## A NOTE ON SOME ASPECTS OF HOUSEHOLD OWNERSHIP HOLDING

### SECTION ONE

### ARTICLES/NOTES

#### INTRODUCTION

1.10 The survey on land holdings and household holdings carried out in the thirtieth round (January-December 1972) of the National Sample Survey (NSS) was the fourth in the series of similar surveys conducted so far by the NSSO with the object of obtaining information on the agrarian structure, income and assets and operational holdings in the country.

1.11 The first survey on land holdings was taken up by the NSS in its 20th round (July '54-April '55) as part of the 1950 program of the World Agricultural Census initiated by the Food & Agricultural Organization of the United Nations (FAO). While information on holdings was collected up to 1955, the requirements of the FAO, the need for collecting data on agricultural holdings was felt in the year 1957.

### **1. A Note on some aspects of household ownership holding : NSS 37th Round (January-December 1982)**

and information on the income of the household. Part of the survey on land holdings was conducted in the 20th round of the NSS with some modifications in the year 1957 and in the year 1972.

1.20 The survey on land holdings and household holdings was carried out in the 37th round of the NSS (January-December 1982) with the object of obtaining information on the agrarian structure, income and assets and operational holdings in the country.

As regards the operational holdings, the survey was carried out in the 37th round of the NSS (January-December 1982) with the object of obtaining information on the agrarian structure, income and assets and operational holdings in the country.

# A NOTE ON SOME ASPECTS OF HOUSEHOLD OWNERSHIP HOLDING

## SECTION ONE

### INTRODUCTION

1.1.0 The survey on land holdings and livestock holdings carried out in the thirtyseventh round (January—December 1982) of the National Sample Survey (NSS) was the fourth in the series of similar surveys conducted so far by the NSSO with the object of obtaining information on the agrarian structure relating to ownership and operational holdings in the country.

1.1.1 The first survey on land holdings was taken up by the NSS in its 8th round (July '54—April '55) as part of the 1950 programme of World Agricultural Census initiated by the Food & Agricultural Organisation of the United Nations (FAO). While information on holdings was collected to meet mainly the requirements of the FAO, the need for collecting data on ownership holdings was felt in the context of formulating land reform measures in the country. For participating in the next Agricultural Census of 1960, a similar survey was repeated in 16th (July 1960—August 1961) and 17th (September 1961—July 1962) rounds of the NSS. The next NSS survey on the subject was conducted in 26th round (July 1971—September 1972) as part of the 1970 World Agricultural Census when it was integrated with a survey on debt and investment at the instance of the Reserve Bank of India. The present enquiry was essentially a repetition of the 26th round survey with some modifications in the item coverage and method of collection of data.

1.2.0 *Items of enquiry* : As for the land holdings part of the present survey, information on various features of ownership and operational holdings was collected for both the rural and urban sectors. In regard to ownership holdings, particulars of land owned, land leased out with break-ups by type of lease and by term of lease were collected. Further, with a view to ascertain the extent of land possessed by the households, the particulars of land leased in were also obtained. As regards the operational holdings, data on size, composition, tenurial form, land use, extent of irrigation by source, fragmentation of holding, drainage facilities and other related aspects of the holdings were collected. Since livestock and agricultural machinery from the basic resources for agricultural

operations, an inventory of these assets owned and otherwise possessed by the households was also prepared.

1.3.0 *Methodology adopted for collection of data* : Data collected in this round related to the agricultural year July 1981 to June 1982. In order to reduce recall error, particulars relating to the whole agricultural year were collected by making two visits to each sample household at an interval of nearly six months. The first visit (January to June 1982) was meant to collect information for the Kharif season of the agricultural year 1981-82 and the second visit (July to December, 1982) for the corresponding 1981-82 Rabi season. Thus, the calendar year of 1982 was considered to be the most desirable survey period for this round.

1.3.1 While collection of data on land owned, land leased out, land leased in, livestock owned and agricultural machinery & implements owned and possessed referred to the position as obtained on the date of survey in both the visits to the households, the information relating to operational holdings referred to the Kharif season of the agricultural year, July 1981 to June 1982 in the first visit and to the Rabi season of the same agricultural year in the second visit. However, information on multiple cropping and land use for each plot included in Kharif and/or Rabi holdings was collected on the basis of the entire agricultural year 1981-82. It may be noted that collection of data on operational holdings separately for Kharif and Rabi seasons at the end of each season was a departure from the earlier surveys in that the reference periods of those surveys were either the major crop seasons of the agricultural year or the entire agricultural year preceding the survey period.

1.4.0 *Geographical Coverage* : The 37th round survey was planned to cover the whole of the Indian Union excepting (a) rural areas of Nagaland and (b) Ladakh and Kargil districts of Jammu & Kashmir. But due to operational difficulties and shortage of staff the following areas too could not be surveyed, viz.,

- (i) Andaman and Nicobar Islands and Lakshadweep.
- (ii) Urban areas of Dadra and Nagar Haveli.
- (iii) Rural areas of Sikkim.
- (iv) Rural areas of Chattarpur district and urban areas of Guna and Jhabua districts of Madhya Pradesh.

1.5.0 *Sample size and the Field Work*: The all-India sample size was fixed at 8408 villages and 5300 urban blocks considering both the Central and State samples together. Of the total sample, 4114 villages and 2544 urban blocks formed the Central sample and were surveyed, except in some states of the North-Eastern Region, by the staff belonging to the Field Operations Divisions (FOD) of the NSSO. Under the matching scheme, the remaining villages and blocks constituting the State sample were surveyed by the field staff of the respective State Statistical Agencies. At the household level, eight households in each sample village and six households in each urban sample block were planned to be surveyed for this enquiry. However, due to the reasons mentioned in para 1.4.0 and also non-availability of some records at the tabulation stage, the survey results of the Central sample are based on 3692 villages and 2408 urban blocks only. In terms of households, the sample size for the Central sample was 29089 and 14341 in the rural and urban sectors respectively. Statewise number of sample villages and blocks are given in Table (0), and detailed breakdowns of sample households by sub-sample and household ownership holding in Table (1) of the survey results. The estimates presented in this report are based on the data of Central sample only.

A brief description of the sample design and estimation procedure adopted for the survey has been given in Section Three.

1.6.0 *Content of the report*: Although a large mass of data for ownership and operational holdings has been processed and tabulated, the present report accommodates only some important features of ownership holdings. Different aspects of operational holdings are proposed to be brought out in successive volumes.

1.6.1 While this Section of the report provides a general idea of the subject coverage, method of collection of data, concepts and definitions of important terms used in the survey, sample size etc., Section Two of this report summarizes the main findings of the survey results presented in the Survey Results. In Section Three, a note on sample design and estimation procedure of the 37th round survey has been provided. The survey results which is the main body of this report contains eight tables showing detailed results relating to household ownership holdings; a brief idea of these tables is given in the following paragraphs.

1.6.2 All the Table (1) to (8) have been presented for the rural sector while for urban areas only Table Nos. (1), (3) and (8) have been included in this report. Table (1) shows number of sample

households as well as estimates of total number of households and area owned classified by sub-samples for both the rural and urban sectors. Similarly, percentages of households leasing out land and percentage share of leased out land to total owned land given in Table (3) and the particulars of land owned, land leased out and leased in by Scheduled tribe and Scheduled caste households as shown in Table (8) are also presented separately for each of the two sectors. The remaining tables showing percentage distribution of households and area owned by household type (Table 2) and various features of land leased out (Tables 4.1, 4.2, 5 and 6) and land leased in (Tables 6 and 7) have been drawn up for the rural sector only.

1.6.3 All the tables present estimates by size class of household ownership holding; in addition Tables 2 and 6 show the results by household type also. It should also be mentioned here that the estimates presented in this report are based on the data of the central sample collected during the first visit made during the survey. Lastly, in the state and all-India tables given in Survey Results the cell figures of a table, when added up, may not in all cases agree with the figure shown against the corresponding column/line total due to rounding off errors.

1.7.0 *Processing of data*: After finalisation of the schedule of enquiry of the NSS 37th round, the Working Group (WG) set up by the Governing Council (GC) of the NSSO, recommended an elaborate programme for tabulation of the data. The recommendations of the WG were approved by the GC, NSSO. It was subsequently decided that the tabulation work of the Central sample in respect of the land holdings enquiry would be carried out in the in-house computer of the Department of Statistics, Government of India located at the Computer Centre, New Delhi. The scrutiny of data and transcription to punched cards were undertaken by the different processing centres of the Data Processing Division (DPD) of the NSSO and the punched cards were sent to the Computer Centre, New Delhi for taping and further processing work. For facilitating quick release of results, the data were cleaned by resorting to only one cycle of corrections in the data file as per the Computer Scrutiny programme and "auto-correction" rules furnished by the Survey Design and Research Division (SDRD), NSSO. In the initial stage the concerned officers of the Computer Centre and of the SDRD held several meetings for discussing the conceptual frame work of the survey and impact of different types of errors and inconsistencies in the data on the estimates and for evolving the procedures to correct them and also to tackle other processing difficulties.

1.8.0 *Concepts and definitions* : The important concepts and definitions used for the survey and relevant to the estimates presented in this report are given below :

(i) *Household* : A group of persons normally living together and taking food from a common kitchen constituted a household. The members of a household might or might not be related to one another.

(ii) *Ownership of land* : A plot of land was considered to be owned by the household if the right of permanent heritable possession with or without the right to transfer the title was vested on a member/members of the household. Land held in owner-like possession under a long term lease or assignment was also considered as land owned by the household. In states where land reform legislations provided for full proprietorship to erstwhile tenants, even though tenants did not pay full compensation, they were treated as having ownerlike possession. Further, a plot might be possessed by a tribal with traditional tribal rights from local chieftains or village/district councils. Again, a plot might be occupied by a tenant while the right of ownership vested in the community. In both the cases the tribals or other individuals (tenants) were taken as owners, for in all such cases the holder had the ownerlike possession of land in question. Land owned by a household might, however, be leased out to another household without losing the ownership right. In case of a plot owned jointly with other households, only the households share of land was taken into account.

(iii) *Household ownership holding* : A household ownership holding was constituted by all plots of land, cultivated or not, owned by a household. Households owning no land or land less than 0.002 hectare were considered to constitute ownership holding of size zero. Thus the number of household ownership holdings (including holdings of size zero) was exactly equal to the number of households.

(iv) *Landless households* : Households owing either no land or land less than 0.002 hectare are termed as 'landless' in this report.

(v) *Land leased out* : All land owned by a household might not be under its physical possession. The household might lease out part or whole of the land owned by it without losing its ownership right. Land owned but not under the physical possession of the household was taken to be the land 'leased out' by the household.

(vi) *Terms of lease* : The land might be leased out under one or more terms of lease agreed upon. The lease agreement might be a written document or verbal assurances only. The terms of lease for which data were collected are as follows :—

- (a) fixed money.
- (b) fixed produce.
- (c) share of produce (the owner of the land receives a stipulated share of the produce but he does not participate in the work, nor does he manage or direct or organise the agricultural operations on the plot of land which he has leased out).
- (d) combination of crop sharing and any other term(s) of lease enumerated against a, b, e and f.
- (e) usufructuary mortgage (the ownership of the property remains with the mortgagor but the possession vests on the mortgagee—the person to whom the mortgage is made or given. Income from the property accrues to the mortgagee and the mortgage is terminated as soon as the full amount is realised).
- (f) other terms (area leased out on other terms of mortgage such as simple mortgage or mortgage by conditional sale or terms of lease other than those specified above).

(vii) *Land leased in* : All land leased in by a household (other than the land which was treated as under owner-like possession) who had the possession over the land without the right of ownership constituted 'land leased in' by a household.

(viii) *Household type* : During the field work of 37th round, rural sample households were categorised into five groups on the basis of their incomes during the 365 days preceding the date of survey from gainful occupations pursued by the members of the households. For the purpose of this report however, some of these groups have been combined so as to classify the rural households into three household types as explained below.

(a) *Agricultural Labour* : At first a rural household was categorised as rural labour if its earnings from wage-paid manual labour during the 365 days preceding the date of survey exceeded (A) the income from self-employment (in agriculture plus non-agriculture) and also (B) the income from wage-paid non-manual employment, (A) and (B) being

taken separately. Of the households categorised as rural labour, those which earned 50 per cent or more of their total income during the above-mentioned period from wage-paid manual labour in agriculture were termed agricultural labour households. However, working in fisheries was excluded from the coverage of agricultural labour.

(b) *Self-employed in agriculture* : This type was constituted by households which earned 50 per cent or more of their total income during the last 465 days preceding the date of survey from self-employment in agricultural occupations.

(c) *Others* : All other households including those having no income from gainful occupations, have been put under this type.

\*\*\*\*\*

## SECTION TWO

### IMPORTANT FINDINGS OF THE SURVEY

2.0.0 In this section some highlights of the survey results pertaining to the household ownership holdings as enumerated during the first visit (January to June 1982) to the sample households are presented at the state and all-India levels. The estimates are based on the pooled data of the two sub-samples of the Central sample only. However, to provide some idea on the margin of uncertainty of the combined estimates, sub-samplewise estimates are provided in Table (1) of the Survey Results for the two basic characteristics, namely, number of households and area owned. Although the results presented in this report are generally in the form of ratios (viz. percentages, averages etc.), the basic aggregate estimates relating to the number of households and area owned provided in Table (1) of the Survey Results, will facilitate derivation of aggregate estimates of other items, when required.

2.1.0 *Estimates of households and persons* : Before taking up discussion on the main features of ownership holdings, it is worthwhile to examine the validity of a few basic estimates thrown up by the survey for making an assessment of the survey results in general. For this purpose the estimates of households and persons as obtained from the survey are compared with 1981 Population Census figures in Table (I). Although the survey was conducted about a year after the 1981 Population Census, the comparison would serve the purpose of dimensional verification of the survey results with the Census figures. In table I, these comparisons are made for sixteen major states and all-India separately for rural and urban sectors. Assam has been excluded from state-wise comparison since 1981 Population Census

was not conducted there. However, the All-India Population Census figures as presented in the table include the projected figures for Assam. Also the All-India census figure for number of households includes the estimate for Assam derived on the basis of the projected 1981 population and estimated household size as per 37th round survey.

2.1.1 Table I shows that in 1982 there were 93.9 million rural households and 30.1 million urban households in India as against 1981 Population Census figures of 93.8 and 29.4 million households in rural and urban sectors respectively. Thus these estimates of households obtained from the two sources are found to be quite close. But although the NSS estimates of households are higher than the Census figures, the estimates of persons from the NSS are on the lower side of the 1981 Census for both rural and urban sectors. In terms of percentages, households exhibit a difference of + 0.03 per cent in rural areas and + 2.42 per cent in urban areas while difference in case of persons is of the order of - 2.97 per cent and - 6.68 per cent in rural and urban areas of India respectively.

2.1.2 At the statelevel percentage differences of households as obtained from the two sources are generally low except in some cases. Compared to census figures, the survey estimates of households are considerably less in Himachal Pradesh (21.67%), Madhya Pradesh (10.06%) and Orissa (7.36%) in the rural sector, and in Kerala (24.74%) and Maharashtra (11.14%) in the urban sector. In the rural sector, the percentage difference in the number of persons has more or less followed the pattern of the differences observed in the case of number of households. Strangely, in the urban sector, the number of persons as per the population census 1981 is found to be more than the survey estimate in Andhra Pradesh, Bihar, Gujarat, Haryana, Himachal Pradesh, Orissa, Punjab, Rajasthan, Uttar Pradesh and West Bengal, although the number of households as estimated from the survey is more than the Census figures in these states. In fact, although the 37th round estimates are expected to be the higher than the corresponding census figures due to the population growth during the intervening gap of one year between the centre and the survey, the extent to which the survey estimates of households exceed the corresponding census figures in Bihar (10.92%), Haryana (12.71%), Jammu & Kashmir (10.11%), Punjab (14.06%) and West Bengal (9.75%) in the rural sector, and in Bihar (21.77%), Himachal Pradesh (11.54%), Madhya Pradesh (9.31%), Orissa (9.68%) and Tamil Nadu (13.61%) in the urban sector, cannot be explained by growth factor alone.

TABLE (I) : COMPARISON BETWEEN THE ESTIMATED NUMBER OF HOUSEHOLDS AND PERSONS BASED ON NSS 37TH ROUND SURVEY AND 1981 POPULATION CENSUS FIGURES.

srl. no.	states	rural				urban

17.	all-India	93822	93855	0.03	525458	509856	-2.97	29366	30076	2.42	159727	149057	-6.68

NOTE : (i) 1981 Census figures for number of households and population for all-India includes projected figures for Assam.

(ii) Percentage difference =  $\frac{\text{NSS 37th round} - \text{Census 1981}}{\text{Census 1981}} \times 100$

2.1.3 As stated in Section One, both the enquiries of land holdings and debt & investment were conducted in the same set of sample households belonging to the same sample villages/blocks. However the estimates of households derived from the data of these two enquiries differ to some extent although they should have been identical under ideal conditions. The tabulating agencies being different (tabulation of debt & investment data was done by the Reserve Bank of India, Bombay), the differences in the estimates may be attributed partly to the differences in the number of first and second stage sampling units considered for tabulation by the two agencies. At the all-India level, the percentage differences in the estimated number of households is only 0.25 percent in the rural sector and 2.38 percent in the urban sector. However, in some states, the difference is not as negligible as in the case of all-India.

TABLE (II) : ESTIMATED AREA OWNED, AVERAGE AREA OWNED PER HOUSEHOLD AND PERCENTAGE OF LANDLESS HOUSEHOLDS IN RURAL AND URBAN AREAS, 1982

item (1)	ALL INDIA	
	rural (2)	urban (3)
1. Estimated number of households (000)		
2. Estimated area owned (000 hectares)		
3. Average area owned per household including landless households (0.00 hectares)	93855	30076
4. Percentage of landless households (i.e. households owning either no land or land less than 0.002 hectare)	1.28	0.27
5. Average area owned per household owning some land (0.00 hectares)	11.33	51.72
	1.44	0.56

2.2.1 The estimate of area owned by households is 119765 (000) hectares in rural and only 8136(000) hectares in urban India. Thus the contribution of urban areas is only 6.36 percent of the total land owned by rural and urban households in India. The average size of household ownership holdings is calculated as 1.28 hectares in rural India which rises to 1.44 hectares when the average is worked out by excluding the landless households. In urban India the average holding size is 0.27 hectare which becomes more than double and rises to 0.56 hectare when landless households are left out from calculation of the average figures. This is because the percentage of landless households is much higher in urban areas (51.72 percent) than in rural areas (11.33 percent).

It may be mentioned here that because of the quite small contribution of the urban sector to total land owned, all the discussions in the subsequent paragraphs of this section have been confined to *the rural sector only*.

2.2.2 As stated in Section One, data on ownership land were collected in all the four surveys on land holding conducted in eighth round (1954-55)

2.2.0 *Household ownership holdings and area under holdings* —As stated earlier, all lands whether cultivable or not, owned by a household constitute household ownership holding. Thus a household ownership holding may include, besides cultivated lands all areas under forest, barren and uncultivable land, cultivable waste land, land growing miscellaneous tree crops or land put to non-agricultural uses, viz. houses, sites, roads etc. provided these are owned (including owner-like possession) by the household. Households owning either no land or land less than 0.002 hectare are taken as landless households and such households constitute ownership holdings of size zero. The estimates of area under ownership holdings, average size of household ownership holding and percentage of landless households in rural and urban area of India are presented in Table (II).

sixteenth and seventeenth round (1960-61 and 1961-62), twenty sixth round (1971-72) and thirty-seventh round (1982) of the NSS. It would be of considerable interest to make a study of the relevant estimates thrown up by these four surveys to assess the changes in the structure of holdings brought about by the various factors including land reforms measures implemented during the last two decades.

But before studying the results of different NSS rounds it is desirable to look into the definitions of ownership as adopted in these rounds and also the reference periods for collection of such data. These are given in the following paragraph.

2.2.3 In the 8th round a plot of land was considered to be owned by a member of the household only if he held it with a right of permanent heritable possession, with or without the right to transfer title. In 17th round, in addition to above type of ownership, land held under grant, lease or assignment by government on long-term basis was considered to be possessed by the holder in ownerlike manner and such lands were also treated as owned by the holder. In 26th round some more elaborations on ownerlike

possession were made to cover the following categories viz. (a) land held under perpetual lease, hereditary tenure and long-term lease (ranging from 30 to 99 years) (b) land held by tribals under traditional right from local chieftains, village councils or district councils, (c) land held by tenants who were granted full proprietary rights by the government under land reforms legislation, (d) land held by tenants while ownership rights were with the community. The concept of ownership in 37th round remained the same as that in 17th and 26th rounds.

The reference period for collection of data in the 8th round was the major crop season of the agricul-

tural year 1953-54 while date of survey which staggered over the entire period of survey from September 1961 to July 1962 was the reference period for the 17th round. In the 26th round it was a fixed date, namely, 30th June, 1971. The data for the 37th round related to the date of survey spread over the survey period of first visit, namely January to June, 1982.

2.2.4 Table (III) below shows the temporal changes in the extent of ownership, leasing out and leasing-in of land in rural areas of India. As mentioned above the study is confined to the rural areas only.

TABLE (III) : TEMPORAL CHANGES IN THE EXTENT OF OWNERSHIP, LEASING OUT AND LEASING IN OF LAND BY HOUSEHOLDS AS OBTAINED FROM THE ESTIMATES OF VARIOUS NSS ROUNDS.

items	ALL INDIA		RURAL SECTOR	
	1953-54 (8th round)	1961-62 (17th round)	1971-72 (26th round)	1982 (37th round)
(1)	(2)	(3)	(4)	(5)
1. estimated area owned (000 hectare)	123699	128734	119636	119765
2. average area owned per household (0.00 hectare)	1.95	1.78	1.53	1.28
3. Percentage of landless households	23.09	11.68	9.64	11.33
4. average area owned per household owning some land (0.00 hectare)	2.53	2.01	1.69	1.44
5. percentage of households leasing out land to households owning land	12.03	7.03	9.87	6.24
6. percentage of area leased out to total area owned	11.42	4.43	5.77	4.30
7. percentage of households leasing in land	—	—	25.29	17.78
8. Percentage of area leased in to total area owned	—	—	11.59	7.46
9. number of sample villages	4431	3486	4547	3692
10. number of sample households	75720	53138	35947	29089

N.B. (1) Sources of estimates of 8th, 17th and 26th rounds are NSS Report Nos. 36, 144 and 215 respectively.

(2) Information on land leased in by households was not collected in 8th and 17th rounds.

2.2.5 The estimates given in Table III reveal that area owned as reported in 1953-54 (123.7 million hectares) had increased to 128.7 million hectares in 1961-62 showing an increase of about 4 percent over the 1953-54 estimate. But the estimate of area owned was found to be only 119.6 million hectares in 1971-72 which meant a fall of about 7 percent from the 1961-62 estimate. The 1982 survey estimate of 119.8 million hectares of land under the ownership of rural households is quite close to the estimate of 1971-72. The reason for an increase in ownership of land in 1961-62 over 1953-54 might be attributed to the fact that the definition of ownership as adopted in 1953-54 survey was extended to cover *ownerlike possession* comprising of long-term leases (30 years or more) in 1961-62. On the other hand, the definition of owner-

ship of land remaining the same for the surveys of 1961-62, 1971-72 and 1982, there is no apparent reason for the decrease in area owned except that some rural land might have been merged in urban land due to urbanisation over the years. But the estimates of area owned by urban households in 1971-72 and 1982 which are less than the corresponding estimate of 1961-62 do not justify the phenomenon of urbanisation as a plausible reason for the decrease in the estimate of area owned by rural households in 1971-72 and 1982 from 1961-62.

2.2.6 Changes in the features of ownership over times as presented in Table III for rural India also indicate that there was a sharp fall in the landless households from 23.09 per cent in 1953-54 to 11.68

per cent in 1961-62. This decline might be partly due to the change in the definition of ownership adopted in 1961-62 survey from the earlier survey (as mentioned in paragraph 2.2.3) and partly due to the implementation of the land reform measures aimed at re-distribution of surplus land to the landless households during the intervening period. However, no change in the percentage of landless households was observed in 1982 compared with 1961-62 which stabilised around 11 percent although a slight fall in the said percentage was noticed in the 1971-72 survey (9.64 per cent). As expected, the average size of household ownership holding has decreased progressively from 1.95 hectares in 1953-54 to 1.78 hectares in 1961-62, 1.53 hectares in 1971-72 and finally to 1.28 hectares in 1982. If the landless household are excluded while calculating the average, then the average size of holdings works out to 2.53 hectares in 1953-54, 2.01 hectares in 1961-62, 1.69 hectares in 1971-72 and 1.44 hectares in 1982. The reduction in the average size of holdings over time was inevitable as number of households increased progressively without any increase in total land owned.

2.2.7 Tendency to lease out land to the tenants and to enjoy the share of produce by the land owners was prevalent in different parts of the country. To counter the evils of exploitation, several land reform measures were implemented over the years in different states. It was thus expected that as a consequence of such measures, the extent of leasing out of land should have been reduced. The estimates also reveal that there is a decreasing trend in the percentage of households leasing out land to households owning land with the consequential decline in the leased out area out of the area owned by such households over the years. In 1953-54 the percentage of land owning households leasing out part or whole of their land to others was 12.03 which came down to 7.03 per cent in 1961-62 and to 6.24 per cent in 1982. The lessor households leased out 11.42 per cent of the owned area in 1953-54 which substantially reduced to only 4.43 per cent in 1961-62 and has remained more or less at the same position in 1982 (4.30 per cent). However, the estimates obtained from the 1971-72 survey were a little out of time with the corresponding values for 1961-62 and 1982; the estimate for these two years were stable and almost of the same magnitude.

2.2.8 While collecting data on leasing out of land by land owning households supplementary information on land leased in by all households (including landless) was also collected in the land holdings surveys of

1971-72 and 1982. However, this information was not collected in the earlier surveys. The percentage of households reporting leased in area to all households was estimated at 25.29 in 1971-72 which came down to 17.78 per cent in 1982. The percentage of area leased in to area owned by households also decreased to 7.46 in 1982 from 11.59 in 1971-72. It may be mentioned here that while leasing out of land was restricted to area leased out by households only, the information on area leased in by households covered leasing in of land from households as well as from government and non-household institutions.

2.2.9 Having assessed the changes in extent of ownership, leasing out and leasing-in of land by households, it may now be worthwhile to study the change in the pattern of distribution of ownership holdings and area owned during the last three decades over which consistent efforts had been made through various land reform measures to reduce the inequality in land distribution. Table (IV) on the next page gives the cumulative percentage distribution of households and area owned by size class of household ownership holdings in 1953-54, 1961-62, 1971-72 and 1982.

2.2.10 A glance at the estimates presented in Table (IV) reveals that there was some reduction in the unevenness of the land distribution over the last two decades. In 1953-54 the marginal holders (with land size upto 1.01 ha.) comprising of 38.15 percent of the households (61.24% minus 23.09%) owned 6.23 per cent of the total owned land. Marginal holders swelled to 54.38 per cent (66.06% minus 11.68) in 1961-62 commanding 7.59 per cent of land owned. Although the percentage of marginal holders remained more or less the same in 1982 (55.31 per cent) the share of area owned by them was much larger (12.22 per cent) compared to the 1961-62 estimate. As far as the small holders (owning land between 1.02 ha to 2.03 ha) were concerned, about 9 per cent of them (75.22% minus 66.06%) in 1961-62 owned little more than 12 per cent of land while in 1982 such holders increased to 15 per cent commanding about 17 per cent of land owned.

On the other hand, the number of households having large holdings of size 10.14 ha. or more diminished from 2.85 per cent in 1961-62 to only 1.43 per cent in 1982 with a substantial reduction in area owned by them from 28.25 per cent in 1961-62 to 18.08 per cent in 1982. Thus there was an overall improvement in the land holding structure in the sense that inequality in the distribution of land had smoothed out to some extent. As an overall measure

of inequality of land distribution, the concentration ratios for household ownership holdings for the years 1953-54, 1961-62, 1971-72 and 1982 have been worked out for the rural sector of India which are shown in Table (V).

TABLE (V) : CONCENTRATION RATIOS OF HOUSEHOLD OWNERSHIP HOLDINGS FOR 1953-54, 1961-62, 1971-72 AND 1982.

	ALL INDIA	RURAL
years	concentration ratio	
(1)	(2)	
1953-54	0.75	
1961-62	0.73	
1971-72	0.71	
1982	0.71	

2.2.11 Although the inequality in the distribution of ownership holding has decreased progressively over

the years, the nevertheless the change has not been appreciable as seen from the values of concentration ratios shown in Table (V).

2.2.12 *State-wise picture in 1982* : In the foregoing paragraphs discussion was confined to some basic features of ownership of land at the all India level. These aspects at the state level are dealt with in the subsequent paragraphs. Table (VI) presents average size of ownership holdings, percentage of landless households and extent of leasing out and leasing in of land for 16 major states and all all-India as derived from the data of 37th round (1982) survey.

$$(a) \text{ (concentration ratio); } C = 1 - \frac{\sum (P_j - P_{j-1})(q_j + q_{j-1})}{10^4}$$

where  $p_j$  and  $q_j$  are respectively the cumulative percentage of households and area owned in the  $j$ th size class of ownership holding as presented in Table (IV).

TABLE (VI) : SOME IMPORTANT RATIOS AND AVERAGES OF CHARACTERISTICS OF LAND HOLDINGS FOR 16 MAJOR STATES AND ALL INDIA IN 1982.

srl. no.	state	RURAL				
		average area owned per household	p.c. of landless households	average area owned per hh. owning land	p.c. of area leased out to area owned	p.c. of area leased in to area owned

16.	West Bengal	0.55	17.21	0.67	2.48	12.31
17.	All India	1.28	11.33	1.44	4.30	7.47

2.2.13 It can be seen from column (3) of this table that among all the states shown here Kerala has the least average area of land owned per household (0.36 hectares) while Rajasthan has the highest average (3.39 hectares). Besides Kerala, Bihar, Jammu and Kashmir, Orissa, Tamil Nadu, Uttar Pradesh and West Bengal have an average of 1 hectare or less while other states have the average ownership of more than 1 hectare. The corresponding all India average is 1.28 hectares only. It may be clarified here that these average figures are based on all households including landless households, the extent of which has been given in column (4).

2.2.14 The percentage of landless households also varies widely among the states. Column (4) of the table gives the percentage of landless households i.e.

the households who do not own any land or own very nominal land i.e. less than 0.002 hectare. It is seen that Maharashtra has the largest percentage of such households (21.24%) to total households in the state followed by Tamil Nadu (13.13%), West Bengal (17.21%), and Gujarat (16.83%). On the other side of the scale are Bihar (4.11%) and Uttar Pradesh (4.85%). The percentage lies between 6 to 10 in Haryana, Himachal Pradesh, Jammu & Kashmir, Orissa, Punjab and Rajasthan, and between 11 to 15 in the remaining states.

2.2.15 Average ownership per household *owning some land* has been shown in column (5) of the table. Obviously, these average estimates are a little more than the corresponding averages shown in col. (3).

the difference in the two average estimates clearly depending upon the percentage of landless households in the state.

2.2.16 Of the total area owned the percentage of area leased out and also the percentage of area leased in by all house holds are shown in column (6) and (7) of table (VI). An interesting feature of these leasing activities is that in all the states except Himachal Pradesh the extent of leasing in of land is more than that of leasing out. The difference between the percentages leased in and leased out land is highest in West Bengal (about 10). Other states where these two percentages differ by 5 or more are Bihar, Haryana, Punjab, Tamil Nadu and Uttar Pradesh. In the remaining states the two percentages do not differ much. At all-India level against 4.30 per cent of owned area leased out area leased in constitutes 7.47 per cent of the owned area. The difference between the percentages of leased out and leased in land, may be ascribed to the fact that while the data on land leased in include not only the land leased in from rural households but also that from the urban households, government and non-household institutions the information on land leased out relate to area leased out by rural households only.

2.3.0 *Changes in distribution of ownership during 1961-1982*: In table (VII) the percentage distributions of households and area owned by ownership holding classes have been presented for 16 major states and all-India for the three years 1961-62, 1971-72 and 1982 as obtained from the NSS 17th, 26th and 37th round land holding surveys. In presenting this table, however, the usual 16 size classes of holdings have, been clubbed into 5 broad categories on the lines adopted in the Agricultural Census of India. These 5 categories are (i) marginal holdings of size less than 1.01 hectares, (ii) small holdings of size from 1.01 to 2.02 hectares, (iii) semi-medium holdings between 2.03 and 4.04 hectares, (iv) medium sized holdings of 4.05 to 10.12 hectares, and (v) large holdings of size 10.13 hectares and above. In the case of Haryana and Himachal Pradesh no figure exists for the year 1961-62 since these states came into existence in later years.

2.3.1 It is a general feature of household ownership holding in all the states that the percentage of marginal households (i.e. those with marginal holdings) is very high while the percentage of area owned by this category of households is quite low when compared to other categories of households except in Kerala. Also, in general, the percentage of households decreases as the holding size increases while the percentage of area owned increases in higher holding size

classes. However this trend of increase in area owned reverses in the highest holding size class of 10.13 hectares and more, possibly because the highest class contains only a very small proportion of households. This is the case in all the states except in Rajasthan where a large number of households own medium to large-sized holdings. In fact among all the states, Rajasthan has the highest percentage of households in the top two holding classes. Another exception, in the opposite direction, is Kerala where the percentage of owned area declines steadily over the successive ownership holding classes with the lowest class accounting for the largest percentage of owned area (46 p.c. in 1982).

Similar features of distribution of households and area owned are noticed in the three years 1961-62, 1971-72 & 1982 for these states. While the percentages may vary over the years, the general pattern has remained the same.

2.3.2 As regards the changes during the period (1961-1982), it is observed that the percentage of marginal households (i.e. those in the lowest holding class : below 1.01 ha) has definitely increased in 1982 from 1961-62 though the increase is not very significant in all the states. Also there is a markedly increasing trend in the percentage of area owned by marginal households and this trend is noticeable in all the major states with varying degree of intensity except in Maharashtra. In this state the percentages of both marginal households and area owned by them has dropped in 1971-72 from the level of 1961-62, and then again risen slightly in 1982. This feature is more pronounced in the case of percentage of area owned by such households which has declined sharply from 17.55 per cent in 1961-62 to 3.48 per cent in 1971-72, and then risen again to 4.65 per cent in 1982.

2.3.3 Looking closely at the percentage figures of different categories of households over the years it is clearly observed that there is a rise in the percentage of households of lowest holding size over time whereas the percentages of households of higher holding sizes (starting from 2.03 ha) have decreased steadily. It is also encouraging to observe that during (1961-1982) the percentage of area owned has increased in the ownership holding class of small sizes (upto 2.02 h.a), remained more or less constant in holdings of size 2.03-4.04 h.a., and started falling in holdings of sizes 4.05 h.a. and above in majority of the states. The figures do indicate a tendency towards a more equitable distribution of land. However, in spite of this hopeful trend, it has to be recognised that the

category of households owning medium and large holdings (i.e. holdings of size 4.05 h.a and above) still command a much larger share of land owned compared to the proportion of households falling in those size classes.

#### 2.4.0 Land owned, leased out and leased in by household type

Some key characteristics in land ownership have been analysed by major household type in order to have a comparative picture of rural households according to the nature of occupation in which they were engaged during the reference period. In Table (2) of the Survey Results, percentage distributions of households and area owned by major household type have been presented and in Table (6) percentages of area leased out and area leased in by different household types of total area owned by all households are given

TABLE (VIII) : PERCENTAGE DISTRIBUTION OF HOUSEHOLDS, AREA OWNED, AREA LEASED OUT AND AREA LEASED IN BY MAJOR HOUSEHOLD TYPE

household type	ALL INDIA			
	households	area owned	area leased out	area leased in
(1)	(2)	(3)	(4)	(5)
1. self-employed in agriculture . . . . .	48.81	86.24	34.35	88.33
2. agricultural labour . . . . .	24.60	5.01	19.39	5.92
3. others . . . . .	26.58	8.74	46.26	5.71
4. all . . . . .	100.00	100.00	100.00	100.00

2.4.2 Considering all size classes together (Table No. VIII) it is found that about 49% of total rural households are self-employed in agriculture and that they command about 86% of total owned area. An important characteristic of these households is that in addition to owning large areas of land, they also lease out and lease in large amounts of land, the percentages of total leased out and leased in area being about 34 and 88 respectively. On the other hand, agricultural labour households who are about 25 per cent of total households, own only a negligible share of 5 per cent in total owned area. And they lease out 19 per cent and lease in only 6 per cent of the total leased out and leased in areas respectively. The 'others' category of households mentioned in the Table comprises of households self-employed in non-agricultural occupations, other labour households

for each size class of holdings. Major household types in which the households have been categorised are self-employed in agriculture, agricultural labour and others. The definitions of these terms have been given in Section One of this report.

2.4.1 As expected, in the lower holding size class the percentage of households self-employed in agriculture is quite small (10% or less) but this percentage increases rapidly with the ownership holding size. In fact such households comprise of more than 90 per cent of total households in the ownership holding classes of 4.05 hectares and above. Similar trend is also observed in respect of area owned by this type of households. While about 22 per cent of total area owned belongs to self-employed in agriculture households in the lower ownership holding class (0.002-0.20 h.a.), this percentage rises to about 96 in the 12.15 to 20.24 ha holding size class.

having wage paid non-manual employment and other households. It is because of this heterogeneous nature of this category that it does not show a particular trend in relation to increasing holding size. For all these household types the trends in state-wise tables are quite similar to what has been found in India level as described in the preceding paragraph.

2.5.0 Land Ownership among Scheduled tribe and scheduled caste households : In the above paragraph the patterns of ownership holdings, as obtained in 1982 (NSS 37th round), have been discussed for the general population of rural India and comparison have been made with the situations prevailing during the reference years of similar surveys undertaken in the previous NSS rounds. But unlike the previous

rounds, the 37th round data permit a separate tabulation for the categories of scheduled tribe and scheduled caste households. Detailed results for these categories of households have been provided in Table (8) of the Survey Results. A brief summary of these results is given in the following paragraphs.

2.5.1 Table (IX) below shows the percentages of scheduled tribe and scheduled caste households to all households and their share of area owned in the total area owned by all households.

TABLE (IX)

social group	ALL-INDIA		RURAL	
	percentage of			
	house-holds	area owned		
(1)	(2)	(3)		
1. scheduled tribe . . . . .	9.75	10.10		
2. scheduled caste . . . . .	19.71	7.89		
3. others . . . . .	70.55	82.01		
4. all households . . . . .	100.00	100.00		

2.5.2 The survey reveals that of the total households in rural areas of the country about 10 percent belonged to the scheduled tribe and another 20 percent to the scheduled caste community. Interestingly, between the two social groups, scheduled tribe households appear to be much better off than scheduled caste households as the percentage of tribal households and the percentage of area owned by them were both nearly 10, whereas scheduled caste households constituting about 20 per cent of total households, had a share of only 8 percent in the total owned area; on the other hand, 82 percent of total owned area belonged to the remaining 70 per cent 'other households'. The problems of scheduled tribe and scheduled caste households are well recognised. That the percentage of these two groups is comparatively more among households owning no land or owning only small holdings and much less among households owning large holdings has been known for a long time. This fact is also borne out by the estimates presented in Table (8) of the Survey Results. It can be seen from columns (6) and (7) of Table (8) for all India rural that in the lowest five

ownership holdings classes (that is, upto 0.50 hectare) the percentage of scheduled caste households to all households in the corresponding classes is either more or nearly the same as the all-India all class percentage of 19.71. By contrast, the percentage of scheduled caste households consistently decrease in the higher ownership holding classes and drops to a minute figure of 1.95 in the highest class (above 20.24 hectare).

2.5.3 As mentioned above, the scheduled tribe households are placed in a somewhat better position in respect of ownership of land. In the lowest two ownership holding classes (i.e. upto 0.001 hectare) the percentage of tribal households is of course larger than the all class percentage of 9.74 but in the next two classes (0.002-0.40 ha) the percentage of tribal households is less than 9.74. In the still higher holding classes (up to 8.09 hectares), the percentage of tribal households is either nearly the same or slightly larger than the all class average of 9.74. In the top four classes, the proportion of tribal households falls, but not so sharply as in the case of scheduled caste households, the smallest percentage being 4.70 in the highest class.

2.5.4 Regarding the percentage of area owned by households of these two groups, it is observed from columns (8) and (9) of the all-India Table that for each of the ownership holding classes the percentage of area owned by either group is nearly the same as the percentage of households of that group. This reveals the stark reality of the situation. Because for the general population, in each ownership holding class starting from 1.01 hectare and going up, the percentage of area owned to total owned area (all classes) is more than the percentage of households in that class to all households. It is well known that this concentration of ownership among fewer households increases in the higher holding classes. Apart from the social and economic implications of this pattern, what transpires in the case of scheduled tribe and scheduled caste households is that within each of the higher holding classes these groups of households command much smaller holdings than the other households.

2.5.5 Since the percentage of scheduled tribe and scheduled caste households vary widely over the states it would be worthwhile to have a glimpse of the state-wise situation. This can be seen in Table (X), which shows the percentage of area owned by these groups of households to total owned area for each state u.t.

TABLE (X) : PERCENTAGE OF SCHEDULED TRIBE AND SCHEDULED CASTE HOUSEHOLDS TO ALL HOUSEHOLDS AND PERCENTAGE OF AREA OWNED BY THEM TO TOTAL OWNED AREA RURAL

state	percentage of households		percentage of area owned by households of	
	scheduled tribe	scheduled caste	scheduled tribe	scheduled caste
(1)	(2)	(3)	(4)	(5)
1. Andhra Pradesh	8.99	22.91	8.73	7.89
2. Assam	9.32	16.93	11.64	11.28
3. Bihar	12.24	14.90	22.10	3.18
4. Gujarat	19.58	11.74	0.44	3.22
5. Haryana	0.00	23.42	0.00	0.81
6. Himachal Pradesh	4.22	28.01	6.77	13.86
7. Jammu & Kashmir	0.09	10.62	0.00	8.77
8. Karnataka	4.80	17.60	2.81	8.90
9. Kerala	1.59	13.22	0.27	2.20
10. Madhya Pradesh	1.59	13.22	24.11	7.85
11. Maharashtra	26.81	14.90	8.94	3.45
12. Manipur	12.84	8.45	42.22	0.00
13. Meghalaya	37.17	0.10	94.07	0.08
14. Orissa	88.86	0.09	25.95	9.64
15. Punjab	23.81	18.58	0.00	2.11
16. Rajasthan	0.19	39.27	6.39	12.45
17. Tamil Nadu	12.47	20.13	1.72	8.23
18. Tripura	1.09	24.01	18.59	19.92
19. Uttar Pradesh	12.62	25.59	1.56	10.47
20. West Bengal	1.58	24.71	3.98	20.59
21. Arunachal Pradesh	7.96	29.53	96.14	0.00
22. Chandigarh	83.86	0.00	0.00	1.57
23. Dadra and Nagar Haveli	0.00	19.46	66.02	10.13
24. Delhi	78.30	5.63	0.00	5.27
25. Goa, Daman & Diu	0.00	15.47	0.03	2.31
26. Mizoram	2.78	3.04	99.78	0.08
27. Pondicherry	99.02	0.06	0.00	6.84
28. All-India	9.74	19.71	10.10	7.89

2.5.6 It can be seen from this table that the percentage of tribal households is 99,89,84 and 78 in Mizoram, Meghalaya, Arunachal Pradesh and Dadra & Nagar Haveli with percentage of area owned by them being nearly 100, 94, 96 and 66 respectively. Figure for Dadra & Nagar Haveli may not be sufficiently reliable due to small sample size). The percentage of area owned by tribal households is found to be greater than the percentage number of households in the state/ut.s of Assam, Bihar, Himachal Pradesh, Manipur, Orissa and Tripura, whereas these two percentages are nearly the same in Andhra Pradesh, Madhya Pradesh and Uttar Pradesh. This means that in these states the scheduled tribe households enjoy a better position or at least an equivalent position as the remaining groups of the population. Although Gujarat, Maharashtra and Rajasthan have got more than 10 percent and West Bengal nearly 8 percent of scheduled tribe households, the percentage of area owned by them is proportionately less. The remaining states are not important for this group.

2.5.7 In contrast to this, the scheduled caste households appear to be placed in a disadvantageous position in all the states and union territories in the sense that the percentage of area owned by them is less and in some cases much less than the percentage of these households. Clearly, most of them own small holdings only.

2.5.8 However, these aspects of tribes and castes should not cloud the main issues. The basic fact is that there exist in rural India a large number of households owning practically no land or very small holding. And their number will continue to increase alarmingly with the growth of population since total land is limited. By what name 'weaker section' or 'backward class' they are branded is unimportant. The essential point is that programmes of land redistribution and employment generation specially in the non-agricultural sector have to be actively pursued, implemented and evaluated for these people.

## SECTION THREE

## A NOTE ON SAMPLE DESIGN AND ESTIMATION PROCEDURE

## 3.1 SAMPLE DESIGN

3.1.1 *Broad design* :—The broad sample design was stratified with two stage sampling in each stratum. The first stage units in the rural sector were 1981 census villages in most districts, but in a few cases where either 1981 census was not conducted or the frame of census villages could not be procured in time, 1971 census villages were used. In the urban areas, the first stage units were generally blocks formed in the NSS urban frame survey in all towns except those places which were declared as urban areas for the first time in 1981 Census. In such cases, the Census (1981) blocks were the first stage units. The second stage units were households in both rural and urban sectors.

3.1.2 *Regions and strata* :—Each State/Union territory was divided into a few agro-economic regions by grouping contiguous districts similar in respect of population density and crop pattern. In Gujarat, some districts were split for this purpose, considering the location of dry areas and the distribution of tribal population in the state. The total number of regions thus formed all over India (excluding areas not covered by NSS) was 77, "Basic strata" for sampling in rural areas were formed within each region. Each district with less than 1.5 million 1971 census rural population constituted a basic stratum by itself except in Gujarat and Arunachal Pradesh where some districts with less than the above population were divided into two or more basic strata. Districts having more than 1.5 million rural population were divided into a number of basic strata (depending upon the population) by grouping contiguous tehsils similar with respect to crop pattern and density of rural population. Generally, each urban stratum was a district or a group of districts within the same region excepting the districts of Ahmedabad, Bangalore and Kanpur. In each of these cases, the district was divided into two strata, the city itself making up one stratum and the rest of the urban areas the other. With this arrangement, each city with 1971 census population above 1 million constituted a separate stratum, the remaining cities being whole districts. Those cities were Bombay, Calcutta, Delhi, Hyderabad and Madras. The total number of rural and urban strata were 497 and 363 respectively.

3.1.3 *Allocation* :—The state level allocations were determined on the basis of their investigator strength available and the expected work load per investigator. These were further allocated to strata in proportion to the total number of 1981 census House-listing blocks in rural sector and the total number of blocks in the frame in urban sector (in the case of Assam, rural allocation was proportional to 1971 census rural population). These were adjusted to the field strength of each FOD sub-region. Final stratum level allocations were rounded off to multiples of two.

3.1.4 *Sampling of villages* :—The sample villages were selected with probability proportional to number of House-listing blocks and with replacement. In the case of villages selected from 1971 census frame, sample villages were selected with probability proportional to size and with replacement where size was related to 1971 census population. Selection was done in the form of two independent sub-samples.

3.1.5 *Revenue village selection* :—When the sampled census village was not identifiable, one of the following procedures was adopted according to the situation (a) all revenue villages contained wholly or partly in the census village were surveyed as one unit, or (b) the revenue village which contained the selected census village and possibly other census villages, was wholly surveyed.

3.1.6 *Sampling of blocks* :—The urban frame survey (UFS) blocks of UFS-1977 scheme wherever available and UFS blocks of 1972-77 period for the remaining towns and 1981 census frame in case of new towns constituted the sampling frame for selection of blocks. In each urban stratum sample blocks were selected by simple random sampling without replacement in the form of two independent sub-samples.

3.1.7 *Hamlet-group and sub-block selection* :—In case the present population of a sample village or block was 1200 or more, it was divided into two or more equal (in terms of population) sub-divisions (called hamlet-groups in the case of villages and sub-blocks in the case of urban blocks), the number of sub-divisions depending on the population of the village or block at the time of the investigator's visit. One of them was selected at random for survey.

3.1.8 *Sampling of households (rural)* :—The households of each sample village were divided into four sub-strata, by their area of land possessed. Households possessing less than 0.05 acres formed sub-stratum-1. The remaining households were ranked first by their area of land possessed and then divided into three sub-strata by determining two boundary points A and B for each village such that the total area of land possessed was nearly the same for each sub-stratum (households with land possessed : (i) from 0.05 to A (ii) A to B and (iii) above-B constituted respectively sub-stratum 2,3 and 4). Two households were selected from each-sub-stratum circular systematically with a random start. The households of sub-stratum 1 were arranged by their means of livelihood (agricultural labour, artisan and others) before sample selection.

3.1.9 *Sampling of households (urban)* :—The households of a sample block were divided into three sub-strata by their monthly per capita expenditure. The boundary points for them were fixed at state level. Two households were selected circular systematically in each sub-stratum. In both rural and urban sectors, the same sample households were surveyed in both the visits.

## 3.2 ESTIMATION PROCEDURE

### 3.2.1 Notations :—

s :subscript for sth stratum.

t :subscript for tth sub-stratum (within a village block)

i :subscript for ith sample village/block

j :subscript for jth sample household

L :total number of rural/urban strata in the state

z :village size (used for sampling)

Z :total size of a rural stratum

N :total number of blocks in an urban stratum

D :number of hamlet-groups/sub-blocks formed

m :number of surveyed villages/blocks including depopulated and zero cases

H :total number of households in a sub-stratum

h :number of surveyed households in a sub-stratum

f :adjustment factor for survey of a revenue village

y :value of characteristic

Y :total of y at the state level

$\hat{Y}$  :estimate of Y from the sample

The expressions for  $\hat{Y}$  are given in the next para.

### 3.2.2. Rural Sector

$$Y = \sum_{s=1}^L \frac{Z_s}{m_s} \sum_{i=1}^{m_s} \frac{D_{si}}{f_{si} z_{si}} \sum_{t=1}^4 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

Where  $H_{sit}$  was the total number of household in the tth sub-stratum of the village and  $h_{sit}$  was the corresponding number of surveyed households available for tabulation.

### 3.2.3 Urban Sector :

$$\hat{Y} = \sum_{s=1}^L \frac{N_s}{m_s} \sum_{i=1}^{m_s} D_{si} \sum_{t=1}^3 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

3.2.4 *Estimates of ratios* :—Let Y and X be the totals of the characteristics y and x at the states/all-India level. Then the estimate of the ratio  $R = \frac{Y}{X}$  was obtained as  $R = \frac{\hat{Y}}{\hat{X}}$  where  $\hat{Y}$  and  $\hat{X}$  were unbiased estimates of Y and X respectively.

3.2.5 *Sub-sample-wise estimates* :—Sub-sample-wise estimates were computed on the basis of villages and blocks surveyed in the concerned sub-sample. Thus,  $m_s$  in the above formula would mean the number of surveyed villages/blocks in the concerned sub-sample of the sth stratum. The combined estimate of the stratum total based on the whole sample was computed as the weighed mean of the sub-sample-wise estimates. The combined estimate of the state (or all-India) total of the characteristic was obtained as the sum of the estimates of relevant stratum totals. However, the combined estimate of a ratio was calculated as the ratio of the combined estimates of numerator and denominator at the state/all-India level.

3.2.6 *Participation of states* :—All the states and Union Territories except Sikkim, Andaman & Nicobar Islands, Chandigarh Dadra & Nagar Haveli and Lakhshadweep participated in the 37th round survey on at least an equal matching basis, some of the states and u.t.s had more than equal matching samples.

## NATIONAL SAMPLE SURVEY ORGANISATION

### SUBJECTS COVERED IN VARIOUS ROUNDS OF N.S.S.

Round No.	Period of Survey	Subjects of Enquiry
(1)	(2)	(3)
1.	October 50—March 51	Wages, land utilisation, household enterprises, household assets and liabilities and monthly working account for Pune schedules, consumer expenditure prices.
2.	April 51—June 51	Village statistics, agriculture, consumer expenditure.
3.	August 51—November 51	Village statistics, agriculture and animal husbandry, small scale manufacture and handicrafts, transport, trade, profession, service and financial operations, consumer expenditure, prices.
4.	April 52—September 52	Village statistics, land utilisation, agriculture and animal husbandry, small scale manufacture and handicrafts, transport, trade, profession, service and financial operations, consumer expenditure prices.
5.	December 52—March 53	Land utilisation, agriculture and animal husbandry, non-household manufacturing establishments, small scale manufacture and handicrafts, transport, trade, profession, service and financial operations, consumer expenditure, prices
6.	May 53—September 53	Village statistics, land utilisation, agriculture and animal husbandry, non-household manufacturing establishments, small scale manufacture and handicrafts, transport, trade, profession, service and financial operations, consumer expenditure, prices, opinion of newspaper readers about newspaper reading.
7.	November 53—March 54	Village statistics, housing condition, land utilisation, agriculture and animal husbandry, non-household manufacturing establishments, small scale manufacture and handicrafts, transport, trade, profession, service and financial operations, consumer expenditure, prices opinion on out-turn of rice in villages.
8.	July 54—March 55	Housing condition, land holdings, trend of self management of agricultural holdings, land utilisation, small scale manufacture and handicrafts, transport, trade, profession, service and financial operations, household indebtedness, consumer expenditure, prices, farming practices.
9.	May 55—September 55	Vital statistics, employment and unemployment, land utilisation, small scale manufacture and handicrafts, transport and trade, consumer expenditure, income and expenditure, prices.
10.	December 55—May 56	Village statistics, housing condition, employment and unemployment, land utilisation and yield survey, small scale manufacture and handicrafts, transport, trade, profession, service and financial operations, income and expenditure, prices.
11.	August 56—January 57	Village statistics, housing condition, employment and unemployment and indebtedness of agricultural labour households, employment and unemployment of households, other than agricultural labour households, land utilisation and yield survey, agriculture and animal husbandry, income and expenditure, prices, weights and measures in urban areas.
12.	March 57—August 57	Village statistics, vital statistics, housing condition, employment and unemployment and indebtedness of agricultural labour households, employment and unemployment of households other than agricultural labour households, land utilisation and yield survey, production of milk and production and utilisation of cattle dung, housing, income and expenditure, prices, weights and measures in urban areas.
13.	September 57—May 58	Village statistics, vital statistics, employment and unemployment, land utilisation and yield surveys, income and expenditure, prices, reader's preference.
14.	July 58—June 59	Village statistics, population, births & deaths, employment and unemployment, land utilisation and yield surveys, small scale manufacture and handicrafts, income and expenditure, prices.
15.	July 59—June 60	Population, births & deaths, housing condition, employment and unemployment, land utilisation and yield surveys, non-mechanised transport and utilisation of working animals, livestock products, non-registered trade, building construction (rural) and capital formation, consumer expenditure, prices, disposal of cereals by producer households.
16.	July 60—August 61	Population, births & deaths, family planning, housing condition, employment and unemployment, urban labour force, number of physically handicapped persons, ownership of land and operational holdings (in rural only), land utilisation, yield survey, households indebtedness, consumer expenditure, prices.

(1)	(2)	(3)
17.	September 61—August 62	Population, births & deaths, morbidity, employment and unemployment, urban labour force, ownership of land and operational holdings, land utilisation and yield surveys, capital formation, consumer expenditure, prices.
18.	February 63—January 64	Village statistics, population, births & deaths, migration, housing condition, urban labour force, land utilisation, yield surveys, earnings from professions and liberal arts, construction, indebtedness of scheduled tribe households in Manipur and Tripura, income of rural labour households, consumer expenditure, prices.
19.	July 64—June 65	Village and block statistics, population, births & deaths, housing condition, urban labour force, employment and unemployment and indebtedness of rural labour households, land utilisation and yield surveys, integrated household schedule detailed and abridged, prices.
20.	July 65—June 66	Village and block statistics, population, births & deaths, housing condition, urban labour force, employment, unemployment and indebtedness of rural labour households, land utilisation, yield survey, integrated household schedule with emphasis on trade and land utilisation, prices.
21.	July 66—June 67	Village and block statistics, population, births & deaths, housing condition, urban labour force, land utilisation, yield survey, integrated household schedule detailed and abridged with emphasis on land utilisation, prices, opinion on production of cereal crops.
22.	July 67—June 68	Village and block statistics, population, births & deaths, housing condition, number of pucca houses, urban labour force, land utilisation, yield survey, integrated household surveys, prices, farming practices, opinion on production of cereal crops.
23.	July 68—June 69	Population, births & deaths, housing condition, number of pucca houses, land utilisation, yield survey, small scale manufacturing (household and non-household), integrated household schedule, prices, opinion on production of cereal crops.
24.	July 69—June 70	Number of pucca houses, number of physically handicapped persons, land utilisation yield survey, non-registered distributive trade, integrated household schedules, prices, opinion on production of cereal crops.
25.	July 70—June 71	Statistical check on land utilisation, indebtedness of non-manual employee households in urban areas, economic conditions of weaker section of rural population integrated household schedule (revised) prices.
26.	July 71—September 72	Village statistics, number of pucca houses, land holdings, statistical check on land utilisation, debt and investment, consumer expenditure, prices.
27.	October 72—September 73	Seasonal migration, number of pucca, semi-pucca and kutchra houses, employment and unemployment, current building activity in rural areas, consumer expenditure, prices.
28.	October 73—June 74	Population, births & deaths, morbidity, fertility, maternal and childcare, family planning, housing condition, normal health facilities in rural areas, disability, number of physically and mentally affected persons, number of new building, consumer expenditure, prices.
29.	July 74—June 75	Employment, unemployment and indebtedness of rural labour households, small scale manufacture and handicrafts, mining and quarrying, trade, hotels and restaurants, transport, service, construction, consumer expenditure, income, availability and extent of utilisation of electricity in rural areas, prices.
30.	July 75—June 76	Village statistics, livestock number and products, consumption of livestock products, livestock enterprises, prices, survey on railway travel.
31.	July 76—June 77	Education in both rural and urban areas, survey on the practice of Jhum cultivation in rural areas, household indebtedness survey in Himachal Pradesh, economic condition of urban slum dwellers, performance of irrigation, rural electrification, rural retail prices in North East Regions.
32.	July 77—June 78	Employment and unemployment, consumer expenditure, household integrated survey in North Eastern region, rural retail price.
33.	July 78—June 79	Manufacture of cane and bamboo products for own consumption and household weaving in North East region, unorganised manufacture, rural retail prices.
34.	July 79—June 80	Education, medical and health, unorganised sectors of trade, transport, hotels and restaurants, storage, warehousing and services, prices.
35.	July 80—June 81	Maternal and childcare, family planning education, medical and health, construction activity and social consumption, prices.
36.	July 81—December 81	Survey on Disabled Persons.

---

(1)	(2)	(3)
37. January 82—December 82	•	Land holdings and Livestock holdings, Debt and Investment.
38. January 83—December 83		Employment and Unemployment, Consumer Expenditure.
39. January 84—June 84	•	• Population, births & deaths.
40. July 84—June 85	•	• Unorganised manufacture—Non-directory establishments and own account enterprises.
41. July 85—June 86	•	• List of households and trading enterprises. Trade—Non-directory establishments and own account enterprises.
42. July 86—June 87	•	• Social consumption, Problems of aged and Armed Forces personnel.
43. July 87—June 88	•	• Employment & Unemployment and consumer expenditure.
44. July 88—June 89	•	• Living condition of Tribals, Housing condition and current construction activity.

---

PART II :  
SURVEY RESULTS

RESULTS ON SOME ASPECTS OF  
HOUSEHOLD OWNERSHIP HOLDING

*National Sample Survey :*  
*Thirty-seventh Round (January—December 1982)*

## LIST OF TABLES

srl. no.	table no	description of tables
(1)	(2)	(3)
1	0	Number of sample villages/blocks by states
2	1	Number of sample households and estimates of number of households, area owned and household size by household ownership holding size classes
3	2	Percentage distribution of households and of area owned over household type for each size class of household ownership holding
4	3	Percentage of households leasing out land fully and partly to total households owning land and respective percentage shares of area leased out to total area owned; and percentage distribution of number of households and of area owned by size class of household ownership holding
5	4.1	Percentage of households leasing out land to all households by different terms of lease for each size class of household ownership holding
6	4.2	Percentage of area leased out to total area owned by different terms of lease for each size class of household ownership holding
7	5	Percentage distribution of area leased out over type of lease for each size class of household ownership holding
8	6	Percentage of area leased out and area leased in by different household type to total area owned by all households for each size of household ownership holding
9	7	Percentage of households leasing in land to total households and area leased in to total area owned by type of lessor in each size class of households ownership holding
10	8	Percentage distribution of households and area owned by scheduled tribe and scheduled caste households over size class of household ownership holding; percentage of such households to all households and their respective percentage shares of area owned, area leased out and area leased in to area owned by all households for each size class of household ownership holding
