## HIGHLIGHTS OF NEXT ISSUE :

1. The sample design of NSS 44th round (July 1988—June 1989) survey on building construction : a post-survey appraisal by K. Sankaranarayanan
2. Role of NSSO in collection of statistics on housing by K. Sankaranarayanan
3. Report on construction (All India) :  
NSS 35th round (July 1980—June 1981)
4. Report on pilot survey on construction in urban areas :  
NSS 35th round (July 1980—June 1981)
5. Report on building construction :  
NSS 44th round (July 1988—June 1989)
6. Report on housing condition :  
NSS 44th round (July 1988—June 1989)

**EMPLOYMENT-UNEMPLOYMENT SITUATION OF SCHEDULED TRIBE  
AND SCHEDULED CASTE POPULATION DURING LATE EIGHTIES :  
NSS 43rd ROUND (JULY 1987—JUNE 1988)**

**SECTION ONE**

**INTRODUCTION**

1.1 The National Sample Survey Organisation carried out the fourth country-wide quinquennial survey on employment and unemployment in its 43rd round survey operations (July 1987—June 1988). In the survey, for each household, information regarding the 'social group' (Scheduled tribe, Scheduled caste, Neo-Buddhists & others) to which the household belongs was also collected. Some selected tables giving key indicators of employment and unemployment cross-classified with the information on 'social group' were also generated as a part of the overall tabulation programme for the 43rd round employment and unemployment survey. This report is based on the key tables thus generated from the central sample<sup>1</sup> data for the different social groups. It may be mentioned that in order to net the households of the upper income class in the sample, significant changes compared to earlier rounds were made in the sample design of the 43rd round survey.

1.2 Summary results for all-India and the different states/union territories are presented in section two, while corresponding detailed tables for all-India are presented in Part II. Details of the sample design, survey coverage, estimation procedure and salient features of the conceptual frame and data collection procedure adopted in the survey are given in the report<sup>2</sup> containing the all-India results. A brief summary of the scope and coverage of the survey, the concepts and definitions, etc. is however, given below.

1.3 *Geographical coverage.*—The 43rd round survey covered the whole of Indian Union excepting (i) Ladakh and Kargil districts of Jammu & Kashmir and (ii) rural areas of Nagaland.

1.4 *Sample design and sample size.*—A stratified two-stage sample design was adopted for the survey with census villages and urban blocks (Urban Frame Survey Blocks defined by NSSO) as the first stage units respectively for the rural and urban areas and

households as the second stage units. Altogether, the survey covered about 1.3 lakh households spread over about 8400 sample villages and 4660 sample blocks. In each of the selected first stage units 10 households were selected as second stage units.

1.5 *Survey period and sub-round formation.*—The survey was started in July 1987 and was completed by June 1988. The entire survey period of one year was divided into four sub-round periods each of three months' duration coinciding approximately with the four climatic seasons. The sub-round periods were July '87 to September '87, October '87 to December '87, January '88 to March '88 and April '88 to June '88. The sample villages and blocks were distributed over the four sub-rounds in a manner so as to provide valid estimates for each of the sub-round periods separately.

1.6 *Estimation procedure.*—The estimation procedure adopted for the NSS 43rd round was based on a weighted sum of the sample values. Denoting by  $\hat{Y}$  the unbiased estimated of  $Y$  (the state/region total of any variate), it is estimated as :

$$\hat{Y} = \sum_s \frac{P_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{C_{si} P_{si}} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} Y_{sikj} \dots \dots \dots (1)$$

for the rural sector except Arunachal Pradesh,

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{n_s} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} Y_{sikj} \dots \dots \dots (2)$$

for rural Arunachal Pradesh and

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} Y_{sikj}$$

1. For the NSSO surveys, two independent samples are selected to be surveyed by the Central agency and by the different state agencies. The former is referred to as 'central sample' and the latter as 'state sample'.  
2. Sarvokshana, Special Number: Results of the fourth quinquennial survey on employment and unemployment (All India), NSS 43rd Round (1987-88): September 1990.

for the urban sector where

$s, i, j,$  and  $k$  are suffixes for stratum, village/block, household and sub-stratum respectively;

$P_s, N_s$  and  $n_s$  give the stratum values of selection population, number of villages/blocks in the frame and number of sample villages/blocks respectively;

$D_{si}, c_{si}, p_{si}$  stand for number of hamlet-groups/sub-blocks formed, number of census villages contained in a revenue village actually surveyed and the selection population of the sample village respectively;

$H_{sik}$  and  $h_{sik}$  stand for the total number of households listed and the number of sample households respectively and  $y_{sik}$  is the observed value of the variate of a sample household.

1.7 *Estimates of ratios.*—The estimate of a ratio of the form

$R = Y/X$  was given as

$\hat{R} = \hat{Y}/\hat{X}$ , where

$\hat{Y}$  and  $\hat{X}$  are obtained using the formulae already given at the level at which  $\hat{R}$  is required. That is to say, if  $\hat{R}$  was required at state level,  $\hat{Y}$  and  $\hat{X}$  were first obtained at state level and then  $\hat{R}$  was obtained by division.

1.8 The NSSO quinquennial surveys on employment and unemployment aim mainly to measure the extent of 'employment' and 'unemployment' in quantitative terms disaggregated by various households and population characteristics for different geographical regions. For the purpose, attempts are made in the surveys to classify the entire population as belonging to different activity categories adopting three different approaches of classification on the basis of the activities (or inactivities) pursued by them during specified reference periods. The three approaches are :

- (i) usual status approach with a reference period of 365 days preceding the date of survey,
- (ii) current weekly status approach with a reference period of 7 days preceding the date of survey and
- (iii) current daily status approach with each day of the 7 days preceding the date of survey as the reference period\*.

The various activity categories along with the corresponding codes used in the 43rd round survey were as under.

code**	description
	<i>working (or employed)</i>
11	worked (self-employed) in household enterprises
21	worked as helper in household enterprises
31	worked as regular salaried/wage employee
41	worked as casual wage labour in public works
51	worked as casual wage labour in other types of work
61	did not work due to sickness though there was work in household enterprise
62	did not work due to other reasons though there was work in household enterprise
71	did not work due to sickness but had regular salaried/wage employment
72	did not work due to other reasons but had regular salaried/wage employment
	<i>not working but available for work (or unemployed)</i>
81	sought work
82	did not seek but was available for work
	<i>neither working nor available for work (or not in labour-force)</i>
91	attended educational institutions
92	attended domestic duties only
93	attended domestic duties and was also engaged in free collection of goods (vegetables, roots, fire-wood, cattle-feed, etc), tailoring, weaving, etc., for household use
94	rentiers, pensioners, remittance recipients, etc.
95	not able to work due to disability
96	beggars, prostitutes etc.
97	others
98	did not work due to sickness (for casual workers only)
99	infants of age 0—4 years.

Persons reported to be engaged in any one or more of the activities listed under the category codes 11 to

\*Strictly speaking, this approach attempts classification of person-days and not persons.

\*\*Codes 61, 62, 71, 72, 82 and 98 were applicable only in the case of current weekly and current daily status approaches.

72 (11 to 51 for usual status) during the specified reference period were considered 'working' (or employed). A person assigned the activity category code 81 or 82 (81 for usual status) was considered 'seeking and/or available for work' (or unemployed). The employed and unemployed together constituted the 'labour force'. Any person reported to be engaged in or as belonging to one or more of the activities (inactivities) under the category codes 91 to 99 (91 to 97 and 99 for usual status) was classified as 'not in labour force'.

**1.9 Classification according to usual status approach.**—In the 43rd round survey, the status of activity on which a person spent relatively longer time of the preceding 365 days prior to the date of survey was considered the principal usual activity status of the person. Accordingly, a person's principal usual status was considered 'working' or 'employed', if he/she was engaged relatively for a longer time during the reference period of 365 days in any one or more work activities (activities coded 11 to 51), 'seeking or available for work' or 'unemployed', if he/she was not working but was either seeking or was available for work (activity code 81) for a relatively longer time of the specified reference period and 'not in labour force', if he/she was engaged for a relatively longer period in any one or more of the non-gainful activities (activities coded 91 to 97 and 99). Within the two broad activity categories, 'working' and 'not in labour force', the detailed activity category was determined on the basis of time spent criterion. A person categorised as a 'worker' on the basis of his/her principal status is hereafter referred to as 'principal status worker'. A 'non-worker' (on the basis of principal usual activity status) who pursued some gainful activity in a subsidiary capacity was considered to be usually working in a subsidiary capacity and is hereafter referred to as 'subsidiary status worker'. These two groups viz., 'principal status workers' and 'subsidiary status workers' together constituted 'all workers' according to the usual status classification. The same concept was adopted in the NSS 32nd and 38th rounds also for classification of population according to usual status.

**1.10 Classification according to current weekly status approach.**—For classification of persons according to current weekly status, they had to be initially assigned a unique activity status with reference to a period of 7 days preceding the date of survey. This posed no problem in the case of persons having only one status during the reference week. But, a unique status was assigned to persons, pursuing more than one

activity during the week by adopting a priority-cum-major time rule. Under the priority rule, the status of 'working' got priority over the status of 'not working but seeking/available for work' and the status of 'seeking/available for work' got priority over the status of 'not working and 'not seeking/not available for work'. But within the broad category of 'working' or 'not working', the detailed activity category was assigned by major time criterion, i.e., the activity category in which major part of time was spent was considered the current-weekly status. Thus, a person was considered 'working' (or employed) if he was engaged in any one or more of the gainful activities (11 to 72) for at least one hour on any one day of the reference week. Further, he was assigned that gainful activity category (11 to 72) on which he spent major part of the working time during the reference week. A person who had not worked for even one hour on any one day of the week, but had been seeking work or had been available for work (although not seeking) at any time during the week was considered 'seeking/available for work' (or unemployed). Others were considered 'not available for work' (or not in labour force). Each member of the sample household was, thus, assigned a unique activity status for the week. Aggregates of persons under the different activity status thus assigned provided the distribution of persons by activity during an average week of the survey period of one year.

**1.11 Classification according to current daily status approach\*.**—The activity pattern of the population particularly in the unorganised sector is such that a person might be pursuing more than one activity during a week and sometimes even during a day. Many people—particularly women—might undertake nominal work in their household enterprises along with other non-gainful activities, thus pursuing both gainful and non-gainful activities on the same day. The 'current daily status approach', therefore, recorded or assigned upto two activity statuses on each day of the reference week to persons pursuing more than one activity during the seven days of the reference week. The unit of classification was thus 'half day' according to 'current daily status' approach. In assigning the activity status on a day, a person was considered 'working' (employed) for the entire day if he had worked 4 hours or more during the day. If he had worked one hour or more but less than 4 hours, he was considered 'working' (or employed) for half day and 'seeking/available for work' (unemployed) or 'not available for work' (not in labour force) for the other half day depending on whether he was seeking/avail-

\*This was termed 'labour time disposition' in the 27th round, 2—324 Statistics/91

able for work or not. On the other hand, if a person was not engaged in any 'work' even for one hour on the day but was seeking or available for 'work' for four hours or more, he was considered 'unemployed' for the entire day. But if he was available for 'work' for less than four hours only, he was considered 'unemployed' for half day and 'not in labour force' for the other half of the day. A person who neither had any 'work' to do nor was available for 'work' even for half of the day was considered 'not in labour force' for the entire day and was assigned the one or two of the non-gainful activity statuses pursued during the day. The aggregate of person-days classified thus under the different activity categories for all the seven days of the week gave the distribution of person-days by activity category during an average week over the survey period of one year.

1.12 *Probing questions.*—In the 43rd round survey there were two sets of probing questions, the first set to be put to all persons excepting those categorised as disabled, beggars, prostitutes infants in the age-group 0—4 years etc. and the other set for those categorised as usually engaged in household duties. The first set aimed to get data to understand the complex dimensions of the work pattern and the extent of underutilisation of available labour time. The second set aimed to bring out the extent of participation of women engaged in household duties in certain specified activities which provide benefits to their households, availability for work in the household premises, etc.

### 1.13 DEFINITIONS

(a) *Gainful activity.*—Gainful activity (or work) is the activity pursued for pay, profit or family gain or in other words, the activity which adds value to the 'national product'. Normally, it is an activity which results in production of 'goods and services' for exchange. However, the activities in 'agriculture' (i.e., all activities relating to industry section O) in which a part or whole of the agricultural production is used for own consumption and does not go for sale, are also considered 'gainful'. Execution of household chores or social commitments, etc., however, are not considered 'gainful' activities. The activities, such as prostitution, begging, etc., which may result in earnings, are, by convention, not considered 'gainful'.

(b) *Workers (or employed).*—Persons engaged in any gainful activity are considered 'workers' (or employed). They are the persons assigned any one or more of the nine activity categories under the first broad activity category, i.e., 'working or employed' in para 1.8.

(c) *Seeking or available for work (or unemployed).*—Persons who, owing to lack of work, had not

worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration are considered unemployed.

(d) *Labour force.*—Persons categorised as 'working' (or employed) and as 'seeking or available for work' (or unemployed) together constitute the labour force.

(e) *Not in labour force.*—Persons categorised as neither 'working' nor 'seeking or available for work' are considered to be engaged in non-gainful activities or 'not in labour force'. The persons falling in this category are students, those engaged in domestic chores, rentiers, pensioners, those living on alms, recipients of remittance, infirm and disabled persons, prostitutes, infants of age 0—4 years etc.

(f) *Worked (self-employed) in household enterprise—usual and current status code 11.*—Persons who are engaged in their own farm or non-farm enterprise are defined as 'self-employed'—the term used to designate their activity status. There are different kinds of self-employed. Some may operate their enterprise without hiring any labour. Some others may occasionally hire a few labourers. There is also a third category who, by and large, regularly run their enterprises by hiring labour. The first two groups of self-employed are called own-account workers and the third, employers.

(g) *Worked as helper in household enterprise—usual and current status code 21.*—The helpers are a category of working persons who work full or part-time in household enterprise and do not receive any cash payment or share of the family earnings in return for the work performed for the enterprise. They are household members, a large number of them being related to the household head and dependent on the household head and work for the family enterprise. They get food and shelter as members of the household. One may also come across persons in a household who do not receive any cash remuneration for their work in the household enterprise but have a share in the family earning out of such enterprise. Such persons are not 'helpers' but 'self-employed'. On the other hand, if any member of the household works in the household enterprise for which he is paid wage/salary, he should be treated as an employee.

(h) *Worked as regular salaried/wage employees—usual and current status code 31.*—Persons working in others' farm or non-farm enterprises (both household and non-household) and getting, in return, salary or wages on a regular basis (and not on the basis of

daily or periodical renewal of work contract) are treated as regular salaried/wage employees. The category salaried/wage employees will include not only salary and wage earners getting time wage but also earners getting piece wage or salary and paid apprentices, both full-time and part-time.

(i) *Worked as casual wage labour—usual and current status codes 41 & 51.*—Persons engaged in others' farm or non-farm enterprises (both household and non-household) and getting in return wages according to the terms of a daily or periodical work contract are treated as *casual wage labour*. In the rural areas and also in the Government project sites, a type of casual labourers can be seen who normally engage themselves in public works activities which include works taken up by the Government or local bodies for construction of roads, bunds, digging of ponds, etc., as test relief measures/employment generation schemes, etc. The casual labourers doing only such public work activities are casual labourers in public works. The rest are casual wage labourers in other types of work.

(j) *Had work in household enterprises but did not work due to sickness/other reasons (current status code 61/62) and had regular salaries/wage employment but did not work due to sickness/other reasons (current status code 71/72)* Persons engaged in household farm or non-farm enterprises or working in others' farm or non-farm enterprises as salaried/wage employees but absenting from work temporarily due to sickness/for enjoying leave or holiday or for other reasons belong to these two categories 61 and 62 and 71 and 72 respectively depending on whether they are self-employed in household farm/non-farm enterprises or employed in others' farm/non-farm enterprises as wage/salaried employees.

(k) *Attended domestic duties and was also engaged in free collection of goods, sewing, tailoring, weaving, etc., for household use—usual and current status code 93.*—In rural areas in general and particularly in the tribal areas, domestic work usually includes among others, a lot of work for free collection of vegetables, roots, firewood, etc., and also spinning and weaving of cloth for household use. Persons found to be spending regularly some of their time in performing the above-mentioned activities along with household chores, belong to this category.

## SECTION TWO

## SUMMARY RESULTS

2.0 Summary results pertaining to household and population characteristics as background information and the pattern of employment and unemployment obtaining for the four social groups of population—'scheduled tribe', 'scheduled caste', 'neo-Budhists' and 'others'—are presented in this section for all-India and different states and union-territories. The tables in Part II give the corresponding detailed results for all-India. Attempts have also been made to compare, wherever possible, the all-India results of some important key indicators with the corresponding results based on the NSS 38th (1983) and 32nd (1977-78) round surveys.<sup>1</sup>

2.1 *Proportion of female headed households and household size.*—Based on the NSS 43rd round data on employment and unemployment, a few tables on the distribution of households and population were generated separately for female headed households. Using these results, the proportion of female headed households and the average household size of female headed households and of all households have been worked out. These results for all-India are presented in Statement 1. The corresponding results for states and union territories are given in Statement 2.

STATEMENT 1 : PROPORTION OF FEMALE HEADED HOUSEHOLDS AND AVERAGE HOUSEHOLD SIZE, ALL-INDIA

household group	ALL-INDIA					
	rural			urban		
	no. of f.h. hhs. per 1000 hhs.	average hh. size		no. of f.h. hhs. per 1000 hhs.	average hh. size	
(1)	(2)	(3)	(4)	(5)	(6)	(7)
sch. tribe	82	3.0	4.9	100	3.2	4.3
sch. caste	101	3.2	4.8	109	3.3	4.6
others	108	3.4	5.2	98	3.5	4.7
total	104	3.3	5.1	99	3.5	4.7

Source : Tables 1R, 1U, 20R and 20U; f.h. hhs = female headed households

1. NSS 32nd round results are presented in the report no. 298B—'Pattern of employment-unemployment of scheduled caste and Scheduled tribe population during late seventies.' (mimeographed)
- (b) NSS 38th round results are presented in the report no. 341/A—'Employment-unemployment situation of scheduled tribe and scheduled caste population during early eighties' (Sarvekshana, Vol. XIII, No. 1, Issue No. 40, July-September, 1989).
- (c) A statement giving comparative estimates of the proportions of scheduled tribe and scheduled caste population to total population based on NSS 38th and 43rd rounds is presented as table P at the end.

It is observed that in rural India, the proportion of female headed households was relatively higher (about 10-11 per cent) among the scheduled caste and 'others' categories of households compared to scheduled tribe households (8 per cent). On the other hand, in urban India, the proportion was of similar magnitude (10 per cent) for all the social groups. For all the social groups, the average household size of 'female headed households' was less than the average obtained for 'all households' in both rural and urban India. In rural areas, the states of Kerala, Tamil Nadu, Karnataka and Himachal

Pradesh had high proportion of female headed households for all the social groups. In urban areas also, this proportion was high for the states of Karnataka, Tamil Nadu and Kerala for all the social groups. On the other hand, rural areas of Assam, Rajasthan and Madhya Pradesh and urban areas of Uttar Pradesh, Rajasthan and Haryana had the lowest proportions of female headed households. For all the social groups, the average household size of 'female headed households' was less than the average obtained for 'all households' in both the rural and urban areas of all the states.

STATEMENT 1: PROPORTION OF FEMALE HEADED HOUSEHOLDS AND AVERAGE HOUSEHOLD SIZE FOR EACH HOUSEHOLD GROUP FOR DIFFERENT STATES AND UNION TERRITORIES.

2.2 *Distribution of households and persons by household type.*—The activity pattern of the members of a household is very much indicated by the nature and type of work from which the household derives its major income. Each sample household was, therefore, categorised as belonging to different 'household types' depending on the major activity of the household decided on the basis of income during the 365 days preceding the date of survey. In the 43rd round survey, the rural households were divided into five household types, namely, (i) self-

employed in agriculture, (ii) self-employed in non-agriculture, (iii) agricultural labour, (iv) other labour and (v) others. The urban households were divided into four types, namely, (i) self-employed, (ii) regular wage/salaried, (iii) casual labour and (iv) others.

Statement 3 gives the per 1000 distribution of households and the corresponding persons for all-India by household type for each social group.

It is observed that in rural areas the proportion of households depending on 'self-employment' was highest among 'others' category of households (57 per cent) compared to the scheduled tribe and scheduled caste households. It was as low as 30 per cent among the latter category of households and about 44 per cent among the scheduled tribe households. On the other hand the proportion of households depending on wage labour was highest (65 per cent) among the neo-Buddhist households closely followed by scheduled caste households (63 per cent). The proportion was about 50 per cent among the scheduled tribe households and 31 per cent among the 'others' category of households. In the urban areas, by and large, the proportion of households depending on regular wage employment

was found to be of almost of a similar magnitude—about 40 to 45 per cent. Proportion of urban households depending on casual labour was highest among neo-Buddhist households (28 per cent) followed by scheduled caste households (26 per cent) and scheduled tribe households (22 per cent). It was relatively very low (10 per cent only) among the 'others' category of households. A similar pattern is also observed in the distribution of persons belonging to the different types of households.

The relevant proportions of households and persons belonging to different household types are presented for states and union territories in Statements 4 and 5 respectively.

STATEMENT 3: PER 1000 DISTRIBUTION OF HOUSEHOLDS AND PERSONS BY HOUSEHOLD TYPE FOR EACH HOUSEHOLD GROUP.

2.3 *Distribution of households and persons by monthly per capita expenditure (MPCE) class* : Some idea of the standard of living of the population is thrown up by their income level, which is highly correlated with employment of the population. The distribution of households by income level, therefore, is an important background indicator for a correlative study of 'employment' or 'unemployment'. Expenditure being a very close proxy for income, the NSSO in its surveys collects data on expenditure, as reliable information on income is very difficult to collect. Using the data on consumer expenditure collected in the 43rd round survey, the distributions of households and the corresponding population are generated for different monthly per capita expenditure (MPCE) classes for each household group. It may be noted that the MPCE classes used for rural areas are different from those used for urban areas. The relevant results are presented by different social groups separately for rural and urban India in Statement 6 and for states and union territories in Statement 7 for households and in Statement 8 for persons. In rural India, the proportion of households which could spend only a maximum of Rs. 160/- per month per person was highest among scheduled tribe category of households—about 76 per cent accounting for about 81 per cent of the scheduled tribe population. These proportions were relatively lower among the scheduled caste households—about 72 per cent of households accounting for about 77 per cent of persons belonging to that category.

On the other hand, they were lowest for the non-scheduled category of households—only about 57 per cent of the households accounting for 62 per cent of the persons. As against this, the proportion of households which could afford to spend Rs. 370/- or more per month per person was highest among the non-scheduled category of households—about 6 per cent accounting for about 4 per cent of the population belonging to that category. The corresponding proportions were relatively low among the scheduled tribe and scheduled caste households—only about 2 per cent accounting for an equal proportion of persons. For urban India, the pattern is seen to be different from that of rural India. The proportion of households which could spend only a maximum of Rs. 160/- per month per person was highest among scheduled caste households—about 46 per cent accounting for about 54 per cent of the scheduled caste population. The corresponding proportions were 41 per cent and 47 per cent respectively for scheduled tribe households. But for the non-scheduled category of households they were much less—about 28 per cent of households accounting for about 35 per cent on non-scheduled category of population. The proportion of households which could spend over Rs. 370/- per month per person was much higher in urban areas compared to rural areas for all the different social groups of the population. It was over 21 per cent for the non-scheduled category of households. Against this, the proportions were over 14 per cent for scheduled tribe households and over 10 per cent for scheduled caste households.

s.t. scheduled tribe, s.c. scheduled caste

In Statement 7, (i) the difference, if any, between 1000 and the sum of cols. (3) to (14) includes non-hyper-expenditure 'not recorded' cases.

(ii) \* results are not presented as the number of sample households was less than 20 and

(iii) results for 'neo-Buddhists' are presented only for Maharashtra and all-India.

In Statement 8,

- (i) the difference, if any, between 1000 and the sum of cols. (3) to (14) indicates monthly per capita expenditure 'not recorded' cases.  
 (ii) \*results not presented as the number of sample households was less than 20 and  
 (iii) results for 'neo-Buddhists' are presented only for Maharashtra and all-India.

2.4 *Distribution of households by size class of land possessed.*—Area of 'land possessed' by a household is obviously an indicator of the economic status of the household, particularly in rural areas. The distribution of households belonging to any particular social group by different 'land possessed' classes, therefore, will give an idea of the economic status of the social group which can be compared with similar distributions for the other social groups. Statement 9 gives the comparative picture of the distribution of households by size class of 'land possessed' for rural India, for the different social groups of the population—'scheduled tribe', 'scheduled caste, neo-Buddhists' and 'others' based on the 43rd and 38th rounds surveys.

The corresponding results of 1987-88 (43rd round) are presented in Statement 10 for the different different states and union territories.

It is seen that in rural India, during 1987-88, as high as about 60 per cent of scheduled caste households possessed less than 0.2 hectares (half an acre) of land as compared to a corresponding proportion of only about 31 per cent for scheduled tribe households and 38 per cent for non-scheduled

category of households. The proportion of households possessing a land area between 0.40 to 1.00 hectares (1 acre to 2.5 acres) was highest for scheduled tribe households (22 per cent) followed by 'others' category of households (18 per cent) and then scheduled caste households (15 per cent). On the other hand, about 8 per cent of the 'others' category of households possessed more than 4 hectares (10 acres) of land. The corresponding proportions for scheduled tribe and scheduled caste households were 7 per cent and 2 per cent respectively. During the five year period 1983-88, the proportion of households possessing land upto 0.2 hectare (half an acre) had remained almost constant for all the social groups. However, for scheduled tribe households, it appears that relatively higher extent of fragmentation of larger holdings had taken place with an increase in the proportion of households in the land possessed classes 0.21-0.40 hectares and 0.41-1.00 hectares during 1987-88 compared to 1983 and corresponding decrease in the proportion in the higher land possessed classes. Such a phenomenon is not observed in the case of scheduled caste and 'others' categories of households.

2.5 *Distribution of households and persons by land cultivated.*—Agriculture being the main sector of employment in rural India, it is very important to view the distribution of households and persons by size classes of land cultivated. Relevant results for each household group are presented in Statement 11 for rural India. During 1987-88, in rural areas, about 74 per cent of scheduled caste households accounting for about 68 per cent of scheduled caste persons cultivated only less than 0.4 hectare (1 acre) of land, while the corresponding proportions were very low—only 44 per cent and 37 per cent respectively—for scheduled tribe households. Among the non-scheduled category of households, the proportion of households cultivating less than 1 acre was higher, about 50 per cent which

accounted for about 43 per cent of persons belonging to that category of households. On the other hand, the proportion of households cultivating larger holding (more than 4 hectares) was highest among the non-scheduled category of households, about 7 per cent accounting for 10 per cent of the population belonging to that category of households. The corresponding proportions were the lowest for scheduled caste households—about 2 per cent of households accounting for an equal proportion of population. The proportions for scheduled tribe households were about 5 per cent and 8 per cent respectively. Similar results for states and union territories are presented in Statement 12 for households and in Statement 12/1 for persons.

s.t. : scheduled tribes, s.c. : scheduled caste.

In Statement 12, (i) the difference, if any, between 1000 and sum of cols. (3) to (11) indicates land cultivated 'not recorded' cases,

(ii) results are not presented as the number of sample households was less than 20, and

(iii) results for 'neo-Buddhists' are presented only for Maharashtra and all-India.

2.6 *Distribution of persons by education*: Education plays a very crucial role in the employment prospects of a person. Educational level of persons, therefore, is another important characteristic in the background of which the employment and unemployment pattern is to be studied. A person is considered to be literate if he/she can both read and write a simple message in any language. Data on literacy and edu-

cational level of persons are being regularly collected as a part of the NSS quinquennial surveys on consumer expenditure and employment—unemployment. Statement 13 gives the literacy rates (number of literate persons per 1000 persons) among the different social groups separately for males and females for rural and urban India.

STATEMENT 13 : NUMBER OF LITERATES PER 1000 PERSONS BY SEX AND RURAL URBAN RESIDENCE STATUS FOR EACH HOUSEHOLD GROUP

household group (1)	year (2)	all-India			
		rural		urban	
		male (3)	female (4)	male (5)	female (6)
scheduled tribe . . . . .	1987-88	325	134	608	430
	1983	305	115	582	363
scheduled caste . . . . .	1987-88	375	155	575	336
	1983	356	130	574	324
neo-Buddhists . . . . .	1987-88	474	232	669	414
	1983	—	—	—	—
others . . . . .	1987-88	537	305	748	597
	1983*	507	263	729	559

Source : Table 31.3; \* includes neo-Buddhists also.

It is seen that, by and large, the literacy rate had increased over the five year period 1983-88 among all the social groups for both males and females excepting for the scheduled caste males of urban India in whose case, it remained almost stationary. The increase in the rate of literacy in terms of absolute percentage points is observed to be relatively more among the household group 'others' compared to scheduled tribe and scheduled caste categories of households of rural India. In urban India, however, while the rates remained almost of the same order for the persons of scheduled caste households, scheduled type category of households had an edge over the 'others' category in this respect. Literacy rate was much lower among the listed categories of households compared to the 'others' category. While the lowest rate was observed to be for the 'scheduled tribes' in rural India, Scheduled castes had the last position in this respect in urban India. For getting a comparative picture of the 'educational' distribution of the persons belonging to the different social groups, the relevant results for all-India based on both the NSS 38th and 43rd round surveys are presented by five different general educational categories, namely, 'not literate', 'literate & upto primary', 'middle', 'secondary' and 'graduate & above' in Statement 14. The proportion

of 'educated' persons i.e., persons with educational level 'secondary and above', was relatively much more for the household group 'others' compared to the scheduled caste and scheduled tribe household groups in the case of both the males and females of rural as well as urban India. The rate of increase of educated persons over the five years period 1983-88 was highest for scheduled tribe households followed by scheduled case households in the case of rural males. The pattern was opposite in the case of rural females. In urban India, the rate of increase of educated females was almost hundred per cent for scheduled tribe households but was relatively much less for scheduled caste household (28 per cent) as against the 25 per cent increase observed for the 'others' category of households. Compared to the urban females, the rate of increase in the proportion of 'educated' was very much low among the urban males. It was only 3 per cent for scheduled caste households, 11 per cent for 'others' category of households and 13 per cent for the scheduled tribe households. The results relating to the education distribution obtaining for the year 1987-88 by the different social groups are presented for the different states and union territories in Statement 15.

2.7 *Current attendance in educational institutions* : Enrolment ratio among children in the educational institutions is one of the important social indicators for assessing the status of progress of any particular group of the population under study. In the 43rd round survey, for each person, it was ascertained whether he/she was currently attending any educational institution. Cross-classification of this information with age and social group has thrown up

results relating to enrolment ratio for children of school going age 5-14 years by social group. Statement 16 gives the number of children (5-14 years) currently attending educational institutions per 1000 children by sex and rural-urban residence status separately for each social group of the population for all-India. The corresponding results for the different states and union territories are presented in Statement 17.

STATEMENT 16 : NUMBER OF CHILDREN (5-14 YEARS) CURRENTLY ATTENDING EDUCATIONAL INSTITUTIONS PER 1000 CHILDREN (5-14 YEARS)

Source : Tables 38R & 38U; NA—not available.

It is seen that the enrolment ratio of children in the age-group 5-14 years is much higher among the 'others' category of households compared to the scheduled tribe and scheduled caste households compared to the scheduled tribe and scheduled caste households both in rural and urban India. Between the schedule tribe and scheduled caste households, the enrolment ratio is found to be higher among the latter category of households compared to the former category. By and large, there has been an improvement in the enrolment of children in the educational institutions during the five years period 1983 to 1987-88. The improvement is considerable among children of all social groups in rural India. On the other hand, in urban India, marked improvement is observed only among the girls of scheduled tribe households. A definite discrimination in the case of girls in enrolment is observed among all the categories of households. It is highly reflected in rural areas and among scheduled caste households in urban areas. High enrolment ratio for both boys and girls among all the three categories of households is observed in the rural areas of Assam. Himachal Pradesh Kerala and Tamil Nadu and in the urban

areas of Andhra Pradesh, Assam, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra and Tamil Nadu.

2.8 *Employed (work-force)* : Generally three different estimates of 'employed' (work-force) are generated from the data collected through the quinquennial employment—unemployment surveys adopting the usual status, current weekly status and current daily status approaches of classification of the population. The three estimates are :

- (i) number of persons usually employed (i.e., those worked for a relatively longer period during the last 365 days preceding the date of survey);
- (ii) average number of persons employed during a week (i.e., those worked at any time during the reference period of 7 days preceding the date of survey) and
- (iii) average number of person-days employed per day (i.e. working person-days in the week of those worked at any time during the reference period of 7 days preceding the date of survey)

STATEMENT 17 : NUMBER OF CHILDREN (5—14 YEARS) CURRENTLY ATTENDING EDUCATIONAL INSTITUTIONS PER 1000 CHILDREN (5—14 YEARS) FOR EACH HOUSEHOLD GROUP FOR DIFFERENT STATES AND UNION TERRITORIES.

However, in the case of the 43rd round survey, social group wise tabulation for generation of the indicators of employment was attempted only for the usual status approach. The estimates of the usually employed are provided in two categories—usually employed in the principal status (ps workers) and usually employed in the subsidiary status (ss workers). The two categories together constitute the total usually employed (all workers). It may be noted that the former category of the usually employed can be considered as those with more or less stable employment. Number of persons usually employed per thousand persons is defined as the usually status workforce participation rate (WFPR) or the usual status worker population ratio (WPR). Statement 18 gives the usual status WPR for all India by social group separately for males and females.

The proportion of persons more or less stably employed (i.e. employed in the principal status) was found to be relatively more during 1987-88 for both rural males as well as rural females belonging to the scheduled tribe households as compared to the scheduled caste and 'others' categories of households. The proportion of stably employed among urban males was almost of similar magnitude for all the social groups. On the other hand, in the case of urban females, this proportion was much more in the case of scheduled tribe and scheduled caste households compared to the 'others' category of households. Among the two scheduled categories of households, the proportion of 'employed' was relatively more for scheduled tribe households in the case of both males and females of rural as well as urban India. A study of the changes in the employment level over the years of the decade 1978-88 at all-India level reveals that while there had been a fall in the proportion of employed among rural males for all the social groups it was not so for rural females. In their case, while a fall in the employment level was observed for scheduled tribe households, it remained almost stable over the years for scheduled caste and 'others' categories of households. In urban areas, the proportions of employed had remained almost constant throughout the decade in the case of males for all the household groups. In the case of urban females, while a gradual fall in the employment level is observed for scheduled tribe households, for scheduled caste households, the level fell initially during the first half of the decade and then remained almost stable during the second half. Against this pattern, for the 'others' category of households the level remained stable almost throughout the decade.

Another feature observed at all-India level is that the proportion of subsidiary status workers was relatively more among females compared to males for all the categories of households. In fact, the proportion is found to be almost of similar magnitude about 2 per cent for rural males, 1 per cent for urban males, 8 to 9 per cent for rural females and about 3 to 4 per cent for urban females for all the social groups of households.

For studying the regional variations in the proportion of 'employed' among the persons belonging to different social groups of households and also the differentials over the categories, the relevant results for states and union territories are presented in statement 19. High level of 'employment' among rural males is observed for all the social groups in the states of Andhra Pradesh, Orissa, Tamil Nadu, Madhya Pradesh and Karnataka. On the other hand, it was high in the states of Rajasthan, Andhra Pradesh, Maharashtra and Madhya Pradesh for rural females. In urban areas, the employment level was high in the states of Punjab, Tamil Nadu, Kerala, West Bengal and Madhya Pradesh for males and in the states of Tamil Nadu, Andhra Pradesh, Karnataka and Rajasthan for females.

*2.9 Distribution of working person-days of persons by type of operation:* Agriculture being the main sector of employment in rural India, a large section of workers are engaged in agricultural activities. Most of these activities are manual in nature and therefore, the working days of a big chunk of the rural work-force is spent on different manual operations relating to agriculture. With a view to studying the distribution of working person-days by the type of work operation in which they are spent, NSSO collects the relevant information for each day of the 7 days preceding the date of survey. The data thus collected in the NSS 43rd round were tabulated separately for each of the households social groups. Statement 20 gives the relevant results for all-India for each household group. The corresponding results for different states and union territories are presented in Statement 21. It is observed that the proportion of working days spent on manual work was highest among the scheduled tribe households for both males and females followed by scheduled caste households. However, the proportion of days spent on manual work relating to non-agricultural activities was relatively less among the scheduled tribe households—about 19 per cent for males and 13 per cent for females as against the corresponding proportions—27 per cent for males and 17 per cent for females belonging to both the scheduled caste and 'others' categories of households.

2.10 *Unemployed* : As in the case of 'employment', for 'unemployment' also, three different estimates are generally worked out from the NSS quinquennial survey data on employment - unemployment. They are :

- (i) number of persons usually unemployed based on 'usual status' approach;
- (ii) number of persons unemployed on an average in a week based on average on a day based on 'weekly status' approach; and
- (iii) number of person-days unemployed on an average on a day based on 'daily status' approach.

However, social group-wise results were generated from the NSS 43rd round survey data to give only the above three indicators of unemployment, i.e., the estimates of 'usually unemployed'. The estimates of usually unemployed indicate the magnitude of persons unemployed for a relatively longer period during a reference period of 365 days or say, chronically unemployed. Some of the persons so labelled, as usually or chronically 'unemployed' on the basis of the time criterion might be working in a subsidiary capacity (or for a relatively shorter period during the reference year). Two estimates of 'usually unemployed', therefore, are presented - usually unemployed in the principal status (p.s.) and usually unemployed excluding the subsidiary status workers (u.s. excluding s.s.). The proportions of unemployed or the number of persons unemployed per thousand persons are presented in statement 22 by different social groups for rural and urban India. The corresponding results for the period 1983 (NSS 38th round) and 1977-78 (NSS 32nd round) are also given in this statement. During 1987-88, the proportion of chronically unemployed i.e., unemployed in the principal status, was observed to be relatively lower among males of all the social groups of rural areas as compared to urban areas. The proportion of unemployed (principal status) was lowest among scheduled tribe households for both rural and urban males. Chronic unemployment of rural males was observed to be highest for the 'others' category of households. On the other hand, for urban males, it was almost of the same order for scheduled caste households and the 'others' category of households. Considering the female population, the proportion of unemployed in the principal status was found to be relatively higher for the scheduled caste households of rural India as compared to the scheduled tribe and 'others' category of households, the latter two categories having proportions of almost similar magnitude. In urban India, the proportions were higher for both the scheduled caste and 'others' categories

of households as compared to the scheduled tribe households. Over the years 1977-78 to 1987-88, while the proportion of unemployed in the principal status had increased in the case of scheduled caste in the case of urban males, the proportions had remained at the same level for all the social groups. A considerable fall in the proportion of chronically unemployed, however, was observed among females of all the social groups excepting the females of scheduled tribe households of rural areas. This fall was more marked in urban areas as compared to rural areas.

The relevant results on the proportions of unemployed for different states and union territories are presented in statement 23 by social group, sex and rural-urban residence status. Chronic unemployment among rural males was observed to be high for all the social groups in the states of Kerala, Tamil Nadu, Punjab and Haryana. On the other hand, it was high in the states of Kerala, West Bengal, Tamil Nadu and Andhra Pradesh for rural females. In urban areas, the level of unemployment was high in the states of Kerala, West Bengal, Tamil Nadu, Maharashtra and Andhra Pradesh for males and in the states of Tamil Nadu, Kerala and Andhra Pradesh for females.

2.11 *Women's participation in activities deriving benefits to their households* : In general, a large section of women are engaged in household duties. But many among them, particularly in rural areas, also carry out certain activities which derive benefits to their households along with and as a part of their usual household chores. A special module containing some probing questions on this aspect of women's participation in such activities which derive benefits to their households along with their domestic chores has been included in the NSS questionnaire on employment and unemployment since the second quinquennial survey (32nd round). Based on the information collected on the topic, results on the participation of women engaged in household duties in specific activities which results in benefits to their households were worked out separately for each social group. Relevant results giving proportion of women engaged in domestic duties and also some specific activities to total women engaged in household duties are given in statement 24 for rural and urban India. It is observed that the proportions of women participating in specified activities which derive benefit to their households were higher among scheduled tribe and scheduled caste population compared to the non-scheduled category of the population. The corresponding results for different states and union territories are presented in statement 25.

# SOCIO-ECONOMIC PROFILE OF THE AGED PERSONS

## NSS 42nd ROUND (July 1986—June 1987)

### Section One

#### INTRODUCTION

1.1 At the instance of the Ministry of Social Welfare, the National Sample Survey Organisation (NSSO) conducted a nation wide survey to assess the nature and dimensions of the socio-economic problems of the old, that is, persons of age 60 years and above in its 42nd round (July 1986—June 1987). The present report is based on the results on the various aspects of the socio-economic profile of the aged population generated from the data of the central sample.

1.2 *Geographical coverage of the survey.*—The survey covered the whole of Indian Union except (i) Ladakh and Kargil districts of Jammu & Kashmir and (iii) the rural areas of Nagaland.

1.3 *Contents of the report.*—The report consists of four sections appended by the detailed tables for all-India and 17 states. The sample design and estimation procedure follow in Section Two. In Section Three, the concepts and definitions of some important terms used in the survey are presented. Important summary findings are discussed in Section Four.

### Section Two

#### SAMPLE DESIGN AND ESTIMATION PROCEDURE

2.1 *Sample design.*—The sampling procedure adopted for the survey is a two-stage stratified design. The first stage units (f.s.u.) were villages in the rural sector and the urban frame survey block of the NSSO in the urban sector. The second stage units were households in both the sectors.

2.2 *Selection of first stage units (fsu's).*—The sample villages were selected with probability proportional to population with replacement in the form of two independent interpenetrating sub-samples (IIPNS). The sample blocks were selected using simple random sampling without replacement (SRSWOR) also in the form of two IIPNS's.

2.3 *Sampling of households.*—For the selection of

sample households, the frame consisted of households having at least one member of age 60 years and above. Three households were selected circular systematically with a random start from each of the fsu's. If in a selected first stage unit the number of households in the frame was found to be less than three, then all such households were selected for the survey.

2.4 *Sample size.*—The survey covered about 50,000 households spread over a sample of 8312 villages and 4546 urban blocks. The statewide distribution of sample villages/blocks and the households surveyed are presented in Statement—1.

2.5 *Estimation procedure.*—The following symbols are used in the sequel :

- S : subscript for state/u.t./region
- s : subscript for stratum
- i : subscript for sample village/block
- j : subscript for sample household
- P : total frame population of stratum in rural sector
- p : population of sample village (used for selection)
- N : total number of urban blocks in frame in urban stratum
- n : number of sample villages/blocks available for tabulation including depopulated and other zero cases in rural/urban stratum (excluding casualty and other not received cases)
- D : number of hamlet-groups/sub-blocks formed
- C : number of census villages in surveyed revenue villages
- H : total number of households listed in frame
- h : number of sample households available for tabulation
- x, y : value of any character
- X, Y : aggregate estimate of x, y
- R : any ratio of the form Y/X

A cap (^) placed over any symbol such as Y denotes the estimate obtained from the sample.

\* Nucleus villages.

2.6 *Estimate of aggregates—rural.*—The formulas for  $\hat{Y}$ , the estimate of aggregate of any characteristic  $y$  are given below for the rural sector :

$$\hat{Y}_s' = \sum_s \frac{P_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{c_{si} P_{si}} \frac{H_{si}}{h_{si}} \sum_j Y_{sij}$$

2.7 *Estimate of aggregates—urban.*—The formulas for  $\hat{Y}$  are given below for the urban sector :

$$\hat{Y}_s' = \sum \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \frac{H_{si}}{h_{si}} \sum_j Y_{sij}$$

2.8 *Estimate of ratios.*—The estimate of a ratio of the form  $R=Y/X$  is given by

$$\hat{R} = \hat{Y} / \hat{X}$$

Where  $\hat{Y}$  and  $\hat{X}$  are obtained by using the formulas already given at the level at which  $\hat{R}$  is required.

Section Three

CONCEPTS AND DEFINITIONS

3.1 *Illness/injury.*—Any deviation from the state of normal physical and mental well-being was considered as illness. Injury covered all types of damage to any part of the body such as cuts, wounds, haemorrhages, fractures, burns etc. caused by accident including bites.

3.2 *Hospitalisation.*—A person was considered as hospitalised if she/he had availed of any medical services as an indoor patient in any medical institution. However, hospitalisation of female members for the purpose of child birth was not considered as hospitalisation for the purpose of the survey.

3.3 *Usual activity status.*—The usual activity status of an individual was the activity situation obtained

for the person on the basis of a major time criterion in respect of his/her participation in gainful and non-gainful activities during a period of 365 days preceding the date of survey.

3.4 *Financial asset and property.*—By financial asset was meant Company Shares, Government Securities, Unit Trust, National Saving Certificates etc. Property included land and building.

3.5 *Participation in social matters, religious matters and daily household chores :* By participation in social matters was meant physical or mental (giving advice) participation in arranging important social functions such as marriage, sradh ceremony etc. Participation in religious matters was physical or mental (giving advice) participation in arranging religious functions. Participation in household chores was execution of activities such as 'going to market' 'laundry', 'taking children to school', 'taking ailing members of the household to doctors chamber' etc.

3.6 *Prevalence rate.*—The prevalence rate has been calculated as the ratio of the total number of cases of ailments/injuries/poisoning to the total number of persons.

Section Four

SUMMARY OF FINDINGS

4.0 Some important summary findings based on the survey results are discussed in this section. These results are based on the central samples surveyed by the NSSO. In general, they are presented for all the states and union territories and also for all-India separately for the rural and urban sectors.

4.1 *A general profile.*—Some basic information of the aged (60 years and above) population is presented in statement 2.0 for all-India.

STATEMENT 2.0 : ESTIMATE OF SOME BASIC CHARACTERISTICS OF AGED PERSONS FOR RURAL AND URBAN SECTORS OF ALL-INDIA.

Sr. no.	Description of characteristics	ALL-INDIA	
		rural	urban
(1)	(2)	(3)	(4)
1.	estimate of aged persons (lakh)	394.51	87.35
2.	p.c. of aged persons who are economically independent	234.02	28.94
3.	p.c. of aged persons living alone	7.99	5.94
4.	p.c. of aged persons willing to move to home for aged persons among the aged persons living alone	19.1	17.6
5.	p.c. of aged persons having chronic disease	45.0	44.8
6.	p.c. of physically immobile aged persons	5.4	5.5
7.	p.c. of aged persons who are gainfully employed	40.55	26.76

The aged population during 1986-87 was estimated as 395 lakhs in rural India and 87 lakhs in urban India. The proportion of economically independent persons among the aged was about 29 per cent in urban India as against 34 per cent in rural India. About 6—8 per cent of the aged were living alone and of them about 18-19 per cent were willing to move to the 'home for the aged persons'. About 45 per cent of the aged were found to be suffering from chronic diseases. In fact, about 5—6 per cent of the aged persons were reported to be physically immobile. Of the aged while about 41 per cent was found to be usually working in rural India the percentage of 'working' among the aged was only 27 in urban India.

4.2.0 *Sex-ratio among aged persons.*—Sex-ratio (number of females per 1000 males) among aged persons as obtained from the results of NSS 38th (1983) and 43rd (July 1987—June 1988) rounds is given in

statement 2.1 separately for rural and urban sectors of each state and all-India. It is observed that at the all-India level the sex-ratio was higher in urban sector compared to rural sector during 1983 and also 1987-88. This feature is also observed in the rural and urban sectors of most of the states. There had been a fall in the sex-ratio over the five year period—from 992 in 1983 to 971 in 1987-88 in rural India and from 1099 in 1983 to 1032 in 1987-88 in urban India. This pattern is not uniformly observed in all the states. In some states there had been an increase also. The observed sex-ratio, at the rural and urban sectors of each state, indicates that there was more number of aged females than aged males in Kerala, Andhra Pradesh, Gujarat, Rajasthan, Orissa, Maharashtra and Goa, Daman & Diu. In some smaller states and union-territories, the sex-ratio was substantially low. One of the reasons for this may be due to the small sample size.

STATEMENT 2.1 : SEX-RATIO (NUMBER OF FEMALES PER 1000 MALES) AMONG AGED PERSONS BASED ON THE RESULTS OF NSS 38TH (1983) AND 43RD (JULY 1987- JUNE 1988) ROUNDS FOR RURAL AND URBAN SECTORS OF EACH STATE.

4.2.1 *Marital status distribution of aged persons.*—The per thousand distribution of aged persons over marital status by sex as obtained from NSS 38th and 43rd rounds is given in statement 2.2R for rural sector and in statement 2.2U for urban sector of each state and all-India. It is observed that during 1987-88 about 74 per cent of the aged males was currently married as against 34 per cent of the currently married aged females in the rural India. In urban India about 78 per cent aged males were currently married as compared to 30 per cent currently married females during that period. Further, the percentage of aged

widowed/divorced/separated males was about 24 in rural areas and about 20 in urban areas. The corresponding percentages for females were about 65 and 69 respectively. Similar pattern was also observed for 1983 as revealed by the NSS 38th round results. This marital status differential among the males and females might be due to the fact that in our country, the female partner of a couple is generally younger. Also, the incidence of remarriage is much higher among widowers compared to widows. This pattern is also observed in almost all the states during both the period 1983 and 1987-88.

TABLE 2.2R : PER THOUSAND DISTRIBUTION OF AGED MALES OVER MARITAL STATUS BASED ON THE RESULTS OF NSS 38TH (1983) AND 43RD (JULY 1987-JUNE 1988)—ROUNDS FOR RURAL SECTOR OF STATES.

4.3 *Activity status.*—The percentages of 'employed' and 'unemployed' among the aged persons are given statement 3. The corresponding results based on the NSS 38th round survey are also presented in the statement. It is observed that the percentage of usually employed among males was much higher than that among females. It is also observed that the proportion of employed were higher in rural areas than in urban areas. It is observed that the rates thrown up by the 42nd round survey are on the lower side of those as obtained from the 38th round employment—unemployment survey. The percentage of the aged 'employed' and 'unemployed' of each state and all-India are given in statement 4 separately for rural and urban sectors. It is seen that the percentage of employed among aged females in the rural sector of Dadra & Nagar Haveli is as high as 42 per cent followed by Meghalaya and Manipur (39). On the other hand, the percentage of 'employed' among aged males is only 18 in the urban areas of Andaman & Nicobar Islands followed by rural Delhi (19), urban Pondicherry (23), rural Goa, Daman & Diu (23) and rural Bihar (26).

4.4 *Economically independent persons:* The percentage of economically independent aged persons

and the percentage of aged persons with dependents among the economically independent aged persons are given in statement 5 separately for males and females and also for rural and urban sectors of each state and all-India. It is observed at the all-India level that about 51 per cent of the rural aged males and 46 per cent of the urban aged males were economically independent and among them, about 71 per cent had dependents to support. In the case of aged female, the proportion of economically independent persons was about 9 per cent in rural India and 51 per cent of them had dependents. The corresponding proportion of aged females of urban India were 5 per cent and 36 per cent respectively. Large variation in the percentage of economically independent aged person over the states is observed both for males and females. The variation appears to be more in the rural sector.

4.5 *Living arrangement:* The percentage of aged persons living alone are given in statement 6 separately for rural and urban sectors of each state and all-India. It is observed that 12 per cent of the aged males and a little over 1 per cent of the aged females were living alone in rural India. On the other hand, about 10 and a little less than 1 per cent of the aged males and females respectively were living alone in urban India.

4.6 *Physical mobility* : The proportion (per 1000) of physically immobile males and females of age 60 years and above are presented in Statement 7 for rural and urban sectors of each state and all-India. It is found that 44-47 aged males per 1000 reported physical immobility as against 67-68 aged females per 1000 at all-India level. The male-female disparity in the proportion of persons with physical immobility observed at the all-India level, is also reflected in both the rural and urban sectors of states. It is also observed that there is a large variation in the proportion of persons with physical immobility over

States. The proportion, among the aged males, is highest in urban Manipur (129) followed by rural Tripura (105) and rural Manipur (103), and lowest in urban Mizoram (6) followed by rural Meghalaya (7) and rural Lakshadweep (21). Similarly, the proportion among the aged females is highest in the rural areas of Lakshadweep (107) followed by rural Tripura (106) and rural Goa, Daman & Diu (168), and lowest in the rural areas of Meghalaya (12) followed by urban Pondicherry and urban Goa, Daman & Diu (17).

4.7 *Chronic disease* : Statement 8 gives the proportion (per 1000) of aged males and females reported to be suffering from chronic diseases for the rural and urban sectors of each state and all-India. It is seen that the proportion of aged persons with chronic disease varied between 443 to 455 per 1000 persons at the all-India level. The proportion among the aged

males and females were of the same order in most of the states. The states, which indicated relatively wider differences, were the rural sectors of Chandigarh; Goa, Daman & Diu; Lakshadweep; and urban sectors of Pondicherry; Lakshadweep and Andaman & Nicobar Island.

4.8 *Willingness to move to home for aged persons* : The proportion (per 1000) of aged persons who were willing to move to home for aged persons among the aged persons living alone are given in Statement 9. It is observed that in rural India 198 aged males per 1000 aged males living alone had expressed their willingness to move to home for the aged persons.

The corresponding proportion for urban India was 181. Among the aged females living alone only a relatively much lower proportion of persons —877 per 1000 in rural areas and 95 per 1000 in urban areas had expressed willingness to move to the home for the aged.

4.9 *Location of home for aged persons* : The aged persons who were living alone and were willing to move to home for the aged were asked about their preference for the location of such homes where they would have liked to move. The proportion (per 1000) among those aged persons willing to move by location of home for the aged persons and state of their economic independence are given in Statement 10 for rural and urban sectors of all-India. Statement 11 gives the proportions by only the preference for the location of home for rural and urban sectors of each state. It is revealed that the aged persons who

were living alone preferred to move to a home for aged persons located within village/town of their stay then to the home located outside the village/town of their present stay. About 133 to 134 aged males per 1000 living alone expressed their willingness to move to a home located within the village/town of their stay as compared to a corresponding proportions of 112 to 125 aged females per 1000 at all-India level. In a few states however the aged persons expressed their preference to move to a home located outside the village/block of their stay but within the some state.

STATEMENT 10 : PROPORTION (PER 1000) OF PERSONS LIVING ALONE WHO ARE WILLING TO MOVE TO HOME FOR AGED PERSONS BY SEX, LOCATION OF HOME AND STATE OF ECONOMIC INDEPENDENCE FOR RURAL AND URBAN SECTORS OF ALL-INDIA.

4.10 *Financial assets and property* : It is observed from Statement 12 that the proportion (per 1,00,000) of aged males having financial assets were 581 and 525 respectively in the rural and urban India while the corresponding proportions were 482 and 371 for females. Further, the proportion of aged males having

property were 819 and 700 respectively in the rural and urban India as against the proportions of 633 and 481 respectively for females. The proportion at the state level are observed to vary considerably for each sex and sector.

STATEMENT 12 : PROPORTION (PER 1,00,000) OF PERSONS HAVING FINANCIAL ASSETS AND PROPORTION (PER 1,00,000) OF PERSONS HAVING PROPERTY BY SEX FOR RURAL AND URBAN SECTORS OF EACH STATE.

4.11 *Participation in social and religious matters and daily household chores*: The all-India proportions (per 1000) of aged persons participating in social matters, religious matters and daily household chores are given in Statement 13 separately for each sex and marital status. It is observed that at all-India level the rate of participation in social matters, religious matters and daily household chores (as defined for the purpose of the survey) were considerably high and it was higher among males compared to

females, and also higher for currently married aged males. The above participation rates (per 1000) are presented in Statement 14 for each state separately for rural and urban sectors. It is revealed that the rate of participation in social matters was lowest in urban Mizoram (102) and highest in rural Delhi (975). On the other hand, the rate of participation in religious matters was lowest in urban Mizoram and highest in rural Sikkim (979).

STATEMENT 13 : PROPORTION (PER 1000 PERSONS) OF PERSONS PARTICIPATING IN SOCIAL MATTERS, RELIGIOUS MATTERS AND DAILY HOUSEHOLD CHORES BY SEX AND MARITAL STATUS FOR RURAL AND URBAN SECTORS OF ALL-INDIA.

# Results on Socio-Economic Profile of the Aged Persons

NSS 42nd Round (July 1986—June 1987)

**LIST OF DETAILED TABLES**

Table no.	Title	Page(s)
(1)	(2)	(3)
1	Projected population (in 00) of age 60 years and above by sex as on 1st January 1987 for rural and urban sector of selected states and all-India.	S85
2.00—2.17	Percentage distribution of persons by sex, age and usual activity status for rural and urban sectors of selected states.	S86—S103
3.00—3.17	Percentage distribution of persons by sex, age and number of surviving sons & daughters for rural and urban sectors of selected states.	S104—121
4.00—4.17	Percentage distribution of persons by sex, age and state of economic independence and percentage of persons with dependents among economically independent persons for rural and urban sectors of selected states.	S122—S139
5.00—5.17	Percentage distribution of economically dependent persons by sex, age and category of persons supporting aged persons for rural and urban sectors of selected states.	S140—S157
6.00—6.17	Percentage distribution of persons by sex, age and living arrangements for rural and urban sectors of selected states.	S158—S175
7.00—7.17	Proportion (per 100,000) of physically—immobile persons in different age-groups and their percentage distribution of physically immobile persons over category of persons helping physically immobile persons by sex and age for rural and urban sectors of selected states.	S176—S193
8.00—8.17	Proportion (per 100,000) of persons having chronic disease and percentage distribution of persons having chronic disease over type of chronic disease by sex and age for rural and urban sectors of selected states.	S194—S211
9.00—9.17	Prevalence rate (per 1000) and proportion (per 1000) of hospitalised among aged persons by sex and age for rural and urban sectors of selected states.	S212—S220
10	Proportion (per 100,000 persons) of ever gainfully employed persons who are not currently having any gainful activity by sex and age for rural and urban sectors of selected states.	S221—S225
11.00—11.17	Percentage distribution of persons who were never engaged in wage/salaried job by cause of withdrawal and age at withdrawal from gainful activity for rural and urban sectors of selected states.	S226—S235
12.00—12.17	Percentage distribution of persons who were ever engaged in wage/salaried job by cause of retirement and age at retirement for rural and urban sectors of selected states.	S236—S244
13.00—13.17	Proportion (per 100,000 persons) of persons living alone who are willing to move to home for aged persons among persons living alone and percentage distribution of willing persons by sex, age and location of home for aged persons for rural and urban sectors of selected states.	S245—S262
14.00—14.17	Proportion (per 100,000 persons) of persons living alone who are willing to move to home for aged persons by sex, age, stage of economic independence and location of home for rural and urban sectors of selected states.	S263—S280
15.00—15.17	Proportion (per 100,000 persons) of persons having financial assets and proportion (per 100,000 persons) of persons participating in management of financial assets by sex and age for rural and urban sectors of selected states.	S281—S298
16.00—16.17	Proportion (per 100,000 persons) having property and proportion (per 100,000 persons) of persons participating in management of property by sex and age for rural and urban sectors of selected states.	S299—S316
17.00—17.17	Proportion (per 100,000 persons) of persons who participating in social matters, religious matters and daily household class by sex and marital status for rural and urban sectors of selected states.	S317—S325

Table no.	Title	Page(s)
(1)	(2)	(3)
18.00—18.17	Proportion (per 100,000 persons) of persons who participated in social matters by sex, age and living arrangements for rural and urban sectors of selected states.	S326—S343
19.00—19.17	Proportion (per 100,000 persons) of persons who participated in religious matters by sex, age and living arrangements for rural and urban sectors of selected states.	S344—S361
20.00—20.17	Proportion (per 100,000 persons) of persons who participated in daily household chores by sex, age and living arrangements for rural and urban sectors of selected states.	S362—S379

सर्वेक्षण

खण्ड XV, संख्या 2, अक्टूबर—दिसम्बर, 1991

(अंक संख्या 49)

विषय-सूची

	पृष्ठ संख्या
1 अनुसूचित जाति/जन जाति की जनसंख्या में रोजगार एवं बेरोजगारी की स्थिति	हि०-1
2 वृद्धों का सामाजिक रेखाचित्र—44वाँ दौर (जुलाई 1986—जून 1987)	हि०-15

**अस्सी के दशक के उत्तरार्ध में अनुसूचित जाति अनुसूचित जनजाति की जनसंख्या में रोजगार एवं बेरोजगारी की स्थिति, 43वां दौर, (जुलाई 1987—जून 1988)**

1.0 पूर्व सूचना के रूप में परिवार एवं जनसंख्या की विशेषताओं से सम्बन्धित संक्षिप्त परिणाम और जनसंख्या के चार सामाजिक समूहों—“अनुसूचित जनजाति”, “अनुसूचित जाति”, “नव-बौद्ध”, “अन्य”—के संबंध में प्राप्त रोजगार एवं बेरोजगारी का पैटर्न इस खण्ड में प्रस्तुत किए गए हैं, जो समस्त भारत विभिन्न राज्यों और संघ शासित क्षेत्रों के संबंध में हैं। परिशिष्ट की सारणियां समस्त भारत के लिए तदनुरूपी विस्तृत परिणामों को दर्शाती हैं। जहां भी संभव हुआ है कुछ महत्वपूर्ण मुख्य संकेतकों के अखिल भारतीय परिणामों की तुलना राष्ट्रीय प्रतिदर्श सर्वेक्षण 38वें (1983) और 32वें (1977-78) दौरे सर्वेक्षणों पर आधारित तदनुरूपी परिणामों से करने के भी प्रयास किए गए हैं।

1.1 स्त्री प्रमुख परिवारों और परिवारों के आकार का अनुपात : रोजगार एवं बेरोजगारी के संबंध में राष्ट्रीय प्रतिदर्श सर्वेक्षण के 43वें दौरे के आंकड़ों पर आधारित परिवारों एवं जनसंख्या

के वितरण संबंधी कुछ सारणियां स्त्री प्रमुख परिवारों के लिए अलग से तैयार की गई थीं। इन परिणामों का उपयोग करके परिवारों और स्त्री प्रमुख परिवारों का औसत परिवार आकार और सभी परिवारों के अनुपात तैयार किए गए हैं। समस्त भारत के ये परिणाम विवरण पत्र-1 में प्रस्तुत किए गए हैं।

यह देखा गया है कि ग्रामीण भारत में स्त्री प्रमुख परिवारों का अनुपात अनुसूचित जनजाति परिवारों (8 प्रतिशत) की तुलना में अनुसूचित जाति और “अन्य” श्रेणियों के परिवारों का अनुपात अपेक्षाकृत अधिक (लगभग 10-11 प्रतिशत) अधिक था। दूसरी तरफ शहरी भारत में यह अनुपात सभी सामाजिक समूहों के लिए ऐसे ही परिणाम (10 प्रतिशत) का था। सभी सामाजिक समूहों के लिए “स्त्री प्रधान परिवारों” का औसत परिवार आकार ग्रामीण और शहरी भारत दोनों में “सभी परिवारों” के संबंध में प्राप्त आकार औसत से कम था। केरल, तमिलनाडु, कर्नाटक और हिमाचल प्रदेश के ग्रामीण क्षेत्रों में सभी सामाजिक

विवरण-पत्र 1 : स्त्री प्रमुख परिवारों और औसत परिवार आकार का अनुपात

समस्त भारत

परिवार समूह	ग्रामीण			शहरी

स्रोत : सारणी 1 ग्रामीण, 1 शहरी, 20 ग्रामीण और 20 शहरी-स्त्री प्रमुख परिवार

- (क) राष्ट्रीय प्रतिदर्श सर्वेक्षण के 32 वें दौर के परिणाम रिपोर्ट सं० 298 ख में प्रस्तुत किए गए हैं—सत्र के दशक के उत्तरार्ध में अनुसूचित जाति और अनुसूचित जन जाति की जन संख्या में रोजगार-बेरोजगारी का पैटर्न।
- (ख) राष्ट्रीय प्रतिदर्श सर्वेक्षण के 38वें दौर के परिणाम रिपोर्ट संख्या 341/क में प्रस्तुत किए गए हैं—“अस्सी के दशक के उत्तरार्ध में अनुसूचित जनजाति और अनुसूचित जाति की जन संख्या में रोजगार-बेरोजगारी की स्थिति” सर्वेक्षण खण्ड ज, संख्या 1, अंक संख्या 40, जुलाई-सितम्बर, 1988।
- (ग) राष्ट्रीय प्रतिदर्श सर्वेक्षण के 38वें और 43वें दौर पर आधारित कुल जन संख्या की तुलना में अनुसूचित जनजाति और अनुसूचित जाति की जन संख्या के अनुपातों के तुलनात्मक अनुमानों को दर्शाने वाला एक विवरण-पत्र अंत में सारणी ‘पी’ के रूप में प्रस्तुत किया गया है।

समूहों के लिए स्त्री प्रमुख परिवारों का अनुपात अधिक था। शहरी क्षेत्रों में भी यह अनुपात कर्नाटक, तमिलनाडु और केरल राज्यों के सभी सामाजिक समूहों में अधिक था। दूसरी तरफ असम, राजस्थान और मध्य प्रदेश के ग्रामीण क्षेत्रों में तथा उत्तर प्रदेश, राजस्थान और हरियाणा के शहरी क्षेत्रों में स्त्री प्रमुख परिवारों का अनुपात न्यूनतम था। सभी राज्यों के ग्रामीण एवं शहरी दोनों क्षेत्रों में सभी सामाजिक समूहों के लिए स्त्री प्रमुख परिवारों का औसत परिवार आकार, "सभी परिवारों" के संबंध में प्राप्त औसत आकार से कम था।

**1.2 परिवार के प्रकार के अनुसार परिवारों एवं व्यक्तियों का वितरण :** एक परिवार के सदस्यों का कार्यकाल पैटर्न उस कार्य के स्वरूप एवं प्रकार द्वारा बहुत अधिक प्रदर्शित होता है जिससे परिवार अपनी मुख्य आय प्राप्त करता है। अतः प्रत्येक प्रतिदर्श परिवार को विभिन्न "परिवार प्रकारों" से संबंधित के रूप में सर्वेक्षण की तारीख से 365 दिन पूर्व की अवधि के दौरान आय के आधार निर्णीत परिवार के मुद्दा कार्यकाल पर निर्भर रहते हुए श्रेणीबद्ध किया गया था। 43वें वार सर्वेक्षण में ग्रामीण परिवारों को पांच प्रकार के परिवारों अर्थात् (1) कृषि में स्व-नियोजित, (2) गैर-कृषि में स्व-नियोजित, (3) कृषि मजदूर, (4) अन्य मजदूर और (5) अन्य में विभाजित किया गया था। शहरी परिवारों को चार प्रकार अर्थात् (1) स्व-नियोजित, (2) नियमित मजदूरी/बैतन पाने वाले, (3) आर्कीस्टिक मजदूर और (4) अन्य में विभाजित किया गया था। यह देखा गया है कि ग्रामीण क्षेत्रों में स्वरोजगार पर निर्भर परिवारों का अनुपात अनुसूचित जनजाति और अनुसूचित जाति परिवारों की तुलना में "अन्य" श्रेणी परिवारों में अधिकतम (57 प्रतिशत) था। बाद की परिवार श्रेणी में यह अनुपात 30 प्रतिशत था और अनुसूचित जनजाति परिवारों में लगभग 44 प्रतिशत था। दूसरी तरफ श्रमिक मजदूरी पर निर्भर परिवारों का अनुपात नव-बाँध परिवारों में अधिकतम (65 प्रतिशत) था इसके निकट ही अनुसूचित जाति परिवारों (63 प्रतिशत) का अनुपात था। अनुसूचित जनजाति परिवारों में यह अनुपात लगभग 50 प्रतिशत और परिवारों की "अन्य" श्रेणी में 31 प्रतिशत था। शहरी क्षेत्रों में नियमित रोजगार मजदूरी पर निर्भर परिवारों का अनुपात कुल मिलाकर करीब करीब इसी परिमाण में अर्थात् लगभग 40 से 45 प्रतिशत पाया गया। नैमित्तिक मजदूरी पर निर्भर शहरी परिवारों का अनुपात नव-बाँध परिवारों (28 प्रतिशत) में अधिकतम था इसके बाद अनुसूचित जाति परिवारों (26 प्रतिशत) और अनुसूचित जनजाति परिवारों (22 प्रतिशत) के अनुपात आते हैं। परिवारों की "अन्य" श्रेणी में यह अनुपात अपेक्षाकृत बहुत कम (केवल 10 प्रतिशत) था। परिवारों के विभिन्न प्रकारों से संबंधित व्यक्तियों के वितरण में भी इसी प्रकार का पैटर्न देखा गया है।

**1.3 मासिक प्रति व्यक्ति व्यय श्रेणी के अनुसार परिवारों एवं व्यक्तियों का वितरण :** जनसंख्या के जीवन स्तर का कुछ अनुपात उनके आय स्तर से लगाया जाता है, जनसंख्या के रोज-

गार से पूरी सहसम्बद्ध है। अतः आय स्तर के अनुसार परिवारों का वितरण "रोजगार" अथवा "बेरोजगारी" के सहसम्बद्ध अध्ययन के लिए एक महत्वपूर्ण पृष्ठभूमि संकेतक है। व्यय आय का एक बहुत ठोस प्रतिपत्र होने के कारण, राष्ट्रीय प्रतिदर्श सर्वेक्षण अपने सर्वेक्षणों में व्यय संबंधी आंकड़ों एकत्र करता है क्योंकि आय संबंधी विश्वसनीय सूचना एकत्र करना बहुत कठिन है। 43वें वार सर्वेक्षण में कत्र किए गए उपभोक्ता व्यय संबंधी आंकड़ों का उपयोग करके परिवार और तत्समी जनसंख्या के वितरण, प्रत्येक परिवार समूह के लिए विभिन्न प्रति व्यक्ति मासिक व्यय श्रेणियों के लिए तैयार किए जाते हैं। यह नोट किया जाये कि ग्रामीण क्षेत्रों के लिए प्रयुक्त मासिक प्रति व्यक्ति मास श्रेणियाँ शहरी क्षेत्रों के लिए प्रयुक्त श्रेणियों से भिन्न हैं। ग्रामीण भारत में उन परिवारों का अनुपात जो प्रति माह प्रति व्यक्ति अधिकतम केवल 160/- रुपए व्यय कर सकते थे, अनुसूचित जनजाति परिवार श्रेणी में अधिकतम था। लगभग 76 प्रतिशत, जो जनजाति जनसंख्या का लगभग 81 प्रतिशत था। ये अनुपात अनुसूचित जाति के परिवारों में अपेक्षाकृत कम थे—लगभग 72 प्रतिशत, जो इस श्रेणी से संबंधित व्यक्तियों का लगभग 77 प्रतिशत था। दूसरी तरफ वे गैर-अनुसूचित जाति परिवार श्रेणी के लिए न्यूनतम थे—परिवारों का लगभग 57 प्रतिशत, जो व्यक्तियों का 62 प्रतिशत था। इसकी तुलना में उन परिवारों का अनुपात जो प्रति माह प्रति व्यक्ति 370/- रुपए अथवा अधिक व्यय कर सकते थे, गैर-अनुसूचित जाति परिवारों की श्रेणी में अधिकतम था लगभग 6 प्रतिशत जो उस श्रेणी से संबंधित जनसंख्या का लगभग 4 प्रतिशत था। तदनुरूपी अनुपात अनुसूचित जनजाति और अनुसूचित जाति परिवारों में अपेक्षाकृत कम थे—केवल लगभग 2 प्रतिशत जो व्यक्तियों का समान अनुपात था। शहरी भारत के संबंध में यह पैटर्न ग्रामीण भारत से भिन्न देखा गया है। उन परिवारों का अनुपात, जो प्रति माह प्रति व्यक्ति अधिकतम केवल 160/- रुपए व्यय कर सकते थे, अनुसूचित जाति परिवारों में अधिकतम था—लगभग 46 प्रतिशत, जो अनुसूचित जाति परिवारों का लगभग 54 था। अनुसूचित जनजाति परिवारों के सम्बन्ध में तदनुरूपी अनुपात क्रमशः 41 प्रतिशत और 47 प्रतिशत था किन्तु गैर-अनुसूचित परिवारों के लिए वे अनुपात बहुत कम थे—लगभग परिवारों का 28 प्रतिशत, जो गैर-अनुसूचित जनसंख्या वर्ग का लगभग 35 प्रतिशत था। उन परिवारों का अनुपात जो प्रति माह प्रति व्यक्ति 370 रुपए से अधिक व्यय कर सकते थे, ग्रामीण क्षेत्रों में जनसंख्या के सभी विभिन्न सामाजिक समूहों की तुलना में बहुत अधिक था। गैर-अनुसूचित परिवार वर्ग के लिए यह 21 प्रतिशत से अधिक था। इसकी तुलना में अनुसूचित जनजाति परिवारों का अनुपात 14 प्रतिशत से अधिक और अनुसूचित जाति परिवारों का 10 प्रतिशत से अधिक था।

**1.4 धारित भूमि की आधार श्रेणी के अनुसार परिवारों का वितरण :** परिवारों द्वारा "धारित भूमि" का क्षेत्र परिवार के आर्थिक स्तर का स्पष्ट संकेतक है विशेष रूप से ग्रामीण क्षेत्रों में

अतः 'धारित भूमि' की विभिन्न श्रेणियों के अनुसार किसी विशेष सामाजिक समूह से संबंधित परिवारों का वितरण उस सामाजिक समूह के आर्थिक स्तर के अनुमान को दर्शाएगा जिसकी तुलना अन्य सामाजिक समूहों के इसी प्रकार के वितरणों से की जा सकती है। विवरण-पत्र 9, 43 वें और 38 वें और सर्वेक्षणों पर आधारित जनसंख्या के विभिन्न समूहों—'अनुसूचित जनजाति', 'अनुसूचित जाति', 'नव बौद्ध' तथा 'अन्य' के संबंध में ग्रामीण भारत के लिए 'धारित भूमि' की आकार श्रेणी के अनुसार परिवारों के वितरण की तुलनात्मक तस्वीर को दर्शाता है।

यह देखा गया है कि ग्रामीण भारत में 1987-88 के दौरान अनुसूचित जाति परिवारों के लगभग 60 प्रतिशत के पास 0.2 हेक्टेयर (आधे एकड़) से कम भूमि थी जबकि तदनुरूपी अनुपात अनुसूचित जनजाति परिवारों के लिए केवल 31 प्रतिशत और गैर-अनुसूचित परिवार श्रेणी के लिए 38 प्रतिशत था। 0.40 से 1 हेक्टेयर (1 एकड़ से 2.5 एकड़) के बीच भूमि रखने वाले परिवारों का अनुपात अनुसूचित जनजाति परिवारों (22 प्रतिशत) के लिए अधिकतम था इसके बाद 'अन्य' श्रेणी परिवारों (18 प्रतिशत) और फिर अनुसूचित जाति परिवारों (15 प्रतिशत) के अनुपात आते हैं। दूसरी तरफ 'अन्य' श्रेणी परिवारों के 8 प्रतिशत के पास 4 हेक्टेयर (10 एकड़) से अधिक भूमि थी। अनुसूचित जनजाति और अनुसूचित जाति परिवारों के लिए तदनुरूपी अनुपात क्रमशः 7 प्रतिशत और 2 प्रतिशत था। 1983-88 की अवधि के दौरान 0.2 हेक्टेयर (आधे एकड़) तक भूमि रखने वाले परिवारों का अनुपात सभी सामाजिक परिवारों के लिए लगभग स्थिर रहा। फिर भी अनुसूचित जाति परिवारों के संबंध में ऐसा प्रतीत होता है कि अपेक्षाकृत

बड़ी जातों का उच्च सीमा तक विखण्डन हुआ था जिसके कारण 1983 की तुलना में 1987-88 के दौरान 0.21-0.40 हेक्टेयर 0.41-1.00 हेक्टेयर धारित भूमि श्रेणियों में परिवारों के अनुपात में वृद्धि हुई और धारित भूमि की उच्च श्रेणियों में तदनुरूपी हुआ हुआ। अनुसूचित जाति और अन्य परिवार श्रेणियों के मामले में ऐसा तथ्य नहीं पाया गया।

**1.5 कृषि भूमि के अनुसार परिवारों एवं व्यक्तियों का वितरण :** ग्रामीण भारत में कृषि रोजगार का मुख्य अंग होने के कारण कृषि भूमि का आकार श्रेणियों के अनुसार परिवारों एवं व्यक्तियों के वितरण की समीक्षा करना बहुत महत्वपूर्ण है। 1987-88 के दौरान ग्रामीण भारत में अनुसूचित जाति परिवारों का लगभग 74 प्रतिशत जो अनुसूचित जाति व्यक्तियों का लगभग 68 प्रतिशत बनाता है, केवल 0.4 हेक्टेयर (1 एकड़) से कम भूमि पर काश्तकारी करते थे जबकि अनुसूचित जनजाति परिवारों के लिए तदनुरूपी अनुपात बहुत कम थे—क्रमशः केवल 44 प्रतिशत और 37 प्रतिशत। गैर-अनुसूचित परिवारों की श्रेणी में एक एकड़ से कम भूमि पर काश्तकारी करने वाले परिवारों का अनुपात अधिक था, लगभग 50 प्रतिशत जो उस श्रेणी के परिवारों से संबंधित व्यक्तियों का 43 प्रतिशत बनाता है। दूसरी तरफ बड़ी जातों (चार हेक्टेयर से अधिक) की काश्तकारी करने वाले परिवारों का अनुपात गैर अनुसूचित परिवारों की श्रेणी में अधिकतम था, लगभग 7 प्रतिशत जो उस श्रेणी के परिवारों से संबंधित जनसंख्या का 10 प्रतिशत बनाता है। अनुसूचित जाति परिवारों के लिए तदनुरूपी अनुपात निम्नतम थे। परिवारों का लगभग 2 प्रतिशत जो जनसंख्या का इसके बराबर ही अनुपात बनाता है। अनुसूचित जनजाति परिवारों के अनुपात क्रमशः लगभग 5 प्रतिशत और 8 प्रतिशत थे।

**विवरण-पत्र 2:—**ग्रामीण क्षेत्रों में प्रत्येक परिवार समूह के लिए कृषि भूमि की आकार श्रेणी के अनुसार परिवारों एवं व्यक्तियों का प्रति 1000 वितरण। समस्त भारत

1.6 शिक्षा के अनुसार व्यक्तियों का वितरण :—किसी व्यक्ति के रोजगार की सम्भावनाओं में शिक्षा एक निर्णायक भूमिका निभाती है। अतः लोगों का शैक्षिक स्तर एक अन्य प्रमुख विशेषता है जिसकी पृष्ठ भूमि में रोजगार एवं बेरोजगारी पैटर्न का अध्ययन किया जाना है। किसी व्यक्ति को साक्षर तभी माना

जाता है यदि वह किसी भी भाषा में साधारण संदेश लिखना व पढ़ना दोनों जानता हो। लोगों के साक्षरता एवं शैक्षिक स्तर संबंधी आंकड़े रा. प्र. सर्वे. के उपभावता व्यय एवं रोजगार बेरोजगारी संबंधी पंचवार्षिक सर्वेक्षणों के एक भाग के रूप में नियमित रूप से संग्रहित किये जा रहे हैं।

विवरण 3: प्रत्येक परिवार समूह के लिए लिंग तथा ग्रामीण शहरी आवास स्तर के अनुसार प्रति 1000 व्यक्तियों पर साक्षरों की संख्या समस्त भारत

स्रोत : सारणी 31.3, \*इसमें नव बौद्ध भी शामिल हैं।

यह देखा जाता है कि कुल मिलाकर समस्त सामाजिक समूहों में, शहरी भारत के अनुसूचित जाति के पुरुषों को छोड़कर जिसके मामले में साक्षरता दर लगभग स्थिर थी, साक्षरता दर पुरुषों एवं स्त्रियों दोनों के लिए पांच वर्ष की अवधि के दौरान बढ़ी है। ग्रामीण परिवारों की अनुसूचित जनजाति तथा अनुसूचित जाति की श्रेणियों की तुलना में परिवार समूह "अन्य" में सम्पूर्ण प्रतिशतता के संबंध में साक्षरता की दर में अपेक्षाकृत और अधिक वृद्धि पाई गई। तथापि शहरी भारत में अनुसूचित जाति के परिवारों के व्यक्तियों के लिए दरें लगभग वही रहीं, इस विषय में परिवारों को अनुसूचित प्रकार की श्रेणी "अन्य" श्रेणी से अधिक रही। "अन्यों" की श्रेणी की तुलना में परिवारों की सूचीकृत श्रेणियों में साक्षात्कार बहुत कम थी। जबकि ग्रामीण भारत में "अनुसूचित जनजातियों" के लिए निम्नतम दर पाई गईं। इस संबंध में शहरी भारत में अनुसूचित जातियों का अन्तिम स्थान रहा। भिन्न भिन्न सामाजिक समूहों से संबंध व्यक्तियों के "शैक्षिक" स्तर की तुलनात्मक रूपरेखा प्राप्त करने के लिए रा. प्र. सर्वे. के 38वें तथा 43वें दोनों दौरों के सर्वेक्षणों पर आधारित समस्त भारत के लिए सम्बद्ध परिणाम विवरण-पत्र 4 में दी गई पांच विभिन्न सामान्य शैक्षिक श्रेणियों तथा—"जो साक्षर नहीं है", "साक्षर एवं प्राथमिक", "मिडिल", "माध्यमिक" एवं "स्नातक व उससे अधिक" के

अनुसार प्रस्तुत किए गए हैं। "शिक्षित" व्यक्तियों का अर्थात् "माध्यमिक एवं उससे अधिक" शैक्षिक स्तर वाले व्यक्तियों का यह अनुपात अनुसूचित जाति एवं अनुसूचित जनजाति के परिवार समूहों के लिए ग्रामीण एवं शहरी भारत के पुरुष एवं शहरी भारत के पुरुषों एवं स्त्रियों, होने के मामलों में अपेक्षाकृत अधिक है। 1983 से 1988 तक की पांच वर्ष की अवधि के दौरान ग्रामीण पुरुषों के मामले में अनुसूचित जाति के परिवारों के लिए शिक्षित व्यक्तियों में वृद्धि की दर उच्चतम रही। इसके पश्चात अनुसूचित जनजाति के परिवारों का स्थान रहा। ग्रामीण स्त्रियों के मामले में यह पैटर्न विपरीत था। शहरी भारत में अनुसूचित जनजाति परिवारों के लिए शिक्षित स्त्रियों की वृद्धि दर लगभग शत प्रतिशत थी परन्तु परिवारों को "अन्य" श्रेणी के लिए पाई गई 25 प्रतिशत वृद्धि की तुलना में अनुसूचित जाति के परिवारों (28 प्रतिशत) के लिए यह अपेक्षाकृत काफी कम थी। शहरी स्त्रियों की तुलना में "शिक्षित" के अनुपात में वृद्धि की दर शहरी पुरुषों में बहुत कम थी। यह अनुसूचित जाति के परिवारों के लिए केवल 3 प्रतिशत परिवारों की "अन्य" श्रेणी के लिए 11 प्रतिशत तथा अनुसूचित जनजाति के परिवारों के लिए 13 प्रतिशत थी।

स्रोत:—सारणी 38 (ग्रामीण) और 38 (शहरी)  
उपलब्ध नहीं-उपलब्ध नहीं

ऐसा देखा जाता है कि ग्रामीण और शहरी भारत दोनों में अनुसूचित जनजाति एवं अनुसूचित जाति की तुलना में अन्य श्रेणी के परिवारों में 5-14 वर्ष के आयु वर्ग में बच्चों का नामांकन अनुपात उच्चतर था। अनुसूचित जनजाति तथा अनुसूचित जाति के परिवारों के बीच नामांकन अनुपात परिवारों की पहली श्रेणी की अपेक्षा बाद की श्रेणी में उच्चतर पाया गया है। कुल मिलाकर 1983 से 1987-88 तक की पांच वर्ष की अवधि के दौरान शिक्षण संस्थाओं में बच्चों के नामांकन में वृद्धि हुई है। ग्रामीण भारत में समस्त सामाजिक समूहों के बच्चों में पर्याप्त वृद्धि हुई है। दूसरी ओर शहरी भारत में, केवल अनुसूचित जनजाति के परिवारों की लड़कियों में विशेष वृद्धि पाई जाती है। नामांकन में लड़कियों के मामले में परिवारों की समस्त श्रेणियों में एक सुनिश्चित अंतर पाया जाता है। ग्रामीण क्षेत्रों तथा शहरी क्षेत्रों में अनुसूचित जाति के परिवारों में यह बहुत अधिक प्रतिबिम्बित होता है। असम, हिमाचल प्रदेश, केरल तथा तमिलनाडु के ग्रामीण क्षेत्रों में तथा आन्ध्र प्रदेश, असम, गुजरात, कर्नाटक, केरल, मध्य प्रदेश, महाराष्ट्र एवं तमिलनाडु के शहरी क्षेत्रों में परिवारों की सभी तीनों श्रेणियों में लड़कों एवं लड़कियों दोनों के लिए उच्च नामांकन अनुपात पाया जाता है।

1.8 नियोजित (कार्यबल):—सामान्यतः पर पंचवर्षीय रोजगार-बेरोजगारी संबंधी सर्वेक्षण के माध्यम से जनसंख्या के वर्गीकरण के सामान्य स्तर, वर्तमान साप्ताहिक स्तर तथा वर्तमान दैनिक स्तर पद्धतियों को अपनाते हुए आंकड़े संग्रहित करके "नियोजित" (कार्य बल) के तीन अलग-अलग अनुमान तैयार किए जाते हैं। तीनों अनुमान ये हैं:—

(1) सामान्यतः नियोजित व्यक्तियों की संख्या (अर्थात् जिन्होंने सर्वेक्षण की तारीख से पहले पिछले 365 दिनों के दौरान अपेक्षाकृत लंबी अवधि तक काम किया हो),

(2) एक सप्ताह के दौरान नियोजित व्यक्तियों के औसत संख्या (अर्थात् वे जिन्होंने, सर्वेक्षण की तारीख से पहले 7 दिनों की संदर्भ अवधि के दौरान किसी भी समय काम किया हों) तथा

(3) प्रति दिन नियोजित श्रम दिवसों की औसत संख्या (अर्थात् सर्वेक्षण की तारीख से पूर्व 7 दिनों की संदर्भ अवधि के दौरान सप्ताह में किसी भी समय काम करने वाले व्यक्तियों के श्रम दिवस)।

तथापि 43वें दौर सर्वेक्षण के मामले में केवल सामान्य स्तर पद्धति हेतु रोजगार के संकेतकों को तैयार करने के लिए सामाजिक समूहवार सारणीय तैयार किए गए। सामान्यतः नियोजित व्यक्तियों के अनुमान दो श्रेणियों में प्रस्तुत किए गए हैं। प्रमुख स्तर (प्र. स्त. के कामगार) में सामान्यतः नियोजित व्यक्ति तथा गौण स्तर (गौण स्तर के कामगार) में सामान्यतः नियोजित व्यक्ति। दोनों श्रेणियां एक साथ इस कुल सामान्यतः नियोजित (समस्त कामगार) का निर्माण करती हैं। इस बात पर ध्यान दिया जाए कि सामान्यतः नियोजित की पहली श्रेणी को उन व्यक्तियों की भांति माना जा सकता है जो अधिक या कम स्थायी रोजगार वाले हैं। सामान्यतः नियोजित प्रति हजार व्यक्तियों में अनेक व्यक्तियों को सामान्य स्तर के कार्य बल में भागीदारी की दर अथवा सामान्य स्तर के कामगार के जनसंख्या अनुपात के रूप में परिभाषित किया गया है। समस्त भारत के लिए पुरुषों एवं स्त्रियों के लिए अलग-अलग सामाजिक समूह द्वारा सामान्य स्तर के कामगार जनसंख्या के अनुपात विवरण पत्र (6) में प्रस्तुत किए गए हैं।

अधिक या कम स्थायी रूप से नियोजित व्यक्तियों का अनुपात (अर्थात् प्रमुख स्तर में नियोजित) वर्ष 1987-88 के दौरान परिवारों की अनुसूचित जाति तथा "अन्य" श्रेणियों की अपेक्षा अनुसूचित जनजाति के परिवारों से संबंधित ग्रामीण पुरुषों एवं ग्रामीण स्त्रियों के लिए अपेक्षाकृत अधिक पाया गया। समस्त

सामाजिक समूहों के लिए शहरी पुरुषों में स्थायी रूप से नियोजित व्यक्तियों का अनुपात अधिकांशतः एक सा था। दूसरी ओर शहरी स्त्रियों के मामले में परिवारों की "अन्य" श्रेणी की तुलना में अनुसूचित जनजाति तथा अनुसूचित जाति के परिवारों के मामले में यह अनुपात बहुत अधिक था। परिवारों की दो अनुसूचित श्रेणियों में, "नियोजित" का यह अनुपात पुरुषों एवं स्त्रियों दोनों के मामले में ग्रामीण तथा शहरी भारत के अनुसूचित जनजाति के परिवारों के लिए अपेक्षाकृत अधिक था। 1978-88 दशक के दौरान अखिल भारतीय स्तर पर रोजगार स्तर में हुए परिवर्तनों के एक अध्ययन से यह पता चलता है कि जबकि समस्त सामाजिक समूहों के लिए ग्रामीण पुरुषों में नियोजित पुरुषों का अनुपात गिर चुका था तथापि ग्रामीण स्त्रियों

के मामले में ऐसा नहीं हुआ। उनके मामले में जबकि अनुसूचित जनजाति के परिवारों के रोजगार स्तर में गिरावट पाई गई तथापि इन वर्षों में अनुसूचित जाति एवं परिवारों की "अन्य" श्रेणी के लिए यह लगभग स्थिर रहा। शहरी क्षेत्रों में पुरुषों के मामले में नियोजित व्यक्तियों के अनुपात समस्त परिवार समूहों के लिए पूरे दशक में लगभग स्थिर रहे। जबकि शहरी स्त्रियों के मामले में, अनुसूचित जनजाति के परिवारों में रोजगार स्तर में क्रमिक गिरावट पाई जाती है तथापि अनुसूचित जाति के परिवारों में दशक के पूर्वार्ध के दौरान यह स्तर आरम्भ में गिरा तथा बाद के अर्ध दशक के दौरान लगभग स्थिर रहा। इस पैटर्न की तुलना में परिवारों की "अन्य" श्रेणी हेतु पूरे दशक में यह स्तर लगभग स्थिर रहा।

विवरण 6 :—प्रत्येक परिवार समूह के लिए और निवास स्तर के अनुसार प्रति हजार व्यक्तियों पर "सामान्यतः नियोजित व्यक्तियों की संख्या

@ 32वें दौर सर्वेक्षण के लिए सामाजिक वर्गों के अनुसार सभी "दरें" तैयार नहीं की गई थीं

\*नव बौद्ध को भी सम्मिलित किया गया है।

अखिल भारतीय स्तर पर देखी गई दूसरी विशेषता यह है कि गौण स्तर के कामगारों का यह अनुपात परिवारों की समस्त श्रेणियों में पुरुषों की अपेक्षा स्त्रियों में अपेक्षाकृत अधिक था। वस्तुतः, यह अनुपात लगभग एक जैसा पाया जाता है—परिवारों के समस्त सामाजिक समूहों में ग्रामीण पुरुषों के लिए लगभग 2 प्रतिशत, शहरी पुरुषों के लिए 1 प्रतिशत, शहरी ग्रामीण स्त्रियों के लिए 8 से 9 प्रतिशत तथा शहरी स्त्रियों के लिए लगभग 3 से 4 प्रतिशत।

आन्ध्र प्रदेश, उड़ीसा, तमिलनाडु, मध्य प्रदेश तथा कर्नाटक राज्यों में समस्त सामाजिक समूहों के लिए ग्रामीण पुरुषों में "रोजगार" का उच्च स्तर पाया जाता है। दूसरी ओर, राजस्थान, आन्ध्र प्रदेश, महाराष्ट्र तथा मध्य प्रदेश राज्यों में ग्रामीण स्त्रियों के लिए यह उच्च था। शहरी क्षेत्रों में पंजाब, तमिलनाडु, केरल, पश्चिम बंगाल तथा मध्य प्रदेश राज्यों में पुरुषों में तथा तमिलनाडु, आन्ध्र प्रदेश, कर्नाटक तथा राजस्थान राज्य में स्त्रियों में रोजगार का स्तर अधिक था।

1.9 कार्य के प्रकार के अनुसार व्यक्तियों के श्रम दिवसों का वितरण :—ग्रामीण भारत में कृषि रोजगार का प्रमुख क्षेत्र है, श्रमिकों का एक बड़ा भाग कृषि कार्यकलापों में लगा हुआ है। ये कार्यकलाप अधिकतर शारीरिक हैं अतः ग्रामीण कार्य बल के श्रम दिवस का एक बड़ा भाग कृषि संबंधी भिन्न-भिन्न शारीरिक कार्यों में व्यतीत होता है, कार्य के प्रकार के अनुसार श्रम दिवसों, के वितरण संबंधी अध्ययन को ध्यान में रखते हुए रा. प्र. सर्वे. संगठन सर्वेक्षण की तारीख से पूर्ववर्ती 7 दिनों के प्रत्येक

विवरणी 7 :—ग्रामीण क्षेत्रों के लिए कार्य के प्रकार तथा परिवार समूह के अनुसार चालू साप्ताहिक स्तर के अनुसार नियोजित के रूप के वर्गीकृत व्यक्तियों के श्रम दिवसों का प्रति हजार वितरण।

समस्त भारत

स्रोत :—सारणी 45 (ग्रामीण), नव बीडों को सम्मिलित करके।

दिन की संबंधित जानकारी संग्रहीत करता है। इस प्रकार रा. प्र. सर्वे. के 43 वें दौर में संग्रहीत आंकड़े प्रत्येक सामाजिक वर्ग के परिवारों के लिए अलग से सारणीबद्ध किए गए। विवरण पत्र 7 प्रत्येक परिवार समूह के लिए समस्त भारत के संबद्ध परिणाम प्रस्तुत करता है। ऐसा देखा जाता है कि शारीरिक श्रम पर व्यतीत किए गए श्रम दिवसों का अनुपात अनुसूचित जनजाति के परिवारों में पुरुषों और स्त्रियों दोनों में उच्चतम रहा, इसके बाद अनुसूचित जाति का स्थान रहा। तथापि, गैर कृषि कार्यकलापों से संबंधित शारीरिक श्रम युक्त कार्यों पर व्यतीत किए गए श्रम दिवसों का समानुपात अनुसूचित जनजाति के परिवारों में अपेक्षाकृत कम था। संगत अनुपात अनुसूचित जाति तथा "अन्य" श्रेणियों दोनों के परिवारों में पुरुषों के लिए 27 प्रतिशत तथा स्त्रियों के लिए 17 प्रतिशत की तुलना में लगभग पुरुष 19 प्रतिशत और स्त्रियां 13 प्रतिशत।

1.10 रोजगार के मामले की तरह सामान्यतः "बेरोजगारी" के लिए भी रोजगार बेरोजगार संबंधी रा. प्र. सर्वे. पंचवर्षीक सर्वेक्षण आंकड़ों से किए तीन भिन्न-भिन्न अनुमान तैयार किए जाते हैं।

- (1) "सामान्य स्तर" पद्धति पर आधारित सामान्यतः बेरोजगार व्यक्तियों की संख्या।।
- (2) "साप्ताहिक स्तर" पद्धति पर आधारित एक सप्ताह में औसतन बेरोजगार व्यक्तियों की संख्या और
- (3) "दैनिक स्तर" पद्धति पर आधारित एक दिन में औसतन बेरोजगारी के श्रम दिवसों की संख्या।

तथापि, रा. प्र. सर्वे. 43वां दौर सर्वेक्षण आंकड़ों से बरोजगारी की उपर्युक्त तीन संकेतकों से केवल सबसे पहले अर्थात् "सामान्यतया बरोजगार के अनुमान के सामाजिक समूहवार परिणाम तैयार किए गए। सामान्यतः बरोजगार के अनुमान संदर्भ अवधि के लिए 365 दिन अर्थात् दीर्घकाल से बरोजगार व्यक्तियों की संख्या दर्शाते हैं। समय कसौटी के आधार पर सामान्य रूप से अथवा दीर्घकालिक रूप से "बरोजगार" दर्शाए गए कुछ व्यक्ति गौण क्षमता (अपना संदर्भ वर्ष के दौरान अपेक्षाकृत लघु अवधि के लिए) में कार्यरत हो सकते हैं। अतः सामान्यतः बरोजगार के दो अनुमान प्रस्तुत किए जाते हैं :—

प्रमुख स्तर में सामान्यतः बरोजगार तथा गौण स्तर के कामगारों को छोड़कर सामान्यतः बरोजगार। ग्रामीण और शहरी भारत के लिए विवरण पत्र 8 में भिन्न-भिन्न सामाजिक वर्गों के अनुसार प्रति हजार बरोजगार व्यक्तियों की संख्या पर बरोजगारों के अनुपात प्रस्तुत किए गए हैं। 1983 की (रा. प्र. सर्वे. 38वां दौर) और 1977-78 (रा. प्र. सर्वे. 32वां दौर) की अवधि के लिए संगत परिणाम भी इसी विवरण पत्र में दिए गए हैं। वर्ष 1987-88 के दौरान, दीर्घकालिक बरोजगार अर्थात् प्रमुख स्तर में बरोजगार का अनुपात, शहरी क्षेत्रों की तुलना में ग्रामीण क्षेत्र के सभी सामाजिक समूहों के पूरुषों में अपेक्षाकृत कम पाया गया। ग्रामीण और शहरी दोनों के अनु-

विवरणी 8 : प्रत्येक परिवार समूह के लिए लिंग और विकास स्तर के अनुसार प्रति 1000 व्यक्तियों पर "सामान्यतः बरोजगार" व्यक्तियों की संख्या।

स्रोत : सारणी 53.2 और 53.4 प्र० स्तर=प्रमुख स्तर, गौण स्तर=गौण स्तर, सा० स्तर=सामान्य स्तर

@सामान्य स्तर, गौण स्तर को छोड़कर 32वें दौर सर्वेक्षण के लिए सामाजिक वर्ग से दर तैयार नहीं की गई थी।

\*नव बौद्ध भी सम्मिलित हैं।

सूचित जनजाति के परिवारों में बेरोजगार पुरुषों (प्रमुख स्तर) का अनुपात कम था। "अन्य" श्रेणी के परिवारों के ग्रामीण पुरुषों की दीर्घकालिक बेरोजगारी उच्चतम पाई गई। दूसरी ओर, शहरी पुरुषों के लिए अनुसूचित जाति के परिवारों तथा अन्य श्रेणी के परिवारों की तुलना में अनुसूचित जाति के परिवारों स्त्रियों की जनसंख्या पर विचार करते समय प्रमुख स्तर में बेरोजगारी का अनुपात, ग्रामीण भारत के अनुसूचित जनजाति और अन्य श्रेणी के परिवारों की तुलना में अनुसूचित जाति के परिवारों में उच्चतर पाया गया, परवर्ती दो श्रेणियों का अनुपात लगभग एक समान महत्व का है। शहरी भारत में अनुसूचित जाति के परिवारों की तुलना में अनुसूचित जाति तथा "अन्य" श्रेणियों दोनों का अनुपात उच्चतर रहा। 1977-78 से 1987-88 वर्षों में हालांकि प्रमुख स्तर में अनुसूचित जनजाति के परिवारों के ग्रामीण पुरुषों के मामले में बेरोजगार के अनुपात में वृद्धि हुई थी तथापि अनुसूचित जाति तथा "अन्य" श्रेणी के परिवारों के मामलों में यह लगभग उसी स्तर पर रहा। परन्तु शहरी पुरुषों

के मामले में यह अनुपात सभी सामाजिक वर्गों के लिए उसी स्तर पर रहा। यद्यपि ग्रामीण क्षेत्रों के अनुसूचित जनजाति के परिवारों की स्त्रियों को छोड़कर सभी सामाजिक वर्ग की स्त्रियों में दीर्घकालिक बेरोजगार के अनुपात में पर्याप्त कमी आई है। यह कमी ग्रामीण क्षेत्रों की तुलना में शहरी क्षेत्रों में अधिक देखी गई है।

केरल, तमिलनाडु, पंजाब और हरियाणा राज्यों में सभी सामाजिक वर्ग के ग्रामीण पुरुषों में दीर्घकालिक बेरोजगारी उच्च पाई गई। दूसरी ओर, केरल, पश्चिम बंगाल, तमिलनाडु और आन्ध्र प्रदेश राज्यों की ग्रामीण महिलाओं में यह उच्च रहा। शहरी क्षेत्रों में, केरल, पश्चिम बंगाल, तमिलनाडु, महाराष्ट्र और आन्ध्र प्रदेश राज्यों के पुरुषों और तमिलनाडु, केरल और आन्ध्र प्रदेश राज्यों की महिलाओं में बेरोजगारी का स्तर उच्च रहा।

## वृद्धों का सामाजिक रेखाचित्र (चवालीसवां दौर : जुलाई 1986—जून 1987)

### प्रस्तावना

1.1 समाज कल्याण मंत्रालय के कहने पर राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन ने 42वें दौर (जुलाई 1986—जून 1987) में वृद्धों अर्थात् 60 वर्ष अथवा इससे अधिक आयु के व्यक्तियों की सामाजिक समस्याओं के स्वरूप तथा आयाम का मूल्यांकन करने के लिए राष्ट्रव्यापी सर्वेक्षण आयोजित किया। यह रिपोर्ट केंद्र प्रतिदर्श के आंकड़ों से निर्मित वृद्ध जनसंख्या के सामाजिक रेखाचित्र के विभिन्न पहलुओं के परिणामों पर आधारित है।

1.2 सर्वेक्षण की भौगोलिक व्याप्ति :—सर्वेक्षण में (1) जम्मू और कश्मीर के लद्दाख और कारगिल जिलों और (2) नागालैंड के ग्रामीण क्षेत्र को छोड़कर संपूर्ण भारत संघ को शामिल किया गया।

1.3 रिपोर्ट की सामग्री :—रिपोर्ट में समस्त भारत और 17 राज्यों के लिए विस्तृत सारणियाँ सहित 4 खंड हैं। प्रतिदर्श अभिकल्प और आकलन प्रक्रिया खंड दो में हैं। खंड-3 में सर्वेक्षण में प्रयुक्त कुछ महत्वपूर्ण शब्दावलिओं की संकल्पनाएं तथा परिभाषाएं दी गई हैं। खंड चार में महत्वपूर्ण संक्षिप्त निष्कर्षों पर चर्चा की गई है।

### भाग 2

#### प्रतिदर्श अभिकल्प एवं आकलन प्रक्रिया

2.1 प्रतिदर्श अभिकल्प :—सर्वेक्षण के लिए अपनायी गयी प्रतिचयन प्रक्रिया द्विस्तरीय संस्तरिकृत अभिकल्प थी। ग्रामीण क्षेत्रों में प्रथम स्तरीय इकाई गांव तथा शहरी क्षेत्र में राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन के शहरी ढांचा सर्वेक्षण खंड थी। द्वितीय स्तर की इकाईयां दोनों क्षेत्रों में परिवार थे।

2.2 प्रथम स्तर की इकाईयों का चयन :—प्रतिदर्श गांवों का चयन दो स्वतंत्र अंतर्व्याप्ति उप प्रतिदर्शों के रूप में प्रतिस्थापन सहित जनसंख्या के संभाव्यता समानुपात के साथ किया गया। प्रतिदर्श खंडों का चयन दो स्वतंत्र अंतर्व्याप्ति उप प्रतिदर्शों के रूप में प्रतिस्थापन सहित सरल यादृच्छक प्रतिचयन का प्रयोग करके किया गया।

2.3 परिवारों का प्रतिचयन :—प्रतिदर्श परिवारों के चयन के लिए, ढांचे में ऐसे परिवार शामिल थे जिनमें 60 वर्ष और इससे अधिक आयु का कम से कम एक सदस्य हो। प्रत्येक प्रथम स्तर की इकाई में से यादृच्छक प्रारम्भ के साथ वृत्ताकार क्रम-वृद्ध रूप से चयन किया गया। किसी चुनी हुई प्रथम स्तर की इकाई में यदि किसी ढांचे में परिवारों की संख्या तीन से कम हो तो सर्वेक्षण के लिए सभी ऐसे परिवारों का चयन कर लिया गया।

2.4 प्रतिदर्श आकार :—सर्वेक्षण में 8312 गांवों और 4546 शहरी खंडों के प्रतिदर्श में फलें हुए लगभग 50,000 परिवारों को शामिल किया गया। प्रतिदर्श गांवों/खण्डों के राज्य-वार वितरण तथा वे परिवार जिनका सर्वेक्षण किया गया, विवरण-1 में प्रस्तुत किया गया है। (अंग्रेजी रूपान्तरण देखें)।

### भाग 3

#### संकल्पनाएं एवं परिभाषाएं

3.1 बीमारी/चोट :—सामान्य शारीरिक तथा मानसिक स्वास्थ्य की स्थिति से किसी प्रकार का विचलन बीमारी माना गया। चोट में शरीर के किसी भाग में जीव जन्तु के काटने सहित दुर्घटना में हुई सभी प्रकार की क्षति जैसे चोट, घाव, रक्त स्राव, हड्डी टूटना, जल जाना इत्यादि शामिल है।

3.2 अस्पतालीय चिकित्सा :—ऐसा व्यक्ति जिसने किसी चिकित्सा संस्थान में अन्तरंग रोगी के रूप में कोई चिकित्सा सेवा प्राप्त की हो उसे अस्पतालीय चिकित्सा प्राप्त माना गया। तथापि, प्रसूति उद्देश्य के लिए - महिला सदस्यों की अस्पतालीय चिकित्सा को सर्वेक्षण के प्रयोजन से अस्पतालीय चिकित्सा नहीं माना गया।

3.3 सामान्य कार्यकलाप स्तर :—किसी व्यक्ति का सामान्य कार्यकलाप स्तर सर्वेक्षण की तारीख से 365 दिनों की अवधि के दौरान लाभकारी और अलाभकारी कार्यकलाप में भाग लेने के बारे में मुख्य समय कसौटी के आधार पर व्यक्ति के लिए प्राप्त कार्यकलाप स्थिति थी।

3.4 वित्तीय परिसम्पत्ति एवं सम्पत्ति :—वित्तीय परिसम्पत्ति में अर्थ था कम्पनी शेयर, सरकारी धरोहर, यूनिट ट्रस्ट, राष्ट्रीय बचत पत्र इत्यादि। सम्पत्ति में भूमि और भवन शामिल थे।

3.5 सामाजिक मामलों, धार्मिक मामलों और दैनिक पारिवारिक कार्यों में भागीदारी :—सामाजिक मामलों में भागीदारी का अर्थ है, शादी, श्राद्ध, उत्सव इत्यादि जैसे महत्वपूर्ण सामाजिक समारोहों की व्यवस्था में शारीरिक अथवा मानसिक (सलाह देना) भागीदारी है। धार्मिक मामलों में भागीदारी धार्मिक समारोहों की व्यवस्था में शारीरिक अथवा मानसिक (सलाह देना) भागीदारी थी। परिवार के कार्यों में भागीदारी 'बाजार जाना' कपड़े धोना, बच्चे को स्कूल ले जाना, डाक्टर के क्लिनिक में परिवार के बीमार सदस्यों को ले जाना इत्यादि जैसे कार्यकलापों का निष्पादन था।

3.6 प्रचलन दर :—प्रचलन दर की गणना बीमारी/चोट/विषाक्त भोजन खाने के मामलों की कुल संख्या और व्यक्तियों की कुल संख्या के अनुपात के रूप में की गई है।

## भाग-4

## निष्कर्षों का सारांश

4.0 सर्वेक्षण परिणामों पर आधारित कुछ महत्वपूर्ण सार निष्कर्षों की चर्चा इस भाग में की गई है। ये परिणाम राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन द्वारा सर्वेक्षण किए गए केन्द्रीय प्रतिदर्शों पर आधारित हैं। सामान्य रूप से ये सभी राज्यों और संघ राज्य क्षेत्रों के लिए तथा समस्त भारत के लिए ग्रामीण और शहरी क्षेत्रों के लिए अलग-अलग प्रस्तुत किए जाते हैं।

4.1 सामान्य रेषा चित्र :—समस्त भारत के लिए वृद्ध (60 वर्ष तथा अधिक) जनसंख्या के बारे में कुछ मूल सूचना विवरण-2 (अंग्रेजी रूपान्तरण देखें) में प्रस्तुत है। 1986-87 के दौरान वृद्ध जनसंख्या ग्रामीण भारत में 395 लाख और शहरी भारत में 87 लाख थी। लिंग अनुपात (प्रति 1000 पुरुषों पर स्त्रियों की संख्या (ग्रामीण क्षेत्र में 675 तथा शहरी क्षेत्रों में 697 देखा गया। आर्थिक रूप से आत्म निर्भर व्यक्तियों का समानुपात शहरी भारत में लगभग 29 प्रतिशत की तुलना में ग्रामीण भारत में 34 प्रतिशत था। लगभग 6-8 प्रतिशत वृद्ध अकेले रह रहे थे और उनमें से लगभग 18-19 प्रतिशत 'वृद्धगृहों', में आना चाहते थे। लगभग 45 प्रतिशत वृद्ध पुरानी बीमारियों से पीड़ित पाए गए। वास्तव में, लगभग 5-6 प्रतिशत वृद्ध शारीरिक रूप से चलने फिरने लायक नहीं थे। ग्रामीण भारत में लगभग 41 प्रतिशत वृद्ध ग्राम तौर पर कार्यरत थे जबकि शहरी भारत में केवल 27 प्रतिशत वृद्ध कार्यरत थे।

4.2 वैवाहिक स्तर :—वृद्धों का वैवाहिक स्तर के अनुसार प्रतिशत वितरण भिन्न-2 राज्यों/संघ शासित क्षेत्रों और समस्त भारत के लिए विवरण 2 ग्रामीण (आर.) (अंग्रेजी रूपान्तरण देखें) में ग्रामीण क्षेत्र के लिए तथा 2 शहरी (यू.) (अंग्रेजी रूपान्तरण देखें) में दिया गया है। यह स्पष्ट होता है कि समस्त भारत स्तर पर 9.3 प्रतिशत पुरुषों के विवाहित होने की तुलना में स्त्रियों का प्रतिशत 32 से 37 प्रतिशत था। वृद्धों में विधवाओं का प्रतिशत पुरुषों के मामले में लगभग 6 प्रतिशत तथा स्त्रियों के मामले में लगभग 62 से 67 प्रतिशत था। पुरुषों तथा स्त्रियों में वैवाहिक स्तर में यह अंतर दम्पतियों में जीवन की प्रत्याशा की अपेक्षा आयु में अंतर के कारण है। यह समस्त भारत के स्तर पर देखा गई यह विशेषता सभी राज्यों/संघ शासित क्षेत्रों के लिए भी देखी जा सकती है।

4.3 कार्यकलाप स्तर :—वृद्धों में 'बारांजगार' और बारांजगारी की प्रतिशतता विवरण 3 (अंग्रेजी रूपान्तरण में देखें) दिया गया है।

राष्ट्रीय प्रतिदर्श सर्वेक्षण के 38वें दौर सर्वेक्षण पर आधारित तदनुकूपी परिणाम विवरण में भी प्रस्तुत किए गए हैं।

यह देखा गया है कि सामान्य रूप से बारांजगार पुरुषों की प्रतिशतता स्त्रियों की अपेक्षा अधिक है। यह भी देखा गया है

कि बारांजगारों का समानुपात शहरी क्षेत्रों में की अपेक्षा ग्रामीण क्षेत्रों में उच्च था। यह परिलक्षित है कि 42वें दौर सर्वेक्षण द्वारा निकाली गई दरें इनसे कम हैं जैसे 38वें दौर बारांजगार-बारांजगार सर्वेक्षण से प्राप्त हुआ। वृद्ध 'बारांजगार' तथा 'बारांजगार' का प्रत्येक राज्य तथा समस्त भारत के लिए प्रतिशतता ग्रामीण और शहरी क्षेत्रों के लिए अलग-अलग विवरण 4 (अंग्रेजी रूपान्तरण देखें) में दी गई है। यह देखा जाता है कि वृद्ध स्त्रियों में बारांजगारी की प्रतिशतता दादरा और नागर हवेली के ग्रामीण क्षेत्र में 42 प्रतिशत इसके बाद मंगोलय और मणिपुर (39) है। दूसरी ओर वृद्ध पुरुषों में 'बारांजगारी' की प्रतिशतता जम्बुमान निकोबार द्वीप समूह के शहरी क्षेत्रों में केवल 18 है और इसके बाद ग्रामीण दिल्ली (19), शहरी पाण्डिचेरी (23) ग्रामीण गोवा, दमण और दीव (23) और ग्रामीण बिहार (26) का स्थान है।

4.4 आर्थिक रूप से आत्मनिर्भर व्यक्ति :—आर्थिक रूप से स्वतंत्र वृद्धों की प्रतिशतता और आर्थिक रूप से स्वतंत्र वृद्धों में आश्रितों वाले वृद्धों की प्रतिशतता पुरुषों तथा स्त्रियों के लिए अलग-अलग प्रत्येक राज्य और समस्त भारत में ग्रामीण और शहरी क्षेत्रों के लिए विवरण 5 (अंग्रेजी रूपान्तरण देखें) में दी गयी है। यह देखा गया है कि समस्त भारत स्तर पर ग्रामीण वृद्ध पुरुषों का 46 प्रतिशत आर्थिक रूप से स्वतंत्र था और उसमें से लगभग 71 प्रतिशत पर आश्रित/निर्भर थे। राज्यों में आर्थिक रूप से स्वतंत्र वृद्ध व्यक्तियों की प्रतिशतता में पुरुषों और स्त्रियों दोनों के लिए बड़ी विभिन्नता देखी गई है। ग्रामीण क्षेत्र में यह विभिन्नता अधिक प्रतीत होती है।

4.5 जीवन व्यवस्था :—प्रत्येक राज्य और समस्त भारत के ग्रामीण और शहरी क्षेत्रों के लिए अकेले रहने वाले वृद्धों की प्रतिशतता विवरण 6 (अंग्रेजी रूपान्तरण देखें) में अलग-अलग दी गई है। यह परिलक्षित है कि ग्रामीण भारत में वृद्ध पुरुषों का 12 प्रतिशत और वृद्ध स्त्रियों का 1 प्रतिशत से मामूली ऊपर अकेला रह रहा था। दूसरी ओर शहरी भारत में लगभग 10 प्रतिशत वृद्ध पुरुष और 1 प्रतिशत से मामूली से कम वृद्ध स्त्रियाँ अकेली रह रही थीं। वृद्ध स्त्रियों के मामले में आर्थिक रूप से स्वतंत्र व्यक्तियों का समानुपात ग्रामीण भारत में लगभग 9 प्रतिशत था और उनमें से 51 प्रतिशत पर आश्रित/निर्भर थे। शहरी भारत में वृद्ध स्त्रियों का तदनुकूपी प्रतिशत क्रमशः 5 प्रतिशत और 36 प्रतिशत था।

4.6 शारीरिक गतिशीलता :—प्रत्येक जिले और समस्त भारत के ग्रामीण और शहरी क्षेत्रों के लिए 60 वर्ष तथा इसके अधिक आयु वाले शारीरिक रूप से चलने फिरने में असमर्थ पुरुषों और स्त्रियों का समानुपात (प्रति 1000) विवरण-7 (अंग्रेजी रूपान्तरण देखें) में दिया गया है। यह पाया गया है कि समस्त भारत स्तर पर प्रति 1000 पुरुषों में से 44-47 की तुलना में प्रति 1000 स्त्रियों में से 67-68

शारीरिक रूप से चलने फिरने में असमर्थ सूचित की गई। शारीरिक रूप से चलने फिरने में असमर्थ व्यक्तियों के समानुपात में पुरुष स्त्री अन्तर समस्त भारत स्तर पर देखा गया। यह भी देखा गया कि राज्यों में शारीरिक रूप से चलने फिरने में असमर्थ व्यक्तियों के समानुपात में राज्य अनुसार बहुत बड़ा अन्तर है। वृद्ध पुरुषों के समानुपात शहरी मणिपूर में सबसे अधिक (129) इसके बाद ग्रामीण त्रिपुरा (105) और ग्रामीण मणिपूर (103) तथा सबसे कम शहरी मिजोरम में (6) तथा इसके बाद ग्रामीण मेघालय (7) और ग्रामीण लक्षद्वीप (21) है। इसी प्रकार वृद्ध स्त्रियों का समानुपात लक्षद्वीप के ग्रामीण क्षेत्रों में सबसे अधिक (197) इसके बाद ग्रामीण त्रिपुरा में (186) और ग्रामीण गोवा, दमन व दीव (168) तथा मेघालय के व ग्रामीण क्षेत्रों में सबसे कम (12) और इसके बाद शहरी पाण्डिचेरी और शहरी गोवा, दमन और दीव (17) है।

4.7 पुरानी बीमारियाँ :—विवरण-8 (अंग्रेजी रूपान्तरण देखें) में प्रत्येक राज्य तथा समस्त भारत के ग्रामीण तथा शहरी क्षेत्रों के लिए पुरानी बीमारियों से पीड़ित सूचित किए गए वृद्ध पुरुषों और स्त्रियों का समानुपात (प्रति 1000) दर्शाया गया है। यह देखा गया है कि वृद्ध पुरुषों का पुरानी बीमारियों से पीड़ित होने का समानुपात समस्त भारत स्तर पर प्रति 1000 व्यक्तियों पर 443 से 455 के बीच विचलन करता है। वृद्ध पुरुषों तथा स्त्रियों का समानुपात अधिकांश राज्यों में इसी स्तर का है। वे राज्य जिन्होंने अपेक्षाकृत अधिक अन्तर का संकेत दिया वे थे, चड्डीगढ़, गोवा, दमन व दीव लक्षद्वीप के ग्रामीण क्षेत्र तथा पाण्डिचेरी, लक्षद्वीप, और अण्डमान व निकोबार द्वीप समूह के शहरी क्षेत्र।

4.8 वृद्धों से वृद्ध गृह में जाने की इच्छा :—वृद्धों के लिए बनाए गए गृहों में जाने की इच्छा रखने वाले व्यक्तियों का समानुपात (प्रति 1000) जो अकेले रह रहे हैं, विवरण-9 (अंग्रेजी रूपान्तरण देखें) दिया गया है। यह देखा जाता है कि ग्रामीण भारत में अकेले रहने वाले प्रति 1000 वृद्ध पुरुषों में से 198 वृद्ध पुरुषों ने वृद्धों के लिए बनाए गए गृहों में जाने की इच्छा व्यक्त की। शहरी भारत के लिए तदनुसूची समानुपात 181 था। वृद्ध स्त्रियों में से अपेक्षाकृत बहुत कम समानुपात में अर्थात् ग्रामीण क्षेत्रों में प्रति 1000 स्त्रियों में से 87 तथा शहरी क्षेत्रों में प्रति एक हजार में से 95 ने वृद्ध गृहों में जाने की इच्छा व्यक्त की।

4.9 वृद्ध गृहों की अवस्थिति :—अकेले रहने वाले और वृद्ध गृह में जाने के इच्छुक वृद्धों से ऐसे गृहों की अवस्थिति के बारे में उनकी प्राथमिकता पृच्छी गयी जहाँ वे जाना पसन्द करेंगी। वृद्ध गृहों की स्थिति के अनुसार वृद्धों के उनमें जाने की इच्छा रखने वाले व्यक्तियों का समानुपात

(प्रति 1000) और उनकी आर्थिक आत्मनिर्भरता स्थिति समस्त भारत के ग्रामीण तथा शहरी क्षेत्रों के लिए विवरण-10 (अंग्रेजी रूपान्तरण देखें) में दी गई है। विवरण-11 (अंग्रेजी रूपान्तरण देखें) में प्रत्येक राज्य के ग्रामीण तथा शहरी क्षेत्रों के लिए इन गृहों की अवस्थिति के लिए उनकी प्राथमिकता के अनुसार ही समानुपात दिया गया है। यह स्पष्ट होता है कि अकेले रहने वाले वृद्धों ने अपने घर के स्थान से बाहर किसी गांव/कस्बों में अपनी वर्तमान निवास की अपेक्षा अपने गांव/शहर में स्थित वृद्ध गृह में जाने की प्राथमिकता दी। अकेले रहने वाले प्रति 1000 वृद्ध पुरुषों में से लगभग 133-134 ने अपने ठहरने के गांव/शहर में स्थित गृह में जाने की इच्छा व्यक्त की जबकि समस्त भारत स्तर पर प्रति 1000 वृद्ध स्त्रियों में तदनुसूची समानुपात 112 ने 125 रहा। कुछ राज्यों में वृद्ध व्यक्तियों ने उसी राज्य में परन्तु अपने ठहरने के गांव/ब्लाक के बाहर स्थित गृह में जाने के लिए अपनी प्राथमिकता व्यक्त की।

4.10 वित्तीय परिसम्पत्तियाँ तथा सम्पत्ति :—विवरण-12 (अंग्रेजी रूपान्तरण देखें) से पता चलता है कि वित्तीय परिसम्पत्तियाँ रखने वाले वृद्ध पुरुषों का समानुपात (प्रति 1,00,000) ग्रामीण तथा शहरी भारत में क्रमशः 581 और 525 रहा। जबकि स्त्रियों के लिए तदनुसूची समानुपात 482 और 371 रहा। इसके अतिरिक्त सम्पत्ति रखने वाले पुरुषों का समानुपात ग्रामीण तथा शहरी भारत में क्रमशः 819 और 700 रहा जो स्त्रियों के लिए क्रमशः 633 और 481 था। राज्य स्तर पर प्रत्येक लिंग तथा क्षेत्र के लिए समानुपात काफी भिन्न है।

4.11 सामाजिक तथा धार्मिक मामलों और दैनिक परिवार कार्यों में भागीदारी :—सामाजिक मामलों, धार्मिक मामलों तथा परिवार के दैनिक कार्यों में भाग लेने वाले वृद्ध व्यक्तियों का समस्त भारत समानुपात (प्रति 1000) प्रति लिंग तथा वैवाहिक स्तर के लिए अलग-अलग विवरण-13 (अंग्रेजी रूपान्तरण देखें) में दिया गया है। यह देखा गया है कि समस्त भारत स्तर पर सामाजिक मामलों, धार्मिक मामलों तथा परिवार के दैनिक कार्यों (जैसा सर्वेक्षण के प्रयोजन के लिए परिभाषित किया गया है) में भागीदारी की दर काफी ऊँची थी और यह स्त्रियों की अपेक्षा पुरुषों में अधिक थी तथा इस समय विवाहित वृद्ध पुरुषों के लिए भी अधिक थी। उक्त भागीदारी दर (प्रति 1000) ग्रामीण तथा शहरी क्षेत्रों के लिए पृथक-पृथक प्रत्येक राज्य के लिए विवरण-14 में प्रस्तुत की गई है। यह स्पष्ट होता है कि शहरी मिजोरम में सामाजिक मामलों में भागीदारी की दर सबसे कम तथा ग्रामीण दिल्ली में सबसे अधिक थी। दूसरी ओर धार्मिक मामलों में भागीदारी की दर शहरी मिजोरम में सबसे कम और ग्रामीण सिक्किम में सबसे अधिक थी।
