INJURY MORBIDITY AND ASSOCIATED BURDEN OF TREATMENT IN INDIAPRIVATE

ANIL GUMBER

1. Introduction

Since long, injuries have been considered synonymous with "accidents" implying that occurrence of such events was sudden and caused by external factors. Assuming that these factors were random and uncontrollable acts of fate and luck, injuries have remained a neglected field of research in the past. Some studies have been carried out in developed countries to estimate the magnitude, severity and consequences of injuries and accordingly appropriate safety measures, laws and regulations have been devised to prevent them. Recently, the epidemiologists of developed countries have expanded the scope of etiology of diseases to include injury and have contributed towards the understanding of causal relationships among risk factors, events and the outcomes of injury. In contrast, so far not much attention has been paid in the developing countries about awareness, prevention and control of injury. Not many efforts have been made to learn from the experience and research findings of the developed nations by the developing countries.

In the process of economic development, not only the magnitude of injury producing agents has multiplied but also their nature has become complex. With industrialization and technological change, a major expansion took place in the development of transport and communication networks. Further, due to population growth, there has been a massive shift in the labour force from rural to urban and from agriculture to industry accompanied by a heavy dependence on the service sector. As a result, more and more people are becoming exposed to injury producing agents such as mechanical, electrical, thermal or chemical energy. In the world today, mechanical energy has remained the dominant cause of injury. In this paper an attempt is made: a) to highlight the differentials in the burden and causes of injury between India, china, other developing and developed countries on the basis of methodology and data provided by the World Development Report 1993 (WDR); and b) to examine in detail the extent of utilization of health services and associated cost of treatment for injury based on the household level data for five states collected by the National Sample Survey Organisation (NSSO) during 1986-87. Best efforts have been put forward to explore the existing data set on injury, raise issues and generate specific hypotheses which would help in designing new research studies on injury prevention and control and in formulating the related policy measures in India.

2. Definition of Injury

The term "injury" derived from the Latin "in+jus" meaning "not right", refers to human damage

I am thankful to Dr. Lincoln Chen, Dr. Michael Reich, Dr. Peter Berman and Mr. Ramesh Govindaraj of theHarbard School of Public Health for their useful comments on the earlier draft of the paper. I am also indebted to Dr. Pravin Visaria for his valuable suggestions and the National Sample Survey Organisation for allowing me to analyze the data in detail.

from acute exposure to physical and chemical agents (Baker et al. 1987). Pioneering work on defining agents of injury was done by J.E. Gordon; he suggested that injuries behaved like classic infectious diseases and were characterized by epidemic episodes, seasonal variation, long-term trends and demographic distribution. He further argued that each injury was the product not of one cause, but of forces from at least three sources which are the host, the agent itself and the environment in which host and agent find themselves (Gordon 1949). According to Haddon (1980), unlike disease, the exposure causing injury is sudden and the damage is quick and severe; besides the energy induced or exposed episodes, injury also results from the absence of essentials such as oxygen or heat.

Haddon further expanded the work of Gordon by including time dimension in injury producing factors and created a landmark in the prevention measures of injury: often referred to in the literature as 'the Haddon Matrix'. The matrix includes three phases of injury as 'pre-event', 'event', and 'post-event' as rows and the interacting factors, which cause injury over time, as columns. The latter include host, agent (or vector) and environment (physical and socioeconomic). (For the evolution of the injury concept, refer for details: National (US) Committee for Injury Prevention and Control 1989.)

The World Health Organization (1977) in its International Classification of Diseases tried to explain the typology of injuries in terms of external causes (agents) and associated pathological outcomes. The classification has helped a great deal in addressing the issues of acute effects and long-term disability resulting from injury; however, it failed to provide adequate attention to the associated socioeconomic and psychological consequences.

From a public health perspective, so far no consensus has been reached in defining injury because it is considered an outcome and consequence of many causal and interacting factors which include physical environment, human behaviour resulting from socioeconomic, political and cultural environment, as well as man-made and natural agents. Also, it is always felt that bridging the gap between normative and positive approach in defining any concept is rather difficult. Nevertheless, it is widely accepted that the causes of injury can be classified as unintentional and intentional so that different safety and preventive measures can be developed and enforced. In terms of public health, the National (US) Committee for Injury Prevention and Control has redefined injury as "unintentional or intentional damage to the body resulting from acute exposure to thermal, mechanical, electrical, or chemical energy or from the absence of such essentials as heat or oxygen". However, it is still not clear from this definition whether "the damage to the body" is only physical or includes stress as well as psychic and mental damage.

3. Burden and Causes of Injury in Developed and Developing Countries

In the world today, injuries kill more than four million persons each year and account for nearly nine per cent of all deaths. According to the WDR 1993, injury is the fourth important cause of death after heart diseases, cancer and respiratory infections in developing countries and the third in developed countries. Interestingly, the share of injury in total deaths, in contrast to other diseases, does not differ between developed and developing countries. (The shares of

communicable and noncommunicable diseases are 5 and 87 per cent respectively in the developed and 41 and 51 per cent respectively in the developing countries).

In terms of disability adjusted life years (DALYs) lost, an index measuring the burden of disease accounting for potential life years lost due to premature death and disability, the share of injury in the world increases from 9 to 12 per cent; the increase is higher in developed than in developing countries. Now injury exerts the most impact in the developing countries. The underlying reasons for the rise in share of injury are:

- (a) The younger population is more prone to injury and the resulting fatality counts for a higher number of life years lost. In United States, injury is the single greatest killer of individuals at any age between 1 and 44 (Baker et al. 1992)
- (b) The severity and the resulting impairment, disability and handicap tend to be higher in injury than in morbidity caused by other diseases. For instance, in United States, One in four persons suffers injury requiring medical attention each year; and in terms of severity, for every fatal injury there are 16 hospitalizations and almost 400 injuries serious enough to restrict activity or require medical attention (Stansfield et. al. 1993:614). A decade ago, WHO estimated one out of ten persons as disabled in the world; and injury was the main cause of disablement for 1 out of 7 disabled persons (Wood 1989). Moreover, like mortality, injury morbidity and the resulting disability is higher among the younger population.

The estimated disease burden rate (DALYs lost per 1000 population) for India is twice that in china and nearly thrice that in the developed regions; the differentials are the highest for immunization and literacy programmes in China during late 70's, has considerably reduced the infant and child mortality as well as prevalence of communicable diseases; which India is yet to achieve universal immunization and literacy. Surprisingly, the burden of injury was found to be the same in China and India and marginally higher than in the developed regions; evidently, the injury problem is more universal than confined to a specific region.

Compared to communicable and noncommunicable diseases, injuries have a different demographic distribution. In both developed and developing countries as well as in India and China, injury affects the prime age group 5 to 44, the most (including school-going children, youth, and productive work force.) Also, the share of injury in DALYs lost is two to three times higher among males than among females.

The WDR 1993 data by types of injury suggest that a majority of injuries (and two-thirds of fatal injuries) belong to the unintentional category, in which the main cause is motor vehicle collisions. Although in developing countries some traffic laws have been enforced, their effective implementation has been difficult to achieve. Further, the traffic safety devices in developing countries are far more inadequate than those followed in developed nations. Deaths caused by drowning are the second most important category in the developing countries. Ponds, rivulets irrigations canals and open wells pose the danger of drowning to young children. Studies in many Asian countries revealed that drowning was the primary cause of injury deaths particularly

among children (Stansfield et al. 1993).

In both developed and developing countries males are exposed to a higher risk of any type of injury; in certain injuries the gender difference are very large (see Table 1). In developed countries, in drowning and occupational injuries males were 5 to 6.5 times as high a risk as females. In developing countries, male were exposed to a higher risk, 3.25 to 3.5 that of females, in occupational injuries and homicide including violence. The gender difference was the lowest for injuries resulting from fires and falls. Out of nine types of injuries, females faced a higher risk than males only for suicides in China and for fires in India. Unsafe fireplace and stoves for cooking are the main agents of fire injury among women in India (firewood and cow dung cakes are the primary source for cooking in villages and in cities it is kerosene). sometimes short circuiting of electricity due of substandard wires causes fires in homes and buildings in urban India. Thus, depending upon the nature of daily activity, men and women face varied risks for different types of injury.

In certain injuries (drowning, suicide, homesick, etc.) the impact is rapid and sudden, and the outcome is death; while in other injuries such as falls, fires, motor vehicle collisions and occupational, the degree of impact varies and the level of severity differs between untreated and acute morbidity, impairment, disability, handicap and fatality. The WDR 1993 data have exclusively dealt with the state of mortality and disability and have not considered the access to and use of health services, and cost and duration of treatment for injury and other diseases. Also, the DALYs lost approach does not account for productive days/months lost due to sickness, which had shown considerable variations across age groups and diseases. As the duration of treatment as well as rehabilitation period for injury is usually longer than for most other diseases, the required adjustment in DALYs lost would have given much better estimates for the relative burden of injury. Some of these issues particularly relating to the nature and cost of treatment for injury are discussed below.

4. A Profile of Injury Morbidity in the Five States of India

The NSSO had carried out two surveys in 1980-81 (35th Round) to make an assessment of the benefits derived by various sections of the society from public investment in social services such as health care, education, family planning and public distribution system. The following discussion is based on the analysis of the 1986-87 data on the utilization of health services for the five states of India.

The five states (Gujarat, Maharashtra, Tamil Nadu, Uttar Pradesh and West Bengal) together covered 31 per cent of the geographical area and 45 per cent of the population of the country as a whole in 1991. These states not only belong to different agro-climatic zones of the country but also differ with respect to their level of socio-economic development. Maharashtra, Gujarat and Tamil Nadu are the three most urbanized among the major states. West Bengal is also more urbanized than the country as a whole; whereas Uttar Pradesh has a little less than one-fifth of its population residing in urban areas. In terms of the level of development measured through per capita state domestic product in 1988-89, Maharashtra and Gujarat occupied the third and the fourth ranks (after Punjab and Haryana); Tamil Nadu and West Bengal were 3 and 7 per cent

below the national average, whereas Uttar Pradesh was backward, 27 per cent below the national average. Overall, the five states provide a good cross-section of the conditions prevailing in different parts of the country.

4.1 Data and Methodology

The NSS survey on the utilization of health services for illness and injury was spread throughout the year beginning July 1, 1986. A two-stage sampling design was adopted, with villages/urban blocks as the first stage and households as the second stage units. The number of sample villages/urban blocks from every agro-climatic region of the state was selected according to the probability proportional to population. For the second stage units, in each sampled village/urban block a house listing was conducted to enumerate household: (a) in which at least one member had been hospitalized during the 365 days preceding the survey; and (b) in which at least one member had fallen ill or had been injured during the 30 days preceding the date of survey [not enumerated for (a)]. Four households [two each from categories (a) and (b)] from every sampled village/urban block were surveyed for detailed information.

For ascertaining whether the person had suffered any illness or injury during the reference period, various probes referring to the condition of any organ or parts of the body were inquired to individual members of the household. Injury was defined as all types of damage to body such as cuts, wounds, hemorrhage, fractures, burns and bites. Those who availed of health services for practicing family planning methods, immunization, pregnancy and childbirth during the reference period were not considered as ill. Similarly, all self-treated illness were considered as untreated ones (Government of India 1985). All the diagnosed ailments were grouped into fifty most prevalent diseases including injury. However, injury was considered as a group caused by many factors such as a fall, drowning, fire, motor vehicle collision, self-infliction and violence.

For each household member who was ill or injured, information was collected on the duration of illness, type of ailment, the number of days the patient was unable to perform his/her normal vocation/usual activity, the type of health agency contacted and services availed of, and the cost of treatment - amount paid to health care provided and total expenditure incurred. A probing question was asked to those who did not seek medical treatment about the reason for not taking the treatment.

In addition, the survey included question not only on the characteristics of the individuals seeking health facilities (such as sex, age, marital status and educational attainment), but also of the household and the head of household (such as household size, land possessed, main source of income, occupation/industry, average monthly household and per capita expenditure during the last year, caste/tribe status, and sex, age and education level of the head). These characteristics help to analyze both the differentials and determinants of health care utilization.

The analysis of five states is based on the data collected from 2,872 villages and 1,991 urban blocks. A total of 11,378 rural households and 7,912 urban households have provided information relating to 9,086 episodes of illness involving hospitalization and 18,954 episodes of illness not requiring hospital care. Among them, 1,000 episodes of inpatient treatment and 615 episodes of

outpatient treatment were reported to be due to injury. Appendix Table 1 provides the details relating to the number of sample villages, households and illness cases, etc. for 1986-87 for each of the five states.

4.2. Distribution and Incidence of Morbidity by Disease

Table 2 shows the distribution, incidence, and proportion of illness requiring hospitalization by disease and injury groups. The fifty pre-coded diseases were regrouped into eleven, using WHO International Classification of Diseases, 1977. similar to other developing countries, infectious diseases are prominent in India, particularly in rural areas (31 per cent in rural and 24 per cent in urban areas). The next important are the diseases of the respiratory system (15 and 12 per cent in rural and urban areas respectively). The share of injury in total illnesses was rather small, 3 per cent in rural and 4 per cent in urban areas. Annual incidence of injury was also the same, however, it was higher in rural than in urban areas. Also, in the different disease groups the incidence remained higher in rural than in urban areas; overall it was twice higher (1.2 episodes per year for rural and 0.6 episodes for urban areas.)

It appears that the NSS survey had under-estimated annual incidence of morbidity compared to other micro-level surveys which had been the basis for forming the norm of an average of two episodes per individual per year. There can be many reasons for such an underestimate, the most important are as follows.

- (a) The above estimated did not include untreated illness. If we included them the NSSO estimated for rural rises to 1.47 and that of urban to 0.74.
- (b) The estimates exclude the deceased members who were hospitalized or received other treatment and who would no longer be recorded as members of enumerated households (Visaria and Gumber 1994:20).
- (c) Some under-reporting is likely due to the longer recall period (30 days) which according to international standard is twice the normal length (Gumber and Berman 1994).
- (d) Quite likely, some of the minor illness such as usual cough and cold, aches and pains were either under-recorded or not considered serious enough to be reported by the respondents. The cases of untreated injuries such as cuts, burns, etc. of minor nature were not considered at all (Government of India 1985:109).

Moreover, there are inter-state differences in the incidents of morbidity (incidence was low in Gujarat and Maharastra and high in West Bengal with more variation in rural than in urban areas). In general, we need more survey work on these issues to evaluate the validity of the estimates.

Interestingly, in terms of severity (measured as the proportion of illness requiring hospitalization to all treated illness), injury ranked second in rural and third in urban areas, next to diseases of skin and subcutaneous tissue, and neoplasms. It is quite likely that some of the injuries in the form of burns were misclassified as diseases related to skin. Compared to an overall average, injury required 3-4 times higher inpatient care. However, there are inter-state variations; the two most urbanized and industrialized states (Maharashtra and Gujarat) have reported the highest

proportion of injuries requiring hospitalization (see Table 3).

Table 4 shows the distribution of illness treated as inpatients and outpatients by three broad groups of diseases in rural and urban areas. The share of injury is higher for inpatient (between 6 and 15 per cent) than for outpatient care (between 2 and 4 per cent); whereas it was the opposite in the case of communicable diseases.

Figures 1 and 2 highlight sex and age differentials in the cases of injury treated as inpatients and outpatients. Males reported higher cases of injury than females in both rural and urban areas as well as treated as inpatients or outpatients. Such sex differentials were not visible in all illness together. Similarly, injury affected the young population more than the older ones (5-14 age group in urban areas and 25-34 age group in rural areas).

5. Risk Factors Associated With Severe and Non-Severe Injury

An attempt has been made to identify risk factors associated more with injury than other disease through logistic regression analysis. The analysis covered only the treated illnesses because the disease break-up was not available for untreated episodes. The share of untreated illness was 16 and 11 per cent in rural and urban areas, respectively. Also, the majority of untreated illness were of minor in nature; three-fourths of such illnesses were not considered serious enough for treatment by the respondents.

As observed earlier, certain population groups are at a higher risk of sustaining injury and in certain cases severe enough to require hospitalization. From the available data, 18 risk factors were identified and divided into four categories.

- (a) Characteristics of the patient: It includes six predictors namely sex, age, marital status, education, whether head of household, and whether covered under Employees' State Insurance (ESI) or other health insurance schemes.
- (b) Characteristics of the household: Six predictors identifying the socio-economic status of the household of the host are: whether belongs to a scheduled caste and tribe, major source of income (from self-employment, regular employment, casual employment or other source), monthly household consumer expenditure, whether belongs to the top 30 per cent of monthly per capita expenditure class (a proxy variable for the better-off), household size, and the highest level of education attained by any adult female in the household.
- (c) Characteristics of the head of household: Three variables consider the sex, age and education level of the head of the household.
- (d) Physical environment: It takes into account type of state, season, whether the village is located in an urbanized zone, and whether the patient is residing in a town, city or metropolitan.

The dependent variable is valued 'I' if the person sought treatment for an injury and, 'O' if sought treatment for another disease. Four logistic regressions have been attempted (as shown in Table 5) to describe differentials in risk factors by rural/urban residence, and requiring inpatient/outpatient care.

From the analysis it is clear that males and the never married are at a higher risk of suffering an injury than another disease. The probability of suffering an injury and not other disease has a strong non-linear relationship (inverted U-shaped) with age, suggesting that the risk is higher among young people than among elders and children. However, the education level of the patient and insurance status were not found to be significant predictors except in the case of non-severe injury in urban areas.

The socio-economic status of the household has shown a varying influence on the probability of having injury rather than another disease. In rural areas, it is higher among person nor belonging to scheduled caste and tribe households and persons living in larger households, and much lower in households reporting major source of income other than from self-employment (rental, pension and dividend income). Similarly, the probability declines with the education level of adult female in the household as well as monthly total household expenditure in rural areas. In urban areas, none of the above socio-economic characteristics of the households is significant; however, if the person belongs to top 30 per cent of start monthly per capita expenditure (MPCE) class, the risk of having injury rather than another disease is lower.

Further, only in rural areas the risk of severe injury is higher in female headed households and also in those household where the head is young (aged between 30 and 44) and educated up to secondary or above.

The most important predictor in rural areas turned out to be the risk of living in a highly urbanized region. Every state divided into certain number of contiguous regions depending upon rural population density and cropping pattern (there were 24 regions in the five states together). The proportion of urban population in that region is used here as a predictor to capture the effect of towns and cities on their hinterland and the degree of transport and commutation networks in the region. The risk of suffering both a severe and a non-severe injury for start6 rural residents rises with the level of urbanization. The risk of suffering an injury (only non-severe ones) was lower among the residents of cities with population of one million and above than among those of with cities less than 200 thousand population.

Both in rural and urban areas, the season has also shown an important effect on the risk of injury. As observed in other developing countries, the incidence of communicable, particularly infectious, diseases is higher in monsoon than in other seasons. Conversely, the relative risk of injury is much lower in monsoon (July to September) and in the following months of mild winter (October to December) than in summer (April to June).

The risk also varied among the five states. Compared to Gujrat, the rural residents were found to be at the highest risk of having a severe injury in Uttar Pradesh and that of non-severe injury in Tamil Nadu. In urban areas, there was no inter-state differential for severe injury; however, the relative risk was higher for nor-severe injury in West Bengal, Tamil Nadu and Maharashtra compared to Gujarat.

Overall, the demographic characteristics of the population and the physical environment are found to be the important risk factors rather than the socio-economic status of the household

(particularly so in urban areas.). Furthermore, the identified risk factors of suffering an injury rather than another disease, for which some treatment was sought, have shown much more influence in rural than in urban areas and in seeking inpatient than outpatient care.

6. Utilization of Health Services

6.1. Sources of Treatment for Injury

About two-thirds of patients relied on the public sector agencies for the treatment of serious illnesses (inpatient care); the percentages varied between a low of 45 in Maharashtra and a high of 93 in West Bengal (see Table 6 and Figure 3). On the other hand, the outpatient treatment was mainly sought in the private sector (its share was 82 and 76 per cent in rural and urban areas, respectively and as high as 90 per cent in rural Uttar Pradesh).

However, the share of public sector providers remained high for injury treated both as inpatients and outpatients in all the five states. Overall, the share of public providers for the treatment of injury as inpatients was 75 and 73 per cent in rural and urban areas, respectively; whereas respective percentages were 21 and 32 for injuries treated as outpatients (see Figure 4). The share of public providers also varied with economic status of the household (measured in terms of monthly per capita expenditure - MPCE quintile). Figure 5 shows that for inpatient treatment, the decline in the reliance on the public sector with a rise in economic status was much faster for other diseases than that for injury. In the case of outpatient treatment, the share of public providers for injury by MPCE quintile remained stable and that for other diseases showed some decline at least in urban areas. Thus, irrespective of economic status, the reliance on the public sector for the treatment of injury was much higher than that for other diseases.

Quite likely, those who sustain serious injury to approach government hospitals because private providers are hesitant in following bureaucratic procedures involving police and legal enquiries. Also, in the case of motor vehicle collision, the injured is usually shifted by either police personnel or some non-acquainted person to a government hospital where medical services are available round the clock. The government hospital is usually equipped with diversified services including the surgery, orthopedics and blood bank which many private hospitals lack. Finally, there is a general tendency among the private practitioners to refer more serious patients to the public hospital.

To confirm the above fact, we have analyzed the information on pre- and post-hospitalization period by type of provider. Only 29 and 31 per cent of the hospitalized patients in rural and urban areas, respectively had received treatment before they became inpatients; whereas for the treatment of other diseases, the respective percentages were 64 and 62. No significant difference was found between injury and other diseases in the case of continuation of treatment after discharge from a hospital (the respective percentages for injury and other diseases were 63 and 64 in rural and 60 and 59 in urban areas.) Furthermore, the share of public provider in both other diseases. (The difference was 5 to 22 percentage points for pre-hospitalization and 2 to 8 percentage points for post-hospitalization treatment - see Figure 6.) Thus, the data corroborate the argument that the impact of injury is rapid and sudden resulting in hospitalization.

6.2 Cost of Treatment fore Injury

No doubt, there is price consideration in choosing a public rather than a private provider particularly for the treatment of chronic or serious illnesses. Table 7 shows that the average cost of inpatient treatment in the private sector was 2.5 times higher than in the public sector in rural areas and 4.5 times higher in urban areas. The difference in the cost of treatment between private and public hospitals was much higher in Tamil Nadu and West Bengal and virtually none in rural Uttar Pradesh.

For outpatient care, the cost of treatment was much less (about one-tenth that of the inpatient treatment). Moreover, the difference in the cost of treatment between public and private providers narrowed. Patients, on an average, paid fifty per cent more for seeking treatment in the private sector. Similar to inpatient treatment, the cost difference was the highest in Tamil Nadu and surprisingly, in Uttar Pradesh the public providers seemed to have charged more than the private providers.

It is interesting to note that the cost of both inpatient and outpatient treatment was highest in Uttar Pradesh and lowest in Tamil Nadu. Tamil Nadu also reported the lowest cost of treatment in the public sector indicating that the public sector is better managed and more efficient there. Moreover, the urban patients paid about 70 per cent more than their rural counterparts for inpatient care and almost double if they had gone to the private hospitals; the urban-rural difference was much smaller for outpatient treatment, virtually none in the public sector.

For injury the cost of even outpatient treatment was double in rural in urban areas when compared to the overall average cost of treatment of an illness. A similar differential continued between the public and private providers as well (Figure 7). No significant difference was found in both rural and urban areas for inpatient treatment due to higher dependency on subsidized public hospitals. However, the cost difference between public and private providers for treatment of injury and all ailments together varied a great deal among the five states (Figure 8). In sex out of ten population groups, the public/private ratio in the treatment of injuries as inpatients was lower than the overall ratio; and in the case of outpatient treatment it was other way round. It implies that injury is a high cost need and the cost differential between public and private providers narrows down with the level of severity.

The cost of treatment also depends upon the type of health services availed of (i.e., whether the patient has to pay for the use of hospital bed, medicine, X-ray/ECG/EEG, other diagnostic tests, physiotherapy and surgery). Table 8 highlights that in both inpatient and outpatient treatment, the injured patients underwent more of X-ray/ECG/EEG and surgical operation than those suffering from other diseases; these services contribute relatively more to the total cost than the use of other services. Moreover, in rural areas for both inpatient and outpatient treatment no significant difference was found between the patients treated for injury and other diseases with respect to the extent of free receipt of all the health services. a majority of free services (more than 93 per cent for inpatient care) were provided by the public sector agencies.

This leads us to the issues of whether the financial burden on households is higher for the treatment of injury than that for other diseases; and whether the burden differs between rural and urban areas and across different socio-economic groups.

7. Financial Burden on Households for Treatment of Injury

Financial burden on the households for the treatment of disease or injury depends upon the health insurance coverage, the cost of treatment as well type of provider and monthly total household income or expenditure budget. In India, the health insurance coverage of population is limited to only the central government employees and employees of the organized industrial sector, which constitute a very small segment of the population. The insurance companies so far have paid very little attention to medical insurance because of both low profitability and high risks well as lack of demand. Thus so far, the main focus of insurance companies has been on covering the risks of material goods and its movement, century bills, office and factory premises and transport vehicles against fire and theft. Personal accidents as a result of motor vehicle collisions are also covered; however, no attention has been paid to cover other types of personal accidents such as falls or to cover school-going children. Overall, the health insurance coverage under mediclaim including that for personal accidents accounted for a negligible proportion (less than one per cent) of the total business of insurance companies.

The survey had collected information on whether the sick person was covered under Employees' State Insurance Scheme or some other health insurance scheme, so that the patient did not have to pay directly to the provider for the use of facility. Only about 8 and 17 per cent of inpatients in rural and urban areas, respectively had been covered under health insurance; the corresponding figures for outpatients were even smaller (3 and 6 per cent). No difference was found in health insurance coverage for patients who sought treatment either for injury or other disease in rural areas; however, in urban areas there was a difference of 4 and 8 percentage points in favour of injuries treated as inpatients and outpatients, respectively (see Table 8). As most of the organized manufacturing sector is located in urban areas, it is quite likely that unskilled and skilled workers who face a higher risk of sustaining injuries and seek treatment have accounted for the difference.

Because of health insurance coverage, the out-of-pocket expenses for treatment were much smaller for the insured than for the non-insured patients. (For insured patients, the average cost of treatment was less than four per cent of the average cost incurred by non-insured patients). As a result, the relative financial burden on household with insurance coverage was far below that shouldered by non-insured households.

To measure the financial burden on household for treatment, it is necessary to compare the expenditure for treatment with either the household's income or total expenditure. In most developing countries, it is difficult to collect information about income; hence, the Indian NSS collects information on expenditure households. As a result, the burden is expressed in terms of the total cost of treatment as a percentage of: a) the average monthly total household expenditure (MTHE), and b) the average monthly per capita expenditure (MPCE).

The inpatient treatment tends to be quite expensive. Overall, the financial burden was 83 and 92 per cent of the MTEH, and 702 and 516 per cent of the MPCE in rural and urban areas, respectively. The burden was relatively low for outpatient treatment and it did not exceed 10 per cent of MPCE. However, in both inpatient and outpatient treatment, the burden was higher in rural than in urban areas, mainly because of living between rural and urban areas.

The burden was not equally distributed across different diseases and socio-economic strata. Figure 9 shows that the burden of treatment for injury requiring hospitalization was about 50 per cent higher than that for communicable diseases. In the case of outpatient treatment, the burden of injury was 100 to 150 per cent higher than that for communicable or all diseases together. Also, the differentials in the burden of injury and other diseases were even larger for households in the lower MPCE quintiles. It was observed that the households belonging to the same MPCE quintile and seeking treatment in the private sector had spend a higher multiple of their total or per capita expenditure.

To obtain the net effect to burden on households for treatment, multiple regression analysis is used. The dependent variable is the ratio of total cost of treatment to monthly per capita expenditure (in the log form). The independent variables were selected from a pool of variables which influenced the cost of treatment, the most. (For further discussion on the determinants of cost of treatment, see. Visaria and Gumber 1994.)

The ten most important variables selected were: whether treatment was sought for injury, type of health care provider (three categories: free provision of all the services by the public provider, charging a fee-for-service by the public provider, and charging a fee-for-service by the private provider), duration of treatment and whether it was continued for more than a month, whether the patient had insurance coverage, monthly per capita expenditure decile, whether the patient belonged to non-scheduled caste and tribe household, major source of income (from self employment, regular employment, casual employment and other), proportion of urban population in the region for rural and the size of town for urban residents, and the state of resident.

It is clear from Table 9 that the most influential variables explaining the variations in the financial burden on households for inpatient treatment (depicted in terms of beta coefficients) were: if treated by a private provider, if treated by the public provider charging a fee-for-service, duration and if the length of treatment was more than a month, MPCE decile, insurance status and the state. On the other hand, for the outpatient treatment, the duration and if the length of treatment was more than a month and MPCE decile were found more important than the type of provider (public or private) charging for the payment of services. Insurance status did not contribute much to the burden of outpatient treatment.

The financial burden on households was much higher if the patient was treated in a private sector institution, had no insurance coverage, had undergone a longer duration of treatment, belonged to a non-scheduled caste and tribe household and was the resident either of a highly urbanized zone or of a city with one million or more population. Furthermore, the burden varied inversely with MPCE decile suggesting that the poor households were the main victims of the inefficient health care system and did not stand a chance to break the vicious circle of

poverty, indebtedness, low productivity, malnutrition and disease.

Inter-state differentials were pronounced for requiring inpatient rather than outpatient treatment. Relative to Gujarat, except Uttar Pradesh, all the other three states showed a lower financial burden on households. For inpatient care, the residents of Uttar Pradesh had faced the highest burden of treatment.

Above all, injury was highly significant variable with a positive coefficient in both inpatient and outpatient treatment in rural as well as in urban areas. It implies that the burden on households, even after controlling for socio-economic status, state of resident and type of provider, was higher for treatment of injury than for other diseases.

8. Summary and Conclusion

In the process of economic development and modernization, the pattern of injury may shift and/or increase due to changing interactions of hosts with the environment and risks to agents of mechanical, electrical, thermal or chemical energy. There is little public awareness about injuries as a public health problem in both developed and developing countries. In this paper an attempt is made to describe the spectrum of injury morbidity, disability and mortality for India from two data sources: the World Development Report 1993 data for burden of disease by cause, and the National Sample Survey Organisation data on the utilization of health services for treatment of illness and injury during 1986-87. The main findings that emerge from the analysis and their policy implications are summarized below.

Globally, injury is the fourth most important cause of death accounting for nine percent of all deaths. In terms of disability adjusted life years (DALYs) lost, injury ranks third to heart diseases and cancer and in the developing countries, it exerts the most impact. In both developed and developing countries, injury has the greatest impact on the prime age group 5 to 44 including school-going children, youth and the productive work force. The share of injury in DALYS lost is two to three times higher among males than among females. Type gender difference is more pronounced in ages 15 to 44 as well in certain types of injuries such as motor vehicle collisions, homicide and violence, drowning and occupational injuries. Yet, little attention has been paid to injury prevention and control in the developing countries.

Concentration according to age and sex in injury is evident from data on morbidity in India. An exploration of risk factors associated with injury morbidity also suggest that the probability of an injury rather than other diseases is higher among poor households. The level of urbanization has also raised the risk, particularly with respect to serious injuries requiring hospitalizations.

The fatality, disability and severity (measured in terms of whether hospital based treatment was required) are much higher in injury than diseases. The impact of injury is rapid and sudden resulting in hospitalization which in turn, demands better logistics for emergency medical services including transportation, communication and trauma care service.

In contrast to other diseases, injury patients in the five states of India relied more on public sector institutions. About three-fourths of all injuries involving hospitalization and one-fourth of

not involving hospitalization were treated by the public providers whereas the respective proportions for other diseases were three-fifths and one-fifth. The use of public providers by economic status of the household remained for injury whereas tended to decline for other diseases. A majority of free health service are provided by the public sector institutions and most of the poor households have benefitted from it. Overall, the cost of treatment as an inpatient in the public sector was half or one-third that in the private sector; however, the cost differential was minimum for treatment of injury than that for other diseases. In contrast, for outpatient care, the out-of-pocket expenditure was higher for treatment of injury than that for other diseases.

Beside cost considerations, the other reasons for choosing a public rather than a private provider for the treatment of serious injuries could be the reluctance of private providers to accept serious injury patients due to the fear of police and legal enquiries. Also, in the case of motor vehicle collision, the injured is usually shifted by either police personnel or some non-acquainted person to a government hospital where medical services are available round the clock.

The analysis of determinants of the financial burden on household for treatment indicates that the poor household have to spend a higher multiple of total or per capita monthly expenditure for treatment. Even after controlling for socio-economic status, state or region of residence and type of provider, the burden was higher for the treatment of injury than for other diseases. The burden varied inversely with MPCE decile and was higher among non-insured suggesting that the poor households are not benefitting much from the public health care system. In the immediate future, target specific health insurance should be protect the poor against the heavy draft on their meagre resources.

In India, children of school-going age, particularly in urban areas, face a higher risk of sustaining injury. An effort should be made to introduce the community health insurance approach to cover at least the student population for personal accidents. Some private schools in cities, have come forward and covered the students under a group insurance scheme with a small premium of Rs. 10 per student per academic year. Of course, the premium has been charged from the parents; even then if made universal, every parent would be will to afford this is lieu of a heavy out-of-pocket expenses for the treatment in a hospital.

The other vulnerable group at higher risk of suffering an injury are youth in the work force, who need immediate coverage at least for personal accidents. The employers in the registered manufacturing sector intentionally do not extend health coverage to temporary workers and thus the latter are the most needy but deprived class. Further, the Interstate Migrant workmen's Act was passed in 1979 by the central government, but it is left left to the individual state for implementation. The law ensure better working condition and treatment coverage by the employer for illness and injury particularly to agricultural and construction migrating labourers. Unfortunately, due to various political factors, no state has succeeded in implementing the law.

Also, similar to many developed countries, the role of health insurance should be encouraged in India. A long term plan should be developed to introduce an efficient trilateral exchange model in the health care system.

In most of the developing countries, including India, motor vehicle collision is the most important cause of serious injuries due to poor road safety networks. The number of road accidents and resulting fatal injuries are not only the product of high speed, age of the vehicle, alcoholic and smoking behaviour of the driver, but also the composition of traffic moving at varying speeds (pedestrians, bicycles, two-wheeled motor vehicles, cars and four-wheeled heavy vehicles), width of the road and its condition, as well as adequacy of traffic lights. The Town and country Planning Department has to work harder in devising better road and traffic management networks as well as educating the public in general for road safety measures. Even legislative and effective regulation on the use of helmets and seat belts all over the country would considerably reduce the risk of fatal and serious traffic injuries. Similarly, the emergency medical services (ambulances) and trauma and emergency units in the hospitals should be strengthened to avoid unnecessary delays in treatment for injuries which otherwise result in disability, handicap and fatality.

A number of efforts to reduce and control the risk factors for injuries have already been made in most of the developed countries; the list is exhaustive and beyond the scope of this paper. However, the replication of similar safety measures and injury prevention and control programmes, step by step, in accordance to cost-effectiveness would considerably reduce the economic, social and psychic burden of injuries in developing countries.

Identification of Adult Goods and Demographic Separability : The Case of Rural Maharashtra

Manisha Chakrabarty
Indian Statistical Institute, Calcutta

Abstract

Children are not born with cash supplements, but they must be fed, clothed and housed. Therefore parents have to adjust their expenditure pattern in order to meet the cost of children. To measure the cost of a child by Rothbarth's method, one needs to identify the adult goods that are not consumed by children. This paper attempts to identify some adult goods using the central sample data of rural Maharashtra. It also tests for the demographic separability of the group of adult goods from children categories.

Thanks are due to the authorities of the NSSO for permitting the use of updated tapes containing NSS 38 round consumption expenditure data and employment data supplied to ISI, Calcutta, for the purpose of present analysis. I would like to thank my supervisor Dr. A. Majumder for her help. I am also grateful to Dr. D. Coondoo and Dr. N. Bhattacharya for their comments and helpful suggestions. I also thank Shri G. Poduval for his help in computerised processing of data.

Introduction

Measurement of child cost is one of the major concerns in policy making, as some governments attempt to compensate for the costs of children. The two most important measures of child cost are the Engel measure and the Rothbarth measure. The Engel measure is given by the sum of money that would have to be paid to the parents to restore the household food share to its prenatal level, while the Rothbarth measure is given by the sum of money that would restore the level of expenditure on adult goods to its previous level, i.e. before the appearance of a child. Thus in order to measure child cost by Rothbarth method one needs to identify the adult goods first.

This paper focuses on the identification of adult goods and tests for their demographic separability using the central sample data of rural Maharashtra. The methodology used here is a slightly modified version of that proposed in Deaton (1989). The results are compared with those in Deaton and S. Subramanian (1991) who perform a similar analysis using the state sample data on rural Maharashtra.

The plan of this paper is as follows: section 2 briefly describes the methodology, section 3 presents data and the results, and finally, section 4 draws the conclusions.

2 Methodology

Children do not consume adult goods and have needs of their own. Since a child does not bring additional income, parents have to give up their own consumption in order to provide the resources required by the child. This effect is likely to spread over a wide range of goods. In case of adult goods this effect can be isolated; it acts as would a cut in income.

This effect can be expressed in terms of the outlay-equivalent ratio π_{ir} , which is given by [Deaton, Castillo and Thomas (1989)]:

$$\pi_{ir} = \frac{\partial p_i q_i / \partial n_r}{\partial p_i q_i / \partial x} \times \frac{n}{x} \quad (2.1)$$

where x is the income level, i refers to a commodity group, n_r is number of persons in r th demographic category and n is the household size. Each gives π_{ir} the effect of an additional person of type r on the demand for good i , measured as the amount of additional outlay that would have been necessary to produce the same effect on demand, expressed as a fraction of total household expenditure per household member. If i is an adult good and r a child category, π_{ir} should be negative, i.e. an additional child acts like a decrease in the budget.

An adult good group, G is said to be demographically separable from D , a demographic group, if changes in the demographic structure within D exert only income-like effects on the goods in G . Formally demographic separability can be expressed as [Deaton, Castillo and Thomas(1989)]

$$\frac{\partial q_g}{\partial a_d} = \theta_d \frac{\partial q_g}{\partial x} \quad (2.2)$$

for all $g \in G$ and $d \in D$. θ_d , which is a factor of proportionality, is independent of commodity index g . So, if the effect of a child on the good is divided by the effect of income on the good, the ratio should be common across all the *adult goods*, which is a testable restriction given a demand function. π_{ir} values should then be same for all i in the *adult good group*. It may be noted that there must be at least two goods in order to test the equality of θ_d .

To test demographic separability in terms of π_{ir} , we take a set of Working-Leser form of engel curves, following Deaton, Castillo and Thomas (1989), containing a set of demographic variables. The equation is as follows:

$$w_i = \alpha_i + \beta_i \log \frac{x}{n} + \eta_i \log n + \sum_{j=1}^{J-1} V_{ij} \left(\frac{n_j}{n} \right) + \delta_i z + u_i \quad (2.3)$$

where w_i is the budget share of commodity group i , j is a demographic category, and z is a vector of socio-economic determinants of behaviour.

Given the above form of *engel curve*, π_{ir} can be calculated as

$$\pi_{ir} = \frac{(\eta_i - \beta_i) + v_{ir} - \sum_{j=1}^J V_{ij} \left(\frac{n_j}{n} \right)}{\beta_i + w_i} \quad (2.4)$$

for $r = 1, 2, \dots, J$ and V_{ij} is defined to be zero.

We test *demographic separability*, using the following hypothesis

$$H_0: \Delta_{ir} = \pi_{ir} - \sum_j \frac{\pi_{jr}}{v} = 0 \quad (2.5)$$

where v is the number of goods in *demographically separable* group of foods. Δ_{ir} actually measures deviation around the mean. In matrix notation the above equation can be written as

$$\Delta_r = A\Pi_r = 0 \quad (2.6)$$

where Δ_r is the v -vector of discrepancies for the demographic category r , and Π_r the corresponding π -ratios. A is the matrix $I - (i\bar{i}'/v)$ for identity matrix I and vector of units i and t stands for transpose. Then the variance-covariance matrix is

$$V(\Delta_r) = AV(\Pi_r)A^t \quad (2.7)$$

But note that, by construction, the matrix A and hence $V(\Delta_r)$ becomes singular. In order to correct for this we drop one equation and proceed in the same manner. So A is the matrix $P - (T\bar{i}'/v)$ where P is a $v - 1 \times v$ matrix with 1 corresponding to each Δ_{ir} and 0 elsewhere, q is a $v - 1$ unit vector and i is a v unit vector. For the overall test for separability, if the true Δ_r are zero, we can use Wald test statistic of the following form

$$W_r = \Pi_r' A' (V(\Delta_r))^{-1} A \Pi_r \quad (2.8)$$

which is asymptotically distributed as χ^2 with $v - 1$ degrees of freedom. If W_r test statistic value is less than the critical value of χ^2 , then group r is *demographically separable* from the commodity groups taken together. The results are presented in the next section.

3 Data and results

3.1 Data

The data used in this analysis are the NSS-38th round (1983) central sample data for the rural sector of Maharashtra. We use the detailed consumption expenditure and demographic data. Combining the expenditure data and the demographic data, which are available from employment schedule, the sample size turns out to be 5020, of which 197 single-person households are excluded as their life-style is completely different. Thus the final sample-size is 4823.

We have aggregated the detailed item level consumption expenditure data to a commodity group wise data. The commodity groups we consider are : (1) tea-coffee, (2) pan, (3) tobacco,

(4) intoxicants, (5) adult cloth, (6) adult personal care, (7) food, (8) other beverages (9) other cloth, (10) miscellaneous (11) unclassified, (12) and durable good, (13) medical.'

For durable goods, the data with last 365 days reference period have been converted to monthly figures, as taking a 30-day reference period for these items might lead to many zero observations.

Out of the above 13 goods, 6 goods can possibly be defined as adult goods based on intuitive reasoning, which are (a) tea-coffee, (b) pan, (c) tobacco (d) intoxicants, (e) adult cloth, and (f) adult personal care. The NSS-data are not particularly well-endowed with potential *adult* goods. Commodities like adult cloth, adult personal care are not measured separately. We have however formed these groups by aggregating the individual items that might possibly belong to these groups.

The four demographic categories considered here are the age-groups 0-5, 6-10, 11-14 and 15 years and above. In the z vector we have included 8 dummy-variables. Four of them are for the occupational group of household head, viz., (a) self-employed in non-agriculture activity, (b) agriculture labour, (c) non-agricultural labour, (d) self-employed in agriculture. There are 2 dummies for household religion i.e. (a) Hindu, (b) Muslim and 2 dummies for (a) SC, (b) ST. In each the residual category included the 'others'.

3.2 Result

Equation (2.3) has been estimated using the OLS technique. To account for the heteroskedasticity in such cross-section data we have estimated this equation also using the weighted least square method taking the probability weights. Except for food, unclassified and pan all other F-statistics for the differences in 2-estimates are non-significant.

In view of this and for ease of estimation of the variance-covariance matrix to be used for testing demographic separability we confine our attention to the OLS estimates. Table 1 presents the estimates of the regression coefficients (V_{ij} , $j=1,2,3$) along with the mean budget shares and percentage of reporting for all the 13 goods. It is clear from the table that the three children categories have a significantly negative effect on most of the possible adult good categories.

Table 2 present the outlay-equivalent ratios along with their asymptotic t-values for all the 13 goods. The possible adult goods from which we have started can now be called *adult goods*, based on the regression coefficients and outlay-equivalent ratios. For most of these goods, the children categories have negative values and the adult category has a positive value for π_{ir} as should be expected for adult goods. There are, however, some discrepancies. Positive ratios for the 0-5 years age group for tea and tobacco may be due to Barten's effect. i.e., the effect due to

price-substitution and/or increase in tension after the birth of a child. In case of adult cloth, π_{ir} for the age group 11-14 years is positive, which can be justified by the fact that in rural areas boys and girls normally wear dhoti and saree. The negative value of π_{ir} for the adult age group in case of intoxicants may be attributed to data problem, as only 15% of the households purchase this good. Other goods can be called general goods as for them either all π_{ir} 's are positive or all are negative.

Table 3 presents the value of Δ_{ir} together with their absolute value of asymptotic t-statistic. The last row of the table shows the corresponding Wald-test (W-T) statistic. All the W-T statistics are significant at 5% level indicating that these 6-goods as a group are not *demographically* separable from the children categories defined here.

To identify a set of *adult* goods that is *demographically* separable from the children categories, we consider all possible 5-goods groupings. None of these groups turn out to be *demographically* separable from the children categories. We finally identify a *demographically* separable 4-commodity group consisting of tea-coffee, tobacco, intoxicants and adult personal care. These results are presented in Table 4, where all the W-T statistics for the 3 children age-group turn out to be non-significant.

Using state sample data of rural Maharashtra Deaton and Subramanian (1991) have tried to identify the *adult* goods starting with 8 commodity groups, viz. (a) pan and tobacco, (b) alcohol, (c) meat, eggs and fish, (d) male clothing, (e) female clothing, (f) leather shoes and boots, (g) amusements, (h) personal care and toiletries. They have considered male and females separately and have been able to identify only pan and tobacco as the *adult goods* for both sexes. Male and female clothing separately are not *adult goods* according to them, while in our case the combined 'adult cloth' turns out to be an *adult good* based on the outlay-equivalent ratio. Deaton and Subramanian did not find any *demographically* separable group of goods based on Wald test statistics, but here we have found a *demographically separable* 4-commodity group consisting of tea-coffee, tobacco, intoxicants and adult personal care.

A close look at Table 1 reveals that for some *adult goods* the percentage of reporting is rather low, thus yielding many zero observations for these cases. This may call for estimating the equations taking into consideration the zero observations, viz., using a Tobit type model. However, in view of the facts that (i) OLS applied to all types of households (including zero purchase) gives us total influence [Deaton and Subramanian, 1991], and (ii) in the presence of heteroskedasticity, which is endemic in survey data, Tobit may not give better estimates than OLS [Deaton, 1993], we have omitted the Tobit estimation.

4. Conclusion

This paper identifies six items, viz, tea-coffee, pan tabocca, intoxicants adults cloth, adult personal care, that can be called *adult goods*. It also identifies a 4-commodity group consisting of tea-coffee, tobacco, intoxicants, adult personal that is *demographically* separable from the children categories defined here. This exercise serves as the groundwork for measurement of child cost by Rothbarth's method, which is an agenda for future research.

Appendix

- **Food** : This group includes cereal, gram, cereal substitute, pulses, other pulse products, milk, edible-oil, meat, egg and fish, vegetables, fruit, sugar salt spices.
- **Tea-Coffee**: This group includes tea (number of cups and leaf) and coffee (number of cups and powder)
- **Other Beverages** : This group includes cold beverages, fruit juice, chocolate, biscuits, prepared sweets and other processed food.
- **Pan** : This group includes pan leaf, pan finished, supari, ratha, lime other ingredients for pan. Tobacco: This group includes biri, cigaretts, tobacco, zarda etc.
- **Intoxicants**: This group includes ganja, liquor, opium, bear, other drugs and intoxicants.
- **Adult Cloth** : this group includes dhoti, saree, cloth for shirt, pajama, salwar, coat, trousers, overcoat etc.
- **Other Cloth** : This group includes chaddar, dopatta, wraper, lungi, gamcha, towel, ready-made garments, headwear, knitted garments, bed-sheet, bed-cover, mats, mosquito net, knitting wool etc.
- **Adult personal Care** : This group includes shaving blades other non-electrical shaving requisities, torch light, fountain pen, lock, walking stick, lighter, sunglass, other goods for personal care.
- **Miscellaneous** : This group includes amusement, toilet articles, sundry articles, consumer services, conveyance.
- **Durable Good** : This group includes purchases and repair of durable goods.
- **Unclassified** : This group includes club fee, rent and taxes.

NOTE

3. Some Aspects of Household Ownership Holdings : NSS 48th round (January-December 1992)

SOME ASPECTS OF HOUSEHOLD OWNERSHIP HOLDINGS : NSS 48TH ROUND (JANUARY-DECEMBER 1992)

SECTION - I

Introduction

1.1.0 The survey on Land and Livestock Holdings carried out in the fortyeighth round (January-December 1992) of the National Sample Survey Organisation (NSSO) is the fifth in the series of similar surveys conducted so far by the NSSO. The objective of these surveys is to generate the basic quantitative information on the agrarian structure of the country, which is of immediate interest in connection with land policy. A large part of the information is collected mainly along the lines suggested in World Agricultural Census Programme of the Food and Agricultural Organisation (FAO) and thus serves the purpose of international comparison as well.

1.1.1 [The present results are a first of the series of four documents envisaged to be brought out on the land and livestock holdings survey.] This issue covers various features of household ownership holdings and presents estimates on ownership, leasing out and leasing in of land by the households.

1.2 Background

1.2.0 The first survey on land holdings was taken up by the NSS in its eighth round (July '54-April '55) as part of the World Agricultural Census initiated by the Food & Agricultural Organisation (FAO) of the United Nations. In this survey, information on (agricultural) holdings was collected mainly to meet the requirements of the FAO. In addition, information on household ownership holdings was collected to provide the policy framers with the much needed data for formulating land reforms policy for the country. A similar survey was conducted again in the sixteenth (July '60 - August '61) and seventeenth (September '61 - July '62) rounds of the NSS to participate in the next World Agricultural Census Programme of 1960.

1.2.1 Since then, NSSO has been regularly conducting Land Holdings survey after every ten years. The third Land Holdings survey of NSSO, conducted in its twentysixth round (July '71 - June '72), was integrated with a survey on Debt and Investment at the instance of the Reserve Bank of India. The present enquiry, as well as the fourth survey of the series conducted in the thirtyseventh round (January - December '82), are essentially repetition of the twentysixth round survey with some modifications in item coverage and the method of data collection.

1.3 Scope

1.3.0 In the Land and Livestock Holdings survey of the NSSO, two types of holdings, namely, household ownership holdings and operational holdings, are enumerated by interviewing the sample households. Data are collected on the size (in terms of area), type, utilisation, tenurial status and other related aspects of both the types of holdings.

1.3.1 Items of enquiry: For the Land Holdings part of the survey of the 48th round, information on various aspects of ownership and operational holdings was collected for both rural and urban sectors. Particulars of land owned, land leased out, types and terms of lease formed the main body of information for the study of ownership holdings. Further, particulars of land leased in were also collected to ascertain the land possessed by the households. For the operational holdings,

data on size, composition, tenorial form, land use, extent of irrigation by sources, fragmentation of holding, drainage facilities and other related aspects of holdings were collected. Since livestock and agricultural machinery form the basic resources for agricultural operations, an inventory of these assets owned by the households on the date of survey was also obtained.

1.3.2 Geographical Coverage : The fortyeighth round was planned to cover the whole of Indian Union excepting

- (i) Ladakh and Kargil districts of Jammu & Kashmir;
- (ii) 768 interior villages of Nagaland (out of a total of 1119 villages) located beyond 5 kms. of a bus route, and
- (iii) 172 villages in Andaman & Nicobar Islands (out of a total of 520 villages) which are inaccessible throughout the year.

However, the survey could not be conducted in certain districts of Jammu & Kashmir viz., Anantnag, Pulwana, Srinagar, Badgam, Baramula and Kupwara, and in the district of Amritsar in Punjab due to unavoidable circumstances.

1.4 Method of Data Collection

1.4.0. The information for Land and Livestock holdings survey was collected from a sample of households by interview method. Each sample household was visited twice during the period of survey with a gap of four to eight months. Two different schedules of enquiry were canvassed in the two visits. Information on household ownership holding and land leased-in was, however, collected only during the first visit.

1.4.1 *Survey Period :* The survey period for the fortyeighth round survey was the calendar year 1992. The first visits to the households were made during January to August and the second during September to December.

1.4.2 *Reference Date :* In order to reduce recall error, particulars relating to the entire agricultural year were collected by visiting each sample household twice during the survey period. The first visit to the sample households were made during a period of 8 months, January to August, while the second visits were made during a shorter period of 4 months - September to December. The longer period for the first visit was kept in view of the higher workload for the field staff for this visit compared to the second one.

1.4.3 The data collected on land owned, land leased out, land leased in, livestock and agricultural machinery & implements owned referred to the position, as obtained on the date of survey. These were collected only during the first visits to the households. In fact, all the results presented in this report are based on the data collected during the first visits. Thus, these estimates are based on data collected with a moving reference period (on the date of survey) spanning between January to August 1992.

1.4.4 *Sample Design :* The sample design adopted for the survey was essentially a two stage stratified design, with census villages and urban blocks as first stage units (FSUs) for the rural and urban sectors respectively, and households as the second stage sampling units (SSUs) for both the sectors. The selection of villages was done with probability proportional to population (with replacement), mainly based on the 1981 census list of villages. The selection of urban blocks was done with equal probability without replacement based on Urban Frame Survey (UFS)

conducted by the NSSO on an on-going basis. The details of sample design and estimation procedure adopted for the survey are given in Section Two of this report.

1.4.5 *Sample Size - FSU* : In all 9052 villages were planned to be surveyed in this round. Of these, 4328 villages were allocated for the central sample - the part surveyed mainly by the NSSO field staff - and the rest for the state sample - the part surveyed by the state agencies. In the urban sector, the allocations for the central and state samples were 2484 and 3076 respectively. This report is based on the estimates obtained from the central sample alone. The number of villages and urban blocks actually surveyed as the central sample were 4231 and 2420 respectively.

1.4.6 *Sample Size - SSU* : 8 households from each sample village and 9 households from each sample urban block were planned to be surveyed. In the central sample, the actual number of households surveyed was 33289 in the rural sector and 20592 in the urban sector.

1.5 Concepts and definitions

1.5.0 Explanations of the major concepts and definitions of important terms used in the survey and relevant to this report are explained below :

1.5.1 *Household* : A household was a group of persons normally living together and taking food from a common kitchen. However, a boarding house, a hotel or a hostel was treated as a cluster of households, where each individual boarder formed a separate household. If, however, a group of persons among them normally pooled their income for spending, they together were treated as forming a single household. Barracks of military and paramilitary forces, orphanages and vagrant houses were excluded from the scope of the survey.

1.5.2 *Household size* : The number of normally resident members of a household was its size. It included temporary stay-aways but excluded temporary visitors and guests.

1.5.3 *Ownership of land* : (i) A plot of land was considered to be owned by the household if permanent heritable possession, with or without the right to transfer the title was vested in a member or members of the household. Land held in ownerlike possession under long term lease or assignment was also considered as land owned. Thus, in determining the ownership of a plot of land two basic concepts were involved, namely,

- (a) Land owned by the household, i.e. land on which the household had the right of permanent heritable possession with or without the right to transfer the title, e.g. Pattadars, Bhumidars, Jenmons, Bhumiswamis, Rayat Sithibans, etc. A plot of land may be leased out to others by the owner without losing the right of permanent heritable possession.
- (b) Land held under special conditions such that the holder did not possess the title of ownership but the right for long term possession of the land (for example, land possessed under perpetual lease, hereditary tenure and long term lease for 30 years or more) was considered as being held under ownerlike possession. In the states where land reform legislations have provided for full proprietorship to erstwhile tenants, they were considered as having ownerlike possession, even if they had not paid the full compensation.

(ii) Sometimes a plot may be possessed by a tribal in accordance with traditional tribal rights from local chieftains or village/district council. Again, a plot may be occupied by a tenant for which the right of ownership vests in the community. In both the cases, the tribal or other

individual (tenant) was taken as owner, for in all such cases, the holder had the owner like possession of land in question.

1.5.4 *Lease of land* : (i) Land given to others on rent or free by owner of the land without surrendering the right of permanent heritable title is defined as land leased out. It is defined as land leased in if it is taken by a household on rent or free without any right of permanent or heritable possession. The lease contract may be written or oral.

(ii) Sometimes orchards and plantations are given to others for harvesting the produce for which the owner receives a payment in cash or kind. Such transactions were not treated as 'lease' for the purpose of the survey.

1.5.5 *Otherwise possessed land* : This was understood to mean all public/institutional land possessed by the household without title of ownership or occupancy right. The possession was without the consent of the owner. Private land (i.e. land owned by the household sector) possessed by the household without title of ownership and occupancy right was not included in this category. All private land encroached upon by the household was treated as leased-in land.

1.5.6 *Homestead land* : (i) Homestead of a household was defined as the dwelling house of the household together with the courtyard, compound, garden, out-house, place of worship, family graveyard, guest house, shop, workshop and offices for running household enterprises, tanks, wells, latrines, drains and boundary walls annexed to the dwelling house. All land coming under homestead was defined as homestead land.

(ii) Homestead may constitute only a part of a plot. Sometimes, gardens, orchards or plantations, though adjacent to the homestead and lying within the boundary walls, may be located on a clearly distinct piece of land. In such cases, land under garden, orchard or plantation was not considered as homestead land.

1.5.7 *Type of land* : The classification by type of land was based on the usual status of the land and was meant for classifying land owned and land leased-in as on date of survey. The definitions of various classes of land relevant for the survey are given below :

(1) **FOREST** : This included all area actually under forest or land so classed under any legal enactment or administered as forest, whether state owned or private. If any portion of such land was not actually wooded but put to raising of field crops, it was treated under net sown area and not under forest. All area under social and farm forestry will be included in this class.

(2) **ORCHARDS** : A piece of land put to production of horticulture crops, viz., fruits, nuts, dates, grapes etc. (other than those treated as plantation crops), was regarded as an orchard, if it was at least 0.10 hectare in size or had at least 12 trees planted on it. In the case of such fruit trees where distance between the trees was quite large, say more than six metres, as in the case mangoes, the orchard was defined according to the minimum number of 12 trees planted in it. In cases where the distance was less than six metres as in the case of bananas, papayas, grape vines etc., the orchard was defined on the basis of the minimum area of 1/10th of an hectare.

(3) **PLANTATIONS** : Area devoted to production of plantation crops, viz., tea, coffee, cashewnut, pepper, coconut, cardamom, rubber, cocoa, arecanut, oil palm, clove and nutmeg, was treated as area under plantation. The size restriction given for orchards was also applicable for plantations for the purpose of the survey.

(4) **AREA UNDER SEASONAL CROP** : All land under net sown area not coming under orchards or plantations was taken as area under seasonal crops. Sometimes, net sown area

consists of a piece of land put to a combination of the above three uses. In such cases, the use to which the major area of the piece of land was put was treated as the 'use' of the piece of land.

(5) **LAND PUT TO NON-AGRICULTURAL USES** : This included all land occupied by buildings, path etc. or under water (tanks, wells, canals etc.) and land put to uses other than agricultural uses. For the purpose of this survey, this class of land was further divided into two classes :

- (a) **WATER BODIES** : All land which are perennially under water was defined as water bodies, provided that no crop was raised on them.
- (b) **OTHER NON-AGRICULTURAL USES** : All land put to other non-agricultural uses, viz., buildings, roads, railways, paths etc. were classified under land put to other non-agricultural uses.

(6) **OTHER USES** : This included all land coming under rest of the classes of standard nine-fold classification, viz., "culturable waste", "miscellaneous tree crops and groves not included in net sown area", "permanent pastures and other grazing land" and "barren and unculturable waste".

1.5.8 *Irrigation* : Irrigation was considered as a device of purposively providing land with water, other than rain water, by artificial means for crop production.

1.5.9 *Household type* : Each of the sample households was assigned a 'type' code, which was recorded against this item. The procedure of determining the 'type' code of a household is given below :

For the rural areas, a household's total income earned during the 365 days preceding the date of survey from gainful activities pursued by the members of the household (excluding domestic servants, paying guests etc.) was first grouped under one or more of the following sources of incomes/means of livelihood categories :

- (a) self-employed in non-agriculture,
- (b) self-employed in agriculture,
- (c) wage paid manual labour : (i) in agriculture (ii) others and
- (d) wage paid non-manual labour

Next, the 'type' code of the household was assigned on the basis of shares of income against each of the four categories, according to the definitions laid down below :

| <u>Household Type</u> | <u>Condition</u> |
|-------------------------------------|---|
| 1. Self-employed in non-agriculture | income from category(a) exceeded income from category(c) as well as income from categories (b) and (d) pooled together |
| 2. Agricultural labour | income from category c(i) is 50% or more of the total income from all sources |
| 3. Other labour | income from category c(i) is less than 50 % of the total income from all sources, but income from category (c) exceeded income from category (d) as |

- | | |
|---------------------|---|
| | well as income from categories (a) & (b) pooled together. |
| 4. Self-employed in | income from category (b) was agricultural 50% or more of the total income from all sources. |
| 5. Others | the households not satisfying any of the above conditions. |

In the urban areas also, the 'type' of a household was determined on the basis of the total income of all the household members (excluding servants, paying guests etc.) derived from gainful activities during the 365 days preceding the date of survey. Each sample household was classified on the basis of its sources of income viz. self - employed, regular wage/salaried employment, casual labour and others. Out of the first three types, the one which contributed the maximum amount of the household's income from gainful activities during the last 365 days was considered as the 'household type' for the household. The 'household type' of a household with no income from gainful activities was considered as 'others'.

1.5.10 *Terms of lease* : The various terms of lease on which the area was leased out to the lessee households were :

- (1) for fixed money
- (2) for fixed produce
- (3) for share of produce
- (4) for service contract
- (5) for share of produce together with other terms
- (6) under usufructuary mortgage
- (7) from relatives under no specified terms and
- (8) under other terms.

It may be noted here that leasehold under crop-sharing basis meant that the owner of land received a stipulated share of the produce but he did not participate in the work nor did he manage or direct or organise the agricultural operations on the plot of land which he had leased out. Leasehold under service contract meant that an employer gave some land to an employee for cultivation in lieu of the services provided by him under the condition that the land could be retained so long as the employee continued to serve the employer and no other specific terms of lease was contracted. The term by which the mortgagor retained the ownership of land till the foreclosure of the deed but the possession of the land was transferred to the mortgagee would be considered as leasing-out under usufructuary mortgage. Sometimes land owned by a household is looked after and used by a close relative. For example, a person staying away from his village may own a piece of land in the village which is looked after and used by his brother's household. All such land owned by the household but looked after and used by some relative's household, under no contract of payment of any kind to the owner, was treated as leasing-out to 'relatives under no specified terms'. Lease on terms other than those specified for types (1) to (7) stated above was treated as 'under other terms'. All rent free leases, other than to (or from) 'relatives under no specified terms', was treated as lease 'under other terms'.

SECTION - 2

Sample Design And Estimation Procedure

2.1.0 *SAMPLE DESIGN* : A stratified two-stage sampling design was adopted for the survey with the first stage units as census villages for rural areas and the Urban Frame Survey blocks for urban areas. Households formed the second stage units in both rural and urban areas.

2.2.0 *Sampling frame for fsu's* : In the rural sector, the sampling frame in most of the strata was the 1981 census list of villages. However, in Assam, where the 1981 census was not undertaken, and in a few districts of other states, where the available list as per 1981 census was incomplete, the 1971 census list of villages was used. In the urban sector, the sampling frames used in most cases were the lists of NSS Urban Frame Survey (UFS) blocks. However, the 1991 census house listing enumeration blocks were considered as the sampling units for some of the new towns declared as urban areas in the 1991 population census.

2.3.0 *Stratification* : Each state/union territory (u.t.) was divided into one or more agro-economic regions by grouping contiguous districts which are similar with respect to population density and crop pattern. In Gujarat, however, some districts were sub-divided for the purpose of region formation on the basis of location of dry areas and the distribution of tribal population in the state. The total number of regions formed in the India as whole was 78.

2.3.1 In the rural sector, within each region, each district with a rural population of less than 1.8 million according to the 1981 census formed a single basic stratum. Districts with larger population were divided into two or more strata, depending on population, by grouping contiguous tehsils, similar as far as possible in respect of rural population density and crop pattern. In Gujarat, however, in the case of districts extending over more than one region, the portion of a district falling in each region constituted a separate stratum even if the rural population of the district as a whole was less than 1.8 million. Further, in Assam, the strata formed for the earlier NSS rounds on the basis of 1971 census rural population exactly in the above manner, but with a cut-off of 1.5 million population, were retained as the strata for rural sampling.

2.3.2 In the urban sector strata were formed, again within NSS regions, on the basis of 1981 (1991 in some of the new towns) census population of towns. Each city with a population 10 lakhs or more formed a separate stratum by itself. The remaining towns of each region were grouped to form three different strata on the basis of 1981 (1991 in a few cases) census population. The strata were formed as details stated below :

Composition of Urban Strata

| Stratum number | Population size class of towns |
|-------------------|---|
| (1) | (2) |
| 1. | all towns with population less than 50,000 |
| 2. | all towns with population 50,000 - 1,99,999 |
| 3. | all towns with population 200,000 - 999,999 |
| 4. | each city with population 1 million and above |

2.4.0 *Allocation of sample* : A total all-India sample of 6812 first stage units (4328 villages and 2484 urban blocks) - determined on the basis of investigator strength in different states/u.t.'s and the expected workload per investigator - was initially allocated to the states/u.t.'s in proportion to central field staff available. The sample thus obtained for each state/u.t. was then allocated to its rural and urban sectors considering the relative sizes of the rural and urban population with almost double weightage being given for the urban sector. Within each sector of state/u.t., the allotted sample size was re-allocated to the different strata in proportion to the stratum population. All allocations were adjusted so that the sample size for a stratum was at least a multiple of 4 for the rural and urban sectors separately. This was done to accomplish equal-sized samples in each sub-sample and sub-round. The only exception was Daman & Diu for which the first stage rural sample comprised 2 villages only.

2.5.0 *Selection of FSU's* : The selection of sample villages was PPS (with replacement) with population as the size variable, in the form of two independent sub-samples. The sample blocks were selected by simple random sampling without replacement, also in the form of two independent sub-samples.

2.5.1 *Arunachal Pradesh* : For the rural areas of Arunachal Pradesh, a cluster sampling procedure was followed. The field staff were supplied with a list of sample "nucleus" villages and were advised to select clusters of villages, each cluster being formed around a nucleus village, according to prescribed guidelines. The nucleus villages were selected circular systematically with equal probability, in the form of two independent sub-samples.

2.6.0 *Selection of hamlet-groups/sub-blocks* : Large villages and blocks were divided into a suitable number of hamlet-groups and sub-blocks respectively having more or less equal population content. Two hamlet-groups were then selected from large villages, whereas only one sub-block was selected from the large blocks. The hamlet-groups were selected circular systematically and the sub-block with equal probability.

2.7.0 *Selection of households* : Two different procedures of selection of households were used for the rural and urban sectors. Different procedures for the two sectors were necessary, since in the rural sector schedules of enquiry for LLH survey and Debt & Investment survey were required to be canvassed in two separate sets of sample households, while in the urban sector, both the schedules were to be canvassed in the same set of sample households.

2.7.1 In the rural sector, eight households were selected from each sample village/selected hamlet groups. For selecting a sample of 8 households, first, all the households of the sample village/selected hamlet groups were divided into four sub-strata by area of land possessed by them. Households possessing either no land or land less than .005 acre were grouped in sub-stratum 1. The rest of the households were then arranged in ascending order by area of land possessed and classified into three sub-strata, 2, 3 and 4, such that the total area of land possessed by the households in each of the 3 sub-strata was nearly the same. Independent samples of size 1,3,2 and 2 households were selected circular systematically from the sub-strata 1, 2, 3 and 4 respectively.

2.7.2 In the urban sector, a sample of 9 households were selected from each sample urban block/sub-block. The households of a sample block/sub-block were classified into 7 strata, considering the monthly per capita consumption expenditure (mpce) and indebtedness status of the households. For this, the households were first grouped in three mpce classes, viz., less than A, A to B and B & above. The cut-off points A and B were determined at the state-level on the basis of mpce obtained from the survey on consumer expenditure, NSS 43rd Round, such that

the mpce classes, below A, A to B, and B and above, respectively constituted 30 p.c, 60 p.c, and 10 p.c. of the urban population of the state. These mpce classes were further sub-divided by indebtedness status of the households to form 7 sub-strata. A sample of size 1 or 2 was selected from each sub-strata. For the sub-strata with allocation of 2 sample households, the samples were drawn circular systematically.

2.8.0 *Sample size* : In all, the survey covered 53881 households spread over 6651 sample villages/blocks. The number of sample villages and blocks allotted and surveyed, and the number of sample households surveyed, are given for different state/u.t.'s and all-India in the statement given below, separately for rural and urban sectors.

STATEMENT OF SAMPLE SIZE

| State/u.t. | No. of villages | | No. of blocks | | No. of hhs. | |
|----------------------|-----------------|----------|---------------|----------|-------------|----------------|
| | Allotted | Surveyed | Allotted | Surveyed | Rural | Surveyed Urban |
| (1) | (2) | (3) | (4) | (5) | (6) | (7) |
| Andhra Pr. | 304 | 304 | 180 | 180 | 2395 | 1604 |
| Arunachal Pr. | 72* | 89 | 12 | 9 | 643 | 72 |
| Assam | 192 | 184 | 52 | 49 | 1455 | 403 |
| Bihar | 404 | 404 | 112 | 112 | 3201 | 874 |
| Goa | 16 | 16 | 12 | 12 | 104 | 101 |
| Gujarat | 136 | 136 | 124 | 124 | 1076 | 1076 |
| Haryana | 60 | 60 | 36 | 36 | 480 | 360 |
| Himachal Pr. | 112 | 112 | 16 | 16 | 878 | 141 |
| J & K | 160 | 80 | 84 | 28 | 639 | 241 |
| Karnataka | 160 | 160 | 132 | 132 | 1247 | 1156 |
| Kerala | 168 | 168 | 76 | 76 | 1311 | 679 |
| Madhya Pr. | 324 | 324 | 164 | 164 | 2528 | 1409 |
| Maharashtra | 872 | 872 | 296 | 295 | 2140 | 2562 |
| Manipur | 56 | 56 | 40 | 40 | 448 | 300 |
| Meghalaya | 60 | 60 | 28 | 28 | 471 | 136 |
| Mizoram | 52 | 52 | 36 | 36 | 416 | 314 |
| Nagaland | 32 | 32 | 16 | 16 | 255 | 126 |
| Orissa | 192 | 192 | 52 | 52 | 1522 | 446 |
| Punjab | 132 | 115 | 104 | 104 | 894 | 874 |
| Rajasthan | 180 | 180 | 96 | 96 | 1419 | 804 |
| Sikkim | 24 | 24 | 12 | 12 | 192 | 74 |
| Tamil Nadu | 228 | 228 | 228 | 227 | 1811 | 2019 |
| Tripura | 104 | 97 | 24 | 24 | 774 | 200 |
| Uttar Pr. | 528 | 528 | 236 | 236 | 4166 | 1957 |
| West Bengal | 256 | 254 | 184 | 184 | 2015 | 1598 |
| A & N Islands | 40 | 40 | 20 | 20 | 317 | 178 |
| Chandigarh | 8 | 8 | 12 | 12 | 63 | 100 |
| Dadra & Nagar Haveli | 16 | 16 | 4 | 4 | 128 | 36 |
| Daman & Diu | 8 | 8 | 8 | 8 | 64 | 70 |
| Delhi | 8 | 8 | 68 | 68 | 64 | 564 |
| Lakshadweep | 8 | 8 | 8 | 8 | 56 | 63 |
| Pondicherry | 16 | 16 | 12 | 12 | 117 | 108 |
| All-India | 4328 | 4328 | 2484 | 2420 | 33289 | 20592 |

* 18 nucleus villages were allotted for Arunachal Pradesh(rural). The original allocation showed 72 villages for Arunachal Pradesh; this was worked out on the basis of 4 villages per cluster selected. The actual number of villages selected came to 89. Thus the all-India figure given here in col.(2) differ by 17 from the original allocation.

ESTIMATION PROCEDURE:

2.9.0 The estimation procedure adopted in the 48th round for schedule 18.1 is briefly indicated here.

2.10.0 Notations : The notations used for describing the estimation procedure are given below :

- s : Subscript for sth stratum
 i : subscript for ith village/block
 t : subscript for tth sub-stratum (i.e. householdstrata within a village/block)
 j : subscript for jth sample household
 L : total number of rural/urban strata in the state
 p : village population (used for sampling and as per frame)
 P : total population of a rural stratum (as per frame)
 N : total number of blocks in an urban stratum as per frame. This notation is also used for total member of villages in a rural stratum of Arunachal Pradesh as per frame.
 n : number of surveyed villages/blocks including depopulated and zero cases available for tabulation (excluding casualty and other not received cases).
 c : number of census villages in a surveyed revenue village
 D : number of hamlet-groups/sub-blocks formed
 H : total number of households in the frame
 h : number of surveyed households (available for tabulation) in a sub-stratum.
 x,y : values of characteristics
 x or y : total of x or y at the state level
 Y : estimate of y from the sample for rural sector,
 $mD = D$ if $D = 1$
 $D/2$ if $D \geq 4$

2.11.0 Estimates of aggregates : As sampling procedures were different for the rural and urban sectors, the estimation formula used for the two sectors were also different.

2.11.1 Rural : For the states and u.t.s other than Arunachal Pradesh and Lakshadweep, the estimates of aggregate for the sth stratum is given by

$$\hat{Y}_s = \frac{P_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{ai}}{C_{ai}} \frac{1}{p_{st}} \sum_{t=1}^4 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

For Arunachal Pradesh,

$$\hat{Y}_s = \frac{N_s}{n_s} \sum_{i=1}^{n_s} \sum_{t=1}^4 \sum_{j=1}^{h_{sit}} \frac{H_{sit}}{h_{sit}} y_{sitj}$$

and for Lakshadweep

$$\hat{Y}_s = \frac{7}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{C_{si}} \sum_{t=1}^4 \sum_{j=1}^{h_{sit}} \frac{H_{sit}}{h_{sit}} y_{sitj}$$

2.11.2 Urban : For all the states, the estimate of aggregate for the s^{th} stratum is given by

$$\hat{Y}_s = \frac{N}{n_s} \sum_{i=1}^{n_s} D_{si} \sum_{t=1}^7 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

2.11.3 States/u.t. level estimates : The aggregate estimates at the state/u.t. level were worked out separately for the rural and estimate at state/u.t. level was obtained as

$$\hat{Y}_s = \sum_{s=1}^L \hat{Y}_s$$

2.11.4 Subsample Estimates : Each Subsample estimate was based on the data collected from the surveyed FSVs of the respective subsample. For each state/u.t. (or all-India) 2 Subsample estimates were obtained separately for the rural and urban sectors. The formula given above were used for this purpose, taking n_s as the number of surveyed FSVs of the respective subsample.

2.11.5 Combined Estimate : The 'combined' estimates for the rural and urban sectors of a state/u.t. (or all-India) were obtained as the simple average of the subsamplewise estimates for the respective sectors. All the estimates presented in this report are based on the combined estimates of the aggregates, unless otherwise specified.

2.12.0 Estimates of Ratios : Let x and y be the totals of respectively two characteristics x and y , at state/u.t./all-India level. Thus the estimate of $R = Y/X$ is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}} \text{ where } (\hat{X}), (\hat{Y}) \text{ are}$$

the estimates of X and Y respectively. Both the subsample and combined estimates of ratios were obtained in this way.

SECTION THREE

SUMMARY OF FINDINGS

3.0 Some important findings emerging from the enquiry on household ownership holdings are summarised in this section. The principal objective of the enquiry was to provide data on certain aspects of land holdings of the households. Thus, the results presented in this section, relate mostly to household ownership holdings in different parts of the country. To start with, the discussion traces the changes in household ownership of land and its size-distribution over the last three decades for rural India, as well as the inter-state variation on these aspects. The composition of household ownership holdings by different types of land is then presented in some detail. Besides ownership of land, the incidence and nature of tenancy and their variation over size-class of ownership holdings, as well as over the states, are discussed next. Lastly, some particulars of ownership of land among the scheduled tribe and scheduled caste households are compared with those of the rest of the households.

3.1 Household Ownership of Land

3.1.1 Land, with permanent heritable possession, with or without right to transfer the title, was considered as owned land. The land held in owner-like possession under a long-term lease or assignment (e.g. village land possessed by a tribal household as per traditional tribal rights or a community land customarily operated by a tenant for a long period) was also treated as land owned. A household ownership holding includes all plots (or parts of plot) of land owned by a member of the household, whether the land is cultivable or not. Thus a household ownership holding may include, besides cultivable land, areas under forest, barren and uncultivable land, cultivable waste land, land put to non-agricultural uses (viz. house sites, roads etc.), land growing miscellaneous tree crops, etc.

3.2 Basic estimates at the national level

3.2.1 The estimates of area under household ownership holdings, average size of holding, the number and proportion of landless and semi-landless households are presented in Table (1). Households owning no land or land less than 0.002 hectare are termed as landless households and those owning 0.002 to 0.20 hectare as semi-landless households.

TABLE (1): ESTIMATED AREA OWNED, AVERAGE AREA OWNED, PROPORTION OF LANDLESS AND SEMI LANDLESS HOUSEHOLDS IN RURAL AND URBAN AREAS

ALL-INDIA

| Item | Rural | Urban |
|---|----------|---------|
| (1) | (2) | (3) |
| 1. Estimated number of households(00) | 116,4058 | 41,8038 |
| 2. Estimated area owned (00 hectares) | 117,3537 | 8,6716 |
| 3. Estimated number of landless households(00) | 13,0889 | 20,7784 |
| 4. Estimated number of semi-landless households(00) | 36,2643 | 16,5436 |
| 5. Average area owned (0.00 ha.) : | | |
| (a) including landless households | 1.01 | 0.21 |
| (b) excluding landless households | 1.14 | 0.42 |
| 6. Percentage of landless households | 11.3% | 49.7% |
| 7. Percentage of semi-landless households | 31.2% | 39.6% |

3.2.2 The estimated area owned by the rural households was 117 million hectares (mha.) and that by the urban households was 8.7 million hectares. The share of urban households in the total land under household ownership was only 6.88%. The average size of rural holdings was 1.01 hectares and that of urban holdings was 0.21 hectare. For the households owning some land, these averages turn out as 1.14 and 0.42 hectares in the rural and urban areas respectively.

3.2.3 A large number of households owned practically no land or a very small holding. About 13 million households were reported to be landless in the rural India. There were another 36 million semi-landless households in rural areas, i.e. those who had very small holdings of size less than 0.20 hectares. The proportion of landless and semi-landless among the rural households was estimated as 11% and 31% respectively.

3.2.4 Since the share of the urban sector in total land owned by households is quite small and since land as a factor of production is of relatively less importance in the urban sector (more than one-half of the urban households were landless) the remaining part of the discussion in this section is confined to the rural sector only.

3.3 Trends in household ownership of land : all India

3.3.1 Data on ownership of land are being collected regularly by the NSSO since its eighth round (1954-55). So far, including the present one, five land holding surveys have been conducted. The results of these surveys contribute a fairly comparable set of data over quite a long period of time. The estimates obtained from the 8th round, however, are not strictly comparable with those from the later rounds. In the 8th round, a plot of land was considered to be owned by a member of the household only if he/she held it with permanent heritable possession, with or without right to transfer the title. The coverage of owned land remained unaltered through the rounds, except for one change introduced in the definition of owned land. The land held in owner-like possession under a long-term lease or assignment became a part of the land owned by the household since the 17th round (1961-62). In that round the terms 'assignment' or 'long-term lease' covered only those given by the Government. In the 26th round (1971-72), owner-like possession was elaborated to cover the following types of possession as well :

- (a) land held under perpetual basis, hereditary tenure and long-term lease (ranging from 30 to 99 years),
- (b) land held by tribals under traditional right from local chieftains, village councils or district councils,
- (c) land held by tenants who were granted full proprietary rights by the government under land reforms legislation, and
- (d) land held by tenants while ownership rights were with the community.

These types of possession, however, account for a very small share of area owned. But for the coverage of owner-like possession, the coverage of the term 'ownership' has remained unaltered since the twenty-sixth round.

3.3.2 The basic estimates relating to ownership of land obtained from these surveys are given in Table(2) for studying the trend. As mentioned above, the estimates for only the rural sector are discussed here. The size of the sample on which the estimates are based are also provided in the table.

TABLE (2): Changes In Household Ownership of Land During 1961-62 to 1992

| Items | 1961-62 (17th) | 1971-72 (26th) | 1982 (37th) | 1992 (48th) |
|--|-------------------|-------------------|----------------|----------------|
| (1) | (2) | (3) | (4) | (5) |
| 1. Estimated area owned (000 ha.) | 128,734 | 119,636 | 119,736 | 117,354 |
| 2. Average area owned per households(0.00 ha.) | | | | |
| (a) including landless households | 1.78 | 1.53 | 1.28 | 1.01 |
| (b) excluding landless households | 2.01 | 1.69 | 1.44 | 1.14 |
| 3. p.c. of landless households | 11.7% | 9.6% | 11.3% | 11.3% |
| 4. Number of sample villages | 3486 | 4547 | 3692 | 4231 |
| 5. Number of sample households | 53138 | 35947 | 29089 | 33289 |

N.B. Estimates for 17th, 26th and 37th rounds are taken from NSS REPORT Nos 114, 215 and 330 respectively.

3.3.3 It may be observed that the total area owned (128.7 mha.), as estimated in 1961-62, had fallen to 119.6 mha. in 1971-72 - a fall of about 7 percent. The 1982 survey estimate of 119.8 mha. of land under the ownership of rural households is quite close to the estimate of 1971-72. The definition of ownership of land remaining the same for the surveys of 1961-62, 1971-72 and 1982, there is no apparent reason for the decrease in area owned except that some rural land might have been merged in urban land due to urbanisation over the years. But the estimates of area owned by the urban households in 1971-72 and 1982 which are less than the corresponding estimate of 1961-62 do not justify the phenomenon of urbanisation as a plausible reason for the decrease in the estimate of area owned by rural households in 1971-72 and 1982 from 1961-62.*

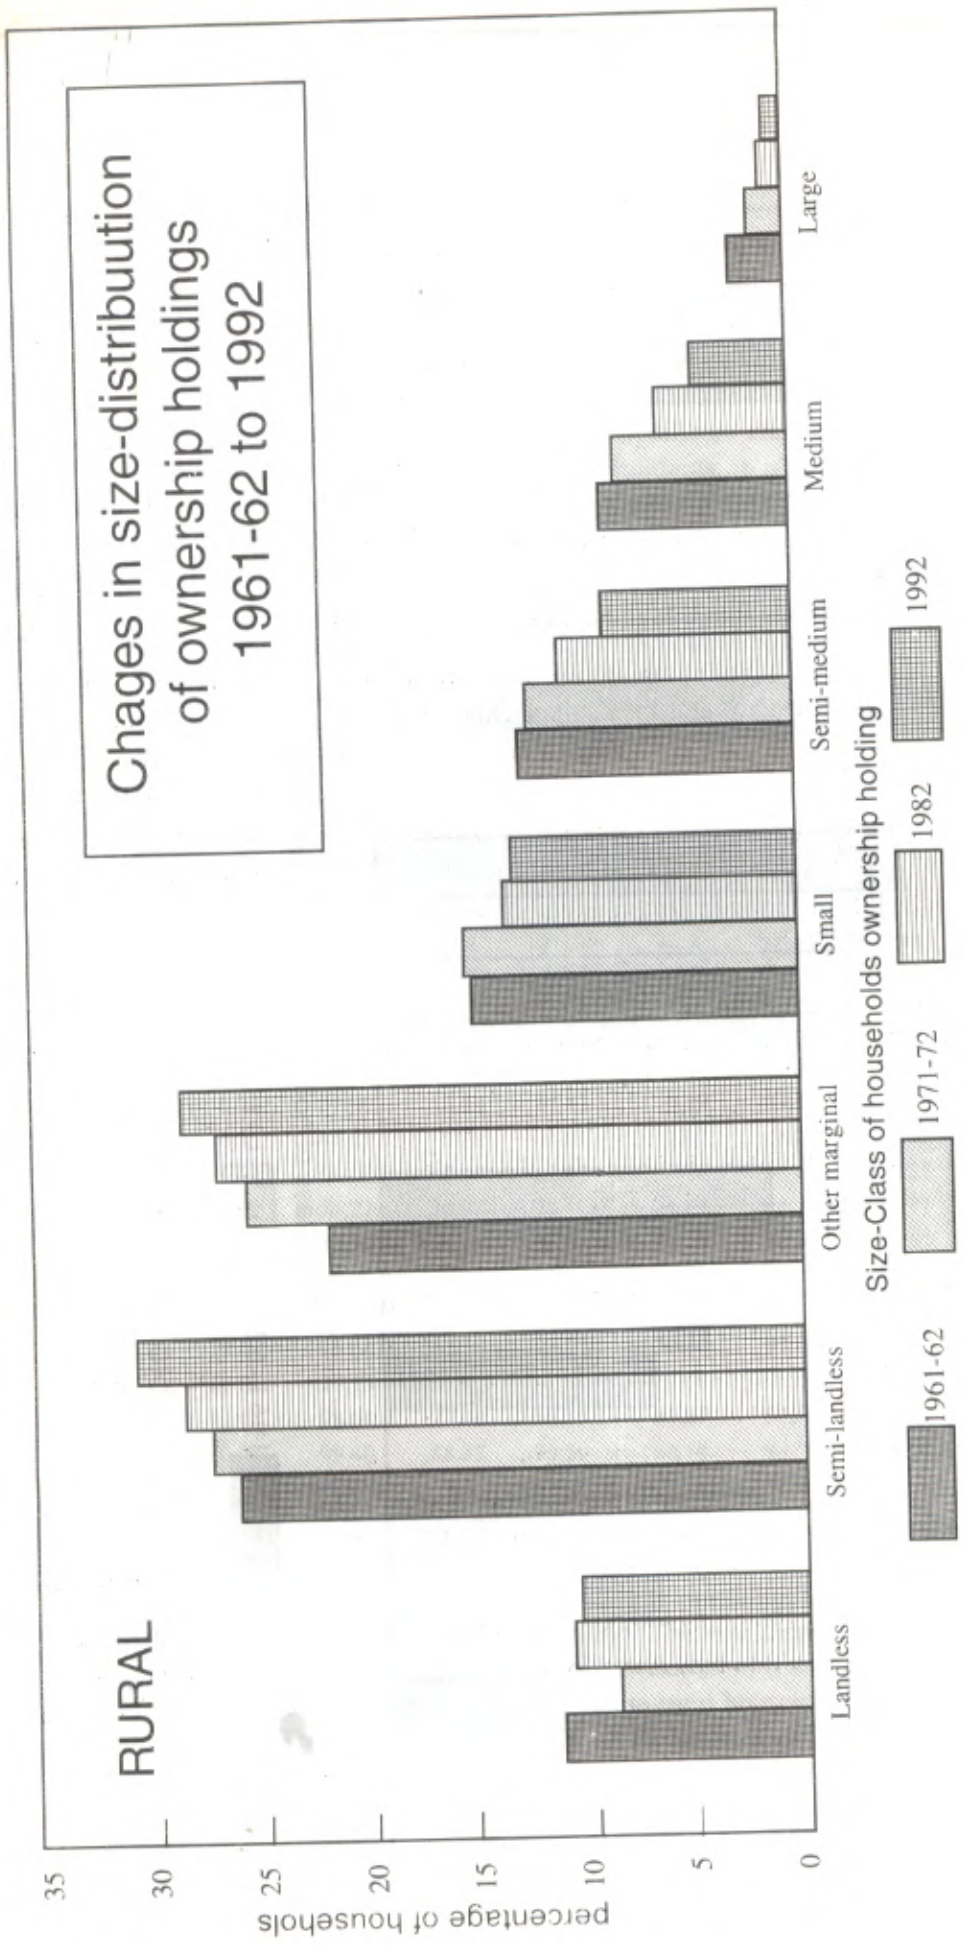

3.3.4 Much of the difference between the estimates obtained in 1982 and 1992 can be explained by incomplete coverage during the 48th round survey. A very large part of Jammu & Kashmir and a large district of Punjab had to be excluded from the coverage in the 48th round due to unavoidable circumstances. These areas account for about a million hectares out of the observed fall of about 2.4 mha. Of the remaining difference (1.4 mha.) between the estimates of the two rounds under discussion, about 0.5 mha. is explained by the rise in total area owned by the urban households during this period **. A difference of about a million hectares remains unexplained. This difference can only be attributed to sampling and non-sampling errors.

3.3.5 *Changes in the proportion of landless households* : Table (2) reveals no significant change in the percentage of landless households since 1961-62, except that it was slightly lower (10%) in 1971-72.

3.3.6 *Trend in average area owned* : With the progressive increase in the number of rural households, decline in average area owned is inevitable. The increasing pressure of rural population on the limited land base has been reflected by the steady decline in the average area

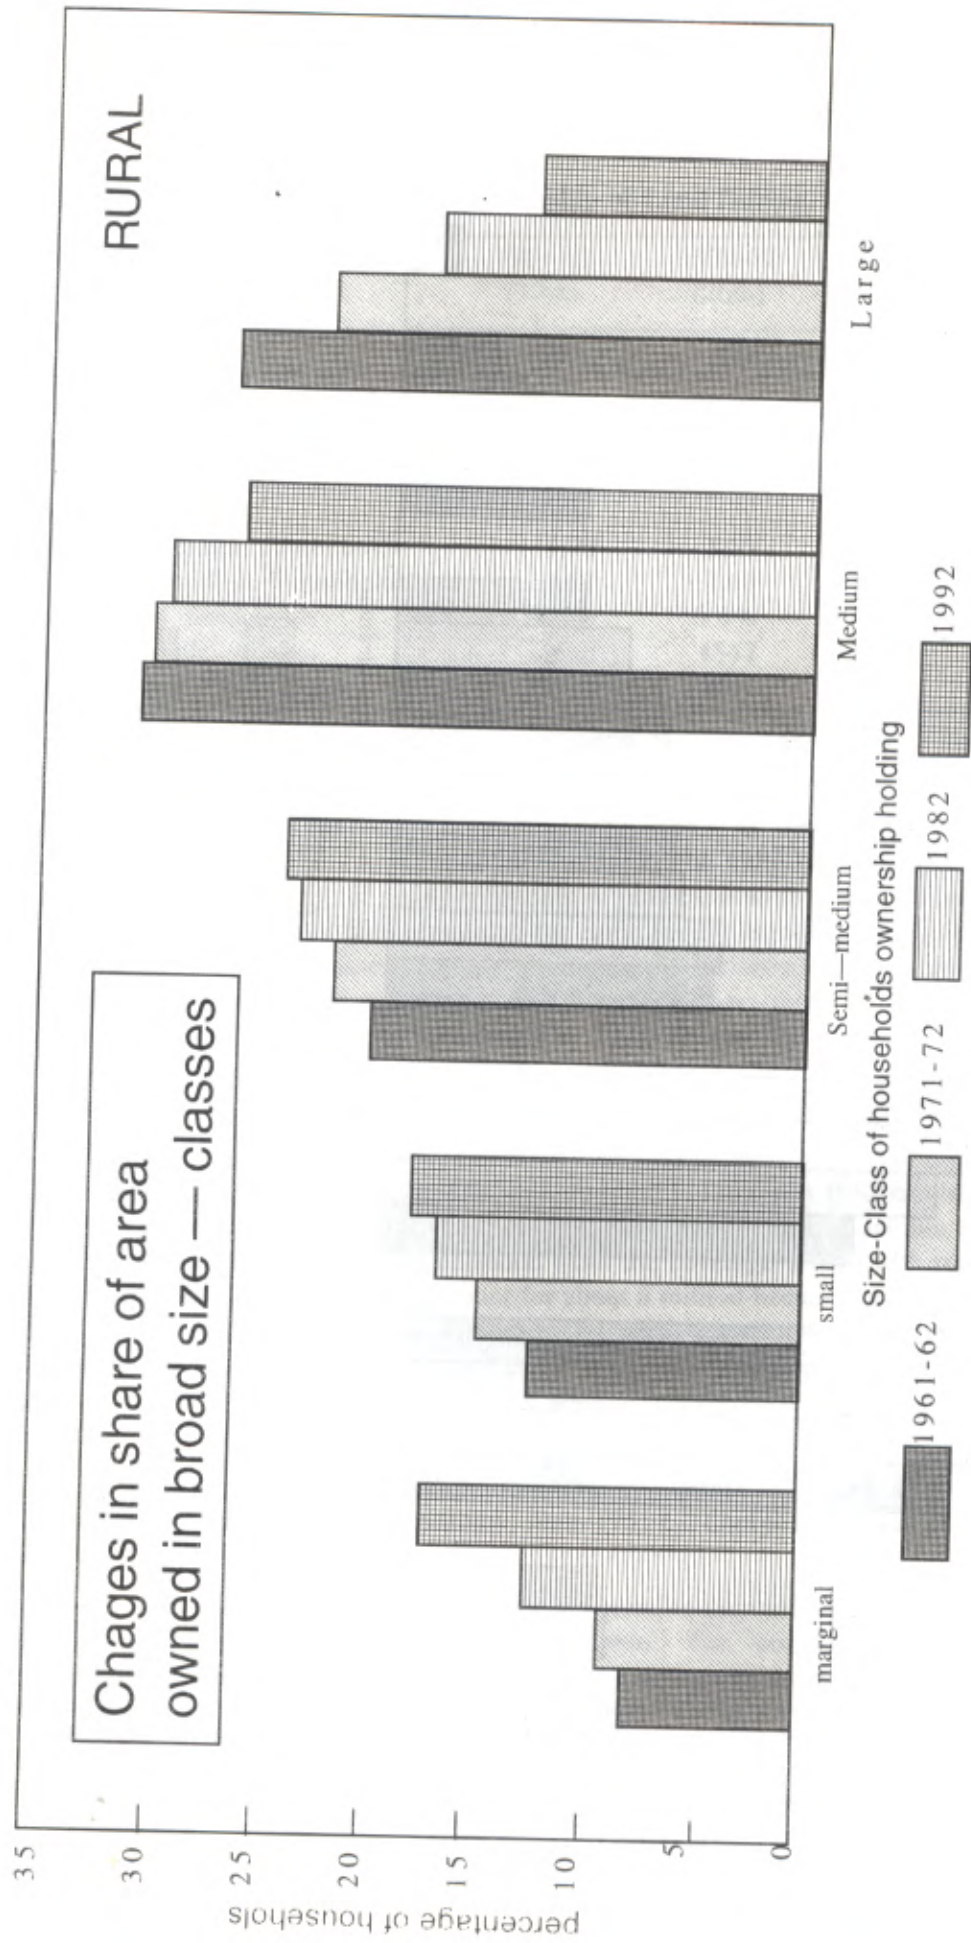

* Note : The estimates of total area owned by urban households in 1971-72 & 1982 were both about 8 mha., while that in 1961-62 was about 9 mha.

** Note : Total area owned by urban households was estimated as 8.1 mha. in the 37th round. In the 48th round, it is estimated to be 8.7 mha.

Semi—landless : up to 0.2 ha, Other marginal : 0.2 - 1 ha, Small : 1 - 2 ha
 Semi—medium : 2 - 4 ha, Medium : 4 - 10 ha, Large : Over 10ha

Figure 1

Marginal : upto 1 ha, Small : 1 - 2 ha, Semi-medium : 2.4 ha
 Medium : 4 - 10 ha, Large : over 10 ha

Figure 2

owned per household over the years. In 1961-62, the average area owned per household was 1.98 hectares. Gradually and steadily, it has come down to 1.01 hectares in 1992. Excluding the landless households, the average area owned is estimated to be 1.14 hectares in 1992, which is little over than one-half of the estimate (2.01 hectares) obtained in 1961-62.

3.4 Changes in pattern of distribution of ownership holdings : all India

3.4.1 To examine whether there has been any significant change in the agrarian structure, apart from the observed decline in average size of holdings, it is necessary to study the nature and extent of temporal variations in the pattern of distribution of ownership holdings. Table (3) gives the cumulative percentage distribution of households and area owned by size class of ownership holdings from all the Land Holding Surveys of NSS, excepting the 8th round, for which, as mentioned earlier, the household ownership distribution obtained is not strictly comparable with any of those derived from the successive rounds.

TABLE(3): CUMULATIVE PERCENTAGE DISTRIBUTION OF HOUSEHOLDS AND AREA OWNED OVER SIZE CLASSES OF HOUSEHOLD OWNERSHIP HOLDINGS IN DIFFERENT ROUNDS OF NSS.

| all Sizes | | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | |

3.4.2 It is seen from the table that the broad, albeit highly skewed, nature of size-distribution of ownership holdings has, by and large, remained unchanged over time, notwithstanding the progressively downward shift in the distribution. The size distribution of ownership holdings in India is characterised by predominance of landless households and marginal holders. The marginal holders and landless constitute about 72% of the rural households but they own hardly 17% of total area owned. The medium (owning 4 to 10 hectares of land) and large holders (owning more than 10 hectares of land) accounted for only 5.5% of the households but had a combined share of about 40% in the total land owned by all households.

3.4.3 Over a period of three decades since 1961-62, the size distribution of ownership holdings has progressively shifted downwards. The proportion of marginal holders has risen from 66% in 1961-62 to 72% in 1992 and the proportion of small holders (owning 1 to 2 hectares), has increased from 9% to 15% during the same period. This rise in the proportions of marginal and small holders was accompanied by a steady decline in the proportions of medium and large holders. The proportion of medium holders fell from 9% to 5% and that of large holders from 3% to 1% during this period. (see fig. 1)

3.4.4 *Concentration ratio - a measure of inequality* : During the three decades, the percentage share of area owned by marginal holders has increased from 8% to 16% , while that of the large holders has declined from 28% to 14% . The progressive downward shift in the distribution of area owned over the period, nevertheless, has hardly caused any change in the prevailing level of inequality of land distribution. The concentration ratios of household ownership holdings for the years 1961-62, 1971-72, 1982 and 1992 are given in Table (4) below. It is seen that the concentration ratio of household ownership holdings has remained the same (0.71) in all the last three rounds. Only in the 17th round it was estimated to be 0.73.

TABLE (4) : CONCENTRATION RATIOS (Gini's coefficient) OF HOUSEHOLD OWNERSHIP HOLDINGS

| ALL INDIA | | | | | | | | RURAL |
|-----------|-----|-----|-----|-----|-----|-----|-----|------------------------|
| years | | | | | | | | concentration ratio(*) |
| (1) | | | | | | | | (2) |
| 1961-62 | ... | ... | ... | ... | ... | ... | ... | 0.7313 |
| 1971-72 | ... | ... | ... | ... | ... | ... | ... | 0.7087 |
| 1982 | ... | ... | ... | ... | ... | ... | ... | 0.7120 |
| 1992 | ... | ... | ... | ... | ... | ... | ... | 0.7104 |

* Note : Concentration ratio (Gini's Coefficient) is given by

$$C = 1 - [\sum_j (P_j - P_{j-1}) (Q_j + Q_{j-1})] / 10^4$$

where P and Q are respectively the cumulative percentage of households and area owned in the j th size class of ownership holdings as presented in Table (3).

3.5 Household ownership of land : inter-state comparison

3.5.1 The average size of ownership holdings and percentage of landless households for the 17 major states are given in Table (5). For the major states, the average area owned per household varied over a wide range, with Kerala showing the lowest value (0.30 ha.) and Rajasthan reporting the highest (2.66 ha.). Besides Kerala, an average area per household of less than half a hectare was reported by Tamil Nadu (0.41 ha.) and West Bengal (0.46 ha.). The national average was 1.01 ha. States that showed an average holding exceeding one hectare were, besides Rajasthan, Madhya Pradesh (1.74 ha.), Maharashtra (1.59 ha.), Haryana (1.41 ha.), Gujarat (1.38 ha.), Punjab (1.10 ha.) and Karnataka (1.39 ha.).

TABLE (5): AVERAGE SIZE OF HOUSEHOLD OWNERSHIP HOLDINGS FOR 17 MAJOR STATES
RURAL

| state | average area owned per household (0.00 ha.) | p.c. of landless house- holds | average area owned per hh. owning land |
|------------------|---|--|---|
| (1) | (2) | (3) | (4) |
| ANDHRA PRADESH | 0.78 | 11.8 | 0.88 |
| ASSAM | 0.70 | 13.4 | 0.81 |
| BIHAR | 0.64 | 8.6 | 0.70 |
| GUJARAT | 1.38 | 16.3 | 1.65 |

| TAMILNADU | 0.41 | 17.9 | 0.50 |
| UTTAR PRADESH | 0.83 | 4.9 | 0.87 |
| WEST BENGAL | 0.46 | 11.0 * | 0.52 |
| ALL INDIA | 1.01 | 11.3 | 1.14 |

3.5.2 The averages so far discussed are based on all households, including the landless households. It is interesting to note that though Maharashtra, Gujarat and Madhya Pradesh were among the top 5 states in terms of the average size of ownership holding, three of the four highest proportions of landless households among the major states were reported in these very three states. About 20% of the households in Maharashtra, about 16% in Gujarat and 15% in Madhya Pradesh were found to be landless. The other state among the top four in respect of percentage of landless households was Tamil Nadu (17%). Two other states - Orissa (14%) and Assam (13%) - also reported high proportions of landless households.

3.5.3 Average land owned per household owning some land was, for obvious reason, higher than the overall averages. Besides Rajasthan, which had an average exceeding 2 ha., Madhya Pradesh and Maharashtra reported an average of about 2 ha. among the land-owning households.

3.6 Changes in pattern of distribution of ownership holdings : inter-state comparison

3.6.1 Table (6) gives the percentage distributions of households and area owned by major size-class in 17 major states for the years 1992, 1982 and 1971-72, as obtained from the NSS 48th, 37th & 26th round Land Holding surveys respectively. The size classes of the detailed classification by land owned have been merged to form 5 broad size-classes along the lines adopted in the Agricultural Census of India. The 5 broad size classes are as follows:

- marginal holdings - those of size less than 1.01 hectares
- small holdings - those of size 1.01 to 2.00 hectares
- semi-medium holdings - those of size 2.01 to 4.00 hectares
- medium holdings - those of size 4.01 to 10.00 hectares
- large holdings - those of size larger than 10.00 hectares

3.6.2 Considering the country as a whole, the large and medium holdings, at the top 10 per cent bracket, owned 54% of the total land in 1971-72, while the combined shares of these size-classes in the number and area of ownership holdings in 1992 declined to 5% and 40% respectively. At the bottom, the proportion of marginal holdings increased from 63% in 1971-72 to 72% percent in 1992, while the proportion of area under marginal holdings rose from about 10% in 1971-72 to 17% in 1992. In fact, the proportion of marginal holdings to total number of holdings increased in nearly all the states excepting Haryana and Jammu & Kashmir. The increasing trend in the percentage of area owned by marginal households is also observed in most of the states. The decline in the shares of the top two classes, both in number and area of ownership holdings, is noticeable in all the major states with varying rates.

3.6.3 The general feature that emerges from the distributions given in Table (6) is that there is a rise in the percentage of households in the lowest major size-class, and a decline in the percentage of households in the size classes semi-medium upwards. Only in respect of the small holders some amount of inter-state variation, both in magnitude and direction of change can be observed. There is no doubt a declining trend in the proportion of small holders in nearly all the states. But in Gujarat, Karnataka, Madhya Pradesh and Rajasthan, there was a rise, albeit marginal, in the proportion of small holdings during 1982 to 1992. The proportion of area under small holdings reveal much more varying trends over the states. Besides the states registering rise in proportion of small holdings, five other states, viz Andhra Pradesh, Gujarat, Madhya Pradesh, Maharashtra and Rajasthan, reported perceptible rise in proportion of area under small holders during the period 1982 to 1992. This was in contrast to the general trend observed in the proportion of small holdings.

3.6.4 The impact of population growth is evident from the nature of the temporal variations in the pattern of distribution of ownership holdings observed for all the major states. In this respect, there is hardly any inter-state variation worth mentioning.

3.6.5 *Concentration ratio* : To examine the changes in the level of inequality in size-distribution of land in the major states, the concentration ratios of household ownership holdings for the years 1971-72, 1982 and 1992 are given in Table (7). For the country as a whole, the level of inequality measured by the concentration ratio, has remained more or less unchanged during the past two decades. However, the ratio has shown varying trends over the states.

3.6.6 At the very beginning, it may be observed that the concentration ratio in ownership of land in the states of Punjab(0.77), Tamil Nadu(0.75) and Andhra Pradesh(0.72) were higher than the national level ratio of 0.71 in the year 1992. The concentration ratio for the country as a whole is expected to be higher than that of the individual states owing to the disparate state-level average size of holdings. In view of this, values higher than the national value of the ratio in these three states indicate prevalence of very high level of inequality. While the ratio appears to have declined in Andhra Pradesh during the last two decades, it shows no definite trend in the other two states over the same time span.

3.6.7 In a number of states, including Gujarat, Himachal Pradesh, Madhya Pradesh, Orissa and Rajasthan, there was a steady upward trend in the concentration ratio. Besides Andhra Pradesh, only in Haryana the period between 1971-72 was marked by a steady and perceptible decline in the concentration ratio.

Table (6) : Percentage Distribution of Households and Area Owned Over Five Broad Classes in 17 Major States for the Years 1992, 1982, 1971-72.

| state | year | p.c. distribution of households | | | | | p.c. distribution of area owned | | | | | | |

N.B. The figures of cols(8) &(9) are taken from a paper entitled "Temporal and regional variations in the agrarian structure in India", by T. Haque, appearing in Indian Journal of Agricultural Economics, July-Sept. 1987, Vol. 42, No.3CN.

3.7 Growth of Landless and Semi-Landless Households

3.7.1 The results presented in Table(7) reveal that the proportion of landless rural households has increased from 9.6% to 11.3% during the two decades since 1971- 72. The rise had occurred mainly during the period between 1971-72 to 1982. The proportion of landless households has remained, by and large, unchanged during the latter decade.

3.7.2 Most of the states, including Gujarat, Himachal Pradesh, Madhya Pradesh and Maharashtra, which showed an upward trend in the concentration ratio in ownership of land have also reported a sharp rise the proportion of landless households between 1971-72 and 1992. However, in Uttar Pradesh and West Bengal, while the concentration ratio rose sharply during the last decade, there was no perceptible rise in the proportion of landless households. In fact, West Bengal has registered a sharp fall - from 16% in 1982 to 11% in 1992 - in the proportion of landless households.

3.7.3 The table also reveals that the proportion of the landless and semi-landless taken together has risen during the last two decades - from 37% to 42% - at the national level. In Punjab and Kerala, though the proportions of landless were relatively low, the combined proportions of landless and semi-landless taken together were as high as 57% and 65% respectively. The two other states with more than one-half of the households in these two classes taken together were Tamil Nadu (63%) and West Bengal (53%).

3.8 PER CAPITA OWNERSHIP HOLDING : ALL INDIA

3.8.1 Table (8) gives average size of holding per household, average household size and per capita holding by size-class of ownership holdings, at the all-India level. It is seen that average household size was 5.25 and the per capita holding about 0.2 hectare.

Table (8) : Average household size and per capita holding by size class of ownership holdings

| ALL-INDIA | | RURAL | |
|--------------------------------------|---|-------------------------------|------------------------------|
| size-class of ownership holding (ha) | average holding per household (0.00 ha) | average household size (0.0) | per capita holding (0.00 ha) |
| (1) | (2) | (3) | (4) |
| nil | 0.00 | 3.9 | 0.00 |
| less than 0.002 | 0.00 | 4.2 | 0.00 |
| 0.002-0.20 | 0.04 | 4.7 | 0.01 |
| 0.21-0.50 | 0.34 | 5.1 | 0.07 |
| 0.51-1.00 | 0.73 | 5.3 | 0.14 |
| 1.01-2.00 | 1.40 | 5.9 | 0.24 |
| 2.01-4.00 | 2.67 | 6.4 | 0.43 |
| 4.01-10.00 | 5.78 | 7.3 | 0.79 |
| 10.00 & above | 15.86 | 8.6 | 1.84 |
| all classes | 1.01 | 5.3 | 0.19 |

3.8.2 For the size classes below 2.00 hectare, the average size of holding per household was close to midpoint of the size class. In the higher size-classes, it was found to be much closer to the lower limit. It was 2.7 hectare for the size-class '2.01-4.00', 5.8 hectare for the size-class '4.01-10.00' and 15.9 hectare for the open ended class '10.00 & above'.

3.8.3 It is seen that the average household size increases steadily from 3.87 for the 'nil' class to 8.60 for the highest class 10.00 & above. The per capita holding, therefore increases at a much slower rate than the average household holding over the size-classes.

3.9 Composition of ownership holdings by type of land : all India.

3.9.1 At the all-India level, the percentage distribution of land owned by major types of land is given in Table (9). The detailed percentage distributions of land owned by types of land are given in Table (7R) of Appendix A, separately (a) for the states and Union territories and (b) for holdings in seven broad size-class of ownership holdings. Data on land owned and its break-up over the following seven types of land (definitions are given in Section one) were collected in survey :

(i) forest, (ii) orchards & plantations, (iii) seasonal crop area : irrigated, (iv) seasonal crop area : unirrigated, (v) water bodies, (vi) land under other non-agricultural uses, (vii) others.

In Table (7R) of Appendix , the first two types are grouped under one major type, viz., orchards & plantations (including forest), and the types (iii) & (iv) are put under the major group "seasonal crop area". In addition, land owned under homestead is also treated as a separate major type. For Table (9) given below, also the types (v), (vi) & (vii) are merged into one major type, viz. "other types of land". In the discussion that follows, land under orchards & plantations, forest and seasonal crop will all be considered as land for agricultural purpose.

3.9.2 It is seen from Table (9) that land for agricultural purpose, particularly seasonal crop area, is the major constituent of land owned by the rural households of the country. The share of seasonal crop area in the total land owned is 90% , and that of orchards & plantations is 2% . The rest of the 8% is distributed under homestead and other types of land.

TABLE (9) : PERCENTAGE DISTRIBUTION OF AREA OWNED BY MAJOR TYPES OF LAND
ALL INDIA RURAL

| major types of land | percentage share | area (mha) |
|---|------------------|------------|
| (1) | (2) | (3) |
| 1. homestead | 3 | 3 |
| 2. land for agricultural purpose | 92 | 108 |
| 2.1 orchards & plantations (including forest) | 2 | 2 |
| 2.2 seasonal crop area | 90 | 106 |
| 3. other types of land | 5 | 6 |
| 4. all | 100 | 117 |

3.10 Composition of ownership holdings of different sizes : all India.

3.10.1 Table (10) brings out the difference in composition among ownership holdings of different sizes. It shows that among the semi-landless (.002-0.20 ha.) ownership holdings, as high as 40% of the area was under homestead and a little over one-half was seasonal crop

area. For the higher size-classes of ownership holdings, it is seen that the larger the size of the holding the lower was the percentage of area under homestead. The share of seasonal crop area in the total land owned is about 90% in all but the bottom two land-owning classes.

TABLE (10) : PERCENTAGE DISTRIBUTION OF AREA OWNED BY TYPE OF LAND FOR BROAD SIZE-CLASSES OF OWNERSHIP HOLDING

| ALL INDIA | | | | | RURAL | | | | | |
|---|------------|---------------------------------|--------------------|------|---------------------|----------------------|--------|------|------|-------|
| broad size-class of ownership holding (h.a) | home stead | agricultural land | | | other types of land | | | | all | |
| | | orchards & plantations & forest | seasonal crop area | all | water bodies | other non agri. uses | others | n.r. | | |
| (1) | (2) | (3) | (4) | (5) | (6) | (7) | (8) | (9) | (10) | (11) |
| 0.002-0.20 | 40.3 | 4.7 | 51.5 | 56.2 | 0.5 | 0.9 | 2.1 | 0.2 | 3.6 | 100.0 |
| 0.21-0.50 | 8.1 | 4.4 | 83.9 | 88.4 | 0.5 | 0.6 | 2.0 | 0.5 | 3.5 | 100.0 |
| 0.51-1.00 | 4.3 | 2.5 | 89.9 | 92.4 | 0.4 | 0.6 | 2.0 | 0.3 | 3.4 | 100.0 |
| 1.01-2.00 | 2.8 | 2.5 | 90.2 | 92.7 | 0.5 | 0.8 | 2.8 | 0.4 | 4.5 | 100.0 |
| 2.01-4.00 | 1.5 | 1.8 | 91.3 | 93.2 | 0.4 | 0.9 | 3.6 | 0.4 | 5.3 | 100.0 |
| 4.01-10.00 | 1.0 | 1.3 | 92.3 | 93.6 | 0.3 | 1.4 | 3.5 | 0.3 | 5.4 | 100.0 |
| 10.01 & above | 0.5 | 1.4 | 91.6 | 92.9 | 0.2 | 1.5 | 4.1 | 0.8 | 6.6 | 100.0 |
| all sizes | 2.6 | 2.0 | 90.4 | 92.3 | 0.4 | 1.0 | 3.2 | 0.4 | 5.0 | 100.0 |

3.11 Composition of ownership holdings : inter-state variation

3.11.1 The statewise percentage composition of land owned is given in Table (11). The category of land for agricultural purpose and that constituted of the rest will be considered initially, ignoring for the moment, the sub-divisions among the second category. In six major states, the percentage share of land for agriculture purpose was found to be less than 90%, with Himachal Pradesh (68%), Kerala (80%) and Assam (81%) ranking the lowest among the six. While Karnataka (97%) and Gujarat (96%) occupied the top positions among all the states in this respect.

TABLE (11) : PERCENTAGE DISTRIBUTION OF AREA OWNED BY TYPE OF LAND FOR 17 MAJOR STATES

| state | home- stead | agricultural land | | all | other types of land | RURAL | | |
|------------------|----------------|-------------------------------------|------------------------------------|------|------------------------------|-------|------------------------|---|
| | | orchards & plan- tations & | seasonal crop area forest | | | all | non-agri.holdings | |
| | | | | | | | % of report- ing | area per report- ing hh (0.00ha) |
| (1) | (2) | (3) | (4) | (5) | (6) | (7) | (8) | (9) |
| ANDHRA PRADESH | 2.3 | 2.5 | 90.3 | 92.8 | 4.9 | 100.0 | 42.7 | 0.03 |
| ASSAM | 15.6 | 2.1 | 78.9 | 81.0 | 3.5 | 100.0 | 33.7 | 0.09 |
| BIHAR | 5.4 | 0.9 | 91.3 | 92.2 | 2.4 | 100.0 | 33.6 | 0.02 |
| GUJARAT | 0.8 | 0.4 | 95.7 | 96.1 | 3.1 | 100.0 | 39.5 | 0.03 |
| HARYANA | 1.8 | 0.1 | 95.7 | 95.8 | 2.4 | 100.0 | 40.7 | 0.05 |
| HIMACHAL PRADESH | 3.9 | 7.6 | 60.0 | 67.6 | 28.5 | 100.0 | 15.6 | 0.05 |
| JAMMU & KASHMIR | 2.3 | 1.4 | 84.7 | 86.1 | 11.6 | 100.0 | 15.0 | 0.02 |
| KARNATAKA | 0.9 | 3.8 | 93.1 | 96.9 | 2.2 | 100.0 | 29.8 | 0.03 |
| KERALA | 15.9 | 57.1 | 23.2 | 80.3 | 3.7 | 100.0 | 43.4 | 0.05 |
| MADHYA PRADESH | 1.3 | 0.2 | 94.6 | 94.8 | 3.9 | 100.0 | 29.5 | 0.02 |
| MAHARASHTRA | 0.6 | 0.8 | 85.4 | 86.2 | 13.2 | 100.0 | 39.0 | 0.02 |
| ORISSA | 5.2 | 0.4 | 93.0 | 93.3 | 1.5 | 100.0 | 33.2 | 0.02 |
| PUNJAB | 2.4 | 1.5 | 93.4 | 95.0 | 2.6 | 100.0 | 54.3 | 0.02 |
| RAJASTHAN | 0.9 | 0.1 | 94.1 | 94.3 | 4.9 | 100.0 | 19.0 | 0.01 |
| TAMIL NADU | 3.3 | 5.0 | 87.0 | 92.0 | 4.8 | 100.0 | 57.8 | 0.02 |
| UTTAR PRADESH | 2.4 | 2.4 | 92.3 | 94.6 | 2.9 | 100.0 | 23.5 | 0.03 |
| WEST BENGAL | 7.4 | 1.1 | 86.3 | 87.4 | 5.3 | 100.0 | 39.7 | 0.03 |
| ALL INDIA | 2.6 | 2.0 | 90.4 | 92.3 | 5.0 | 100.0 | 35.4 | 0.03 |

3.11.2 In most of the major states, the land for agricultural purpose mainly comprises seasonal crop area, the most notable exception in this regard being Kerala. About 80% of its total land owned in Kerala was for agricultural purpose, of which only about 30% was seasonal crop area and the rest was under orchards & plantations. Himachal Pradesh too reported a relatively high share of orchards and plantations in land for agricultural purpose (over 11%) as well as in the total area owned (8%).

3.11.3 Besides land for agricultural purpose, household ownership holdings cover all types of land for non-agricultural purposes as well. While share of homestead in total land owned was found to be generally small in most of the states, Kerala and Assam reported relatively large proportions (16% each) of area under homestead.

3.11.4 *Non-agricultural holdings* : Household ownership holdings owning no land for agricultural purpose are termed non-agricultural holdings for the purpose of this report. The proportion of such holdings among the rural households was found to be about 35%. Among the major states, Punjab, in spite of being one of the most agriculturally developed states, reported 54% non-agricultural holdings. The major state with a higher proportion of non-agricultural holdings was Tamil Nadu (58%). For all the other major states, except Himachal Pradesh, Jammu & Kashmir and Rajasthan, the proportion ranged between 24% to 43%.

3.12 EXTENT OF TENANCY : All India

3.12.1 The survey estimates indicating extent of tenancy in rural India are presented in Table (12). Granting the right of using a piece of land to others, either on rent or free, by the owner without transferring the title is termed as land lease. Such agreements, even when made orally, were considered as lease contracts. For the purpose of the survey, hereditary tenancy and long term lease for 30 years or more were not treated as land lease - they were treated as land owned. On the other hand, private land encroached upon by a household was treated as leased-in land (free of rent).

TABLE (12) : INCIDENCE OF TENANCY IN RURAL INDIA - 1992

| item | aggregate estimate (mill./mha.) | p.c. of hhs./area to total hhs./area owned |
|--|---------------------------------|--|
| (1) | (2) | (3) |
| 1. households reporting leasing out | 5.6 | 5% |
| 2. households reporting leasing in | 17.1 | 17% |
| 3. area reported as leased out | 5.7 | 5% |
| 4. area reported as leased in | 10.6 | 9% |
| 5. area (other than homestead) leased in from rural hhs. | 9.4 | 8% |

3.12.2 It is seen that while only 5.6 million households reported leasing out of land, 17.1 million households reported leasing in. A lessor household could have leased out land to more than one lessee households. But there is a large difference between area leased-out (5.7 mha.) and area leased-in (10.6 mha.). It may be mentioned here that while collection of data on leasing out of land was restricted to household ownership holdings only, that on leasing in covered contracts involving land owned by urban households and non-household sector as well.

3.12.3 The estimate of area (other than those under homestead) leased in from rural households, also obtained from the survey, is about 9.4 mha. . This, compared with the survey estimate of area leased out by rural households (5.7 mha.), indicates that there are reasons other than those mentioned in the earlier paragraph for the difference between the estimates of area leased in and area leased out. It is quite conceivable that there is a tendency to suppress information on leasing out of land among the land owners owing to fear of tenancy legislation. This might have induced widespread under-reporting of leasing out of land. The estimates given in Table (13) below indicate that leasing out of land was under-reported in the earlier Land Holding surveys also. The estimates on leased out land are generally under-estimates. Therefore, in the rest of the discussion, only the proportion of households reporting leasing-in of land and the ratio of total area leased-in to total area owned are used as indicators of the incidence of tenancy.

TABLE (13) : ESTIMATES ON LEASING OUT AND LEASING IN OF LAND BY HOUSEHOLDS FROM VARIOUS ROUNDS OF NSS

| ALL INDIA | | RURAL | | |
|--|-----------------------|--------------------|--------------------|--|
| items | 1971-72 (26th Rd.) | 1982 (37th Rd.) | 1992 (48th Rd.) | |
| (1) | (2) | (3) | (4) | |
| 1. percentage of households leasing-in land | 25% | 18% | 15% | |
| 2. percentage of area leased-in to total area owned | 12% | 7% | 9% | |
| 3. percentage of area leased-out to total area owned | 6% | 4% | 5% | |

N.B. Estimates for 26th and 37th rounds are taken from NSS Reports No. 215 and 330 respectively.

3.13 Temporal changes in leasing-in of land : All-India

3.13.1 The proportion of households leasing-in land and ratios of land leased-in to total area owned from the last three land holding surveys of NSS are given in Table (13). The estimates reveal that there is a declining trend in the percentage of households leasing-in land over the two decades. However, the estimates of 1982 & 1992 are almost of the same order. The ratio of area leased-in to area owned by households has decreased from 12% to 9% during the two decades but the 1992 estimates was a little higher than the 1982 estimate.

3.14 Leasing-in of land : Inter-state variation

3.14.1 Table (14) provides the survey estimates of percentage of leasing-in households, average area leased in per leasing-in household and ratio of area leased in to area owned for the 17 major states. The estimates of ratio of area leased in to area owned for 1982 are also given for these major states.

TABLE (14) : INCIDENCE OF TENANCY FOR 17 MAJOR STATES

| states | % of hhs. reporting | | av. area leased in per reporting household owned | RURAL |
|------------------|---------------------|------------|--|---|
| | leasing out | leasing in | | leased-in area as percent of total area |
| (1) | (2) | (3) | (4) | (5) |
| ANDHRA PRADESH | 4.6 | 15.9 | 0.47 | 9.6 |
| ASSAM | 3.9 | 16.7 | 0.33 | 8.0 |
| BIHAR | 2.4 | 7.0 | 0.39 | 4.3 |
| GUJARAT | 4.0 | 10.6 | 0.56 | 4.2 |
| HARYANA | 10.1 | 18.3 | 3.17 | 41.1 |
| HIMACHAL PRADESH | 3.4 | 14.4 | 0.24 | 4.4 |
| JAMMU & KASHMIR | 1.0 | 6.4 | 0.53 | 3.4 |
| KARNATAKA | 7.5 | 13.1 | 0.99 | 9.3 |
| KERALA | 2.2 | 9.6 | 0.10 | 3.2 |
| MADHYA PRADESH | 3.9 | 12.3 | 1.04 | 7.4 |
| MAHARASHTRA | 4.4 | 15.8 | 0.52 | 5.2 |
| ORISSA | 6.8 | 22.3 | 0.38 | 11.4 |
| PUNJAB | 8.9 | 15.2 | 1.31 | 18.2 |
| RAJASTHAN | 4.5 | 10.9 | 1.43 | 5.8 |
| TAMIL NADU | 5.6 | 19.5 | 0.26 | 12.4 |
| UTTAR PRADESH | 5.8 | 16.5 | 0.59 | 11.8 |
| WEST BENGAL | 4.7 | 17.8 | 0.31 | 12.0 |
| ALL INDIA | 4.8 | 14.7 | 0.62 | 9.0 |

3.14.2 Among the major states the highest percentage of leasing-in households was reported in Orissa (22%), followed by Haryana (18%) and Assam (17%). At the other end of the spectrum, three states reported percentages of 10% or less viz., Jammu & Kashmir (6%), Bihar (7%) and Kerala (10%).

3.14.3 There was a wide inter-state variation in the average land leased in per leasing-in household. While the national level average was only 0.62 hectare, the corresponding average for Haryana was found to be as high as 3.17 hectares. On the other hand, about 5 states reported less than 0.35 hectare of land leased in per leasing-in household, with Himachal Pradesh (0.24 ha.), West Bengal (0.31 ha.) and Assam (0.33 ha.) recording the three lowest averages. It may be of interest to note that among the three states with high percentage of leasing-in households, Orissa and Assam reported relatively low average area leased in per leasing in household, while Haryana had an exceptionally high average. Punjab (1.31 ha.) and Rajasthan (1.43 ha.) also reported relatively high values of the average.

3.14.4 The ratio of land leased to total area owned was 12% or less in most of the major states, except Haryana and Punjab. Haryana reported an exceptionally high value of the ratio. The total area leased in was more than two-fifths of the total area owned in this state. The estimated value of the ratio in Punjab was about 18%. Incidence of leasing in of land was the lowest in Kerala and Himachal Pradesh (about 3% in both). It was relatively low in Bihar (4%), Gujarat (4%) and Maharashtra (5%) as well.

3.15 Terms of lease

3.15.1 Leasing of land is contracted by two parties under certain terms of lease which are binding on both the parties. The specific terms of lease on which data were collected in the survey are at follows :

(i) for fixed money, (ii) fixed produce, (iii) for share of produce (iv) for service contract, (v) for share of produce together with other terms, (vi) under usufructuary mortgage, (vii) from relatives under no specified terms.

In Table (15) percentage distribution of leased-in area under the first three specific terms of lease and the rest put together in "other terms" is given for the major states as well as all-India.

TABLE (15) : PERCENTAGE DISTRIBUTION OF AREA LEASED-IN BY TERMS OF LEASE FOR 17 MAJOR STATES

| state | RURAL | | | | |
|------------------|-----------------|-------------------|----------------------|-------------|-------|
| | for fixed money | for fixed produce | for share of produce | other terms | all |
| (1) | (2) | (3) | (4) | (5) | (6) |
| ANDHRA PRADESH | 32.1 | 29.2 | 33.9 | 4.8 | 100.0 |
| ASSAM | 23.7 | 4.7 | 49.6 | 22.1 | 100.0 |
| BIHAR | 9.2 | 20.4 | 57.4 | 13.0 | 100.0 |
| GUJARAT | 19.1 | 3.2 | 56.5 | 21.2 | 100.0 |
| HARYANA | 82.2 | 2.6 | 14.3 | 0.9 | 100.0 |
| HIMACHAL PRADESH | 18.1 | 6.8 | 9.2 | 65.9 | 100.0 |
| JAMMU & KASHMIR | 16.1 | 27.9 | 27.6 | 28.4 | 100.0 |
| KARNATAKA | 19.7 | 18.5 | 47.3 | 14.5 | 100.0 |
| KERALA | 15.1 | - | 4.6 | 80.3 | 100.0 |
| MADHYA PRADESH | 22.7 | 30.9 | 25.1 | 21.3 | 100.0 |
| MAHARASHTRA | 27.0 | 10.3 | 47.3 | 15.5 | 100.0 |
| ORISSA | 12.7 | 11.9 | 65.1 | 10.4 | 100.0 |
| PUNJAB | 67.1 | 10.8 | 15.0 | 7.1 | 100.0 |
| RAJASTHAN | 17.7 | 32.2 | 37.1 | 13.0 | 100.0 |
| TAMILNADU | 32.4 | 26.5 | 25.3 | 15.9 | 100.0 |
| UTTAR PRADESH | 7.8 | 18.7 | 56.3 | 17.2 | 100.0 |
| WEST BENGAL | 12.4 | 9.8 | 67.4 | 10.4 | 100.0 |
| ALL INDIA | 29.1 | 18.0 | 39.8 | 13.1 | 100.0 |

3.15.2 It is seen that in rural India, a large majority of the contracts were share cropping and fixed rent in cash or kind. About 40% of the leased in land was contracted for share of produce. The shares of the rent in cash and that in kind were respectively 29% and 18%. All the other terms of lease accounted for only 13%.

3.15.3 The percentage distributions for the individual major states reveal a wide variation in the practice of leasing land. In Haryana and Punjab - the two most agriculturally advanced states

in the country - the most prevalent form of contract was fixed rent in cash. Over 82% and 67% of the tenanted land was contracted for fixed cash rent in Haryana and Punjab respectively.

3.15.4 Share cropping was found to be the most prevalent practice of leasing land in West Bengal and Orissa. In both the states about two-thirds of the total leased-in land was contracted for share of produce. The percentage of tenanted land under this term of lease was also high in Bihar, Gujarat (about 57% in both), Uttar Pradesh (56%) and Assam (50%).

3.15.5 In most of the major states, share cropping and fixed rent were the main terms of lease, together accounting for over three-fourths of the total leased-in land. Only Kerala and Himachal Pradesh stand out as exceptions. Most of the leased-in land in Kerala (80%) and Himachal Pradesh (66%) was contracted on "other terms".

3.16 Recorded and Unrecorded lease : All India

3.16.1 Table (16) provides estimates on prevalence of unrecorded lease in rural India. As mentioned earlier, all tenurial contracts (excepting those made for 30 years or more), whether made verbally or formally, were treated as land lease. The table gives estimates of proportion of households reporting leasing-in and percentage of area leased in by recorded and unrecorded contracts, only for those land which was not under homestead.

TABLE (16) : ESTIMATES ON RECORDED AND UNRECORDED LEASING IN OF LAND (other than homestead)

| ALL INDIA | | RURAL | |
|---|----------------|------------------|-----------|
| item | recorded lease | unrecorded lease | any lease |
| (1) | (2) | (3) | (4) |
| 1. percentage of reporting households | 1.3 | 8.3 | 9.5 |
| 2. percentage share in total area leased in | 16% | 84% | 100% |

3.16.2 Table (16) clearly brings out that the lease contracts are mostly unrecorded. While 9.5 per cent of the rural households reported leasing in of land (other than homestead), only 1.3% reported recorded leasing in. The area under recorded lease formed only 16% of the total leased-in area.

3.17 Ownership of land among scheduled tribe and scheduled caste households

3.17.1 A summary of the results of the survey on some particulars of ownership of land among the scheduled tribe and scheduled caste households is given in Table (17). Corresponding results for the non-scheduled households are also given in the table for comparison.

TABLE (17) : SHARE OF SCHEDULED TRIBE AND SCHEDULED CASTE HOUSEHOLDS IN TOTAL AREA OWNED AND LANDLESSNESS AMONG THEM

| RURAL | | | | | |
|---|------|--------------|------|--------|----------|
| item | year | social group | | | all hhs. |
| | | S.T. | S.C. | others | |
| (1) | (2) | (3) | (4) | (5) | (6) |
| 1. percentage distribution of households | 1982 | 9.7 | 19.7 | 70.6 | 100.0 |
| | 1992 | 11.2 | 21.5 | 67.4 | 100.0 |
| 2. percentage distribution of area owned | 1982 | 10.1 | 7.9 | 82.0 | 100.0 |
| | 1992 | 11.8 | 10.2 | 78.0 | 100.0 |
| 3. percentage of landless households (owning no land or less than .002 ha.) | 1982 | 17.1 | 12.6 | 10.2 | 11.3 |
| | 1992 | 11.5 | 13.3 | 10.5 | 11.3 |
| 4. percentage of semi-landless households (0.002 - 0.20ha.) | 1982 | 16.3 | 48.0 | 24.9 | 28.6 |
| | 1992 | 22.3 | 47.5 | 27.4 | 35.2 |

3.17.2 The estimates presented in Table (17) reveal that, between the two social groups, scheduled tribe households appear to be much better off than the scheduled caste households. The share of the scheduled caste households (constituting 21% of the rural households) in the total area owned was only about 10%, whereas that of the scheduled tribe households (constituting 11% of the rural households) was about 12%. Of the total area owned, the remaining 78% belonged to "other" households, which had a share of 67% in the total number of households.

3.17.3 *Landlessness among the social groups* : It is seen that landlessness is more prevalent among the scheduled caste households. In this social group, the percentages of landless and semi-landless were 13% and 48% respectively, the corresponding percentages among all the rural households being 11% and 31%. The scheduled tribe households are in a better position in this respect. Though the proportion of landless among the scheduled tribe households was marginally higher than that of 'other' households, the proportion of semi-landless among them was clearly lower. However, the quality of land with scheduled tribe households tends to be inferior to that of land owned by other households.

PART II
SURVEY RESULTS

**4. Results on some Aspects of Household Ownership Holdings :
NSS 48th round (January-December 1992)**

List of Detail Tables

| Srl. no. | Table no. | Description | page no. | |
|-------------|--------------|--|----------|-------|
| | | | rural | urban |
| (1) | (2) | (3) | (4) | (5) |
| 1. | 1R/1U | Number of villages/blocks and households surveyed by states/u.t. 's | 83 | 84 |
| 2. | 2R/2U | Sub-samplewise estimates of number of households and area owned by size-class of ownership holding. | 85 | 102 |
| 3. | 3R/3U | Percentage distribution of households and area owned by size-class of ownership holding and social group. | 119 | 136 |
| 4. | 4R/4U | Percentage of households reporting leasing out and leasing in of land to all households and average area of such land by broad size class of ownership holding and social group. | 153 | 179 |
| 5. | 5R/5U | Percentage distribution of households and area by board size class of holding of own land other than homestead. | 208 | 210 |
| 6. | 6R | Percentage distribution of households type for board size-class of ownership holding. | 212 | — |
| 7. | 7R | Percentage distribution of area owned by type of for broad size-class of ownership holding. | 223 | — |
| 8. | 8R | Percentage of households reporting leasing in land to all households by type of land and broad size-class of ownership holding. | 234 | — |
| 9. | 9R | Percentage distribution of area lease in by type of land and size-class of ownership holding. | 243 | — |
| 10. | 10R | Percentage of households leasing in land excluding homestead to all households by lease and board size-class of ownership holding. | 253 | — |
| 11. | 11R | Percentage of households leasing in land (excluding homestead) to all households by type of lessor for board size-class of ownership holding. | 261 | — |

List of Detail Tables (continued)

| Srl. no. | Table no. | Description | page no. | |
|-------------|--------------|--|----------|-------|
| | | | rural | urban |
| (1) | (2) | (3) | (4) | (5) |
| 12. | 12R | Percentage of households reporting land(excluding homestead) possessed but not owned to all household by type of possession and broad size-class of ownership holding. | 269 | — |
| 13. | 13R | Percentage distribution of area (excluding homestead) possessed but not owned by not owned by type of possession for broad size-class of ownership holding. | 278 | — |
| 14. | 14R | Percentage distribution of area leased (excluding homestead) by terms of lease for broad size-class of ownership holding. | 287 | — |
| 15. | 15R | Percentage distribution of area leased in (excluding homestead) by type of lessor for each broad size-class of ownership holding. | 298 | — |
| 16. | 16R/16U | Average household size by broad size-class of household ownership holding. | 307 | 308 |

Notes on Detail Tables :

1. Tables 1 to 5 & 16 are presented separately for rural and urban sectors.
2. Table numbers for the rural sector are suffixed with 'R' and those for the urban sector are suffixed with 'U'.
3. Tables 6 to 16 are presented for only the rural sector
4. The sum of the components of percentage distributions given in some of the tables may exactly be equal to 100 due to rounding off errors.
5. In Table (7R), "Orchards & plantations" include "forests".
6. "Any" in tables (8R), (11R) & (12R) and "any terms" in Table (10R) also includes "not recorded" cases.
7. "n.r" in column-headings denotes "not recorded".
8. In a column giving sample sizes, "O" indicates that no household of the particular category was found in the sample.
9. In a column giving survey estimates,
 "-" stands for absolute zero. "—" stands for zero round off, and
 "*" stands for cases where the survey could not produce any estimate

पारिवारिक स्वामित्व जोत के कुछ पहलू रा. प्र. स. -48 वॉ दौर (जनवरी - दिसम्बर 1992)

निष्कर्षों का सार

1.0 इस भाग में परिवार स्वामित्व जोतों के बारे में पूछताछ से प्रकट होने वाले कुछ महत्वपूर्ण निष्कर्षों का सार दिया गया है। पूछताछ को प्रमुख उद्देश्य परिवारों को भूमि जोतों के कुछ पहलुओं के बारे में आंकड़े प्राप्त करना था। इस प्रकार, इस भाग में दिए गए परिणाम, देश के भिन्न भिन्न भागों के परिवार स्वामित्व की जोतों से संबंधित हैं। आरंभ से चर्चा में ग्रामोण भारत तथा इन पहलुओं के बारे में अंतर राज्योय विभिन्नता के लिए गत तीन दशकों में भूमि के पारिवारिक स्वामित्व तथा इसके आकार वितरण में परिवर्तनों को शामिल किया गया है। भूमि के भिन्न-भिन्न प्रकारों के अनुसार पारिवारिक स्वामित्व को जोतों का संगठन कुछ विस्तार से प्रस्तुत किया गया है। इसके बाद भूमि के स्वामित्व के अलावा किरायेदारों, काश्तकारों प्रसंग और स्वास्थ्य तथा स्वामित्व जोतों के आकार वर्ग में राज्यों में इन आकार वर्गों में विभिन्नता पर चर्चा की गई है। अंत में अनुसूचित जनजातियों और अनुसूचित जातियों के परिवारों के भूमि स्वामित्व के कुछेक विवरणों की तुलनाप शेष परिवारों के विवरणों से की जाती है।

1.1 स्थायी आनुवंशीय अधिपत्यवाली भूमि, जिसका हस्तांतरणीय अधिकारी हो अथवा नहीं हो को स्वामित्व की भूमि माना गया। दोर्धावधि पट्टे अथवा हस्तांतरण (अर्थात् पारम्परिक जनजातीय अधिकारों के अनुसार जनजातीय परिवार के स्वामित्व को ग्राम भूमि अथवा लम्बी अवधि के लिए किरायेदार द्वारा प्रछागत से संचालित सामुदायिक भूमि के अधीन स्वामी जैसे आधिपत्य की भूमि को भी स्वामित्व वाली भूमि-चाहे वह कृषि योग्य हो अथवा नहीं के सभी भूमि खंड (भूमि खंड का भाग) परिवार के स्वामित्व वाली जोते में सम्मिलित हैं। परिवार के स्वामित्व की जोत में कृषि=योग्य भूमि के अलावा वन क्षेत्र, बंजर तथा अकृषिकीय भूमि, कृषि योग्य बंजर भूमि कृषितर उपयोग के लिए प्रयोग में लाई गई भूमि अर्थात् गृह स्थल, सड़कें आदिए विविध वृक्ष फसलों वाली भूमि आदि सम्मिलित हैं।

1.2 राष्ट्रीय स्तर पर मूलभूत अनुमान

1.2.1 परिवार के स्वामित्व वाली जोतों के अधीन के अनुमान, जोत का औसत आकार, भूमिहीन तथा अर्द्ध भूमिहीन परिवारों के संख्या तथा समानुपात सारणी -1 में प्रस्तुत है। ऐसे परिवार जिनके पास कोई भूमि नहीं है अथवा 0.002 हेक्टेयर से कम है को भूमिहीन परिवार माना जाता है तथा 0.002 हेक्टेयर से 0.02 हेक्टेयर भूमि रखने वाले परिवारों को अर्द्ध भूमिहीन माना जाता है।

**सारणी -1 : ग्रामीण तथा शहरो क्षेत्रों में अनुमानित स्वामित्व वाला क्षेत्र,
स्वामित्व वाला औसत क्षेत्र, भूमिहीन तथा अर्द्धभूमिहीन परिवारों का समानुपात**

समस्त भारत

| मद | ग्रामीण | शहरो |
|---|----------|---------|
| 1. | 2. | 3. |
| 1. परिवारों के अनुमानित संख्या (00) | 116,4058 | 41,8038 |
| 2. स्वामित्व वाला अनुमानित क्षेत्र (00 हेक्टेयर) | 117,3537 | 8,6716 |
| 3. भूमिहीन परिवारों को अनुमानित संख्या (00) | 13,0889 | 20,7784 |
| 4. स्वामित्व वाला औसत क्षेत्र (0.00 हेक्टेयर) | 36,2643 | 16,5436 |
| 5. अर्द्धभूमिहीन परिवारों की औसत संख्या (00 हेक्टेयर) | | |
| (क) भूमिहीन परिवारों सहित | 1.01 | 0.21 |
| (ख) भूमिहीन परिवारों रहित | 1.14 | 0.42 |
| 6. भूमिहीन परिवारों का प्रतिशत | 11.38 | 49.76 |
| 7. अर्द्ध भूमिहीन परिवारों का प्रतिशत | 31.28 | 39.68 |

1.2.2 ग्रामीण परिवारों के स्वामित्व में 1170 लाख हेक्टेयर अनुमानित क्षेत्र और शहरी परिवारों के स्वामित्व में 87 लाख हेक्टेयर क्षेत्र था। परिवार के स्वामित्व में कुल भूमि में शहरी परिवारों का भाग 6.88% ही था। ग्रामीण जोतों का औसत आकार 1.01 हेक्टेयर और शहरो जोतों का औसत आकार 0.21 हेक्टेयर था। कुछ न कुछ भूमि रखने वाले परिवारों के लिए यह औसत ग्रामीण और शहरी क्षेत्रों के लिए क्रमशः 1.14 और 0.42 हेक्टेयर क्रमशः 11% और 31% आंका गया।

1.2.4 परिवारों के स्वामित्व की कुल भूमि में शहरी क्षेत्र का भाग चूंकि बहुत कम है और शहरी क्षेत्र/आधे से अधिक शहरी परिवार भूमिहीन थे! में उत्पादन के कारक के रूप में भूमि अपेक्षाकृत कम महत्वपूर्ण है इसलिए इस खंड में चर्चा का शेष भाग ग्रामीण क्षेत्र तक ही सीमित है।

1.3 भूमि के परिवारिक स्वामित्व की प्रवृत्तियाँ:समस्त भारत

1.3.1 भूमि के स्वामित्व के बारे में आंकड़े आठवें दौर (1954-55) से राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन द्वारा नियमित रूप से एकत्र किए जाते हैं। अब तक, वर्तमान दौर सहित पांच भूमि जोत सर्वेक्षण आयोजित किए गए हैं। इन सर्वेक्षणों के परिणामों में काफी समय से आंकड़ों के स्पष्ट रूप से तुलनोव सेटों का योगदान है। आठवें दौर में, भूमि खंड की परिवार से सदस्य के स्वामित्व में माना गया यदि उसके पास भूमिखंड की हस्तांतरित करने के अधिकार सहित अथवा रहीत स्थायी अनुवंशकीय कब्जा हो। स्वामित्व वाली भूमि की व्याप्ति, स्वामित्व वाली भूमि की परिभाषा में किए गए एक परिवर्तन को छोड़कर दौरों के दौरान अपरिवर्तनीय रही। 17वें दौर (1961-62) से दीर्घावधि पट्टे अथवा हस्तांतरण में अधीन स्वामी जैसे आधिपत्य वाली भूमि का भाग बन गई। उस दौर में, केवल सरकार द्वारा "हस्तांतरण" तथा "दीर्घावधि पट्टे" पर दी गई भूमि सामिल की गई। 26वें दौर (1971-

72) में निम्नलिखित प्रकार के कब्जों को सामिल करने के लिए स्वामी जैसे आधिपत्य को भी स्पष्ट किया गया :-

- (क) स्थायी आधार पर आनुवांशिक अवधि तथा दीर्घावधि पटअे (30 से 99 वर्षों तक) के अधीन भूमि।
- (ख) स्थानीय सरदारों, ग्राम परिषदों और जिला परिषदों से पारम्परिक अधिकार के अधीन जनजातियों की भूमि।
- (ग) भूमि सुधारी कानून के अधीन सरकार द्वारा पूर्ण मालिकाना अधिकार प्राप्त किराएदारों की भूमि और
- (घ) किरायेदारों की भूमि जबकि स्वामित्व के अधिकार समुदाय के पास हों।

तथापि इस प्रकार के आधिपत्य में स्वामित्व वाली भूमि का बहुत कम भाग है। परन्तु स्वामी जैसे आधिपत्य की व्याप्ति के लिए "स्वामित्व" की व्याप्ति छब्बीसवें दौर से अपरिवर्तनीय रही।

1.3.2 इन सर्वेक्षणों से प्राप्त स्वामित्व वालो भूमि से संबंधित मूल अनुमानों की प्रवृत्ति के अध्ययन के लिए सारणो (2) में दिया गया है। प्रतिदर्श का आकार जिस पर अनुमान आधारित हैं, भी सरणी में दिए गए हैं।

सारणी (2) : 1961-62 से 1992 तक के दौरान परिवार के स्वामित्व वालो भूमि में परिवर्तन

| मद | 1961-62 (17वा) | 1971-72 (26वा) | 1982 (37वा) | 1992 (48वा) |
|--|-------------------|-------------------|----------------|----------------|
| 1. | 2. | 3. | 4. | 5. |
| 1. स्वामित्व वाला अनुमानित क्षेत्र (00हेक्टेयर) | 128,734 | 119,636 | 119,736 | 117,354 |
| 2. प्रति परिवार स्वामित्व का औसत क्षेत्र (0.00 हेक्टेयर) | | | | |
| (क) भूमिहीन परिवारों सहित | 1.78 | 1.53 | 1.28 | 1.01 |
| (ख) भूमिहीन परिवारों रहित | 2.01 | 1.69 | 1.44 | 1.14 |
| 3. भूमिहीन परिवारों का प्रतिशत | 11.7% | 9.6% | 11.3% | 11.3% |
| 4. प्रतिदर्श गांवों की संख्या | 3486 | 4547 | 3692 | 4231 |
| 5. प्रतिदर्श परिवारों की संख्या | 53138 | 35947 | 29089 | 33289 |

पाद टिप्पणी : 17वें, 26वें और 37वें दौर के लिए अनुमान रा.प्र.सर्वे. की क्रमशः रिपोर्ट सं. 114,215 और 330 से लिए गए हैं।

1.3.3 यह देखा जा सकता है कि 1961-62 में स्वामित्व का कुल अनुमानित क्षेत्र 128.7 मिलिक हेक्टेयर 1971-72 में गिरकर 1196 लाख हेक्टेयर रह गई, यह गिरावट लगभग 7 प्रतिशत थी।

ग्रामीण परिवारों के स्वामित्व में 1198 लाख हेक्टेयर के 1982 के सर्वेक्षण के अनुमान 1971-72 के अनुमानों के काफी करीब हैं। 1961-62, 1971-72 और 1982 के सर्वेक्षणों के लिए भूमि के स्वामित्व की परिभाषा समान रही है, स्वामित्व के क्षेत्र में कमी का सम्भावित कारण इस बात को छोड़कर कोई नहीं है कि इन वर्षों में शहरोकरण के कारण कुछ ग्रामीण भूमि शहरी भूमि में विलय हो गयी है। 1971-72 और 1982 में शहरी परिवारों के स्वामित्व वाले क्षेत्र के अनुमान जो 1961-62 के तदनुसूची अनुमान से कम है 1971-72 और 1982 से 1961-62 में ग्रामीण परिवारों के स्वामित्व वाले क्षेत्र के अनुमान में कमी के लिए विश्वसनीय कारण शहरोकरण के तथ्य को न्यायसंगत नहीं ठहराती।

1.3.4 48वें दौर सर्वेक्षण के दौरान अधूरी व्याप्ति से 1982 और 1992 में प्राप्त अनुमानों के बीच बड़े अंतर को समझाया जा सकता है। जम्मू और कश्मीर के एक बड़े जिले की परिस्थितियों के कारण 48वें दौर में कवरेज से बाहर रखना पड़ा था। ये क्षेत्र लगभग 10 लाख हेक्टेयर है जिनमें लगभग 24 लाख हेक्टेयर की कमी पाई गई है। चर्चाहीन दो दौरों के अनुमानों के बीच के शुष्क अंतर 14 लाख हेक्टेयर में से लगभग 5 लाख हेक्टेयर को इस अवधि के दौरान शहरी परिवारों के स्वामित्व वाले कुल क्षेत्र में वृद्धि के रूप में दर्शाया जाता है। इस अंतर को प्रतिचयन और गैर प्रतिचयन त्रुटि हो माना जा सकता है।

1.3.5 भूमिहीन परिवारों के समानुपात में परिवर्तन

सारणी (2) 1961-62 से भूमिहीन परिवारों के प्रतिशत में कोई अंतर नहीं दर्शाती है। 1971-72 में यह कुछ कम (10%) था।

1.3.6 स्वामित्व वाले औसत क्षेत्र का रुख: - ग्रामीण परिवारों की संख्या में उत्तरोत्तर वृद्धि से स्वामित्व वाले औसत क्षेत्र में कमी अपरिहार्य है। गत वर्षों में प्रति परिवार स्वामित्व वाले औसत क्षेत्र में हुई लगातार कमी से कीमित भूमि आधार पर ग्रामीण जनसंख्या का बढ़ता हुआ दबाव प्रतिबिम्बित होता है। 1961-62 में प्रति परिवार स्वामित्व वाला औसत क्षेत्र 1.98 हेक्टेयर था। धीरे धीरे 1992 में यह घटकर 1.01 हेक्टेयर हो गया। भूमिहीन परिवारों को छोड़कर स्वामित्व वाला औसत क्षेत्र 1992 में 1.14 हेक्टेयर आंका गया जो 1961-62 में प्राप्त अनुमान 2.01 हेक्टेयर के आधे से मामूली अधिक है।

1.4 स्वामित्व वाली जोतों के वितरण के पैटर्न में परिवर्तन: समस्त भारत

1.4.1 जोतों के औसत आकार में अभिलक्षित कमी के अतिरिक्त कृषि ढांचे में उल्लेखनीय परिवर्तन की जांच करने के लिये यह आवश्यक है कि स्वामित्व वाली जोतों के वितरण के पैटर्न में स्वाभाविक विभिन्नता के स्वस्थ और सीमा का अध्ययन किया जाय। सारणी (3) राष्ट्रीय प्रतिदर्श सर्वेक्षण के सभी भूमि जोत सर्वेक्षणों से स्वामित्व वाली जोतों के आकार वर्ग परिवारों का और उनके स्वामित्व के क्षेत्र का संचयन प्रतिशत वितरण दर्शाया गया है। लेमिन इसमें आठवें दौर को शामिल नहीं किया गया है जिसके लिये यह पहले ही बताया जा चुका है कि प्राप्त परिवारों के स्वामित्व वितरण आगे वाले दौरों से प्राप्त आंकड़ों से पूर्णतया मेल नहीं खाते हैं।

सारणी (3) : राष्ट्रीय प्रतिदर्श सर्वेक्षण के भिन्न दौरों में परिवार के स्वामित्व वाली ज़ोतों के आकार वर्गों में परिवार तथा उनके स्वामित्व वाले क्षेत्र का संचयी प्रतिशतता वितरण

| परिवार का आकार वर्ग स्वामित्व ज़ोत हेक्टेयर | 1961-62 | | 1971-72 | | 1982 | | 1992 | |
|---|---------------------|-----------|---------------------|-----------|---------------------|-----------|---------------------|-----------|

| 2.01 से कम | 75.22 | 19.98 | 78.11 | 24.44 | 81.34 | 28.71 | 85.30 | 35.52 |
| 3.01 से कम | 83.51 | 31.55 | 86.00 | 37.14 | 88.61 | 42.55 | 91.86 | 50.90 |
| 4.01 से कम | 88.08 | 40.52 | 90.00 | 46.36 | 92.12 | 52.09 | 94.58 | 60.10 |
| 6.01 से कम | 93.17 | 54.49 | 94.67 | 60.93 | 96.02 | 66.73 | 97.39 | 73.33 |
| 8.01 से कम | 95.64 | 64.15 | 96.71 | 70.19 | 97.66 | 75.55 | 98.50 | 80.74 |
| 10.01 से कम | 97.15 | 71.75 | 97.88 | 77.09 | 98.57 | 81.99 | 99.12 | 86.17 |
| 12.01 से कम | 98.01 | 77.08 | 98.55 | 81.89 | 99.00 | 85.73 | 99.40 | 89.18 |
| 20.01 से कम | 99.40 | 88.87 | 99.59 | 92.14 | 99.76 | 94.57 | 99.85 | 95.69 |
| सभी आकार | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 |

1.4.2 सारणी से पता चलता है कि समय के साथ-साथ स्वामित्व वाली ज़ोतों का आकार वितरण का स्वरूप बृहत रूप से यद्यपि अत्याधिक विषम रहा है फिर भी वितरण में उत्तरोत्तर अधोगामी परिवर्तन है। भारत में स्वामित्व वाली ज़ोतों का आकार वितरण भूमिहीन परिवारों और सीमांत भूमि धारकों के बाहुल्य से दर्शाया जाता है। ग्रामीण परिवारों के लगभग 72% भाग ही है। मध्यम चार से दस हेक्टेयर भूमि के स्वामी और बड़े भूमि धारक दस हेक्टेयर से अधिक भूमिधारक कुल परिवारों का केवल 5.5% है, परन्तु सभी परिवारों के स्वामित्व वाले भूमि में इनका संयुक्त भाग लगभग 40% है।

1.4.3 1961-62 से तीन दशकों की अवधि के दौरान स्वामित्व वाले ज़ोतों का आकार वितरण उत्तरोत्तर रूप से अधोगामी रहा है। सीमांत भूमि धारकों 1961-62 में 66% से बढ़कर 1992 में 72% हो गया है और लघु भूमि धारकों 1 से 2 हेक्टेयर के स्वामी का समानुपात इसी अवधि के दौरान 9%

से बढ़कर 15% हो गया है। सीमांत तथा लघु भूमि धारकों के समानुपात में यह वृद्धि मध्यम और बड़े भूमि धारकों के समानुपात में सतत कमी के साथ-साथ हुई। मध्यम भूमि धारकों का समानुपात इसी अवधिके दौरान 9% से घटकर 5% और बड़े भूमि धारकों का समानुपात 3% से घटकर 1% रह गया। देखें आकृति एक।

1.4.4 संकेन्द्रण अनुपात-असमानता का माप: तीन दशकों के दौरान सीमांत भूमि धारकों के स्वामित्व वाले क्षेत्र का प्रतिशत भाग 8% से बढ़कर 16% हो गया है जबकि बड़े भूमि धारकों का भाग 28% से घटकर 14% रह गया है। इस अवधि में स्वामित्व वाले क्षेत्र के वितरण में उतरोत्तर अधोगामी परिवर्तन से भूमि वितरण की असमानता के विद्यमान स्तर में कोई परिवर्तन नहीं हुआ है। 1961-62-1971-72, 19982 और 1992 के वर्षों के लिए परिवारों के स्वामित्व वाली जोतों का संकेन्द्रण अनुपात सारणी -4 में नीचे दर्शाया गया है। इससे देखा जा सकता है कि परिवारों के स्वामित्व वाली जोतों का संकेन्द्रण अनुपात पिछले सभी तीन दौरों में समान 0.71 रहा है। सतहरवें दौर में यह 0.73 आंका गया।

सारणी 4: परिवारों के स्वामित्व वाली जोतों का संकेन्द्रण अनुपात गिनी का गुणांक

| समस्त भारत | ग्रामीण |
|------------|-------------------|
| वर्ष | संकेन्द्रण अनुपात |
| 1. | 2. |
| 1961-62 | 0.7313 |
| 1971-72 | 0.7087 |
| 1982- | 0.7120 |
| 1992 | 0.7104 |

टिप्पणी: संकेन्द्रण अनुपात (गिनी का गुणांक) इस फामूले द्वारा दर्शाया जाता है

जहां पी और क्यू क्रमशः सारणी (3) में प्रस्तुत जोतों के स्वामित्व के 51वें आकार वर्ग में परिवारों तथा स्वामित्व वाले क्षेत्र के संचयी प्रतिशत हैं।

1.5 भूमि का पारिवारिक स्वामित्व: अन्तर-राज्जीय तुलना

1.5.1 सारणी 5 में 17 प्रमुख राज्यों के लिए स्वामित्व वाली जोतों का औसत आकार और भूमिहीन परिवारों का प्रतिशत दिया गया है। प्रमुख राज्यों के लिए प्रति परिवार स्वामित्व वाले औसत क्षेत्र में व्यापक विभिन्नता है जो केरल में न्यूनतम 0.30 हैक्टेयर और राजस्थान में अधिकतम 2.66 हैक्टेयर है। इसके अतिरिक्त केरल के साथ-साथ तमिलनाडु में प्रति परिवार औसत क्षेत्र आधे हैक्टेयर से भी कम 0.46 हैक्टेयर सूचित किया गया और पश्चिम बंगाल में 0.46 हैक्टेयर सूचित किया गया। राष्ट्रीय औसत 1.01 हैक्टेयर था। राजस्थान, मध्यप्रदेश 1.47 हैक्टेयर, महाराष्ट्र 1.59 हैक्टेयर, हरियाण 1.41 हैक्टेयर, गुजरात 1.39 हैक्टेयर, पंजाब 1.10 हैक्टेयर और कर्नाटक 1.39 हैक्टेयर में औसत जोत हैक्टेयर से अधिक थी।

सारणी 5 : परिवार के स्वामित्व वाली जोतों का 17 प्रमुख राज्यों में औसत आकार

| राज्य | ग्रामीण | | |
|-----------------|--|--|---|
| | प्रति परिवार औसत क्षेत्र 0.00 हैक्टेयर | भूमिहीन परिवारों का प्रतिशत के पास औसत | भूमि रखने वाले प्रति परिवार क्षेत्र |
| 1. | 2. | 3. | 4. |
| आंध्र प्रदेश | 0.78 | 11.8 | 0.88 |
| असम | 0.70 | 13.4 | 0.81 |
| बिहार | 0.64 | 8.6 | 0.70 |
| गुजराज | 1.38 | 16.3 | 1.65 |
| हरियाण | 1.41 | 3.7 | 1.46 |
| हिमाचल प्रदेश | 0.79 | 10.4 | 0.88 |
| जम्मू और कश्मीर | 0.99 | 2.8 | 1.02 |
| कर्नाटक | 1.39 | 10.0 | 1.54 |
| केरल | 0.30 | 8.4 | 0.33 |
| मध्य प्रदेश | 1.74 | 15.2 | 2.05 |
| महाराष्ट्र | 1.59 | 19.6 | 1.98 |
| उड़ीसा | 0.74 | 13.8 | 0.86 |
| पंजाब | 1.10 | 5.9 | 1.17 |
| राजस्थान | 2.66 | 6.4 | 2.84 |
| तमिलनाडु | 0.41 | 17.9 | 0.50 |
| उत्तर प्रदेश | 0.83 | 4.9 | 0.87 |
| पश्चिम बंगाल | 0.46 | 11.0 | 0.52 |
| समस्त भारत | 1.01 | 11.3 | 1.14 |

1.5.2 अभी तक चर्चित औसत, भूमिहीन परिवारों सहित सभी परिवारों पर आधारित है यह गौरतलब है कि यद्यपि महाराष्ट्र और मध्य प्रदेश स्वामित्व वाली जोतों के औसत आकार में संदर्भ में चोटो के पांच राज्यों में से फिर भी प्रमुख राज्यों में भूमिहीन परिवारों का 4 अधिकतम समानुपातों में से तीन इन तीनों राज्यों में सूचित किया गया। महाराष्ट्र में लगभग 20% गुजरात में लगभग 16% और मध्य प्रदेश में 15% परिवार भूमिहीन पाए गए। भूमिहीन परिवारों के प्रतिशत के संदर्भ में चार चोटी के राज्यों के साथ अन्य राज्य तमिलनाडु 17% था। दो अन्य राज्यों उड़ीसा 14% और असम 13% में भी भूमिहीन परिवारों का उचा समानुपात सूचित किया गया।

1.5.3 कुछ भूमि रखने वाले प्रति परिवार के स्वामित्व में औसत भूमि कुछ कारणों से समग्र औसतों से अपेक्षकृत अधिक थी। राजस्थान जिसमें औसत 2 हैक्टेयर से अधिक था के अलावा मध्यप्रदेश और महाराष्ट्र में भूमिहीन परिवारों के पास लगभग 2 हैक्टेयर का औसत सूचित किया।

पाद टिप्पणी : कालम (8) और (9) के आंकड़े भारतीय कृषि अर्थशास्त्र पत्रिका जुलाई-सितम्बर 1987 खंड 42 संख्या 3 सी.एन. में प्रकाशित टी.हैक के "भारत में कृषि संरचना में प्राकृतिक और क्षेत्रीय विभिन्नता" नामक लेख से लिए गए हैं।

1.6 भूमिहीन और अर्ध भूमिहीन परिवारों की वृद्धि

1.6.1 सारणी (6) में प्रस्तुत परिणाम दर्शाते हैं कि 1971-72 से दो दशकों के दौरान भूमि हीन ग्रामीण परिवारों का समानुपात 9.6 प्रतिशत से बढ़कर 11.3 प्रतिशत हो गया है। यह वृद्धि 1971-72 से 1982 के बीच की अवधि के दौरान हुई है। भूमिहीन परिवारों का समानुपात समान्यतया अगले दशक के दौरान अपरिवर्तित रहा है।

1.6.2 गुजरात, हिमाचल प्रदेश, मध्य प्रदेश और महाराष्ट्र सहित जिन्होंने भूमि के स्वामित्व में संकेन्द्रण अनुपात में उर्ध्वगामी रख दर्शाया है, सहित अधिकांश राज्यों में 1971-72 और 1992 के मध्य भूमिहीन परिवारों के समानुपात में तीव्र वृद्धि सूचित की है। तथापि उत्तर प्रदेश और पश्चिम बंगाल में जबकि गत दशक के दौरान संकेन्द्रण अनुपात तेजी से बढ़ा फिर भी भूमिहीन परिवारों के समानुपात में कोई विशेष वृद्धि नहीं हुई। वास्तव में पश्चिम बंगाल में भूमिहीन परिवारों के समानुपात में 1982 में 16 प्रतिशत से घटकर 1992 में 11 प्रतिशत रह जाने की स्थिति को दर्शाया गया है।

1.6.3 सारणी यह भी दर्शाती है कि गत दो दशकों के दौरान पंजाब और केरल में यद्यपि भूमिहीनों का समानुपात अपेक्षाकृत कम था, भूमिहीन तथा अर्ध भूमिहीन दोनों के संयुक्त समानुपात क्रमशः 57 प्रतिशत और 65 प्रतिशत थे जबकि राष्ट्रीय स्तर पर भूमिहीन और अर्ध भूमिहीन दोनों के समानुपात 37 प्रतिशत से बढ़कर 42 प्रतिशत हो गए। इन दोनों वर्गों में अधे से अधिक परिवारों वाले दो राज्य तमिलनाडु 63% और पश्चिम बंगाल 53% थे।

1.7 प्रति व्यक्ति स्वामित्व वालो जोत : समस्त भारत

1.8.1 सारणी 7 समस्त भारत स्तर पर स्वामित्व वाली जोतों के आकार वर्ग के अनुसार प्रति परिवार जोत को औसत आकार और परिवार आकार तथा प्रति व्यक्ति जोत दर्शायी गई है। यह देखा जाता है। यह देखा जाता है कि औसत परिवार आकार 5.25 और प्रति व्यक्ति जोत लगभग 0.2 हेक्टेयर थी।

सारणी (7) : स्वामित्व वाली जातों के आकार वर्ग के अनुसार औसत परिवार आकार और प्रति व्यक्ति जोत.

| समस्त भारत | | | ग्रामीण |
|---|--------------------------------------|-----------------------|----------------------------------|
| स्वामित्व वाली जोत का आकार वर्ग (हैक्टेयर) | प्रति परिवार औसत जोत (0.00 हैक्टेयर) | औसत परिवार आकार (0.0) | प्रत व्यक्ति जात (0.00 हैक्टेयर) |
| 1. | 2. | 3. | 4. |
| शून्य | 0.00 | 3.9 | 0.00 |
| 0.002 से कम | 0.00 | 4.2 | 0.00 |
| 0.002-0.20 | 0.04 | 4.7 | 0.01 |
| 0.21-0.50 | 0.34 | 5.1 | 0.07 |
| 0.51-1.00 | 0.73 | 5.3 | 0.14 |
| 1.01-2.00 | 1.40 | 5.9 | 0.24 |
| 2.01-4.00 | 2.87 | 8.4 | 0.43 |
| 4.01-10.00 | 5.78 | 7.3 | 0.79 |
| 10.00 और अधिक | 15.88 | 8.8 | 1.84 |
| सभी वर्ग | 1.01 | 5.3 | 0.19 |

1.7.2 2.00 हैक्टेयर से कम श्रेणियों के आकार के लिए प्रत्येक परिवार के लिए जोत का औसत आकार श्रेणी के साइज के मध्य चिन्ह के नजदीक था। उच्च आकार की श्रेणियों में, इसे न्यूनतम सीमा के नजदीक पाया गया। श्रेणी आकार "2.01-4.00" के लिए 2.7 हैक्टेयर, क्षेत्र आकार 4.01-10.00" के लिए 5.8 हैक्टेयर, तथा खुली अंतिम श्रेणी 10.00 और उससे अधिक" के लिए 15.9 हैक्टेयर था।

1.7.3 यह देखा गया है कि औसत पारिवारिक आकार धीरे धीरे "शून्य" से 3.87 उच्च श्रेणी 10.00 ओर उससे अधिक के लिए 8.60 बढ़ा है। अतः प्रति व्यक्ति जोत, औसत पारिवारिक जोत श्रेणी आकार की तुलना में बहुत ही धीमी दर से बढ़ता है।

1.8 भूमि के प्रकार अनुसार स्वामित्व जोतों की संरचना :

1.8.1 समस्त भारत स्तर पर भूमि के बड़े आकारों द्वारा भूमि स्वामित्व के वितरण का प्रतिशत सारणी (8) में दिया गया है। भूमि के प्रकारों द्वारा भूमि स्वामित्व के वितरण के प्रतिशत विस्तृत विवरण सारणी (7 आर) के परिशिष्ट "क" अलग से दिया गया है। (क) राज्यों और संघ शसित श्रेणियों के लिए (ख) सात बड़े आकार की श्रेणी के स्वामित्व जोतों के लिए, भूमि स्वामित्व पर आधारित आंकड़े और निम्नलिखित सात प्रकार की भूमि के ब्रेक अप परिभाषा भाग -1 में दी गई है। सर्वेक्षण में इकट्ठे किए गए हैं:

(i) जंगल (ii) फलोद्यान और पेड़ लगाना (iii) मौसमी फसल क्षेत्र सिंचित (iv) मौसमी फसल क्षेत्र असिंचित (v) जल निकाय (vi) अन्य गैर कृषि प्रयोगों के अंतर्गत भूमि (V) अन्य ।

अनुबंध की सारणी (7 आर) प्रथम दो प्रकार के समूहों को एक बड़े प्रकार में फलोद्यान औ पेड़ लगाने (जंगल सहित) में लिया गया है और टाइप (i) और (ii) को बड़े समूह "मौसमी आकार माना जाए। सारणी (9) में दिये गये प्रकार (v) (vi) और (vii) को एक बड़े प्रकार में बदल दिया गया है वे हैं "भूमि के अन्य प्रकार" निर्णय इस प्रकार लिनए गए हैं, भूमि जो फलोद्यान एवं पेड़ लगाने, जंगल और मौसमी क्षेत्र की भूमि को कृषि संबंधी उद्देश्य के लिए माना जाएगा।

1.8.2 सारणी (9) में यह देखा गया है कि कृषि उद्देश्य के लिए भूमि विशेषकर देश के ग्रामीण परिवारों का मौसमी फसल क्षेत्र भूमि स्वामित्व का एक प्रमुख घटक है। कुल स्वामित्व भूमि में से मौसमी फसल क्षेत्र का भाग 90% है। फलोद्यान और पेड़ लगाने का 2% है। शेष 8% है जो "घर के स्थान" और अन्य प्रकार की भूमि में वितरित है।

सारणी (8) : भूमि के बड़े प्रकारों के अनुसार स्वामित्व क्षेत्र के वितरण का प्रतिशत

| समस्त भारत भूमि के बड़े प्रकार (मि. हेक्टे) | प्रतिशत भाग | ग्रामीण क्षेत्र |
|---|-------------|--------------------|
| 1. | 2. | 3. |
| 1. घर का स्थान | 3 | 3 |
| 2. कृषि उद्देश्य के लिए भूमि | 92 | 108 |
| 2.1 फलोद्यान एवं पेड़ लगाने (जंगल सहित) | 2 | 2 |
| 2.2 मौसमी फसल क्षेत्र | 90 | 106 |
| 3. भूमि के अन्य प्रकार | 5 | 6 |
| 4. समस्त | 100 | 117 |

1.9 समस्त भारत: विभिन्न आकारों के स्वामित्व जोतों की संरचना:

1.9.1 विभिन्न आकारों के स्वामित्व जोतों के बीच की संरचना में तुलना सारणी (9) में दिखाई गई है। यह दर्शाता है मि अर्द्ध भूमिहीन स्वामित्व वाले जोत (.00-0.20 हेक्टेयर) के क्षेत्र में से उच्च प्रतिशत 40 है, घर के स्थान में आते हैं, और उनसे छोटा प्रतिशत लगभग 1/2 मौसमी फसल क्षेत्र में आता है। स्वामित्व जोतों में बड़े आकार की श्रेणियों के लिए यह भी देखा गया है मि जोत में बड़ा आकार है जबकि घर के स्थान के अंतर्गत कम आकार दिया गया है। कुल भूमि स्वामित्व में से मौसमी फसल क्षेत्र का लगभग 90% है, जो सबसे ऊपर दो भूमि स्वामित्व श्रेणियों में से है।

**सारणी 9: स्वामित्व जोत की बड़े आकार की श्रेणियों के लिए भूमि के प्रकार के अनुसार
स्वापमित्व वाले क्षेत्र के वितरण का प्रतिशत.**

| समस्त भारत स्वामित्व जोत हेक्टेयर के बड़े आकार की श्रेणी | घर का स्थान | कृषि भूमि | | भूमि के अन्य प्रकार | | | | ग्रामीण सभी | | |
|---|----------------|-----------------------------|----------------|---------------------|----------------|--------|-----|----------------|-----|-------|
| | | फलोद्यान | मौसमी | जल | अन्य गैर | एन. आर | सभी | 10. | 11. | |
| | | एव पेड़ लगाना एव जंगल | फसल क्षेत्र | निकाय | कृषि प्रयोग | | | | | अन्य |
| 1. | 2. | 3. | 4. | 5. | 6. | 7. | 8. | 9. | 10. | 11. |
| 0.002-0.20 | 40.3 | 4.7 | 51.5 | 56.2 | 0.5 | 0.9 | 2.1 | 0.2 | 3.6 | 100.0 |
| 0.21-0.50 | 8.1 | 4.4 | 83.9 | 88.4 | 0.5 | 0.6 | 2.0 | 0.5 | 3.5 | 100.0 |
| 0.51-1.00 | 4.3 | 2.5 | 89.9 | 92.4 | 0.4 | 0.6 | 2.0 | 0.3 | 3.4 | 100.0 |

| 10.01 - ऊपर | 0.5 | 1.4 | 91.6 | 92.9 | 0.2 | 1.5 | 4.1 | 0.8 | 6.6 | 100.0 |
| सभी आकार | 2.6 | 2.0 | 90.4 | 92.3 | 0.4 | 1.0 | 3.2 | 0.4 | 5.0 | 100.0 |

1.10 स्वामित्व जोतों की संरचना: अन्तर्राज्य भिन्नता.

1.10.1 भूमि स्वामित्व की संरचना का राज्यवार प्रतिशत सारणी (10) में दिया गया है। कृषि उद्देश्य के लिए भूमि की श्रेणी और शेष दूसरी श्रेणी में से उप प्रभागों में आते हैं। छः बड़े राज्यों में उद्देश्य के लिए भूमि के भाग का प्रतिशत 90% से कम है, हिमाचल प्रदेश (68%) केरल (80%) और असम (81%) छः में से निम्न रैंक के हैं। जबकि कर्नाटक (97%) सभी राज्यों में से सबसे उच्च स्थान पर है।

सारणी (10): 17 बड़े राज्यों के लिए भूमि के प्रकार के अनुसार स्वामित्व वाले क्षेत्र का प्रतिशत वितरण.

| राज्य | घर का | | कृषि भूमि | | भूमि के | | ग्रामीण | |
|------------------|-------|------------------------------|------------------------------|------|----------------|-------|--------------------------------|---|
| | स्थान | फलोद्यान पेड़ लगाना और | मौसमी फसल जंगल क्षेत्र | सभी | अन्य प्रकार | सभी | रिपोर्टिंग प्रति का प्रतिशत | गैर कृषक जॉत रिपोर्टिंग क्षेत्र (0.00 हेक्टे) |
| 1. | 2. | 3. | 4. | 5. | 6. | 7. | 8. | 9. |
| आंध्र प्रदेश | 2.3 | 2.5 | 90.3 | 92.8 | 4.9 | 100.0 | 42.7 | 0.03 |
| असम | 15.6 | 2.1 | 78.9 | 81.0 | 3.5 | 10.0 | 33.7 | 0.09 |
| बिहार | 5.4 | 0.9 | 91.3 | 92.2 | 2.4 | 100.0 | 33.6 | 0.02 |
| गुजरात | 0.8 | 0.4 | 95.7 | 96.1 | 3.1 | 100.0 | 39.5 | 0.03 |
| हरियाण | 1.8 | 0.1 | 95.7 | 95.8 | 2.4 | 100.0 | 40.7 | 0.05 |
| हिमाचलप्रदेश | 3.9 | 7.6 | 60.0 | 67.6 | 28.5 | 100.0 | 15.6 | 0.05 |
| जम्मू एवं कश्मीर | 2.3 | 1.4 | 84.7 | 86.1 | 11.6 | 100.0 | 15.0 | 0.02 |
| कर्नाटक | 0.9 | 3.8 | 93.1 | 96.9 | 2.2 | 100.0 | 29.8 | 0.03 |
| केरल | 15.9 | 57.1 | 23.2 | 80.3 | 3.7 | 100.0 | 43.4 | 0.05 |
| मध्यप्रदेश | 1.3 | 0.2 | 94.6 | 94.8 | 3.9 | 100.0 | 29.5 | 0.02 |
| महाराष्ट्र | 0.6 | 0.8 | 85.4 | 86.2 | 13.2 | 100.0 | 39.0 | 0.02 |
| उड़ीसा | 5.2 | 0.4 | 93.0 | 93.3 | 1.5 | 100.0 | 33.2 | 0.02 |
| पंजाब | 2.4 | 1.5 | 93.4 | 95.0 | 2.6 | 100.0 | 54.3 | 0.02 |
| राजस्थान | 0.9 | 0.1 | 94.1 | 94.3 | 4.9 | 100.0 | 19.0 | 0.01 |
| तमिलनाडु | 3.3 | 5.0 | 87.0 | 92.0 | 4.8 | 100.0 | 57.8 | 0.02 |
| उत्तरप्रदेश | 2.4 | 2.4 | 92.3 | 94.6 | 2.9 | 100.0 | 23.5 | 0.03 |
| पश्चिमबंगाल | 7.4 | 1.1 | 86.3 | 87.4 | 5.3 | 100.0 | 39.7 | 0.03 |
| समस्त भारत | 2.6 | 2.0 | 90.4 | 92.3 | 5.0 | 100.0 | 35.4 | 0.03 |

1.10.2 ज्यादातर बड़े राज्यों में, कृषि उद्देश्य के लिए भूमि मुख्यतः मौसमी फसल क्षेत्र के लिए रखी जाती है। अति उल्लेखनीय छूट इस संदर्भ में केरल को दी जाती है। केरल में 80% कुल स्वामित्व

क्षेत्र का लगभग 80% कृषि उद्देश्य के लिए था जबकि 30% मौसमी फसल क्षेत्र के लिए और शेष फलोद्यान एवं पेड़ लगाने के लिए है। हिमाचल प्रदेश में भी फलोद्यान और पेड़ लगाने के लिए भूमि कृषि उद्देश्य के लिए बहुत बड़ा हिस्सा दिया गया है। (11 प्रतिशत से अधिक) कुल स्वामित्व क्षेत्र (8 प्रतिशत) में भी है।

1.10.3 कृषि प्रयोजन हेतु भूमि के अलावा, घरेलू स्वामित्व जोत ने सभी प्रकार की भूमि को गैर कृषि प्रयोजन के लिए कवर किया है। ज्यादातर राज्यों में समान्यतः छोटा स्थान कुल स्वामित्व भूमि में से घर के स्थान के लिए पाया गया है जबकि केरल और असम ने लगभग (16% प्रत्येक) अनुपात का बड़ा क्षेत्र घर के स्थान के लिए बताया है।

1.10.4 गैर कृषि जोत:- घरेलू स्वामित्व जोत में कृषि उद्देश्य के लिए कोई स्थान नहीं है, की गैर कृषि जोत को इस रिपोर्ट के उद्देश्य के लिए समझा जाए। ग्रामीण जोतों में से इस प्रकार के जोतों का अनुपात लगभग 35% है। बड़े राज्यों मेंसे पंजाब, जो कि कृषि प्रधान राज्यों में से एक है, ने 54% गैर कृषि जोतों के लिए बताया है। गैर कृषि जोतों में सबसे बड़े राज्य के रूप में उच्चतर अनुपात तमिलानडु का है, लगभग (58%) अन्य सभी बड़े राज्यों के लिए, हिमाचल प्रदेश, जम्मू एवं कश्मीर और राजस्थान को छोड़कर, अनुपात की सीमा 24% से 43% है।

1.11 काश्तकारी का विस्तार: समस्त भारत

1.11.1 सर्वेक्षण ने ग्रामीण भारत में काश्तकारी का विस्तार दर्शाया है जो सारणी (11) में दिया गया है। दूसरों की भूमि का एक टुकड़ा प्रयोग करने के लिए मालिकों द्वारा हक दिया गया है चाहे वो किराए पर हो, या मुफ्त हो, बिना शीर्षक को बदले बिना इसे भूमि को पट्टे पर माना जाए। इस प्रकार के इकरार, जब मौखिक तौर पर, की पट्टे पर ठेका समझा जाए। सर्वेक्षण के उद्देश्य के लिए वंशानुगत काश्तकारी और लम्बी अवधि का पट्टा 30 वर्षों के लिए या उससे अधिक की भूमि पट्टे पर न समझा जाए। उन्हें भूमि स्वामित्व समझा जाए। दूसरी तरफ निजी भूमि की जोत के अनुसार अनाधिकार भूमि को पट्टे पर समझा जाए रिए से मुक्त

सारणी (12): ग्रामीण भारत में काश्तकारी की घटना -1992

| मद | औसत आकलन (मि./मि. हे.) | पारिवारिक जोत/परिवारों का कल क्षेत्र/स्वामित्व क्षेत्र का प्रतिशत |
|---|---------------------------|---|
| 1. | 2. | 3. |
| 1. पट्टे से बाही बताए गए परिवार | 5.6 | 5% |
| 2. पट्टे पर बताए गए परिवार | 17.1 | 17% |
| 3. वे क्षेत्र जो पट्टे पर बताए गए | 5.7 | 5% |
| 4. क्षेत्र, जो पट्टे के अंतर्गत बताए गए | 10.6 | 9% |
| 5. क्षेत्र घर के स्थान के अलावा | 9.4 | 8% |

ग्रामीण परिवारों से पट्टे पर

1.11.2 यह देखा गया है कि केवल 5.6 मिलियन (दस लाख गुणा) परिवारों ने भूमि पट्टे पर दी हुई है, रिपोर्ट की है 17.1 मिलियन परिवारों ने भूमि को पट्टे के अंतर्गत बताया है। पट्टेधारी जोत पट्टे पर भूमि से अधिक पट्टेधारी जोतों को पट्टे पर दे सकते हैं। परन्तु क्षेत्र जो पट्टे पर दी गई है (5.7 मि. हे.) और क्षेत्र पट्टे पर (10.6 मि.हे.) में बहुत अंतर है। यह भी दिया गया है कि जब पट्टे पर भूमि के आंकड़ों को इकट्ठा करें तो केवल यह पारिवारिक स्वामित्व जोतों तक ही प्रतिबन्धित थी। शहरी पारिवारिक और गैर पारिवारिक क्षेत्र द्वारा भी भूमि स्वामित्व में पट्टे पर कवर करने के अनुबंध में हो।

1.11.3 क्षेत्र का आकलन (घर के स्थान के अलावा) ग्रामीण परिवारों से पट्टे पर है। सर्वेक्षण से लिए गए हैं जिनका क्षेत्र 9.4 मि. हे. है। इस की तुलना ग्रामीण परिवारों (5.7 मि. हे.) सर्वेक्षण से क्षेत्र का अनुमान लगाया जा सकता है यह भी दर्शाता है कि क्षेत्र लीज में और लीज के बाहर क्षेत्र के बीच का आकलन करने के लिए ऊपर पैराग्राफ में बताए गए कारणों के अलावा इसके और भी कई कारण हैं। यह विचारणीय है कि भूमि को पट्टे पर भूमि स्वामित्व में से देने की प्रतिबंधित सूचना की प्रवृत्ति है, जिसके लिए कानूनी प्रवृत्ति का भी डर है। सारणी (12) में दिए गए आकलन यह भी दर्शाते हैं कि भूमि पट्टे से बाहर, भूमि जोत सर्वेक्षणों में पहले ही दर्शाई गई है। पट्टे पर भूमि का आकलन सामान्यतः अन्तः आकलन है। इसलिए निर्णय के अनुसार पट्टे पर पारिवारिक भूमिका अनुपात और कुल क्षेत्र स्वामित्व कुल क्षेत्र पट्टे पर का अनुपात को काश्तकारी दायित्व के लिए संकेतक के रूप में प्रयोग किया जाता है।

सारणी (12) राष्ट्रीय प्रतिदर्श सर्वेक्षण के विभिन्न दौरों के अनुसार परिवारों द्वारा भूमि के पट्टे पर और पट्टे पर न लेने के अनुमान.

| समस्त भारत | ग्रामीण | | |
|--|------------------------|-------------------|-------------------|
| मद | 1971-72 (26वां दौर) | 1982 37वें दौर | 1992 48वां दौर |
| 1. | 2. | 3. | 4. |
| 1. भूमि पट्टे पर लेने वाले परिवारों का प्रतिशत | 25% | 18% | 15% |
| 2. कुल स्वामित्व क्षेत्र में पट्टे के अंतर्गत क्षेत्र का प्रतिशत | 12% | 7% | 9% |
| 3. कुल स्वामित्व क्षेत्र में पट्टे के बाही क्षेत्र का प्रतिशत | 6% | 4% | 5% |

ध्यान दें : 26वें एवं 37वें दौर का आकलन राष्ट्रीय प्रतिदर्श सर्वेक्षण रिपोर्ट सं. 215 और 330 से लिया गया है।

1.12 भूमि के पट्टे पर लेने में अस्थयी परिवर्तन: समस्त भारत.

1.12.1 राष्ट्रीय प्रतिदर्श सर्वेक्षण के पिछले तीन भूमि जोत सर्वेक्षणों से कुल स्वामित्व क्षेत्र की पट्टेधारी भूमि और पट्टेधारी भूमि के अनुपात का पारिवारिक अनुपात सारणी (12) में दिया गया है। आकलन से पता चलता है कि पिछले दो दशकों से घरेलू पट्टे की भूमि के प्रतिशत में गिरावट की प्रवृत्ति है फिर भी, वर्ष 1982 और 1992 में भी लगभग यही प्रवृत्ति में है। पट्टे के क्षेत्र का प्रतिशत परिवार द्वारा स्वामित्व क्षेत्र में पिछले दो दशकों में 12% से 9% की गिरावट आई है। परन्तु वर्ष 1992 का आकलन 1982 के आकलन से थोड़ा ज्यादा था।

1.13 पट्टे पर भूमि: अन्तर्राज्यीय भिन्नता.

1.14/1 सारणी (13) पट्टे पर पारिवारिक जोतों का प्रतिशत, पारिवारिक पट्टे के अनुसार औसत क्षेत्र और स्वामित्व वाले क्षेत्र में 17 बड़े राज्यों के लिए पट्टे पर दिये गए क्षेत्र का अनुपात के सर्वेक्षण आकलन उपलब्ध कराती है। वर्ष 1982 के लिए स्वामित्व वाले क्षेत्र में पट्टे पर क्षेत्र के अनुपात का आकलन भी इन बड़े राज्यों में दिया गया है।

सारणी (14) : 17 प्रमुख राज्यों हेतु काश्तकारी की घटना।

| राज्य | ग्रामीण | | ग्रामीण | |
|------------------|---|----------|--|---|
| | सूचित करने वाले परिवारों का प्रतिशत पट्टे की सीमा से बाहर | पट्टे पर | प्रति सूचित करने वाले पारिवारिक पट्टेदारी वाला औसत क्षेत्र | कुल लिए गए क्षेत्र के प्रतिशत भाग में पट्टेदारी के रूप में लिया गया क्षेत्र |
| 1. | 2. | 3. | 4. | 5. |
| आन्ध्र प्रदेश | 4.6 | 15.9 | 4.47 | 9.6 |
| असम | 3.9 | 16.7 | 0.33 | 8.0 |
| बिहार | 2.4 | 7.0 | 0.39 | 4.3 |
| गुजरात | 4.0 | 10.6 | 0.56 | 4.2 |
| हरियाणा | 10.1 | 18.3 | 3.17 | 41.1 |
| हिमाचल प्रदेश | 3.4 | 14.4 | 0.24 | 4.4 |
| जम्मू और काश्मीर | 1.0 | 6.4 | 0.53 | 3.4 |
| कर्नाटक | 7.5 | 13.1 | 0.99 | 9.3 |
| केरल | 2.2 | 9.6 | 0.10 | 3.2 |
| मध्य प्रदेश | 3.9 | 12.3 | 1.04 | 7.4 |
| महाराष्ट्र | 4.4 | 15.8 | 0.52 | 5.2 |
| उड़ीसा | 6.8 | 22.3 | 0.38 | 11.4 |
| पंजाब | 8.9 | 15.2 | 1.31 | 18.2 |
| राजस्थान | 4.5 | 10.9 | 1.43 | 5.8 |
| तमिलनाडु | 5.6 | 19.5 | 0.26 | 12.4 |
| उत्तर प्रदेश | 5.8 | 16.5 | 0.59 | 11.8 |
| पश्चिम बंगाल | 4.7 | 17.8 | 0.31 | 12.0 |
| समस्त भारत | 4.8 | 14.7 | 0.62 | 9.0 |

1.13.2 प्रमुख राज्यों में पट्टेदारी वाले परिवारों का प्रतिशत उड़ीसा में उच्चतम (22 प्रतिशत), इसके अनुक्रम में हरियाणा (18 प्रतिशत) तथा असम (17 प्रतिशत) थे। वर्षक्रम के दूसरे छोर पर तीन राज्यों ने 10 प्रतिशत या इससे कम अर्थात् जम्मू और कश्मीर (6 प्रतिशत), बिहार (7 प्रतिशत) और केरल (10 प्रतिशत) सूचित किया है।

1.13.3 पट्टेदारही वाले प्रत्येक परिवारों में पट्टेदारी की औसत भूमि में व्यापक अंतर राज्यीय भिन्नता थी। जब कि इसकी राज्य स्तर औसत केवल 0.62 हेक्टेयर थी, हरियाणा हेतु तदनुरूपी औसत 3.17 हेक्टेयर तक ऊंची है। दूसरी ओर लगभग 5 राज्यों में प्रति पट्टेदारी वाले परिवारों में पट्टेदारी की भूमि 0.35 हेक्टेयर कम तीन सबसे कम प्रतिशत वाले राज्यों को रिकार्ड करके हिमाचल प्रदेश (0.24 हेक्टेयर), पश्चिम बंगाल (0.31 हेक्टेयर) तथा असम (0.33 हेक्टेयर) सूचित की है। यह नोट करना दिलचस्प होगा कि उच्च प्रतिशत की पट्टेदारी वाले परिवारों के तीन राज्यों में उड़ीसा और असम ने पट्टेदारी वाले परिवारों का प्रतिशत का औसत क्षेत्र अपेक्षाकृत कम दर्ज किया जबकि निरअपवाद स्वरूप हरियाणा का औसत उच्च था पंजाब (1.31 हेक्टेयर) तथा राजस्थान (1.43 हेक्टेयर) ने भी अपेक्षाकृत उच्च औसत मुल्य सूचित किए।

1.13.4 कुल स्वामित्व वाले क्षेत्र पंजाब और हरियाणा को छोड़ कर अधिकांश प्रमुख राज्यों में 12 प्रतिशत या इससे कम था। अपवाद स्वरूप हरियाणा ने अपेक्षाकृत अनुपात का उच्च मुल्य सूचित किया है। पट्टेदारी वाले कुल क्षेत्र में इस राज्य में स्वामित्व वाले कुल क्षेत्र के दो पांचवे से अधिक था। भूमि को पट्टे पर देने के उदाहरण केरल और पंजाब में निम्नतम दोनों में लगभग 3 प्रतिशत थे। यह बिहार (4 प्रतिशत), गुजरात (4 प्रतिशत) तथा महाराष्ट्र में (5 प्रतिशत) तक अपेक्षाकृत कम था।

1.14 पट्टे की शर्तें:

1.15.1 भूमि को पट्टे पर देने में पट्टे की कुछ शर्तें जो दोनों पक्षों को मान्य हो दोनों पक्षों के सम्पर्क से तय की जाती है। पट्टे की विशिष्ट शर्तें जिन पर सर्वेक्षण में आंकड़े संग्रहित किए गए थे निम्नानुसार हैं।

(i) नियत धन हेतु (ii) नियत उत्पाद, (iii) उत्पाद के भाग हेतु (iv) सम्पर्क की सेवा हेतु (v) अन्य शर्तों सहित उत्पाद के भाग हेतु (vi) भोगाधिकार अधीन बंधक (vii) रिश्तेदारों से बिना किसी विशिष्ट शर्त के।

सारणी (14) में पट्टेदारी वाले क्षेत्र के प्रतिशत विवरण के अधीन पट्टे की प्रथम तीन विशिष्ट शर्तें दी हैं तथा अन्य को "अन्य शर्तों" में एक साथ रखा गया प्रमुख राज्यों के साथ-साथ प्रमुख राज्यों हेतु दी गई हैं।

सारणी (14) : 17 प्रमुख राज्यों हेतु पट्टेदारी की शर्तों के अनुसार पट्टे पर लिए गए क्षेत्र का वितरण प्रतिशत।

| राज्य हेतु | नियत धन हेतु | नियत उत्पाद हेतु | उत्पाद के भाग शर्तें | ग्रामीण | |
|------------------|-----------------|---------------------|-------------------------|---------|-------|
| | | | | अन्य | सभी |
| (1) | (2) | (3) | (4) | (5) | (6) |
| आन्ध्र प्रदेश | 32.1 | 29.2 | 33.9 | 4.8 | 100.0 |
| असम | 23.7 | 4.7 | 49.6 | 22.1 | 100.0 |
| बिहार | 9.2 | 20.4 | 57.4 | 13.0 | 100.0 |
| गुजराज | 19.1 | 3.2 | 56.5 | 21.2 | 100.0 |
| हरियाणा | 82.2 | 2.6 | 14.3 | 0.9 | 100.0 |
| हिमाचल प्रदेश | 18.1 | 6.8 | 9.2 | 65.9 | 100.0 |
| जम्मू और काश्मीर | 16.1 | 27.9 | 27.6 | 28.4 | 100.0 |
| कर्नाटक | 19.7 | 18.5 | 47.3 | 14.5 | 100.0 |
| केरल | 15.1 | - | 4.6 | 80.3 | 100.0 |
| मध्य प्रदेश | 22.7 | 30.9 | 25.1 | 21.3 | 100.0 |
| महाराष्ट्र | 27.0 | 10.3 | 47.3 | 15.5 | 100.0 |
| उड़ीसा | 12.7 | 11.9 | 65.1 | 10.4 | 100.0 |
| पंजाब | 67.1 | 10.8 | 15.0 | 7.1 | 100.0 |
| राजस्थान | 17.7 | 32.2 | 37.1 | 13.0 | 100.0 |
| तमिलनाडु | 32.4 | 26.5 | 25.3 | 15.9 | 100.0 |
| उत्तर प्रदेश | 7.8 | 18.7 | 56.3 | 17.2 | 100.0 |
| पश्चिम बंगाल | 12.4 | 9.8 | 67.4 | 10.4 | 100.0 |
| समस्त भारत | 29.1 | 18.0 | 39.8 | 13.1 | 100.0 |

1.14.2 ऐसा देखा गया है कि ग्रामीण भारत में अधिकांश ठेके फसलों में भाग लेने तथा नकद या अन्य प्रकार के नियत किराया थे। भूमि में पट्टे के लगभग 40 प्रतिशत उत्पाद के भाग हेतु किए गए थे। नकद तथा अन्य प्रकार के किराये का भाग क्रमशः 20 प्रतिशत तथा 18 प्रतिशत थे। पट्टे की अन्य सभी शर्तें मात्र 13 प्रतिशत रखी गईं।

1.14.3 व्यक्तिगत प्रमुख राज्यों के लिए प्रतिशत वितरण पट्टेवाली भूमि के चलन में काफी भिन्नता दर्शाते हैं। पंजाब और हरियाण देश में दो-कृषि में अग्रपति राज्यों में संविदा का अति प्रचलित रूप नियत नकद किराया है। 82 प्रतिशत और 67 प्रतिशत से अधिक किराये पर दी गई भूमि का ठेका पंजाब और हरियाणा में क्रमशः नियत नकद किराये पर था।

1.14.4 पश्चिमबंगाल और उड़ीसा में बंटाई उगीने हेतु पट्टे पर भूमि देने का तरीका बहुत अधिक प्रचलित पाया गया दोनों राज्यों में कुल पट्टे पर दी गई भूमि लगभग दो तिहाई बंटाई उत्पाद हेतु रखी थी। पट्टे की इन शर्तों के अधीन पट्टे वालों के प्रतिशत में भी बिहार और गुजरात सबसे उच्च दोनों में लगभग 57 प्रतिशत, उत्तर प्रदेश 56 प्रतिशत तथा असम 50 प्रतिशत था।

1.14.5 अधिकांश प्रमुख राज्यों में पट्टे वाली कुल भूमि के दो तिहाई से भी अधिक में बंटाई फसल उगाना तथा नियत किराया पट्टे की मुख्य शर्तें थी। केरल और हिमाचल प्रदेश की इसके अपवाद थे। केरल में अधिकांश पट्टे की भूमि 80 प्रतिशत तथा हिमाचल प्रदेश में 66 प्रतिशत "अन्य शर्तों" पर आधारित थीं।

1.15 दर्ज और गैर-दर्ज पट्टे: समस्त भारत

1.15.1 सारणी (15) ग्रामीण भारत में बिना दर्ज की गई पट्टे की भूमि के प्रचलित अनुमान प्रदान करती है। जैसा कि पहले उल्लिखित है सभी काश्तकारी ठेके उन्हें छोड़कर जो 30 वर्ष या इससे अधिक के लिए दिए जाते हैं। चाहे मौखिक रूप में हो या लिखित में पट्टे की भूमि के रूप में मानी जाएगी। सारणी पट्टे पर दी हुई भूमि के परिवारों का समानुपात के अनुमान तथा दर्ज वाले पट्टे के क्षेत्र तथा गैर दर्ज पट्टे के क्षेत्रों के अनुमान दर्शाती है, वे केवल उस भूमि हेतु जो पास क्षेत्र न हो के हैं।

सारणी (15) रु भूमि के पट्टे पर देने वास क्षेत्र को छोड़कर दर्ज और गर-दर्ज संबंधी अनुमान

| समस्त भारत | | ग्रामीण | |
|--|------------|----------------|-------------|
| मद | दर्ज पट्टे | गैर दर्ज पट्टे | अन्य पट्टे |
| (1) | (2) | (3) | (4) |
| 1. पट्टेवाल परिवारो का प्रतिशत | 1.3 | 8.3 | 9.5 |
| 2. कुल पट्टेपर दिए क्षेत्र में प्रतिशत भाग | 16 प्रतिशत | 84 प्रतिशत | 100 प्रतिशत |

1.15.2 सारणी (15) से स्पष्ट होता है कि अधिकांश पट्टे गैर-दर्ज है, जबकि ग्रामीण परिवार 9.5 प्रतिशत वासके क्षेत्र को छोड़कर पट्टे की भूमि वाले थे। केवल 1.3 प्रतिशत पट्टे वाली भूमि ही दर्ज बताई थी। दर्ज पट्टे के अधीन आने वाला क्षेत्र कुल पट्टे वाले क्षेत्र का केवल 16 प्रतिशत था।

1.16 अनुसूचित जनजाति और अनुसूचित जाति के परिवारों में भूमि का स्वामित्व

1.16.1 अनुसूचित जनजाति और अनुसूचित जाति के परिवारों के मध्य भूमि के स्वामित्व के कुछ ब्यौरों संबंधी सर्वेक्षण के परिणामों का सारांश सारणी 16 में दिया गया है। गैर अनुसूचित जाति परिवारों होतु तत्संबंधी परिणाम भी सारणी के मिलान में दी गई है।

सारणी (17) अनुसूचित जनजाति और अनुसूचित जाति के परिवारों में कुल स्वामित्व वाले क्षेत्र तथा उनमें भूमिहीनता का भाग

| मद | समाजिक समूह | | | | ग्रामीण |
|--|-------------|-----------------|--------------|------|---------|
| | वर्ष | अनु. जन जाति | अनु. जाति | अन्य | सभी |
| (1) | (2) | (3) | (4) | (5) | (6) |
| 1. परिवारों का प्रतिशत वितरण | 1982 | 9.7 | 19.7 | 70.6 | 100.0 |
| | 1992 | 11.2 | 21.5 | 67.4 | 100.0 |
| 2. स्वामित्व वाले क्षेत्र का प्रतिशत वितरण | 1982 | 10.1 | 7.9 | 82.0 | 100.0 |
| | 1992 | 11.8 | 10.2 | 78.0 | 100.0 |
| 3. भूमिहीन परिवारों का प्रतिशत जिनके पास भूमि नहीं है या .002 हेक्टेयर से कम | 1982 | 17.1 | 12.6 | 10.2 | 11.3 |
| | 1992 | 11.5 | 13.3 | 10.5 | 11.3 |
| 4. अर्ध भूमिहीन परिवारों का प्रतिशत 0.002-0.20 हेक्टेयर | 1982 | 16.3 | 48.0 | 24.9 | 28.6 |
| | 1992 | 22.3 | 47.5 | 27.4 | 35.2 |

1.16.2 सारणी (16) में प्रस्तुत अनुमानों से पता चलता है कि दो सामाजिक समूहों में मध्य अनुसूचित जाति परिवारों से अनुसूचित जनजाति के परिवार ज्यादा अच्छी स्थिति में है। कुल स्वामित्व वाले क्षेत्र में अनुसूचित जाति के परिवारों का भाग ग्रामीण परिवारों का 21 प्रतिशत केवल लगभग 10 प्रतिशत था, जब कि अनुसूचित जनजाति का ग्रामीण परिवारों को 10 प्रतिशत लगभग 12 प्रतिशत था। कुल स्वामित्व के क्षेत्र में शेष 78 प्रतिशत से संबंधित "अन्य" परिवारों से संबंधित था। जिनका परिवारों की कुल संख्या में भाग 67 प्रतिशत था।

1.16.3 सामाजिक समूहों के बीच भूमिहीनता: ऐस पया गया है कि अनुसूचित जाति के परिवारों के बीच भूमिहीनता अधिक है। इस सामाजिक समूह में, भूमिहीनों और अर्ध भूमिहीनों का प्रतिशत क्रमशः 13 प्रतिशत और 48 प्रतिशत था, ग्रामीण परिवारों के बीच तत्संबंधी प्रतिशत 11 प्रतिशत और 31 प्रतिशत था। इस संबंध में अनुसूचित जनजाति के परिवार बेहतर स्थिति में है। हालामि अनुसूचित जनजाति के परिवारों में भूमिहीनों का समानुपात अन्य परिवारों की तुलना में आंशिक रूप से उच्चरत था, उनमें अर्ध भूमिहीनों का समानुपात स्पष्ट तथा कम था। तथापि अन्य परिवारों के स्वामित्व वाली भूमि की तुलना में अनुसूचित जनजाति के परिवारों की भूमि की गुणवत्ता का स्तर घटिया था।
