## NOTES

1. Some aspects of internal migration (All-India) :  
NSS 43rd round (July 1987—June 1988).
2. Morbidity and utilisation of medical services :  
NSS 42nd round (July 1986—June 1987).
3. Bibliography of National Sample Survey Results

## HIGHLIGHTS OF NEXT ISSUE:

1. Utilisation of family planning services :  
NSS 42nd round (July 1986—June 1987)
2. Particulars of dwelling units :  
NSS 43rd round (July 1987—June 1988)
3. Report on the third annual survey on consumer  
expenditure and employment-unemployment :  
NSS 45th round (July 1989—June 1990)

# SOME ASPECTS OF INTERNAL MIGRATION (ALL-INDIA) NSS 43RD ROUND (JULY 1987—JUNE 1988)

## SECTION ONE

### INTRODUCTION

1.1 *Background* : Data on internal migration forms one of the basic sources for the inter-censal estimation of population of any region of the country. Apart from births and deaths, it is the only other cause of change in population. Besides the estimation of population figures, an analysis of the cause and nature of population movements helps in socio-economic planning. Urbanisation which is considered to be the most important aspect of transition from agricultural economy to industrialised economy, is the direct result of migration of people from rural areas to towns and cities. Thus, movement of people have always been associated with economic development. Political upheavals and natural calamities also force people to migrate in large numbers. Other reasons for migration are social customs like marriages, resettlement of population as a result of Government policies, pursuing academic careers etc. A comprehensive sample survey like that of the NSS helps in making a detailed study of the profile of migrants in India.

1.2 *Sources of migration data* : Census of India is the largest single source of data on migration characteristics of the people of India. The NSS from its 9th round survey (1955) has been collecting data on migration as part of its employment and unemployment enquiries. In the 9th, 11th and 12th rounds of surveys, migration particulars were collected for the labour force population only. From the 13th round onwards, more detailed information on internal migration has been collected. Results based on the data collected in the 9th, 11th, and 12th rounds were released through NSS report no. 53 : 'Tables with notes on internal migration'.

1.3 In the NSS 28th round survey on birth, death, morbidity and disability, migration particulars of the usual members of the sample households were also collected. Based on this survey, the estimates of migration rates have been published in Sarvekshna Volume I, No. 1.

1.4 *Current position of NSSO surveys on migration* : NSSO has integrated the collection of migration data with the regular quinquennial surveys on employment and unemployment from the 38th round

(1983). The 43rd round (1987-88) survey on which this report is based is the second in this series of surveys. With a uniform conceptual frame-work and five year periodicity, migration data would now be available from the NSSO surveys. The 38th round results have been released in the Sarvekshna Vol. XIII No. 3.

1.5 It may be noted that from the 38th round onwards NSSO has adopted a slightly different norm from what had been adopted for the 28th round survey for considering a person as a migrant. While for the 28th round, a person was considered a migrant if his/her residence was different from the place of enumeration one year ago, in the 38th and 43rd rounds a different concept was used which is explained below.

1.6 *Definition of a migrant as adopted for the current surveys* : A normally resident member of a sample household was treated as a 'migrant' if the person's village/town of enumeration was different from his/her 'last usual place of residence', (village/town). The last usual place of residence is defined as the village/town where the person has stayed continuously for at least six months immediately prior to moving to the present village/town where the person is enumerated.

1.7 *Information collected* : Information on migration particulars was collected in a separate block of the employment and unemployment survey schedule alongwith the usual activity status particulars. The information collected for each of the person identified as a migrant included reason for migration, type of last usual place of residence, period since migrated, usual activity pursued at the time of migration etc. Besides these, their demographic particulars such as, age, sex, educational standard, present usual activity status etc. were also collected.

1.8 The present report gives the results based on the tabulation of data on migration collected in the 43rd round survey in respect of central samples only. The report in section two gives the details of the sampling design, coverage, estimation procedure etc. Important summary results for all-India and states with explanatory notes are given in section three. The detailed tables for all-India are given in Part II

SECTION TWO

Sampling design, Coverage and Estimation procedure

2.1 The 43rd round survey in which data on migration was collected covered the entire country excepting the Ladakh and Kargil districts of Jammu & Kashmir and rural areas of Nagaland.

2.2 *Sample design* : The sample design adopted in the 43rd round survey was a stratified two stage one. The first stage units (fsu's) were the census villages in rural areas and the urban blocks of the NSSO urban frame survey in urban areas while the households formed the second stage units (ssu,s) (For a detailed description of the sampling design, formation of strata, estimation procedure etc., see 'Sarvekshna, Special Number'. Results of the fourth quinquennial survey on employment and unemployment (All-India)—September 1990).

2.3 *Sample size* : The 43rd round survey covered about 1.3 lakh sample households spread over about 8400 sample villages and 4600 sample blocks. About 6.7 lakh persons were surveyed during the one year survey period out of which approximately 1.6 lakh persons qualified as migrants as per the definition of migrants explained in Section One. The regional breakdown of fsu's and the ssu's are given in Statement 1. Statement 2 gives the number of migrants covered in the survey for various states and union territories.

2.4 *Survey period sub-round formation* : The survey was started in July, 1987 and was completed in June, 1988. The entire survey period of one year was divided into four sub-round periods of three months' duration coinciding approximately with the four climatic seasons. The sub-round periods were July' 87 to September' 87, October' 87 to December' 87, January' 88 to March' 88 and April' 88 to June' 88. The sample villages and blocks were distributed over the four sub-rounds in a manner so as to provide valid estimates for each of the sub-round periods separately.

2.5 *Estimation procedure* : The estimation procedure adopted for the NSS 43rd round was based on a weighted sum of the sample values. Denoting by  $\hat{Y}$  the unbiased estimate of Y (the state/region total of any variate), it was estimated as :

$$\hat{Y} = \sum_s \frac{P_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{C_{si} P_{si}} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} y_{sikj} \dots\dots\dots(1)$$

for the rural sector except Arunachal Pradesh,

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{n_s} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{i_{sik}} y_{sikj} \dots\dots\dots(2)$$

for rural Arunachal Pradesh and

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} y_{sikj} \dots\dots\dots(3)$$

for the urban sector where

s, i, j and k are suffixes for stratum, village/block, household and sub-stratum respectively;

$P_s, N_s$  and  $n_s$  give the stratum values of selection population, number of villages/blocks in the frame and number of sample villages/blocks respectively;

$D_{si}, C_{si}, P_{si}$  stand for number of hamlet-groups/sub-blocks formed, number of census villages contained in a revenue village actually surveyed and the selection population of the sample village respectively;

$H_{sik}$  and  $h_{sik}$  stand for the total number of households listed and the number of sample households respectively and  $y_{sikj}$  is the observed value of the variate of a sample household.

2.6 *Estimates of ratio* : The estimate of a ratio of the form

$$R = Y/X \text{ was given as}$$

$$R = \hat{Y}/\hat{X}, \text{ where}$$

$\hat{Y}$  and  $\hat{X}$  are obtained using the formulae already given at the level at which  $\hat{R}$  is required. That is to say, if  $\hat{R}$  was required at state level,  $\hat{Y}$  and  $\hat{X}$  were first obtained at state level and then  $\hat{R}$  was obtained by division.

STATEMENT I : NUMBER OF VILLAGES/BLOCKS ALLOTTED AND SURVEYED AND NUMBER OF SAMPLE HOUSEHOLDS AND PERSONS SURVEYED.

### SECTION THREE

#### SUMMARY OF FINDINGS

3.0 Based on the analysis of the detailed results generated from the data collected during the survey, this section presents a few summary findings which provide important characteristics of 'internal migration' in India. Apart from the tables giving the proportions and the distribution of migrant population, tables giving the economic profile of migrants and the reason for their migration etc. are also presented with brief analysis. These summary tables have been compiled from the detailed tables given in Part II

3.1 *Migration rates* : There are two kinds of rates pertaining to migration for any region, the 'in-migration rate' and the 'out-migration rate'. Their difference gives the net change in population due to migration. However, estimates of out-migration can not directly be obtained from surveys. The present surveys are planned to obtain the in-migration rates and also the profile of the migrants. For the surveys, a migrant is identified in the sample household as one whose 'last usual place of residence' was different from the village or town where he/she is enumerated. In-migration rate for any region is estimated as the proportion of migrants in the region during a specific period of time to the total population of that region. In the 43rd round survey, as in the case of 38th round, each migrant was asked about the period elapsed since migrating from his last usual place of residence. Based on this information, the percentage of migrants to total population classified according

to the period since migrated are given for all-India in Statement 3. The table also gives the corresponding proportions worked out on the basis of NSS 38th round survey conducted during January to December 1983.

3.2 It is seen that both in the rural and urban areas, the percentage of male migrants have remained almost constant—about 7 per cent for rural areas and 27 per cent for urban areas over the two quinquennial rounds of survey. In the case of females a slight increase is, however, observed. The percentage based on NSS 43rd round being 40 for rural as well as urban areas is higher than the corresponding proportions based on 38th round being 35 per cent and 37 per cent, respectively, for rural and urban India. The percentage of migrants among females is significantly higher than the percentage of migrants among males both in the rural and urban areas. However, this difference should not be attributed to any economic factor that makes Indian females more mobile than their male counterparts. As will be clear from the Statements presented later, the most important factors for female migration are those associated with 'marriage' and 'accompanying earning members of the household'. That the migration caused by these factors is of more enduring nature is evident from the results presented in Statement 3 which indicates an immigration increase by about 5 percentage points for rural areas and 3 percentage points for urban areas over the two surveys with about five years' interval.

STATEMENT 3 : PERCENTAGE OF MIGRANTS TO TOTAL POPULATION BY PERIOD SINCE MIGRATED.

ALL-INDIA

period since migrated	rounds	rural			urban

As expected, percentage of migrants over the period since migrated decreases. This decrease is more rapid for males compared to females, both in rural and urban areas. Thus, a differential pattern of mobility among the males and females can be observed in the decreasing percentages.

3.3 *In-migration rates for States and Union territories* : Statement 4 gives the percentage of in-migrants for different states and union territories separately for rural and urban areas. The information is presented for three different periods—'last one year', 'last five years', and 'last ten years' and also for all years. As observed for all-India, the percentage of migrants of 'all years' is significantly higher among female population than among male population almost in all the states and union-territories for both rural and urban areas. Of the major states, the percentage of migrants of all years among rural males was highest in Kerala (17.9) followed by Andhra Pradesh (13.0), Punjab (12.1), Tamil Nadu (11.4) and Maharashtra (10.1). This percentage was lowest in Bihar (1.3). In the case of rural females, on the other hand, the proportion of migrants of 'all years' was as high as about 50 per cent in the states of Haryana, Punjab, Rajasthan and Uttar Pradesh. In the other states, it varied from about 12 per cent to 48 per cent. The in-migration rate for a period of one year among the rural males was a little over 3 per cent in Kerala and between 2-3 per cent in the states of Andhra Pradesh, Maharashtra, Punjab, and Tamil Nadu. It was practically negligible in Assam and Bihar. Among the rural female population, Punjab topped the list closely followed by Kerala the rate being a little over 4 per cent in both the states. As regards urban population, in the case of males, the in-migration rates of all years was as high as about 40 per cent in Haryana followed by West Bengal (36.5 per cent), Orissa (34.3 per cent), Punjab (32.3 per cent), Andhra Pradesh (33.0 per cent) and Himachal Pradesh and Tamil Nadu (30.6 per cent). In the case of females again Haryana topped the list (54.3 per cent) followed by Punjab (51.3 per cent). Considering the one year period, both in the case of males as well as females, the rate exceeded 6 per cent in the major states of Andhra Pradesh, Haryana and Himachal Pradesh. Assam and Bihar were again at the bottom rung in this respect.

3.4 *Reasons for migration* : From the point of understanding the phenomena of population movements, an analysis of the reasons for migration as ascertained from the individuals, identified as migrants, becomes very important. Broadly there are the 'pull' factors and the 'push' factors which induce migration. Pull factors are those which attract migrants

to a place due to availability of better opportunities, mostly economic while push factors are those which act as disincentives for persons to remain where they are. There could also be economic factors or other external events. However, these two factors do not lend themselves to clear out classifications for survey purposes. Taking all these aspects into consideration, for the NSSO surveys, the reasons for migration are categorised as follows :—

- (1) In search of employment.
- (2) In search of better employment (for persons who were already employed at the place of origin at the time of migration).
- (3) Under transfer on service/business contract.
- (4) For pursuing studies.
- (5) On marriage.
- (6) Due to migration of parents or earning member.
- (7) Due to political changes/lack of security or social adjustments.
- (8) Due to natural calamities.
- (9) Due to other reasons.

It may be noted that reasons for migration listed under serial numbers 1, 2 and 3 are related to employment of the concerned migrants and can broadly be identified as economic factors. Those under serial numbers 5 and 6 can be categorised as social factors while those under 7 and 8 are the factors on which a migrant has limited individual discretion.

3.5 Statement 5 presents distribution of migrants by reason for migration. To study the pattern of migration by reason, the estimated distribution is presented separately for migrants during last one year, last five years and last ten years. A look at the results presented in the statement shows that the reasons inducing bulk of the females to migrate are almost totally different from those inducing males to migrate. Among the male migrants, 33 per cent in rural areas and 46 per cent in urban areas had migrated during the last year under the influence of the economic factors (i.e., the first three reasons taken together). On the other hand, the corresponding percentages among the female migrants were only about 4 and 7 respectively for rural and urban areas. The pattern remained the same for those migrated during the last five years and also during the last ten years excepting that the percentages varied slightly. Among the female migrants during the last one year 64 per cent in rural areas and 29 per cent in urban areas had changed place of residence due to marriage. For the female migrants during the five year period, 'marriage' accounted for 73 per cent of them in rural India and 36 per cent in urban India.

NA—indicates estimates were not computed for 38th round survey.

The two social factors—'marriage' and 'accompanying parents or earning members'—together accounted for as high as 84 per cent of the rural females and 77 per cent of the urban females migrated during the last one year. Considering the migrants during the last five years, the corresponding percentages were 88 and 80 respectively for rural and urban areas. Percentages for the ten year period worked out to 90 per cent for rural female migrants and 83 per cent for their urban counterparts. Thus, a vast

majority of females would not have been participants in the migration process but for the social factors which forced them to move either to join their husbands or to accompany their family members when they change their places of residence.

3.6 The percentage distribution of migrants during last one year, last five years and last ten years for different states and union territories are presented in Statement 6.

3.7 *Distribution of migrants by monthly per capita expenditure (MPCE)* : In the NSSO quinquennial surveys, data on employment-unemployment and consumer expenditure are collected from a common set of sample households. Based on the data collected on consumer expenditure of the household, monthly per capita expenditure (MPCE) is worked out for each sample household and recorded in the survey questionnaire on employment-unemployment. Using this information, the percentage distribution of migrants by MPCE classes are derived. Statement 7 gives this distribution of persons migrated during last one year, last five years and last ten years separately for rural and urban India. It may be noted that expenditure classes are different for rural and urban areas. It is observed from the statement that for the persons who had migrated during the last one year 55 per cent of the males belonged to the class of households with monthly expenditure of over Rs. 160/- per person in rural areas whereas in the urban areas the corresponding proportion was about 80 per cent. In the case of female migrants during the one year period, these percentages were 43 for rural areas and 72 per cent for urban areas. The minimum per capita consumer expenditure of about one half of the rural male migrants during the one year period was Rs. 180/- per month per person. On the other hand, their urban counterparts spent a minimum of Rs. 255/- per month per person. In the case of female migrants the corresponding proportions were 35 per cent for rural India and 40 per cent for urban India. The bottom 20 per cent of the rural male migrants during the one year period spent only a maximum of Rs. 110/- per month per person whereas, the bottom 20 per cent of urban male migrants spent a maximum of about Rs. 160/- per person. In the case of female migrants the percentage of persons belonging to these expenditure levels was 28 for both rural and urban India.

3.8 *Distribution of migrants by place of origin* : So far the report has considered the migrants as a whole irrespective of the distances traversed by them from the place of origin to the place of migra-

tion. Now, an analysis of the survey results is made by the 'type of last usual place of residence' i.e., the place of origin. Migrants have been grouped into four broad categories, namely, those migrating from (i) same district (ii) other districts of the same state, (iii) other states and (iv) other countries. Migration from the first two types of places are usually of short distance and expectedly the most prevalent. Though the regional imbalances in economic development has a positive contribution in migration between regions, strong restraining factors like language and communication barriers, transport difficulties racial and other social divisions have their own negative influence on migration.

3.9 It is observed from statement 8 that in rural India, of the male migrants during the last one year, 63 per cent of them had come from within the same district. The corresponding proportion for urban India was 42 per cent. In the case of females, this proportion was about 74 per cent and 48 per cent for rural and urban India respectively. On the other hand, of the male migrants during the last one year, those from the same state accounted for 85 per cent of the migrants in rural areas and 76 per cent of the migrants in urban areas. For females, the corresponding proportions were 93 per cent for rural areas and 82 per cent for urban areas. No remarkable change in the migration pattern is observed while considering the longer periods elapsed since migration or for that matter the results based on the NSS 38th round survey. Thus, it becomes evident that in India, inter-state migration is limited in comparison to intra-state migration. In fact for males, inter-state migrants account for only about 22 per cent of the male migrants during a one year period in urban India and 14 per cent of the total male migrants in rural India. In the case of females, about 18 per cent of the migrants in urban areas and about 7 per cent of the migrants in rural areas were from outside the state during the same one year period. Statement 9 gives the distribution of migrants by place of origin in respect of states and union territories.

## MORBIDITY AND UTILISATION OF MEDICAL SERVICES

### NSS 42ND ROUND (JULY 1986—JUNE 1987)

#### Section One

#### INTRODUCTION

1.1 The fortysecond round of the National Sample Survey was devoted mainly to an enquiry on social consumption. The object was to make an assessment of the benefits derived by various sections of the society from public expenditure incurred by the government; particularly in the areas of education, public distribution and health care. With this view, an integrated survey on Maternity, Child Care, Family Planning, Utilisation of Public Distribution System, Education and utilisation of Medical Services was conducted during July 1986—June 1987. The scope of the present report is to provide the results of the survey on utilisation of medical services.

1.2 In this report results are presented on hospitalised cases by type of hospital, system of medicine availed category of payment, average duration of stay in the hospital and average total expenditure per hospitalised case, etc. In addition to these, results on non-hospitalised treatments of ailments are also presented in this report. In Part II are given the tables with detailed results for all-India and the 18 major states. The summary tables give the key results for the remaining states and the union territories.

1.3 *Geographical coverage of the survey* : The survey covered the whole of Indian Union except (i) Ladakh and Kargil districts of Jammu & Kashmir and (ii) the rural areas of Nagaland.

1.4 *Sample design* : The sampling procedure adopted for the survey was a two-stage stratified design.

The first stage units (fsu's) were villages in the rural sector and urban blocks in the urban sector while the second stage units (ssu's) were households in both the sectors.

1.5 *Selection of first stage units (fsu's)* : The sample villages were selected with probability proportional to population with replacement in the form of two independent inter-penetrating sub-samples (IIPNS). The sample blocks were selected by simple random sampling without replacement (SRSWOR), also in the form of two IIPNS's.

1.6 *Sampling of households* : For the selection of sample households in a village/block, the households were divided into two sub-strata—one containing households with at least one member who had been hospitalised during last 365 days and other containing households with at least one member who had fallen ill or been injured during last 30 days out of those households not included in the first sub-stratum. A sample of 2 households was selected from each sub-stratum circular systematically with a random start.

1.7 *Sample size* : The survey was conducted in a sample of 8346 villages and 4568 urban blocks. The statewise numbers of sample villages and blocks are given for the eighteen selected states and all-India in Statement 1. The sample sizes for all-India are inclusive of the samples of those states and union territories for which the detailed survey results could not be presented in the report.

STATEMENT 1 : NUMBER OF SAMPLE VILLAGES AND BLOCKS ALLOTTED AND SURVEYED FOR SELECTED STATES AND ALL-INDIA

State/u.t.	rural		urban	
	no. of villages allotted	no. of villages surveyed	no. of blocks allotted	no. of blocks surveyed
Andhra Pradesh	624	614	344	341
Assam	363	364	120	119
Bihar	816	787	216	208
Gujarat	280	280	232	230
Haryana	128	128	64	64
Himachal Pradesh	208	304	48	48
Jammu & Kashmir	328	326	152	151
Karnataka	344	340	240	236
Kerala	336	336	144	144
Madhya Pradesh	656	635	312	302
Maharashtra	576	571	552	548
Orissa	368	357	120	120
Punjab	272	265	192	188
Rajasthan	368	367	176	176
Tamil Nadu	480	480	432	431
Tripura	208	158	48	36
Uttar Pradesh	1064	1043	456	452
West Bengal	520	498	352	338
All-India	8546	8346	4656	4568

1.8 *Content of the report* : The report contains tables separately for rural and urban sectors in respect of eighteen selected states and all-India. In addition to these, the other sections of the report.

contain (i) Estimation Procedure, (ii) Concepts and Definitions, (iii) Explanatory Note on Detailed tables and (iv) Summary of findings.

Section Two

ESTIMATION PROCEDURE

2.1 *Notation* : The following notations are used in the sequel :—

- S : subscript for state/u.t./region
  - s : subscript for stratum
  - i : subscript for sample village/block
  - j : subscript for sample household
  - k : subscript for sub-stratum
  - P : total frame population of stratum in rural sector
  - p : population of sample village (used for selection)
  - N : total number of urban blocks in frame in urban stratum
  - n : number of sample villages/blocks available for tabulation including depopulated and other zero cases in rural/urban stratum (excluding casualty and other not received cases)
  - D : number of hamlet-groups/sub-blocks formed
  - c : number of census villages in surveyed revenue village
  - H : total number of households listed in frame
  - h : number of sample households available for tabulation
  - x,y : value of any character
  - X,Y : aggregate estimate of x, y
  - R : any ratio of the form Y/X
- A cap ( $\hat{\ } \text{A}$ ) placed over any symbol such as  $\hat{Y}$  denotes the estimate obtained from the sample.

2.2 *Estimate of aggregates* : The formulæ for  $\hat{Y}$ , the estimate of aggregate of any characteristic y are given as

$$\hat{Y}_s = \sum_s \frac{P_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{C_{si} \cdot P_{si}} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} y_{sikj}$$

for the rural sector

where  $H_{si1}$  and  $H_{si2}$  are total number of households in the frames of sub-strata 1 and 2 respectively for schedule 25.7

$$\text{and } \hat{Y}_s = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} y_{sikj}$$

for the urban sector

2.3 *Estimate of ratios* : The estimate of a ratio of the form  $R=Y/X$  is given by  $\hat{R} = \hat{Y}/\hat{X}$ , where Y and X are obtained by using the formulæ already given at the level at which  $\hat{R}$  is required.

Section Three

CONCEPTS AND DEFINITIONS

3.1 *Illness/injury* : Any deviation from the state of normal physical and mental well-being is considered as illness. Injury covers all types of damage to any part of the body such as cuts, wounds haemorrhages, fractures, burns etc. caused by accidents including bites.

3.2 *Hospitalisation* : A person is considered as hospitalised if she/he has availed of medical services as an indoor patient in any medical institution. However, hospitalisation of female members for the purpose of child birth was not considered as hospitalisation for the purpose of this survey.

3.3 *Adult education classes* : Adult education class relates to the highest education level attained among the adult members of the household.

3.4 *Average total expenditure* : The average total expenditure per hospitalised case/person hospitalised

is the ratio of the total expenditure for hospital treatment to total number of hospitalised cases/persons hospitalised reporting payment.

3.5 *Proportion of person with ailments* : Ailments, which prevailed for any length of time during the reference period of 30 days preceding the date of survey have been considered for this enquiry. However, the ailments which were not treated as an in-patient in a hospital have only been considered for working out the proportion of persons with ailments. The proportion of persons with ailments is given by the ratio of the persons with ailments, observed during the reference period of 30 days preceding the date of survey, to the total number of persons.

#### Section Four

##### EXPLANATORY NOTE ON DETAILED TABLES

4.1 *Fractile-group* : It was mentioned earlier that the 42nd round survey was an integrated enquiry on maternity and child care, family planning, utilisation of educational services and medical services etc. Data on utilisation of educational services were collected through schedule 25.2 and that of medical services through schedule 25.7. While the second stage sampling frame for the former constituted all the households of a village/block that for the latter constituted all the households which reported at least one of their members as either hospitalised during last 365 days, or fallen ill or injured during last 30 days, preceding the date of listing of households. Thus, the second stage sampling units for the enquiry on utilisation of medical services was a truncated one representing only part of the population. In order to study the survey results on utilisation of medical services by fractile-groups, the monthly per capita expenditure limits of the different fractile-groups were, therefore, worked out on the basis of the fractile distribution obtained from the tabulation of data collected through schedule 25.2.

4.2 For generation of table 4 series giving the distribution of hospitalised cases by type of medical services and type of payment, the cases with type of payment 'not recorded' were excluded from tabulation. This had resulted in slight differences in the overall estimated proportions of hospitalised cases in the government and private hospitals as given by the different types of medical services utilised.

#### Section Five

##### SUMMARY OF FINDINGS

5.1 The survey results show that on an average about 149 lakh persons were hospitalised in rural

India and 26 lakhs in urban India in a period of 365 days (July 1986—June 1987). The male-female ratio among the hospitalised persons was about 56 : 44 both in the rural and urban sectors. The number of hospitalised cases per person hospitalised were observed to be 1.07 and 1.06 respectively in rural and urban India. The prevalence rate of hospitalisation (28 and 17 per 1000 persons respectively for rural and urban sectors) indicates a lower order of hospitalisation in the urban sector as compared to the rural.

5.2 *Hospitalised cases by type of hospital* : The percentage distribution of hospitalised cases over types of hospitals is given in statements 2R and 2U. It is observed that about 55 per cent of the hospitalised cases in the rural sector were treated in the public hospitals and about 32 per cent in the private hospitals. The corresponding figures for the urban sector were about 60 per cent and 30 per cent respectively. It is observed that the proportion of hospitalised cases treated by primary health centres was only about 1 per cent in the urban sector as against about 4 per cent in the rural sector. The preference of getting treated as an inpatient in a public hospital over other types of hospitals is observed in all the states and union territories except in Andhra Pradesh, rural Kerala, Maharashtra and rural Punjab where treatment in private hospitals was preferred to public hospitals.

5.3 *Hospitalised cases by type of wards used* : The percentage distribution of hospitalised cases by type of ward is given in Statement 3. While about 61 per cent of the hospitalised cases in rural India were treated in free wards, about 32 per cent cases got treated in paying general wards and 7 per cent in paying special wards. The percentages of hospitalised cases treated in the corresponding types of wards were observed to be 55, 32 and 13 respectively in urban India. This observed all-India pattern of the use of wards by the hospitalised cases could also be seen for all states and union territories except for Andhra Pradesh, Gujarat, Maharashtra, urban Meghalaya and rural Punjab, where the percentage of hospitalised cases in the paying general ward is observed to be higher than that in other types of wards.

5.4 *System of medicine used* : The percentage distributions of hospitalised cases over the system of medicine used during hospitalisation are given in Statements 4R and 4U, respectively for the rural and urban sectors of each state and all-India. Results reveal that allopathic system of medicine was used in respect of more than 98 per cent of the hospitalised cases in both rural and urban India.

The percentages of hospitalised cases using allopathic system of medicine were lowest in the rural (88 per cent) and urban (90 per cent) sectors of Manipur. On the other hand, the homeopathic system of medicine had been used only in a few cases

of hospitalisation. For rural areas, such percentage is observed to be highest in Pondicherry and Manipur (4%) and for urban areas in Mizoram (5%) followed by Tripura and Manipur (1%).

STATEMENT 2R : PERCENTAGE DISTRIBUTION OF HOSPITALISED CASES OVER TYPE OF HOSPITAL FOR EACH STATE/U.T.

5.5 Hospitalised cases and payment category : Statement (5) gives the percentage distribution of hospitalised cases by payment category. At the all-India level, the percentages of hospitalised cases under 'no payment' and 'employers' medical welfare scheme' categories are observed to be 23 and 6 respectively in the rural sector as against 20 and 13 in the urban sector. The disparity over the states and Union territories is observed to be very high in the distribution of hospitalised cases by payment category in both the rural and urban sectors. The percentage of hospitalised cases, where no payment was made for the hospital treatment, is observed to be very high in the rural sectors of Andaman & Nicobar Islands (77%), Tripura (73%), Pondicherry (71%) and Jammu & Kashmir (70%) and in the urban sectors of Lakshadweep (78%), Tripura (73%), Andaman & Nicobar Islands (71%). On the other hand, the percentage of hospitalised cases with no payment is as low as 2, 3 and 7 respectively in the rural sectors of Haryana, Punjab and Uttar Pradesh; and 1, 6 and 6 per cent respectively in the urban sectors of Punjab,

Gujarat and Uttar Pradesh. In Haryana, the number of such cases is practically nil.

5.6 Payment made to the hospital : The payments made to hospital per hospitalised case for government and private hospitals are given in Statement 6. A wide variation in the average amount of payment made to the government and private hospitals is observed in both the rural and urban sectors of states and union territories. In the rural sector, the variation is from Rs. 5117 (Delhi) to Rs. 28 (Tripura), as against Rs. 1667 (Goa, Daman & Diu) to Rs. 127 (Mizoram) in the urban sector. Obviously, the average amount of payment made to the government hospitals is much less compared to the payment made to private hospital. At the all-India level, while the average amount of payment made to the government hospital was only Rs. 320 per case, it was as high as Rs. 733 for private hospital in the rural sector. The corresponding amount of payments were Rs. 385 and Rs. 1206 respectively in the urban sector. A similar pattern is observed for all the states except urban Himachal Pradesh.

STATEMENT 6 : AVERAGE AMOUNT OF PAYMENT (Rs.) MADE TO HOSPITAL BY TYPE OF HOSPITAL FOR RURAL AND URBAN SECTORS OF EACH STATE/U.T.

5.7 *Average number of days stayed in the hospital per hospitalised case* : In the Statements 7R & 7U the average number of days stayed in the hospital per hospitalised case are given for rural and urban sectors of each state and all-India. It is observed that the average number of days stayed in government hospitals is more than that in private hospitals for both the rural and urban sectors of India. Further, the

number of days stayed in "paying special ward" per hospitalised case is observed to be higher than that in "free ward" and 'paying general ward' in the rural sector. But in the urban sector, it is comparatively higher in the 'free ward' of the hospital. This observed phenomenon at the all-India level is not uniformly reflected over the rural and urban sectors of the different states and union territories.

5.8 *Average total expenditure per hospitalised case*: The average expenditure per hospitalised case by type of ward separately for government hospitals and private hospitals is presented for different states and all-India in Statements 8R and 8U for rural and

urban areas respectively. It is observed that the average expenditure incurred per hospitalised case varies considerably according to the type of ward used and also over the states.

5.9 Average number of days stayed and average total expenditure per hospitalised person : From statement 9, it is seen that the average number of days stayed in the hospital per hospitalised person is about 16 and 15 days respectively in rural and urban India.

The average total expenditure is found to be Rs. 853 in rural areas as against Rs. 1183 in urban India. At the state level, the average expenditure is found to be the highest in rural Delhi (Rs. 2053) followed by urban Uttar Pradesh (Rs. 1821).

STATEMENT 9 : AVERAGE NUMBER OF DAYS STAYED IN THE HOSPITAL AND AVERAGE TOTAL EXPENDITURE (Rs.) FOR HOSPITAL TREATMENT PER PERSON HOSPITALISED FOR RURAL AND URBAN SECTORS OF EACH STATE/U.T.

5.10 It is evident from the foregoing comments on Statements 6, 8R, 8U, 9 that the average amount of payment to hospital/total expenditure per hospitalised cases or per person varies considerably over types of hospitals, types of wards and also over the rural and urban sectors of the states. It is also observed that in some cases, the average expenditure was higher in the rural sector compared to that in the urban sector. While studying these variations, it may be kept in mind that actual expenditure depends more on the type of ailments/injuries, its severity and the place of availability of proper medical facilities rather than the type of hospital or ward. Obviously, some serious type of ailments/injuries may lead to very high-expenditure for its treatment. This apart, the facilities for treatment of some serious type of ailments/injuries are available only in the urban areas. Also, relatively better facilities of treatment are available in urban areas. The people in the rural areas are, therefore, forced to avail themselves of the medical facilities more often from urban medical institutions for treatment of serious ailments/injuries. Such rural hospitalised cases obviously will reflect the expenditure behaviour of medical treatment similar to the hospitalised urban cases. Further, because of the lack of facilities in the rural areas, only serious cases involving high expenditure might be hospitalised; whereas those residing in urban areas, even if the ailment is not very serious, may get hospitalised for which the expenditure is likely to be less. These factors might explain why the average expenditure, in some cases, was higher in rural areas compared to urban areas. Small sample size might have also distorted the true variations over the classificatory characteristics in some cases.

5.11 Proportion of persons with ailments : The morbidity rate, that is the number of persons, who had fallen ill on an average in a period of 30 days during 1986-87, per 1000 population/are presented in Statement 10. The proportion of ailing persons in the rural sector was higher than that in the urban sector of India. It was 64 and 63 per 1000 persons respectively among the rural males and females, as compared to rates of 30 and 33 among the urban males and females. The morbidity rates among both the males and females are observed to be almost same within the different fractile groups of population.

5.12 Proportion of persons with ailments treated and household monthly per capita expenditure : The proportion (per 100000) of persons with ailments treated (not as an inpatient in a hospital) to total persons with ailments are given in Statement 11. The proportion of persons with ailments treated is found to be higher among males than females in the bottom expenditure groups, while a reverse pattern is observed in the higher expenditure groups. Also, the proportions are higher in the urban as compared to the rural sector.

5.13 Proportion of persons with ailments treated and adult education : Results given in Statement 12, indicate a positive association between adult education standard and proportion of persons with ailments treated. The proportion is found to be appreciably higher among those with higher level of adult education. Also, the proportions are higher among males compared to females and also higher in the urban sector than in the rural sector. However, the male-female differences at the highest level of education are insignificant.

5.14 *Source of treatment* : Percentage distribution of treatments over sources of treatment is given in Statements 13R & 13U. In rural India about 53 per cent of treatments were availed from private doctors while public hospitals and private hospitals accounted for 18 per cent and 15 per cent respectively. The corresponding percentages in urban India were 52,23 and 16, respectively. These proportions are found to vary highly from one state to another.

5.15 *System of medicine* : The percentage distribution of treatments over systems of medicine is presented for rural and urban areas in Statements 14R & 14U, respectively. It is seen that most of the ailing persons go for allopathic system of medicine for their treatment. At all-India level this system of medicine was used in 96 per cent of treatments in both the rural and urban areas. This preference for allopathic system of medicine for treatment of ailments could also be observed in the rural and urban sectors of all the states and union territories.

5.16 *Type of payment for treatment* : It is observed from Statements 15R & 15U that in rural India 49 per cent of the treatments for ailments were without payment, while in the urban sector, the corresponding percentage is 42. Of the treatments reporting payment to some institutions, the percentage of treatments received from private institutions is higher compared to the government institutions.

5.17 *Average duration of treated sickness and average total expenditure per treatment* : Average duration of treated cases of sickness and average total expenditure per treatment are given in Statement 16. The average duration of sickness treated was nearly the same irrespective of the type of institution or the place of residence (rural or urban) at the all-India level—a little over 13 days from government institution and about 12 days from private facilities.

5.18 Untreated sickness and and reason for taking no treatment : The percentage distributions of untreated sickness by reason for taking no treatment, given in Statements 17R & 17U, reveal that in rural India in about 75 per cent of the cases of untreated sickness, the ailments were not considered serious. In about 15 per cent of the cases, the reason was financial difficulties. The corresponding figures for urban India were 81 and 10 per cent respectively. In the rural sectors of Jammu & Kashmir, Orissa and Rajasthan and in rural as well as urban Goa, Daman & Diu,

financial difficulties were reported as major cause for taking no treatment. In rural India, in about 3 per cent cases of untreated sickness, the reported reason was "no medical facility". Percentage of such cases was highest in the state of Himachal Pradesh (14%) followed by Sikkim (10%) and Rajasthan (9%). In urban India, this reason was cited only in less than 1 per cent of the cases. The proportion of untreated sickness due to non-availability of medical facilities was as high as 9 per cent in urban Meghalaya.

<b>VII. IRRIGATION</b>									
1.1	Fertiliser use in agricultural holdings	26	July 71 to Sept 72	II	2	October 1978	6	N SR	56 to 68 83 to 89
1.2	Survey on irrigation	31	July 76—June 77	III	2	October 1979	10	N	79 to 86
1.3	Use of irrigation in household holdings in India	31	July 76—June 77	X	4	April 1987	31	N SR	28 to 36 S—111 to S—128
1.4	Use of irrigation in household holdings—some selected important results								
1.4.1	States: A.P., Assam, Bihar, Karnataka, M.P., Maharashtra, Manipur, Orissa, Tripura and West Bengal (10 States)	31	July 76—June 77	VIII	2	October 1984	23	N S.R	10 to 14 S—1 to S—104
1.4.2.	States: Gujarat, Haryana, H.P., J & K., Kerala, Punjab, Rajasthan, Tamil Nadu, U.P., Delhi, Goa & Pondicherry (12 States)	31	July 76—June 77	IX	1 & 2	July—Oct. 1985	25	N SR	1 to 2 S—1 to S—136
1.4.3.	Results on unirrigated household holdings States and All India	31	July 76—June 77	IX	1 & 2	July—Oct. 1985	25	N SR	3 to 4 S—137 to S—152
<b>VIII. LAND HOLDINGS</b>									
1.1	Survey results on land holdings	26	July 71 —Sept. 72	V	3 & 4	Jan.—April 82	16	N SR	1 to 7 S—1 to S—293
1.2	Some aspects of household ownership holdings	37	Jan.—Dec. 1982	XI	2	October 1987	33	N SR	1— to 18 S—1 to S—175
1.3	Some aspects of household operational holdings	37	Jan.—Dec. 1982	XII	1	July 1988	36	N SR	24 to 52 S—1 to S—191
<b>IX. LIVE STOCK NUMBER AND PRODUCTS</b>									
1.1	Number and products	30	July 75—June 76	II	2	October 1978	6	N SR	69 to 79 91 to 105 S—235 to S—284
1.2	Pack animals	30	July 75—June 76	II	4	April 1979	8	N SR	140 to 148 S—459 to S—505
1.3	Household dairy enterprises	30	July 75—June 76	III	4	April 1980	12	N SR	145 to 153 S—259 to S—279
1.4	Number of bovines and yield of milk	30	July 75—June 76	VIII	1	July 1984	22	N SR	1 to 18 S—1 to S—117
1.5	Estimates of birth, death and calving interval of bovines	30	July 75—June 76	VIII	1	July 1984	22	SR	S—119 to S—173
1.6	Characteristics of household poultry enterprises	30	July 75—June 76	IX	3	January 1986	26	N	10 to 16 S—1 to S—49
1.7	Estimates of livestock and agricultural implements classified by household operational holding	37	Jan.—Dec. 1982	XIII.	3	January 1990	42	N SR	44 to 64 S—115 to S—266
<b>X. MIGRATION</b>									
1.1	In-migration and out-migration rates	28	Oct. '73—Sept. '74	I	1	July 1977	1	N	33 to 41

1	2	3	4	5	6	7	8	9	10
1.2	Internal migration (All India)	38	Jan.—Dec. 1983	XIII	3	January 1990	42	N SR	1 to 43 S—2 to S—114
1.3	Internal migration (All India)	43	July 87—June 88	XV	4	April 1992	51	N SR	1 to 49
<b>XI. MORBIDITY</b>									
1.1	Notes and survey results	28	Oct. 73—June 74	IV	1 & 2	July—Oct. 1980	13	N SR	17 to 21 S—137 to S—180
1.2	Morbidity and utilisation of medical services	42	July 86—Jun. 87	XV	4	April 1992	51	N SR	50 to 75
<b>XII. NUTRITION</b>									
1.1	Per capita per diem intake of nutrients.	27	Oct. 72—Sept. 73	VI	3 & 4	Jan.—April 83	18	N SR	1 to 10 S—1 to S—88
1.2	Per capita and per consu- mer unit per diem intake of calorie, protein and fat and perception of people on adequacy of food	38	Jan.—Dec. 83	XIII	2	October 1990	41	N SR	27—37 S—177 to S—258
<b>XIII. POWER AND ELECTRICITY</b>									
1.1	Use of power for industrial/ commercial purpose	31	July 76—June 77	III	4	April 1980	12	N SR	183 to 186 S—313 to S—382
1.2	Use of power (electricity/ diesel)	31	July 76—June 77	IV	1 & 2	July—Oct. 1980	13	N SR	22 to 27 S—3 to S—24
1.3	Use of electricity for domestic purposes	31	July 76—June 77	IV	1 & 2	July—Oct. 1980	13	N SR	22 to 27 S—25 to S—136
1.4	General information on electrification in rural areas	31	July 76—June 77	VII	4	July 1984	20	N SR	1 to 4 S—1 to S—78
<b>XIV. RURAL LABOUR</b>									
1.1	Indebtedness of rural labour households	32	July 77—June 78	VIII	3 & 4	January—April 1985	24	N SR	1 to 32 S—1 to S—129
1.2	Wages and earnings of rural labour household	32	July 77—June 78	X	4	April 1987	31	N SR	20 to 27 S—1 to S—109
<b>XV. NON-AGRICULTURAL ENTERPRISES</b>									
1.11	Survey on self employed	29	July 74—June 75	I	1	July 1977	1	N	42 to 46
1.12	All India results on general characteristics	29	July 74—June 75	II	3	January 1979	7	SR	S—437 to S—456
1.13	Non-directory establish- ments and own account enterprises in mechanised passenger and goods trans- port activity	34	July 79—June 80	XII	3	January 1988	34	N SR	86 to 92 S—3 to S—39
1.14	Non-directory establish- ments and own account enterprises in non-mecha- nised passenger and goods transport activity	34	July 79—June 80	XII	3	January 1988	34	N SR	98 to 104 S—57 to S—86

1	2	3	4	5	6	7	8	9	10
<b>1.2 Statewise results on general characteristics:</b>									
1.21	12 States: Andhra Pradesh, Assam, Gujarat, Haryana Karnataka, Kerala, Madhya Pradesh, Tamil Nadu, Maharashtra, Punjab, Uttar Pradesh and West Bengal	29	July 74—June 75	I		4 April 1978	4	N SR	167 to 179 183 to 185 S—399 to S—584
1.22	13 States: Bihar, Delhi, Goa, H. P., J&K. Manipur, Meghalaya, Orissa, Pondicherry, Rajasthan, Tripura, Chandigarh and Nagaland.	29	July 74—June 75	II		1 July 1978	5	SR	S—1 to S—149
<b>1.3 Detailed tables on fixed assets, working capital, employment, emoluments, output, input value added etc.:</b>									
1.31	All India results	29	July 74—June 75	III		4 April 1980	12	N SR	177 to 182 S—281 to S—312
1.32	9 States: Assam, Bihar, Delhi, Gujarat, Haryana, Madhya Pradesh, Jammu & Kashmir, Kerala, Himachal Pradesh and Maharashtra	29	July 74—June 75	III		1 July 1979	9	SR	S—3 to S—253
1.33	7 States: Andhra Pradesh, Karnataka, Manipur, Meghalaya, Uttar Pradesh, Tamil Nadu and West Bengal.	29	July 74—June 75	III		2 October 1979	10	SR	S—254 to S—732
1.34	8 States: Chandigarh, Goa, Nagaland, Orissa, Pondicherry, Punjab, Rajasthan and Tripura.	29	July 74—June 75	III		3 January 1980	11	SR	S—707 to S—257
<b>XVI. SERVICES</b>									
1.1	Non-directory establishments in service-sector other than education, medical, health and selected community and cultural services.	34	July 79—June 80	X		3 January 1987	30	N SR	9 to 19 S—155 to S—208
1.2	Non-directory establishments and own account enterprises in services incidental to transport.	34	July 79—June 80	X		3 January 1987	30	N SR	20 to 27 S—209 to S—213
1.3	Own account enterprises in service sector.	34	July 79—June 80	XI		3 January 1988	34	N SR	105 to 111 S—87 to S—136
1.4	Non-directory establishments in community and non-commercial cultural Services	34	July 79—June 80	XI		3 January 1988	34	N SR	93 to 97 S—40 to S—56

1	2	3	4	5	6	7	8	9	10
<b>XVII. SOCIAL CONSUMPTION</b>									
1.1	A profile of households and population distributed by economic class, social group and availability of drinking water, electricity and disinfection of dwellings	42	July 86—June 87	XIII	4	April 1990	43	N SR	1 to 9 S—1 to S—99
1.2	Utilisation of Public Distribution System.	42	July 86—June 87	XIII	4	April 1990	43	N SR	10 to 14 S—101 to S—210
1.3	Participation in education (All India)	42	July 86—June 87	XIV	3	January 1991	46	N SR	31 to 40 S—13 to S—121
1.4	Child and maternity Care	42	July 86—June 87	XIV	4	April 1991	47	N SR	13 to 30 S—7 to S—209
<b>XVIII. SURVEYS IN NORTH-EASTERN (N.E.) STATES</b>									
1.1	Jhum Cultivation in N.E. States	31	July 76—June 77	II	4	April 1979	8	N SR	159 to 161 S—609 to S—698
1.2	Jhum Cultivation in N.E. States	31	July 76—June 77.	III	4	April 1980	12	N	169 to 176
1.3	Results of educational survey in N.E. states.	31	July 76—June 77	III	4	April 1980	12	N SR	154 to 168 S—1 to S—109
<b>XIX. MISCELLANEOUS</b>									
1.1	National Sample Survey Organisation	—	—	I	1	July 1977	1	N	21 to 32
1.2	Number of strata, sample size and subjects of enquiry in different rounds of NSS	—	—	II	1	July 1978	5	N	19 to 21
1.3	Glossary of technical terms used in NSS	—	—	III	3	January 1980	11	N	1 to 74
1.4	Source of drinking water and energy used for cooking and lighting	38	Jan—Dec. 1983	XII	2	October 1988	37	N SR	14 to 27 S—153 to S—235
1.5	Dissemination of survey results	—	—	XI	1	July 1987	32	N	26 to 32
1.6	Classified list of mimeographed NSS reports unpublished or partially published in Sarvekshana	—	—	XI	4	April 1988	35	N	74 to 76
1.7	Bibliography of survey results	—	—	XV	4	April 1992	51	N	76 to 90
1.8	Consumption of fuel & light based on the first three quinquennial rounds of NSS	—	—	XIV	3	January 1991	46	N	41 to 44 S—123 to S—157
1.9	Socio Economic profile of the aged persons	42	July 86—June 87	XV	2	October 1991	49	N SR	103 to 122 S 85 to S 379

## Annexure-II

## ARTICLES PUBLISHED IN SARVEKSHANA

Serial no.	Name of article and author(s)	Issue no.	Vol.	No.	Month and Year	Page no.
(1)	(2)	(3)	(4)	(5)	(6)	(7)
<b>I. BACKWARD REGIONS AND WEAKER SECTIONS</b>						
1.1	Weaker section of rural population—some results of twentyfifth round of National Sample Survey—S.K. Sinha	2	I	2	October 1977	53 to 64
1.2	A note on identification of economically backward regions in rural India—G.A. Kulkarni, B.S. Gill and S.K. Pillai	17	VI	1 & 2	July—October 1982	7 to 17
<b>II. CONSUMER EXPENDITURE</b>						
2.1	A note on Inter-state variation in consumption level of rural households based on NSS 28th round consumer expenditure—S. Bhattacharya, A.B. Roy Choudhury and P.D. Joshi	2	I	2	October 1977	77 to 80
2.2	Consumption of cereals and energy content of food consumption—S. Son Gupta and P.D. Joshi	5	II	1	July 1978	1 to 13
2.3	Changes in consumption expenditure : All India Rural (1960-61 to 1973-74)—Sharwan Kumar	10	III	2	October 1979	9 to 14
2.4	A note on estimates of minimum (normative) per capita consumption based on NSS consumer expenditure survey—K.C. Seal and A. R. Rao	17	VI	1 & 2	October 1982	1 to 6
2.5	Results of the methodological survey on integrated short-schedule on consumer expenditure—Survey Design & Research Division, NSSO	34	XI	3	January 1989	18 to 35
2.6	Measurement of general cost of living for urban India : All-India and different states—B.S. Minhas, L.R. Jain, S.M. Kansal and M.R. Saluja	36	XII	1	July 1988	1 to 23
2.7	Gender effects in Indian consumption pattern—S. Subramanian & A. Deaton.	47	XIV	4	April 1991	1 to 12
<b>III. DEBT AND INVESTMENT</b>						
3.1	Distribution of assets in rural India—G. A. Kulkarni, B.S. Gill and Shambhu Dayal	23	VIII	2	October 1984	1 to 9
<b>IV. EMPLOYMENT, UNEMPLOYMENT AND MIGRATION</b>						
4.1	NSS 27th round unemployment rates—the problem of interpretation and a few controversial issues—Sudhir Bhattacharya	1	I	1	July 1977	14 to 20
4.2	Some aspects of internal annual migration in India—S.R. Mukherjee and S.K. Banerjee.	6	II	2	October 1978	23 to 24
4.3	A note on concept of work and estimates of work force : an appraisal of the treatment of activity relating to non-marketed output—Paul Jacob	27	IX	4	April 1986	11 to 15

(1)	(2)	(3)	(4)	(5)	(6)	(7)
<b>V. FAMILY PLANNING</b>						
5.1	Some aspects of practice of family planning revealed in NSS 28th round survey—Netai Chandra Das . . . . .	7	II	3	January 1979	119 to 128
5.2	Cohort fertility by age at marriage and marriage duration—Netai Chandra Das . . . . .	10	III	2	October 1979	15 to 19
<b>VI. LAND HOLDINGS</b>						
6.1	Trend in some characteristics of land holdings—an analysis for a few states(I)—S.K. Sanyal . . . . .	1	I	1	July 1977	1 to 13
6.2	Trends in some characteristics of land holdings an analysis for a few states (II) S.K. Sanyal. . . . .	2	I	2	October 1977	65 to 76
6.3	Analysis of indicators of tenancy in India Sharawan Kumar . . . . .	13	IV	1 & 2	July—Oct. 1980	1 to 16
<b>VII. LIVESTOCK NUMBER AND PRODUCTS</b>						
7.1	A study of animals in milk and their rate in India—G.A.Kulkarni, B.S.Gill and Shambhu Dayal . . . . .	26	IX	3	January, 1986	1 to 9
7.2	Catch of fish from inland water resources: problems of estimation in Indian condition—A.N. Ganguly and Paul Jacob . . . . .	5	II	1	July 1978	14 to 16
<b>VIII. NUTRITION</b>						
8.1	Nutrition situation in India during 1971-72—Ramakrishna Rao . . . . .	7	II	3	January 1979	111 to 118
8.2	Estimates of the undernourished population from alternative sources—G.A. Kulkarni and Ashis Kumar . . . . .	21	VII	4	April 1984	1 to 6
<b>IX. POVERTY, LEVEL, OF LIVING</b>						
9.1	A note on determination of poverty line based on NSS 27th round data—S. Sengupta and P.D. Joshi . . . . .	9	III	1	July 1979	1 to 8
9.2	On suitability of displaced log normal distribution in graduating the size of distribution of total consumer expenditure—P. D. Joshi . . . . .	9	III	1	July 1979	4 to 8
9.3	Disparities in level of living across states and social group in urban India during 1973-74—N. Bhattacharya, G.S. Chatterjee and Padmaja Paul . . . . .	29	X	2	October 1986	1 to 14
<b>X. POWER AND ELECTRICITY</b>						
10.1	A study on quality in the consumption of electricity for domestic use in rural sector—B.S. Gill, Ashis Kumar and B.K. Giri . . . . .	27	IX	4	April 1986	1 to 10
<b>XI. PRICES</b>						
11.1	Regional price indices based on NSS 28th round consumer expenditure survey data—S.S. Bhattacharya, P.D. Joshi and A.B. Roy Choudhury . . . . .	12	III	4	April 1980	107 to 120
11.2	Rural and urban consumer price indices by commodity groups (states and all India: 1970-71 to 1983) L.R. Jain and B.S. Minhas . . . . .	48	XV	1	July 1991	1 to 21

(1)	(2)	(3)	(4)	(5)	(6)	(7)
<b>XII. SOCIAL CONSUMPTION</b>						
12.1	A note on social consumption based on state sample reports relating to NSS 35th round (1980-81)—V.K. Rajagopalan and D.K. Joshi	34	XI	3	January 1988	1 to 17
<b>XIII. SURVEYS/SAMPLE DESIGN, ESTIMATION PROCEDURE</b>						
13.1	Development of sample design of the Indian National Sample Survey during its first thirtytwo rounds (1950—77)—A.K. Bhattacharya	3	I	3	January 1978	131 to 139
13.2	Estimates of standard errors of selected estimates built up from NSS 27th round survey on employment and unemployment—K. Sankaranarayanan	7	II	3	January 1979	107 to 110
13.3	Survey design for an enquiry on self-employment in agricultural enterprises: NSS 29th round (July 1974—June 1975) S. Banerjee and P. K. Basak	8	II	4	April 1979	135 to 139
13.4	Survey on enterprises in trade, hotel and restaurant, transport, storage and warehousing and service sectors, NSS 34th round—Saibal Banerjee	10	III	2	October 1979	20 to 23
13.5	Standard errors of estimates from the NSS 28th round consumer expenditure survey—G.D. Rao & V.R.R. Sarma	12	III	4	April 1980	87 to 93
13.6	NSS thirtysecond round enquiry on employment & unemployment: Preliminary results of a comparative study of two estimation procedures—K. Sankaranarayan	31	X	4	April 1987	1 to 19
13.7	Technical note on the sample design for the survey on use of irrigation in agriculture in the 31st round of National Sample Survey—A.K. Bhattacharya	10	II	2	October 1979	70 to 78
13.8	Bias in the Gini co-efficient due to choice of size classes—K.C. Seal and A.R. Rao	39	XII	4	April 1979	1 to 4
13.9	Decomposition of total inequality between classes and within classes components—D. V. Sastry and A.B. Chakravarty	39	XII	4	April 1989	5 to 8
13.10	On stage-wise variance components of a stratified two stage design—K. Sankaranarayanan.	41	XIII	2	October 1989	1 to 3
13.11	A note on pooling of Central and State Sample data of NSS—B.S. Minhas & M.G. Sardana	44	XIV	1	July 1990	1 to 4
13.12	The sample design of NSS 44th round (July 1988—June 1989) survey on building construction—K. Sankaranarayanan	50	XV	3	January 1992	7 to 14
<b>XIV. MISCELLANEOUS</b>						
14.1	A place for quantal information in socio-economic surveys—SM. Vidwans	4	I	4	April 1978	159 to 166
14.2	Progress of literacy in India during 1983 to 1988—S. Sengupta	47	XIV	4	April 1991	13 to 34
14.3	Role of NSSO in collection of statistics on housing—K. Sankaranarayanan	50	XV	3	January 1992	1 to 6

## ANNEXURE—III

## A CLASSIFIED LIST OF MIMEOGRAPHED NSS REPORTS STILL UNPUBLISHED OR PARTIALLY PUBLISHED IN SARVEKSHANA

Serial Report No.	Report No.	Round No.	Survey Period	Title	Date of release	In case published partially in Sarvekshana, then Vol. & No. of the Issue
(1)	(2)	(3)	(4)	(5)	(6)	(7)
<b>I. Consumer Expenditure</b>						
1	356	38	Jan.—Dec., 1983	The effect of adjustment of energy intake for meal consumed free & meal served to others.	May 1989	—

116	380	44	July'88—June'89	A report on living conditions of tribals and non-tribals areas.	"	

## PART II

# SURVEY RESULTS

1. Results on Internal Migration : NSS 43rd round (July 1987—June 1988)
2. Results on morbidity and utilisation of medical services : NSS 42nd round (July 1986—June 1987)

# Results on Internal Migration (All India)

NSS 43rd round (July 1987—June 1988)

LIST OF TABLES

table no. (as per tabulation plan)	description of table	page no.
(1)	(2)	(3)
1	Per thousand distribution of population by migration status and period since migrated for each state/all-India . . . . .	S-6
2	Per thousand distribution of migrants by type of last residence for each household monthly per capita expenditure class . . . . .	S-13
3	Per thousand distribution of migrants by reason for migration and type of last residence for each household group . . . . .	S-21
4R	Per thousand distribution of migrants by reason for migration for each household type and type of last usual residence—Rural Areas . . . . .	S-57
4U	Per thousand distribution of migrants by reason for migration for each household type and type of last usual residence—Urban Areas . . . . .	S-75
5	Per thousand distribution of migrants by usual activity category after migration for each usual activity category before migration . . . . .	S-93
6	Per thousand distribution of migrants by reason for migration for each usual activity category before migration . . . . .	S-111
P	Projected population (in 000) as on 1st January, 1988 based on the estimates as on 1st March, 1986 and 1st March, 1991 using exponential growth rate . . . . .	S-129

Note: (1) Marginal totals between tables may not exactly agree due to rounding off errors.

(2) Marginal aggregates presented may be used only for combining ratios.

(3) To obtain aggregates, estimated ratios are to be applied on the projected population as given in table (F).

TABLE (1): PER THOUSAND DISTRIBUTION OF POPULATION BY MIGRATION STATUS AND PERIOD SINCE MIGRATED FOR EACH STATE/ALL-INDIA

# Results on Morbidity and Utilisation of Medical Services

NSS 42nd Round (July 1986—June 1987)

LIST OF DETAILED TABLES

table no.	title	page no.(s)
(1)	(2)	(3)
1R	Estimated number of hospitalised persons by sex and fractile groups for selected states : rural . . . . .	S-134
1U	Estimated number of hospitalised persons by sex and fractile groups for selected states : urban . . . . .	S-135
2.00—2.18	Percentage distribution of hospitalised cases over fractile groups, social groups and adult education classes by type of hospital and type of ward for rural and urban sectors of selected states . . . . .	S-137
3.00—3.18	Percentage distribution of hospitalised cases over fractile groups by system of medicine for rural and urban sector of selected states . . . . .	S-380
4.00—4.18	Percentage distribution of hospitalised cases over types of hospital into payment types by type of medical services for rural and urban sectors of selected states . . . . .	S-399
5.00—5.18	Percentage distribution of hospitalised cases over fractile groups by payment category and average amount of payment made to hospital by fractile group and type of hospital for rural and urban sectors of selected states . . . . .	S-418
6.00—6.18	Average number of days stayed in the hospital and average total expenditure per hospitalised case by fractile group, type of hospital and type of ward for rural and urban sectors of selected states . . . . .	S-437
7R	Proportion (per 1,00,000) of persons with ailments treated (not as an inpatient of hospital) to total persons with ailments by sex and fractile groups for selected states : rural . . . . .	S-456
7U	Proportion (per 1,00,000) of persons with ailments treated (not as an inpatient of hospital) to total persons with ailments by sex and fractile groups for selected states : urban . . . . .	S-458
8.00—8.18	Percentage distribution of treatments (not as an inpatient in a hospital) over fractile groups by source of treatment for rural and urban sectors of selected states . . . . .	S-459
9.00—9.18	Percentage distribution of treatments (not as an inpatient in a hospital) over fractile groups by system of medicine for rural and urban sectors of selected states . . . . .	S-478
10.00—10.18	Percentage distribution of treatments (not as an inpatient in a hospital) over sources of treatment by type of medical services and type of payment for rural and urban sectors of selected states . . . . .	S-497
11.00—11.18	Percentage distribution of treatments (not as an inpatient in a hospital) over fractile groups by payment category and average amount of payment made to source of treatment by fractile groups and source of treatment for rural and urban sectors of selected states . . . . .	S-516
12.00—12.18	Percentage distribution of untreated spells of sickness over fractile groups, social groups and adult education classes by reason for no treatment for rural and urban sectors of selected states . . . . .	S-536

## अस्वस्थता तथा चिकित्सा सेवाओं का उपयोग

### संकल्पनाएं एवं परिभाषा

**रुग्णता/चाट :**—सामान्य शारीरिक एवं मानसिक स्वस्थता की स्थिति से किसी प्रकार के व्यतिक्रम को रुग्णता माना गया है। चाट में शरीर के किसी अंग को किसी शोष-जन्तु के द्वारा काटने सहित दुर्घटनाओं द्वारा हुई सभी प्रकार की क्षति जैसे कट जाना, जख्म होना, रक्तस्राव, हड्डी टूटना, जलना आदि शामिल है।

**उपचार हेतु अस्पताल में भर्ती :**—किसी व्यक्ति को उपचार हेतु अस्पताल में भर्ती हुआ माना जाएगा यदि उसने किसी चिकित्सा संस्था में अन्तरंग रोगी के रूप में चिकित्सा सेवाएं प्राप्त की हों। किन्तु बच्चे के जन्म के प्रयोजन से महिला सदस्यों का अस्पताल में भर्ती करने का संदर्भगत सर्वेक्षण के लिए अस्पताल में भर्ती नहीं माना गया।

**श्रीढ़ शिक्षा कक्षाएं :**—श्रीढ़ शिक्षा कक्षा, परिवार के श्रीढ़ सदस्यों द्वारा प्राप्त किए गए उच्चतम शिक्षा स्तर से संबंधित है।

**असित कुल व्यय :**—अस्पताल में भर्ती किए गए प्रति व्यक्ति का असित कुल व्यय अस्पताल में भर्ती किए गए व्यक्तियों जिन्होंने भूगतान संबंधी सूचना दी, की कुल संख्या की तुलना में अस्पताल में इलाज के लिए कुल व्यय का समानुपात है।

**बीमारियों सहित व्यक्तियों का अनुपात :**—सर्वेक्षण की तारीख से 30 दिन पूर्व की संदर्भ अवधि के दौरान कितने भी समय से चल रही बीमारियों पर इस जांच में विचार किया गया है। फिर भी केवल उन्हीं पर बीमारियों सहित व्यक्तियों का समानुपात तैयार करने के लिए विचार किया गया है जिन बीमारियों का उपचार किसी अस्पताल में अन्तरंग रोगी के रूप में नहीं किया गया था। बीमारियों सहित व्यक्तियों का समानुपात बीमारियों सहित व्यक्तियों के अनुपात के अनुसार दिया गया है जो कि कुल व्यक्तियों की संख्या की तुलना में सर्वेक्षण की तारीख से 30 दिन पूर्व की संदर्भ अवधि के दौरान देखा गया था।

### विस्तृत सारणियां संबंधी टिप्पणी

**फ्रैक्टाइल ग्रुप :**—पहले यह बताया गया है कि चिकित्सा सेवाओं के उपयोग संबंधी सर्वेक्षण के अतिरिक्त शिक्षा के क्षेत्र में भी सर्वेक्षण किया गया। अनुसूची 25.2 शिक्षा में सह-भागिता संबंधी सूचना एकत्रित करने के लिए तैयार की गई थी। अनुसूची 25.2 के प्रतिचयन ढांचे में भारत की समस्त जनसंख्या का शामिल किया गया था। दूसरी तरफ इस रिपोर्ट के विचाराधीन चिकित्सा सेवाओं के उपयोग संबंधी सूचना एकत्रित करने

के लिए अनुसूची 25.7 का प्रतिचयन ढांचा सीमित है जो भारत की जनसंख्या के एक भाग का दर्शाता है। समस्त जनसंख्या का दर्शाने वाले फ्रैक्टाइल ग्रुपों के अनुसार चिकित्सा सेवाओं के उपयोग संबंधी सर्वेक्षण के परिणामों का अध्ययन करने के लिए अनुसूची 25.2 हेतु फ्रैक्टाइल ग्रुपों के प्रति व्यक्ति सीमान्त व्यय का अनुसूची 25.7 के लिए फ्रैक्टाइल ग्रुप की उपरोक्त सीमाओं के रूप में माना गया है और तदनुसार अनुसूची 25.7 के लिए फ्रैक्टाइल बनाए गए थे।

विशेषताओं का प्रतिशतता वितरण सम्भवतः सभी सारणियों में पूर्णतः मेल न जाए। जिन विशेषताओं के आधार पर विभिन्न सारणियां तैयार की गई हैं वे कुछ मामलों में प्रतिदर्श परिणामों के रिकार्डों में उपलब्ध नहीं थीं और इसलिए ऐसे रिकार्डों को उस सारणी के सारणीयन से अलग रखा गया।

### निष्कर्षों का सारांश

चिकित्सा सेवाओं के उपयोग संबंधी राष्ट्रीय प्रतिदर्श सर्वेक्षण का 42वां दौर सर्वेक्षण समस्त भारत के 8346 गांवों और 4568 सण्डों के प्रतिदर्श में किया गया। सर्वेक्षण के परिणामों से यह प्रकट होता है कि असित आधार पर जुलाई 1986—जून 1987 के दौरान 365 दिन की अवधि में ग्रामीण भारत में लगभग 149 लाख व्यक्तियों को और शहरी भारत में 26 लाख व्यक्तियों को उपचार हेतु अस्पताल में भर्ती कराया गया था। उपचार हेतु अस्पताल में भर्ती कराए गए व्यक्तियों के मध्य पुरुष-महिला का अनुपात ग्रामीण एवं शहरी दोनों क्षेत्रों में लगभग 56:44 था। प्रति व्यक्ति अस्पताल में भर्ती किए गए मामलों की संख्या ग्रामीण एवं शहरी भारत में क्रमशः 1.07 और 1.06 देखी गई। ग्रामीण एवं शहरी क्षेत्रों में प्रति 1000 व्यक्तियों के पीछे क्रमशः 28 और 17 व्यक्तियों को अस्पताल में भर्ती करने की व्यापक दर ग्रामीण क्षेत्रों की तुलना में शहरी क्षेत्रों में अस्पताल में भर्ती होने के घटते क्रम को दर्शाती है।

**अस्पतालों की किस्म के अनुसार अस्पताल में भर्ती के मामलों:**—अस्पतालों की किस्म के अनुसार अस्पताल में भर्ती के मामलों का प्रतिशत वितरण विवरणपत्र 2 ग्रामीण और 2 शहरी (कृपया अंग्रेजी पाठ देखें) में दिया गया है। यह देखा गया है कि ग्रामीण क्षेत्र में अस्पताल में भर्ती कराए गए मामलों में लगभग 55 प्रतिशत का उपचार सार्वजनिक अस्पतालों में और लगभग 32 प्रतिशत का उपचार निजी अस्पतालों में किया गया। शहरी क्षेत्र के संबंध में तदनुसूची अंकड़े लगभग क्रमशः 60 प्रतिशत और 30 प्रतिशत थे। यह देखा गया है कि प्राथमिक स्वास्थ्य केंद्रों में उपचार के लिए भर्ती कराए गए मामलों का अनुपात ग्रामीण क्षेत्र में लगभग 4 प्रतिशत की तुलना में शहरी क्षेत्र में

केवल लगभग एक प्रतिशत था। अन्य किस्म के अस्पतालों की तुलना में सार्वजनिक अस्पतालों में अन्तरंग रोगों के उपचार कराने की वरीयता सभी राज्यों एवं संघ शासित क्षेत्रों में देखी गई। किन्तु आन्ध्र प्रदेश, ग्रामीण केरल, महाराष्ट्र और ग्रामीण पंजाब जैसे कुछ राज्यों में सार्वजनिक अस्पतालों की तुलना में उपचार के लिए निजी अस्पतालों को वरीयता दी गई।

**इस्तेमाल किए गए वाडों की किस्म के अनुसार अस्पताल में भर्ती कराए गए मामलों के:**—वाडों की किस्म के अनुसार अस्पताल में भर्ती कराए गए मामलों का प्रतिशत वितरण विवरणपत्र (3) में दिया गया है जबकि ग्रामीण भारत में अस्पताल में भर्ती कराए गए लगभग 61 प्रतिशत मामलों का उपचार निःशुल्क वाडों में कराया गया और लगभग 32 प्रतिशत का सशुल्क सामान्य वाडों में तथा 7 प्रतिशत का सशुल्क विशेष वाडों में उपचार कराया गया। तदनुसारी किस्म के वाडों में उपचारित भर्ती मामलों की प्रतिशतताएं शहरी भारत में क्रमशः 55, 32 और 13 देखी गईं। अस्पताल में भर्ती मामलों के द्वारा वाडों के इस्तेमाल में देखे गए इस अखिल भारतीय पैटर्न को आंध्र प्रदेश, गुजरात, महाराष्ट्र, शहरी मेघालय और ग्रामीण पंजाब को छोड़कर सभी राज्यों और संघ शासित क्षेत्रों में भी देखा जा सकता है। इन राज्यों और क्षेत्रों के सशुल्क सामान्य वाडों में भर्ती मामलों की प्रतिशतताएं अन्य किस्म के वाडों की अपेक्षा अधिक देखी गईं हैं।

**प्रयुक्त औषध पद्धति:**—अस्पताल में भर्ती के दौरान प्रयुक्त औषध पद्धति के अनुसार भर्ती किए गए मामलों का प्रतिवर्ष वितरण प्रत्येक राज्य के ग्रामीण एवं शहरी क्षेत्रों के लिए क्रमशः विवरणपत्र-4 ग्रामीण और 4 शहरी में दिया गया है तथा अखिल भारतीय परिणामों से यह प्रकट होता है कि भारत के ग्रामीण एवं शहरी दोनों क्षेत्रों में उपचार हेतु भर्ती किए गए मामलों में 98 प्रतिशत से अधिक में एलोपैथिक औषध पद्धति प्रयुक्त की गई। अस्पताल में भर्ती किए गए मामलों में तथाकथित रूप से प्रयुक्त एलोपैथिक औषध पद्धति की प्रतिशतताएं मणिपुर के ग्रामीण (88 प्रतिशत) और शहरी (90 प्रतिशत) क्षेत्रों में निम्नतम थी। अस्पताल में भर्ती किए गए केवल कुछ मामलों में होम्योपैथिक औषध पद्धति प्रयुक्त की गई थी। ग्रामीण क्षेत्रों के लिए पांडिचेरी और मणिपुर (4) और शहरी क्षेत्रों के लिए मिजोरम (5) में, इसके बाद त्रिपुरा एवं मणिपुर (1) में अधिकतम प्रतिशतता देखी गई।

**अस्पताल में भर्ती मामलों और भुगतान श्रेणी:**—विवरणपत्र (5) भुगतान श्रेणी के अनुसार अस्पताल में भर्ती मामलों के प्रतिशत वितरण को दर्शाता है। अखिल भारतीय स्तर पर भुगतान श्रेणियों में "कोई भुगतान नहीं" और "निर्वाहक चिकित्सा कल्याण स्कीम" के अंतर्गत अस्पताल में भर्ती मामलों की प्रतिशतता शहरी क्षेत्र में क्रमशः 20 और 13 की तुलना में ग्रामीण क्षेत्र में क्रमशः 23 और 6 देखी गईं। राज्यों और संघ शासित

क्षेत्रों के अनुसार असमानता ग्रामीण एवं शहरी क्षेत्र दोनों में भुगतान श्रेणी के अनुसार अस्पताल में भर्ती मामलों के वितरण में बहुत अधिक देखी गई। अस्पताल में उपचार के लिए कोई भुगतान नहीं किया गया। ऐसे मामलों की प्रतिशतता अण्मान और निकोबार द्वीपसमूह (77), त्रिपुरा (73), पांडिचेरी (71), तथा जम्मू व कश्मीर (70) के ग्रामीण क्षेत्रों तथा लक्षद्वीप (78), त्रिपुरा (73), अण्मान और निकोबार द्वीपसमूह (71) के शहरी क्षेत्र में बहुत अधिक देखी गईं। दूसरी तरफ कोई भुगतान नहीं वाला भर्ती मामलों की प्रतिशतता हरियाणा, पंजाब और उत्तर प्रदेश के ग्रामीण क्षेत्रों में क्रमशः कम से कम 2, 3 और 7 तथा पंजाब गुजरात और उत्तर प्रदेश के शहरी क्षेत्रों क्रमशः 1, 6 और 6 थी। हरियाणा में ऐसे मामलों की संख्या वास्तव में शून्य है।

**अस्पताल को किया गया भुगतान:**—सरकारी और निजी अस्पतालों में प्रत्येक भर्ती के मामले में अस्पताल को किए गए भुगतान विवरणपत्र (6) में दिए गए हैं। सरकारी और निजी अस्पतालों को किए गए भुगतान की औसत राशि में राज्यों और संघ शासित क्षेत्रों के ग्रामीण एवं शहरी दोनों क्षेत्रों में व्यापक अन्तर देखा गया है। शहरी क्षेत्र में 1667 रुपए (गोवा, दमन व दीव) से 127 रुपए (मिजोरम) तक की तुलना में ग्रामीण क्षेत्र में 5117 रुपए (दिल्ली) से 28 रुपए (त्रिपुरा) तक का अन्तर है। स्पष्टतया निजी अस्पताल को किए गए भुगतान की तुलना में सरकारी अस्पताल को किए गए भुगतान की औसत राशि बहुत कम है। अखिल भारतीय स्तर पर जबकि सरकारी अस्पताल को किए गए भुगतान की औसत राशि प्रति मामला केवल 320 रुपए थी, ग्रामीण क्षेत्र में निजी अस्पताल के संबंध में यह अधिक से अधिक 733 रुपए थी। शहरी क्षेत्र में तदनुसारी भुगतान की राशि क्रमशः 385 रुपए और 1206 रुपए थी। हिमाचल प्रदेश के अतिरिक्त सभी राज्यों में यही पैटर्न देखा गया है।

**अस्पताल में भर्ती किए गए प्रत्येक मामले में अस्पताल में रखे गए दिनों की औसत संख्या:**—विवरणपत्र 7 ग्रामीण और 7 शहरी में भर्ती किए गए प्रत्येक मामले में अस्पताल में रखे गए दिनों की औसत संख्या प्रत्येक राज्य और समस्त भारत के ग्रामीण एवं शहरी क्षेत्रों के संबंध में दी गई है। यह देखा गया है कि सरकारी अस्पतालों में रखे गए दिनों की औसत संख्या भारत के ग्रामीण एवं शहरी दोनों क्षेत्रों के लिए निजी अस्पतालों की अपेक्षा अधिक है। इसके अतिरिक्त प्रत्येक भर्ती मामले में "सशुल्क विशेष वाड" में रखे गए दिनों की संख्या ग्रामीण क्षेत्र के "निःशुल्क वाड" और "सशुल्क सामान्य वाड" की अपेक्षा अधिक देखी गई है। किन्तु शहरी क्षेत्र में अस्पताल के "निःशुल्क वाड" में यह अपेक्षाकृत अधिक है। अखिल भारतीय स्तर पर देखा गया यह तथ्य विभिन्न राज्यों और संघ शासित क्षेत्रों के ग्रामीण एवं शहरी क्षेत्रों में समान रूप से प्रतिबिम्बित नहीं होता है।

अस्पताल में भर्ती किए गए प्रति मामले पर कुल औसत व्यय :—सरकारी अस्पतालों और निजी अस्पतालों के संबंध में वार्ड की किस्म के अनुसार अलग-अलग भर्ती किए गए प्रति मामले का औसत व्यय ग्रामीण क्षेत्रों के लिए विवरणपत्र 8 ग्रामीण और शहरी क्षेत्रों के लिए विवरणपत्र 8 यू में विभिन्न राज्यों और समस्त भारत के लिए प्रस्तुत किया गया है। यह देखा गया है कि भर्ती किए गए प्रति मामले पर किया गया औसत व्यय इस्तेमाल किए गए वार्ड की किस्म के अनुसार और राज्यों के अनुसार पर्याप्त रूप से भिन्न-भिन्न है।

अस्पताल में भर्ती प्रति व्यक्ति को रखे गए दिनों की औसत संख्या और उस पर किया गया कुल औसत व्यय :—विवरणपत्र (9) से यह देखा गया है कि अस्पताल में भर्ती किए गए प्रति व्यक्ति को अस्पताल में रखे गए दिनों की औसत संख्या ग्रामीण एवं शहरी भारत में लगभग क्रमशः 16 और 15 दिन है। कुल औसत व्यय शहरी भारत में 1183 रुपए की तुलना में ग्रामीण क्षेत्रों में 853 रुपए पाया गया है। राज्य स्तर पर औसत व्यय ग्रामीण दिल्ली (2053 रुपए) में अधिकतम और इसके बाद शहरी उत्तर प्रदेश (1821 रुपए) पाया गया है।

विवरणपत्र 6, 8 ग्रामीण, 8 शहरी और 9 संबंधी पिछले विचार-विमर्श से यह स्पष्ट होगा है कि अस्पताल को भूगतान की औसत राशि/भर्ती किए गए प्रति मामले अथवा प्रति व्यक्ति का कुल व्यय, अस्पतालों की किस्म, वाडों की किस्म के अनुसार तथा राज्यों के ग्रामीण एवं शहरी क्षेत्रों के अनुसार भी पर्याप्त रूप से भिन्न-भिन्न है। यह भी देखा गया है कि कुछ मामलों में औसत व्यय शहरी क्षेत्र की तुलना में ग्रामीण क्षेत्र में अधिक था। इन भिन्नताओं का अध्ययन करते समय यह ध्यान में रखा जाये कि वास्तविक व्यय अस्पताल अथवा वाडों की किस्म की अपेक्षा बीमारियों/चोटों की किस्म, इनकी गंभीरता और उचित चिकित्सा सुविधाओं की उपलब्धता के स्थान पर अधिक निर्भर करता है। स्पष्टतया कुछ गंभीर किस्म की बीमारियों/चोटों के उपचार पर बहुत अधिक व्यय हो सकता है। इसके अतिरिक्त कुछ गंभीर किस्म की बीमारियों/चोटों के उपचार की सुविधाएं केवल शहरी क्षेत्रों में उपलब्ध हैं। अतः ग्रामीण क्षेत्रों के लोग बहुधा गंभीर बीमारियों/चोटों के उपचार हेतु शहरी चिकित्सा संस्थाओं से चिकित्सा सुविधाएं प्राप्त करने के लिए विवश होते हैं। ऐसे भर्ती किए गए मामलों से स्पष्टतया शहरी क्षेत्रों में भर्ती किए गए इसी प्रकार के मामलों के उपचार का व्यय व्यवहार प्रतिबिम्बित होगा। इसके अतिरिक्त ग्रामीण क्षेत्रों में सुविधाओं के अभाव के कारण केवल गंभीर मामलों जिदमें भारी व्यय अन्तर्गत हों, भर्ती कराए गए हों जबकि शहरी क्षेत्रों में रहने वाले अस्पताल में भर्ती हो सकते हैं यद्यपि उनको बीमारों अधिक गंभीर न हो जिसके लिए संभवतः कम व्यय होता है। ये कारक इस बात को स्पष्ट कर सकते हैं कि कुछ मामलों में औसत व्यय शहरी क्षेत्रों की तुलना में ग्रामीण क्षेत्रों में क्यों अधिक था।

छोटे प्रतिदर्श आकार भी कुछ मामलों में वर्गीकरणात्मक विशेषताओं के अनुसार वास्तविक भिन्नताओं को विकृत कर सकते हैं।

बीमारियों सहित व्यक्तियों का अनुपात :—रुग्णता दर अर्थात् उन व्यक्तियों की संख्या जो 1000 व्यक्तियों के पीछे 1986-87 के दौरान 30 दिन की अवधि में औसत रूप से बीमार हुए थे, विवरणपत्र (10) में प्रस्तुत किए गए हैं। यह प्रकट होता है कि ग्रामीण क्षेत्र में बीमार व्यक्तियों का अनुपात भारत के शहरी क्षेत्र की अपेक्षा अधिक था। यह प्रति 1000 व्यक्तियों के पीछे शहरी पुरुषों एवं महिलाओं के मध्य 30 से 33 की दर की तुलना में ग्रामीण पुरुषों एवं महिलाओं के मध्य 63 से 64 था। पुरुषों एवं महिलाओं के मध्य रुग्णता दर जनसंख्या के विभिन्न विभाजित समूहों के अनुसार लगभग वही बंभी गई है।

उपचार की गई बीमारियों सहित व्यक्तियों का अनुपात तथा परिवार में प्रति व्यक्ति मासिक व्यय :—बीमारियों सहित कुल व्यक्तियों की तुलना में उपचार की गई बीमारियों सहित व्यक्तियों (अस्पताल में अन्तर्गत रोगों के रूप में नहीं) के अनुपात (प्रति 100000) विवरण पत्र (11) में दिए गए हैं। उपचार की गई बीमारियों सहित व्यक्तियों का अनुपात निम्न व्यय समूहों में महिलाओं की अपेक्षा पुरुषों में अधिक पाया गया है। जबकि उच्च व्यय समूहों में विपरीत पैटर्न देखा गया है। ग्रामीण क्षेत्र की अपेक्षा शहरी क्षेत्र के अनुपात भी अधिक हैं।

उपचार की गई बीमारियों सहित व्यक्तियों का अनुपात एवं प्रौढ़ शिक्षा :—विवरण-पत्र (12) में दिए गए परिणाम प्रौढ़ शिक्षा स्तर और उपचार की गई बीमारियों सहित व्यक्तियों के अनुपात के बीच एक सकारात्मक संबंध को दर्शाते हैं। प्रौढ़ शिक्षा के उच्च स्तर वाले व्यक्तियों के मध्य उच्च अनुपात पाया गया है। इसी तरह महिलाओं की तुलना में पुरुषों के मध्य उच्च अनुपात है तथा ग्रामीण क्षेत्र की अपेक्षा शहरी क्षेत्र में अधिक है।

उपचार के स्रोत :—उपचार के स्रोत के अनुसार उपचारों का प्रतिशत वितरण विवरणपत्र 13 ग्रामीण और 13 शहरी में क्रमशः ग्रामीण एवं शहरी क्षेत्रों के लिए दिया गया है। ग्रामीण भारत में लगभग 53 प्रतिशत उपचार निजी डाक्टरों से कराए गए थे। 18 प्रतिशत उपचार सार्वजनिक अस्पतालों में और 15 प्रतिशत उपचार निजी अस्पतालों में कराए गए। तदनुरूपी प्रतिशतताएं शहरी भारत में क्रमशः 6, 23 और 16 थीं। ये अनुपात एक राज्य से दूसरे राज्य में बहुत अधिक भिन्न-भिन्न पाए गए।

औषध पद्धति :—औषध पद्धति के अनुसार उपचारों का प्रतिशत वितरण ग्रामीण एवं शहरी क्षेत्रों के लिए क्रमशः विवरण-पत्र 14 ग्रामीण एवं 14 शहरी में प्रस्तुत किया गया है। यह देखा गया है कि अधिकांश बीमार व्यक्ति अपना उपचार एनो-पैथिक औषध पद्धति से कराते हैं। अखिल भारतीय स्तर पर

इस औषध पद्धति का उपयोग ग्रामीण एवं शहरी दोनों क्षेत्रों में 96 प्रतिशत उपचारों में किया गया था। बीमारियों के उपचार हेतु एलोपैथिक औषध पद्धति की यह वरीयता सभी राज्यों और संघ शासित क्षेत्रों के ग्रामीण एवं शहरी क्षेत्रों में भी देखी जा सकती है।

**उपचार हेतु भुगतान की किस्म :—**विवरणपत्र 15 ग्रामीण और 15 शहरी से यह देखा गया है कि ग्रामीण भारत में बीमारियों के लिए 49 प्रतिशत उपचार बिना भुगतान के थे। शहरी क्षेत्र में तदनुसूची प्रतिशतता 42 है। किसी संस्था को उपचार के लिए भुगतान के संबंध में निजी संस्थाओं से प्राप्त उपचारों की प्रतिशतता सरकारी संस्थाओं की तुलना में अधिक है।

**उपचारिता रुग्णता की औसत अवधि तथा प्रति उपचार कूल औसत व्यय :—**रुग्णता के उपचारित मामलों की औसत अवधि तथा प्रति उपचार कूल औसत व्यय विवरणपत्र 16 में दिए गए हैं। सरकारी संस्थाओं में उपचारित रुग्णता की औसत अवधि अखिल भारतीय स्तर पर ग्रामीण एवं शहरी दोनों क्षेत्रों में लगभग 11 से 13 दिन तक थी जबकि निजी संस्थाओं से उपचारित रुग्णता की औसत अवधि ग्रामीण एवं शहरी क्षेत्रों में 12 दिन थी।

**गैर उपचारित रुग्णता और कोई उपचार न कराने का कारण :—**कोई उपचार न कराने के संबंध में विवरणपत्र 17 ग्रामीण और 17 शहरी में दिए कारण के अनुसार गैर उपचारित रुग्णता के प्रतिशतता वितरणों से प्रकट होता है कि ग्रामीण भारत में गैर उपचारित रुग्णता के लगभग 75 प्रतिशत मामलों में उपचार नहीं किया गया क्योंकि वीमारियों को गंभीर नहीं माना गया। लगभग 15 प्रतिशत मामलों में कारण वित्तीय कठिनाइयां थीं। शहरी भारत में तदनुसूची आंकड़ों क्रमशः 81 और 10 प्रतिशत थे। जम्मू व कश्मीर, उड़ीसा और राजस्थान के ग्रामीण क्षेत्रों में तथा गोवा, दमन व दीव के ग्रामीण एवं शहरी दोनों क्षेत्रों में उपचार न कराने का मुख्य कारण वित्तीय कठिनाइयां बताया गया। ग्रामीण भारत में गैर उपचारित रुग्णता के लगभग 3 प्रतिशत मामलों में सूचित किया गया कारण "कोई चिकित्सा सुविधा नहीं" था। ऐसे मामलों की प्रतिशतता हिमाचल प्रदेश (14), इसके बाद सिक्किम (10) और राजस्थान (9) राज्यों में अधिकतम थी। शहरी भारत में इस कारण का उल्लेख केवल एक प्रतिशत से भी कम मामलों में किया गया। चिकित्सा सुविधाएं उपलब्ध न होने के कारण गैर उपचारित रुग्णता का अनुपात शहरी मंचालय में अधिक से अधिक 9 प्रतिशत था।

विवरण पत्र 10 : समस्त भारत के ग्रामीण एवं शहरी क्षेत्रों के संबंध में लिंग और विभाजित समूह के अनुसार बीमारियों सहित व्यक्तियों (प्रति 1000 व्यक्तियों) का अनुपात।

## आंतरिक प्रवजन रिपोर्ट

### निष्कर्षों का सारांश

सर्वेक्षण के दौरान एकत्रित आंकड़ों से प्राप्त विस्तृत परिणामों के विश्लेषण पर आधारित इस भाग के कुछेक सार निष्कर्ष प्रस्तुत किए गए हैं जो भारत में आंतरिक प्रवास की महत्वपूर्ण विशेषताएँ दर्शाते हैं। प्रवासी जनसंख्या का समानुपात और वितरण दर्शाने वाली सारणियों के अलावा, प्रवासियों की आर्थिक रूपरेखा और उनके प्रवास इत्यादि के कारण भी संक्षिप्त विश्लेषण के साथ प्रस्तुत किए जाते हैं। इन संक्षिप्त सारणियों को अनुबंध में दी गई विस्तृत सारणियों से संकलित किया गया है।

**प्रवास दर** :—किसी क्षेत्र के लिए प्रवास से संबंधित दरों की दो किस्में "अन्तःप्रवास दर" तथा "बहिःप्रवास दर" हैं। इनका अन्तर प्रवास के कारण जनसंख्या में निवल परिवर्तन दर्शाता है। तथापि, बहिःप्रवास के अनुमान, सर्वेक्षणों से प्रत्यक्ष रूप से प्राप्त नहीं किए जा सकते। वर्तमान सर्वेक्षणों का अन्तःप्रवास दर और प्रवासियों की रूप रेखा प्राप्त करने के लिए योजनाबद्ध किया जाता है। सर्वेक्षणों के लिए, एक प्रवासी को प्रतिदर्श परिवार में ऐसे व्यक्ति के रूप में दर्शाया जाता है जिसका "धानास का पिछला सामान्य स्थान" उस गाँव अथवा शहर से भिन्न हो जहाँ उस प्रमाणित किया जाता है। किसी क्षेत्र के लिए अन्तःप्रवास दर का अनुमान किसी विशिष्ट अवधि के दौरान उस क्षेत्र की कुल जनसंख्या और क्षेत्र में प्रवासियों के समानुपात के रूप में लगाया जाता है। 43वें दौर सर्वेक्षण में, 38वें दौर की तरह, प्रत्येक प्रवासी से अपने पिछले आवास स्थान से प्रवासित होने के बाद बीती समयावधि के बारे में पूछा जाता है। इस सूचना पर आधारित समस्त भारत के लिए प्रवास के बाद की अवधि के अनुसार वर्गीकृत कुल जनसंख्या के मुकाबले प्रवासियों की प्रतिशतता, चिबरण-3 (अंग्रेजी रूपान्तरण देखें) में दी गई है। सारणी में जनवरी से दिसम्बर, 1983 के दौरान आयोजित राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन के 38वें दौर के आधार पर तैयार तदनुरूपी समानुपात भी प्रस्तुत किए गए हैं।

यह देखा जाता है कि ग्रामीण तथा शहरी क्षेत्रों में, पुरुष प्रवासियों की प्रतिशतता आमतौर पर स्थिर रही है जो सर्वेक्षण के दो पंचवर्षीय दौरों में ग्रामीण क्षेत्र के लिए लगभग 7 प्रतिशत और शहरी क्षेत्रों के लिए 27 प्रतिशत है। तथापि स्त्रियों के मामले में, मामूली वृद्धि अभिलक्षित होती है। राष्ट्रीय प्रतिदर्श सर्वेक्षण के 43वें दौर पर आधारित प्रतिशत ग्रामीण तथा शहरी क्षेत्रों के लिए 40 है जो 38वें दौर पर आधारित तदनुरूपी समानुपात क्रमशः 35 प्रतिशत और 37 प्रतिशत है। ग्रामीण तथा शहरी दोनों क्षेत्रों में महिला प्रवासियों का प्रतिशत पुरुष

प्रवासियों की अपेक्षा काफी अधिक है। किन्तु, यह अन्तर किसी आर्थिक कारक जो भारतीय स्त्रियों का पुरुषों के मुकाबले अधिक गतिशील बनाता है, के साथ नहीं जोड़ा जाना चाहिए जैसा आगे दिए गए विवरणों में स्पष्ट होगा, स्त्री प्रवास के लिए सबसे महत्वपूर्ण कारकों में "विवाह" और "परिवार के अर्जक सदस्य के साथ जाना" शामिल है। इन कारकों की वजह से प्रवास अधिक प्रभावी होता है जो विवरण-3 (अंग्रेजी रूपान्तरण देखें) में प्रस्तुत परिणामों से स्पष्ट है। इसमें पांच वर्षों के अन्तराल वाले दो सर्वेक्षणों में ग्रामीण क्षेत्रों के लिए लगभग 5 प्रतिशत बिन्दु प्रवास वृद्धि तथा शहरी क्षेत्रों के लिए 3 प्रतिशत बिन्दु दर्शाए गए हैं।

जैसी आशा थी, प्रवास की अवधि के अनुसार प्रवासियों के प्रतिशत में कमी आयी है। यह कमी ग्रामीण तथा शहरी क्षेत्रों दोनों में स्त्रियों की तुलना में पुरुषों के लिए अधिक तीव्र है। इस प्रकार, पुरुषों और स्त्रियों में गतिशीलता का विभेदक प्रतिमान घटती हुई प्रतिशतता में देखा जा सकता है।

**राज्यों और संघ शासित क्षेत्रों के लिए अन्तःप्रवास** :—चिबरण-4 (अंग्रेजी रूपान्तरण देखें) में ग्रामीण तथा शहरी क्षेत्रों के लिए अलग-अलग, भिन्न-भिन्न राज्यों और संघ शासित क्षेत्रों के लिए अन्तःप्रवासियों की प्रतिशतता दी गई है। सूचना तीन भिन्न-भिन्न अवधियों "गत एक वर्ष", "गत पांच वर्षों" तथा "गत दस वर्षों" और सभी वर्षों के लिए भी प्रस्तुत की गई है। समस्त भारत के लिए आंकड़ों का देखने से पता चलता है कि "सभी वर्षों" के प्रवासियों का प्रतिशत ग्रामीण तथा शहरी इलाकों दोनों के लिए सभी राज्यों और संघ शासित क्षेत्रों में पुरुष जनसंख्या की तुलना में स्त्री जनसंख्या में काफी उंचा है। प्रमुख राज्यों में ग्रामीण पुरुषों में से सभी वर्षों के प्रवासियों का प्रतिशत केरल (17.9) में अधिकतम था, इसके बाद आन्ध्र प्रदेश (13.0), पंजाब (12.1), तमिलनाडू (11.4) और महाराष्ट्र (10.1) का स्थान रहा। यह प्रतिशत बिहार (1.3) में न्यूनतम था। दूसरी ओर ग्रामीण स्त्रियों के मामले में "सभी वर्षों" के प्रवासियों का समानुपात हरियाणा, पंजाब, राजस्थान और उत्तर प्रदेश में लगभग 50 प्रतिशत तक रहा। अन्य राज्यों में, यह 12 प्रतिशत से 48 प्रतिशत के बीच रहा। ग्रामीण पुरुषों में एक वर्ष की अवधि के लिए अन्तःप्रवास दर केरल में 3 प्रतिशत से मामूली ऊपर तथा आन्ध्र प्रदेश, महाराष्ट्र, पंजाब और तमिलनाडू में 2-3 प्रतिशत के बीच रही। यह असम तथा बिहार में व्यावहारिक रूप से नगण्य रही। ग्रामीण स्त्री जनसंख्या में, पंजाब का स्थान सर्वोच्च रहा, इसके ठीक बाद केरल का स्थान रहा, इन दोनों राज्यों में दर, 4 प्रतिशत से मामूली सी अधिक रही। जहाँ तक शहरी जनसंख्या का संबंध

है, पुरुषों के मामले में, 'सभी वर्षों' को अना: प्रवास दर हरियाणा में 4 प्रतिशत तक ऊंची रही, इसके बाद पश्चिम बंगाल (36.5 प्रतिशत), उड़ीसा (34.3 प्रतिशत), पंजाब (32.3 प्रतिशत), आन्ध्र प्रदेश (33.0 प्रतिशत) और हिमाचल प्रदेश और तमिलनाडु (30.6 प्रतिशत) का स्थान रहा। स्त्रियों के मामले में हरियाणा ने फिर (54.3 प्रतिशत) पहला स्थान प्राप्त किया, इसके बाद पंजाब (51.3 प्रतिशत) का स्थान रहा। एक वर्ष की अवधि पर विचार करते हुए, पुरुषों और महिलाओं के मामले में यह दर आन्ध्र प्रदेश, हरियाणा और हिमाचल प्रदेश के प्रमुख राज्यों में 6 प्रतिशत से अधिक रहा। असम और बिहार इस मामले में भी सबसे नीचे रहे।

**प्रवास के कारण :—**जनसंख्या की गतिशीलता को समझने की दृष्टि से, व्यक्ति विशेष जिसे प्रवासी माना गया है, से मालूम किए गए प्रवास के कारण, बहुत महत्वपूर्ण हो जाते हैं। मोटे तौर पर प्रवास के लिए बाध्य करने वाले दो कारक, 'आकर्षण' कारक और 'प्रतिकर्षण' कारक हैं। 'आकर्षण' कारक वे हैं जो किसी प्रवासी को बेहतर अवसरों अधिकांशतः आर्थिक अवसरों की उपलब्धता के कारण प्रवासियों को स्थान विशेष की ओर आकर्षित करते हैं। 'प्रतिकर्षण' कारक वे अनुत्साही कारक हैं जो किसी व्यक्ति को जहां वह है, वहीं बने रहने पर प्रेरित करते हैं। ये अतिरिक्त आर्थिक कारक अथवा बाध्य घटनाएं भी हो सकती हैं। तथापि ये दो कारक सर्वेक्षण उद्देश्य के लिए स्पष्ट वर्गीकरण हेतु उपयुक्त नहीं हैं। इन सभी पहलुओं पर विचार करते हुए राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन के लिए, प्रवास के लिए कारण नीचे वर्गीकृत किए गए हैं :—

- (1) रोजगार की तलाश में
- (2) बेहतर रोजगार की तलाश में (उन व्यक्तियों के लिए जो प्रवास के समय मूल स्थान पर नियोजित थे)
- (3) सेवा के दौरान स्थानांतरणाधीन/व्यापार अनुबंध
- (4) अध्ययन करने के लिए
- (5) विवाह होने पर
- (6) माता पिता अथवा अर्जक सदस्य के प्रवास के कारण
- (7) राजनीतिक/परिवर्तनों सुरक्षा का अभाव सामाजिक समायोजन के कारण
- (8) प्राकृतिक विपदाओं के कारण
- (9) अन्य कारणों से

यह ध्यान देने की बात है कि क्र. सं. 1, 2 और 3 के अधीन सूचीबद्ध प्रवास के कारण, संबंधित प्रवासियों को रोजगार से संबंधित हैं और इन्हें आर्थिक कारक के रूप में पहचाना जा सकता है। क्र. सं. 5 और 6 के अधीन लिखित कारकों को सामाजिक कारकों के रूप में वर्गीकृत किया जा सकता है और

7 और 8 के अधीन कारकों को ऐसे कारकों के रूप में वर्गीकृत किया जाता है जो प्रवासियों के लिए बाध्य हैं और जिन पर पुरुष/महिला की सीमित व्यक्तिगत इच्छा होती है।

विवरण-5 (अंग्रेजी रूपान्तरण देखें) प्रवास के कारण के अनुसार प्रवासियों का वितरण प्रस्तुत करता है। कारण के अनुसार प्रवास के प्रतिमान का अध्ययन करने के लिए, प्रवासियों के लिए गत एक वर्ष, गत पांच वर्षों और गत दस वर्षों के दौरान अलग-अलग अनुमानित वितरण प्रस्तुत किया जाता है। विवरण में प्रस्तुत परिणामों पर एक नजर दशाती है कि स्त्रियों के प्रवास के लिए प्रेरित करने वाले कारण पुरुषों का प्रवास के लिए प्रेरित करने वाले कारणों से पूर्णतः भिन्न हैं। पुरुष प्रवासियों में से आर्थिक कारकों (अर्थात् पहले तीनों कारणों को मिलाकर) के प्रभाव में पिछले वर्ष के दौरान ग्रामीण क्षेत्रों में 33 प्रतिशत और शहरी क्षेत्रों में 46 प्रतिशत प्रवासित हुए। दूसरी और ग्रामीण और शहरी क्षेत्रों के लिए स्त्री प्रवासियों की तदनुकूपी प्रतिशतता क्रमशः 4 से 7 थी। पिछले पांच वर्षों तथा पिछले दस वर्षों के दौरान प्रवासित व्यक्तियों का प्रतिमान वही रहा। इस बात को छोड़कर कि प्रतिशतता में मामूली विचलन रहा। स्त्री प्रवासियों में पिछले एक वर्ष के दौरान विवाह के कारण निवास बदलने वालों का ग्रामीण क्षेत्रों में प्रतिशत 64 प्रतिशत तथा शहरी क्षेत्रों में 29 प्रतिशत रहा। पिछले पांच वर्षों की अवधि के दौरान स्त्री प्रवासियों के लिए ग्रामीण भारत में 'विवाह' का कारक 73 प्रतिशत तथा शहरी भारत में 36 प्रतिशत रहा। पिछले एक वर्ष के दौरान दो सामाजिक कारकों 'विवाह' और 'माता पिता अथवा अर्जक सदस्य का साथ' को मिलाकर ग्रामीण स्त्रियों का प्रतिशत अधिक से अधिक 84 तक रहा और शहरी स्त्री प्रवासियों का प्रतिशत 77 प्रतिशत रहा। पिछले पांच वर्षों के दौरान प्रवासियों पर विचार करते हुए, ग्रामीण तथा शहरी क्षेत्रों के लिए तदनुकूपी प्रतिशत क्रमशः 86 और 82 रहा। ग्रामीण स्त्री प्रवासियों के लिए पिछले दस वर्ष की अवधि के लिए प्रतिशत 90 प्रतिशत तथा शहरी स्त्री प्रवासियों के लिए 83 प्रतिशत रहा। इस प्रकार, अधिकांश स्त्रियां सामाजिक कारकों की वजह से या तो अपने पति अथवा परिवार के सदस्यों जब वे अपना निवास बदलते हैं, के साथ जाने के लिए, प्रवास प्रक्रिया में भागीदार बनीं।

गत एक वर्ष, गत पांच वर्षों और गत दस वर्षों के दौरान प्रवासियों का (भिन्न-भिन्न राज्यों और संघ शासित क्षेत्रों के लिए) प्रतिशतता वितरण सारणी 6 में प्रस्तुत है। (अंग्रेजी रूपान्तरण देखें)

**मासिक प्रति व्यक्ति व्यय के अनुसार प्रवासियों का वितरण :—**राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन पंचवर्षीय सर्वेक्षण में, रोजगार, बेरोजगारी और उपभोक्ता व्यय से संबंधित आंकड़ों, परिवार के उपभोक्ता व्यय से संबंधित एकत्रित आंकड़ों पर आधारित प्रतिदर्श परिवारों के सामान्य सैट से एकत्रित किए जाते हैं और मासिक प्रति व्यक्ति व्यय की गणना प्रत्येक प्रतिदर्श परिवार के

किए की जाती है और रोजगार-बेरोजगारी से संबंधित सर्वेक्षण प्रश्नावली में दर्ज किया जाता है (विवरण-7) (अंग्रेजी रूपान्तरण देखें) में ग्रामीण तथा शहरी भारत के लिए अलग-अलग, गत एक वर्ष, गत पांच वर्षों और गत दस वर्षों के लिए प्रवासित व्यक्तियों का वितरण दर्शाता है। यह ध्यान देने की बात है कि ग्रामीण तथा शहरी क्षेत्रों के लिए व्यय वर्ग भिन्न हैं। विवरण से यह स्पष्ट होता है कि पिछले एक वर्ष के दौरान प्रवासित व्यक्तियों में से, 55 प्रतिशत पुरुष शहरी क्षेत्र में परिवार वर्ग से संबंधित थे और प्रति व्यक्ति मासिक व्यय 160 रु. से अधिक वाले थे और शहरी क्षेत्रों में तदनुरूपी प्रतिशत लगभग 80 प्रतिशत था। पिछले एक वर्ष के दौरान स्त्री प्रवासियों के मामले में यह प्रतिशत ग्रामीण क्षेत्रों में 43 प्रतिशत और शहरी क्षेत्रों में 72 प्रतिशत था। एक वर्ष की अवधि के दौरान ग्रामीण पुरुष प्रवासियों के आधे का न्यूनतम प्रति व्यक्ति उपभोग व्यय प्रति व्यक्ति 180 रु. प्रतिमाह था। दूसरी ओर, शहरी प्रवासियों का प्रतिमाह प्रति व्यक्ति व्यय कम से कम 255 रु. था। स्त्री प्रवासियों के मामले में ग्रामीण भारत के लिए तदनुरूपी समानुपात 35 प्रतिशत तथा शहरी भारत के लिए 40 प्रतिशत रहा। एक वर्ष की अवधि के दौरान ग्रामीण पुरुष प्रवासियों के निचले 20 प्रतिशत ने प्रति व्यक्ति प्रतिमाह अधिकतम 110 रु. ही खर्च किए। जबकि शहरी पुरुष प्रवासियों के निचले 20 प्रतिशत ने अधिकतम प्रति व्यक्ति 160 रु. खर्च किए। स्त्री प्रवासियों के मामले में इन व्यय स्तरों से संबंधित व्यक्तियों का प्रतिशत ग्रामीण तथा शहरी भारत दोनों के लिए 28 था।

**मूलस्थान के अनुसार प्रवासियों का वितरण :—**अब तक रिपोर्ट में प्रवासियों पर समग्र रूप से विचार किया गया है, मूल स्थान से प्रवास के स्थान तक तय की गई दूरियों का ध्यान में नहीं रखा गया। अब, "गत सामान्य निवास स्थान के प्रकार" अर्थात् मूल स्थान के अनुसार सर्वेक्षण परिणामों का वर्गीकरण किया जाता है। प्रवासियों को चार प्रमुख श्रेणियों अर्थात् (1) उसी जिले में (2) उसी राज्य के अन्य जिलों में (3) अन्य

राज्यों में और (4) अन्य देशों में प्रवास करने वाले, में समूहीकृत किया गया है। पहले दो प्रकार के स्थानों से प्रवास को आमतौर पर लघु दूरी माना जाता है और इसी के अधिक सामान्य होने की आशा की जाती है। यद्यपि आर्थिक विकास का क्षेत्रीय असन्तुलन क्षेत्रों के बीच प्रवास में सकारात्मक योगदान है, फिर भी भाषा और संचार अवरोध, परिवहन कठिनाइयाँ, जातीय तथा अन्य सामाजिक विभाजन जैसे सृष्टि प्रतिबंधक कारक प्रवास पर नकारात्मक प्रभाव डालते हैं।

विवरण 8 (अंग्रेजी रूपान्तरण देखें) से यह देखा जा सकता है कि ग्रामीण भारत में, पिछले एक वर्ष के दौरान पुरुष प्रवासियों का 63 प्रतिशत उसी जिले से ही आया था। शहरी भारत के लिए तदनुरूपी समानुपात 42 प्रतिशत था। स्त्रियों के मामले में, यह समानुपात ग्रामीण तथा शहरी भारत के लिए क्रमशः लगभग 14 तथा 48 प्रतिशत था। दूसरी ओर, पिछले एक वर्ष के दौरान पुरुष प्रवासियों का, ग्रामीण भारत में उसी राज्य से आने वाले प्रवासियों का प्रतिशत 85 प्रतिशत तथा शहरी क्षेत्रों में प्रवासियों का 76 प्रतिशत रहा। स्त्रियों के लिए, ग्रामीण भारत के लिए तदनुरूपी समानुपात 93 प्रतिशत और शहरी क्षेत्रों के लिए 82 प्रतिशत था। प्रवास के बाद से गुजरी लम्बी अवधि पर विचार करते समय प्रवास प्रतिमान में अथवा इस मामले के लिए राष्ट्रीय प्रतिदर्श को सर्वेक्षण के 38वें दौर सर्वेक्षण पर आधारित परिणामों में कोई उल्लेखनीय परिवर्तन देखने में नहीं आया है। यह स्पष्ट हो जाता है कि भारत में अंतर्राज्यीय प्रवास, अन्तर्राज्यीय प्रवास की तुलना में सीमित है। वास्तव में, पिछले एक वर्ष के दौरान पुरुषों के लिए, अन्तर्राज्यीय प्रवासियों का लगभग 22 प्रतिशत शहरी भारत में और कुल पुरुष प्रवासियों का 14 प्रतिशत ग्रामीण भारत में रहा। स्त्रियों के मामले में, उसी एक वर्ष की अवधि के दौरान राज्य से बाहर से शहरी क्षेत्रों में प्रवासियों का लगभग 18 प्रतिशत तथा ग्रामीण क्षेत्रों में प्रवासियों का लगभग 7 प्रतिशत रहा। विवरण-9 (अंग्रेजी रूपान्तरण देखें) में राज्यों और संघ शासित क्षेत्रों के बारे में मूल स्थान के अनुसार प्रवासियों का वितरण दिया गया है।
