A NOTE ON PATTERN OF CONSUMER EXPENDITURE OF SCHEDULED CASTE AND SCHEDULED TRIBE HOUSEHOLDS

SECTION I

PART I ARTICLES\NOTES

INTRODUCTION

Under its new quinquennial survey programme, the National Sample Survey Organisation (NSSO) has been conducting regularly the Household Consumer Expenditure and Employment-surveys in the rural as well as in the urban households once in every five years. The 38th round survey (January-December 1983) was the third quinquennial survey in the new series on household consumer expenditure. As usual, in the 38th round survey, the sample households were classified by social groups, namely: (i) Scheduled caste, (ii) Scheduled tribe, and (iii) others. The first survey results, particularly those relating to the Scheduled caste, are in my schedule, Part I.

The present article, on the other hand, is based on the survey of consumption of the Scheduled caste and Scheduled tribe households, 1983-84, as reported in the schedule, Part II.

A note on pattern of consumer expenditure of Scheduled Caste and Scheduled Tribe households : NSS 38th round (January--December 1983)

The present article is based on the survey of consumption of the Scheduled caste and Scheduled tribe households, 1983-84, as reported in the schedule, Part II. The 38th round survey, on household consumer expenditure and rural labour, was conducted in the period January-December 1983. The survey period is the same as that of the 37th round survey, 1982-83. The survey period is the same as that of the 37th round survey, 1982-83. The survey period is the same as that of the 37th round survey, 1982-83.

The survey period is the same as that of the 37th round survey, 1982-83. The survey period is the same as that of the 37th round survey, 1982-83. A NOTE ON PATTERN OF CONSUMER EXPENDITURE OF SCHEDULED CASTE AND SCHEDULED TRIBE HOUSEHOLDS

SECTION 1

INTRODUCTION

1.0 Under its new quinquennial work programme, the National Sample Survey Organisation (NSSO) has been conducting enquiries on Household Consumer Expenditure and Employment-unemployment in the same set of sample households once in every five year. The 38th round enquiry (January-December 1983) was the third quinquennial survey in the new series on household consumer expenditure. As usual, in the 38th round enquiry, the sample households were classified by social groups, namely: (i) Scheduled caste, (ii) scheduled tribe, and (iii) others. The last category includes households which belong neither to any scheduled caste nor to any scheduled tribe.

1.1 This report presents, for the first time in NSS history, the pattern of consumption of the scheduled caste and scheduled tribe households, their size, as well as composition, separately and in complete exclusion of the households belonging to other social groups. Provisional results based on all households were released earlier¹. The results presented in this report should provide a firm basis for assessing the levels of living of the scheduled caste and scheduled tribe households, which constitute the most vulnerable section in our society. The 38th round survey results, relating to Agricultural and Rural Labour households, are being presented in a separate report.²

1.2 *Survey period and reporting period*: The field work of the 38th round started in January 1983 and continued upto December 1983, covering a period of one complete year. The reference period for collection of data on consumer expenditure was 30 days preceding the date of survey. The estimates presented in the report, therefore, broadly relate to the period of December 1982 to December 1983.

1.3 *Coverage*: The geographical coverage of the survey was the entire Indian Union excluding Ladakh

and Kargil districts of Jammu and Kashmir and rural areas of Nagaland.

1.4 *Sample size*: The survey covered about 1 lakh 23 thousand households spread over 8035 villages and 4379 urban blocks. In table 1 is shown the number of sample village/blocks allotted and surveyed in different states. From this table, it is evident that in Meghalaya, Sikkim, Tripura, Arunachal Pradesh and Lakshadweep, large proportions of samples, ranging from about 38 to 90 per cent were not surveyed and as a result the surveyed samples fall far short of the respective number of samples allotted. These omissions do not appear to be all random and therefore the results of the survey for those states are likely to be affected on two counts: Most likely, some of the areas (strata) remained unrepresented in the survey and the contribution of the survey data to the population estimates for those areas would be zero only, that is, the total population of the state would be severely underestimated; and secondly, it is apparent from the table that the affected states are having larger proportions of scheduled tribe population which resulted in severe underestimation of scheduled tribe population of those states.

1.5 Tripura, for example, had an allotment of 204 villages and 48 block for the survey, whereas data is available only for 85 villages and 28 blocks. The population estimate derived from those surveyed units was only 75 per cent of the 1981 census population count for the state. It is also observed that the estimated proportion of scheduled tribe population of 13.01 per cent to the total population of the state is much less than the corresponding proportion in the 1981 population census. This observation strongly suggests that a major part of the non-surveyed villages/blocks of Tripura are predominantly inhabited by the scheduled tribe population. The proportion of scheduled tribe population to the total population being much larger

¹Since the present report is based on full scrutiny and correction of coverage and content errors in the data file (by computer processing), the results, presented in this report are slightly at variance with the provisional results released in *Sarvekshana* Vol. IX, No. 4, April 1986.

²NSS Draft Report No. 333: *Pattern of Consumer expenditure of Self-employed Households in Agriculture and of Agricultural and Rural Labour Households* (1986).

than what is observed from the available survey results, the general population characteristics will not be properly reflected from the survey data. The results will be diverging more from what they should really be when the difference between the values of the characteristics for the tribal and other than tribal population is larger.

1.6 The survey data for Meghalaya, Sikkim, Tripura, Arunachal Pradesh and Lakshadweep is avail-

able for less than 70 per cent of the first stage sample units that is, villages and urban blocks. The observed proportion of scheduled tribe population to the total population for those four states, as estimated from the survey data, might not therefore be reliable, sented separately in the report. Those are, however, included in the all-India estimated. While the aggregate population of those states is only 0.64 per cent the total population of the country, they contain 4.3 per cent of the total scheduled tribe population of India³

TABLE S.O: NUMBER OF SAMPLE VILLAGES/BLOCKS ALLOTTED AND SURVEYED IN THE CENTRAL SAMPLE FOR NSS 38TH ROUND BY STATE

* nucleus villages.

**not available.

—mark underlined indicates less than 70% of the samples surveyed.

1.7 *Participation of states* : In the NSS 38th round, all the states and union territories (including in the geographical coverage) except Andaman and Nicobar Islands, Chandigarh, Dadra and Nagar Haveli and

Lakshadweep, participated in the survey on at least equal matching basis. The results presented in this report are, however, based on the central sample data only.

3. Census of India 1981, Series 1, India, Part-II-B (iii), Primary Census Abstract : Scheduled Tribes.

1.8 *Contents of the report* : The report contains two distinct types of tables in respect of states and union territories of India as also for all-India. However, tables have not been presented for states/union territories where the scheduled castes or scheduled tribes in a sector (rural, urban) represent less than 5 per cent of the population of that sector of the state/union territory. Apart from these tables, the other sections of this report contain (1) Explanatory Notes on the Tables presented, (2) Sampling Design and Estimation Procedure; and (3) A Summary of Findings. This being the premier report of its kind, containing results of the survey for the scheduled social groups, it would be of interest to examine to what extent it is possible to capture the different groups of population from a general sampling scheme. In section 6, the NSS 38th round survey results on the proportion of scheduled caste and scheduled tribe population of different states have been compared with the corresponding proportions derived from 1981 census population counts.

It has already been mentioned that a separate report containing tables showing the consumer expenditure pattern of different types of households viz., households self-employed in agriculture, agricultural labour households and rural labour households, based on the NSS 38th round survey data, has been released. Similar results from NSS 25th round survey data are also available for two groups of population viz., small cultivators and non-cultivating wage earners which are two major constituent of the 'weaker sections' of the rural population of India. The pattern of consumer expenditure of these various sections of population is the main theme of study in Section 7.

SECTION TWO

CONCEPTS AND DEFINITIONS

2.0 The concepts and definitions followed in the consumer expenditure enquiry continue to remain broadly the same as in earlier NSS rounds. Some of these concepts and definitions are explained below.

2.1 *Household* : A household is a group of persons normally living together and taking food from a common kitchen. A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with the dependents or guests) forms a separate household. Households maintained and fed directly by government, such as those in prisons, police quarters, cantonments, hospitals, asylums, relief camps are, however, excluded from the scope of the survey.

2.2 *Household member* : Any person who is a normal resident of the sample household is considered

to be a member of the household. Household members are grouped into three categories viz., adult male, adult female and child. One who has already attained the age of 15 (in completed years) is considered as an adult.

2.3 *Scheduled Caste and Scheduled Tribe* : A household was considered to belong to a particular social group (scheduled caste, scheduled tribe or neo-Buddhist) provided the head of the household is a member of that group. On the basis of the response to a direct question, the information was noted to indicate whether or not the household belongs to the particular social group. No attempt was however made to verify whether the reported name of the caste/tribe belonged to the listed group in the schedule. Further elaboration on this aspect has been made in Appendix B of this report.

2.4 *Household size* : The total number of members (as defined above) in a household is considered to be the size of the household.

2.5 *Household consumer expenditure* : Consumer expenditure comprises all expenditure incurred by the household, exclusively on domestic account, including consumption out of home-grown produce or transfer receipts like gift, loan etc. The expenditure on household enterprise is excluded from consumer expenditure. While consumption out of transfer receipts is included, transfer payments of all kinds (loan, gifts, charities, monetary as well as in kind, like grain loan etc.) are excluded. Expenditure on purchase and construction of residential houses are considered to be expenses on capital account and hence are excluded from the consumer expenditure; but the expenditure towards maintenance of residential building is included in the consumer expenditure of the household. Monetary value of food articles consumed during the reference period is taken to represent consumer expenditure on food articles. For semi-durable and durable goods, the actual expenditure incurred towards purchase of these articles, during the reference period is considered as the consumer expenditure of the articles. For items of clothing & foot-wear, the monetary value of the articles and brought into first use during the reference period is taken as the consumer expenditure on the articles concerned.

2.6 *Reference period* : The reference period for collection of data on all items of consumer expenditure is last 30 days (ending on the day preceding the date of enquiry). In addition for items of clothing & footwear, durable goods and some items of miscellaneous goods & services, data have been collected

for a reference period of last 365 days also. The results presented in this report are based on data collected for the reference period of 30 days only.

SECTION THREE

EXPLANATORY NOTES ON TABLES

3.0 *Table 1 series* give the distribution of (i) no. of sample households, (ii) percentage of estimated no. of households, persons, and (iii) average household size (number of adult males adult females and children) by monthly per-capita expenditure classes.

3.1 *Table 2 series* give value of consumption of broad groups of items per person for a period of 30 days by monthly per-capita expenditure classes. Estimates are given for 19 broad groups of items. The groups are (1) cereals; (2) gram; (3) cereal substitutes; (4) pulse and products; (5) milk and

products; (6) edible oil; (7) meat, egg and fish; (8) vegetables; (9) fruits and nuts; (10) sugar; (11) salt; (12) spices; (13) beverages and refreshments; (14) pan, tobacco & intoxicants; (15) fuel and light; (16) clothing; (17) foot-wear; (18) miscellaneous goods and services (including rents and taxes); and (19) durable goods. Apart from this, estimates on (20) rents and (21) taxes have been shown separately also. The results are presented also for (i) foot-total; (ii) non-food total and (iii) total consumer expenditure.

3.2 *Monthly per capita expenditure classes* : Estimates have been given by monthly per-capita expenditure classes in rupees, arranged in ascending order of magnitude. The expenditure levels are grouped into the following 14 classes :—

Serial no.	monthly per-capita expenditure classes (in rupees)		Serial no.	monthly per-capita expenditure classes (in rupees)			
(1)	(2)	(3)	(1)	(2)	(3)		
1.	0	—	30	8.	100	—	125
2.	30	—	40	9.	125	—	150
3.	40	—	50	10.	150	—	200
4.	50	—	60	11.	200	—	250
5.	60	—	70	12.	250	—	300
6.	70	—	85	13.	300 & above		
7.	85	—	100	14.	all expenditure classes		

Note: The groups 0—30, 30—40, etc. stand for Rs. 0 to less than Rs. 30/-, Rs. 30/- to less than Rs. 40/- and so on.

3.3 *Table Numbering* : For convenience of reference, the table numbers have been coded—the digit to the left of the decimal point refer to the nature of information and the digit to the right refer to the state/union territory, followed by R for rural table and U for urban tables.

The code numbers assigned to the states/union territories are as follows :—

0. All-India
1. Andhra Pradesh
2. Assam
3. Bihar
4. Gujarat
5. Harayana
6. Himachal Pradesh
7. Jammu & Kashmir
8. Karnataka
9. Kerala
10. Madhya Pradesh

11. Maharashtra
12. Manipur
- **13. Meghalaya
14. Nagaland
15. Orissa
16. Punjab
17. Rajasthan
- **18. Sikkim
19. Tamil Nadu
- **20. Tripura
21. Uttar Pradesh
22. West Bengal
23. Andaman & Nicobar Islands
- **24. Arunachal Pradesh
25. Chandigarh
26. Dadra & Nagar Haveli
27. Delhi
28. Goa, Daman & Diu
- *29. Lakshadweep
30. Mizoram
31. Pondicherry

*Tables for Lakshadweep are not presented in the report as the survey results were not available.

**Tables for the States of Meghalaya, Tripura and Arunachal Pradesh and for rural area of Sikkim are not presented because of non-availability of survey data for large proportions of sample villages/blocks.

SECTION FOUR

SAMPLING DESIGN AND ESTIMATION PROCEDURE

4.0 *Broad design* : The sampling design adopted in the survey was a stratified two-stage one with census villages in the rural areas and NSSO urban frame survey blocks in the urban areas as first stage units and households as second stage units. The sample villages were selected with probability proportional to size and with replacement in the form of two independent interpenetrating samples (IPNS). Sample blocks were selected with equal probability also in the form of two IPNS. The sample households in the second stage (ten from each first stage unit) were selected circular systematically after arranging all the households of the first stage units in a specified manner.

4.1 *Survey period and sub-round formation* : The survey was started in the month of January 1983 and was completed in December 1983. The entire survey period of one year was divided into four sub-rounds each of three months duration coinciding approximately with the four agricultural seasons. The four sub-round periods were :

- sub-round 1 : January-March 1983
- sub-round 2 : April-June 1983
- sub-round 3 : July-September 1983
- sub-round 4 : October-December 1983

The sample units were equally distributed over the four sub-rounds in a manner so as to provide equally valid estimated for each of the related sub-round period. The averages based on the pooled data, taking all the four sub-rounds together, would be freefrom the effects of seasonality.

4.2 *Estimation procedure* : The estimation procedure adopted in 30th round is based on a weighted sum of the sample values. Denoting by \hat{y} the un-biased estimate of Y, (the state total of any variate) it is given by :

$$\hat{Y} = \sum_{\&} \frac{P_s}{n_s} \sum_{\&} \frac{D_{si}}{e_{si} P_{si}} \frac{H_{si}}{h_{si}} \sum_j Y_{sij} \quad \dots (1)$$

for the rural sector, and

$$\hat{Y} = \sum_{\&} \frac{N_s}{n_s} \sum_j D_{sj} \frac{H_{sj}}{h_{sj}} \sum_j Y_{sij} \quad \dots (2)$$

for the urban sector where,

s, i and j are suffixes for stratus, village/urban block and household respectively;

P_s , N_s and n_s give the stratum values of population, number of villages/blocks in frame and number of sample villages/blocks respectively;

D_{si} , e_{si} , P_{si} stand respectively for, number of hamlet-groups/sub-blocks formed, number of census villages contained in a larger revenue village actually surveyed and the population of the sample village :

H_{si} and h_{si} stand for the total number of households listed and number of sample households; and finally y_{si} , is the observed value of the variate for a sample household.

Estimates of ratio of two characteristics is given by the ratio of the estimates of their aggregates.

SECTION FIVE

SUMMARY OF FINDINGS

5.0 In this section, some important findings of the survey are discussed to project a comparative picture of the consumption pattern of different groups of households. According to the Census of India 1981, the proportion of scheduled caste (SC) and scheduled tribe (ST) population to the total population are 15.32 percent and 7.55 percent respectively and the corresponding estimates of the proportions from the NSS 38th round survey are 16.66 percent and 8.50 percent. The share of SC and ST population in different states, as estimated from the NSS 38th round survey data, have been compared with the respective 1981 census population in Appendix-B of the report.

5.1 *Average size of a Household* : In Tables S1 and S2 are given the household size of all groups of households for the rural and urban sector respectively. At the all-India level, the average household size of an urban household belonging to any group is less than its rural counterpart. At the state level, though it is generally true for SC, ST and other households, there are a number of states where the average size of so households in rural areas is markedly less than the corresponding urban size. These states, with their rural and urban sizes within bracket, are Assam (4.90, 5.41), Gujarat (4.80, 5.69) and Pondicherry (4.41, 5.32). In the case of ST such states are Manipur (4.83, 5.40) and Mizoram (4.50, 4.67). For other households, however, there is no such state where the urban household size is markedly greater than the rural household size.

5.2 In the rural area, the state with average household size greater than 5 for SC households are Jammu & Kashmir (5.85), Haryana (5.68), Kerala (5.24), Punjab (5.20), Rajasthan (5.17), Karnataka (5.16),

Delhi (5.07) and West Bengal (5.01). For the ST households in rural areas, states with average household size greater than 5 are Delhi (6.34), Assam (5.73), Andaman & Nicobar Islands (5.66), Karnataka (5.52), Gujarat (5.36), Dadra & Nagar Haveli (5.31) and Madhya Pradesh (5.26).

5.3 In case of urban areas, states in respect of SC households reporting average size more than 5 are Gujarat (5.69), Assam (5.41), Pondicherry (5.32), Chandigarh (5.26), Maharashtra (5.22), Delhi (5.15), Rajasthan (5.14), Haryana and Madhya Pradesh (5.03

each). In case of ST households, the state Manipur (5.40) has the household size above 5.

5.4 In the urban sector, for SC households, Andhra Pradesh (3.84), West Bengal (4.19), Karnataka (4.25) and Himachal Pradesh (4.47) and Bihar (4.72) are states reporting smaller household size. For the ST households, the corresponding states are Andaman & Nicobar (3.60), Nagaland (3.39) and Sikkim (3.32). Barring a few exceptions, the average size of a SC or a ST household is, in general, less than that of other households.

TABLE—SI: AVERAGE NUMBER OF PERSONS PER HOUSEHOLD BY HOUSEHOLD GROUP: RURAL

state/union territory	average number of persons per household			
	scheduled caste	scheduled tribe	others	all
(1)	(2)	(3)	(4)	(5)

32. All-India	4.75	4.34	4.84	4.81

5.5 *Monthly per capita consumer expenditure (MPCE)*: The average monthly per capita consumer expenditure (Rs.) for the different groups of households have been shown in Tables S3 and S4, for the rural and urban sectors respectively. In both the sectors, it is found that the MPCE for 'other' households of any state/union territory is higher than the corresponding MPCE of SC and ST households; only exception being Delhi (rural) where the MPCE of SC households is higher than that of ST households and all households. With regard to MPCE, SC has a little edge over ST in a large number of states and ST reported higher MPCE in the others. At all-India rural level, compared to the MPCE of Rs. 112/- the corresponding amounts are Rs. 94/- (78 per cent), Rs. 87/- (72 per cent) and Rs. 120/- (107 per cent) respectively for the SC, ST and the residual group of population. The relative position of the three groups of population with respect to their MPCE in the urban

areas, as may be observed from Table S4, is not much different from that of the rural; the only apparent difference is that the level of MPCE is marginally higher for ST, and both for SC and ST the MPCE is less than 80 per cent of that for the residual population group.

5.6 In the rural sector, within the SC households, some of the states showing comparatively high MPCE (in rupees within brackets) are Delhi (229), Andaman & Nicobar Island (151), Punjab (132), Himachal Pradesh (126), and Chandigarh (117). In case of ST households such states are Andaman & Nicobar Island (146), Delhi (129), Goa, Daman & Diu (124), and Manipur (122). For all households, Delhi (209), Chandigarh (199), Punjab (170), Goa, Daman & Diu (169), Andaman & Nicobar Island (157) and Himachal Pradesh (150) are some of the states showing high per capita expenditure.

5.7 In the urban sector, states showing high per capita expenditure in respect of SC households are Sikkim (204), Chandigarh (195), Himachal Pradesh (187), Punjab & Gujarat (146 each) and Haryana (144); for ST households are Sikkim (268), Mizoram (191), and Nagaland (186); and for all households such states are Chandigarh (290), Himachal Pradesh (257), Andaman & Nicobar Island (241), Delhi (230), Sikkim and Goa, Daman & Diu (223 each), Nagaland (196) and Mizoram (192).

5.8 At the lower end of the scale are the states of Andhra Pradesh, Karnataka, Bihar, Orissa, Madhya Pradesh, Maharashtra and West Bengal, where per capita expenditure of a scheduled caste or scheduled tribe households lies below Rs. 1000/-, in rural sector. In the urban sector, none of the state reported such a low MPCE. In respect of all household combined, in the rural sector, the states of Bihar, Orissa, Dadra & Nagar Haveli and Pondicherry have per capita expenditure less than Rs. 100/-. In the urban sector, the minimum per capita expenditure is Rs. 138/- in Uttar Pradesh and Manipur.

5.9 Proportion of expenditure on food : In Tables S5 and S6 are shown the percentage of expenditure on food items to total consumer expenditure by states for rural and urban areas. It is seen that the percentage of consumption expenditure on food items for all household is very high in both rural and urban areas of the states of West Bengal (73.94, 60.90) Orissa (73.72, 65.13), Bihar (73.63, 66.10), Assam (73.37, 63.77) and Manipur (71.38, 71.56). In the urban sector, Nagaland (64.64), Jammu & Kashmir (64.00) and Gujarat (61.75) have also high percentage of expenditure on food.

5.10 In both rural and urban areas, are percentage of expenditure on food for SC households (67.08, 62.05) and ST households (70.12, 62.95) are higher than the all-India average for all households (65.56, 58.69). In the urban areas, though the percentage of expenditure on food for the former two groups of households are higher than that for the general households, the respective percentages for the two groups, however, are of the same order.

TABLES 3: AVERAGE MONTHLY PER CAPITA CONSUMER EXPENDITURE BY HOUSEHOLD GROUP: RURAL

state/union territory	value (Rs.) of total consumption per person for 30 days			
	scheduled caste households	scheduled tribe households	other households	all households

32. All India	62.05	62.95	58.69

5.11 *Pattern of consumer expenditure for the social groups, rural*: It has already been observed that the average MPCE for SC and ST is less than that for the total population. So, it is worth studying the consumer expenditure pattern presented in Table 7 of the different population groups. The all-India rural MPCE's on cereals for all the groups are very close. Expenditure on most of the food groups, including cereals is the highest for the total population, but the differences are usually small. The MPCE on cereal substitutes is the highest for the scheduled tribes and expenditure on salt is almost identical for all the three groups. The average MPCE on milk and milk products of Rs. 8.50 for the all-India rural population is more than double of that for SC and much higher than the corresponding expenditure for ST. Expenditure on pulse and products, edible oil, fruits and nuts, vegetables, sugar and beverages are also higher for the total population.

5.12 Larger differences are observed for the non-food items. Though marginally, the expenditure on pan, tobacco and intoxicants is the highest for ST and the lowest for the total population. The expenditure on fuel and light is the highest for the total population and the lowest for ST. The observed difference is of much higher order for clothing. Whereas the MPCE on clothing for the total population is Rs. 9.64, it is only Rs. 6.90 and Rs. 5.65 respectively for SC and ST. Similarly, the average MPCE of Rs. 14.06 on miscellaneous goods and services for the total population is perceptibly higher than the corresponding expenditures of Rs. 11.04 and Rs. 7.61 for SC and ST. The expenditure for the total population is again the highest for footwear and durable goods.

5.13 The validity of the comparison would depend on certain issues. The major factors could be (1) consumption out of free collection (2) extent of barter purchase and proper evaluation of the commodities received through barter purchase and consumer; and (3) extent of consumption out of home produced stock and its evaluation. It is well known that most of the tribal pockets in India are forest infested areas and in their living, exploitation of forest and free collection of forest products makes a substantial contribution. Proper evaluation of consumption of such freely collected products may not be an easy task. Similarly, barter purchase by exchanging commodities, is reported to be common in certain areas. Evaluation of the commodities bartered at prevailing price in the local market as difficult for such non-monetised transaction as, 'local market' may be quite at a distance from the forest infested localities. Moreover, if a significant part of the consumption of primary products

is made out of home produce, which has to be evaluated at ex-farm price, the real consumption could be more than what could be purchased from the market by spending the reported amount. Life style is likely to be similar for the population in the higher expenditure brackets and therefore, the observed differences in the consumer expenditure pattern of the different groups of population, in the top expenditure class should be closer to the real differences.

5.14 *Pattern of consumer expenditure for the social groups in the MPCE class of Rs. 300 and above; all-India rural*: It is seen from Table 7 that the average MPCE for the three groups of population in the top expenditure class is close to Rs. 450/- and the corresponding amount of Rs. 437/- for ST is the lowest of the three. The percentages of population in that expenditure class to the respective total population are 3.46, 2.74 and 3.47 for SC, ST and the total population respectively. The pattern of consumption of SC and ST population, in this expenditure bracket, unlike that for the total population of those social groups, exhibit close similarity to that of the total population. For most of the item groups, the MPCE of either SC or ST is higher than the corresponding MPCE of the total population.

5.15 In the top expenditure class, the average MPCE is the lowest (Rs. 437/-) and MPCE on food is the highest (Rs. 208/-) for ST. Relatively higher expenditure is reported for SC and ST population on cereals, edible oil and meat, egg and fish. Expenditure on edible oil is much higher for ST. Compared to the MPCE's on milk and fruits for the total population, the SC and ST population has substantially lower expenditure per capita on these items. Among the non-food item groups, SC and ST spend larger amount on pan, tobacco, intoxicants. It is further observed that the MPCE on fuel and light is of the order of Rs. 17/- for all the three groups of population being studied. Close similarity in the expenditure pattern in other non-food items for the three groups of population is noticed. However, the reported expenditure on durable goods by ST is again perceptibly lower.

5.16 *Pattern of consumer expenditure for the social groups, urban*: The pattern of consumer expenditure pertaining to the SC and ST and to the total population of the urban areas of the country is shown in Table S8. Broadly, the deviations in the consumer expenditure pattern of SC and ST, compared to that of the total population, in the urban areas are similar to those obtaining in the rural areas. In value terms,

the average MPCE in the urban areas is nearly one and half times of that in the rural areas, for ST and the total population. For SC, the corresponding proportion is 1.36.

5.17 *Pattern of consumer expenditure for the social groups in the MPCE class of Rs. 300 and above; all-India urban*: While more than 9 per cent of the total population belonging to the MPCE class of

Rs. 300/- above, the corresponding proportions for SC and ST are 3.49 and 4.41 per cent respectively. The average total MPCE in that class for the total population and the population belonging to SC and ST are Rs. 466/-, Rs. 435/- and Rs. 425/- respectively. Agreement and dissimilarities among the MPCEs on different groups of items for the three population groups in the urban areas exhibit close similarity with those of the rural areas.

SECTION SIX

COMPARABILITY OF 1981 CENSUS COUNT AND NSS ESTIMATES OF SCHEDULED CASTE AND SCHEDULED TRIBE POPULATION

6.0 Generally, the proportions of scheduled caste

and scheduled tribe population of the NSS 38th round, compared to those of the Census 1981, turned out to be higher. In the NSS, a simple question is asked to ascertain whether the head of the household belongs to scheduled caste or scheduled tribe, and entries are made in the survey schedule on the basis of the res-

response to the question. That is, if the respondent says that he is a 'harijan' or he is an 'adivasi', the household is labelled accordingly. But in census, no entry is made before the name of the caste or tribe is ascertained. The reported name of the caste or tribe is compared with the list of the scheduled caste/tribe of the state. If the name declared by the informant is found in the schedule, then only the person is considered as one belonging to scheduled caste/scheduled tribe. From operational point of view, the census definition is definitely framed on a more objective basis. Hence, the difference in the estimates of the proportion is not altogether unexpected. Sampling error apart, some amount of response bias in NSS may not also be ruled out.

6.1 *Growth of scheduled caste population* : In spite of the effort given in enumerating the scheduled caste and scheduled tribe population, the intercensal growth of 40% for scheduled tribe for the decade of 1971—1981, compared to the increase of only 25% for the total population, was significantly higher. The extent of growth, perhaps, can not be explained by the growth due to natural increase alone. At least, a part of the difference might be due to the difference in the 'listed class' used in the two censuses. In census 1981, each enumerator was furnished with a list of scheduled caste and scheduled tribe in relation to his state/union territory as notified under the scheduled caste and scheduled tribe orders (Amendment) Act 1976, and other relevant Acts and Orders.

TABLE—6.1 : AVERAGE INTERCENSAL GROWTH OF SCHEDULED CASTE, SCHEDULED TRIBE AND TOTAL POPULATION BETWEEN THE YEARS 1971 AND 1981

3. percentage increase in ten years (1971—1981)	32.45	41.80	25.00
4. mean annual geometric growth rate (percentage)	2.85	3.55	2.26
5. mean annual exponential growth rate (percentage)	2.81	3.49	2.23

SOURCE : - (a) Census of India 1981, Series 1, India Part-II-B(II) primary census abstract, Scheduled Caste,
(b) *ibid* Part-II-B (iii) : Primary Census Abstract, Scheduled Tribe.

It is also mentioned in the Census report that no tribe was scheduled by the President of India for Haryana, J & K, Punjab, Chandigarh, Delhi and Pondicherry and hence those State/Union Territories did not figure in the Census tables. But it is observed from the NSS 38th round survey results that a small proportion of population reported to be belonging to scheduled tribe in Haryana, J & K and Punjab. This might be due to migration of scheduled tribe population in those states from other states.

6.2 *Proportion of scheduled caste population* : Table-6.2 shows the proportion of scheduled caste population to total population in rural and urban areas of the states and union territories of India. For rural India, the proportion of scheduled caste population is 16.79 per cent according to 1981 census and the corresponding NSS 38th round estimate of 17.97 per cent is a little higher. By and large, the proportion of

scheduled caste population, derived from the NSS survey data are in agreement with the proportions obtained from the 1981 census enumeration data. The difference between the proportions is however very large for rural Pondicherry : 34 per cent according to NSS and only 22 per cent from census. Large difference is also observed for Delhi rural and urban. More than 20 per cent of rural population belong to scheduled caste in rural areas of Haryana, Himachal Pradesh, Punjab, Tamil Nadu, Uttar Pradesh, West Bengal, Chandigarh, Delhi and Pondicherry. States having high proportion of scheduled caste population in rural areas, are also found to contain high proportion of them in the urban areas as well, but the urban proportions are usually much lower than the corresponding rural proportions. Exceptions are Gujarat, Sikkim and Goa, Daman & Diu, where the proportions of scheduled caste population is higher in urban than those in the respective rural areas, according to the 1981 census and NSS 38th round.

6.3 *Proportion of scheduled tribe population* : The proportions of scheduled tribe population to total population derived from 1981 census and NSS 38th round are presented in Table 6.3. Both in the rural and urban areas, the NSS proportions are a little bit higher than the corresponding proportions obtained from the census counts. Only a small proportion of population of urban areas belong to scheduled tribe

(2-3 per cent) whereas about 10 per cent of the rural population belong to scheduled tribe. Excepting for a few smaller states, the proportions from NSS and Census are in good agreement in rural and urban areas. For Madhya Pradesh, where there is large concentration of scheduled tribe population of about 30 per cent, the difference between the census and NSS is of the order of 5 per cent.

SECTION SEVEN

CONSUMPTION PATTERN OF DIFFERENT GROUPS OF POPULATION

7.0 Consumption expenditure surveys for specific groups of population has seldom been carried by the NSS. Surveys on consumption habits of agricultural labour households were collected in the first two agricultural labour enquiries and subsequently in the rural labour enquiries, a survey of the weaker sections of the population, consisting of two identifiable groups rural labour enquiries. In between the two rural

viz., the small cultivator and non-cultivating wage earner households, was carried out.²

7.1 Since the NSS 27th round (1972-73), surveys on consumer expenditure and employment and unemployment are being conducted, at five yearly intervals, on a large scale. In these surveys, some auxiliary information relating to the sample households like, area of land possessed, the type of household by the nature of gainful activities pursued by the household members (from among the particular activity which fetches the largest share of income, denotes the type),

¹The First All-India Agricultural Labour Enquiry (ALE) was conducted in 1950-51 and the Second ALE in 1956-57.

²The First Rural Labour Enquiry (RLE) was conducted by the NSS in two parts—the first part was done during February 1963—January 1964 and the Second part in October 1964—September 1965 and the Second RLE was conducted in 1974-75.

³Survey of the Economic Condition of the Weaker Sections—NSS 25th Round, 1970-71.

whether the household belongs to scheduled caste/scheduled tribe, and some other particulars are also collected. These auxiliary information have been used to classify households into various sets of identifiable groups with a view to study the consumption pattern of the different population groups. Though results for sectional population were made available to the users of NSS data, this is for the first time in NSS that a report on consumer expenditure relating to two listed groups of population viz., scheduled caste and scheduled tribe is released.

7.2 The purpose of introducing this Appendix to the report is to bring together the data on consumer expenditure relating to different sections of population in the rural sector of the country, some of which were earlier released through a number of NSS reports. Such results are available for the 'small cultivator' and 'non-cultivating wage earner' households which were surveyed separately in the NSS 25th round (1970-71). The survey results are available for each of these two groups separately and also for the total population.¹ Similarly, results are also available for the 'cultivator' (NSS 26th round 1971-72)², 'self-employed in agriculture', 'agricultural labour' and 'rural labour' (NSS 38th round 1983). All these available results on consumption pattern of different sections of population have been put together which can lead to tentative suggestions about their similar and distinctive features in the pattern of consumer expenditure.

7.3 *Concentration ratios for per capita consumer expenditure* : The concentration ratio (CR) of per capita consumer expenditure, average monthly per capita expenditure and the percentage share of the total consumer expenditure by the top and bottom decile groups of population, for various segments of the rural population of India are presented in Table 7.1. At the all-India level, in the rural sector, the CR of .297 for the total population in NSS 38th round (1983) is slightly higher than the CR of .283 for the total population in NSS 25th round (1970-70). It may also be observed from the table that the CR of any section of the population is less than that for the total population. The CR values of the different segments of population can not, however, be considered to be small and those indicate considerable inequality within the groups as well. The high CR value of .293 for

self employed in agriculture (38th round) is not unexpected as it covers the whole spectrum—from the marginal cultivators to the big farmers. Although, it is well known that all the other groups of population (shown in the table) belong to the weaker sections, the values of the index of inequality are not all too small. Of all the groups, the agricultural labour households of the NSS 38th round show the lowest CR value of 0.254, which is very close to the CR value of 0.255 for small-cultivators (NSS 25th round). The rural labour households has a higher CR of 0.263 although, about 80 per cent of them are agricultural labour households. Non-cultivating wage earner households (NSS 25th round), scheduled caste and scheduled tribe households have very close CRs of 0.275, 0.273 and 0.274 respectively.

7.4 *Average monthly per capita expenditure* : The average monthly per capita expenditure (MPCE) in the rural areas of India for the total population at current prices was Rs. 35/- in 1970-71 and Rs. 112/- in 1983. Excepting for the scheduled caste population the reported MPCE's for all other groups is found to be less than 80 per cent of that for the total population. The MPCE of the scheduled caste population was Rs. 94/-, which is 84 per cent of that for the total population. The average MPCE of Rs. 123/- for the population belonging to the households self-employed in agriculture is 109 per cent of the average MPCE of the total population.

7.5 *Total consumer expenditure of the top and bottom decile group* : It is observed from the table that the percentage share of the total consumer expenditure (TCE) for the bottom 10 per cent of the weaker sections of the population is slightly higher than 4 per cent of the respective total population. The top 10 per cent on the other hand, share 21-23 per cent of the TCE for the respective population groups. The bottom decile group of the total population share less than 4 per cent of the total expenditure and the top decile group take a share of 23-24 per cent of it.

7.6 The concentration curves on total consumer expenditure for the various groups of population of rural India are shown in charts 1, 3 and 5. From charts 2, 4 and 6 the percentage of population below any MPCE class limit can be measured directly for the corresponding population group. It may be observed from chart 3, for example, that the lower 50 per cent of the

¹(i) Consumer Expenditure of the Weaker Section of the Rural Population of India, NSS 25th Round, NSS Report No. M232.

(ii) Tables with Notes Consumer Expenditure, NSS 25th Round NSS Report No. 231.

²Consumer Expenditure for Cultivator Households, NSS 26th Round NSS Report No. 239.

³Pattern of Consumer Expenditure of Households Self-employed in Agriculture and of Agricultural and Rural Labour Households, NSS 38th round, NSS Report No. 333 (mimeographed).

population ranked by MPCE belonging to scheduled caste, scheduled tribe and total population have the share of the consumer expenditure of about 31.5 per cent, 31.5 per cent and 29.5 per cent of the total consumer expenditure of the respective groups of population, in the rural areas. Similarly, it may be

seen from chart 4 that the lower 50 per cent (ranked by MPCE) of the scheduled caste, scheduled tribe and total population have a monthly per capita expenditure less than Rs. 82, Rs. 75 and Rs. 89 respectively whereas, the corresponding average MPCE's shown in Section five of the report are Rs. 94, Rs. 87 and Rs. 112.

TABLE-7.1: CONCENTRATION RATIO, AVERAGE MPCE AND PERCENTAGE OF TOTAL CONSUMER EXPENDITURE SHARED BY THE TOP AND BOTTOM DECILE GROUPS OF POPULATION—FOR POPULATION BELONGING TO VARIOUS CATEGORIES OF HOUSEHOLDS—ALL INDIA RURAL

7.7 Pattern of consumer expenditure over time :

The consumer expenditure on broad groups of items as percentage to total consumer expenditure for different groups of households for the rural areas of India is shown in Table-7.2. It is observed that even for the total population there is a perceptible change in the pattern of consumer expenditure over time. The results presented relate to four different points of time covering the period of twelve and a half years from the beginning of 1971 to the mid-point of 1983. While the percentage of expenditure on food was between 72-74 in 1970-71 and 1972-73, it came down to about 65 in 1977-78 and maintained the same level in 1983 also. Similarly, the expenditure on cereals for the earlier two years was nearly 8 percentage points higher as compared to those for the later years. Expenditure on cereals substitutes and gram is also observed to be coming down in proportion, over time. Consumption of miscellaneous goods and services show definite increase in its proportion to total consumer expenditure, with the passage of time. These phenomenal changes over time can not be fully explained by the

4-695 Statistics/88

difference in the change of prices for the two broad groups of commodities, over time and might thus indicate an improvement in the average standard of living in the rural areas of the country. It should be made clear that the above inference is only a tentative one and it would require deeper probing analysis to arrive at a firm conclusion.

7.8 Pattern of consumer expenditure for various groups of population : Compared to the consumer expenditure pattern of the total population, the expenditure on cereals and total food are higher for the weaker sections. While the expenditure on milk and milk-products claimed a share of 7-8 per cent of the TCE for the total population and even a higher proportion of above 9 per cent for cultivators and farmers, the corresponding proportions were much lower for the weaker sections. Proportionately higher expenditure on pan, tobacco and intoxicants are also reported by the weaker sections, being the highest (4.43 per cent) for the scheduled tribe households.

ADDITIONAL 10 TABLES ON THE THIRD
QUINQUENNIAL SURVEY ON EMPLOYMENT
AND UNEMPLOYMENT, SURVEY RESULTS—
'ALL INDIA' (NOTE AND SURVEY RESULTS
ALREADY PUBLISHED IN SARVEKSHANA,
VOL. XI, NO. 4, APRIL 1988, ISSUE NO. 35)

*National Sample Survey Organisation
38th round (January—December 1983)*

LIST OF ADDITIONAL TABLES

(Report on the third quinquennial survey on employment and unemployment) published in Sarvekshana, Vol. XI No. 4, April 1988
(Issue No. 35)

Srl. No.	table no. as in the Survey Results of the report	description
(1)	(2)	(3)
1.	38	Percentage distribution of persons of age 5 and above by usual activity taking also into consideration the subsidiary gainful status of persons categorised 'not working' and sex for each household monthly per-capita expenditure class.
2.	40	Percentage distribution of persons of age 5 and above by sex and usual activity taking also into consideration the subsidiary gainful status of persons categorised 'not working' for each household type.
3.	42	Percentage distribution of persons of age 5 and above by usual activity taking also into consideration the subsidiary gainful status of persons categorised 'not working' and sex for each household religion.
4.	44	Percentage distribution of persons of age 5 and above by usual activity taking also into consideration the subsidiary gainful status of persons categorised 'not working' and sex for each household 'and cultivated class.
5.	46	Percentage distribution of persons of age 5 and above by usual activity taking also into consideration the subsidiary gainful status of persons categorised 'not working' and sex for each marital status.
6.	48	Percentage distribution of persons of age 5 and above by usual activity taking also into consideration the subsidiary gainful status of persons categorised 'not working' and sex for each age-group.
7.	49/1	Percentage distribution of 'working' persons of age 5 and above by sector (industry) of usual activity taking also into consideration the subsidiary gainful status of persons categorised 'not working' and sex for each age-group.
8.	51	Percentage distribution of persons of age 15 and above by usual activity taking also into consideration the subsidiary gainful status of person categorised 'not working' and sex for each education category.
9.	55	Percentage distribution of persons of age 5 and above by current weekly activity for each usual activity taking also into consideration the subsidiary gainful status of persons categorised 'not working'.
10.	57	Percentage distribution of person-days per day of persons of age 5 and above by current daily activity for each usual activity taking also into consideration the subsidiary gainful status of persons categorised 'not working'.

अनुसूचित जाति एवं अनुसूचित जनजाति परिवारों के उपभोक्ता व्यय पैटर्न संबंधी एक टिप्पणी

निष्कर्षों का सारांश

0. इस खंड में परिवारों के विभिन्न समूहों के उपभोग पैटर्न की एक तुलनात्मक तस्वीर प्रस्तुत करने के लिए सर्वेक्षण के कुछ महत्वपूर्ण निष्कर्षों पर चर्चा की गई है। भारत की 1981 की जनगणना के अनुसार कुल जनसंख्या की तुलना में अनुसूचित जाति और अनुसूचित जनजाति का अनुपात क्रमशः 15:32 प्रतिशत और 7.55 प्रतिशत है तथा रा० प्र० सर्वे के 38वें दौर सर्वेक्षण के अनुपातों के तदनु रूपी अनुमान 16.66 प्रतिशत और 8.50 प्रतिशत है। रा० प्र० सर्वे के 38वें दौर सर्वेक्षण से यथा अनुमानित विभिन्न राज्यों में अनुसूचित जाति एवं अनुसूचित जनजाति जनसंख्या के भागों की रिपोर्ट की परिशिष्ट-क में 1981 की जनगणना में संबंधित जनसंख्या के साथ तुलना की गई है।

1. परिवार का औसत आकार : सारणी एस० 1 और एस० 2 में क्रमशः ग्रामीण एवं शहरी क्षेत्र के सभी परिवार समूहों के परिवार आकार दिए गए हैं। अखिल भारतीय स्तर पर किसी समूह से संबंधित शहरी परिवार का औसत परिवार आकार अपने ग्रामीण प्रतिस्थानी से कम है। राज्य स्तर पर यद्यपि अनुसूचित जाति, अनुसूचित जनजाति और अन्य परिवारों के संबंध में सामान्यतः यह सत्य है फिर भी अनेक ऐसे राज्य हैं जहां ग्रामीण क्षेत्रों से अनुसूचित जाति परिवारों का औसत आकार तत्संबंधी शहरी आकार से खासा कम है। कोष्ठकों में दिए गए उनके ग्रामीण एवं शहरी आकारों वाले वे राज्य असम (4.90, 5.41), गुजरात (4.80, 5.69) तथा पांडिचेरी (4.41, 5.32) हैं। अनुसूचित जनजाति के मामले में ऐसे राज्य मणिपुर (4.83, 5.40) और मिजोरम (4.50, 4.67) हैं। फिर भी अन्य परिवारों के संबंध में ऐसा कोई राज्य नहीं है जहां शहरी परिवार आकार ग्रामीण परिवार आकार से सुस्पष्ट रूप से अधिक हो।

2. ग्रामीण क्षेत्र में अनुसूचित जाति परिवारों के संबंध से 5 से अधिक औसत परिवार आकार वाले राज्य जम्मू व कश्मीर (5.85), हरियाणा (5.68), केरल (5.24) पंजाब (5.20), राजस्थान (5.17), कर्नाटक (5.16), दिल्ली (5.07) और पश्चिम बंगाल (5.01) हैं। ग्रामीण क्षेत्रों से अनुसूचित जनजाति परिवारों के संबंध से 5 से अधिक औसत परिवार आकार वाले राज्य दिल्ली (6.34), असम (5.73), अण्डमान और निकोबार द्वीप समूह (5.66), कर्नाटक (5.52), गुजरात (5.36), दादरा व नागर हवेली (5.31) और मध्य प्रदेश (5.26) हैं।

3. शहरी क्षेत्रों के मामले में 5 से अधिक औसत आकार को सूचित करने वाले अनुसूचित जाति परिवारों से संबंधित राज्य गुजरात (5.69), असम (5.41), पांडिचेरी (5.32) चण्डीगढ़ (5.26), महाराष्ट्र (5.22), दिल्ली (5.15), राजस्थान (5.14), हरियाणा और मध्य प्रदेश (5.03) प्रत्येक है। अनुसूचित जनजाति परिवारों के मामले में मणिपुर राज्य (5.40) का 5 से अधिक परिवार आकार है।

4. शहरी क्षेत्र में अनुसूचित जाति के संबंध में छोटा परिवार आकार सूचित करने वाले राज्य आंध्र प्रदेश (3.84) पश्चिम बंगाल (4.19), कर्नाटक (4.25), हिमाचल प्रदेश (4.47) और बिहार (4.72) हैं। अनुसूचित जनजाति के लिए तत्संबंधी राज्य अण्डमान और निकोबार द्वीप समूह (3.60), नागालैण्ड (3.39) और सिक्किम (3.32) हैं। कुछ अपवादों को छोड़कर एक अनुसूचित जाति अथवा एक अनुसूचित जनजाति परिवार का औसत आकार सामान्य रूप से अन्य परिवारों की तुलना में कम है।

समस्त भारत	4.75	4.34	4.84	4.81

5. प्रति व्यक्ति उपभोक्ता मासिक व्यय—परिवारों के विभिन्न समूहों के संबंध से प्रति व्यक्ति उपभोक्ता औसत मासिक व्यय क्रमशः ग्रामीण और शहरी क्षेत्र के लिए सारणी एस 3 एवं 4 में दर्शाया गया है। दोनों क्षेत्रों में यह पाया गया है कि किसी राज्य/संघ शासित क्षेत्र 'के अन्य' परिवारों के संबंध से प्रति व्यक्ति उपभोक्ता मासिक व्यय अनुसूचित जाति के और अनुसूचित जनजाति परिवारों के तत्संबंधी प्रति व्यक्ति उपभोक्ता मासिक व्यय से अधिक है, एक मात्र अपवाद दिल्ली (ग्रामीण) का है जहां अनुसूचित जाति परिवारों का प्रति व्यक्ति उपभोक्ता मासिक व्यय अनुसूचित जनजाति परिवारों और सभी परिवारों से अधिक है। प्रति व्यक्ति उपभोक्ता मासिक व्यय के संबंध में अनुसूचित जाति परिवारों का व्यय अधिकांश राज्यों में अनुसूचित जनजाति परिवारों की तुलना में थोड़ा सा अधिक है और अन्य राज्यों में अनुसूचित जनजाति परिवारों का प्रति व्यक्ति उपभोक्ता मासिक व्यय अधिक बताया गया। अखिल भारतीय ग्रामीण स्तर पर 112 रुपए प्रति व्यक्ति उपभोक्ता मासिक व्यय की तुलना में अनुसूचित जाति, अनुसूचित जनजाति और जनसंख्या के शेष समूह के संबंध में तदनु रूप क्रमशः 94 रुपए (78 प्रतिशत), 87 रुपये (72 प्रतिशत) तथा 120 रुपए (107 प्रतिशत) है। जैसा कि सारणी एस 4 से देखा जा सकता है कि शहरी क्षेत्रों में उनके प्रति व्यक्ति उपभोक्ता मासिक व्यय के बारे में जनसंख्या के तीनों समूहों की संबंधित स्थिति ग्रामीण क्षेत्र में अधिक भिन्न नहीं है, प्रत्यक्ष अन्तर केवल यह है कि प्रति व्यक्ति उपभोक्ता मासिक व्यय का स्तर अनुसूचित जनजाति के लिए सीमान्त रूप से अधिक है तथा अनुसूचित जाति एवं अनुसूचित जनजाति दोनों के संबंध में प्रति व्यक्ति उपभोक्ता मासिक व्यय शेष जनसंख्या समूह के 80 प्रतिशत से कम है।

6. ग्रामीण क्षेत्र में अनुसूचित जाति परिवारों में तुलनात्मक रूप में उच्च प्रति व्यक्ति उपभोक्ता मासिक व्यय (कोष्ठकों के अंदर रुपए में) दशनि वाले कुछ राज्य दिल्ली (229), अण्डमान और निकोबार द्वीप समूह (151), पंजाब (132), हिमाचल प्रदेश (126), तथा चण्डीगढ़ (117) है। अनुसूचित जनजाति परिवारों के मामले में ऐसे राज्य अण्डमान और निकोबार द्वीपसमूह (146), दिल्ली (129), गोवा दमन व दीव (124) तथा मणिपुर (122)। सभी परिवारों के संबंध में दिल्ली (209) चण्डीगढ़ (199), पंजाब (170), मोजा, दमन व दीव (169) अण्डमान और निकोबार द्वीपसमूह तथा हिमाचल प्रदेश जैसे कुछ राज्य उच्च प्रति व्यक्ति व्यय, दर्शाते हैं।

7. शहरी क्षेत्र में अनुसूचित जाति परिवारों के संबंध में उच्च प्रति व्यक्ति व्यय दर्शाने वाले राज्य सिक्किम (204), चण्डीगढ़ (195), हिमाचल प्रदेश (187), पंजाब और गुजरात (146) प्रत्येक तथा हरियाणा (144), अनुसूचित जनजाति परिवारों के लिए सिक्किम (268), मिजोरम (191) तथा नागालैण्ड (186) और सभी परिवारों के लिए ऐसे राज्य चण्डीगढ़ (290), हिमाचल प्रदेश (257), अण्डमान और निकोबार द्वीप समूह (241), दिल्ली (230), सिक्किम और गोवा दमन व दीव (223) प्रत्येक, नागालैण्ड (196) तथा मिजोरम (192) है।

8. मापक्रम के निचले स्तर पर आन्ध्र प्रदेश कर्नाटक, बिहार, उड़ीसा, मध्य प्रदेश, महाराष्ट्र और पश्चिम बंगाल आते हैं। जहां ग्रामीण क्षेत्र में अनुसूचित जाति अथवा अनुसूचित जनजाति परिवारों का प्रति व्यक्ति व्यय 100/- रुपए से कम पड़ता है। शहरी क्षेत्र में किसी ने भी इतना कम प्रति व्यक्ति व्यय सूचित नहीं किया। शहरी क्षेत्र में संयुक्त रूप से सभी परिवारों के संबंध में बिहार, उड़ीसा, दादरा, नागर हवेली और पांडिचेरी राज्यों का प्रति व्यक्ति व्यय 100/- रुपए से कम है। शहरी क्षेत्र में प्रति व्यक्ति न्यूनतम व्यय उत्तर प्रदेश और मणिपुर में 138/- रुपए है।

9. भोजन पर व्यय का अनुपात सारणी एस 5 और एस 6 में ग्रामीण और शहरी क्षेत्रों के लिए राज्यों के अनुसार कुल उपभोक्ता व्यय की तुलना में खाद्य मदों पर व्यय की प्रतिशतता दर्शाया गई है। यह देखा गया है कि सभी परिवारों के लिए खाद्य मदों पर उपभोक्ता व्यय की प्रतिशतता पश्चिम बंगाल (73.94 60.90), उड़ीसा (73.73, 65.13), बिहार (73.63, 66.10), असम (73.37, 63.77) और मणिपुर (71.38 71.56) राज्यों के ग्रामीण एवं शहरी दोनों क्षेत्रों में बहुत ऊंची है। नागालैण्ड (64.64) जम्मू व कश्मीर (64.00) और गुजरात (61.75) के शहरी क्षेत्र में खाद्य पर व्यय की प्रतिशतता भी अधिक है।

10. ग्रामीण एवं शहरी दोनों क्षेत्रों में अनुसूचित जाति परिवारों (67.08, 62.05) और अनुसूचित जनजाति परिवारों (70.12, 62.95) के लिए खाद्य पर व्यय की प्रतिशतता सभी परिवारों (65.56, 58.69) के संबंध में अखिल भारतीय औसत की अपेक्षा अधिक है। शहरी क्षेत्रों में परिवार के पहले दो समूहों के लिए खाद्य पर व्यय की प्रतिशतता यद्यपि सामान्य परिवारों की अपेक्षा अधिक है फिर भी दो समूहों की संबंधित प्रतिशतताएं उसी क्रम में हैं।

11 सामाजिक वर्ग के लिए उपभोग व्यय का प्रतिरूप : ग्रामीण जैसा पहले ही देखा जा चुका है कि अनुसूचित जातियों और जनजातियों के लिए औसत प्रति व्यक्ति मासिक व्यय कुल आबादी के लिए किए गए व्यय से कम है। इसलिए सारणी 7 में प्रस्तुत किए गये विभिन्न जनसंख्या समूहों के उपभोक्ता व्यय प्रतिरूप का अध्ययन महत्वपूर्ण है। समस्त समूहों के लिए अनाजों के बारे में अखिल भारतीय ग्रामीण प्रतिव्यक्ति मासिक व्यय बहुत सीमित है। अनाजों को शामिल करते हुए अधिकांश खाद्य समूहों पर होने वाला व्यय संपूर्ण आबादी के लिए अधिकतम है परन्तु इनमें अन्तर प्रायः मामूली है। अनुसूचित जनजातियों के लिए अनाज के प्रतिस्थापनों पर प्रति व्यक्ति मासिक व्यय अधिकतम है इन समस्त तीनों समूहों के लिए नमक पर होने वाला व्यय लगभग समान ही है। अखिल भारतीय ग्रामीण आबादी के लिए 8.50 रुपये के दूध तथा दूध उत्पाद पर प्रति व्यक्ति औसत मासिक व्यय अनुसूचित जातियों के लिए दुग्ध से भी अधिक है तथा अनुसूचित जनजातियों के लिए यहीं व्यय बहुत अधिक है। दालों एवं उत्पादों, खाद्य तेल, फल एवं मेवे, सब्जियां, चीनी एवं पेय पदार्थों पर होने वाले खर्च भी कुल आबादी के लिए बहुत अधिक है।

12. खाद्य मदों के लिए बहुत अधिक अन्तर पाये गए। यद्यपि न्यूनतम रूप में, पान, तम्बाकू एवं नशीले द्रव्यों पर होने वाला यह व्यय अनुसूचित जनजातियों के लिए अधिकतम है तथा कुल आबादी न्यूनतम है। ईंधन एवं बिजली पर होने वाला व्यय कुल आबादी के लिए अधिकतम है तथा अनुसूचित जनजातियों के लिए न्यूनतम है। चूंकि कुल आबादी के लिए परिधान पर प्रतिव्यक्ति मासिक खर्च 9.64 रुपए है, खर्च अनुसूचित जाति एवं अनुसूचित जनजाति के लिए क्रमशः 6.90 रुपए तथा 5.65 रुपए है। इसी प्रकार कुल आबादी के लिए विविध माल एवं सेवाओं पर 14.06 का औसत प्रति व्यक्ति मासिक व्यय अनुसूचित तथा अनुसूचित अनुसूचित जनजाति के लिए प्रत्यक्ष रूप से 11.04 रुपए तथा 7.61 रुपए के तदनुवर्ती व्यय से अपेक्षाकृत अधिक है कुल आबादी के लिए यह व्यय जूतों एवं टिकाऊ माल के लिए पुनः अधिकतम रहा।

13. तुलना यह की मान्यता कुछ खास विषयों पर निर्भर थी। प्रमुख तथा निम्नलिखित हो सकते थे (1) निःशुल्क संग्रहण के कारण खपत (2) वस्तुविनिमय से की गई खरीद का विस्तार तथा वस्तु विनिमय से की गई खरीद के माध्यम से प्राप्त तथा उपभोग की गई वस्तुओं का सही मूल्यांकन तथा (3) गृह उत्पादों के स्टाल के उपभोग विस्तार एवं उनका मूल्यांकन यह सर्वविदित है कि भारत में कबीलों के अधिकांश अंतर निवास जंगली समस्याओं से ग्रस्त क्षेत्र के हैं तथा उनके रहन-सहन में, वन के दोहन तथा वनोत्पादों का निःशुल्क संग्रहण का पर्याप्त योगदान है। इस प्रकार के निःशुल्क संग्रहीत उत्पादों की खपत का समुचित मूल्यांकन एक सरल कार्य नहीं है। इसी प्रकार वस्तुओं के विनिमय द्वारा वस्तु विनिमय कुछेक क्षेत्रों में समान बताया गया है। इस प्रकार के

गैर मुद्रीकृत मामले में स्थानीय विपणन केन्द्रों में पूर्ववर्ती मूल्य पर वस्तुओं के वस्तु विनिमय का मूल्यांकन कठिन है क्योंकि स्थानीय विपणन जंगल को समस्याओं से ग्रसित बस्तियों से पर्याप्त दूरी पर हो सकते हैं। इनके अतिरिक्त प्रमुख उत्पादकों की खपत का एक महत्वपूर्ण भाग गृह उत्पादों से तैयार किया जाता है जैसे कि पूर्ण कृषि मूल्य के आधार पर मूल्यांकित किया जाना होता है, वास्तविक खपत बताई गई राशि को खर्च करके बाजार से खरीदे जा सकने वाले माल से अधिक हो सकता था। अधिक व्यय वाले समूहों में लोगों के लिए जीने का तरीका भी सम्भवतः एक जैसा ही है तथा इसलिए आबादी के विभिन्न समूहों के इस उपभोक्ता व्यय के पैटर्न में पाए गए अन्तरों का अधिकतम व्ययवर्ग में वास्तविक अन्तरों से धनिष्ठ संबंध होना चाहिए।

14. 300 रुपये तथा उससे अधिक प्रतिव्यक्ति मासिक व्यय वर्ग में सामाजिक वर्ग के लिए उपभोक्ता व्यय पैटर्न, समस्त भारत ग्रामीण: सारणी 7 में यह देख गया है कि इस अधिकतम व्यय वर्ग में आबादी के इन तीनों समूहों के लिए औसत प्रति व्यक्ति मासिक व्यय 450 रुपए के लगभग है तथा अनुसूचित जनजातियों के लिए 437 रुपए की यह तदनुसार राशि तीनों से कम है। कुल आबादी के लिए अलग-अलग व्यय वर्ग में आबादी की यह प्रतिशतता अनुसूचित जाति, अनुसूचित जनजाति तथा कुल आबादी के लिए क्रमशः 3.46, 2.74 तथा 3.47 हैं। इस व्यय समूह में अनुसूचित जाति एवं अनुसूचित जनजाति के लोगों के उपभोग का यह पैटर्न सामाजिक समूहों की खस कुल आबादी से भिन्न है जो कुल आबादी से अत्यधिक समानता दर्शाता है। अधिकांश मद समूहों के लिए अनुसूचित जाति अथवा अनुसूचित जनजाति के लिए यह प्रति व्यक्ति मासिक व्यय कुल आबादी के तदनुवर्ती प्रतिव्यक्ति मासिक व्यय से अपेक्षाकृत अधिक।

15. शीर्षस्थ व्यय श्रेणी में औसत मासिक प्रति व्यक्ति उपभोक्ता व्यय सबसे कम (437 रु०) है तथा अनुसूचित जनजाति द्वारा खाद्य पर सबसे अधिक (208 रु०) है। अनाज खाद्य तेल, और मांस अण्डे तथा मछली पर अनुसूचित जाति तथा जनजाति के बारे में अपेक्षाकृत अधिक व्यय सूचित किया गया है। खाद्य तेल पर अनुसूचित जाति द्वारा किया गया व्यय कुछ अधिक था। कुल संख्या दूध तथा फलों पर मासिक प्रतिव्यक्ति उपभोक्ता व्यय की तुलना में अनुसूचित तथा अनुसूचित जाति जनसंख्या ने इन वस्तुओं पर प्रति व्यक्ति मूलतः कम व्यय किया। गैर खाद्य वस्तु वर्गों पर अनुसूचित जाति तथा अनुसूचित जनजाति द्वारा पान, तम्बाकू, मादक द्रव्यों पर एक बड़ा भाग व्यय किया गया। यह पाया गया कि जनसंख्या के सभी तीनों वर्गों द्वारा ईंधन तथा प्रकाश पर मासिक प्रतिव्यक्ति उपभोक्ता व्यय 17/रु० है जिस पर अध्ययन किया जा रहा है। जनसंख्या के इन तीनों वर्गों के बारे में अन्य गैर खाद्य वस्तु व्यय ढांचे में अत्यधिक समानता

पायी गयी है। तथापि अनुसूचित जाति द्वारा टिकाऊ वस्तुओं पर बताया व्यय स्पष्टतः कम है।

16 सामाजिक वर्ग संबंधी उपभोक्ता व्यय प्रतिरूप; शहरी:

देश के शहरी क्षेत्रों की अनुसूचित जाति तथा अनुसूचित जनजाति एवं कुल जनसंख्या के बारे में उपभोक्ता व्यय प्रतिरूप सारणी एस० 8 में दी गई है। मोटे तौर पर शहरी क्षेत्रों में कुल जनसंख्या की तुलना में अनुसूचित जाति तथा अनुसूचित जनजाति के उपभोक्ता व्यय प्रतिरूप ग्रामीण क्षेत्रों में प्राप्त किए गए प्रतिरूपों के समान ही हैं। अनुसूचित जनजाति तथा कुल जनसंख्या के बारे में शहरी क्षेत्रों में मूल्य के हिसाब से औसत मासिक प्रति व्यक्ति उपभोक्ता व्यय ग्रामीण क्षेत्रों के मुकाबले में करीब डेढ़ गुणा है। अनुसूचित जाति के मामले में तदनुसूची अनुपात 1.36 है।

17-300 रु० तथा ऊपर के मासिक प्रति व्यक्ति उपभोक्ता व्यय श्रेणी में सामाजिक वर्गों संबंधी उपभोक्ता व्यय प्रतिरूप, अखिल भारत शहरी:

जबकि 300 रु० तथा ऊपर के मासिक प्रतिव्यक्ति उपभोक्ता व्यय श्रेणी की कुल जनसंख्या का 9 प्रतिशत से अधिक है अनुसूचित जाति तथा अनुसूचित जनजाति का तदनुसूची अनुपात क्रमशः 3.49 प्रतिशत तथा 4.41 प्रतिशत है। उस श्रेणी तथा कुल जनसंख्या एवं अनुसूचित जाति तथा अनुसूचित जनजाति की जनसंख्या के बारे में औसत कुल मासिक प्रतिव्यक्ति उपभोक्ता व्यय क्रमशः 466 रु० 425 रु० तथा 425 रु० है। वस्तुओं के विभिन्न वर्गों पर मासिक प्रतिव्यक्ति उपभोक्ता व्यय के मध्य अनुसूचित व असमानता शहरी क्षेत्रों में जनसंख्या के तीन वर्ग ग्रामीण क्षेत्रों के साथ अत्याधिक समानता प्रदर्शित करते हैं।

सारणी एस० 7: 300 रुपये तथा ऊपर की मासिक प्रति व्यक्ति व्यय श्रेणी से संबंधित परिवारों के अलग-अलग वर्ग के लिए तथा अनुसूचित जाति, अनुसूचित जनजाति और समस्त परिवारों हेतु वस्तुओं के व्यापक वर्गों के बारे में 30 दिन की अवधि हेतु प्रति व्यक्ति औसत उपभोक्ता व्यय (रु० 00), अखिल भारत-ग्रामीण
