workers:** those self-employed persons who operated their enterprises on their own account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour. They could, however, have had unpaid helpers to assist them in the activity of the enterprise;
- (ii) **employers:** those self-employed persons who worked on their own account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour; and
- (iii) **helpers in household enterprise:** those self-employed persons (mostly family members) who were engaged in their household enterprises, working full or part time and did not receive any regular salary or wages in return for the work performed. They did not run the household enterprise on their own but assisted the related person living in the same household in running the household enterprise.

2.8 Regular salaried/wage employee: These were persons who worked in others' farm or non-farm enterprises (both household and non-household) and, in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.

2.9 Casual wage labour: A person who was casually engaged in others' farm or non-farm enterprises (both household and non-household) and, in return, received wages according to the terms of the daily or periodic work contract, was a casual wage labour.

2.10 Usual activity status: The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively longer time (i.e. major time criterion) during the 365 days preceding the date of survey is considered as the *principal usual activity status* of the person. To decide the principal usual activity of a person, he/she was first categorised as belonging to the labour force or not during the reference

period *on the basis of major time criterion*. Persons thus adjudged as not belonging to the labour force were assigned the broad activity status 'neither working nor available for work'. For persons belonging to the labour force, the broad activity status of either 'working' or 'not working but seeking and/or available for work' was ascertained based on the same criterion viz. relatively longer time spent in accordance with either of the two broad statuses within the labour force during the 365 days preceding the date of survey. Within the broad activity status so determined, the detailed activity status of a person pursuing more than one such activity was determined once again on the basis of the relatively longer time spent on such activities. In terms of activity codes (stated earlier in para 2.3.1), codes 11-51 were applicable for persons classified as workers, while code 81 was assigned to people either seeking or available for work (unemployed persons) and codes 91-97 for those who were out of labour force.

2.11 *Subsidiary economic activity status:* A person whose principal usual status was determined on the basis of the major time criterion could have pursued some economic activity *for a relatively shorter time* during the reference period of 365 days preceding the date of survey. The status in which such economic activity was pursued was the subsidiary economic activity status of that person. Thus, activity status codes 11-51 only were applicable for persons reporting some subsidiary economic activity. It may be noted that engagement in work in subsidiary capacity could arise out of the following two situations, viz.

- (i) a person could be engaged for a relatively longer period during the last 365 days in one economic/non-economic activity and for a relatively shorter period in another economic activity, and
- (ii) a person could be pursuing one economic activity/ non-economic activity almost throughout the year in the principal usual activity status and simultaneously pursue another economic activity for a relatively shorter period in a subsidiary capacity.

2.12 *Industry-occupation:* The description of the industry-occupation was relevant to the type of economic activity pursued by the person. NIC-1998 was followed for classifying industries and NCO-1968 was followed for classifying occupations. In case two or more industry-occupation combinations corresponding to the status code were reported by a person, the principal industry-occupation was taken as the one in which *relatively more time* was spent during the reference period by the person. It may be noted that under Division 95 of NIC 1998, on "Private households with employed persons", six additional codes have been introduced for recording 5 digit entries for industry codes in the survey viz., housemaid /servant (95001), cook (95002), gardener (95003), gatekeeper/chowkidar/watchman (95004), governess/baby-sitter (95005) and for 'others' (95009).

2.13 *Manual work:* A job essentially involving physical labour was considered as manual work. However, jobs essentially involving physical labour but also requiring a certain level of general, professional, scientific or technical education were not termed as 'manual work'. On the other hand, jobs not involving much of physical labour and at the same time not requiring much educational (general, scientific, technical or otherwise) background were treated as 'manual work'. Thus, engineers, doctors, dentists, midwives, etc., were not considered manual workers even though their jobs involved some amount of physical labour. But, peons, chowkidars, watchman, etc. were considered manual workers even though their work might not involve much physical labour. Manual work was defined as

work pursued in one or more of the following occupational groups of the National Classification of Occupations (NCO 1968):

Division 5: Service workers:

Group 52: cooks, waiters, bartenders and related workers (domestic and institutional).

Group 53: maid and other housekeeping service workers (not elsewhere classified).

Group 54: building caretakers, sweepers, cleaners and related workers.

Group 55: Launderers, dry cleaners and pressers.

Group 56: hair dressers, barbers, beauticians and related workers.

Family 570: fire fighters

Family 574: watchmen, gate-keepers

Family 579: protective service workers not elsewhere classified.

Division 6: Farmers, Fishermen, Hunters, Loggers and related workers :-

Group 63: agricultural labourers

Group 64: plantation labourers and related workers

Group 65: other farm workers

Group 66: forestry workers

Group 67: hunters and related workers

Group 68: fishermen and related workers.

Division 7-8-9: Production and related workers, transport equipment operators and labourers:

All groups excluding group 85 (electrical fitters and related workers) and group 86 (broadcasting station and sound equipment operators and cinema projectionists).

2.14 Rural Labour: Manual labour working in agricultural and /or non-agricultural occupations *in return for wages* paid either in cash or in kind (excluding exchange labour) and *living in rural areas*, was taken as rural labour.

2.15 Agricultural labour: A person was considered as engaged as agricultural labour, if he/she followed one or more of the following agricultural occupations in the capacity of a wage paid manual labour, whether paid in cash or kind or both:

(i) farming,

(ii) dairy farming,

(iii) production of any horticultural commodity,

(iv) raising of livestock, bees or poultry,

(v) any practice performed on a farm as incidental to or in conjunction with farm operations (including forestry and timbering) and the preparation for market and delivery to storage or to market or to carriage for transportation to market of farm produce.

Working in fisheries was *excluded* from agricultural labour. Further, 'carriage for transportation' refers *only to the first stage of the transport* from farm to the first place of disposal.

Chapter 3

Sample Design and Estimation Procedure

3.1 Sample Design

3.1.1. A stratified multi-stage sampling design for rural as well as urban areas was adopted for selection of the sample units for the survey. The first stage units (FSU) were the census villages (panchayat wards for Kerala) for rural areas and the NSSO Urban Frame Survey (UFS) blocks for urban areas. The ultimate stage units (USU) were the households for both rural and urban areas.

3.1.2 *Selection of the first-stage units:* The various steps involved before making the selection of the FSUs are discussed at length in the following few paragraphs before taking up the issue of selection of USUs within a FSU.

3.1.2.1 *Sampling frame for the first stage units (FSU's):* For rural areas, the list of census villages as per 1991 population census (list of census villages as per 1981 Census for the State of Jammu & Kashmir) constituted the sampling frame for selection of sample FSUs for most of the states. For the rural areas of Kerala, however, the list of panchayat wards was used as the sampling frame for selection of panchayat wards. For Nagaland, the list of villages located within 5 kms. of a bus route constituted the sampling frame, whereas, the list of accessible villages constituted the sampling frame for Andaman & Nicobar Islands. All the uninhabited villages of the country as per 1991 Census were left out of the survey coverage of the NSS 55th round. For the urban areas, the latest lists of UFS blocks constituted the sampling frame for selection of sample FSUs.

3.1.2.2 *Stratification of the first stage units in rural areas:* From the list of villages of each State/ Union Territory (U.T.), initially, two special strata were formed by considering villages (a) with very small population and (b) with very high population. These are formally stated below:

- Stratum 1: all FSU's with population between 1 to 100,
- Stratum 2: FSU's with population more than 15,000.

The above two strata were spread across a given state and were not confined to any particular administrative division within the state. Each of the above two strata was formed if at least 50 such FSU's were there in the respective frames. Otherwise, these type of villages were included in the general strata as described below:

After formation of strata 1 and 2 (wherever applicable), the remaining villages of the State/ U.T. were considered for formation of general strata. While forming general strata, efforts were made to treat each district with population less than 2 millions as a separate stratum. If limitation of sample size did not allow forming so many strata, smaller districts within a particular NSS region were merged to form a stratum. Each district with rural population of 2 millions or more as per 1991 Census (1.8 millions or more as per 1981 Census in case of Jammu & Kashmir) was as usual split into a number of strata.

3.1.2.3 *Stratification of the first stage units in urban areas*: Within each NSS region, strata were formed by grouping towns on the basis of their population as per 1991 population census (1981 Census for the State of Jammu & Kashmir) following certain specifications which are stated below in a tabular form:

Stratum number	Composition of strata within a NSS region
1, 3, 5 *	'hospital area' (HA) / 'industrial area' (IA) / 'bazaar area' (BA) blocks taken together of each single city with a population of 10 lakhs or more (there could be a maximum of 3 such cities within an NSS Region)
2, 4, 6 *	Other blocks of each single city with a population of 10 lakhs or more
7	HA or IA or BA blocks of all towns with population between 50,000 to less than 10 lakhs
8	Other blocks of all towns with population between 50,000 to less than 10 lakhs
9	HA or IA or BA blocks of all towns with population less than 50,000
10	Other blocks of all towns with population less than 50,000

* *Stratum numbers 3, 4, 5 & 6 remained void if there was only one city in an NSS region with a population of 10 lakhs or more.*

It may be noted that if limitation of sample size did not allow forming so many strata, all blocks of stratum 7 were merged with those of stratum 8 and all blocks of stratum 9 were merged with those of stratum 10.

3.1.2.4 *Allocation of FSU's among Strata*: At the all-India level, a total number of 10,384 FSU's (6208 villages and 4176 urban blocks) was selected for survey in the *central sample* in the 55th round. The actual state/ U.T. level allocation of FSUs in both the rural and urban sector are given in Table A at the end of this Appendix. The sample size at the state/U.T. level was allocated as follows:

(a) *in rural areas*: state/ UT level rural sample size was allocated among the rural strata in proportion to population.

(b) *in urban areas*: state/ UT level urban sample size was first allocated among the three classes of towns (i.e. 10 lakh +, 50000 to less than 10 lakhs and less than 50,000) in proportion to population. Then sample allocation for each of the three classes of towns, within an NSS region, was further allocated between two strata types consisting of - (i) HA/ IA/ BA blocks, and (ii) the rest in proportion to total number of FSU's in the respective frames with double weightage given to the first category of blocks.

3.1.2.5 *Sub-round wise allocation*: Sample size for the whole round for each State/UT x Sector (i.e. rural/ urban) were allocated equally among the 4 sub-rounds. Stratum level allocations for both rural and urban areas of a sub-round were made in even numbers in order to facilitate selection of FSU's in the form of 2 independent sub-samples. Sub-sample numbers were 1 & 2 for sub-round 1; 3 & 4 for sub-round 2; 5 & 6 for sub-round 3 and 7 & 8 for sub-round 4. One salient feature of the 55th round

was the *rotation sampling scheme* which was adopted for the first time in the NSS for the purpose of collection of employment-unemployment data from central sample only. Under this scheme, 1 sub-sample of the sampled first stage units (FSU's) of each sub-round was revisited in the subsequent sub-round. From each such FSU, sample households visited in the previous sub-round for collecting data on employment-unemployment were revisited in the subsequent sub-round for collecting employment-unemployment details.

3.1.2.6 *Selection of first-stage units*: For each sub-round, sample first-stage units from each stratum were selected afresh in the form of 2 independent sub-samples by following circular systematic sampling with :

- (a) probability proportional to population for all rural strata other than stratum 1,
- and
- (b) equal probability for rural stratum 1 as well as for all urban strata.

3.1.3 *Selection of Ultimate Stage Units within a FSU*: The remaining paragraphs of this sub-section outlines the various steps leading to the actual selection of USUs within a FSU.

3.1.3.1 *Formation of hamlet-groups/ sub-blocks*: In some cases, depending upon the approximate present population (P) and approximate total number of non-agricultural enterprises (E) of the villages/blocks, the FSUs were further divided into a fixed number of hamlet groups/ sub-blocks, as per the rules stated below:

Value of P	No. of hg's/ sb's formed in the FSU as per population criterion	Value of E	No. of hg's/ sb's formed in the FSU as per enterprise criterion
(1)	(2)	(3)	(4)
Less than 1200	1 @	Less than 100	1 @
1200 – 1999	5	100 – 249	5
2000 – 2399	6	250 – 299	6
2400 – 2799	7	300 – 349	7
2800 – 3199	8	350 – 399	8
(and so on)		(and so on)	

@ no. of hg's/ sb's = '1' implies that the whole FSU was considered for listing.

It may be noted that for rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur and Doda districts of Jammu & Kashmir, number of hamlet groups formed in the village as per population criterion was : 1 for P < 600, 5 for P = 600 to 999, 6 for P = 1000 to 1199, 7 for P = 1200 to 1399, 8 for P = 1400 to 1599, and so on (procedure remaining unchanged as per enterprise criterion). Further, the higher of the two values obtained as per population and enterprise criteria was taken as the number (D) of hamlet-groups (hg)/ sub-blocks (sb) to be formed in the FSU. In cases where hg's/ sb's were formed in the sample FSU, the same was done by more or less equalizing the population of the different hgs/ sbs of the FSU.

3.1.3.2 *Formation of Segments within FSU*: The hg/ sb having maximum concentration of non-agricultural enterprises was selected with certainty for listing of households/ enterprises. This hamlet group/ sub-block was referred to as segment 1. From the remaining (D-1) hg's/ sb's of the FSU, 2 more hg's/ sb's were selected circular systematically and these 2 selected hg's/ sb's together were referred to as segment 2 for doing a combined listing of households. The listing of households was done only in segments 1 and 2 of the FSU. The FSUs not requiring hg/ sb formation were treated as segment 1 for the purpose of data collection and estimation.

3.1.3.3 *Sampling frame of households*: All households of segments 1 and 2 of the FSU were listed independently and this list of households of the segments 1 and 2 constituted the sampling frame for the purpose of selection of sample households from the corresponding segments.

3.1.3.4 *Stratification of households*: All the households listed in a segment (both rural & urban) were stratified into two second stage strata, viz. 'affluent households' which formed second stage stratum 1, and the rest which formed second stage stratum 2. In the rural sector, a household was classified as 'affluent' if the household owned certain items like motor car/ jeep, colour TV, telephone, etc. or owned land / livestock in excess of certain limits. In the urban sector, the households with MPCE (monthly per capita consumer expenditure) greater than certain limit for a given town/city were treated as 'affluent' households and were included in the frame of second stage stratum 1, and rest of the urban households were included in the frame of second stage stratum 2.

3.1.3.5 *Selection of households*: Sample households were selected from the respective frames by circular systematic sampling with equal probability. For the purpose of systematic sampling, households in the frame of second stage stratum 2 were arranged by means of livelihood x land possessed classes for rural samples and by means of livelihood x MPCE classes for urban samples. The number of households selected for survey on employment–unemployment from different segments x second stage stratum (within a FSU) are specified below:

segment	Household allotment *		
	second stage stratum		
	1	2	total
(1)	(2)	(3)	(4)
FSU with hg/ sb formation:			
1	1	3	4
2	1	7	8
FSU with no hg/ sb formation:			
1	2	10	12

* The fsus of sub-sample 1, sub-sample 3 and sub-sample 5 were re-visited during sub-round 2, sub-round 3 and sub-round 4 respectively. In the fsus of these re-visit sub-samples, all the households where schedule 10 was previously canvassed (i.e. during the previous sub-round) were re-visited for canvassing schedule 10.1. However, in case such a household could not be surveyed during re-visit, it was substituted and schedule 10 was canvassed in the substituted household. Further, schedule 10 was also canvassed for those households which were 'casualty' during visit 1 but could be surveyed during the re-visit. From among the newly formed households found during the re-visit of a fsu (which constituted the second stage stratum 9), at most 1 household was surveyed from each of the 2 segments and schedule 10 only was canvassed for those households.

3.2 Estimation Procedure

3.2.1 This estimation procedure adopted in the 55th round for schedule 10 provides

- (a) estimates on quarterly/ sub-round basis, and
- (b) the estimate of error from the sub-sample replicates.

Tabulated estimate for a quarter/ sub-round was obtained by combining the estimates of the corresponding sub-sample replicates. The estimation procedure adopted in the 55th round for schedule 10 is described below.

3.2.2 *Notation:* The notations used for estimation procedure are given below:

- a = subscript for the a-th stratum
- r = subscript for the r-th sub-sample replicate (r = 1,2,...,8)
- q = subscript for the q-th sub-round / quarter (q=1,2,3 & 4)
- f = subscript for the f-th sampled village/ block as First Stage Unit (FSU)
- s = subscript for the s-th segment of sampled village/ block (s= 1 & 2)
- c = subscript for the c-th second stage stratum of households in the sampled village/ block (c= 1,2); for new households during revisit, c= 9.
- j = subscript for the j-th sampled household
- p = subscript for pooled estimate
- z = size used for selection of an FSU from the sampling frame
- Z = total of sizes in the sampling frame for the stratum
- n = number of sampled FSU surveyed within a stratum and a sub-sample replicate (including zero cases and uninhabited cases but excluding casualty cases) and used for tabulation
- L = number of sub-sample replicates surveyed and used for tabulation
- D = number of hamlet-groups/ sub-blocks formed in rural/ urban sampled FSU
- H = total number of households listed in the appropriate frame
- h = number of sampled households surveyed and used for tabulation from the frame
- y, x = value of characteristic y, x obtained in the sample
- \bar{y}, \bar{x} = estimated value of characteristic y, x obtained from the sample.

3.2.3 *Estimates of aggregates:* If \bar{y} be the estimate of aggregate of any characteristic y for a given stratum (a), and for a particular sub-round (q) and sub-sample replicate (r), the formula used for estimating a characteristic of household from a given 2nd stage stratum (c) is as specified below:

For rural areas:

$$\hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \frac{1}{z_f} \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj}$$

where $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$, for segment 1 (s=1) and $B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}$, for segment 2 (s=2).

For urban areas:

$$\hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj}$$

where , $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$, for segment 1 (s=1) and $B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}$, for segment 2 (s=2).

These formulae are provided for the general case of FSU's having 2 segments 1 & 2. For the FSU's requiring no hg/ sb formation, the formula is identical to that given for segment 1 while the contribution from segment 2 is taken as zero.

Finally, the estimate of a characteristic y for a stratum (a), for a particular sub-round (q) and a sub-sample replicate (r) (which actually represented \hat{Y}_{aqr}) was obtained as $\hat{Y} = \sum_c \hat{Y}_c$.

The combined estimate for a particular stratum and a particular sub-round was computed as the average of sub-sample replicate estimates and is given below:

$$\hat{Y}_{aq} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{aqr}$$

If \hat{Y}_{qr} be the State/ UT/ Region level aggregate from the r-th sub-sample replicate and q-th sub-round, and \hat{Y}_{qp} , the combined estimate of the aggregate based on the whole sample, for a given sub-round/ quarter q, then:

$$\hat{Y}_{qr} = \sum_a \hat{Y}_{aqr} \quad \text{based on sub-sample replicate group r,}$$

and

$$\hat{Y}_{qp} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{qr} \quad \text{based on all sub-sample replicates.}$$

3.2.4 *Estimates of ratios:* If \hat{X} & \hat{Y} be the State/ UT/ Region level aggregate estimate corresponding to variables x and y, then the estimate of ratio, in general, is given by

$$\hat{R}_r = \frac{\hat{Y}_r}{\hat{X}_r} \quad \text{based on sub-sample group r,}$$

and

$$\hat{R}_p = \frac{\hat{Y}_p}{\hat{X}_p} \quad \text{based on the whole sample.}$$

Estimates for the sub-round (/quarter) \hat{R}_{qr} and \hat{R}_{qp} was obtained by replacing \hat{Y}_r and \hat{Y}_p by \hat{Y}_{qr} and \hat{Y}_{qp} , respectively and \hat{X}_r and \hat{X}_p by \hat{X}_{qr} and \hat{X}_{qp} , respectively.

3.2.5 Treatment for casualty:

I) If $H_{fsc} > 0$ but $h_{fsc} = 0$ for a particular 2nd stage stratum of households in a FSU with no hamlet-group/sub-block formation (ie. $D_f = 1$), it was a case of casualty and the value of n was reduced by 1.

II) If $D_f > 1$ and $H_{fs'c} > 0$ but $h_{fs'c} = 0$ for $s=1$ (say, s') and if it was not a case for the entire FSU, here n was not reduced by 1 and in this case $[(D_f - 1)/2] \times H_{fsc}$ was replaced by $\{H_{fs'c} + [(D_f - 1)/2] \times H_{fsc}\}$ in the formula for $s=2$.

III) If $D_f > 1$ and $H_{fs'c} > 0$ but $h_{fs'c} = 0$ for $s=2$ (say, s') and if it was not a case for the entire FSU, here n was not reduced by 1 and in this case, H_{fsc} was replaced by $\{H_{fsc} + [(D_f - 1)/2] \times H_{fs'c}\}$ in the formula for $s=1$.

IV) If $H_{fsc} > 0$ but $h_{fsc} = 0$ for a particular second stage stratum of households in both the segments ($s=1$ & 2) in an FSU, it was a case of casualty and the value of n was reduced by 1.

Table A: Number of villages/ blocks allotted and surveyed and number of persons surveyed in different states and union territories

state/ut.	villages / blocks				persons surveyed

Chapter 4

Summary of Findings

4.1 Introduction

4.1.1 As stated earlier, this report primarily deals with the employment and unemployment situation during 1999-2000 among persons belonging to the four social groups, viz. scheduled tribes (ST), scheduled castes (SC), other backward classes (OBC) and the remaining persons, hereafter referred to as 'other'. However, before studying their employment - unemployment situation, some broad indicators pertaining to household and population characteristics of the different social groups are discussed first. As such, the variation by social group in the level or pattern of a few household or population characteristics like (i) distribution of households by 'household type' (i.e. nature or type of work from which the household derived maximum income during the 365 days preceding the date of survey), (ii) distribution of households by land possessed or land cultivated, (iii) distribution of persons by monthly per capita expenditure (MPCE), etc. are taken up for discussion in the next section. The main findings with respect to the indicators of employment and unemployment are then presented in sections 3, 4 and 5 of this chapter.

4.1.2 It may be mentioned that while all-India summary results are presented along with the write-up, the corresponding results at the state/union territory level are given at the end of this chapter. The appendix tables give the corresponding detailed results for all-India. Discussions are mainly centered around the all-India estimates. A comparison with the earlier survey results is also made in some cases at the all-India level.

4.2 Households and population

4.2.1 Number of households surveyed by social group

4.2.1.1 Before examining the various survey results by social group at the state/union territory level, one may like to have an idea of the respective sample sizes based on which the survey results/estimates have been obtained. Table 1 gives the number of households surveyed in 55th round by social group for different states and union territories and at the all-India level with rural – urban break-up. The table shows that there are quite a few cases where the number of surveyed households from some social groups are rather low for some states/union territories. *As the estimates based on small sample sizes are not likely to be sufficiently reliable for the concerned social group in those states/union territories, such results are to be used with due caution.*

Table 1 : Number of households surveyed in NSS 55th round by social group

State/u.t.	number of households surveyed

4.2.2 Households and Population

4.2.2.1 *Distribution of households and persons by social group*: Tables 2.1R/U give per thousand distribution of estimated number of households and persons by social group separately for the rural and urban areas of different states/union territories and for all-India as obtained from the survey. As stated earlier in Para 4.1.2, these state-level tables are given at the end of this chapter. Table 2.1R shows that in rural areas, during 1999-2000, about 11 per cent of the people were scheduled tribes (ST) and about 21 per cent, scheduled castes (SC)¹. The corresponding proportions were 10 and 18 per cent respectively for STs and SCs according to the 1991 Census. In urban India, the share of STs/SCs in the total population was much less than that in rural areas – only about 4 per cent for STs and 15 per cent for SCs (2 and 12 per cent respectively as per 1991 Census). The tables show that within a state/union territory, proportions of ST or SC or OBC population were generally higher in the rural areas as compared to those in the urban areas. The tables also reveal that among different states /union territories, the relative proportions of the different social groups in their population were highly variable. Maps of India showing concentration of the SCs, STs and OBCs across the states/u.ts. are presented at the end of this chapter.

4.2.2.2 *Comparison of average household size over social groups*: From Table 2.1R it may be noted that for rural India as a whole, share of ST/SC in total population is a little less than their corresponding shares in total number of households. On the other hand, the share of OBC and the 'other' category in total population is a little more than their corresponding shares in total number of households. This indicates that the average household size of ST/SC households was a little less than that for OBC or 'other' category of households. This feature is observed for many states. For urban India as a whole, the share in total population for any social group was closer to its corresponding share in total number of households than that observed for rural areas.

4.2.3 Distribution of households by household type

4.2.3.1 Each surveyed household was categorised under an appropriate 'household type' (refer sec 4.1). There could be 5 different household types in rural areas and 4 in urban areas. These are stated in table 3, which presents the distribution of Indian households by household type separately for each social group. The corresponding results for various states/union territories are given in table 3.1R/U.

4.2.3.2 *In rural areas*: Table 3 shows that in rural India, proportion of households depending on self-employment was higher among 'other' households (56 per cent) or among OBC households (50 per cent) as compared to that among ST (41 per cent) or SC (28 per cent) households. On the other hand, proportion of

¹ NSS estimates of proportion of ST or SC households/population are not strictly comparable with the corresponding figures available from 1991 Population Census due to the differences in definitions adopted. The NSSO classifies a household (and accordingly all persons within a household) as ST or SC if the informant reports the head of the household to be so. On the other hand, in the Population Census, a person enumerated was classified as belonging to ST or SC if he or she was covered in the list of STs/SCs furnished to the enumerator with respect to his/her state/union territory. The divergence of the NSS estimates of ST/SC households or population from the Census figures could partially be due to the limitation of the sample size to which the NSS estimates are subjected.

'rural labour' was much higher among ST (49 per cent) and SC (about 61 per cent) households as compared to that among the 'other' households (25 per cent).

4.2.3.3 *In urban areas:* In urban India too, proportion of households depending on self-employment was higher among OBC households (38 per cent) and 'other' category households (36 per cent) as compared to that among ST (22 per cent) or SC (27 per cent) households. Proportion of households depending on regular wage/salaried employment was the same among ST and SC households (38 per cent) and very close – 36 per cent – among OBC households, as against 47 per cent among 'other' households. Proportion of urban households depending on casual labour was higher among ST and SC (26 per cent and 27 per cent respectively) households than among OBC households (17 per cent) or 'other' households (7 per cent).

4.2.4 Distribution of households by size class of land possessed

4.2.4.1 Land possessed by a household could serve as a good indicator of the economic status of the household, at least in the rural areas. To examine the variation in this respect among different social groups in rural India, the distribution of households of different social groups by the size class of land possessed by them as obtained from the survey are presented in table 4. The distribution of households of various social groups by size class of land possessed by each state/union territory is shown in table 4.1R.

Table 4: Per thousand distribution of households of different social groups by size class of land possessed in rural India

size class of land possessed (hectares 0.00)	social group									
	55 th rd. (99-00)					all	50 th rd. (93-94)

all	1000	1000	1000	1000	1000	1000	1000	1000	1000	1000

(+) Data on OBC category separately was not collected in the 50th Round

4.2.4.2 *During 1999-2000*: Table 4 shows that in rural India, the proportion of households possessing less than 0.01 hectare of land during 1999-2000 was the highest among SC households (10 per cent). The corresponding proportion for ST and OBC households was about 7 per cent each, as against 6 per cent of such households among the 'other' social group. The survey results show that as high as 75 per cent of the SC households possessed land up to 0.40 hectare. The corresponding estimates for ST, OBC and 'other' category of households are 46, 57 and 52 per cent respectively. It may also be noted that proportion of households possessing land of size more than 4.00 hectares was maximum for 'other' category of households (7 per cent) as compared to the OBC (4 per cent), ST (about 3 per cent) and SC households (1 per cent).

4.2.4.3 *Change over the period 1993-94 to 1999-2000*: The estimates obtained from the 50th round (1993-94) are also presented in table 4. As data on OBC category of households was separately collected in the latest quinquennial round (1999-2000) for the first time among the quinquennial rounds, figures corresponding to the OBC category of households cannot be presented for the earlier quinquennial round (1993-94). It may be noted that the data on social groups SC, ST and 'other' were collected during all the earlier NSS rounds. In order to present comparable estimates over the rounds, the two categories of households - OBC and 'other' of the present round - have been merged so as to render estimates obtained for this 'combined' category comparable with those obtained for the category 'other' in the earlier rounds. This practice has been followed in Table 4 and in later tables of this chapter wherever estimates over rounds have been compared. It is seen from Table 4 that between 1993-94 and 1999-2000, the proportion of households under each of the following size classes of land possessed, viz., (i) 0.00 hectare, (ii) 1.01 - 2.00 hectares, (iii) 2.01 - 4.00 hectares and (iv) 4.01 hectares and above, showed a decrease. There was a commensurate increase in the proportion of households in the class 0.01 - 0.40 hectare for each of the three social groups. For the class 0.41 - 1.00 hectare, the proportions remained almost the same for SC and 'other' households, while there is a slight increase in 1999-2000 for ST households.

4.2.5 Distribution of households by size class of land cultivated

4.2.5.1 The distribution of households by size class of land cultivated as obtained from the survey is given in table 5.1R for the rural areas of different states/union territories and all-India. For the purpose of the survey, land cultivated was defined as the net area sown during the agricultural year (AY) 1998-99 i.e. July 1998 to June 1999. It may be seen that during AY 1998-99, in rural India, more than half (about 56 per cent) of the SC households cultivated land of size less than 0.01 hectare only. The corresponding proportions for ST, OBC and 'other' category of households were 32, 39 and 35 per cent respectively. The proportions of households cultivating up to 0.40 hectare of land were of the order of 53 per cent for ST, 79 per cent for SC, 62 per cent for OBC and 57 per cent for 'other' category of households. The proportion of households cultivating larger holdings of size 4.01 hectares and above was the highest among 'other' category of households (about 5 per cent) followed by OBCs (about 3 per cent). Between the two scheduled categories of households, the proportion of households operating such large holdings was a little higher among the households belonging to the STs (2 per cent) than among those belonging to the SCs (1 per cent).

4.2.6 Distribution of persons by household monthly per capita expenditure (MPCE) class

4.2.6.1 Household monthly expenditure could serve as a proxy for household monthly income and reflects the standard of living of the members of a household to some extent. In the present survey on employment and unemployment, data on consumption expenditure was collected through a separate work-sheet which was integrated with the employment - unemployment schedule. Based on the data on household consumer expenditure collected through this work-sheet from the sample households surveyed in the employment-unemployment schedule of the present survey, the distribution of persons by household MPCE class is obtained for each of the four social groups and the same is presented in tables 6.1R/U for different states/union territories and all-India. An attempt is made to study the variations in the pattern of household MPCE among the social groups separately for rural and urban areas.

4.2.6.2 *In rural areas:* It may be seen from table 6.1R that in rural India, proportion of persons in each of the five lower MPCE classes (viz. less than Rs.225, Rs.225 – 255, Rs.255 – 300, Rs.300 – 340 and Rs.340 – 380) was higher among STs, SCs and OBCs than the 'other' social group. Between STs and SCs, proportions of persons in the lowest two MPCE classes were higher among STs than among the SCs. It may be seen that 17 per cent of STs living in rural India spent less than Rs.225 per month during the year 1999-2000; the corresponding percentages for SCs, OBCs and 'other's being 11, 7 and 4 per cent respectively. As high as 65 per cent of the STs spent up to Rs.380 per month during the same period. The corresponding percentages for the SCs, OBCs and 'other' category of persons were 59, 49 and 36 per cent respectively. The proportion of persons in the highest MPCE class (i.e. those who spent Rs.950 or more per month) was higher among 'other' category of persons (6 per cent) than among OBCs (3 per cent) or among the STs and SCs (1 per cent each).

4.2.6.3 *In urban areas:* Table 6.1U shows that in urban India too, proportion of persons in each of the five lower MPCE classes (i.e. less than Rs.300, Rs.300-350, Rs.350-425, Rs.425-500 and Rs.500-575) was higher among STs, SCs and OBCs than among the 'other' category of persons. As in the rural areas, in urban

India too, proportion of persons in the lowest MPCE class (i.e. these spending less than Rs.300 per month) was higher among the STs (16 per cent) than that among SCs (13 per cent). It may be noted from table 6.1U that about 64 per cent of the SCs of urban India spent less than Rs.575 per month during 1999-2000; the corresponding percentages being 59, 56 and 35 for the STs, OBCs and the 'other's respectively. The proportion of urban persons spending Rs.1925 or more per month was higher among 'other's (6 per cent) than among OBCs (2 per cent) or among the STs (3 per cent) or SCs (1 per cent).

4.2.7 Proportion of households with no literate adult member/ no literate adult female member

4.2.7.1 The activity pattern of the members of a household is likely to be related with their level of literacy. Tables 7.1R/U give the proportions of households having no literate adult (age 15 yrs. and above) member and no literate adult female member for different social groups of households at the state/union territory and all-India level, separately for rural and urban areas. The tables reveal that the proportion of households with no literate adult member/ no literate adult female member was much higher among households belonging to the scheduled categories as compared to the OBC or 'other' category households in both rural and urban India. Between the two scheduled categories, the proportion of such households was higher among STs in rural India and among SCs in urban India. Between OBC and 'other' category households, the proportion of such households was higher among OBCs in rural or urban India.

4.2.8 Per thousand distribution of persons (age 15 years and above) by general education

4.2.8.1 The educational level attained by a person is likely to have a bearing on his or her employment prospects. Tables 8.1R/U show the state/union territory level and all-India level distribution of persons of age 15 years and above by their educational level for each of the four social groups separately. The results at the all-India level are summarised in table 8 below.

Table 8: Per thousand distribution of persons of age 15 years & above by general education for different social groups.

social group	per '000 distribution of persons (15 +) by level of general education							all	all-India
	not-literate	literate & upto primary	middle	secondary	higher secondary	graduate & above	not recorded

SC	521	187	138	80	46	27	1	1000	
OBC	383	225	163	119	63	45	1	1000	
others	216	179	161	172	113	157	2	1000	
all	318	196	158	141	86	101	1	1000	

4.2.8.2 Table 8 reveals that the proportion of illiterates among the persons of age 15 years and above was much higher among persons in the ST and SC households than among persons in the other categories of households for both males and females in rural or urban areas in India. Between the two scheduled categories, the proportion of illiterates was higher among STs than among SCs in the rural areas for both males and females. In urban India, however, the proportion of illiterates was higher among SCs than among STs for both males and females. The proportion of persons reporting their educational level as 'graduate and above' was higher among the 'other' category than among any other category of persons for both males and females in rural or urban India. In urban India, proportion of persons reporting their educational level as

'graduate and above' was higher among STs (11 per cent for males and 6 per cent for females) than that among SCs or OBCs. In rural areas, the said proportion was almost the same among the SCs and STs.

4.2.9 School attendance rates among children in the age-group 5-14 years

4.2.9.1 School attendance rate among the children is supposed to be one of the important social indicators for assessing the status of progress of any particular group of people under study. Table 8A presents the school attendance rates among the children in the age-group 5-14 years for different social groups for India as per NSS 43rd (1987-88), 50th (1993-94) and 55th (1999-2000) rounds. As stated earlier (in section 4.2.4), the category OBC and 'other' for the present survey have been taken together for comparing with the category 'other' in the earlier rounds. It may be noted that in the NSS 43rd round (1987-88), neo-Buddhists in the state of Maharashtra were not considered under the category SC for obtaining the estimates. The table shows that school attendance rate was much higher among the children (5-14 years) of 'other' category of households as compared to the households belonging to the scheduled categories. This is true for both males and females of rural/urban areas. Between the two scheduled categories of households, school attendance rates for both males and females were higher among the households belonging to SCs than among the STs in rural India. In urban India however, school attendance rates among the children were a little higher for ST households than that for households belonging to SC. It may further be observed that the school attendance rates steadily increased during the period 1987-88 to 1999-2000. The rate of increase is higher during the period 1988-94 as compared to that during the period 1994-2000.

Table 8A: School attendance rates among the children in the age-group 5-14 years (i.e. number of children attending school per 1000 children in that age-group) for different social groups

all	764	853	845	699	807	808

Note 1. For the 55th round the school attendance rates among children of age-group 5-14 years for OBC and 'Other' category separately, were as follows:

Rural male OBC : 743 and Other : 802; *Rural female* OBC : 621 and Other: 738;

Urban male OBC : 824 and Other : 880; *Urban female* OBC : 786 and Other: 854;

Note 2. Category 'Other' for the 55th round in this table gives the estimates obtained after combining the categories OBC and 'Other';

4.3 Employed (Work - Force)

4.3.1 *General:* The NSSO generates three different estimates of 'employed' (or work - force) from the data collected through its quinquennial employment-unemployment surveys. These are :

- (i) number of persons usually employed in the principal status and all workers taking into account the employed according to both principal and subsidiary statuses during a reference period of 365 days preceding the date of survey,
- (ii) number of persons employed on an average in a week i.e. those who had worked at any time during a reference period of 7 days preceding the date of survey and
- (iii) number of person-days employed per day on an average during the reference period of 7 days preceding the date of survey.

The number of persons /person-days employed per thousand persons/person-days is referred to as work - force participation rate (WFPR) or worker population ratio (WPR).

4.3.1.1 In the present survey, estimates of WPR by social group have been generated with respect to all the three approaches (i), (ii) and (iii) above – they are hereinafter referred to as usual status (us), current weekly status (cws) and current daily status (cds) approaches respectively. In the us approach, the estimates of usually employed are provided in two categories – usually employed in the principal status (ps workers) and usually employed in the subsidiary status (ss workers). The two categories together constitute the total usually employed (all workers).

4.3.1.2 The us approach adopted for classification of the population does not take into consideration the changes in the activity pattern caused by seasonal fluctuations. The estimates of WPR according to cws/cds approaches give the average weekly/daily picture of employment. It may be noted that the difference between the two rates of WPR according to cws and cds approaches give an idea about the extent of underemployment of those who had some employment during the week.

4.3.2 Estimates of employed according to us/cws/cds approaches

4.3.2.1 To examine the disparities in the WPRs across various social groups according to us/cws/cds approaches, estimates of WPR (1999-2000) for different social groups for each state/union territory and all-India are presented in table 9.1R/U (us approach-ps workers), table 9.2R/U (us approach-all workers i.e. ps and ss workers combined), table 9.3R/U (cws approach) and table 9.4R/U (cws approach). All tables are given separately for males and females. The estimates at the all India level are summarized below in table 9.

4.3.2.2 Table 9 shows that in rural India, proportion of persons employed in the principal status according to us approach was the highest among STs, for both males and females. For rural males, these proportions were 55 per cent for STs, 52 per cent each for SCs and OBCs and 51 per cent for 'other' category of persons. For rural females, the corresponding proportions were 38 per cent for STs, 25 per cent for SCs, 24 per cent for OBCs and 16 per cent for 'other'. In urban India, the proportion of persons employed in the principal status according to us approach was the highest among OBCs (53 per cent), followed by 'other' (51 per cent), SCs (50 per cent) and STs (47 per cent). For urban females, this proportion was the highest among the STs (18 per cent). The corresponding proportions among SCs, OBCs and 'other's were 15, 14 and 9 per cent respectively.

cds	451	166	458	140	494	126	499	89	489	111

4.3.2.3 A comparison of WPRs based on the two us approaches (i.e. employed based on ps workers and all workers) reveals that proportion of ss workers was much higher among females than the males in each of the four social groups in rural and urban India.

4.3.3 Changes in the Employment Level

4.3.3.1 It would be of interest to examine whether there has been any change in the employment level for different social groups over the period 1983 to 2000. To this end, the proportions of usually employed as estimated from the present survey and those obtained from the earlier NSS 38th, 43rd and 50th rounds are presented below. Table 10 gives the proportion of 'all workers' based on these four rounds for each of the three social groups at the all-India level. As stated earlier (in section 4.2.4), the category OBC and 'other' for the present survey have been taken together for comparing with the category 'other' in the earlier rounds. It is seen from the table that for any social group, for males or females, WPR in rural areas was more than that in urban areas in any round. The table also shows that the proportion of 'all workers' according to the usual status fell during the period 1999-2000 for both males and females for STs in rural and urban India. For SCs and 'other' category (corresponding to the 'combined' category for the 55th round as stated earlier in section 4.2.4) too, the proportions declined except for urban males, for whom it remained more or less stable over the same period.

Table 10: Number of persons employed per 1000 persons (WPR-all workers) in different NSS rounds for different social groups

NSS round (year)	all- India							
	Worker Population Ratio: all workers (us)

55 th (1999-2000)	480	204	503	185	522	128	518	139

Note 1. For the 55th round the WPRs for OBC and 'Other' category separately, were as follows:

Rural male OBC : 532 and Other : 520; *Rural female* OBC : 302 and Other : 223;

Urban male OBC : 530 and Other : 518; *Urban female* OBC : 159 and Other : 108;

Note 2. Category 'Other' for the 55th round in this table gives the estimates obtained after combining the categories OBC and 'Other';

Note 3. Data on OBC category collected in 55th round only.

4.4 Unemployed

4.4.1 *General:* As in the case of employed, for unemployed also, three kinds of estimates are obtained following the three different approaches. These are:

- i) number of persons usually unemployed based on the 'usual status' approach,
- ii) number of persons unemployed on an average in a week based on the 'weekly status' approach and
- iii) number of person-days unemployed on an average during the reference period of seven days preceding the date of survey based on the 'daily status' approach

4.4.1.1 Of these three, the first estimate indicates the magnitude of persons unemployed for a relatively longer period during a reference period of 365 days and approximates to an indicator of the chronically unemployed. However, some of the unemployed on the basis of this criterion might be working in a subsidiary capacity. One can, therefore, get another estimate of the unemployed excluding those employed in a subsidiary capacity during the reference period. The former can be called the usually unemployed according to the principal status (ps) and the latter, the usually unemployed excluding the subsidiary status workers (us adjusted), which would conceptually be lower than the former.

4.4.1.2 The second estimate is based on the weekly status and gives the average weekly picture during the survey year. It includes both the chronic unemployment and also the intermittent unemployment of those categorised as usually employed caused by seasonal fluctuations in the labour market.

4.4.1.3 The third estimate based on the daily status concept gives the average level of unemployment on a day during the survey year. It is the most inclusive rate of 'unemployment' as it captures all three aspects of unemployment, viz. the unemployed days of the chronically unemployed, the unemployed days of the usually employed who become intermittently unemployed during the reference week and the unemployed days of those classified as employed according to the priority criterion of current weekly status. The state/union territory/all-India level estimates of proportion of unemployed (PU), i.e. number of persons unemployed per thousand persons, as per the us, cws and cds approaches for different social groups are presented in the tables 11.1R/U(ps), 11.2R/U(us adjusted), 11.3R/U(cws) and 11.4R/U(cds) respectively at the end of this chapter.

4.4.2 Estimates of Unemployed at all-India Level

4.4.2.1 The estimates of PUs as per the different approaches for each of the three social groups are summarised below in table 11 for India. It may be seen that proportion of unemployed (PU) during 1999-2000 was higher in urban areas of the country than in rural areas for both males and females of the different social groups, except for females according to cds approach and for SC females according to cws and cds approaches.

Table 11: Number of persons unemployed per 1000 persons (PU) during 1999-2000 for different social groups

approach	India									
	proportion unemployed

cds	37(76)	11(62)	52(102)	12(79)	40(75)	13(94)	35(66)	11(110)	39(74)	12(98)

Note: Figures in parentheses give the corresponding unemployment rates (i.e. number of unemployed per 1000 persons in the labour force)

4.4.2.2 *In rural areas:* In rural India, proportion of chronically unemployed was the highest for the 'other' category of persons for both males and females. Between the two scheduled categories of rural households, proportion of chronically unemployed among males was higher among the SCs than among the STs. However, for rural females, no noticeable difference in the proportion of chronically unemployed was observed between the two scheduled categories.

4.4.2.3 *In urban areas:* In contrast to the situation observed in the rural areas, among urban males of the country, proportion of chronically unemployed was the highest among SCs followed by that in the 'other'

category. For urban females, the proportion of chronically unemployed was slightly lower for SCs and STs (0.6 per cent) than for those belonging to the OBCs or 'other' category (about 1 per cent).

4.4.3 Changes in the Proportions of Unemployed

4.4.3.1 *Change over the period 1993-94 to 1999-2000:* To assess the extent of change in the proportion of unemployed over the given period, the proportions of unemployed (PU) according to the us approach based on the present survey and the last few quinquennial rounds viz. 38th (1983), 43rd (1987-88) and 50th (1993-94) for different social groups are presented in table 12 at the all-India level. The corresponding proportions according to cws and cds approaches are given in table 13. As stated earlier (in section 4.2.4), the category OBC and 'other' for the present survey have been taken together for comparing with the category 'other' in the earlier rounds.

4.4.3.2 *Usual status:* Table 12 shows that during the period 1983 to 1987-88, proportion of usually unemployed showed a slight increase or remained stable for both rural and urban males/females of the different social groups in the country. During the period 1989 to 2000, among the different categories, the proportion of unemployed declined by about 1 percentage point for rural SC females both as per the principal status and as per the usual status (adjusted).

4.4.3.3 *Current status:* Table 13 shows that among the different categories, between 1993-94 to 1999-2000, the proportion of unemployed according to cds approach declined by about 1 percentage point for urban ST males.

4.5 Labour Force

4.5.1 Labour force, or, in others words, the 'economically active' population refers to the population which supplies or seeks to supply labour for production and therefore, includes both the 'employed' and the 'unemployed'. For measuring the labour force participation, all the three measures adopted for classification of the population viz. usual status, current weekly status and current daily status are used.

Table 12: Number of persons unemployed per 1000 persons (PU) for different social groups based on NSS 38th, 43rd, 50th & 55th rounds according to usual status

M: male; F: female

Note 1: Figures in parentheses give the corresponding unemployment rates (i.e. number of unemployed per 1000 persons in the labour force)

Note 2: Tables for cws and cds by social groups were not released for NSS 43rd round.

Note 3: Category 'Other' for the 55th round in this table gives the estimates obtained after combining the categories OBC and 'Other';

Note relating to Tables 12 and 13: For the 55th round the proportion of unemployed and the unemployment rates (per 1000) for OBC and 'Other' category separately for different approaches, were as follows:

approach	rural				urban			
	male		female		male		female	
	OBC	Other	OBC	Other	OBC	Other	OBC	Other
usual principal status	9 (17)	16 (30)	3 (12)	5 (31)	24 (44)	27 (50)	9 (62)	10 (100)
usual status (adjusted)	8 (15)	12 (23)	3 (10)	5 (22)	22 (40)	26 (48)	9 (54)	9 (77)
current weekly status	16 (30)	25 (47)	8 (30)	12 (59)	29 (53)	30 (55)	11 (70)	11 (96)
current daily status	32 (62)	35 (68)	14 (63)	14 (86)	40 (75)	35 (66)	13 (96)	11 (110)

4.5.2 The current daily status gives only the labour force person-days. Further, the labour force measured in terms of usual status includes persons who had for a relatively longer part of the year either worked or were looking for work and also those who had worked at least for some time from among the rest. Thus, on the basis of usual status, two estimates can be obtained - one based on the principal status only and the other, considering both the principal and the subsidiary statuses. The labour force participation rates (LFPR) i.e. the number of persons in the labour force per 1000 persons for each state/union territory and all-India for each social group, separately for males and females, are presented in table 14.1R/U (usual principal status), 14.2R/U (usual principal and subsidiary statuses combined), 14.3R/U (cws) and 14.4R/U (c ds) respectively. The estimates of LFPR at the all-India according to the different approaches by social group are summarized below in table 14.

Table 14: Number of persons in the labour force per 1000 persons (LFPR) during 1999-2000 for different social groups

approach	labour force participation rate (LFPR)								all-India

4.5.3 Table 14 shows that in rural India, the proportion of economically active persons was the highest among the STs for both males and females. After STs, this proportion was higher among the SCs for females and jointly among OBCs and SCs for males. In urban areas, among males, the proportion of economically active persons was the highest among OBCs, followed closely by 'others'. Among females, this proportion was the

highest among STs, followed by that among SCs. In rural or urban areas, among females, the proportion of economically active persons was the lowest among the 'other' category.
