FOREIGN TRADE AND PRICES OF ENERGY RESOURCES

CHAPTER 4

Foreign Trade and Prices of Energy Resources

Trade and Prices

Many challenges are faced by the developing countries and the international community including ensuring, through national and international measures, that energy is (a) accessible to households and industries; (b) affordable for all, especially the poor; (c) sustainably produced and consumed; and (d) available for promoting development locally and globally.

These challenges coupled with the imperative to mitigate climate change, i.e. “decarbonization” of energy generation and use by households and industries, further intensifies high volatility present in the international energy market, and thus impacts energy importers/exporters countries equally.

Countries need to encourage a more efficient management of energy resources, coupled with an accelerated growth of renewable and sustainable sources of energy. The need of the hour, thus, being an increased investment, development of necessary infrastructure and also improvement in trade regimes in order to achieve self-sufficiency in terms of import dependency.

To holistically mitigate the effects of the situation, Energy policies in India in the recent years have been designed to address the country’s growing energy deficit and to focus on developing alternative sources of energy, particularly nuclear, solar, and wind energy. India has been focusing on reducing its dependence on energy imports and diversifying its energy basket. The aim is to achieve Energy security - the continuous availability of energy in varied forms, in sufficient quantities, at reasonable prices, to fuel economic growth in the coming years. Moreover, the international community should promote an enabling environment for the development and utilization of financing mechanisms for exchange of new energy technology and infrastructure for an enabling environment in this sector to thrive.

Highlights

- There has been an increasing trend in the net import of coal in the recent years. Over the last ten years, the Net Import of coal steadily increased from 143.34 MTs in 2012-13 to 216.54 MTs in 2014-15. This was followed by a marginal decline in the succeeding 2 years but again have started increasing again and reached to 247.51 MTs in 2019-20. However, during 2021-22(P), there is a sharp decline of 2.14% in the Net Import of Coal w.r.t the FY: 2020-21. During FY:2021-22(P), the net-Import of Coal came out to be 207.77 MTs as compared to 212.31 MTs during FY:2020-21.
- India is also highly dependent on imports of crude oil to meet domestic consumption. Imports of crude oil have increased from 184.80 MTs during 2012-13 to 226.95 MTs during 2019-20. But during FY: 2020-21 the same has been reduced to 196.46 MTs, a reduction of 13% over the FY: 2019-20. The same may be due to COVID-19 pandemic. However, during FY:2021-22(P) the fuel import has again experienced a growth of 7.9% and reached at 211.98 MTs.
- India is an exporter of Petroleum Products. The export of petroleum products has increased rather slowly from 63.41 MT during 2012-13 to 65.69 MT during 2019-20. But during FY:2020-21 the same has been reduced to 56.76 MTs which has again rose to 62.71 MT during FY:2021-22(P), registering a growth of close to 10.5%.
- The import of Natural Gas has experienced a steady increase over time. From a figure of 17.61 BCM (Billion Cubic Meter) during 2012-13 to 33.89 BCM during 2019-20 i.e. an increase of over 92% in a span of 7 years. However, the same stood at 30.78 BCM for the year 2021-22(P) as compared to 33.03 BCM in the 2020-21 recording a decline of (-)6.83%. The CAGR of import of natural gas between 2012-13 and 2021-22(P) is having a positive growth rate of 6.40%.
- India's exports of electricity started rising as compared to gross imports since 2016-17. The export of electricity has increased from 153.53 GWh in 2012-13 to 9231.63 GWh in 2021-22(P) with a CAGR of 57.64%.
- India, however also imports a decent amount of electricity to meet its' domestic demand. The Import figure during FY:2012-13 was 4,795 GWh which, after having a decline during FY:2018-19 (4,396 GWh), the Import has displayed a steady growth upto FY:2020-21 having a figure of 9547.70 GWh. However, during FY:2021-22(P) the same has been found to be reduced to 7596.71 GWh, a decline of over 20% in comparison to FY:2020-21. (Table 4.1(Contd.))
