A Note on Operational Land Holdings in India, 1991-92

—NSS 48th Round (Jan.-Dec. 1992)

Section 1

Introduction

1.1.0 The survey on Land and Livestock Holdings carried out in the forty-eighth round (January-December 1992) of the National Sample Survey Organization (NSSO) is the fifth in the series of similar surveys conducted so far by the NSSO. The objective of these surveys has been to generate the basic quantitative information on the agrarian structure of the country, which is relevant to land policy. A large part of the information is collected mainly along the lines suggested in World Agricultural Census Programme of the Food and Agricultural Organisation (FAO) and thus serves the purpose of international comparison as well.

1.1.1 The present document is the second of the series of four brought out on the land and livestock holdings survey. This covers various features of the household operational holdings and presents estimates on utilisation, tenurial form and size distribution of operational holdings.

1.2 Background

1.2.0 The first survey on land holdings was taken up by the NSS in its eighth round (July '54-April '55) as part of the World Agricultural Census initiated by the Food & Agricultural Organisation (FAO) of the United Nations. In this

survey, information on (agricultural) holdings was collected mainly to meet the requirements of the FAO. In addition, information on household ownership holdings was collected to provide the policy framers with the much needed data for formulating land reforms policy for the country. A similar survey was conducted again in the sixteenth (July '60 - August '61) and seventeenth (September '61 - July '62) rounds of the NSS as part of the World Agricultural Census Programme of 1960.

1.2.1 Since then, NSSO has been regularly conducting Land Holdings survey every ten years. The third Land Holdings survey, conducted in its twenty-sixth round (July '71 - June '72), was integrated with a survey on Debt and Investment at the instance of the Reserve Bank of India. The present enquiry, as well as the fourth survey of the series conducted in the thirty-seventh round (January - December '82), essentially repeat the twenty-sixth round survey with some modifications in item coverage and the method of data collection.

1.3 Scope

1.3.0 In the Land and Livestock Holdings survey of the NSSO, two types of

holdings, namely, household ownership holdings and operational holdings, are enumerated by interviewing the sample households. Data are collected on the size (in terms of area), type, utilisation, tenorial status and other related aspects of both types of holdings.

1.3.1 Items of enquiry: In the 48th round, information on various aspects of ownership and operational holdings was collected for both rural and urban areas. Particulars of land owned, land leased out, types and terms of lease formed the main body of information for the study of ownership holdings. Further, particulars of land leased in were also collected to ascertain the land possessed by the households. For the operational holdings, data on size, composition, tenorial form, land use, extent of irrigation by sources, fragmentation of holding, drainage facilities and other related aspects of holdings were collected. The data on operational holdings were collected with three different reference periods, viz. the two crop seasons kharif and rabi of the agricultural year and the agricultural year itself. Since livestock and agricultural machinery form the basic resources for agricultural operations, an inventory of these assets owned by the households on the date of survey was also obtained.

1.3.2 Geographical coverage : The forty-eighth round was planned to cover the whole of Indian Union excepting

- (i) Ladakh and Kargil districts of Jammu & Kashmir;

- (ii) 768 interior villages of Nagaland (out of a total of 1119 villages) located beyond 5 kms. of a bus route,
- (iii) 172 villages in Andaman & Nicobar Islands (out of a total of 520 villages) which are inaccessible throughout the year.

However, the survey could not be conducted in six districts of Jammu & Kashmir viz., Anantnag, Pulwana, Srinagar, Badgam, Baramula and Kupwara, and in the district of Amritsar in Punjab due to unfavourable field conditions.

1.4 Method of Data Collection

1.4.0. The information for Land and Livestock holdings survey was collected from a sample of households by interview method. Each sample household was visited twice during the period of survey with a gap of four to eight months. Two different schedules of enquiry were canvassed in the two visits.

1.4.1 Survey period : The survey period for the forty-eighth round survey was the calendar year 1992. In order to reduce recall error, particulars relating to the entire agricultural year were collected by visiting each sample household twice during the survey period. The first visits

to the sample households were made during, January to August, while the second visits were made during September to December. The longer period for the first visit was reflected the higher workload for the field staff during this visit compared to the second visit.

1.4.2 Reference period: The information on holdings operated during the *Kharif* season of the agricultural year 1991-92 was collected in first visit, while that on holdings operated during the *Rabi* season was collected in the second visit. In addition, particulars of operational holdings with the agricultural year 1991-92 as the reference period were also collected in the second visit. The present report is based on the data of operational holdings with the crop seasons as well as those with the agricultural year as the reference period.

1.4.3 Sample design : The sample design adopted for the survey was essentially a two stage stratified design, with census villages and urban blocks as first stage units (FSUs) for the rural and urban sectors respectively, and households as the second stage sampling units (SSUs) in both the sectors. The selection of villages was done with probability proportional to population (with replacement), mainly based on the 1981 census list of villages. The selection of urban blocks was done with equal

probability without replacement based on Urban Frame Survey (UFS) conducted by the NSSO as an on-going activity. The details of sample design and estimation procedure adopted for the survey are given in Chapter 2 of this report.

1.4.4 Sample size - first stage units : In all 9052 villages were planned to be surveyed in this round. Of these, 4328 villages were allocated to the central sample - the part surveyed mainly by the NSSO field staff - and the rest to the state sample - the part surveyed by the state agencies. In the urban sector, the allocations for the central and state samples were 2484 and 3076 blocks respectively. This report is based on the estimates obtained from the central sample alone. The number of villages and urban blocks actually surveyed under the central sample was 4231 and 2420 respectively.

1.4.5 Sample size - second stage units : Our plan was to survey 8 households from each sample village and 9 households from each sample urban block. In the central sample, the actual number of household surveyed was 33289 in rural sector and 20592 in the urban sector.

1.5 Concepts and definitions

1.5.0 Major concepts and definitions of important terms used in the survey and relevant to this report are explained

below :

1.5.1 *Household* : A household was a group of persons normally living together and taking food from a common kitchen. However, a boarding house, a hotel or a hostel was treated as a cluster of households, where each individual boarder formed a separate household. If, however, some persons among them normally pooled their income for spending, the group was treated as forming a single household. Barracks of military and paramilitary forces, orphanages and vagrant houses were excluded from the scope of the survey.

1.5.2 *Operational holdings*: An operational holding is defined as a techno-economic unit wholly or partly for agricultural production (defined below) and operated (directed/managed) by one person alone or with the assistance of others, without regard to title, size or location. The holding might consist of one or more parcels of land provided they are located within the country and form part of the same technical unit. In the context of agricultural operations, a technical unit with more or less independent technical resources covering items like land, agricultural equipments and machinery, draught animals etc. Holdings used exclusively for livestock and poultry raising and for production of livestock and poultry products (primary

and/or pisciculture are considered as operational holdings whereas holdings put exclusively to uses other than agricultural production are not considered as operational holdings. Holdings operated by cooperative farms are also not considered as operational holdings.

1.5.3 *Agricultural production*: The extended definition of agricultural production, as adopted in the survey, includes growing of field crops, fruits, grapes, nuts, seeds, tree nurseries(except those of forest trees), bulbs, vegetables and flowers both in the open and in glass houses ; production of coffee, tea, cocoa, rubber, forest production in parcels of land which form part of the enumeration holding and production of livestock and livestock products, poultry and poultry products, fish, honey, rabbits, fur-bearing animals, and silk-worm cocoons.

1.5.4 *Individual and joint holdings*: An operational holding managed by the members of a single household is taken as an individual holding and a holding managed by members of different households jointly is considered as a joint holding.

1.5.5 *Parcel*: A parcel of an operational holding is a piece of land entirely surrounded by other operational holdings or by land not forming part of any operational holding. It might consist of

one or more plots.

1.5.6 *Ownership of land* : (i) A plot of land was considered to be owned by a household if permanent heritable possession, with or without the right to transfer the title was vested in a member or members of the household. Land held in owner-like possession under long term lease or assignment was also considered as land owned. Thus, in determining the ownership of a plot of land two basic concepts were involved, namely,

- (a) Land owned by the household, i.e. land on which the household had the right of permanent heritable possession with or without the right to transfer the title, e.g. Pattadars, Bhumidars, Jenmons, Bhumi-swamis, Rayat Sithibans, etc. A plot of land may be leased out to others by the owner without losing the right of permanent heritable possession.
- (b) Land held under special conditions such that the holder did not possess the title of ownership but the right for long term possession of the land (for example, land possessed under perpetual lease, hereditary tenure and long term lease for 30 years or more) was considered as being held under owner-like possession. In states where land reform legislation has provided for full proprietorship to erstwhile tenants, they were

considered as having owner-like possession, even if they had not paid the full compensation.

(ii) Sometimes a plot may be possessed by a tribal in accordance with traditional tribal rights from local chieftains or village/district council. Again, a plot may be occupied by a tenant while the right of ownership vests in the community. In both the cases, the tribal or the other individual (tenant) was taken as owner, for in all such cases, the holder had the owner like possession of land in question.

1.5.7 *Lease of land* : (i) Land given to others on rent or free by owner of the land without surrendering the right of permanent heritable title is defined as land leased out. It is defined as land leased in if it is taken by a household on rent or free without any right of permanent or heritable possession. The lease contract may be written or oral.

(ii) Sometimes orchards and plantations are given to others for harvesting the produce for which the owner receives a payment in cash or kind. Such transactions were not treated as 'lease' for the purpose of the survey.

1.5.8 *Otherwise possessed land* : This was understood to mean all public/institutional land possessed by the household without title of ownership or occupancy right. The possession was without the consent of the owner. Private land (i.e. land owned by the household

sector) possessed by a household without title of ownership and occupancy right was not included in this category. All private land encroached upon by the household was treated as leased-in land.

1.5.9 *Homestead land* : (i) Homestead of a household was defined as the dwelling house of the household together with the courtyard, compound, garden, out-house, place of worship, family graveyard, guest house, shop, workshop and offices for running household enterprises, tanks, wells, latrines, drains and boundary walls annexed to the dwelling house. All land coming under homestead was defined as homestead land.

(ii) Homestead may constitute only a part of a plot. Sometimes, gardens, orchards or plantations, though adjacent to the homestead and lying within the boundary walls, may be located on a clearly distinct piece of land. In such cases, land under garden, orchard or plantation was not considered as homestead land.

1.5.10 *Land utilisation in the holdings* : The classification of land used for this report is based on the utilisation of the land during the agricultural year. The definitions of various classes of land relevant for the report are given below :

(1) *Forest*: This includes all area actually under forest or land so classed under any legal enactment or administered as forest, whether state owned or private. If any portion of such land is not actually

wooded but is used for raising of field crops, it is treated under net sown area and not under forest. All plots of land under social and farm forestry were included in this class.

(2) *Orchard*: A piece of land put to production of horticulture crops, viz., fruits, nuts, dates, grapes etc. (other than those treated as plantation crops), is regarded as an orchard, if it is at least 0.10 hectare in size or has at least 12 trees planted on it. In the case of such fruit trees where distance between the trees was quite large, say more than six metres, as in the case mangoes, the orchard is defined according to the minimum number of 12 trees planted in it. In cases where the distance was less than six metres as in the case of bananas, papayas, grape vines etc., the orchard is defined on the basis of the minimum area of 1/10th of a hectare.

(3) *Plantation* : Area devoted to production of plantation crops, viz., tea, coffee, cashew nut, pepper, coconut, cardamom, rubber, cocoa, arecanut, oil palm, clove and nutmeg, is treated as area under plantation. The size restriction given for orchards is also applicable for plantations.

(4) *Area under seasonal crop*: All land under net sown area not coming under orchards or plantations is taken as area under seasonal crops. Sometimes, net sown area consists of a piece of land put to a combination of the above three uses. In such cases, the use to which the major

area of the piece of land is put is treated as the 'use' of the piece of land.

(5) *Land put to non-agricultural uses:* This includes all land occupied by buildings, path etc. or under water (tanks, wells, canals etc.) and land put to uses other than agricultural uses. For the purpose of this survey, this class of land was further divided into two classes :

- (a) Water bodies: All land which is perennially under water is defined as water bodies, provided that no crop was raised on it.
- (b) Other nonagricultural uses: All land put to other non-agricultural uses, viz., buildings, roads, railways, paths etc. is classified as land put to other non-agricultural uses.

(6) *Other uses:* This includes all land coming under rest of the classes of standard nine-fold classification, viz., "culturable waste", "miscellaneous tree crops and groves not included in net sown area", "permanent pastures and other grazing land" and "barren and unculturable waste".

1.5.11 *Irrigation :* Irrigation was considered as a device of purposively providing land with water, other than rain water, by artificial means for crop production.

1.5.12 *Terms of lease:* The various terms of lease on which the area was leased out to the lessee households were :

- (1) for fixed money (2) for fixed produce (3) for share of produce (4) for service contract (5) for share of produce together with other terms (6) under usufructuary mortgage (7) from relatives under no specified terms and (8) under other terms.

It may be noted here that leasehold under crop-sharing basis meant that the owner of land received a stipulated share of the produce but he did not participate in the work nor did he manage or direct or organise the agricultural operations on the plot of land which he had leased out. Leasehold under service contract meant that an employer gave some land to an employee for cultivation in lieu of the services provided by him on the condition that the land could be retained so long as the employee continued to serve the employer and no other specific terms of lease was contracted. The contracts by which the mortgagor retained the ownership of land till the foreclosure of the deed but the possession of the land was transferred to the mortgagee would be considered as leasing lease of land under usufructuary mortgage. Sometimes land owned by a household is looked after and used by a close relative. For example, a person staying away from his village may own a piece of land in the village which is looked after and used by his brother's household. All such land possessed by the household operating a holding but owned by some relative's

household under no contract of payment of any kind to the owner, was treated as leased in from 'relatives under no specified terms'. Lease on terms other than those specified for types (1) to (7) stated above was treated as 'under other terms'. All rent free leases, other than from 'relatives under no specified terms', were treated as leases 'under other terms'.

1.6 Contents

1.6.1 This contains four section in Part I Notes including the present introductory chapter, and detailed tables in Part II - Survey Results. Section 2 gives a fairly detailed description of the sample design and estimation procedure used for the survey. Section 3 discusses the principal findings obtained from the survey on

operational holdings. A Bibliographical Note is given in Section 4. Part II - Survey Results forms the main body of the document. It gives the results in detail for the operational holdings.

1.6.2 The estimates presented in this Issue are based on the pooled data of the two sub-samples of only the central sample and covers only the rural sector.

1.6.3 The results presented in the document are mostly in form of ratios (like percentage, average etc.). The basic aggregate estimates for the number of operational holdings and area operated provided in Table 1 of Part - II, Survey Results, may be used for arriving at aggregate estimates of other characteristics.

Section 2

Sample Design and Estimation Procedure

2.1 Sample Design

2.1.0 A stratified two-stage sampling design was adopted for the survey with the first stage units as census villages for rural areas and the Urban Frame Survey blocks for urban areas. Households formed the second stage units in both rural and urban areas.

2.2.0 *Sampling frame for first stage units (FSU's)*: In the rural sector, the sampling frame in most of the strata was the 1981 census list of villages. However, in Assam, where the 1981 census was not undertaken, and in a few districts of other states, where the available list as per 1981 census was incomplete, the 1971 census list of villages was used. In the urban sector, the sampling frames used in most cases were the lists of NSS Urban Frame Survey (UFS) blocks. However, the 1991 census house listing enumeration blocks were considered as the sampling units for some of the new towns declared as urban areas in the 1991 population census.

2.3.0 *Stratification*: Each state/union territory (u.t.) was divided into one or

more agro-economic regions by grouping contiguous districts which are similar with respect to population density and crop pattern. In Gujarat, however, some districts were sub-divided for the purpose of region formation on the basis of location of dry areas and the distribution of tribal population in the state. The total number of regions formed in the India as whole was 78.

2.3.1 In the rural sector, within each region, each district with a rural population of less than 1.8 million according to the 1981 census formed a single basic stratum. Districts with larger population were divided into two or more strata, depending on population, by grouping contiguous tehsils, similar as far as possible in respect of rural population density and crop pattern. In Gujarat, however, in the case of districts extending over more than one region, the portion of a district falling in each region constituted a separate stratum even if the rural population of the district as a whole was less than 1.8 million. Further, in Assam, the strata formed for the earlier NSS rounds on the basis of 1971 census rural population exactly in the above manner, but with a cut-off of 1.5 million population, were retained as

the strata for rural sampling.

2.3.2 In the urban sector strata were formed, again within NSS regions, on the basis of 1981 (1991 in some of the new towns) census population of towns. Each city with a population 10 lakhs or more formed a separate stratum by itself. The remaining towns of each region were grouped to form three different strata on the basis of 1981 (1991 in a few cases) census population. The strata were formed as details stated below :

Composition of Urban Strata :

stratum no	population size class of towns
1	all towns with population less than 50,000
2	all towns with population 50,000 to 1,99,999
3	all towns with population 2,00,000 to 9,99,999
4	all towns with population 1 million and above

2.4.0 *Allocation of sample* : A total all-India sample of 6812 first stage units (4328 villages and 2484 urban blocks) - determined on the basis of investigator strength in different states/u.t.'s and the expected workload per investigator - was initially allocated to the states/u.t.'s in proportion to central field staff available. The sample thus obtained for each state/u.t. was then allocated to its rural and

urban sectors considering the relative sizes of the rural and urban population with almost double weightage being given for the urban sector. Within each sector of state/u.t., the allotted sample size was re-allocated to the different strata in proportion to the stratum population. All allocations were adjusted so that the sample size for a stratum was at least a multiple of 4 for the rural and urban sectors separately. This was done to accomplish equal-sized samples in each sub-sample and sub-round. The only exception was Daman & Diu for which the first stage rural sample comprised 2 villages only.

2.5.0 *Selection of first stage units* : The selection of sample villages was PPS (with replacement) with population as the size variable, in the form of two independent sub-samples. The sample blocks were selected by simple random sampling without replacement, also in the form of two independent sub-samples.

2.5.1 *Arunachal Pradesh* : For the rural areas of Arunachal Pradesh, a cluster sampling procedure was followed. The field staff were supplied with a list of sample "nucleus" villages and were advised to select clusters of villages, each cluster being formed around a nucleus village, according to prescribed guidelines. The nucleus villages were selected circular systematically with equal probability, in the form of two independent sub-samples.

2.6.0 *Selection of hamlet-groups/sub-blocks* : Large villages and blocks were divided into a suitable number of hamlet-groups and sub-blocks respectively having more or less equal population content.

Two hamlet-groups were then selected from large villages, whereas only one sub-block was selected from the large blocks. The hamlet-groups were selected circular systematically and the sub-block with equal probability.

2.7.0 Selection of households : Two different procedures of selection of households were used for the rural and urban sectors. Different procedures for the two sectors were necessary, since in the rural sector schedules of enquiry for LLH survey and Debt & Investment survey were required to be canvassed in two separate sets of sample households, while in the urban sector, both the schedules were to be canvassed in the same set of sample households.

2.7.1 In the rural sector, eight households were selected from each sample village/selected hamlet groups. For selecting a sample of 8 households, first, all the households of the sample village/selected hamlet groups were divided into four sub-strata by area of land possessed by them. Households possessing either no land or land less than .005 acre were grouped in sub-stratum 1. The rest of the households were then arranged in ascending order by area of land possessed and classified into three sub-strata, 2, 3 and 4, such that the total area of land possessed by the households in each of the 3 sub-strata was nearly the same. Independent samples of size 1,3,2 and 2 households were selected circular systematically from the sub-strata

1, 2, 3 and 4 respectively.

2.7.2 In the urban sector, a sample of 9 households were selected from each sample urban block/sub-block. The households of a sample block/sub-block were classified into 7 strata, considering the monthly per capita consumption expenditure (mpce) and indebtedness status of the households. For this, the households were first grouped in three mpce classes, viz., less than A, A to B and B & above. The cut-off points A and B were determined at the state-level on the basis of mpce obtained from the survey on consumer expenditure, NSS 43rd Round, such that the mpce classes, below A, A to B, and B and above, respectively constituted 30 p.c, 60 p.c, and 10 p.c. of the urban population of the state. These mpce classes were further sub-divided by indebtedness status of the households to form 7 sub-strata. A sample of size 1 or 2 was selected from each sub-strata. For the sub-strata with allocation of 2 sample households, the samples were drawn circular systematically.

2.8.0 Sample size : In all, the survey covered 53881 households spread over 6651 sample villages/blocks. The number of sample villages and blocks allotted and surveyed, and the number of sample households surveyed, are given for different state/u.t.'s and all-India in the statement given below, separately for rural and urban sectors.

2.2 ESTIMATION PROCEDURE

2.9.0 The estimation procedure adopted in the 48th round for schedule 18.1 is briefly indicated here.

2.10.0 Notations : The notations used for describing the estimation procedure are given below :

- s : subscript for sth stratum
 i : subscript for ith village/block
 t : subscript for tth sub-stratum (i.e. household-strata within a village/block)
 j : subscript for jth sample household
 L : total number of rural/urban strata in the state
 p : village population (used for sampling and as per frame)
 P : total population of a rural stratum (as per frame)
 N : total number of blocks in an urban stratum as per frame. This notation is also used for total number of villages in a rural stratum of Arunachal Pradesh as per frame
 n : number surveyed villages/blocks including depopulated and zero cases available for tabulation (excluding casualty and other not received cases)
 C : number of census villages in a surveyed revenue village
 D : number of hamlet-groups/sub-blocks formed

H : total number of households in the frame

h : number of surveyed households (available for tabulation) in a sub-stratum

x, y : values of characteristics of an operational holding of the sample household

X or Y : total of x or y at the state level

\hat{y} : estimate of Y from the sample for rural sector

$$= D^r = \text{if } D=1$$

$$= D/2 \text{ if } D \geq 4$$

2.11.0 *Estimates of aggregates* : As sampling procedures were different for the rural and the urban sectors, the estimation formulae used for the two sectors was also different.

2.11.1 *Rural* : For the states and u.t.s, other than Arunachal Pradesh and Lakshadweep, the estimates for the aggregate for the sth stratum is given by

$$\hat{Y}_s = \frac{P_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{C_{si}} \frac{1}{psi} \sum_{t=1}^4 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} \frac{y_{sitj}}{k_{sitj}}$$

For Arunachal Pradesh,

$$\hat{Y}_s = \frac{N_s}{n_s} \sum_{i=1}^{n_s} \sum_{t=1}^4 \sum_{j=1}^{h_{sit}} \frac{H_{sit}}{h_{sit}} \frac{y_{sitj}}{k_{sitj}}$$

and for Lakshadweep,

$$\hat{Y}_s = \frac{7}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{C_{si}} \sum_{t=1}^4 \sum_{j=1}^{h_{sit}} \frac{H_{sit}}{h_{sit}} \frac{y_{sitj}}{k_{sitj}}$$

2.11.2 *Urban* : For all the states, the estimate of aggregate of the s th stratum is given by

$$\hat{y}_s = \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \sum_{t=1}^7 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} \frac{y_{sitj}}{k_{sitj}}$$

2.11.3 *State/u.t. level estimates* : The aggregate estimates at the state /u.t. levels were worked out separately for the rural and urban sectors. For both the sectors, the aggregate estimate at the state/u.t. level was obtained as

$$\hat{y} = \sum_{s=1}^L \hat{y}_s$$

2.11.4 *Subsample estimates* : Each subsample estimate was based on the data collected from the surveyed FSUs of the respective subsample. For each state/ u.t. (or national level estimate) 2 subsample estimates were obtained separately for the rural and urban sectors. The formulae given above were

used for this purpose, taking n_s as the number of surveyed FSUs of the respective subsample.

2.11.5 *Combined estimate* : The 'combined' estimates for the rural urban sectors of a state/u.t. (or national level estimate) were obtained as the simple averages of the sub-samplewise estimates for the respective sectors. All the estimates presented in this report are based on the combined estimates of the aggregates, unless otherwise specified.

2.12.0 *Estimates of ratios* : Let X and Y be the respective totals of two characteristics X and Y at the state/u.t./ national level. Thus the estimate of ratio $R = Y/X$ is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}} \text{ where } \hat{X} \text{ and } \hat{Y}$$

are the estimates of X and Y respectively. Both the subsample and the combined estimates of ratios were obtained in this way.

Table (2.1): Number of sample villages and urban blocks allotted and surveyed and number of households surveyed

* 18 nucleus villages were allotted for Arunachal Pradesh (rural). The original allocation showed 72 villages for Arunachal Pradesh; this was done on the basis of 4 villages per nucleus villages. However, the number of villages surveyed actually turned out to be 89.

Section 3

Summary of findings

3.0 The Land Holdings Survey (LHS) of NSS is one of the main sources of information on ownership of land and agriculturally operated land in the country. It provides estimates of two basic distributions of land holdings, viz., distribution of land owned by households and that of land operated. Information on household ownership of land was presented in the Sarvekshana Issue No. 65 (Oct.-Dec. 1995) on Land and Livestock Holdings Survey of the 48th round. The present issue gives the survey results relating to techno-economic units called *operational holdings*.

3.0.1 The major findings of the enquiry on operational holdings are summarised in this section. To start with, the discussion traces the changing aspects of operational holdings and their size-distribution over the last three decades. The nature and extent of tenancy are then presented in some detail. Finally, the survey results on the use of land holdings are discussed in terms of agricultural operations carried out in them.

3.1 Estimates of operational holdings: all-India

3.1.1 An operational holding is defined as a techno-economic unit used wholly or partly for agricultural production and is operated (directed or managed) by one

person alone, or with the assistance of others without regard to the title, size or location.

3.1.2 As distinct from a household *ownership holding*, which is restricted to the area of land owned by a household, operational holding encompasses all land under physical possession of the techno-economic unit either owned, leased in or otherwise possessed. A unit with more or less independent technical resources for agricultural operations like land, agricultural equipment and machinery, draught animals etc. was considered to be an operational holding if some agricultural production was carried out on any part of the land under its possession during the reference period. In the present survey, the agricultural year 1991-92 was used as the reference period.

3.1.3 Area under operational holdings is called operated area. For the present survey, the area possessed by an operational holding for the major part of the agricultural year 1991-92 was taken as its operated area.

3.1.4 Table 3.1 shows that there were over 103 million operational holdings in the country during the agricultural year 1991-92. Of these, more than 90% were operated by residents of rural areas. The

total operated area was estimated at 131 million hectares (mha.), with only about 5% of it operated by the urban residents. The average size of an operational holding was 1.34 ha. for the rural sector and 0.61 ha. for the urban sector.

Table 3.1 Number of operational holdings and area operated: 1991-92

item	INDIA	
	rural	urban
1. No. of operational holdings (mill.)	93.45 (90.2%)	10.11 (9.8%)
2. Area operated (mill. ha.)	125.10 (95.3%)	6.15 (4.7%)
3. Area operated per holding (ha.)	1.34	0.61
4. No. of households (mill)	116.41	41.80

The estimates of item 4 are taken from NSS Report No. 399

3.1.5 The remaining part of this chapter will be concerned with the rural sector only.

TRENDS IN OPERATIONAL HOLDINGS

3.2.1 Data on operational holdings are being collected regularly by the NSSO since its eighth round (1954-55). So far, five land holding surveys, including the present one, have been conducted. The results of these surveys form a useful series of data spanning a long period of time. The estimates of different rounds are on the whole comparable, except for those of the 8th round, which, due to differences in definitions, are not strictly

comparable with the other rounds and are therefore omitted from the discussion which follows.*

3.2.2 The definition of operational holdings has undergone only a marginal change since the 17th round (1960-61) with respect to the coverage of "operated land". In the 37th round (1981-82), the definition of operated land was extended to include land encroached or occupied on squatter basis, which is referred to as "otherwise possessed" land in this report. It is seen from Table 3.2 that the percentage shares of such land in the operated area were only 1.7% and 1.0% in 1981-82 and 1991-92 respectively. This means the results of the four surveys since the 17th round remain comparable in spite of the change in definition.

3.2.3 There is, however, a problem of comparison in respect of reference period. In the 17th, 26th and 48th rounds, the criterion used for recognizing an operational holding was "any agricultural production during the reference agricultural year". The estimates of these rounds were obtained directly from the data collected for the entire agricultural year. In contrast, the estimates of the 37th round were generated on the basis of data collected for the major crop season of the reference agricultural year, which means no account was taken of holdings which had carried out agricultural production only during the minor crop season.

* See *Bibliographical Note 1*.

Table 3.2. Estimates of certain key characteristics of operational holdings in rural India from Land Holding Surveys of NSS: 1960-61 to 1991-92

item	1960-61 (17th)	1970-71 (26th)	1981-82 (37th)	1991-92 (48th)
1. Number of operational holdings (mill.)	50.77	57.07	71.04	93.45
1.1 percentage increase	-	12.4%	24.5%	31.5%
2. Area operated (mha.)	133.48	125.68	118.57	125.10
3. Average area operated (ha.)	2.63	2.20	1.67	1.34
4. Percentage of joint holdings	4.22	0.60	0.62	0.08
5. Number parcels per holding	5.7	n.a.	4.0	2.7
6. <i>Percentage of operational holdings with partly or wholly</i>				
(a) owned land	94.86	95.64	92.91	96.15
(b) leased-in land	23.52	24.68	15.20	10.99
7. In area operated, p.c. share of				
(a) area owned	89.30	89.43	91.08	90.44
(b) area leased in	10.70	10.57	7.18	8.52
(c) area otherwise possessed	-	-	1.74	1.04
8. No. of sample villages	3,486	4,547	3,692	4,231
9. No. of sample households	53,138	35,947	29,089	* 33,289

1. Sources of estimates of 17th, 26th and 37th rounds : NSS Report Nos. 144, Servekshana Issue No. 16 & 36

2. Estimates for item 7 are based only on area reporting the type of possession

3.2.4 Table 3.2 gives the basic estimates relating to operational holdings of the last four Land Holding Surveys (LHS) of NSS. The sizes of the samples (at both the stages) on which the estimates are based are also shown in the table.

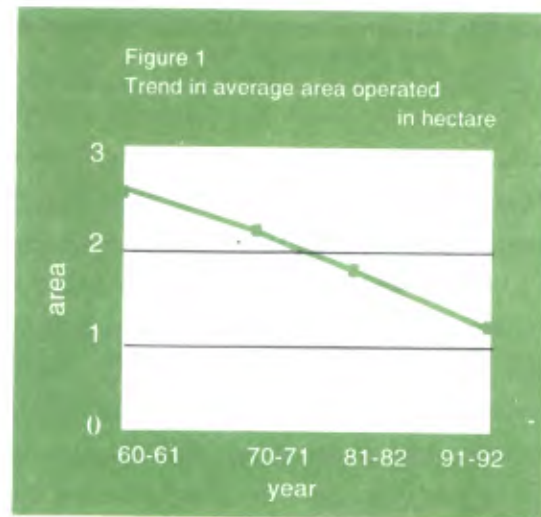

3.2.5 *Rise in the number of operational holdings* : The number of operational holdings has increased rapidly from 51 million in 1960-61 to 93 million in 1991-92. Also, the rate of growth of operational holdings has accelerated over the three decades (see item 1.1 of Table 3.2). The

growing population, and the inability of the non-agricultural sector to absorb additional work force have led to unabated subdivision of operational holdings. As a result, the number of operational holdings has grown by about 80% within a span of three decades. The virtual disappearance of joint holdings also has made some contribution to the rise in the number of operational holdings. There were over 4% joint holdings, i.e. holdings operated jointly by members of two or more households, in 1960-61. By 1970-71 the proportion of joint holdings had come

down to a tiny fraction (0.6%). During 1991-92, nearly all the operational holdings were managed by individual households and only a negligible proportion of them were operated jointly by more than one household.

3.2.6 Change in area operated : The total operated area of 133 mha. in 1960-61 had dropped to 126 mha. in 1970-71 — a fall of about 8%. The estimates of the 26th round and the present survey (125 mha.) reveal little change in operated area during the last two decades. The estimate of the 37th round, however, is significantly smaller than that for the 48th round. This is despite the fact (see Section 1 paragraph 1.3.2) that a large part of Jammu & Kashmir and a large district of Punjab could not be covered by the 48th round due to unavoidable circumstances, whereas the entire sample was surveyed in the 37th round as per the planned coverage. In fact, the fall during the seventies, shown by the estimates in Table 3.3.2, owes more to the reference period employed for estimation of area in the 37th round than to actual change in area operated. Bearing this in mind, it can be reasonably concluded that total operated area in the rural sector has remained largely unchanged during the seventies and eighties.

3.2.7 Declining size of holdings : The consequence of rapid growth in the number of operational holdings with a limited land base is clearly shown by the estimates of average area operated per

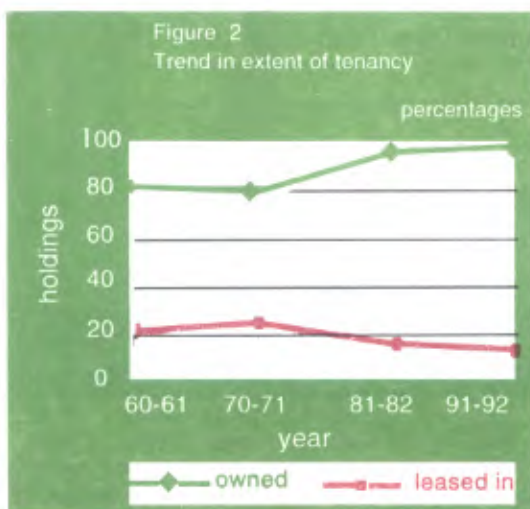

holding given in Table 3.3.2. Over the three decades, the average size of a holding has nearly halved from 2.63 ha. in 1960-61 to 1.34 ha. in 1991-92 (Figure 1).

3.2.8 Number of parcels per holding: Fragmented holding has been a chronic problem in Indian agriculture. The estimates available from three LHS's show that the number of parcels per holding has decreased from 5.7 in 1960-61 to 2.7 in 1991-92.

3.2.9 Trends in tenancy of land by operational holdings: During the thirty years beginning with 1960-61, land tenure status of operational holdings has undergone significant changes. Table 3.2 reveals that the percentage of holdings with partly or wholly owned operated area increased steadily from 82% in 1960-61 to 96% in 1991-92, whereas that of holdings operating on partly or wholly leased in land (henceforth called 'tenant holdings') declined sharply from 24% to 11% during the same period. This trend,

indicating a continuous shift from tenant cultivation to self cultivation, has been a characteristic feature of Indian agriculture in the post-Independence period.

3.2.10 The extent of tenancy measured in terms of percentage share of area leased in reveals (see item 7 of Table 3.2) a similar trend during 1960-61 to 1981-82. The share of leased-in land in operated area came down to 7% in 1981-82 from 11% in 1960-61. Over the last decade, however, there has been a rise, instead of a fall, in this share (Table 3.2). A more detailed discussion on tenancy is contained in Para 3.5 .

3.3 Size distribution of operational holdings : all India

3.3.1 Any significant change in agrarian structure should have some impact on the size distribution of land holdings. In this section, various aspects of this distribution are examined to see whether any such structural change is indicated. In the detailed tables given in the Part II Survey Results, two different size classifications

have been used for presentation of the tables — one based on 15 size classes and the other on 8 broader classes. The latter are referred to as “broad size classes” and the former as simply “size classes”. Here, in order to study the change in size distribution, the “broad size classes” are further merged to form five size-classes along the lines adopted in the Agricultural Census of India. The 5 size groups are as follows:

marginal	: less than 1.01 ha.
small	: 1.01 - 2.00 ha.
semi-medium	: 2.01 - 4.00 ha.
medium	: 4.01 - 10.00 ha.
large	: larger than 10.00 ha.

These size groups will henceforth be called categories of operational holdings.

3.3.2 *Marginalisation of holdings:* A general feature of size distribution of operational holdings is that the percentage of holdings decreases as the holding size increases. The percentage distributions of operational holdings given in Table 3.3 reveal that the decline is getting progressively steeper with each decade. The percentages of large, medium and semi-medium holdings have been declining steadily since 1960-61. The decline is steepest for large holdings from 4.5% to 1%. The percentage of small holdings has been falling since 1971-72. At the other end, one witnesses a great crowding of holdings into the “marginal” category. The percentage of holdings in this category has swelled from 40% in 1960-61 to 63% in 1991-92.

Table 3.3 Changes in the size distribution of operational holdings

INDIA	Rural				
	category of holdings	percentage distribution of operational holdings			
		60-61 (17th)	70-71 (26th)	81-82 (37th)	91-92 (48th)
marginal	39.1	45.8	56.0	62.8	
small	22.6	22.4	19.3	17.8	
semi-medium	19.8	17.7	14.2	12.0	
medium	14.0	11.1	8.6	6.1	
large	4.5	3.1	1.9	1.3	
all sizes	100.0	100.0	100.0	100.0	

Sources of estimates of 17th, 26th & 37th rounds: NSS Report Nos. 144, *Sarvekshana Issue No. 16 & 36*

3.3.3 Number of operational holdings: The pressure of growing population on the limited land base and the consequent division of holdings is clearly reflected in the changes in the absolute numbers of operational holdings in different size classes. Figure 3 shows the trends in number of operational holdings in different categories during the period 1960-61 to 1991-92. It will be noted that numbers of operational holdings in different categories are not changing at the same rate, or even in the same direction, over time. Over the three decades the number of marginal holdings has multiplied from 19.8 million in 1960-61 to 58.7 million in 1991-92 — a threefold increase. The number of small holdings, too, has been increasing, though at a moderate rate since 1970-71. As against this, the absolute numbers of large

and medium holdings have declined steadily during this period. What is interesting to note is that the number of semi-medium holdings, appears to be on the increase after remaining stable at 10 million from 1960-61 to 1981-82.

Table 3.4 Changes in percentage distribution of operated area by category of operational holdings

INDIA	Rural				
	category of holdings	percentage distribution of operated area			
		60-61 (17th)	70-71 (26th)	81-82 (37th)	91-92 (48th)
marginal	6.9	9.2	11.5	15.6	
small	12.3	14.8	16.6	18.7	
semi-medium	20.7	22.6	23.6	24.1	
medium	31.2	30.5	30.1	26.4	
large	29.0	23.0	18.2	15.2	
all sizes	100.0	100.0	100.0	100.0	

Sources of estimates of 17th, 26th & 37th rounds: NSS Report Nos. 144, *Sarvekshana Issue No. 16 & 36*

3.3.4 Distribution of operated area: Table 3.4 gives percentage distributions of operated area by category of operational holdings from the last four Land Holding Surveys. It is seen that the share of marginal holdings in total operated area has increased from 7% in 1960-61 to 16% in 1991-92. The share of small holdings has also registered growth, though at a slower pace, and there is some growth in the share of semi-medium holdings as

Table 3.6. Trend in concentration of operated area

INDIA	Rural			
	group of operational holdings	percentage share in operated area		
	61-62 (17th)	71-72 (26th)	81-82 (37th)	91-92 (48th)
bottom 30%	4.6	4.4	2.2	3.0
bottom 60%	18.3	18.6	14.9	14.2
top 10%	46.0	45.0	47.2	47.6
top 5%	30.5	30.6	32.4	33.6

Sources of estimates of 17th, 26th & 37th rounds : NSS Report Nos. 144, *Sarvekshana Issue No. 16 & 36*

well. At the other end, one sees a significant decline in the share of large holdings — from 29% in 1970-71 to 15% in 1991-92.

3.3.5 Unchanging nature of size distribution : Table 3.5 presents the cumulative percentage distribution of operational holdings and area operated by size class from the last four Land Holding Surveys of NSS. The data are presented for the 12 size classes which could be formed maintaining comparability of the results of the four surveys. The Gini's coefficients given in Table 3.7 are based on these 12 size classes. It is seen from Table 3.5 that the nature of size distribution of operational holdings has, by and large, remained unchanged over the three decades, notwithstanding the progressively downward shift in the distribution.

3.3.6 Lorenz curve : Table 3.6 shows, separately for the four surveys, selected

ordinates of the Lorenz curve, i.e. cumulative percentage share in aggregate operated area of selected ordinal groups of operational holdings. The values of the ordinates presented in the Table 3. were read from the smoothened versions of Lorenz curves based on actual estimates.

Table 3.7 Trend in Gini's coefficient

INDIA	Rural	
	Gini's coefficient *	
year	operational holdings	ownership holdings
1960-61	0.583	0.731
1970-71	0.586	0.709
1981-82	0.629	0.712
1991-92	0.641	0.710

Sources of estimates of 17th round: NSS Report No 144
26th round: *Sarvekshana Issue No. 16* 37th round, NSS :
Sarvekshana Issue No. 33 & 36 Gini's Coefficient for
ownership holdings for 1991-92 is taken from *Sarvekshana Issue No. 65*

3.3.7 Growing inequality : Table 3.62 reveals that the share of the bottom 60% of the operational holdings in the total operated area has progressively declined over the three decades. As against this, the shares of both the top 10% and 5% groups of holdings have grown, though at a low rate, during this period. The present survey shows that overall decline between 1960-61 and 1991-92 in the share of the bottom 60% is about 4 percentage points,

* Gini's coefficient

$$C = 1 - [\sum (p_j - p_{j-1}) (q_j + q_{j-1})] / 10^4$$

where p_j and q_j are respectively the cumulative percentage of number of operational holdings and operated in the j th size class of holdings.

a great deal of which is accounted by the rise (3 percentage points) in the share of the top 5% over the same period. Thus it is seen that the inequality in the distribution of operational holdings, high as it is, has been increasing during the last three decades.

3.3.8 *Gini's coefficient* - a measure of inequality : To serve as an overall measure of inequality in the size distribution of operational holdings, the Gini's coefficient has been worked out for 1960-61, 1970-71, 1981-82 and 1991-92, and is presented in Table 3.7. The trend in Gini's coefficient confirms that the inequality in operational holdings has been increasing progressively since 1960-61. The table also provides Gini's coefficient of household ownership holdings. It is seen that, during the last two decades, while the concentration ratio of ownership of land remained by and large unchanged, that of operational holdings rose sharply from 0.586 in 1970-71 to 0.641 in 1991-92, a fact that is entirely consistent with the phenomenon (discussed later in para 3.7 of this chapter) of an increasing tendency of large and semi-medium holdings to lease in land from the marginal and small ones.*

3.4 Changes in size distribution: inter-

state comparison

3.4.1 Table 3.8 gives the percentage distributions of operational holdings and percentage of area operated in different categories of holding in 15 major states for 1991-92, 1981-82 and 1970-71, as obtained from the Land Holding Surveys of NSS 48th, 37th and 26th rounds respectively. The general feature emerging from the table is that the distribution of operational holdings continued to be highly unequal in all the major states.

3.4.2 In all the major states, the pressure of population growth on the limited land base is reflected in the progressive downward shift in the distribution of operational holdings over the two decades. It is observed that, in general, there was a rise in the percentage of marginal holdings and a decline in percentage of holdings in the semi-medium category upwards. Only in respect of small holdings could some amount of inter-state variation, both in magnitude and direction, be observed during the period. Contrary to the general declining trend, the percentage of small holders in Madhya Pradesh underwent a steady rise since 1970-71. In Punjab and Haryana, too, the proportion of small holders registered a rise during the eighties, after having declined sharply in the preceding decade.

* See *Bibliographical Note 2*

Table 3.9 Changes in Gini's coefficient of operational holdings in 15 major states

RAJASTHAN	0.564	0.604	0.613	3.08
TAMIL NADU	0.516	0.640	0.646	0.71
UTTAR PR.	0.495	0.565	0.572	1.01
WEST BENGAL	0.490	0.597	0.585	0.60
INDIA	0.586	0.629	0.641	1.34

Note: The concentration ratios for 1970-71 and 1981-82 are taken from "Temporal and regional variations in the agrarian structure in India", by T.Haque, Indian Journal of Agricultural Economics, July-Sept. 1987, Vol. 42, NO. 3CN

3.4.3 *Gini's coefficient*: The values of Gini's coefficient given in Table 3.9 for the years 1970-71, 1981-81 and 1991-92 indicate the changes in the level of inequality in the size distribution of operational holdings in the 15 major states. As stated earlier, the Gini's coefficient of operational holdings in the country as a whole has increased significantly during the period. Over the states, however, the

ratio has shown varying trends.

3.4.4 In 10 of the 15 major states there has been an upward trend in the concentration ratio since 1970-71. The rise was most pronounced for the two most agriculturally developed states of Punjab and Haryana. In Punjab, the ratio increased sharply from 0.418 in 1970-71 to 0.702 in 1981-82. This was followed by a small rise in the next decade. In the case of Haryana, the ratio rose substantially in both the decades. The overall increase from 1970-71 to 1991-92 was from 0.464 to 0.675. It may be noted that the Gini's coefficient in these two states were much higher than the national ratio of 0.641 in 1991-92.

3.4.5 In Assam, Kerala, Orissa and West Bengal, the Gini's coefficient increased during 1970-71 to 1981-82, but it has shown a marginal decline in the following decade. In the cases of Assam and West Bengal, there was a substantial rise during the seventies. The only major state not registering a rise in the Gini's coefficient during either of the decades was Andhra Pradesh.

EXTENT OF TENANCY

3.5.1 The changes under way in the tenancy status of operational holdings are briefly discussed in paragraphs 3.2.8 and 3.2.9. This section deals with the trends in incidence of tenancy and proportion of tenanted land under major terms of lease *vis-à-vis* size class of holdings.

Table 3.10 A few important indicators of land tenure status in 1991-92

INDIA		Rural
	item	estimate
1.	no. of tenant holdings (mill.)	10.27 (10.99%)
2.	total operated area leased in (mha.)	10.36 (8.28%)
3.	area leased in per tenant holding (ha.)	1.01
4.	no. of holdings with other-wise possessed land (mill.)	3.87 (4.14%)
5.	total otherwise possessed operated area (mha.)	1.26 (1.01%)
6.	otherwise possessed area per holding with otherwise possessed land (ha.)	0.33

Note: (i) "tenant holding" stands for operational holding with wholly or partly leased-in area. (ii) figures in parentheses indicate the percentages to number of holdings or total operated area.

3.5.2 Granting of the right to use a piece of land to others, either on rent or free, by the owner without transferring the title is termed land lease. Agreements of such lease, even when made orally, are considered as lease contracts in the Land Holding Survey of NSSO. On the other hand, hereditary tenancy and long term lease for 30 years or more are not treated as land lease — they are treated as land ownership. But possession of encroached private land is treated as leased-in land (free of rent).

3.5.3 *National level estimates:* Table 3.10 gives the estimates of the present survey indicating extent of tenancy in rural India. The number of tenant holdings, i.e. holdings with wholly or partly leased-in land, was about 10 million, reporting an

area of about 10 million hectares of tenanted land. Thus, on an average, a tenant holding had a hectare of leased-in land in its possession during 1991-92.

3.5.4 Table 3.10 also provides estimates of "otherwise possessed" land, i.e. possession of public or institutional land without title of ownership or occupancy right. About 4 million holdings reported possession of such land, its area amounting to about a million and a quarter hectares.

3.6 Tenancy and size of holding

3.6.1 Though the measures of land reform undertaken since Independence appear to have deterred the growth of exploitative tenancy, there is still a high proportion of tenanted land in total operated area. What is most remarkable about tenancy in rural India is the significantly high proportion of total tenanted land operated by a small proportion of holdings.

3.6.2 Table 3.11 shows the incidence of tenancy by broad size class of operational holdings in 1991-92. The percentage of tenant holdings shows, largely, a rising tendency with the holding size. In the lowest class — i.e. holdings below 0.20 hectares constituting 28% of the operational holdings — the percentage is much smaller than in the rest of the classes. The next column of Table 3.11 shows that the percentage of tenanted land (area leased-in) in operated area, on the other hand, falls as one passes from size class 0.21-0.50 to size class 4.01-10.00. But, in the topmost size class (over 10.00

Table 3.11
Percentage of tenant holdings and area leased in by broad size-class in 1991-92

INDIA broad size class (ha.)	% of tenant holdings	% of area leased in	Rural
			% DIST. of area leased in
less than 0.20	6.4	6.98	1.0
0.21 - 0.50	11.6	9.04	4.7
0.51 - 1.00	12.4	8.70	10.6
marginal	9.3	8.7	16.3
small	14.9	8.53	19.3
semi-medium	12.2	7.41	21.6
medium	13.1	6.90	22.0
large	16.7	11.37	20.9
over 1.00	13.8	8.2	83.7
all sizes	11.0	8.28	100.0

ha.) it is significantly higher (11.4%) than in the rest of the classes.

3.6.3 Share in tenanted land by holding size: The percentage distribution of tenanted land by the size class of holdings is shown in the last column of Table 3.11. It is seen that nearly two-thirds of the total tenanted land was operated by the top 3 classes, which constituted only about 19% (see Table 3.5) of the total operational holdings. If one considers that holdings higher than one hectare i.e., the top 4 classes, one sees that as much as 85% of

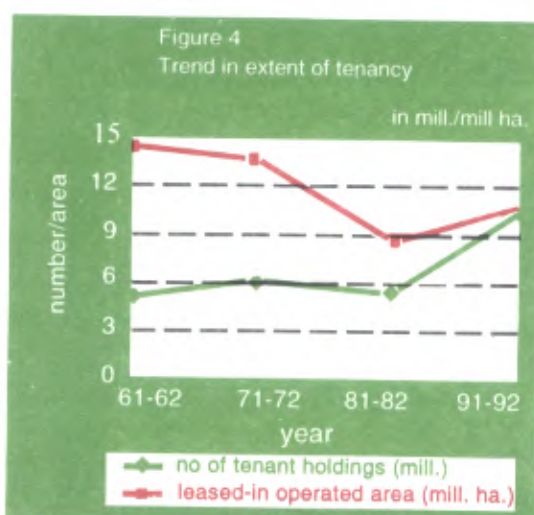

the total tenanted land is operated by these holdings, which, from Table 3.5 are found to constitute about 37% of the total number of operational holdings. Since around 14% of the holdings in the size classes larger than 1 hectare were tenant holdings, it follows that about 84% of the total tenanted land was operated by only 5% of the total number of operational holdings.

3.7 Trends in extent of tenancy

3.7.1 One of the most interesting possibilities brought to light by the present survey is that of a change in trend in extent of tenancy. Two mutually reinforcing findings presented in Figure 4 points to this possibility. One, the number of tenant holdings, which remained more or less

Table 3.12
Percentage of tenant holdings by categories of operational holdings, 1960-61 to 1991-92

INDIA categories	Rural percentage of tenant holdings			
	60-61 (17th)	70-71 (26th)	81-82 (37th)	91-92 (48th)
	marginal	24.1	27.0	14.4
small	25.1	27.8	17.9	14.9
semi-medium	23.6	24.8	15.9	12.2
medium	20.5	20.0	14.5	13.1
large	19.5	15.9	11.5	16.7
all categories	23.5	25.7	15.2	11.0

stable around five and a half million during 1960-61 to 1981-82, increased sharply to about 12 million during the last decade. Two, the total leased-in operated area, after exhibiting a clear downward trend during 1960-61 to 1981-82, showed an upturn after 1981-82. *

3.7.2 Rise in incidence of tenancy in higher size classes: The percentages of tenant holdings by category of holdings from the four LHS of NSSO are given in Table 3.12. The percentage of tenant holdings in the marginal, small and semi-medium categories, in each decade, moved in the same direction as the all-categories percentage. The percentage for the medium and large holdings, on the other hand, declined continuously from 1960-61 to 1981-82. Then, during the last decade, the percentage of tenant

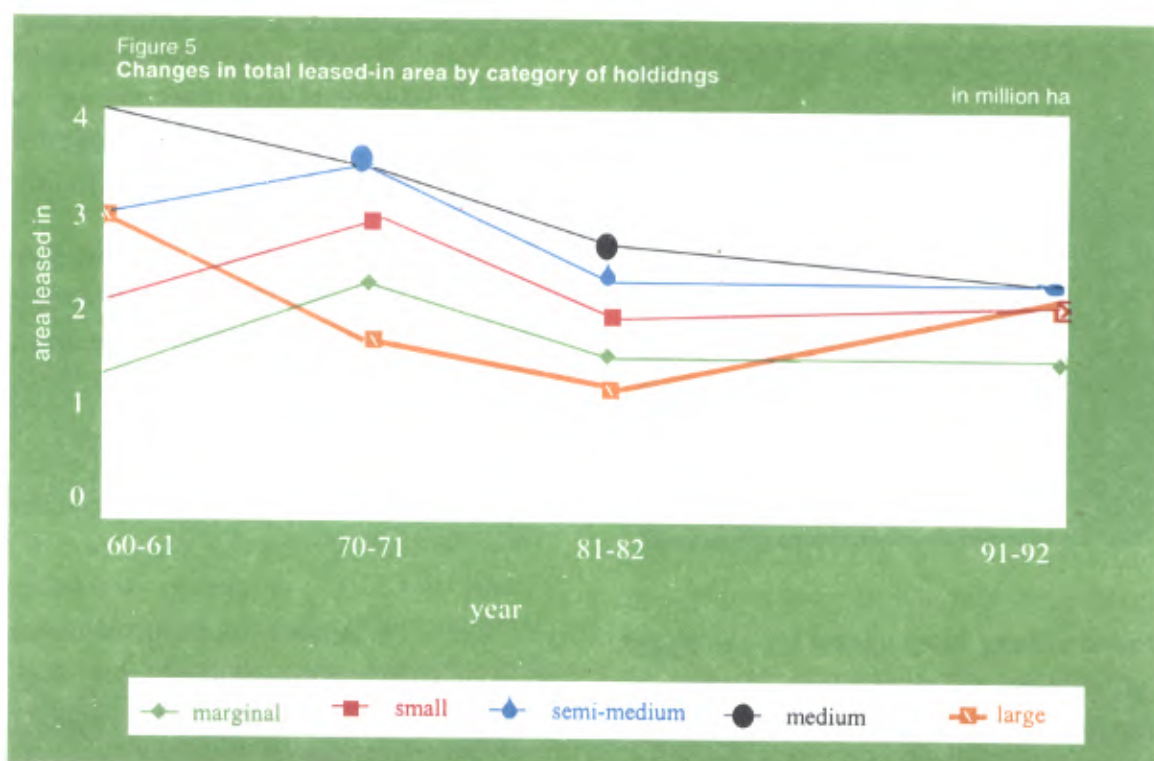

holdings increased remarkably among the large holdings and at a moderate rate in the medium class; but the percentage for all operational holdings continued to fall.

3.7.3 Rise in area under tenancy in higher size class: Table 3.13 shows the percentage of leased-in area by category of holdings size class from the four LHS's. Till 1981-82, there was a steady decline in the percentage of tenanted area in all the size classes. But after 1981-82, one observes that the fall continues only for the "marginal" category, and, simultaneously, that the percentage for large holdings rises sharply — in fact, doubles. This rise in the "large" category not only arrested the fall in the overall percentage but also raised it from 7% to

Table 3.13
Change in percentage of area leased in by category of operational holdings

INDIA	Rural			
	percentage of area leased in			
	60-62 (17th)	70-71 (26th)	81-82 (37th)	91-92 (48th)
marginal	16.6	18.9	9.7	8.7
small	14.0	14.6	8.5	8.5
semi-medium	11.7	11.7	7.3	7.4
medium	9.6	8.7	6.6	6.9
large	8.3	5.9	5.3	11.4
all sizes	10.7	10.6	7.2	8.3

*See Bibliographical Note 3

8% during the decade. Meanwhile, the inverse relationship, which had prevailed between the size of holding and percentage of leased-in area for two decades since 1960-61, seems to have disappeared with the large holdings reporting the highest proportion (11%) of leased-in operated area 1991-92.

3.7.4 Trends in total leased-in area: The tenancy legislation enacted in the late fifties and early sixties had set off a declining trend in tenancy of land. The large and medium holdings were the most affected ones — there was a sharp decline in the total leased-in area in both the classes during the following decade (Figure 5). In all the lower size classes, however, the total leased-in area increased perceptibly during this period. With the

enforcement of more restrictive tenancy legislation in late sixties and early seventies, the total leased-in area declined in all the size classes, almost at the same rate, during the next decade. But the results of the present survey show a sharp rise* in the total leased-in area in the large holdings, accompanied by moderate increase or little change in the other size classes.

3.8 Extent of tenancy : inter-state comparison

3.8.1 Table 3.14 provides the survey estimates of percentage of tenant holdings and percentage share of tenanted land in operated area for 15 major states. The corresponding estimates of the LHS, 37th round (1981-82) are also given in the

*See Bibliographical Note 4

table for examining the emerging trends in tenancy in these states.

3.8.2 It is seen that the percentage of leased-in area was the highest among the 15 states in Haryana (34%) in 1991-92. Punjab too reported a high percentage (19%) of tenanted land. In 1981-82 as well, the highest two percentages of

Table 3.14 Percentage of tenant holdings and operated area leased in for 15 major states

STATE	Rural

UTTAR PRADESH	20.5	15.5	10.2	10.5
WEST BENGAL	23.1	14.4	12.3	10.4
INDIA	15.2	11.0	7.2	8.3

tenanted land were observed in Haryana (18%) and Punjab (16%).

3.8.3 For the country as a whole, though the proportion of tenant holdings declined, the share of leased-in area increased during the last decade. While most of the major states conformed to this pattern, a few deviated from it. Among the notable exceptions are West Bengal and Bihar.

There was a substantial decline in the percentages of both tenant holdings and leased-in area in these two states. On the other hand, both the percentages rose perceptibly in Andhra Pradesh and Madhya Pradesh.

3.9 Terms of lease

3.9.1 Leasing of land is contracted by two parties under certain terms of lease that are binding on both parties. In the present survey, data were collected for the following specific terms of lease:

- (i) for fixed money,
- (ii) for fixed produce,
- (iii) for share of produce,
- (iv) for service contract,
- (v) for share of produce together with other terms,
- (vi) under usufructuary mortgage,
- (vii) from relatives under no-specified terms.*

3.9.2 Table 3.15 gives the percentage distribution of leased-in area by the four major terms of lease and the rest put together under "other terms". Share cropping (34%) was found to be the most prevalent practice of leasing land followed by fixed rent, in cash or kind (33%). A substantial proportion (7%) of the leased-in area was found to have been taken from relatives under no specified terms. It may be noted that the data on leasing in from relatives under no specified terms were collected for the first time in the present survey.

* The detailed results, given in table 5R of the Part II, pertain to percentage of households reporting leasing in of land under different terms of lease.

Table 3.15

Percentage distribution of leased-in area by terms of lease for each broad size class broad

size class	t e r m s o f l e a s e					RURAL
	fixed money	fixed produce	share of produce	from relatives no terms	others	all
0.002 - 0.20	24.4	7.5	19.2	18.0	30.9	100.0
0.21 - 0.50	18.5	13.6	38.7	9.8	19.4	100.0
0.51 - 1.00	11.6	16.0	41.6	5.2	25.6	100.0
1.01 - 2.00	15.1	19.1	40.9	4.3	20.6	100.0
2.01 - 4.00	24.2	14.8	30.1	4.6	26.3	100.0
4.01 - 10.00	26.4	12.3	27.2	3.4	30.7	100.0
over 10.00	35.5	11.1	19.0	5.3	29.1	100.0
ALL SIZES	19.0	14.5	34.4	7.4	24.7	100.0

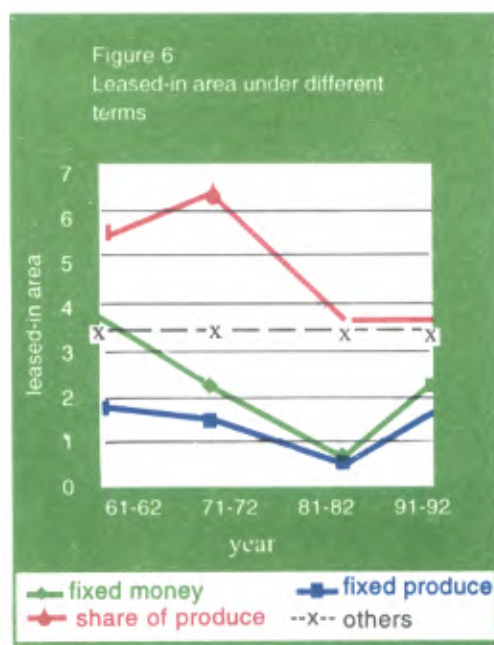

3.9.3 Terms of lease and size of holding: The survey estimates reveal, on the whole, a positive relationship between size of holding and percentage of leased-in area under the "fixed money" term but a negative relationship with "share cropping". The two lowest size-classes, however, do not conform to this pattern. In the case of "fixed produce", the percentage increased with increase in size of holding up to "small" holdings category (1.01-2.00 ha.), but declined thereafter. What is clearly revealed by the estimates is the negative association between the size of holding and the percentage of leased-in area taken from relatives under no specified terms, but for a nominal deviation in the topmost class.

Table 3.16

Percentage distribution of leased-in area by terms of lease

INDIA	Rural			
	percentage distribution of leased-in area			
terms of lease	60-61 (17th)	70-71 (26th)	81-82 (37th)	91-92 (48th)
1. fixed money	25.6 (23.2)	15.4 (12.7)	10.9 (11.9)	19.0 (23.3)
2. fixed produce	12.9 (12.4)	11.6 (10.5)	6.3 (7.6)	14.5 (17.9)
3. share of produce	38.2 (42.0)	47.9 (50.7)	41.9 (38.7)	34.4 (42.1)
4. others	23.3	25.1	40.9	32.1
5. all terms	100.0	100.0	100.0	100.0

Figures in parenthesis are the percentage of tenant holdings reporting leased-in area under the terms of lease.

3.9.4 Rise in share of “fixed rent” in tenanted land: The percentage distributions of leased-in area by terms of lease from the four LHS’s of NSSO are given in Table 3.16. A significant feature of this time series is a clear change in trend in the share of the two “fixed rent” (rows 1 & 2) tenancies, separately or taken together. The share of area leased-in on fixed money or fixed produce had declined steadily during 1960-61 to 1981-82. There was also a decline in the total area leased in under both the terms (Figure 6). By 1981-82, the combined shares of the two “fixed rent” terms had come down to a meagre 17% of the total leased-in area. But since 1981-82, the

situation appears to have undergone a remarkable change. There was a significant rise, both in the percentage share and total leased-in area, in tenancy under both the “fixed rent” terms.*

3.9.5 *Change in prevalence of share cropping*: Share cropping continues to be the most important form of tenancy in the country (Table 3.16). The land reform legislations enacted during the late fifties and early sixties permitted resumption of personal cultivation by the owner of land leased out under share cropping contracts, while framing the laws preventing eviction of tenants. As a result, total area leased in under share cropping contracts rose appreciably during the sixties, while the area under “fixed rent” tenancies dropped significantly (Figure 6). The revised tenancy acts of the late sixties and early seventies, which clearly distinguished share cropping from personal cultivation,* brought about a rapid decline in area under share cropping tenancy from over 6 million hectares in 1970-71 to 3.5 million hectares in 1981-82. It has remained stable at 3.5 million hectares since then.

3.9.6 *Inter-state variation in leasing under different terms*: The percentage distribution of leased-in area operated under four specific terms of lease and the rest put together in “other terms” is given for 15 major states in Table 3.17. The distributions for the individual states

*See Bibliographical Note 6

reveal a wide variation over the country in the relative importance of different contracts.

3.9.7 In Haryana and Punjab — the two most agriculturally advanced states in the country — the most prevalent form of contract was fixed rent in cash. Over 61% and 49% of the tenanted land was contracted for fixed money in Haryana and Punjab respectively. In Tamil Nadu and Andhra Pradesh, too, “fixed rent” tenancies were the major component of leased-in area. The combined shares of “fixed money” and “fixed produce” in total leased-in area was about 53%.

3.9.8 Share cropping was found to be the most prevalent form of tenancy in Orissa (51%), West Bengal (46%), Uttar Pradesh (46%) and Bihar (44%).

3.9.9 While “share cropping” and “fixed rent” tenancies were the main terms of lease in most of the states, leasing in “from relatives under no specific terms” was predominant in Kerala. Land so possessed accounted for 39% of the leased-in land in the state.

3.9.10 *Change during the eighties:* Table 3.17 also gives the percentage distribution of tenanted land by terms of lease for 1981-82. It is to be noted that leasing in from relatives under no specified terms was not collected separately in the 37th round LHS. Thus such leasing of land is included in “other terms” in the distribution for 1981-82. It is seen that most of the major states exhibited a shift

in importance from “share cropping” to tenancy under “fixed” terms. The notable among them are Bihar, Haryana, Maharashtra, Punjab and Tamil Nadu. In all these states, the percentage share of “share cropping” declined substantially, while those of the “fixed” terms rose appreciably during the eighties. In Andhra Pradesh, Gujarat, Kerala, Orissa and Rajasthan as well there was a considerable change in the distribution of tenanted land by terms of lease. The shares of all the three major terms of lease, viz. “fixed money”, “fixed produce” and “share of produce”, rose perceptibly at the cost of the share of “other terms” in all these states during the decade.

USES OF OPERATIONAL HOLDINGS

3.10.1 The following discussion deals with the different uses of the operational holdings, in terms of land use, major agricultural activity and other agricultural activities of the holdings. The main survey findings on irrigation of land are also presented here.

3.11 Land use in operational holdings

3.11.1 Information on land use for each of the plots included in the surveyed operational holdings was collected in the survey with the whole agricultural year as the reference period. The standard ninefold classification of land use was modified appropriately to suit the purpose

of the survey. The detailed percentage distributions of operated area by land use are given in Table (8R) of the Part - II, separately for each of the seven broad size classes of operational holdings. Data were collected on operated area and the break-up over the following nine types of land use (definitions are given in Section 1):

- (i) net area sown :
 - (a) unirrigated & cropped once
 - (b) unirrigated & cropped more than once
 - (c) irrigated & cropped once
 - (d) irrigated & cropped twice
 - (e) irrigated & cropped more than twice
- (ii) current fallow
- (iii) other fallow
- (iv) water bodies and
- (v) other uses.

Table 3.18

Percentage distribution of area operated by type of land use: 1960-61, 1981-82 and 1991-92

INDIA	RURAL		
	% of area operated		
land use	1960-61	1981-82	1991-92
net sown area	85.9	88.0	93.1
current fallow	2.6	2.8	1.5
other fallow	1.7	1.4	0.5
other use	9.8	7.8	4.9
all	100.0	100.0	100.0

Note: The estimates for 1991-92 presented in the table are calculated on the basis of reported land use only, and thus differ from the estimates of Table(8R) in the Appendix, which gives the estimates of the not reported part separately.

3.11.2 For the discussion in this chapter, the estimates for the three main types of land, viz. 'net sown area', 'current fallow' and 'other fallow' are examined separately, while those for other uses are clubbed into one group called 'other uses'. The percentages of operated land under these four types of land use are given in Table 3.18 for the 17th (1960-61), 37th (1981-82) and the 48th rounds. It may be mentioned here that estimates of land use are not available from the LHS of the 26th round.

3.11.3 The estimates of the LHS reveal little change in the pattern of land use over the period. However, they depict a moderately rising trend in the percentage of net sown area in the total operated area, at the cost of the shares of other uses of land.

3.12 Main use of operational holdings

3.12.1 The operational holdings were classified according to the main agricultural activity pursued in them during the agricultural year 1991-92. Among different agricultural activities, the activity generating the maximum income was considered as the main use of the holding. The list of agricultural activities used for this purpose was :

- (i) crop production:
 - (a) vegetables
 - (b) other than vegetables
- (ii) production from horticulture and orchards

Table 3.19

- (iii) production from plantation:
 - (a) forestry
 - (b) others
- (iv) livestock
- (v) poultry
- (vi) pisciculture
- (vii) others.

3.12.2 The distribution of holdings by the detailed main-use classification is given in Tables(10R) & (10U) of the Part-II. For the purpose of the present discussion, percentage of holdings falling in certain main use classes have been merged together and shown under the broader class so formed. The details of formation of the broader classes are given below:

broad class	constituent detailed classes
1. crop production	(i) vegetables (ii) other than vegetable production from horticulture crops/ orchards (from both forestry & others)
2. plantation & orchards	production from horticulture crops/ orchards (from both forestry & others)
3. livestock	livestock
4. poultry	poultry
5. others	(i) pisciculture (ii) others

3.12.3 Table 3.19 gives the percentage distribution of operational holdings by their main use for 1991-92 and 1981-82. It is seen that, at the national level, about 80% of the operational holdings were mainly used for crop production in 1991-

92. The major income of another 4% was from plantation and orchards. These two together are shown under "crop production" for 1981-82, when information was not collected separately for the two uses. The next important activity was rearing of livestock and poultry — about 10% of the operational holdings reported it as the main use.

3.12.4 Inter-state variation in main use: Generally speaking, crop production was the predominant "main use" of operational holdings in most of the major states. The notable exceptions, in this regard, were Punjab, Haryana and Kerala. The main use of 42% of the holdings in Punjab was livestock rearing, while the national level estimate was only 8%. Haryana too had a substantial proportion (23%) of holdings with livestock rearing as its main use. Lastly, while only 4% of the operational holdings in rural India reported "plantation & orchards" as their main use, a majority of the holdings (59%) in Kerala were operated mainly for production from plantations.

3.12.5 The estimates for 1981-82, which are based on the 37th round LHS, are given in the table only for reference, as their use for studying the change during the decade could be very misleading. In the 37th round, data were collected separately for the seasons and estimates were generated for the major crop season. Since the estimates from the present survey are based on the entire agricultural year under reference, the two sets of estimates are not strictly comparable.

Table 3.20

Percentage distribuion of operational holdings by types of agricultural activities carried out for the major state

3.13 Types of agricultural production

3.13.1 Besides the main activity, a number of other activities are simultaneously carried out on most of the holdings. In an attempt to understand the nature and scale of agricultural operations, the holdings were classified into certain exclusive groups on the basis of the agricultural activities carried out in them. Those reporting agricultural production, presumably on a small scale,

in the homestead alone were first identified. They were then further classified by the types of agricultural production they had undertaken during the reference agricultural year. The rest of the holdings were primarily classified into two groups — those reporting raising of field crops and the rest.

3.13.2 It was found that holdings which carried out agricultural production outside the homestead almost invariably reported

raising of some field crop during the reference agricultural year. This explains why the percentages for "all agricultural production within homestead" and "crop production outside homestead" in each row of Table 3.20 (as well as Tables (10R) & (10U) of the Part-II) add up to 100 even though, among the different kinds of agricultural production undertaken outside the homestead, only "raising of field crops" has been considered.

Table 3.21

Percentage of net irrigated area by broad size class of operational holdings : 1991-92 & 1981-82

broad size class of operational holdings (ha.)	Rural % of irrigated area	
	1981-82	1991-92
0.002 - 0.20	28.7	33.7
0.21 - 0.50	36.2	43.4
0.51 - 1.00	32.9	41.7
1.01 - 2.00	30.7	38.9
2.01 - 4.00	26.6	36.8
4.01 - 10.00	33.0	32.1
10.01 & above	12.9	28.1
all sizes	24.8	35.4

3.13.3 At the national level, over 76% of the holdings reported raising of field crops during the year. Of the remaining 24% of the holdings reporting agricultural production only in homestead, about one-third were exclusively engaged in rearing of livestock, with or without poultry-raising activity.

3.13.4 Inter-state variation: As in case of the national-level estimates, the

percentage of holdings reporting raising of field crops outside homestead was, in general, high in most of the states. Kerala, however, stands out as a notable exception. In this state, only 27% of the holdings reported raising of field crops outside homestead. In Punjab, Assam and Haryana too the proportion of holdings raising field crops outside homestead was relatively low. Substantially large proportions of holdings in Punjab(31%) and Haryana(21%) were solely engaged in livestock rearing (with or without poultry raising).*

3.14 Use of irrigation and its sources

3.14.1 Table 3.21 gives the percentage of net irrigated area to operated area for the broad size classes of operational holdings from the present survey as well as from the 37th round LHS. The estimates of the 37th round are presented here only as a reference, as the the estimates are not comparable. Data on irrigated area, too, were collected with season as the reference period, and the estimates were generated for the major crop season. The estimates of the present round are, on the other hand, based on the entire agricultural year under reference.

3.14.2 The estimates of percentage of irrigated area obtained from the present survey suggest that there is an inverse association, though weak, between the intensity of use of irrigation and the size of holding. Leaving aside the lowest size class, it is seen that the percentage of irrigated area decreases with the increase in the size of holding — from 43% in the 0.21- 0.50 size class to 28% in the

* See Bibliographical Note 7

highest size class.

3.14.3 The survey estimates of the proportion of irrigated operated area and its distribution by sources are given in Table 3.22. It is seen that 35% of the operated area in the country was irrigated during the agricultural year 1991-92. Judging by their shares in the total irrigated area, tubewells (36%) and canals (26%) were the two most important sources of irrigation at the national level.

3.14.4 *Inter-state variation in use of irrigation:* Punjab and Haryana were the two most irrigated major states of the country. Both in Punjab and Haryana, 73% of the operated area was irrigated during 1991-92. A high proportion (67%) of irrigated operated area was reported in

Uttar Pradesh as well. In sharp contrast, only 6% of the operated area in Assam was irrigated during the year.

3.14.5 *Inter-state variation in sources of irrigation:* In all the three most irrigated states, tubewell was reported as the main source of irrigation for a major part of the irrigated area. In Punjab and Uttar Pradesh, tubewells, were the principal source for as high as 83% and 67% of the irrigated area respectively. Besides the tubewell, canal too was an equally important source of irrigation in Haryana. These two sources accounted for almost 90% of the irrigated area in the three states. Among other sources, wells covered substantial parts of irrigated area in Maharashtra (55%), Gujarat(45%) and Tamil Nadu(41%).

Table 3.22

Section 4

Bibliographical Note

1. For definitions of operational holding used in earlier Land Holdings Surveys(LHS) of NSSO, see NSS Reports No. 144 (GOI 1968), 215 (GOI 1975) and 331 (GOI 1987). A comprehensive discussion on the definitions used in different LHSs is available in Sawant (1990).
2. The Working Group on Land Reforms for the Eighth Five Year Plan (GOI 1989a) observed "a trend towards concentration of land holdings through leasing of land by small holders to big ones in green revolution areas and also in places where commercialisation of agriculture has taken place on a large scale." The Working Group also predicted that this trend would increase further. The results of the present survey strengthen the view held by the Working Group.
3. The observed rise in leased-in area during the 1980s partially owes to the reference period used in the 37th round (1982). The use of 'major crop season' as the reference period might have caused a smaller estimate of leased-in area in the 37th round. Bhaumik (1993) observed that leases were being contracted for just one crop in Midnapur district of West Bengal during the agricultural year 1986-87. The present survey also reveals presence of seasonal leasing. In 1991-92, about 19% and 3% of the leased-in area of the rural operational holdings were contracted only for kharif and rabi seasons respectively. See NSS Report No. 414 (GOI, forthcoming). The results of the present survey, however, point to the possibility of actual rise in leased-in area during the 1980s. Ghosh (1981) in his study of two agriculturally developed villages of West Bengal had observed a substantial rise in tenancy between 1965-66 and 1975-76 with increasing use of the new technology. Two recent studies (Singh 1989, and Saleth 1995) have observed more (new) tenants in relatively developed regions. Nadkarni(1976), Chatha, Singh and Grewal(1986), Murthy(1987) and Singh(1989) have noted various reasons for extensive prevalence of tenancy, like (i) smallness of plots, (ii) holders with alternative employment outside agriculture do not break away from land even if they are working elsewhere, (iii) cultivation on very small holdings not profitable. These observations also point to the possibility that, driven by the rapid population growth and diversification in non-farm employment opportunities, leasing of land is on the rise.
4. The possibility has been noted in a number of studies since early 1970s. In the Seminar on Land Reforms organised by the Planning Commission in 1989, it was noted that "a phenomenon of small and marginal farmers leasing out land to bigger landlords had been observed, especially in agriculturally developed areas"(GOI 1989b). In a number of studies published in the 1970s (Vyas1970, Rao1974, Bharadwaj and Das 1975,

Bandyopadhyay 1975, Bardhan 1976), it was observed that the tenants did not necessarily constitute the weaker party. The landed farmers with tractors and pumps leased in land to augment their farm size further from the owners of holdings for whom self-cultivation was not a profitable proposition. Some of the latter studies, like A.K.Singh (in Haque and Parthasarathi, 1992), Chatha, Singh and Grewal (1986), Singh (1989), have also observed this phenomenon in agriculturally developed regions. Roa (1992) argues (citing the example of Punjab) that the evidences of reverse tenancy (leasing of land by small holders to big ones) in agriculturally developed areas points to the possibility of rise in large tenant holdings in the future.

5. The fixed rent tenancy is expected to have higher shares with the spread of advanced agricultural practices. In some of the recent studies involving comparison between agriculturally developed and backward areas, like Singh (1989) and Bhaumik (1993), the fixed rent tenancy was found to have a higher share in the developed regions.

6. Joshi (1971) and P.S. Appu ("Tenancy Reform in India" in GOI, 1989b) have reviewed the policy, legislation and implementation of land reforms in different states. Joshi has also examined the observed and possible effects of the reforms on the structure of land holdings.

7. This is consistent with the estimates of livestock holdings based on the present survey. In Punjab and Haryana, the estimates of adult female bovine stock (used mostly as dairy animals) owned per 100 rural households are much higher than the national average. The estimated number of cattle and buffaloes per 100 rural households for the

two states and India are given in the table below. These are taken from NSS Report No. 408 (forthcoming).

Number of cattle and buffalo per 100 rural households

states	cattle		buffalo		bovine	
	a.f.	all	a.f.	all	a.f.	all
Haryana	38	101	136	229	174	330
Punjab	33	83	124	203	157	286
India	45	145	33	59	78	204

'a.f.' stands for 'adult female'

A Note on Seasonal Variation in the Operation of Land Holdings in India 91-92 - NSS 48th Round (Jan.-Dec. 1992)

Section 1

Introduction

1.10 The present document is the last of the series of the four brought out on the land and livestock holdings survey. The same covers various features of the operational holdings of the rural sector in the kharif and rabi crop seasons of the agricultural year 1991-92 and presents estimates on utilisation, tenurial form and size distribution of operational holdings.

1.11 *Sample size - first stage units* : In all 9052 villages were planned to be surveyed in this round. Of these, 4328 villages were allocated to the central sample - the part surveyed mainly by the NSSO field staff - and the rest to the state sample - the part surveyed by the state agencies. In the urban sector, the allocations for the central and state samples were 2484 and 3076 blocks respectively. This report is based on the estimates obtained from the central sample alone. The number of villages and urban blocks actually surveyed under the central sample was 4231 and 2420 respectively.

1.12 *Sample size - second stage units* : Our plan was to survey 8 households from each sample village and 9 households from

each sample urban block. In the central sample, the actual number of operational holdings surveyed during the kharif and rabi seasons were 28855 and 24926 respectively in the rural sector.

1.13 *Crop season*: The crop seasons are generally identified by the months of harvesting of a crop during a normal year. For the purpose of the survey, kharif season was defined to include both early kharif (i.e. autumn) and late kharif (i.e. winter). Similarly, rabi season was defined to include both rabi and zaid rabi (i.e. summer). Generally the harvesting months of early kharif and late kharif seasons extend over August to October and November to January respectively. Again, the crops of rabi and zaid rabi are harvested during February to April and May to June respectively. Thus, as a general rule, the crops harvested during August to January were considered as kharif crops and those harvested during February to June were treated as rabi crops. However, appropriate departures to this rule was made for some crops of certain regions.

1.2 Contents

1.2.1 This contains two section, including the present introductory section in Part-I Notes and detailed tables in Part II-Survey Results. Section 2 discusses the principal findings obtained from the survey on operational holdings during kharif and rabi seasons. Part II forms the main body of the document. It gives the results in detail for the operational holdings of kharif and rabi seasons. Sample design and estimate procedure is given at page 9-13 in this issue.

1.2.2 The estimates presented in this

report are based on the pooled data of the two sub-samples of only the central sample and covers only the rural sector.

1.2.3 The results presented in the issue are mostly in form of ratios (like percentage, average etc.). The basic aggregate estimates for the number of operational holdings and area operated provided in Table 1 of detailed tables in Part II-Survey Results, may be used for arriving at aggregate estimates of other characteristics. Other introductory details are already given on page 1 to 8 of this issue.

Section 2

Summary of Findings

3.0.1 The Land and Livestock Survey(LHS) of NSS is one of the principal sources of information on ownership of land and agriculturally operated land in the country. It provides estimates of two basic distributions of land holdings, viz., distribution of land owned by the households and that of land operated. Besides, estimates on seasonality in the operation of land have also been generated from the LHS of the 37th round(1982) and the present survey. The present report gives the survey results relating to operational holdings for the agricultural seasons kharif and rabi of 1991-92. All the results given in the issue pertain only to the rural sector.

3.0.2 The major findings of the enquiry on seasonal operation of land are summarised in this chapter. To start with, the discussion deals with the seasonal aspects of operational holding and their broad features. It then compares the estimates of seasonal operation of holdings of the current round with those of the earlier round. The nature and intensity of seasonal operation of holdings are then examined in some detail. Finally, the extent of seasonal leasing is discussed in terms of its incidence and its share in total leased-in operated area.

FEATURES OF OPERATIONAL HOLDINGS IN *KHARIF* AND *RABI*

3.1.1 An operational holding is a techno-economic unit used wholly or partly for agricultural production and is operated (directed or managed) by one person alone, or with assistance of others without regard to the title, size and location.

3.1.2 As distinct from household ownership holding, which is restricted to owned area of the household, operational holding encompasses all land under physical possession of the techno-economic unit either owned, leased in or otherwise possessed. A unit with more or less independent technical resources for agricultural operations like land, agricultural equipment and machinery, draught animals etc. was considered to be an operational holding if some agricultural production was carried out on any part of the land under its possession during the reference period. The present survey, effectively had three different reference periods, viz. the two crop seasons kharif and rabi of the agricultural year 1991-92 and the agricultural year 1991-92 itself, for the identification of an operational holding. The estimates relating to *kharif* and *rabi* agricultural seasons corresponding reference periods..

Table 1

Operational holdings in kharif and rabi seasons of agricultural year 1991-92

item	kharif	rabi	agri. year
1. Number of operational holdings (mill.)	89 (96%)	81 (87%)	93
2. Number of holdings operated only in one season (mill.)	12 (13%)	4 (4%)	-
3. Operated area (mha.)	124 (99%)	110 (88%)	125
4. Area operated only in one season (mha.)	15 (12%)	1 (1%)	-
5. Average area operated (ha.)	1.4	1.3	1.3
6. Net sown area as percentage to area operated in agricultural year	81%	50%	93%
7. Percentage holdings used mainly for crop production	78%	69%	70%

1. Estimates of items 5, 6 & 7 for agricultural year are taken from NSS Report no. 407

2. Figures in parentheses indicate the percentages of total number of operational holdings / operated area.

3.1.3 The crop seasons are generally identified by the months of harvesting of a crop during a normal year. In the present report, *kharif* and *rabi* seasons are similarly defined. *Kharif* includes both early (i.e. autumn) and late (i.e. winter) kharif seasons and *Rabi* includes both rabi and zaid *rabi* (i.e. summer) seasons.

3.1.4 Area under an operational holdings is called its operated area. For the present survey, the area of an operational holding for the major part of the reference period was taken as its operated area. Thus, while *operated area* of an operational holding of the agricultural year 1991-92 refer to the area operated for the major part of the agricultural year, the operated area of an operational holding of a season refer to

the area operated for the major part of the season.

3.1.5 *Number of holdings* in different seasons: Table 1 shows that, in the agricultural year 1991-92, there were over 93 million operational holdings in rural India. Of these, about 89 and 81 million were operated during kharif and rabi seasons respectively. Clearly, some of the holdings were operated only during one season. Of the holdings operated during the agricultural year 1991-92, about 12% were operated exclusively in the kharif season and another 4% exclusively in the rabi season. The remaining 77 million operational holdings were operated during both kharif and rabi seasons.

3.1.6 Area operated in different seasons:

The total area operated in the agricultural year 1991-92 was estimated to be 125 million hectares (mha.). About 99% and 88% of the area was operated in *kharif* and *rabi* seasons respectively. The average size of an operational holding of the agricultural year 1991-92 (henceforth called "91-92 holding") was 1.3 hectares. Though the average size of a *rabi* holding was same as that of a 91-92 holding, that of a *kharif* holding was marginally higher.

3.1.7 Net sown area: Area operated by a holding represents the area covered by the holding. Thus, operated area for a season do not necessarily represent the scale of actual operation during the season. Instead, the net sown area is a better indicator, as it reflects the extent of land use for the crop-production activity of a holding and

crop production is the main use of a large majority of holdings. About 78% and 69% of the 91-92 holdings were used mainly for crop production in the *kharif* and *rabi* seasons respectively.

3.1.8 The percentages of net sown area to yearly operated area, given in Table 1, reveal a wide seasonal variation in extent of crop production. While over 81% of the 91-92 operated area (i.e. total operated area of the 91-92 holdings) was put to crop production in the *kharif* season, only 50% was so used in the *rabi* season was only 50%. Since, the net sown area for the agricultural year was about 93% of the operated area, it is evident that about 13% and 46% of the annual net sown area was left uncultivated during the *kharif* and *rabi* seasons respectively.

Table 2 Comparison between seasonal estimates generated from data collected for season and seasonal data reconstructed from data for the agricultural year

state	season	estd. no. of holdings (mill.)		estd. area operated (mha.)	
		from agrl. year data	from data for the season	from agrl. year data	from data for the season
KARNATAKA	<i>kharif</i>	4	5	8	8
	<i>rabi</i>	3	3	7	4
MADHYA PRADESH	<i>kharif</i>	7	8	17	16
	<i>rabi</i>	6	6	15	11
MAHARASHTR	<i>kharif</i>	7	7	15	15
	<i>rabi</i>	5	5	13	8
RAJASTHAN	<i>kharif</i>	5	5	16	16
	<i>rabi</i>	5	5	15	12
INDIA	<i>kharif</i>	89	92	124	120
	<i>rabi</i>	81	81	110	85

3.2.1 *A limitation of the data:* The seasonal estimates discussed so far are based on the data collected for the agricultural year 1991-92. As mentioned in paragraph 1.4.0 of Chapter 1, the data for kharif holdings were collected during the first visit to the sample households and those for rabi holdings and the 91-92 holdings were collected in the second visit. The estimates of kharif and rabi holdings were generated from the data for the individual seasons as well as from the seasonal data reconstructed from the agricultural year data. Both the sets of estimates of number of holdings and operated area are presented in Table 2.

3.2.2 It is seen that the estimates obtained from seasonal data and those generated from the agricultural year data do not differ much in respect of number of holdings. The difference observed for the kharif season is largely due to sampling fluctuation, as the estimates generated from the first visit schedules and second visit schedules are not based on exactly the same sample. Some of the households surveyed during the first visit were not available for survey during the second visit and were thus replaced by a substitute or were altogether left out from the sample.

3.2.3 Unlike the estimates of the number of holdings, the estimates of operated area differ substantially, particularly for the *rabi* season. The estimate of operated area based on seasonal data is 97% of that based on agricultural year data for the *kharif* season and only 77% for the *rabi* season. About 65% of the difference between the two national level estimates of area operated for the *rabi* season is

accounted for by the four states given in Table 2. Thus it appears that there was an underreporting of area operated, particularly for *rabi* season, in certain areas.

3.2.4 The detailed survey results, given in the Part II, are based on data of both agricultural year and the individual seasons. Tables 1 and 7 of the Part II are entirely based on the agricultural year data. In Table 3, the 91-92 holdings obtained from the agricultural year data are classified by their sizes in *kharif* and *rabi* seasons. The rest of the tables of the Appendix use data of individual seasons for the size classification of holdings. Area estimates based on data of a season are given in only two tables of the Appendix. These two tables, viz. Table 6 and Table 8, give the distribution of operated area by land use and the distribution irrigated net sown area by sources of irrigation. The data of net sown area (a component of operated area) in two seasons are largely free from the kind of misreporting mentioned above.

3.2.5 In the rest of this chapter, therefore, discussions on different area estimates are restricted to area estimates based on the agricultural year data, except for the net sown area. For irrigated area as well, the discussion is based on the data of individual seasons, as irrigated area is a part of the net sown area.

CHANGES DURING 1980's

3.3.1 Data on operational holdings are being collected regularly by the NSSO since its eighth round (1954-55). So far, five land holding surveys, including the

Table 3

Estimates of certain key characteristics of operational holdings in kharif and rabi seasons from Land Holding Surveys of NSS: 1981-82 & 1991-92

item	1981-82			1991-92		
	kharif	rabi	agrl. year	kharif	rabi	agrl. year
1. Number of holdings (mill.)	73.36	72.98	71.04	89.30	80.68	93.45
2. Area operated (mha.)	120.52	105.17	118.57	124.33	110.44	125.10
3. Average area operated (ha.)	1.6	1.4	1.7	1.4	1.3	1.3
4. Percentage of holdings used mainly for crop production (includ. plantation & orchards)	87%	76%	86%	82%	74%	83%
5. Sample size:						
5.1 villages	-	-	3,692	-	-	4,231
5.2 households	-	-	29,089	-	-	33,289

Sources of estimates of 37th round: NSS Report No. 334

present one, have been conducted. Besides the present survey, separate estimates for the two seasons are, however, available only from the 37th round (1981-82).

3.3.2 Table 3 gives the basic estimates relating to *kharif* and *rabi* operational holdings of the LHS of 37th and the present round. The sizes of samples (at both the stages) on which the estimates for the agricultural years are based are also provided in the table.

3.3.3 There is, however, a problem of comparison in respect of reference period for the estimates relating to the agricultural years. In the present survey, the criterion used for recognizing an operational holding for the agricultural year was "any agricultural production during the reference agricultural year". The estimate for the present round was thus obtained

directly from the data collected for the agricultural year. In contrast, the estimates of the 37th round were generated on the basis of data collected for the major crop season of the reference agricultural year, which means no account was taken of the holdings which had carried out agricultural production only during the minor crop season. This is why the estimated number of holdings operated during the agricultural year 1980-81 was less than that of holdings operated during each season.

3.3.4 *Rise in the number of operational holdings:* The number of yearly holdings has increased from 71 million in 1981-82 to 93 million in 1991-92. During this period, both the numbers of *kharif* and *rabi* holdings have undergone a rapid rise. But what is clearly revealed by the estimates of the present survey is that a considerably larger number of holdings are

operated in the kharif season than in the rabi season. This was not brought out by the 37th round survey. The estimates of number of kharif and rabi holdings of the 37th round were of the same order (73 mill.).

3.3.5 Change in area operated: The operated area of both *kharif* and rabi seasons rose considerably during the decade. The area of the *kharif* holdings rose from 121 to 124 mha. and that of the rabi holdings from 105 to 110 mha. This is despite the fact (see Chapter 1, paragraph 1.3.2) that a large part of Jammu & Kashmir and a large district of Punjab could not be covered by the present survey due to unavoidable circumstances, whereas the entire sample was surveyed in the 37th round as per the planned coverage.

3.3.6 Declining size of holdings: The consequence of rapid growth in number of holdings with a limited land base is clearly shown by the estimates of average area operated per holding given in Table 3. During the decade, the average size of a holding classified as operated during the agricultural year has declined from 1.7 to 1.3 hectares. In comparison, the average size of holdings operated during each season declined at a slower pace. The differential rates of decline is partly due to different definitions used in the two rounds, as discussed in para 3.3.3.

3.3.7 Holdings for crop production: Table 3 reveals that there is a fall in the percentage of agricultural year holdings mainly used for crop production. This feature is observed for individual seasons as well. The fall in the percentage is seen to be more pronounced for the kharif season. With the growing diversification in agriculture, more and more holdings

are being used mainly for activities other than crop production. This is discussed in further details in a latter section.

INTENSITY OF SEASONAL OPERATION

3.4.1 A large part of the agricultural operations in an area is carried out during a particular season. In this respect, there is a wide regional variation as well. Owing to the seasonal nature of agricultural operations, a considerable proportion of holdings are not operated during both the seasons. Table 4 gives the estimated percentages of holdings operated only during a particular season for each size category of 91-92 operational holdings. For this table, the holdings operated during 1991-92 were classified by their period of operation into three groups, viz. "kharif only", "rabi only" and "both kharif and rabi".

3.4.2 Henceforth the terms "kharif-only holding" and "rabi-only holding" will be used to mean a holding operated exclusively during kharif and rabi seasons respectively. A holding operated in only one season will be called "seasonally-operated holding" and that operated during both the seasons will be called "perennial holding".

3.4.3 In the detailed tables, given in the Part II, two different size classifications have been used for presentation of tables — one based on 15 size classes and the other based on 8 broader classes. The latter are referred to as "broad size classes" and the former as simply "size classes". Here, to study the intensity of seasonal operation in holdings of different sizes, the "broad size classes" are further merged to form six size groups that are used in the

Agricultural Census of India. The 6 size groups are as follows:

insignificant	: less than 0.002 ha.
marginal	: 0.01 - 1.00 ha.
small	: 1.01 - 2.00 ha.
semi-medium	: 2.01 - 4.00
medium	: 4.01 - 10.00 ha.
large	: larger than 10.00

These size groups will henceforth be called categories of operational holdings.

3.4.4 Number of seasonally-operated holdings: The percentage distribution of yearly operational holdings by their duration of operation, given in Table 4, reveals that there were over 13% of holdings were kharif-only holdings and another 4% were rabi-only holdings. The largest percentages of kharif-only holdings was found in the small and semi-medium categories (14%), which between them constituted about 30% of the 91-92

holdings. Besides the "nil" category, 44% of which were operated only in the rabi season, the marginal category had a relatively high percentage (4%) of holdings operated exclusively in the rabi season. In the rest of the categories, the rabi-only holdings constituted less than 1% of the 91-92 holdings. The next column of Table 4 shows that the percentage of holdings operated during both the seasons, on the other hand, rises as one passes from the marginal category to the large category. In the "nil" category it is markedly smaller than in the rest of the categories.

3.4.5 Seasonally operated area: Table 4 also shows the percentage distribution of operated area by season of operation. The area operated only during the kharif season accounted for about 12% of the total area operated during the agricultural year. On the other hand, less than 1% of the total area operated during the year was operated exclusively in the rabi season. The remaining 87% of the area was operated during both the seasons.

Table 4 : Percentage distribution of 91-92 holdings and operated area by duration of operation for each size category of holdings

category of holdings	percentage of 91-92 holdings operated during			percentage of area operated by 91-92 holdings during		
	kharif only	rabi only	both seasons	Kharif only	rabi only	both season
insignificant	7.85	43.75	48.41	-	-	-
marginal	13.22	4.13	82.65	14.87	1.27	83.86
small	14.40	0.97	84.63	14.17	0.97	84.86
semi-medium	13.92	0.74	85.34	13.62	0.77	85.61

3.4.6 The distribution of operated area by season varied considerably over the size category of holdings. The pattern of variation had largely the same features as that for the number of holdings. The only difference between the patterns for the number of holdings and area operated is that the higher the size category of holdings the smaller is the percentage of area operated only during the kharif season.

3.4.7 Inter-state variation in seasonal operation: Table 5 gives the percentage distributions of number of holdings and area operated by duration of operation for 15 major states. The table reveals a wide variation in seasonal operation of holdings.

3.4.8 In some of the states almost all the holdings are operated during both the seasons. The highest proportion of holdings operated during both the seasons was reported in Punjab (97%), followed closely by Rajasthan (94%), Uttar Pradesh (93%) and Kerala (93%). In all these states over 93% of the 91-92 operated area was operated during both the seasons. In view of the predominance of arid and semi-arid regions of Rajasthan, the figure relating to the percentage of holdings operated during both kharif and rabi seasons is rather surprising and needs discussion by experts.

3.4.9 At the other extreme, only 56% of the holdings of Orissa were operated during both the seasons. The proportion of such holdings was low in Andhra Pradesh (69%)

and Karnataka (74%) as well. Of the yearly operated area only 57% in Orissa and 75% in Andhra Pradesh was operated during both the seasons. In Karnataka, however, over 84% of the 91-92 operated area was operated in both the seasons. Besides these three states, Gujarat also reported a low degree of perennial operation — about 76% of its yearly holdings and 73% of yearly operated area were operated during both the seasons.

3.4.10 The seasonally-operated holdings were mostly operated during the kharif season in almost all the major states. Only in Punjab, Haryana, Uttar Pradesh and Kerala, the proportion of rabi-only holdings was larger than that of kharif-only holdings. In Kerala and Haryana, however, the percentage of operated area of kharif-only holdings was larger than that of the rabi-only holdings.

3.4.11 The seasonally-operated holdings of the states with low proportions of perennial holdings, like Orissa, Andhra Pradesh, Karnataka and Gujarat, were mostly kharif-only holdings. The area of seasonally-operated holdings in these states was almost entirely operated in the kharif season.

SEASONAL USE OF HOLDINGS

3.5.1 The following discussion deals with different uses of operational holdings, in terms of land use intensity, use of irrigation and major agricultural activity of the holdings.

Net Sown Area

3.5.2 As operated area represents the area of an operational holding and not the

actual area put to agricultural production, the percentage of area of the kharif and rabi holdings to the 91-92 operated area does not really indicate the intensity of seasonal operation. Instead, the percentage of net sown area to total operated area of the 91-92 holdings indicates the degree of use of the operated area for crop production.

3.5.3 Table 6 gives the percentage of net sown area (NSA), separately for irrigated and unirrigated areas, to 91-92 operated area for 15 major states. As mentioned in paragraph 3.2.4, though the estimates of net sown area for a season are based on seasonal data, they are not liable to be affected by the kind of underreporting the estimates of operated area based on seasonal data suffer from. Thus, for arriving at the percentages given the table, the aggregate estimates of net sown area for each season have been worked out from Appendix Table 6. The estimates of total operated area of the 91-92 holdings were taken from Part II Table 1, which is based on the data for the agricultural year.

3.5.4 *Seasonal variation in NSA:* NSA varies considerably over the seasons. Table 6 reveals that, at the national level, the net sown area was about 81% of the 91-92 operated area in kharif, while it was only about 50% in rabi. Most of the seasonal variation in NSA is accounted for by the additional unirrigated area cultivated in kharif. The percentages of irrigated and unirrigated NSA, given in the table, show that about a third of the 91-92 operated area was irrigated in both the seasons. The percentage of unirrigated NSA, was 47% and 17% in kharif and rabi seasons

Table 6

	<i>rabi</i>	17	32	50	65

respectively.

3.5.5 Inter-state variation: The pattern of variation in NSA and area cultivated with irrigation differs across the country. Table 6 shows that while there was little seasonal variation in percentage of NSA to 91-92 operated area in the three agriculturally developed states, viz. Punjab, Haryana and Uttar Pradesh, it was highly pronounced in all the eastern and southern states, except Kerala. Gujarat too had a high seasonal variation in NSA. In Kerala, as a large part of its NSA is under perennial plantations and orchards, there was little seasonal variation in NSA.

Use of Irrigation

3.6.1 Land use intensity and irrigation: All the states with small seasonal variation in NSA had high land use intensity, measured in terms of percentage of NSA to 91-92 operated area, in both the seasons. Except Kerala, all these states were endowed with a large proportion of irrigated land. In Punjab, over 87% of the 91-92 operated area was cultivated with irrigation in both the seasons. It was 65% or more in Haryana and Uttar Pradesh both in *kharif* and *rabi*.

3.6.2 On the other hand, in all the states with low proportion of NSA in *rabi*, only a small proportion of operated area was irrigated in that season. In Assam, a large part of which is regularly affected by floods, only 37% of the operated area was cultivated and only 2% was irrigated in the *rabi* season. Orissa with only 22% of its operated area under NSA had only 11% irrigated area in that season. In the three southern states (except Kerala), the

percentages of NSA and irrigated area were considerably lower than the national level estimate.

3.6.3 In fact, the percentages of irrigated area to NSA, given in Table 6, clearly show that crop cultivation in *rabi* season depends heavily on the availability of irrigation. Of the *rabi* NSA of the country, about 65% was irrigated land, as against 42% of the *kharif* NSA. In the three agriculturally developed states of Punjab, Haryana and Uttar Pradesh, over 80% of the NSA of *rabi* was irrigated. In West Bengal and Gujarat, though a relatively low proportion of land was cultivated in *rabi*, the percentage of irrigated area to NSA was about 85% in the *rabi* season. The states with low land use intensity also had fairly high percentage of irrigated NSA in *rabi*. Besides Assam and Kerala, only Karnataka had less than 45% irrigated area in its NSA of *rabi*.

3.6.4 Sources of irrigation: Table 7 gives the percentage of operated area irrigated in *kharif* and *rabi* seasons by sources of irrigation. The estimates of operated area used for the table are based on the entire agricultural year 1991-92, while the estimates of irrigated area are based on the data collected for the individual seasons.

3.6.5 It is seen that 34% and 32% of the operated area in the country were irrigated during the *kharif* and *rabi* seasons respectively of the agricultural 1991-92. Judging by the percentage distribution of irrigated area, tube well and canal were found to be the two most important sources

Table 7

INDIA	<i>kharif</i>	9	2	13	6	3	2	34
	<i>rabi</i>	8	1	14	6	2	1	32

of irrigation in both the seasons. The percentage of area irrigated by canal showed little variation over the seasons. On the other hand, a larger area was irrigated by tube wells in rabi than in kharif. For the rest of the sources, viz. tank and well, the estimates indicate slightly higher use in kharif than in rabi.

3.6.6 Inter-state variation in sources of irrigation: In all the three states with a high level of irrigation, viz. Punjab, Haryana and Uttar Pradesh, tube well was reported to be the major source of irrigation in a major part of the irrigated area for both the seasons. Bihar also reported a high percentage of operated area irrigated by tube wells during both the seasons. In general, there was little difference between areas irrigated by tube well during the two seasons in these states. Only in Uttar Pradesh a fairly larger proportion of NSA was irrigated by tube wells in rabi than in kharif.

3.6.7 In Punjab, Haryana and Uttar Pradesh, canal was the other important source of irrigation in both the seasons. Particularly in Haryana, this was as important a source of irrigation as the tube well in the rabi season. Canal was an important source of irrigation in Andhra Pradesh, Tamil Nadu and West Bengal as well. But, unlike Haryana, in all these states, it served a larger area in kharif than in rabi.

3.6.8 Among the other sources of irrigation, wells covered a substantial part in Tamil Nadu, Gujarat and Maharashtra. In all these states, and particularly so in

Table 8

Percentage distribution of 91-92 holdings by main use in kharif and rabi

main use	kharif	rabi	agri. year
crop production	76	60	79
plantation & orchards	4	4	4

poultry	2	2	2
others	6	7	7
not operated	1	13	-
all	100	100	100

Tamil Nadu, it served a larger area in kharif than in rabi.

Main use in kharif and rabi

3.7.1 The operational holdings were separately classified according to the main agricultural activity pursued in them during kharif and rabi seasons of the agricultural year 1991-92. Among different agricultural activities, the activity generating the maximum income was considered as the main use of the holding. The list of agricultural activities used for this purpose was:

- (i) crop production
 - (a) vegetables
 - (b) other than vegetables
- (ii) production from horticulture and orchards
- (iii) production from plantation:
 - (a) forestry
 - (b) others
- (iv) livestock
- (v) poultry
- (vi) pisciculture

(vii) others

3.7.2 The distribution of holdings by the detailed main-use classification is given separately for kharif and rabi seasons in Table 4 of the Appendix. For the purpose of the present discussion, percentage of holdings falling in certain main-use classes have been merged together and shown under the broader classes so formed. The details of broader classes are given below:

broad class	constituent detailed classes
1. crop production	(i) vegetables (ii) other than vegetables
2. plantation & orchards	(i) production from horticulture crops/orchards (from both forestry & others)
3. livestock	livestock
4. poultry	poultry
5. others	(i) pisciculture (ii) others

3.7.3 Table 8 gives the percentage distribution of 91-92 operational holdings by their main use in kharif and rabi seasons. It is seen that, at the national level, while 76% of the 91-92 holdings were mainly used for crop production in kharif, only 60% were so used in rabi. The percentage of 91-92 holdings with a major part of their income coming from orchards and plantation remained unchanged during the year. There was no seasonal change in this respect for the activity of poultry raising as well. On the other hand, the

proportion of 91-92 holdings mainly used for livestock rearing differed in the two seasons. It was the main use of a fairly larger proportion of holdings in rabi (14%) than in kharif (11%).

SEASONAL VARIATION IN TENANCY

3.8.1 This section deals with the incidence of tenancy and proportion of leased-in land in rabi and kharif seasons by different size categories of 91-92 operational holdings. An inter-state comparison of tenancy in the two seasons is also included in this section.

3.8.2 Granting of right to use a piece of land to others, either on rent or free, by the owner without transferring the title is termed land lease. Agreements of such lease, even when made orally, are considered as lease contracts in the Land Holding Surveys of NSSO. On the other hand, hereditary tenancy and long term lease for 30 years or more are not treated as land lease — they are treated as land ownership. But possession of encroached private land is treated as leased-in land (free of rent).

3.8.3 *National level estimates:* Table 9 gives the estimates indicating the seasonal variation in the extent of tenancy. As mentioned in paragraph 1.4.2, data on operational holdings were separately collected for the two agricultural seasons and the agricultural year as a whole. Besides the estimates relating to leasing of a land for a major part of the agricultural year, estimates of leasing of

Table 9

A few important indicators of seasonal tenancy in 1991-92

item	estimate
1. no. of tenant holdings (mill.)	14.91
2. p.c. of holdings reporting land leased in for	
2.1 <i>kharif</i> only	7%
2.2 <i>rabi</i> only	1%
2.3 both seasons	8%
2.4 any season during 1991-92	16%
3. total area leased in for a major part of 1991-92 (mha.)	10.37
4. total area leased in for at least a major part of a season (mha.)	10.67
5. p.c. share in area leased in for at least a major part of a season of area leased in for	
5.1 <i>kharif</i> only	19
5.2 <i>rabi</i> only	3
5.3 both seasons	78

land for a major part of a season were also considered for generating the estimates for the individual seasons.

3.8.4 Table 9 shows that about 14.91 million operational holdings, i.e. about 16% of the 91-92 holdings, had leased in land for at least a major part of a season during the agricultural year. It also shows that respectively about 7% and 1% of the 91-92 holdings had leased in land only for *kharif* and *rabi* seasons.

3.8.5 Some the land leased in for a season were not held in the operational holdings for a major part of the agricultural year. Such leased-in area was not accounted for while working out the operated area for the agricultural year to avoid double counting. It seen that total area leased in

for at least a major part of a season was about 10.67 mha., while that for a major part of the year was 10.37 mha. (97%). Of the area leased in for at least a major part of a season, about 78% was held for major parts of both the seasons and 19% and 3% was held for major parts of *kharif* and *rabi* seasons respectively.

3.8.6 The leasing of land for a season will henceforth be termed as 'seasonal' leasing and that for both the seasons as 'yearly' leasing.

Seasonal tenancy and size of holding

3.9.1 Table 10 gives the percentage distribution of tenanted land (area leased-in seasonally or yearly) by duration of leasing for each size category of holdings. The data indicate that the larger the holding, the higher is the percentage of yearly leased-in area. Larger proportions of leased-in land of the smaller holdings were found to be on seasonal lease in *kharif*. For the seasonal leasing in *rabi*, the table shows no clear pattern.

3.9.2 What appears to be most significant about seasonal tenancy is the higher seasonal leasing than yearly leasing in smaller holdings. Table 11 shows that while average area leased in by a tenant holding was over 1 hectare for yearly leases, it was 0.3 and 0.4 hectare for seasonal leases in *kharif* and *rabi* seasons respectively. However, both seasonal and yearly leasing show a rising relation between average area leased in and the size of holding.

3.9.3 Inter-state variation in seasonal

Table 10

Extent of seasonal tenancy by size category of holdings

category of holding	p.c. distribution of 91-92 leased-in area by duration of lease for

all	19	3	78	100

tenancy: Table 12 reveals a wide variation in incidence of seasonal tenancy over the country. This table gives percentage of 91-92 holdings reporting seasonal and yearly leasing in of land for the 15 major states.

3.9.4 Seasonal tenancy in kharif was found to most prevalent in Orissa (15%), followed by Karnataka (13%), Assam (13%) and Andhra Pradesh (10%). The percentage of tenant holdings was high in Orissa and Andhra Pradesh. In the other two states, seasonal contracts for kharif were the prevalent form of tenancy. Generally, the incidence of holdings reporting seasonal tenancy in rabi was low in all the states. Only in West Bengal and Uttar Pradesh, the percentage of holdings reporting seasonal lease in rabi was perceptibly higher than the national level estimate.

Table 11

large	0.93	2.52	17.55	7.83
all	0.28	0.42	1.09	0.70

3.9.5 Punjab and Haryana, the two agriculturally most advanced states in the country, were among the states with very low incidence of seasonal leasing both in kharif and rabi.

3.9.6 The percentage distribution of leased-in operated area under seasonal and yearly leasing for 15 major states is given in Table 13. In this table, the total area leased in for at least a major part of a season (henceforth called "area leased in during the year") is distributed by season in kharif and rabi seasons and yearly leasing. The distribution for individual states reveals a wide variation in area leased in for different periods of the agricultural year.

3.9.7 In Punjab and Haryana, almost the entire area leased-in during the year was held under yearly lease. Over 99% of the leased-in area during the year in Punjab and about 98% in Haryana was leased.

for the year. Area under seasonal leasing was virtually absent in these two states. In Uttar Pradesh (92%), Kerala (91%) and Bihar (90%) too the percentage leased-in area under yearly leasing was considerably high.

3.9.8 Seasonal leasing in kharif had a large share in the leased-in area during the year in Karnataka (52%) and Orissa

(50%). Share of area under seasonal leasing in rabi was exceptionally high in Assam (17%) as compared with the other states, though the percentage of holdings reporting seasonal leasing in rabi was, in fact, much lower in Assam than in the country as a whole.

4R/4U	Percentage of operated area by type of possession for broad size class of operational holdings	114	227
5R/5U	Percentage of operational holdings reporting area leased in by terms of lease for broad size class of operational holdings	125	228
6R/6U	Percentage distribution of area leased in by terms of lease for broad size class of operational holdings	133	228
7R	Percentage distribution of area leased in by period of lease for broad size class of operational holdings	141	
8R	Percentage distribution of area operated by type of land use for broad size class of operational holdings	149	
9R	Percentage distribution of operational holdings by main use of the holding for broad size class of operational holdings	160	
10R/10U	Percentage distribution of operational holdings reporting different types of agricultural production for broad size class of operational holdings	171	229
11 R	Percentage distribuiton of net irrigated area by source of irrigation for broad size class of operational holdings	182	

Table (1R) : Number of operational holdings and area operated by size class of operational holdings-pooled and subsample estimates

Part II

Results on Seasonal Variation in the Operation of Land Holding in India, 1991-92 — NSS 48th Round (Jan.-Dec. 1992)

List Detailed Tables

table no.	title	page
1	Estimated number of operational holdings and area operated during kharif only, rabi only and both kharif and rabi by size class of operational holding	233
2	Percentage distribution of operational holdings and area operated and number of parcels per holding by size-class of operational holding for each season	250
3	Percentage distribution of holdings operated in kharif and/or rabi by size-class of operational holdings in kharif and rabi	283
4	Percentage distribution of operational holdings by main use of the holding by broad size-class of operational holdings for each season	300
5	Percentage distribution of operational holdings reporting different types of agricultural production during kharif and rabi for broad size-class of operational holding	333
6	Percentage distribution of area operated by type of land use for broad size-class of operational holding for each season	366
7	Percentage operational holdings reporting leased-in area and percentage distribution of leased-in area during different seasons for broad size-class of operational holding	399
8	Percentage distribution of net irrigated area by major source of irrigation for broad size class of operational holding for each season	408

Table (1) : Estimated number of operational holdings and area operated during kharif only, rabi only and both kharif and rabi by size-class of operational holding

भारत में प्रचालन भू-जोत 1991-92 : प्रमुख विशेषताएं -48 वाँ दौर -(जन-दिस 1992)

निष्कर्षों का सार

1.0 रा.प्र.सर्वे. का जोत भूमि सर्वेक्षण देश में भूमि के स्वामित्व तथा कृषि प्रचालित भूमि संबंधी जानकारी का एक प्रमुख स्रोत है। यह भूमि जोत के दो मूल आबंटनों अर्थात् परिवारों के स्वामित्व वाली भूमि तथा प्रचालन भूमि के आबंटन के अनुमान मुहैया कराता है। भूमि के परिवारिक स्वामित्व संबंधी जानकारी 48 वें दौर (सर्वेक्षण अंक संख्या 65 अक्टूबर-दिसम्बर 1995) के भूमि तथा पशुधन जोत सर्वेक्षण संबंधी प्रथम रिपोर्ट में प्रस्तुत की गई थी। वर्तमान अंक में तकनीकी आर्थिक युनिटों जिन्हें प्रचालनात्मक जोत कहते हैं, से संबंधित सर्वेक्षण परिणाम दर्शाता है।

1.1 इस अध्याय में प्रचालनात्मक जोतों संबंधी जांच में प्रमुख निष्कर्षों का सार दिया गया है। शुरू में चर्चा से पिछले तीन दशकों से भी अधिक प्रचालनात्मक जोतों के बदलते हुए पहलुओं का पता लगता है। कांश्तकारी का स्वरूप तथा सीमा उस समय के कुछ ब्यौरों में प्रस्तुत है। अंत में, भूमि जोतों के उपयोग संबंधी सर्वेक्षण परिणामों को उनमें से कार्यन्वित कृषि प्रचालानों के संदर्भ में विवेचना की गई है।

1.1 प्रचालनात्मक जोतों के अनुमान : समस्त भारत

1.1 प्रचालनात्मक जोत को एक ताकनीय-आर्थिक यूनिट के रूप में कृषि उत्पादन हेतु पूर्णतः और अंशतः प्रयुक्त तथा एक अकेले व्यक्ति, या शीर्षक आकार या अवस्थिति संबंध के बिना अन्यो की सहायता से (नर्देशित या प्रवधित) प्रचालित है।

1.1.2 एक परिवारिक स्वामित्व जोत से भिन्न तकनीक-आर्थिक एकक या तो खरीदा, हुआ या पट्टे के रूप में कब्जा किए हुए सीधे कब्जे के अधीन प्रचालनात्मक जोत के रूप में घेरी गई सभी भूमि जो एक परिवार द्वारा स्वामित्व के भूमि के क्षेत्र तक सीमित है। कृषि प्रचालन जैसे भूमि, कृषि उपस्कर तथा मशीनरी, भारवाही पशुओं आदि हेतु अधिक या कम पृथक तकनीकी स्रोतों वाली एक एकक को यदि संदर्भवधि के दौरान इसके कब्जे के अधीन भूमि के किसी भाग पर कुछ कृषि उत्पादन हुआ था तो इसे प्रचालनात्मक जोत माना जाएगा। मौजूदा सर्वेक्षण में कृषि वर्ष 1991.92 को संदर्भवधि के रूप में प्रयुक्त किया गया था।

1.1.3 प्रचालनात्मक जोतों के अंतर्गत आने वाले क्षेत्र को प्रचालित क्षेत्र कहते हैं। मौजूदा सर्वेक्षण हेतु कृषि वर्ष 1991.92 के प्रमुख भाग हेतु प्रचालनात्मक जोत के कब्जे वाले क्षेत्र को इसके प्रचालित क्षेत्र के रूप में लिया गया है।

1.1.4 सारणी 1 दर्शाती है कि कृषि वर्ष 1991-92 के दौरान देश में 103 मिलियन प्रचालनात्मक जोत थी। इनमें से 90 प्रतिशत से अधिक ग्रामीण क्षेत्र निवासियों द्वारा प्रचालित थे। कुल प्रचालित क्षेत्र का अनुमानित क्षेत्र 131 मिलियन हेक्टेयर था, जिसमें से केवल 5 प्रतिशत शहरी निवासियों द्वारा प्रचालित था। प्रचालनात्मक जोत का औसत आकार ग्रामीण क्षेत्र हेतु 1.34 हेक्टेयर तथा शहरी क्षेत्र हेतु 0.61 हेक्टेयर था।

सारणी 1

प्रचालनात्मक जोतों तथा प्रचालित क्षेत्रों की संख्या :1991-92

मद	भारत	
	ग्रामीण	शहरी
1. प्रचालनात्मक जोतों की संख्या (मिलियन में)	93.45 (90.2%)	10.11 (9.8%)
2. प्रचालित क्षेत्र (मिलियन हेक्टेयर)	125.2% 95.3%	6.15 4.7%
3. प्रति जोत प्रचालित क्षेत्र (हेक्टेयर)	1.34	0.61
4. जोतों की संख्या (मिलि)	116.34	41.80

मद संख्या 4 के अनुमान रा.प्र.सर्वे.
रिपोर्ट सं0 399 से लिए गए हैं।

प्रचालनात्मक जोतों में प्रवृत्तियां:

1.2.1 प्रचालनात्मक जोतों संबंधी रा.प्र.सर्वे सं द्वारा इसके 8 वें दौर (1954-55) से नियमित रूप से संगृहीत किए जाते हैं। अभी तक मौजूदा को शामिल करके पांच भूमि जोत सर्वेक्षण आयोजित किए जा चुके हैं। ये सर्वेक्षण परिणाम समय की एक लम्बी अवधि की आकड़ा अंकमाला की एक उपयोगी अंकमाला बनाते हैं। विभिन्न दौरों के अनुमान 8 वें दौर को छोड़ कर जो परिभाषाओं में भिन्नता के कारण अन्य दौरों सहित पूर्णतः तुलनीय नहीं है तथा इसलिए इसे आगामी विचार - विमर्श से निकाल दिया है, समग्र तुलनीय है।

1.2.2 प्रचालनात्मक जोतों की परिभाषा में "प्रचालित भूमि" की व्याप्ति के संबंध में 17 वां दौर (1960-61) से केवल आंशिक परिवर्तन हुआ है। 37 वें दौर (1981-82) में प्रचालित भूमि की परिभाषा को बिखरे हुए आधार पर अधिक्रमण की हुई भूमि कब्जा की हुई को शामिल करके बढ़ाया गया था जिसे इस रिपोर्ट में "अन्य प्रकार से अधिकार में" के रूप में उल्लिखित है। सारणी 2 से यह देखा गया है कि प्रचालित क्षेत्र में ऐसी भूमि का प्रतिशत भाग 1981-82 तथा 1991-92 में क्रमशः

केवल 1.7 प्रतिशत तथा 1.0 प्रतिशत था। इसका अर्थ है कि 17 वें दौर से चार सर्वेक्षों के परिणाम परिभाषा में परिवर्तन के बावजूद तुलनीय रहे।

1.2.3 तथापि संदर्भावधि के संबंध में तुलना की एक समस्या है। 17 वां, 26 वां और 48 वें दौर में एक स्वीकृत प्रचालनात्मक जोत हेतु प्रयुक्त कसौटी "संदर्भ कृषि वर्ष के दौरान कोई कृषि उत्पादन" था। इन दौरों के अनुमान समग्र कृषि हेतु संगृहीत आंकड़ों से सीधे प्राप्त किए गए थे। इसके विपरीत, 37 वें दौर के अनुमान संदर्भ कृषि वर्ष की प्रमुख फसल मौसल हेतु संगृहीत आंकड़ों के आधार पर तैयार किए गए थे। जिसका खाते में नहीं का अर्थ है हाथ में ली गई जोतें जो गौण फसल मौसम के दौरान केवल कृषि उत्पादन ही चलते हैं।

सारणी 2

रा.प्र. सर्वे की भूमि जोत सर्वेक्षण से ग्रामीण भारत में प्रचालन जोतों की निश्चित प्रमुख विशेषताओं के अनुमान: 1960-61 से 1991-92:

मद	1960-61 (17 वां)	1971-71 (26 वां)	1981-82 (37 वां)	1991-92 (48 वां)
1. प्रचालन भू जोतों की संख्या (मिलियन में)	50.77	57.07	71.04	93.45
1.1 प्रतिशत वृद्धि	..	12.4%	24.5%	31.5%
2. प्रचालित क्षेत्र (मि. हेक्ट)	133.84	125.68	118.57	125.10
3. औसत प्रचालित क्षेत्र (हेक्ट)	2.63	2.20	1.67	1.34
4. संयुक्त जोतों का प्रतिशत	4.22	0.60	0.62	0.08
5. प्रति जोत खण्डों की संख्या	5.7	n.a.	4.0	2.7
6 अंशतः या पूर्णतः सहित प्रचालन जोतों का प्रतिशत	94.86	95.64	92.91	96.15
(क) स्व:भूमि				
(ख) पट्टे की भूमि	23.52	24.68	15.20	10.99
7. प्रचालित क्षेत्र में प्रति व्यक्तिभाग				
(क) स्व:क्षेत्र	89.30	89.43	91.08	90.44
(ख) पट्टे की भूमि	10.70	10.57	7.18	8.52
(ग) अन्य प्रकार से अधिकार में क्षेत्र	1.74	1.04
8. प्रतिदर्श गांवों की संख्या	3.486	4.547	3.692	4.231
9. प्रतिदर्श परिवारों की संख्या	53.138	35.947	29.089	33.289

1. अनुमान के स्रोत 17 वां, 26 वां तथा 37 वां दौर, रा. प्र. सर्वे रिपोर्ट सं. 144,
2. मद 7 हेतु अनुमान केवल अधिकार के प्रकार से सूचित क्षेत्र पर आधारित हैं।

1.1.4 सारणी 2.1 रा.प्र. सर्वे के पिछले चार भूमि जोत सर्वेक्षणों में प्रचालन भू-जोतों से संबंधित मूल अनुमान दर्शाती है। प्रतिदर्शों के (दोनों स्तरों पर) जिन पर अनुमान आधारित हैं, भी सारणी में दर्शाए गए हैं।

1.1.5 प्रचालन भू-जोतों की संख्या में वृद्धि प्रचालन भू-जोतों की संख्या 1960.61 में 51 मिलीयन से 1991.92 में 93 मिलियन दूत गति से बढ़ी है। इसके अतिरिक्त तीन दशकों के दौरान प्रचालन भू-जोतों की वृद्धि दर में भी प्रगति हुई है। बढ़ती जनसंख्या तथा गैर-कृषि क्षेत्र में इस अतिरिक्त कार्यबल के समायोजन में असमर्थता के कारण प्रचालन भू-जोतों के अक्षुण्ण उप खण्ड होने लगे। परिणामस्वरूप प्रचालन में जोतों की संख्या तीन दशकों की अवधि में लगभग 80 प्रतिशत तक बढ़ी है। संयुक्त जोतों की भी प्रभावाशाली लुप्तताप ने भी प्रचालन भू-जोतों की संख्या में वृद्धि में कुछ अंशदान किया है। 1960.61 में 4 प्रतिशत से भी अधिक संयुक्त जोत अर्थात् दो या इससे अधिक सदस्यों द्वारा संयुक्त एक अति अल्प भाग, 0.6 प्रतिशत हो गया था, 1991-92 के दौरान लगभग सभी प्रचालन भू-जोतों का प्रबंध एकल परिवारों द्वारा किया गया था तथा उनमें से केवल एक नगव्य समानुपात ही एक से अधिक परिवारों द्वारा संयुक्त रूप से प्रचालित किया गया था।

1.1.6 प्रचालित क्षेत्र में परिवर्तन:

1960-61 में कुल प्रचालित क्षेत्र के 133 मि.हे. क्षेत्र में से 1970-71 में 126 मि.हे. क्षेत्र निकाल दिया गया था। 26 वां दौर और मौजूदा सर्वेक्षण (125 एम.ए.) से प्रचालित क्षेत्र में पिछले से दशकों में थोड़े से परिवर्तन का पता चलता है। तथापि 37 वें दौर के अनुमान 48 वें दौर से विशिष्ट तौर पर कुछ कम हैं। यह इस तथ्य के बावजूद है कि 48 वें दौर में पंजाब और जम्मू कश्मीर की अपरिहार्य स्थितियों के कारण शामिल न किए के बावजूद है (देखें अध्याय। पैरा 1.3.1.2) फिल भी सम्पूर्ण प्रतिदर्श योजनाबद्ध व्याप्ति के अनुशार 37 वें दौर में सर्वेक्षित हैं। वस्तुतः सारणी 3.1 में 70 वें के दशक में दर्शाए गए अनुमानों से 37 वें दौर में क्षेत्र के आकलन में दर्शाई अवधि से अधिक संदर्भ अवधि प्रचालित क्षेत्र में वास्तविकता से अधिक है। इसे ध्यान में रखते हुए यह निष्कर्ष निकाला जा सकता है कि ग्रामीण क्षेत्र में कुल प्रचालित क्षेत्र पर्याप्त रूप से 70 वें और 80 वें दशक के दौरान अपरिवर्तित रहा है।

1.1.7 जोतों के आकार में गिरावट: सीमित भूमि आधार सहित प्रचालन भू-जोतों की संख्या में क्रमिक रूप से ठोस वृद्धि हुई है। सारणी 3.1 में दिए प्रति जोत प्रचालित औसत क्षेत्र के अनुमान में स्पष्ट दर्शाया है। तीन दशकों से अधिक जोतों के औसत आकार में 1960-61 में 1.63 हे. से 1991-92 में 1.34 हे. कमी है।

1.1.8 प्रति जोत खण्डों की संख्या। भारतीय कृषि में बिखरी जोत विकट समस्या है। तीन भूमि जोत सर्वेक्षण से प्राप्त अनुमान दर्शाते हैं कि प्रति जोत खण्डों की संख्या 1960-61 में 5.7 से 1991-92 में 1.7 तक कम हो गई है।

1.1.9 प्रचालन भू-जोतों के अनुसार भूमि की काश्तकारी की प्रवृत्तियां: 19960-61 से प्रारंभ करके 30 वर्षों के दौरान प्रचालन भू-जोतों के स्तर के भूमि कार्यकाल स्थिति में परिवर्तन हो गया है। सारणी 3.1 से पता चलता है कि आंशिक और पूर्णत स्वामित्व वाले प्रचालित क्षेत्र जोतों का प्रतिशत 1960-61 में 82 प्रतिशत से 1991-92 में 96 प्रतिशत हो गया जब कि पट्टे पर आंशिक या पूर्णतः वाली प्रचालन भू-जोतों ;इसके बाद जिन्हें काश्तकारी जोत कहा गया है उसी अवधि के दौरान तेजी से कम हो कर 24 प्रतिशत से 11 प्रतिशत हो गई। यह प्रवृत्ति काश्तकारी से स्व कृषि से लगातार बदलने की दर्शाती है। आजादी के बाद की अवधि में भारतीयकृषि की एक विशेषता हो गई है।

1.1.10 पट्टे क्षेत्र के प्रतिशत भाग के संदर्भ में काश्तकारी की सीमा में (देखें सारणी 2 की मद 7) 1960-61 से 1981-82 के दौरान की यही प्रवृत्ति दिखती है। प्रचालित क्षेत्र में पट्टे की भूमि का भाग 1960-61 में 11 प्रतिशत से 1981-82 में 7 प्रतिशत हो गया तथापि इस भाग में पिछले दशक के बाद गिरावट के स्थान पर वृद्धि हुई ।

यह पाया गया है कि कुल प्रचालित क्षेत्र में से उपान्तिक जोतों का भाग 1960-61 में 7% से 1991-92 में बढ़कर 16 प्रतिशत हो गया है। छोटी जोतों के भाग में चाहे धीमें गति से सही वृद्धि दर्ज की हैं, अर्थ-मध्यम जोतों में भी कुछ वृद्धि हुई है। दूसरी और बड़ी जोतों के भाग में काफी कमी 1970-71 में 29 प्रतिशत से 1991-92 में 15 प्रतिशत देखी गई।

सारणी 3.6

प्रचालित क्षेत्र के केंद्रीकरण में प्रवृत्ति

भारत		ग्रामीण			
प्रचालन भू-जोतों का समूह	प्रतिशत	प्रचालित	क्षेत्र	में प्रतिशत भाग	
	61-62 (17वां)	71-72 (26वां)	81-82 (37वां)	91-92 (48वां)	
सबसे निचला	30:	4.6	4.4	1.1	3.0
सबसे निचला	60:	18.3	18.6	14.9	14.1
सबसे ऊपरी	10:	46.0	45.0	47.1	47.6
सबसे ऊपरी	5:	30.5	30.6	32.4	33.6

17 वां, और 37 वें दौर के अनुमानों के स्रोत: रा.प्र. सर्वे रिपोर्ट सं. 144 व सर्वेक्षण अंक 16 (जन०-मार्च 82) और सर्वेक्षण अंक -36 जु० 88 है

यह पाया गया है कि कुल प्रचालित क्षेत्र में से उपान्तिक जोतों का भाग 1960-61 में 7% से 1991-92 में बढ़कर 16 प्रतिशत हो गया है। छोटी जोतों के भाग में चाहे धीमें गति से सही वृद्धि दर्ज की है, अर्थ-मध्यम जोतों में भी कुछ वृद्धि हुई है। दूसरी और बड़ी जोतों के भाग में काफी कमी 1970-71 में 29 प्रतिशत से 1991-92 में 15 प्रतिशत देखी गई।

1.3.6 लोरेज कर्व: सारणी 3 चार सर्वेक्षणों हेतु जोरेज कर्व के चुनिदां क्रम-सूचकों अर्थात् प्रचालन भू-जोतों के चुनिदा क्रमसूचाक समूहों के समाहारित प्रचालित क्षेत्र में संचित प्रतिशत भाग पृथक-पृथक दर्शाती है। सारणी में प्रस्तुत क्रम सूचकों का मूल्य वास्तविक अनुमानों पर आधारित जोरेज कर्व के बाराबर परिवर्तन से पढ़ा गया था।

सारणी 4

गिनी के गुणांक में प्रवृत्ति

वर्ष	गिनी के गुणांक	
	प्रचालन भू-जोतें	स्वामित्व भू-जोते
1960-61	0.583	0.731
1970-71	0.586	0.709
1981-82	0.629	0.712
1991-92	0.641	0.710

अनुमानों के स्रोत :

17 वां दौर : रा.प्र. सर्वे रिपोर्ट सं. 144

26 वां दौर : सर्वेक्षण अंक स. 16 (जन.-मार्च 82)

37 वां दौर : सर्वेक्षण अंक स. 33 (अक्टू.-87) व अंक सं० 36 (जु.88)

1991-92 हेतु स्वामित्व जोतों हेतु गिनी के गुणांक: से लिया गया है।

सर्वेक्षण अंक सं. - 65 (अक्टू.-दिसम्बर 95)

1.3.7 बढ़ती हुई असमानता: सारणी 3 से पता चलाता है कि कुल प्रचालित क्षेत्र में प्रचालन जोतों का सबसे निचला 60 प्रतिशत भाग तीन दशकों के बाद तीव्र गति से घटा है। इसके मुकाबले दोनों सबसे ऊपरी जोतों के समूह का भाग इस अवधि के दौरान हालांकि कम गति से 10 प्रतिशत तथा 5 प्रतिशत तक बढ़ा है। मौजूदा सर्वेक्षण दर्शाता है कि सबसे निचले का 60 प्रतिशत का भाग 1960-61 और 1991-92 के बीच समग्र लगभग 4 प्रतिशत बिन्दुओं का इसी अवधि से अधिक में 5 प्रतिशत से अधिक का भाग (3 प्रतिशत भाग) से बढ़ कर गिना गया। अतः यह देखा गया है कि प्रचालन

भू-जोतों के वितरण में असमानता काफी ऊँची है। पिछले तीन दशकों के दौरान बढ़ा है।

गिनी का गुणांक-असमानता का मापन: प्रचालन भू-जोतों के वितरण आकार में समग्र असमानता के गिनी के गुणांक की 1980-61, 1970-71, 1981-82 और 1991-92

की गणना सरणी 4 में प्रस्तुत की है।

गिनी की गुणांक प्रवृत्ति यह पृष्टि करती है कि प्रचालन भू-जोतों में असमानता 1960-61 से दूत गति से बढ़ रही है सारणी परिवारिक स्वामित्व जोतों के गिनी गुणांक भी देती है। यह देखा गया है कि पिछले दो दशकों के दौरान जबकि स्वामित्व का सकेन्द्रण काफी हद तक अपरिवर्तित रहा है प्रचालन भू-जोतों 1971-71 में 0.589 से 1991-92 में 0.641 दूत गति से बढ़ रही हैं, वस्तुतः समग्र फोनीमेनन जिसे पर इस अध्याय के 3.7 भाग में बाद में विचार-विमर्श कियाद्ध के अनुकूल है। सीमांतक और छोटी जोतों से भूमि के पट्टे में बड़ी और अर्थ-मध्यम की प्रवृत्ति बढ़ रही है।

भारत में जोत क्षेत्रों का संचालन के मौसमी परिवर्तन 1991-92 — रा०प्र०सर्वे० 48 वॉ दौर (जन-दिसम्बर 1992)

निष्कर्षों का सार

0.1 रा.प्र.सर्वे का जोत तथा पशूघन सर्वेक्षण देश में भूमि के स्वामित्व तथा कृषि की गई भूमि के संबंध में सूचना के प्रमुख स्त्रों मेंसे एक है। यह जोत भूमि के दो मूलभूत वितरणों के अनुमान प्रदान करता है अर्थात् परिवारों के अनुसार स्वामित्व वाली भूमि का वितरण तथा उसमें कोई गई भूमि के अनुमान। इसके अतिरिक्त जोत क्षेत्रों के संचालन में मौसम संबंधी अनुमान भी 37 वें दौर (1982) के एल. एच. एल. तथा मौजूदा सर्वेक्षण से तैयार किए गए हैं। मौजूदा रिपोर्ट 1991-92 की कृषि ऋतुओं खरीक तथा रबी के लिए जोत क्षेत्रों के संचालन से संबंधित सर्वेक्षण परिणाम प्रस्तुत करती है। टिप्पणी में दिए गए सभी परिणाम केवल ग्रामीण क्षेत्र से संबंधित हैं।

0.2 जोत क्षेत्रों के संचालन की मौसमी जांच के मुख्य निष्कर्षों का सार इस टिप्पणी में दिया गया है। आरम्भ में, चर्चा जोत क्षेत्रों के संचालन के मौसमी पहलुओं तथा उनकी विस्तृत विशेषताओं से सम्बन्धित है। रयह मौजूदा दौर के जोतों के मौसमी संचालन के अनुमानों की पूर्ववर्ती दौर के अनुमानों से तुलना करता है। जोत क्षेत्रों के मौसमी संचालन के स्वास्थ्य तथा गहनता की कुछ विस्तार से जांच की गई है। अन्त में मौसमी अवधि में पहे की सीमा की इसकी घटना के सम्बन्ध में तथा कुल पट्टे पर दी गई जोत भूमि में इसके अंश की चर्चा की गई है।

खरीक तथा रबी में प्रचालनात्मक जोतों की विशेषताएं

1.1 प्रचालन जोत, कृषि उत्पादन के लिए पूर्ण रूप से अथवा आंशिक रूप से प्रयोग की गई टेक्नो-आर्थिक इकाई है और यह केवल एक व्यक्ति द्वारा अथवा अन्यो की सहायाता से बिना शीर्षक, आकार तथा अवस्थिति पर ध्यान दिए बिना निर्देशित या व्यवस्थितद्ध बोया जाता है।

1.2 परिवारिक स्वामित्व जोत से भिन्न,

जो परिवार के स्वामित्व क्षेत्र तक सीमित है, भूमि के किसी भाग पर कुछ कृषि उत्पादन किया गया।

1.3 सामान्यतः फसल ऋतुओं की पहचान सामान्य वर्ष के दौरान फसल की कटाई के महिनो के अनुसार की जाती है। मौजूदा रिपोर्ट में खरीफ और रबी ऋतुओं की परिभाषा इसी प्रकार से की गई है। खरीफ में प्रारम्भिक (अर्थात् पतझड़) और बाद (अर्थात् शीतकाल) खरीफ दोनों ऋतुएँ तथा रबी में दोनों रबी और जायद रबी (अर्थात् ग्रीष्म) ऋतुएं शामिल हैं।

1.4 प्रचालन जोत के अन्तर्गत क्षेत्र को इसका बोय गया क्षेत्र कहा जाता है। मौजूदा सर्वेक्षण के लिए, सन्दर्भ अवधि के मुख्य भाग के लिए प्रचालन जोत के क्षेत्र को इसका बोया गया क्षेत्र समझा

गया। इस प्रकार, जबकि कृषि वर्ष 1991-92 के प्रचालन जोत के बोये गए क्षेत्र की कृषि वर्ष के मुख्य भाग के लिए बोया गया क्षेत्र, मौसम के प्रचालन जोत के बोये गए क्षेत्र को ऋतु के मुख्य भाग के लिए बोया गया क्षेत्र समझा गया।

1.5 विभिन्न ऋतुओं में जोतों की संख्या: सारणी। दर्शाती है कि कृषि वर्ष 1991-92 में ग्रामीण भारत में 93 मिलियन से अधिक प्रचालन जोत थे। इनमें से लगभग 89 और 81 मिलियन क्रमशः खरीफ और रबी के दौरान बोये गए। स्पष्ट रूप से कुछेक जोत क्षेत्र केवल एक ऋतु के दौरान बोए गए। कृषि वर्ष 1991-92 के दौरान बोए गए जोतों में से, लगभग 12% मात्र खरीफ ऋतु में ही बोए गए और अन्य 4% मात्र रबी ऋतु में बोयेजायें। शेष 77 मिलियन प्रचालन जोत खरीफ तथा रबी दोनों ऋतुओं के दौरान बोए गए।

1.6 विभिन्न ऋतुओं में बोया गया क्षेत्र: कृषि वर्ष 1991-92 में बोया गये कुल क्षेत्र का अनुमान 125 मिलियन हेक्टेयर लगाया गया था। क्षेत्र का लगभग 11% और 88% क्रमशः खरीफ और रबी में बोया गया। कृषि वर्ष 1991-92 (आगे से "91-92" जोत कहा गया) की प्रचालन जोत का औसत आकार 1.3 हेक्टेयर था। यद्यपि, रबी जोत का औसत आकार वही था जो 91-92 जोत का था, खरीफ जोत का आकार मामूली सा अधिक था।

1.7 बोया गया निबल क्षेत्र: जोत के अनुसार बाया गया क्षेत्र जोत द्वारा शामिल क्षेत्र का प्रतिनिधित्व करता है। इस प्रकार, ऋतु के लिए बोया गया क्षेत्र ऋतु के दौरान वास्तविक प्रचालन का मापन आवश्यक रूप से नहीं दर्शाता है। इसके बजाए, निबल बोया गया क्षेत्र एक बेहतर संकेतक है क्योंकि यह जोत के फसल-उत्पादन कार्यकलाप के लिए भूमि प्रयोग की सीमा दर्शाता है और फसल उत्पादन अधिकांश जोतों का मुख्य प्रयोग है। 1991-92 की जोतों का लगभग 78% और 69% क्रमशः खरीफ और रबी ऋतुओं में फसल उत्पादन के लिए मुख्यतः प्रयोग किया गया था।

1.8 1991-92 में बोए गए क्षेत्र (अर्थात् 91-92 जोतों का कुल बोया गया क्षेत्र खरीफ में फसल उत्पादन पर प्रयोग किया गया, रबी ऋतु के लिए इस प्रकार प्रयोग किया गया केवल 50% था। जबकि कृषि वर्ष के लिए बोया गया क्षेत्र बोए गए क्षेत्र का 93% था, यह स्पष्ट है कि खरीफ तथा रबी ऋतुओं के दौरान वार्षिक निबल बोए गए क्षेत्र का लगभग क्रमशः 13% और 46% बिना खेती किए छोड़ दिया गया था।

सारणी 2

ऋतु के लिए एकत्र किए गए आंकड़ों से तैयार किए गए मौसमी अनुमानों तथा कृषि वर्ष के आंकड़ों से पुनः तैयार किए गए मौसमी आंकड़ों के बीच तुलना

राज्य	ऋतु	जोतों की अनुमातित संख्या (मिलियन)		बोया गया अनुमानित क्षेत्र (मिलियन हेक्टेयर)	
		कृषि वर्ष आंकड़ों से	ऋतु के आंकड़ों से	कृषि वर्ष आंकड़ों से	ऋतु के आंकड़ों से
कर्नाटक	खरीफ	4	5	8	8
	रबी	3	3	7	4
मध्य प्रदेश	खरीफ	7	8	17	16
	रबी	6	6	15	11
महाराष्ट्र	खरीफ	7	7	15	15
	रबी	5	5	13	8
राजस्थान	खरीफ	5	5	16	16
	रबी	5	5	15	12
भारत	खरीफ	89	92	124	120
	रबी	81	81	110	85

जोतों का मौसमी प्रचालन 1991-92

2.1 आंकड़ों की सीमा: अब तक चर्चित मौसमी अनुमान कृषि वर्ष 1991-92 के लिए एकत्रित आंकड़ों पर आधारित हैं। खरीफ जोतों के लिए आंकड़ों प्रतिदर्श परिवारों में प्रथम दौर के दौरान एकत्रित किए गए थे और रबी जोतों और 1991-92 जोतों के आंकड़ों दूसरे दौर के दौरान एकत्र किए गए थे। खरीफ तथा रबी जोतों के अनुमान अलग-अलग ऋतुओं से तथा कृषि आंकड़ों से पुनः तैयार किए गए मौसमी आंकड़ों से तैयार किए गए थे। खरीफ तथा रबी जोतों के अनुमान अलग-अलग ऋतुओं से तथा कृषि आंकड़ों से पुनः तैयार किए गए मौसमी आंकड़ों से तैयार किए गए थे। जोतों की संख्या तथा बोए गए क्षेत्र के अनुमानों के दोनों सेट सारणी 1 में प्रस्तुत किए गए हैं।

2.2 यह देखा गया है कि मौसमी आंकड़ों से प्राप्त किए गए अनुमान तथा कृषि वर्ष आंकड़ों से तैयार किए गए अनुमान जोतों की संख्या के संबंध में बहुत अधिक भिन्न नहीं है। खरीफ मौसम के लिए देखा गया अन्तर मुख्यतः प्रतिदर्श उतार-चढ़ाव के कारण है चूंकि प्रथम दौर अनुसूचियों से

तैयार किए गए अनुमान तथा दूसरी दौर अनुसूचियों से तैयार किए गए अनुमान वास्तव में एक ही प्रतिदर्श पर आधारित नहीं है। पहले दौर के दौरान सर्वेक्षित कुछेक परिवार दूसरे दौर के दौरान सर्वेक्षण के लिए उपलब्ध नहीं थे और इस प्रकार इनका प्रतिस्थापन किया गया था अथवा प्रतिदर्श से उन्हें बिल्कुल हटा दिया गया था।

2.3 जोतों की संख्या के अनुमानों से भिन्न, बोये गए क्षेत्र के अनुमान पर्याप्त रूप से भिन्न थे, विशेष रूप से रबी मौसम के लिए। मौसमी ऑकड़ों पर आधारित बोए गए क्षेत्र के अनुमान कृषि वर्ष ऑकड़ों पर आधारित ऑकड़ों का 97% है और रबी मौसम के लिए केवल 77% है। रबी मौसम के लिए बोए गए क्षेत्र के दो राष्ट्रीय स्तर के अनुमानों के बीच अन्तर लगभग 65% था तथा चार राज्यों की गणना सारणी 2 में दी गई है। इस प्रकार यह प्रतीत होता है कि बोए गए क्षेत्र की रिपोर्ट कम दी गई थी विशेष रूप से कुछेक मामलों में रबी मौसमी के लिए।

2.4 पार्ट - II में दिए गए विस्तृत सर्वेक्षण परिणाम कृषि वर्ष तथा अलग-अलग ऋतुओं के ऑकड़ों पर आधारित हैं। पार्ट-II की सारणी। और 7 पूर्णतया कृषि वर्ष ऑकड़ों पर आधारित है। सारणी 3 में कृषि वर्ष ऑकड़ों से प्राप्त की गई 1991-92 जोतों को खरीफ तथा रबी मौसमों में उनके आकारों के अनुसार वर्गीकृत किया गया है। पार्ट-II की शेष सारणियां जोतों के आकार वर्गीकरण हेतु अलग-अलग ऋतुओं के ऑकड़ों का प्रयोग करते हैं। ऋतु के ऑकड़ों पर आधारित क्षेत्र अनुमान पार्ट-II की केवल दी तालिकाओं में दिए गए हैं। ये दो तालिकाएं, अर्थात् तालिका 6 और तालिका 8 भूमि प्रयोग के अनुसार बोए गए क्षेत्र का वितरण तथा सिंचाई के स्रोतों के अनुसार सिंचित किए गए क्षेत्र का विवरण देता है। दो ऋतुओं बोये निबल गए क्षेत्र (बोए गए क्षेत्र का संघटक) के ऑकड़े उपरिलिखित गलत रिपोर्टिंग के प्रकार से मुक्त है।

2.5 अतः अंत में, विभिन्न क्षेत्र अनुमानों संबंधी चर्चा निबल बोए गए क्षेत्र को छोड़कर कृषि वर्ष ऑकड़ों पर आधारित क्षेत्र अनुमानों तक सीमित है।

सिंचित क्षेत्र के लिए भी चार्चा अलग-अलग ऋतुओं के ऑकड़ों पर आधारित है तथा सिंचित बोए गए क्षेत्र का एक भाग है।

1980 के दौरान परिवर्तन

3.1 प्रचालन जोतों संबंधी ऑकड़ों इसके आठवें दौर (1954-55) से रा.प्र.सर्वे. संगठन द्वारा नियमित रूप से एकत्र किए जा रहे हैं। अब तक, मौजूदा सर्वेक्षण सहित पाँच जोत क्षेत्र सर्वेक्षण आयोजित किए जा चुके हैं। मौजूदा सर्वेक्षण के अतिरिक्त, दो ऋतुओं के लिए अलग-अलग अनुमान केवल 37 वें दौर (1981-82) से ही उपलब्ध हैं।

3.2 तथापि, कृषि वर्षों से संबंधित अनुमानों के लिए सन्दर्भ अवधि के संबंध में तुलना करने के समस्या हैं। मौजूदा सर्वेक्षण में, कृषि के लिए प्रचालन जोत की पहचान के लिए प्रयोग किया गया मपदंड "सन्दर्भित कृषि वर्ष के दौरान कोई कृषि उत्पादन" था। इस प्रकार कृषि वर्ष के लिए

एकत्रित आँकड़ों से मौजूदा दौर के अनुमान सीधे प्राप्त किए गए थे। इसके विपरीत, 37 वें दौर के अनुमान सन्दर्भित कृषि वर्ष की प्रमुख फसल के लिए एकत्रित आँकड़ों के आधार पर तैयार किए गए थे जिसका अर्थ है जोतों की गणना नहीं की गई थी जिसे लघु फसल ऋतु के दौरान केवल कृषि उत्पादन किया था। यह इसलिए है, क्योंकि कृषि वर्ष 1980-81 के दौरान बोए गए जोतों की अनुमानित संख्या प्रत्येक ऋतु के दौरान बोए गए जोतों के संख्या से कम था।

3.3 प्रचालन जोतों की संख्या में वृद्धि: वार्षिक जोतों की संख्या में 1981-82 में 71 मिलियन से 1991-92 में 93 मिलियन की वृद्धि हुई है। इस अवधि के दौरान, खरीफ तथा रबी दोनों जोतों में तीव्र वृद्धि हुई है। पन्तु मौजूदा सर्वेक्षण के अनुमानों से स्पष्ट रूप से पता लगा है वह है कि रबी ऋतु की अपेक्षा खरीफ ऋतु में जोतों की बड़ी संख्या बोई जाती है। यह 37 वें दौर सर्वेक्षण द्वारा प्रकाशित नहीं किया गया था। 37 वें दौर के खरीफ तथा रबी जोतों की संख्या के अनुमान एक समान थे (73 मिलियन)।

3.4 बोए गए क्षेत्र में परिवर्तन: खरीफ तथा रबी दोनों ऋतुओं का बोया गया क्षेत्र दशक के दौरान पर्याप्त रूप से बढ़ गया। खरीफ जोतों का क्षेत्रफल 121 से 124 मि. हे. तथा रबी जोतों का क्षेत्रफल 105 से 110 मि.हे. बढ़ गया। यह इस तथ्य के बावजूद भी है कि जम्मू तथा कश्मीर का बहुत सा भाग और पंजाब का एक बहुत बड़ा जिला अपरिहार्य परिस्थितियों के कारण शामिल नहीं किया जा सका, जबकि सम्पूर्ण प्रतिदर्श को नियोजित व्यक्ति के अनुसार 37 वें दौर में सर्वेक्षित किया गया था।

3.5 दशक के दौरान, कृषि वर्ष के दौरान, बोए जाने के रूप में वर्गीकृत जोतों का औसत आकार 1.7 से 1.3 हेक्टेयर गिर गया है। तुलना में, प्रत्येक ऋतु के दौरान बोए गए जोतों का औसत आकार धीरे-धीरे से गिरता गया। गिरावट में भिन्न-भिन्न दरें आंशिक रूप से दो दौरों में प्रयोग की गई विभिन्न परिभाषाओं के कारण है,

3.6 फसल उत्पादन की जोते: से स्पष्ट है कि फसल उत्पादन के लिए मुख्यतः प्रयोग किए गए कृषि वर्ष जोतों के प्रतिशत में गिरावट हुई है। यह विशेषता अलग-अलग ऋतुओं के लिए भी देखी गई है। प्रतिशत में गिरावट खरीफ के ऋतु के लिए सबसे अधिक है। कृषि में बढ़ते हुए परिवर्तनों से फसल उत्पादन की अपेक्षा अधिक से अधिक जोतों का प्रयोग मुख्यतः अन्य कार्यकलापों के लिए किया जा रहा है।

मौसमी प्रचालन की गहनता

4.1 क्षेत्र में कृषि प्रचालन की एक बड़ा भाग एक विशेष विशेष ऋतु के दौरान किया जाता है। इस संबंध में व्यापक क्षेत्रीय भिन्नता भी है। कृषि प्रचालन के मौसमी स्वरूप 4 1991-92 की प्रत्येक आकार क्षेणी के लिए केवल विशेष ऋतु के दौरान बोई गई जोतों का अनुमानित प्रतिशत दर्शाता है। इस सारणी के लिए, 1991-92 के दौरान बोए गए जोतों को उनकी प्रचालन अवधि से अनुसार तीन समूहों अर्थात् "केवल खरीफ", तथा "खरीफ तथा रबी दोनों" में वर्गीकृत किया गया था।

4.2 अब आगे से "खरीफ-केवल जोत" और "रबी-केवल जोत" शब्दावली का प्रयोग क्रमशः खरीफ तथा रबी ऋतुओं के दौरान बोई गई जोतों के लिए किया गया था। केवल एक ऋतुओं के दौरान बोई गई जोतों के लिए किया गया था। केवल एक ऋतु में बोई गई जोत को "मौसमी-प्रचालन जोत" कहा जाएगा और दोनों ऋतुओं के दौरान बोई गई जाने वाली जोतों को "बारहमासी जोत" कहा जाएगा।

4.3 पार्ट-II में दी गई विस्तृत सारणियों में, सारणियों के प्रस्तुतीकरण के लिए दो भिन्न-भिन्न आकार के वर्गीकरण प्रयोग किए गए हैं।

एक पद्धत आकार श्रेणियों पर आधारित दूसरा आठ विस्तृत श्रेणियों पर आधारित। बाद वाले को "विस्तृत आकार श्रेणी" के रूप में और दूसरा "साधारण आकार श्रेणियों" के रूप में सन्दर्भित किया गया है। यहाँ विभिन्न आकार की जोतों में मौसमी प्रचालन की गहनता का अध्ययन करने के लिए "विस्तृत आकार श्रेणियों" को छः आकार समूहों के रूप में मिला दिया गया है जिन का भारत की कृषि गणना में प्रयोग किया गया है। छः आकार समूह इस प्रकार हैं:-

महत्वहीन	-	0.002 हेक्टर से कम
सीमान्त	-	0.01-1.00 हेक्टर
लघु	-	1.01-2.00 हेक्टर
अर्धमध्यम	-	2.01-4.00
मध्यम	-	4.01-10.00 हेक्टर
बड़ा	-	10.00 से ज्यादा

इन आकार समूहों को अब आगे से प्रचालन जोत की श्रेणियां कहा जाएगा।

4.4 मौसमी तौर पर बोई गई जोतों की संख्या: सारणी 3 में दी गई प्रचालन की उनकी अवधि के अनुसार वार्षिक प्रचालन जोतों का प्रतिशत वितरण से पता चलता है कि 13: से अधिक जोत केवल खरीफ जोतें थी और अन्य 4: केवल रबी जोत थी। केवल खरीफ जोतों का सबसे बड़ा प्रतिशत कम पाया गया और अर्ध-मध्यम श्रेणियां और उनके बीच (1991-92 जोतों का लगभग 30: था। "शून्य" के अतिरिक्त, जिसमें से 44: केवल रबी ऋतु में बोया गया था, सीमान्त श्रेणी का रबी ऋतु में बोए जाने वाले जोतों की अपेक्षाकृत अधिक प्रतिशत (4%) था। शेष श्रेणियों में, केवल रबी जोते 91-92 जोतों का 1: से कम था। सारणी 3 का अगला कालम दर्शाता है कि दूसरी ओर दोनों ऋतुओं के दौरान बोई गई जोतों का प्रतिशत बढ़ता है जैसे-जैसे एक जोत सीमान्त श्रेणी से बड़ी श्रेणी की ओर गुजरती है। "शून्य" श्रेणी में यह शेष श्रेणियों की अपेक्षा अधिक छोटा है।

4.5 मौसमी तौर पर बोया गया क्षेत्र: सारणी-3 प्रचालन ऋतु के अनुसार बोए गए क्षेत्र का प्रतिशत वितरण भी दर्शाती है। केवल खरीफ ऋतु के दौरान बाया गया क्षेत्र कृषि वर्ष के दौरान

बोए गए कुल क्षेत्र का लगभग 12% था। दूसरी ओर, वर्ष के दौरान बोए गए कुल क्षेत्र के 1% से कम केवल रबी ऋतु में बोया गया था। क्षेत्र का शेष 87% दोनों ऋतुओं के दौरान बोया गया था।

4.6 ऋतु के अनुसार बोए गए क्षेत्र के वितरण में जोतों की आकार श्रेणी में

बहुत अधिक अन्तर था। भिन्नता पैटर्न की अधिकांशतः वही विशेषताएं थी जैसी कि जोतों की संख्या की थी। जोतों की संख्या का पैटर्न तथा बोए गए क्षेत्र के बीच अन्तर केवल यह है कि खरीफ ऋतु के दौरान जोतों की आकार श्रेणी जितनी अधिक है, बोए गए क्षेत्र का प्रतिशत उतना ही कम है।

प्रचालन जोत की पहचान के लिए तीन भिन्न-भिन्न अवधियां थी अर्थात् कृषि वर्ष 1991-92 की दो बसंत ऋतुएं और रबी और कृषि वर्ष 1991-92/खरीक तथा रबी कृषि ऋतुओं से सम्बन्धित अनुमानों की तदनुसूची अवधियां हैं।

जोतों का मौसमी प्रचालन 1991-92

सारणी - 2

सारणी - 1: कृषि वर्ष 1991-92 की खरीक तथा रबी ऋतुओं में प्रचालन जोत

भारत	13.13	3.84	83.03	11.81	0.71	87.48

ऑकड़े अपेक्षाकृत हैरान करने वाले हैं तथा इन इपर विशेषज्ञों द्वारा चर्चा की आवश्यकता है।

4.9 दूसरे छोर पर, उड़ीसा के जोतों का केवल 56% दानों ऋतुओं के दौरान बोया गया था। ऐसी जोतों का अनुपात आंध्र प्रदेश (69%) में कम था तथा कर्नाटक में (74%) था। वार्षिक तौर पर बोए गए क्षेत्र का उड़ीसा में केवल 57% और आंध्र प्रदेश में 75% दोनों ऋतुओं के दौरान बोया गया

था। तथापि, कर्नाटक में 91-92 के प्रचालित क्षेत्र के 84: से अधिक दोनों ऋतुओं में बोया गया था। इन तीन राज्यों के अतिरिक्त, गुजरात ने भी बारहमासी प्रचालन की कम डिग्री-दोनों ऋतुओं के दौरान वार्षिक जोतों के लगभग 76: और वार्षिक प्रचालित क्षेत्र का 73: बोया गया था।

4.10 अधिकांशतः सभी प्रमुख राज्यों में मौसमी तौर पर प्रचालित जोतों के खरीफ ऋतु के दौरान बोया गया था। केवल पंजाब, हरियाणा, उत्तर प्रदेश और केरल में, केवल रबी जोतों की अनुपात केवल खरीफ जोतों की अपेक्षाकृत अधिक था। तथापि, केरल और हरियाणा में, केवल खरीफ जोतों की अपेक्षाकृत अधिक था। तथापि, केरल और हरियाणा में, केवल खरीफ जोतों के प्रचालित क्षेत्र का अनुपात केवल रबी जोतों की अपेक्षाकृत अधिक था।

4.11 बारहमासी जोतों के निम्न अनुपातों सहित राज्यों उड़ीसा, आंध्र प्रदेश कर्नाटक और गुजरात के मौसमी प्रचालित जोत क्षेत्र का अधिकांशतः केवल खरीफ जोतें थी। इन राज्यों में मौसमी रूप से प्रचालित जो क्षेत्रों को प्रायः समग्र रूप से खरीफ ऋतु में बोया गया था।

जोतों का मौसमी प्रयोग

5.1 निम्नलिखित चर्चा प्रचालन जोतो के विभिन्न प्रयोगों से सम्बन्धित है-भूमि प्रयोग गहनताए सिंचाई का प्रयोग और जोतो के प्रमुख कृषि कार्यकालाप के सन्दर्भ में। निबल बोया गया क्षेत्र

5.1 चूंकि, बोया गया क्षेत्र प्रचालन जोत के क्षेत्र का प्रतिनिधित्व करता है न कि कृषि उत्पादन में लगाया गया वास्तविक क्षेत्र, खरीफ और रबी जोतों के क्षेत्र और 1991-92 में बोयो गए क्षेत्र का प्रतिशत वास्तविक रूप से मौसमी प्रचालन की गहनता का संकेत देता है। इसके बजाए, 91-92 जोतों के कुल बोए गए क्षेत्र के संबंध में निबल बोए गए क्षेत्र का प्रतिशत फसल उत्पादन के लिए बोए गए क्षेत्र के प्रयोग की डिग्री दर्शाता है।

5.3 सारणी 5, 15 प्रमुख राज्यों को लिए 91-92 में प्रचालित क्षेत्र के सिंचित तथा गैर-सिंचित क्षेत्र के लिए अलग-अलग निबल प्रचालित क्षेत्र का प्रतिशत दर्शाती है। यद्यपि एक ऋतु के लिए निबल प्रचालित क्षेत्र के अनुमान मौसमी आंकड़ों पर आधारित हैं, वे मौसमी आंकड़ों पर आधारित बोए गए क्षेत्र के अनुमानों के कम रिपोर्ट दिए जाने से प्रभावित नहीं है। इस प्रकार सारणी में दिए गए प्रतिशत तक पहुंचने के लिए, प्रत्येक ऋतु के लिए निबल प्रचालित क्षेत्र के समाहार अनुमान परिशिष्ट सारणी 5 से निकाले गए हैं। 91-92 जोतो का कुल प्रचालित क्षेत्र के अनुमान परिशिष्ट सारणी। से लिए गए थे, जो कृषि वर्ष के आंकड़ों पर आधारित है।

सारणी 6

15 प्रमुख राज्यों के लिए खरीफ तथा रबी ऋतुओं में भूमि प्रयोग गहनता तथा सिंचाई

राज्य	ऋतु	91-92 बोए गए क्षेत्र के संबंध में एन. एस. ए. का प्रतिशत			एन. एस. ए. के संबंध में सिंचित भूमि की प्रतिशतता
		असिंचित	सिंचित	जोड़

	रबी	17	32	50	65

5.4 निवल बोए क्षेत्र में मौसमी भिन्नता: निवल बोये गये क्षेत्र में ऋतुओं के दौरान भिन्नता है। सारणी 5 स्पष्ट करती है कि राष्ट्रीय स्तर पर, खरीफ में निवल बोया गया क्षेत्र 91-92 में बोए गए क्षेत्र अधिकांश मौसमी भिन्नता खरीफ तथा असिंचित निवल बोये गये क्षेत्र का प्रतिशत दर्शाता है कि 91-92 में बोए गए क्षेत्र के लगभग एक तिहाई की दोनों ऋतुओं में सिंचाई की गई थी। असिंचित निवल बोए गए क्षेत्र का प्रतिशत खरीफ तथा रबी में क्रमशः 47% और 17% था।

5.5 अन्तर-राज्यीय भिन्नता: निवल बोए क्षेत्र और सिंचाई के साथ की गई खेती के क्षेत्र में भिन्नता की पद्धति देश में भिन्न-भिन्न है। सारणी 5 दर्शाती है कि यद्यपि कृषि तौर पर तीन विकसित राज्यों अर्थात् पंजाब, हरियाण और उत्तर प्रदेश में 91-92 में बोए गए क्षेत्र के संबंध में निवल बोए गए क्षेत्र की प्रतिशतता में बहुत कम मौसमी भिन्नता थी, यह केरल को छोड़कर सभी पूर्वी और दक्षिणी राज्यों में बहुत अधिक थी। गुजरात की निवल बोए गए क्षेत्र में उच्च मौसमी भिन्नता थी चुकि इस निवल बोए गए क्षेत्र का बड़ा भाग बारहमासी बागवानी तथा फलोधानों के अन्तर्गत है, निवल बोए गए क्षेत्र में कम ही मौसमी भिन्नता थी।

सिंचाई का प्रयोग

6.1 भूमि प्रयोग गहनता तथा सिंचाई: निवल बोए गए क्षेत्र में कम मौसमी भिन्नता सहित सभी राज्यों की दोनों ऋतुओं 91-92 में बोए गए क्षेत्र के संबंध में निवल बोए गए क्षेत्र की प्रतिशतता के सन्दर्भ में माँपी गई, उच्च भूमि प्रयोग गहनता थी। केरल को छोड़कर, इन सभी राज्यों में सिंचित भूमि का बहुत बड़ा अनुपात था। पंजाब में, 91-92 में बोए गए क्षेत्र के 87% से अधिक की खेती दोनों ऋतुओं में सिंचाई के साथ की गई थी। यह हरियाणा और उत्तर प्रदेश में खरीफ तथा रबी दोनों में 65% अथवा इससे अधिक था।

6.2 दूसरी ओर, रबी में निवल बोए गए क्षेत्र का कम अनुपात रखने वाले सभी राज्यों में बोए गए क्षेत्र का केवल छोटा सा अनुपात उक्त मौसम में सिंचित किया गया था। असम में, जिसका एक बड़ा भाग द्वारा नियमित रूप से प्रभावित रहता है, रबी मौसम में बोए गए क्षेत्र का केवल 37% और सिंचित क्षेत्र का केवल 1% बोया गया था। निवल बोए गए क्षेत्र के अधीन इसके बोए गए क्षेत्र का केवल 22% सहित उड़ीसा में उक्त मौसम के केवल 11% सिंचाई किया गया क्षेत्र था। तीन दक्षिणी राज्यों केरल को छोड़कर निवल बोए गए क्षेत्र और सिंचाई किए गए क्षेत्र का प्रतिशत राष्ट्रीय स्तर अनुमानों की अपेक्षाकृत बहुत ही कम था।

6.3 वास्तव में, सारणी 5 में दिये गये निवल बोए गए क्षेत्र के संबंध में सिंचित क्षेत्र के प्रतिश ने स्पष्ट दर्शाया है कि फसल खेती रबी ऋतु में सिंचाई की उपलब्धता पर बहुत अधिक निर्भर करती है। देश के रबी निवल बोए गए क्षेत्र का, खरीफ निवल बोए गए क्षेत्र 42% के मुकाबले में लगभग 65% सिंचित भूमि थी। कृषि तौर से विकसित तीन राज्यों पंजाब, हरियाणा और गुजरात में रबी के निवल बोए गए क्षेत्र के 80% से अधिक की सिंचाई की गई थी। पश्चिम बंगाल और गुजरात में, यद्यपि रबी

में भूमि का अपेक्षाकृत कम अनुपात बोया गया, रबी ऋतु में निवल बोए गए क्षेत्र के संबंध में सिंचित क्षेत्र का प्रतिशत लगभग 85% था। निचली भूमि प्रयोग गहनता सहित राज्यों में रबी सिंचित निवल बोए गए क्षेत्र का प्रतिशत बहुत अधिक था। असम और केरल के अतिरिक्त, केवल कर्नाटक में रबी के इसके निवल बोए गए क्षेत्र के 45% से कम की सिंचाई की गई थी।

6.4 सिंचाई स्रोत: सारणी 6 प्रतिशत के स्रोतों के अनुसार खरीफ और रबी ऋतुओं में सिंचित बोए गए क्षेत्र का प्रतिशत देती है। सारणी के लिए प्रयोग किए गए प्रचलित क्षेत्र के अनुमान अलग-अलग ऋतुओं के लिए एकत्रित आँकड़ों पर आधारित है।

जोतों को मौसमी प्रचालन

1991-92

सारणी 6

15 प्रमुख राज्यों के लिए खरीफ तथा रबी ऋतुओं में विभिन्न स्रोतों द्वारा सिंचाई

	रबी	8	1	14	6	2	1	32

6.5 यह देखा गया है कि कृषि वर्ष 1991-92 में देश में बोये गए क्षेत्र का 34% तथा 32% क्रमशः खरीफ तथा रबी ऋतुओं के दौरान सिंचित किया गया था। सिंचित क्षेत्र के प्रतिशत वितरण से अनुमान लगाते हुए, ट्यूब बेल तथा नहर दोनों ऋतुओं में सिंचाई के दो सबसे महत्वपूर्ण स्रोत पाए गए। नहर द्वारा सिंचित क्षेत्र के प्रतिशत में ऋतुओं के दौरान मामूली भिन्नता थी। दूसरी ओर, खरीफ ऋतु की अपेक्षा रबी ऋतु में ट्यूबवैलों द्वारा अधिक बड़ा क्षेत्र सिंचित किया गया था। शैष स्रोतों उदाहरणार्थ टैंक तथा कुएं के लिए, अनुमान रबी की अपेक्षा खरीफ में कुछ थोड़ा सा अधिक प्रयोग का संकेत देते हैं।

6.6 सिंचाई के स्रोतों में अन्तर-राज्यीय भिन्नता: सिंचाई के उच्च स्तर सहित सभी तीनों राज्यों में अर्थात् पंजाब, हरियाणा और उत्तर प्रदेश में, दोनों ऋतुओं के लिए सिंचित क्षेत्र के प्रमुख भाग में

ट्यूबवैल के प्रमुख स्रोत की रिपोर्ट दी गई थी। बिहार ने भी दोनों ऋतुओं के दौरान ट्यूबवैल द्वारा क्षेत्र के बोए जाने के उच्च प्रतिशत की रिपोर्ट दी थी। सधारण तौर पर इन राज्यों में दो ऋतुओं के दौरान ट्यूबवैल द्वारा सिंचाई किए गए क्षेत्र के बीच बहुत कम अन्तर था। केवल उत्तर प्रदेश में खरीफ की अपेक्षा रबी में ट्यूबवैल द्वारा सिंचित एन.एस. की काफी बड़े अनुपात की रिपोर्ट दी थी।

6.7 पंजाब, हरियाण और उत्तर प्रदेश में दोनों ऋतुओं में नहर सिंचाई का दूसरा महत्वपूर्ण स्रोत था। विशेष रूप से हरियाणा में, यह सिंचाई का एक महत्वपूर्ण स्रोत था जबकि ट्यूब वैल रबी ऋतु में। नहर आंध्र प्रदेश, तमिलनाडु और पश्चिम बंगाल में भी सिंचाई की महत्वपूर्ण स्रोत थी। परन्तु, हरियाण से भिन्न, इन सभी राज्यों में इसने रबी की अपेक्षा खरीफ में बड़े की सिंचाई की।

6.8 सिंचाई के अन्य स्रोतों में, कुओं ने तमिलानाडु, गुजरात और महाराष्ट्र में पर्याप्त भाग शामिल किया। इन सभी राज्यों में, और विशेष रूप से तमिलानाडु में, इससे रबी की अपेक्षा खरीफ में बड़े क्षेत्र की सिंचाई की।

सारणी 7

खरीफ और रबी में मुख्य प्रयोग के अनुसार 91-92 की जोतों का प्रतिशत वितरण

मुख्य प्रयोग	खरीफ	रबी	कृषि वर्ष
फसल उत्पादन	76	60	79
बागान तथा फलोद्यान	4	4	4
पशुधन	11	14	8
कुक्कट पालन	1	1	1
अन्य	6	7	7
न बोया गया क्षेत्र	1	13	.
सभी	100	100	100

खरीफ तथा रबी में मुख्य प्रयोग

7.1 कृषि वर्ष 1991-92 की खरीफ तथा रबी ऋतुओं के दौरान उनके द्वारा किए मुख्य कृषि कार्यकलाप के अनुसार प्रचालन जोतों को अलग से वर्गीकृत किया गया था। विभिन्न कृषि कार्यकलापों में, अधिकतम आमदनी उत्पन्न करने वाले कार्यकलाप को जोत के मुख्य प्रयोग के रूप में समझा गया था। इस प्रयोजन के लिए प्रयुक्त कृषि कार्यकालापो की सूची थी :-

(i) फसल उत्पादन

(क) सब्जियाँ

(ख) सब्जियों की छोड़कर

(ii) बागवानी तथा फलोद्यानों से उत्पादन

(iii) बागान से उत्पादन:

(क) वांनिकी

(ख) अन्य

(iv) पशुधन

(v) कुक्कट पालन

(vi) मत्स्यपालन

(vii) अन्य

7.2 विस्तृत मुख्य प्रयोग वर्गीकरण के अनुसार जोतों का वितरण पार्ट-II की सारणी -4 में खरीफ तथा रबी ऋतुओं के लिए अलग-अलग दिया गया है। मौजूदा चर्चा के प्रयोजन के लिए, कुछेक मुख्य प्रयोग श्रेणियों में पड़ने वाले जोतों के प्रतिशत को इक्ठठा किया गया है और इन्हें बनाई गई विस्तृत श्रेणियों में दर्शाया गया है। विस्तृत श्रेणियों के ब्यौरे नीचे दिए गए हैं।

विस्तृत श्रेणी	संघटक विस्तृत श्रेणियां
1. फसल उत्पादन	(i) सब्जियाँ (ii) सब्जियाँ को छोड़कर
2. बागवानी तथा फलोधन	(i) बागवानी फसलों/फलोधानों से उत्पादन वांनिकी तथा अन्य दोनों से
3. पशुधन	पशुधन
4. कुक्कट पालन	कुक्कट पालन
5. अन्य	(i) मत्स्य पालन (ii) अन्य

7.3 सारणी-8 खरीफ तथा रबी ऋतुओं में उनके मुख्य प्रयोग के अनुसार 91-92 प्रचालन जोतो का प्रतिशत वितरण देता है। यह देखा गया है कि राष्ट्रीय स्तर पर, 91-92 जोतों का 76% खरीफ में फसल उत्पादन के लिए मुख्यतः प्रयोग किया गया था, केवल 60% रबी में प्रयोग किया गया था। फलोधानों और बागवानी से हो रही इनकी आय के मुख्य भाग सहित 91-92 जोतों का प्रतिशत वर्ष के दौरान वही रहा। इस संबंध में कुक्कट पालन कार्यकलाप के संबंध में कोई मौसमी परिवर्तन नहीं था। दूसरी तरफ, पशुधन के मुख्यतः प्रयोग किए गए 91-92 जोतों का अनुपात दोनों ऋतुओं में भिन्न-भिन्न था। यह खरीफ (11%) के मुकाबले में रबी (14%) में जोतों के काफी बड़े अनुपात का मुख्य प्रयोग था।

काश्तकरी में मौसमी भिन्नता

8.1 वह भाग 91-92 प्रचालन जोतों की विभिन्न आकार क्षेत्रियों के अनुसार रबी तथा खरीफ ऋतुओं में काश्तकारी तथा पट्टे पर दी गई भूमि की घटनोओं से संबंधित है। दोनों ऋतुओं में

कशतकारी की अन्तरराज्यीय तुलना भी इस भाग में शामिल है।

8.2 दूसरों को भूमि के टुकड़े के प्रयोग का अधिकार या तो किराए पर अथवा निःशुल्क स्वामी द्वारा बिना नाम परिवर्तन किए देने को पट्टे वाली भूमि कहा गया है। ऐसे पट्टे का समझौता, चाहे मौखिक रूप से किया गया हो, को रा.प्र.सर्वे.सं. के भूमि जोत सर्वेक्षणों में पट्टा संविदा के रूप में समझा गया है। दूसरी और, पैतृक काशतकारी और 30 वर्षी या इससे अधिक लम्बे समय के पट्टे को भूमि पट्टे के रूप में नहीं समझा गया है बल्कि उन्हें भू-स्वामित्व के रूप में समझा गया है। परन्तु घेरी गई निजी भूमि के स्वामित्व को पट्टे पर भूमि (किराए से मुक्त) समझा गया है।

8.3 राष्ट्रीय स्तर अनुमान: सारणी 8 काशतकारी की सीमा में मौसमी भिन्नता को दर्शाते हुए अनुमान प्रस्तुत करती है। जैसा कि पैरा 1.4.1 में उल्लिखित किया गया है, प्रचालन जोतों संबंधी आँकड़े दो कृषि ऋतुओं और कृषि वर्ष के लिए अलग-अलग एकत्र किए गए थे। कृषि वर्ष के प्रमुख भाग के लिए भूमि के पट्टे से संबंधित अनुमानों के अतिरिक्त, ऋतु के मुख्य भाग के लिए भूमि के पट्टे के अनुमानों को अलग-अलग ऋतुओं के लिए अनुमान तैयार करने पर भी विचार किया गया।

सारणी 8

1991-92 में मौसमी काशतकारी के कुछ महत्वपूर्ण संकेतक

मद	अनुमान
1. काशतकार जोतों की संख्या (मि.)	14.91
2. के लिए भूमि पट्टे की रिपोर्ट देते हुए जोतो की प्रतिशत	
2.1 केवल रबी	7%
2.2 केवल रबी	1%
2.3 दोनों ऋतुएं	8%
2.4 1991-92 के दौरान अन्य मौसम	16%
3. 1991-92 के मुख्य भाग के लिए पट्टे वाली भूमि का कुल क्षेत्र (मि.हेक्ट.)	10.37
4. मौसम के कम से कम प्रमुख भाग के लिए पट्टे वाली भूमि का कुछ क्षेत्र	10.67
5. के लिए पट्टे वाली भूमि के संबंध में मौसम के मुख्य भाग के लिए पट्टे पर दी गई भूमि के क्षेत्रफल में प्रतिशत अंश	
5.1 केवल खरीफ	19
5.2 केवल रबी	3
5.3 दोनों ऋतुएं	78

8.4 सारणी 8 दर्शाती है कि लगभग 14.91 मिलियन प्रचालन जोते अर्थात् 91-92 जोतों का लगभग 16% कृषि वर्ष के दौरान मौसम के कम से मुख्य भाग के लिए पट्टे पर दी गई थी। इससे यह भी प्रकट होता है कि 92-92 जोतों का लगभग 7% और 1% केवल खरीफ तथा रबी ऋतुओं के लिए पट्टे पर भूमि दी गई थी।

8.5 एम मौसम के लिए पट्टे पर दी गई कुछ भूमि की कृषि वर्ष के मुख्य भाग के लिए प्रचालन जोतों में नहीं रखा गया था। ऐसे पट्टे पर दिए गए क्षेत्र की दोहरी गणना से बचने के लिए कृषि वर्ष के लिए बोए गए क्षेत्र की गणना करते समय गणना नहीं की गई थी। यह देखा गया है कि मौसम के बड़े भाग के लिए कम से कम पट्टे पर दी गई भूमि 10.67 मि.हे. थी, जबकि वर्ष के मुख्य भाग के लिए 10.37 (मि.हेक्टेयर) (97%) थी। एक मौसम के कम से कम प्रमुख भाग के लिए पट्टे पर दिए गए क्षेत्र का, लगभग 78% दोनों ऋतुओं के प्रमुख भाग के लिए रोका गया था और 19% और 3% क्रमशः खरीफ तथा रबी मौसमों के मुख्य भागों के लिए रोका गया था।

8.6 एक मौसम के लिए भूमि के पट्टे को आगे से, "मौसमी" कहा जाएगा और दोनों ऋतुओं के लिए पट्टे वाली भूमि का "वार्षिक" पट्टे पर कहा जाएगा।

मौसमी काश्तकारी और जोतों का आकार

9.1 सारणी 9 जोतों की प्रत्येक आकार की श्रेणी के लिए पट्टे की अवधि के अनुसार काश्तकारी वाली भूमि (मौसमी अथवा वार्षिक तौर पर दी गई पट्टे वाली भूमि) का प्रतिशत वितरण दर्शाती है। आंकड़ों दर्शाते हैं कि जितनी बड़ी जोत है उतनी ही बड़ी वार्षिक तौर पर दिए गए क्षेत्र का प्रतिशत है। छोटी जोतों का पट्टे पर दी गई भूमि का बड़ा अनुपात खरीफ में मौसमी पट्टे पर देखा गया। रबी में मौसमी पट्टी के लिए सारणी पैटर्न नहीं दर्शाती है।

9.2 मौसमी काश्तकारी में अन्तर-राज्यीय भिन्नता: सारणी 11 देश में मौसमी काश्तकारी की घटनाओं में व्यापक भिन्नता स्पष्ट करती है। यह सारणी 15 प्रमुख राज्यों के लिए भूमि की मौसमी तथा वार्षिक तथा लीजिंग की रिपोर्ट दे रहे 91-92 जोतों का प्रतिशत दर्शाता है।

9.3 खरीफ में मौसमी काश्तकारी उड़ीसा में (15%) सर्वाधिक था, इसके पश्चात् कर्नाटक (13%), असम (13%) और आंध्र प्रदेश (10%)। काश्तकारी वाली जोतें उड़ीसा और आंध्र प्रदेश में अधिक थीं। अन्य दो राज्यों में, खरीफ के लिए मौसमी ठैके कारताकारी का प्रचलित रूप थे। साधारणताया, रबी में मौसमी कारताकारी की रिपोर्ट दे रहे जोतों की घटना सभी राज्यों में कम थी। केवल पश्चिम बंगाल और उत्तर प्रदेश में, रबी में मौसमी लीज की रिपोर्ट दे रहे जोतों का प्रतिशत राष्ट्रीय स्तर अनुमानों से काफी अधिक था।

सारणी 9

जोतों की आकार श्रेणी के अनुसार मौसमी काश्तकारी की सीमा

जोतों की	के लिए लीज की अवधि के अनुसार पट्टे पर दिए गए श्रेणी 91-92 का प्रतिशत वितरण			
	केवल	केवल	दोनों	अन्य
खरीफ रबी ऋतुएं ऋतु				
सीमान्त	26	6	69	100
लघु	22	2	77	100
अर्ध-मध्यम	24	3	73	100
मध्यम	19	4	76	100
बड़ा	6	4	90	100
सभी	19	3	78	100

सारणी 10

जोतों की आकार श्रेणी के अनुसार पट्टेदारी (लीजिंग) की रिपोर्ट दे रहे प्रति जोत में औसत क्षेत्र पट्टा

जोतों की	के लिए जोतों की रिपोर्ट दे रहे प्रति औसत पट्टा				
	श्रेणी	केवल	केवल	दोनों	अन्य
खरीफ	रबी	ऋतुएं मौसम			
सीमान्त	0.07	0.10	0.16		0.12
लघु	0.28	0.19	0.87		0.58
अर्ध-मध्यम	0.51	0.67	1.89		1.12
मध्यम	0.80	1.91	3.34		2.05
बड़ा	0.93	2.52	17.55		7.83
सभी	0.28	0.42	1.09		0.70

9.4 पंजाब और हरियाणा देश में कृषि के रूप में सबसे आधुनिक ऐसे दो राज्य थे, जहां खरीफ और रबी दोनों में मौसमी पट्टेदारी सभी राज्यों के मुकाबले बहुत कम थी।

9.5 15 प्रमुख राज्यों के लिए मौसमी और वार्षिक पट्टेदारी के अन्तर्गत पट्टे पर दिए गए क्षेत्र का प्रतिशत वितरण सारणी 12 में दिया गया है। इस सारणी में, मौसम के कम के कम प्रमुख भाग के लिए कुल लीज क्षेत्र (आगे से वर्ष के दौरान लीज क्षेत्र का गया) खरीफ और रबी ऋतुओं और वार्षिक लीजिंग वितरित किया गया है। अलग-अलग राज्यों के लिए वितरण से कृषि वर्ष की विभिन्न अवधियों के लिए लीज क्षेत्र में विस्तृत भिन्नता का पता चलता है।

सारणी 11

15 प्रमुख राज्यों के लिए मौसमी काश्तकारी की घटनाएं

राज्य नाम	के लिए लीज क्षेत्र की रिपोर्ट दे रहे जोतों का प्रतिशत			
	केवल खरीफ	केवल रबी	दोनों ऋतुएं	अन्य ऋतु
आंध्र प्रदेश	10	1	9	21
असम	13	0	5	18
बिहार	4	0	6	10
गुजरात	8	0	2	10
हरियाण	4	1	15	19
कर्नाटक	14	1	2	16
केरल	1	1	4	7
मध्य प्रदेश	9	1	5	14
महाराष्ट्र	9	0	3	12
उड़ीसा	15	1	7	22
पंजाब	3	1	15	18
राजस्थान	6	1	5	12
तमिलनाडु	9	1	12	21
उत्तर प्रदेश	2	2	14	17
पश्चिम बंगाल	9	2	11	22
भारत	7	1	8	16

9.6 पंजाब और हरियाण में, वर्ष के दौरान पट्टे पर दिए गए लगभग सम्पूर्ण क्षेत्र को वार्षिक लीज के अन्तर्गत रोका गया। वर्ष के दौरान पंजाब में पट्टे की भूमि अनुपस्थित था। उत्तर प्रदेश (92%), केरल (91%) और बिहार (90%) में वार्षिक लीज के अन्तर्गत पट्टे पर दिया गया क्षेत्र का बहुत अधिक था।

9.7 खरीफ में मौसमी पट्टे की भूमि का वर्ष के दौरान कर्नाटक (52%) और उड़ीसा (50%) अंश था। रबी में मौसमी लीजिंग के अन्तर्गत क्षेत्र का अंश असम में (17%) अन्य राज्यों की तुलना में विशेष रूप से अधिक था जब कि वास्तव में सम्पूर्ण देश के मुकाबले में रबी में असम का मौसमी लीजिंग कम था।

सारणी 12

15 प्रमुख राज्यों के लिए मौसमी कशतकारी की सीमा

राज्य	पट्टे की अवधि के अनुसार 91-92 पट्टे के क्षेत्र का प्रतिशत वितरण			
	केवल खरीफ	केवल रबी	दोनों ऋतुएं	अन्य ऋतु
आंध्र प्रदेश	32	1	67	100
असम	20	17	63	100
बिहार	8	2	90	100
गुजरात	14	0	86	100
हरियाण	2	0	98	100
कर्नाटक	52	1	46	100
केरल	5	4	91	100
मध्य प्रदेश	32	2	66	100
महाराष्ट्र	29	7	64	100
उड़ीसा	50	4	46	100
पंजाब	0	0	100	100
राजस्थान	9	8	83	100
तमिलनाडु	19	5	76	100
उत्तर प्रदेश	2	5	92	100
पश्चिम बंगाल	22	3	75	100
भारत	19	3	75	100
