# A NOTE ON THE BIAS IN THE GINI CO-EFFICIENT DUE TO CHOICE OF SIZE CLASSES

K. C. SEAL & A. R. RAO\*

In inequality studies involving measures like the Gini Co-efficient the proper choice of size classes is important. The distribution in such cases being highly skewed and approximately lognormal in form, it is generally recommended that the class limits be so chosen that their natural logarithms are more or less equispaced\*\*. Obviously, if size classes are not properly chosen with due attention to the dispersion of the variate values over the observed range, the frequency distribution that is obtained will not capture the nature and form of the distribution undistortedly. Hence it is necessary that size classes are properly chosen after scanning the raw data so that the resulting distribution brings out the underlying form with least possible grouping error.

2. The object of this note is to investigate empirically the nature and extent of bias that would occur in the case of estimation of the Gini Co-efficient of inequality of a distribution as a result of change in size classes. The study is based on a hypothetical distribution of 100 variate-values (see Annex. I). These 100 variate-values were formed into a frequency distribution using certain size classes and the Gini Co-efficient was computed. The variate-values were all multiplied by 2 and again formed into a frequency distribution using the same size classes as before and the Gini Co-efficient was calculated. The process was repeated after multiplying the variate-values by 3 but using the same size classes. Though theoretically the Gini Co-efficient of inequality should remain the same when all the variate-values are multiplied by the same amount, it showed a 24% decline in the second case as compared with the first and a sharper decline (28%) in the third case as compared with the second. The successive values of the Gini Co-efficient were: 0.4332, 0.3281 and 0.2361.

3. The reason for the observed behaviour of the Gini Co-efficient is not far to seek. The frequency distribution in three cases (see Annex. II) reveal

rapid transfer of the frequencies from the lower classes towards the higher classes which leads to the emptying of the lower classes and bunching of the frequencies in the higher classes, especially the last open-ended class. If the exercise were to be repeated further with higher multiples of the variate-values, a stage will soon be reached when all the frequencies would have got bunched together in the highest class leaving all the remaining classes totally empty. The Gini Co-efficient in this case would be zero as the Lorenz Curve would lie completely along the line of equality. It would be of interest to examine as to what the true value of the Gini Co-efficient of inequality of our illustrative model distribution would be, that is, the value calculated directly from the individual variate-values (say  $y$ 's) without grouping them into any frequency distribution, using the formula

$$G = 1 + \frac{1}{n} - \frac{2}{n^2\mu} \sum_{i=1}^n (n+1-i)y_i$$

where  $\mu$  is the arithmetic mean of the variates and  $n$  is their number which is 100 in the present case. The value of  $G$  from this formula works out to 0.4583. The value of  $G$  obtained from the frequency distribution was 0.4332 which is less than the true value by about five and a half percent.

4. When we group the variates into different classes, the Lorenz Curve degenerates into lesser number of broken lines than would be the case if the variates were to be arranged in ascending order of magnitude and individually considered. In the latter case the Lorenz Curve would be made up of  $k+1$  lines,  $k$  being the number of classes chosen which would be far less than the total number of variates. Thus in the Lorenz Curve diagram, the line joining the points representing the cumulative shares corresponding to the end points of a class, would be short-circuiting the curvature contributed by the several

\* Dr. K.C. Seal is Adviser (Statistics) in the Planning Commission and Shri A.R. Rao is a Deputy Director in the Central Statistical Organisation. The views expressed in this note are those of the authors and not necessarily those of the organisations to which they belong.

\*\* United Nations Statistical Series, M/61, : Guidelines for Statistics of Distribution of Income, Consumption and Accumulation.

broken lines representing the several variate-values contained in that class interval and this leads to under-estimation of the Gini Co-efficient. The wider\* the class intervals the larger will be the approximations due to grouping and larger will be the consequent underestimation of the Gini Co-efficient. In our exercise of grouping successive (higher) multiples of the variates using the same class intervals, the highest (open-ended) class grew wider and wider in this sense at the expense of the other classes and hence contributed most to the error in the estimate of the Gini Co-efficient (see Annex. III).

5. The problem of finding a correction (albeit approximate) for the grouping error in the Gini Co-efficient of inequality has engaged the attention of some research workers. A simple mathematical for-

mula for estimating this error has been worked out by M. K. Ramakrishnan of the Indian Statistical Institute, Bangalore Centre\*\*. Adopting the symbols employed in this note, we can express the formula as follows :

$$\text{Error in G due to grouping} = \sum_{j=1}^k (P_j - P_{j-1})(Q_j - Q_{j-1}) \frac{(x_j - x_{j-1})}{3(x_j + x_{j-1})}$$

where  $P_j$  and  $Q_j$  have the meanings given in Annex II and  $x_{j-1}$  and  $x_j$  are end values of the size class  $(x_{j-1} - x_j)$ . The results obtained by application of this formula to our illustrative example are given in the table below :

Case	G from grouped data	Estimate of grouping error in G	Corrected value of G	Difference between true value & corrected value of G (True value: 0.4583)	Difference as percentage of true value
1	0.4332	0.0281	0.4613	-0.0030	-0.65
2	0.3282	0.1138	0.4420	0.0163	3.56
3	0.2361	0.1863	0.4224	0.0359	7.83

It may be seen that the correction brings about a substantial improvement in the estimate of G obtained from grouped data. However, the approximation in the estimate of the error in G increases with the magnitude of the error itself.

6. The relevance of the point raised in this note arises in the context of the consumer expenditure surveys of the National Sample Survey Organisation (NSSO) where the class intervals for per capita consumption expenditure are maintained at the same monetary size without any change over several rounds regardless of the fact that the price level keeps going up continuously resulting in continuing fall in the purchasing power of the rupee. The Gini Co-efficients of inequality, computed from the distributions of consumption expenditure obtained from two different rounds widely separated from each other in time, reflect the phenomenon discussed in this note. It is therefore necessary to be cautious while trying to interpret the observed trend in the Gini Co-efficients of inequality computed from the NSS consumer expenditure data. The price changes over

time are unidirectional over the last two decades more, and even though they may not affect expenditures at all levels equally, the overall effect on distribution would be to push the frequencies toward the higher expenditure classes and also to cause bunching of the frequencies in the last open-ended class. Since corrections like the one mentioned in para 5 are seldom applied in practice, the Gini coefficients presented are likely to be underestimated to a greater extent in the later years and hence the observed falling trend in the inequality is likely to be false either totally or partially and therefore misleading.

7. It is, therefore, essential that class intervals casting consumer expenditure data into frequency distributions of total consumption expenditure (per capita or per household), are revised from time to time keeping in view the movement of price levels so as to ensure that the number of 'effective' classes with non-zero frequencies do not progressively diminish over time on account of transfer of frequencies toward higher classes as a result of escalating prices.

\* In terms of frequency as well as length.

f = Frequency

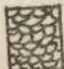

P = Proportionate frequency below the upper end of the class.

Q = Proportionate share in the total value of the variates below the upper end of the class

G = Gini Co-efficient of inequality where k is the number of class intervals. 
$$= 1 - \sum_{j=1}^k (P_j - P_{j-1})(Q_j + Q_{j-1})$$

-  A = Extent of underestimation of Gini Co-efficient on account of grouping.
-  B = Extent of further underestimation of Gini Co-efficient when the unit of measurement is half of the original unit.
-  C = Extent of still further underestimation of Gini Co-efficient when the unit of measurement is one-third of the original unit.

Note: (1) Only the contribution of the highest open-ended class to the underestimation of the Gini Co-efficient is visible in the above diagram in the shaded areas.

(2) The actual extent of underestimation of the Gini Co-efficient in the above three cases is respectively  $2 \times A$ ;  $2 \times (A+B)$ ; and  $2 \times (A+B+C)$ .

# DECOMPOSITION OF TOTAL INEQUALITY INTO BETWEEN CLASSES AND WITHIN CLASSES COMPONENTS

D. V. S. Sastry and A. B. Chakraborty

## INTRODUCTION

The decomposition of overall inequality of total income/assets into the inequalities of the constituent factor incomes/assets is not new. Mahalanobis used this concept even before 1960, but a formal definition was given by Iyenger (1960) who made use of this concept in the calculation of income elasticities (1967). Iyenger called them as specific concentration curves. Fei-Ranis-Kuo (1978) formulated a methodology for the statistical decomposition of total income inequality into factor components. Following the same methodology, Pyatt-Chen-Fei (1980) provided a rigorous and exact formulation of decomposition and expressed Gini Co-efficient of the total incomes as weighted average of the concentration ratios for factor income with respect to total income, Rao (1969), however, attempted an approximate decomposition of Gini Co-efficient and showed that concentration ratio in total population is a weighted average of concentration ratios in sub-populations (with weight equal to the proportion of total population contained in each sub-population) plus a term depending on the inter-sub-population differences in relation to per capita income. He argued that the second term can be approximately taken as an index of the difference between the distribution of sub-populations. Ramakrishnan and Bhanoji Rao (1978) have also obtained similar decomposition of Gini Co-efficient; but in both the above cases, the "Between term" depends on the sub-population distributions as a whole and not only on their means, making the estimation problem more difficult. It will also be interesting to examine the feasibility of decomposition of overall inequality into distinct contributions, one arising due to variability between different class means and that due to variability between units within classes.

For instance, total inequality in assets/income distribution of the household sector may be considered as consisting of a portion arising due to differences between rural and urban household means and another due to the deviation of the individual household values from the corresponding sector means. Similarly, overall inequality in the rural household sector can be interpreted as consisting of a portion arising due to differences between cultivators and non-cultivators and due to differences

among cultivator households and among non-cultivator households. Further classifications can similarly be considered.

## METHODOLOGY:

Suppose there are  $i=1, 2, \dots, k$  types of households and there  $j=1, 2, \dots, n_i$  households in type  $i$ .

Let  $X_{ij}$  denote the asset value of the  $(i, j)$ -th household. Arranging the households in ascending order of asset value, assign them ranks 1 to  $n$  respectively, where  $n$  is the total number of households. Let  $r_{ij}$  denote the rank of the  $(i, j)$ -th household, and  $\bar{x}$  and  $\bar{r}$  be the overall means of assets and ranks respectively.

Then, Gini coefficient of overall inequality can be written as

$$G(x) = \frac{2}{n\bar{x}} \left[ \frac{1}{n} \sum_i \sum_j X_{ij} r_{ij} - \bar{x} \bar{r} \right] \quad (1)$$

where  $\sum_i n_i = n$

Denoting group means of asset value and ranks by

$\bar{x}_i$  and  $\bar{r}_i$  respectively, we can write

$$G[x] = \frac{2}{n\bar{x}} \left[ \frac{1}{n} \sum_i \sum_j (x_{ij} - \bar{x}_i + \bar{x}_i) (r_{ij} - \bar{r}_i + \bar{r}_i) - \bar{x} \bar{r} \right]$$

with little algebra we can show that . . . . .

$$G(x) = \sum_i \frac{n_i \bar{x}_i}{n\bar{x}} \frac{n_i}{n} \frac{2}{n_i \bar{x}_i} \text{Cov.}_j (x_{ij}, r_{ij}) + \frac{2}{n\bar{x}} (\sum_i f_i \bar{x}_i \bar{r}_i - \bar{x} \bar{r}) = \sum \pi_i G(x_i/x) + \frac{2}{n\bar{x}} (\sum_i f_i \bar{x}_i \bar{r}_i - \bar{x} \bar{r}) \quad (2)$$

where  $G(X_i/X)$  is the conditional Gini co-efficient of the  $i$ th class,  $f_i$  is the proportion of households in the  $i$ th group, and  $\pi_i$  is the asset share of the  $i$ th group.

The first term can be interpreted as contribution arising due to variability between households within the classes and second term can be due to variation between the classes. The ranking of each household is determined with reference to the total population

and the same rankings are used in the calculation of the total Gini Co-efficient as well as the above two components. When all groups have equal means, it can be seen that the second term vanishes and then overall inequality is explained by differences within the household classes. When the contribution of variability within household classes is zero then overall inequality will be explained by the differences between means of the groups. It is however seen that the second term attains zero value in another case also, when the average ranks are same for all groups. Further, it can be shown that the first term is non negative, and although the second term can be negative in some cases, it always lies between  $-G(X)$  and  $G(X)$  (the proof is outlined below) making comparisons possible.

Denoting the second term in the RHS of (2) by  $G(\bar{x}/x)$  and the independent Gini co-efficient between the means by  $G(\bar{X})$ , it can easily be verified that the Lorenz Curve  $L(\bar{X})$  of group means always lie between the Lorenz Curve  $L(X)$  and the egalitarian line i.e.

$$0 \leq G(\bar{X}) \leq G(X) \quad (3)$$

In case of individual observations Rao (1969) proved that

$$-G(\bar{x}) \leq G(\bar{x}/x) \leq G(\bar{x}) \quad (4)$$

It can be seen that the above result holds good in case of grouped observations also. Thus from (3) and (4) we have

$$-G(X) \leq G(\bar{X}/X) \leq G(X)$$

For the purpose of such decompositions, the distribution of sub-populations can be considered either independently of the total population or as a conditional distribution depending upon the distribution from the total population. The latter leads to choice of conditional Gini-Co-efficients for the within group inequality. However, the type of decomposition discussed in Shorrocks (1980) requires that the overall inequality measure and the within group inequalities should have the same functional form. Further, the between group inequality and the weights associated to the within group inequalities have to be functions of the sub-group means and population sizes only. As such, our decomposition as well as Ramakrishnan and Bhanaji Rao's (1978) is not covered in Shorrocks' analysis. In multi-characteristic surveys where the stratificatory variable is an aggregate of some components, it is but natural that the form of sub-populations will be depending on the total population.

The decomposition of the total inequality into two components, one arising due to the difference between the means of sub-populations and the other arising due to the variabilities within the sub-populations would be of use in determining the relevance of a particular population characteristic as a stratificatory variable in a sampling design, as an alternative to the normal procedure of the analysis of variance technique. In particular, relative efficacies of different stratificatory variables could be judged by comparing the corresponding between class contributions to the total inequality.

### SOME RESULTS

On the basis of 1981-82 Debt and Investment Survey data for Maharashtra, the total inequality as well as its components were obtained for different population classifications. The classifications considered are the classification of the total population in the first stage into rural and urban, a classification of the rural households into cultivators and non-cultivators and a further classification of the non-cultivators by occupations, the urban households were first classified into self-employed and non-self-employed and the self-employed further classified by occupations. A detailed classification of each of the above categories of households by size classes and value of total assets is also considered. The variables measured relate to value of assets, value of non-farm equipment, value of household durable assets and cash dues payable. The results are discussed below :

In Table 1, the total inequalities and the contributions to the inequalities due to differences between the class means for four items, viz., total assets, value of non-farm equipment, durable household assets and cash dues payable, are presented for the major household classes. It is seen that when we consider classification of the total population into just rural and urban, except in respect of non-farm equipment and to a lesser extent in respect of durable household assets, rural and urban differences account only for an insignificant portion of the total inequalities and therefore, we need a more detailed stratification of households for the purpose of estimating characteristics such as total assets and cash dues payable. Considering the estimates separately for rural households, it is seen that a simple classification of the rural households into cultivators and non-cultivators alone accounts for a large proportion of the total inequality in respect of total assets, and to a smaller extent in respect of estimates for cash due payable. In respect of the remaining two items viz. non-farm equipment and durable household asset

there seems to be hardly any contribution due to differences between cultivators and non-cultivators. A further classification of the non-cultivators into agricultural labourers, artisans and others has also not resulted in any significant improvement. Considering the estimates of urban households, a stratification of the urban households into self-employed and non-self-employed is first considered and this classification has not yielded any noticeable between class differences. When the self-employed are further classified by occupations, the contribution of the class differences to the total inequalities has improved, though slightly, in respect of all the four characteristics under study.

In the next stage, a detailed stratification of each of the major categories of households into a number of asset classes by value of total assets, is considered and results are presented in Table 2. As it should be, most of the inequality in respect of the total assets is accounted for by the asset classes. The asset classification has also uniformly made considerable contribution in respect of the inequality for durable household assets. On the other hand, except in respect of classes like rural non-cultivators

other than agriculture labourers and artisans and certain categories of self-employed urban households, such as administrators and urban farmers and all non-self-employed households who rarely report any non-farm business, the asset classification has contributed significantly to the total inequalities in respect of non-farm business equipment. In respect of the cash dues payable, there was hardly any significant contribution to the total inequality due to asset classes except in case of a few categories of households—these being confined to urban households such as service workers, urban farmers and production workers.

The above results indicate that the decomposition on the lines indicated above could be a useful technique in choosing particular stratificatory variables in planning a sample survey where the survey is mainly in the nature of multi-subject survey and where some of the items under measurement are, by their very nature, not uniformly reported but their reporting is confined to particular categories of households and areas and hence different schemes of stratification would be appropriate at different stages.

Note: Figures in brackets indicate the percentage contribution of inequality due to differences in means of asset classes to overall inequality.

# A NOTE ON CONSUMER EXPENDITURE SURVEY : 42nd ROUND (July 86—June 87)

## 1. INTRODUCTION

1.0 Data on household consumer expenditure were being collected in every round of the National Sample Survey (NSS) beginning from the first round which started in October, 1950 through the 28th round (1973-74). After the 26th round of the survey, the Governing Council of NSSO decided that the survey on Consumer Expenditure and on Employment and Unemployment, be undertaken together once in every five years beginning from the 27th round. Thus, the first quinquennial survey on consumer expenditure was conducted in the 27th round (Sept. 1972—Oct. 1973). To meet some specific ad-hoc requirements, a survey on consumer expenditure was also conducted in the 28th round, outside the quinquennial programme. The third quinquennial survey on household consumer expenditure was carried out in NSS 38th round (Jan.—Dec. 1983). To maintain the continuity of survey data on consumer expenditure for constructing a time series, it was further decided to carry out the enquiry in every NSS round in a thin sample in addition to the quinquennial large scale surveys. The NSS 42nd round survey was the first survey of the series outside the quinquennial surveys. While the basic information collected in the schedule was the same, the volume of the schedule had been effectively reduced by way of deletion of some auxiliary blocks of information. The schedule was canvassed in two households in each sample village and urban block.

1.1 This is the first report prepared on the basis of the results obtained from the survey data of NSS 42nd round enquiry on consumer expenditure. This report contains results on household size, quantity and value of consumption of cereals, consumer expenditure on broad groups of items, average monthly per capita total consumer expenditure and distribution of households by house category. All the results are presented at the state and all-India levels.

1.2 The field work of the 42nd round started in July 1986 and continued upto July 1987, covering a period of one calendar year. The reference period for collection of data on consumer expenditure was 30 days preceding the date of survey. The estimates presented in this report, therefore, broadly relate to the agricultural year 1986-87.

1.3 The geographical coverage of the survey was the entire Indian Union excluding Ladakh and Kargil districts of Jammu & Kashmir, rural areas of Nagaland and urban areas of Dadra & Nagar Haveli.

1.4 The survey covered about 25,748 households spread over 8379 villages and 4588 urban blocks.

1.5 In the NSS 42nd round, all the states and union territories (included in the geographical coverage) except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep, participated in the survey on atleast equal matching basis. The results presented in this report are, however, based on the central sample data only.

## 2. CONCEPTS AND DEFINITIONS

2.0 The concepts and definitions followed in the consumer expenditure enquiries continue to remain broadly the same as in earlier NSS rounds. Some of these concepts and definition are described below :

2.1 *Household* : A group of persons normally living together and taking food from a common Kitchen constitute a household. A boarding house, a hostel or a hotel is treated as a cluster of households, where each individual boarder (with his dependents and guests) forms a household. Households fed directly by some institutional bodies such as those in prisons, police quarters, cantonments, hospitals, asylums, relief camps are, however, excluded from the scope of the survey. Floating population having no normal place of residence and foreign nationals households are also excluded.

2.2 *Household members* : Any person who is a normally resident of the sample household is considered to be a member of the household. Household members are grouped into three categories viz., adult male, adult female and child. One who has already attained the age of 15 (in completed years) is considered as an adult. Any person who usually lives and takes the principal meals with the household is considered a member of the household.

2.3 *Household size* : The total number of members (as defined above) in a household is considered to be the size of the household.

2.4 *Household consumer expenditure* : Consumer expenditure comprises all expenditures incurred by the household on domestic account, including the consump-

tion of home grown products or transfer receipts like gifts and charities, loans etc. While consumption of transfer receipts is included, the transfer payments of all kinds (loans, gifts, charities etc.) are excluded. The total consumption of food items relates to the actual consumption of food items by the normally resident members and guests. This also includes consumption of food items in ceremonies performed in the household during the reference period. Expenditures on purchase and construction of residential houses are considered to be expenses on capital account and, hence, are excluded from the consumer expenditure; but the expenditure towards maintenance of residential buildings is included in the consumer expenditure. Monetary value of the food articles consumed during the reference period is taken to represent expenditure on food articles. For semi-durable and durable goods and miscellaneous goods and services, the actual expenditure incurred towards purchase of those during the reference period is considered as the consumer expenditure on the articles. For items of clothing and footwear, monetary value of articles brought into first use during the reference period is taken as the consumer expenditure of the articles concerned.

2.5 *Reference period*: The reference period for collection of data on all items of consumer expenditure was last 30 days (ending on the day preceding the date of enquiry).

### 3. EXPLANATORY NOTES ON TABLES

3.0 The following four tables are presented in the report:

(i) Table 1 series give the percentage distribution of estimated number of households and persons and

average number of persons per household for each monthly per capita expenditure class.

(ii) Table 2 series give quantity and value of consumption of cereals items, gram and cereal substitutes per person for a period of 30 days for each monthly per capita expenditure class.

(iii) Table 3 series provide value of consumption of broad groups of items per person for each monthly expenditure class. Estimates are given for 19 broad groups of items.

The group are (1) cereals; (2) gram; (3) cereal substitutes; (4) pulses and pulse products; (5) milk and milk products; (6) edible oil; (7) meat, egg and fish; (8) vegetables; (9) fruits and nuts; (10) sugar; (11) salt; (12) spices; (13) beverages and refreshment; (14) pan, tobacco and intoxicants; (15) fuel and light; (16) clothing; (17) footwear; (18) miscellaneous goods and services (including rents and taxes); (19) durable goods. Apart from these, estimates on (20) rents and (21) taxes have been shown separately also. The results are presented also for (a) food—total; (b) non-food—total and (c) total consumer expenditure.

(iv) Table 4 series given percentage distribution of households over monthly per capita expenditure by house category.

3.1 *Monthly per capita expenditure class*: The households are classified according to their monthly per capita expenditure. The expenditure classes (in rupees) have been arranged in ascending order of their magnitudes. The reported expenditure levels are grouped into the following 14 classes for both rural and urban areas of each state/U.T. and India.

sl. no.	monthly per capita expenditure (MPCE) class (in rupees)	sl. no.	monthly per capita expenditure (MPCE) class (in rupees)
	2	1	2
1			100—125
	0—30	8.	125—150
1.	30—40	9.	150—200
2.	40—50	10.	200—250
3.	50—60	11.	250—300
4.	60—70	12.	300 & above
5.	70—85	13.	all expenditure
6.	85—100	14.	
7.			

Note:—The expenditure groups 0-30, 30-40 etc. stand for Rs. 0 to less than Rs. 30/-, rupees 30/- to less than Rs. 40/-, etc. and so on.

3.2 *Table numbering* : For convenience of reference, the table numbers have been systematised. The digit to the left of the decimal point refers to the nature of information and the digit to the right indicates the state/union territory, followed by R for rural tables and U for urban tables. The code numbers assigned to the states/union territories are as follows :

0. All India
1. Andhra Pradesh
2. Arunachal Pradesh\*
3. Assam
4. Bihar
5. Gujarat
6. Haryana
7. Himachal Pradesh
8. Jammu & Kashmir
9. Karnataka
10. Kerala
11. Madhya Pradesh
12. Maharashtra
13. Manipur

14. Meghalaya
15. Mizoram
16. Nagaland
17. Orissa
18. Punjab
19. Rajasthan
20. Sikkim
21. Tamil Nadu
22. Tripura
23. Uttar Pradesh
24. West Bengal
25. Andaman & Nicobar Islands
26. Chandigarh
27. Dadar and Nagar Haveli
28. Delhi
29. Goa, Daman & Diu
30. Lakshadweep
31. Pondicherry

3.3 Number of sample villages/blocks allotted and surveyed for the different states presented in this report are given in statement S-0.

STATEMENT S-0 : NUMBER OF SAMPLE VILLAGES BLOCKS ALLOTTED AND SURVEYED BY STATE/UNION TERRITORY

#### 4. SAMPLING DESIGN AND ESTIMATION PROCEDURE

**4.0 Broad Design :** The sampling design adopted in the survey was a stratified two stage one with census villages in rural areas and NSSO urban frame survey blocks in the urban areas as the first stage units and households as the second stage units. The sample villages were selected with probability proportional to population and with replacement in the form of two independent interpenetrating samples (IPNS). Sample blocks were selected by simple random sampling without replacements in the form of two IPNS's. The sample households in the second stage (two from each first stage units) were selected by circular systematic selection with a random start.

**4.1 Survey period and sub-round formation :** The survey was started in the month of July 1986 and was completed in June 1987. The entire survey period of one year was divided into four sub-rounds, each of three months duration coinciding with the four agricultural seasons. The four sub-rounds periods were :

sub-round 1 : July 1986—September 1986

sub-round 2 : October 1986—December 1986

sub-round 3 : January 1987—March 1987

sub-round 4 : April 1987—June 1987

The sample units are equally distributed over the four sub-rounds in such a manner so as to provide equally valid estimates for each of the related sub-round period. The averages based on the pooled data, taking all the four sub-rounds together, would be free from the effect of seasonability.

**4.2 Estimation Procedure :** The estimation procedure adopted in 42nd round is based on weighted

sum of the sample values. Denoting by  $\hat{y}$ , the unbiased estimate of (the state total of any variate), it is given by :

$$\hat{Y} = \sum_s \frac{P_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{e_{si} P_{si}} \frac{H_{si}}{h_{si}} \sum_{j=1}^{h_{si}} y_{sij}$$

for the rural sector, and

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{si} H_{si}}{h_{si}} \sum_{j=1}^{h_{si}} y_{sij}$$

for the urban sector where s, i and j are the suffixes for stratum, village/urban block and household respectively;

$P_s$ ,  $N_s$  and  $n_s$  give the stratum values of population, number of villages/blocks in frame and the number of sample villages and blocks respectively;

$D_{si}$ ,  $e_{si}$  and  $P_{si}$  stand respectively for number of hamlet groups/sub-blocks formed, number of census villages contained in a large revenue village actually surveyed and population of the sample village;

$H_{si}$  and  $h_{si}$  stand for the total number of households listed and number of sample households, and finally  $y_{sij}$  is the observed value of the variate for the sample household. Estimates of the ratio of two characteristics are given by the ratio of the estimates of their aggregates.

#### 5. SUMMARY OF FINDINGS

**5.0** In this section some important findings of the survey are presented to give a broad comparative picture of the consumption pattern of the households.

In addition, the prevalent pattern of housing structure in rural and urban areas is also discussed.

*5.1 Average size of household :* The statement S-1 presents the average number of persons per household as observed in the 42nd and 38th rounds of NSS for the rural and urban sectors. The average number of persons per rural household at the all India level is 5.26 in 42nd round as against 5.20 in 38th round. In both the rounds, the said average is the lowest (4.25 and 4.35 respectively in 42nd and 38th rounds) in Tamil Nadu, and the highest (6.34 and 6.11 respectively) in Haryana. In the urban sector, the average households size at the all-India level is found to be 4.79 and 4.81 in 42nd and 38th rounds

respectively. Of the states, the highest size is reported by Gujarat (5.33) and Rajasthan (5.27) in 42nd and 38th round respectively, whereas West Bengal (4.38) and Punjab (4.47) have reported the lowest size in those two rounds respectively. The statement S-1 also exhibits that Tamil Nadu is the only state in which the average number of persons per household is larger in urban areas compared to that in rural areas in both the rounds. This is also corroborated by the 1981 census figures, where in the rural/urban (negative) difference in the average household size in the 'normal' (excluding the institutional and houseless) households is quite high in Tamil Nadu and Kerala, followed by Andhra Pradesh and marginally Uttar Pradesh.

STATEMENT S-1: AVERAGE NUMBER OF PERSONS PER HOUSEHOLD

State	rural		urban	
	42nd round (1986-87)	38th round (1983)	42nd round (1986-87)	38th round (1983)
1	2	3	4	5
1. Andhra Pradesh	4.37	4.54	4.47	4.49
2. Assam	5.68	5.40	4.71	4.71
3. Bihar	5.59	5.29	5.19	5.02
4. Gujarat	5.35	5.45	5.33	5.06
5. Haryana	6.34	6.11	4.44	4.92
6. Karnataka	5.43	5.55	5.10	4.92
7. Kerala	5.29	5.32	4.97	5.12
8. Madhya Pradesh	5.52	5.46	5.31	5.20
9. Maharashtra	5.26	5.08	4.85	4.79
10. Orissa	4.96	5.00	4.59	4.63
11. Punjab	5.52	5.73	4.42	4.47
12. Rajasthan	5.78	5.53	5.00	5.27
13. Tamil Nadu	4.25	4.35	4.44	4.60
14. Uttar Pradesh	5.37	5.33	4.91	5.16
15. West Bengal	5.41	5.33	4.38	4.51
16. All India	5.26	5.20	4.79	4.81

*5.2 Pattern of consumer expenditure :* In what follows, the pattern of consumer expenditure has been studied under different aspects. Firstly, distribution of population by monthly per capita expenditure (MPCE) class and the average MPCE in different states are discussed and is followed by commentary on a comparative picture of quantity and value of cereals consumed by states. The discussion on the pattern of consumer expenditure by broad groups of

items is taken up thereafter and lastly the changes in the pattern of consumer expenditure over time have been studied.

*5.3 Distribution of population by MPCE class and average MPCE :* The per thousand distribution of persons for fifteen major states (according to 1981 census population) and all-India is shown by MPCE classes in statements S-2 and S-3 for the rural and urban areas respectively. The average MPCE for

the rural areas of Andhra Pradesh, Tamil Nadu, Uttar Pradesh and West Bengal is almost of the same order as for all-India rural average MPCE of Rs. 140/-, while the said average in Maharashtra, Karnataka, Madhya Pradesh, Bihar and Orissa is almost 4 rupees to 26 rupees less than that of all-India, it is 13 rupees to 72 rupees higher for the states of Gujarat, Rajasthan, Kerala, Haryana and Punjab, compared to all-India MPCE of Rs. 140/-. The distribution of population over MPCE classes exhibits quite a diverse pattern. The per thousand proportion of population having MPCE below Rs. 100/- are 89, 176 for Punjab and Kerala respectively, whereas it is as high as 518 and 522 for Madhya Pradesh and Orissa respectively. As against this, the said proportion for all-India is 367. Again, in the MPCE class of Rs. 200/- and above, Haryana and Orissa have reported the highest and lowest proportion—382 and 81 per thousand population respectively. For the urban areas, of the major states, Uttar Pradesh has reported the highest proportion of 234 per thousand population, having MPCE of less than Rs. 100/-. The highest MPCE of Rs. 260/- has been reported by Punjab, followed by Maharashtra and West Bengal, with the average MPCE of Rs. 243/- each. In the open MPCE class of Rs. 300/- and above, Punjab with the proportion of 297 per thousand population tops the list and Uttar Pradesh with only 138 persons in that MPCE class per thousand population is at the bottom.

5.4 *Quantity of cereals consumed* : Cereals constitute the major part of the food consumption. The composition of the constituent items of cereals vary from state to state. While all the cereals listed in statement S-4 provide almost the same amount of energy units per unit quantity, there is wide variation in their price (value per unit quantity). In statements S-4 and S-5, the average quantity and the respective value of different items of cereals consumed per capita per month (MPC) are shown for the rural and urban areas for fifteen major states and all-India. Relatively more quantity of cereals is consumed in the rural areas compared to that in the urban areas. In the rural areas, the highest quantity of cereals consumption is found in Rajasthan closely followed by Orissa. The lowest consumption is reported by Kerala and then Gujarat. In the urban sector, Orissa and Rajasthan have reported high consumption of cereals in terms of quantity. Gujarat, Maharashtra and Tamil Nadu have, shown relatively lower consumption of cereals. While rice is the major cereal item for Andhra Pradesh, Assam, Bihar, Kerala, Orissa, Tamil Nadu and West Bengal, wheat claims that position in Haryana, Punjab, Rajasthan and Uttar Pradesh both in rural and urban areas.

Generally, in the rice consuming states, only a small amount of wheat is taken except in Bihar in rural and urban areas and urban areas of West Bengal where more than 25 per cent of total cereals is supplemented by wheat. On the other hand, rice is rarely consumed in Punjab, Rajasthan and Haryana, particularly in the rural areas. More than 20 per cent of the total cereals consumed in Rajasthan and Gujarat is supplemented by bajra.

5.5 *Value of cereals consumed* : In rice consuming states, the value of total cereals consumed is relatively higher. Even though Kerala has the lowest quantity of monthly per capita (MPC) consumption of cereals, the corresponding value is higher than many wheat consuming states like Uttar Pradesh and Rajasthan which reported quite high quantity of MPC consumption of cereals like quantity, the value of cereals consumed is higher in the rural areas compared to that in the urban areas at the all-India level. But, it is observed that the implicit price (value/quantity) of the total cereals consumed at the all-India level is lower in the rural sector (Rs. 2.64) than the price in the urban sector (Rs. 3.04).

5.6 *Consumer expenditure by broad groups of items* : The statements S-6 and S-7 show the average monthly per capita consumer expenditure (MPCE) distributed over broad groups of items for rural and urban areas respectively. Food items constitute the major part of the consumer expenditure in both the rural and urban areas of all the states. In the rural sector, some of the states showing comparatively high expenditure on food items are Punjab (125), Haryana (123), Kerala (116) and Rajasthan (104). Relatively low expenditure on food items is reported by Madhya Pradesh (79), Karnataka (84), Bihar (87), Andhra Pradesh (87) and Maharashtra (87). Expenditure on non-food items is highest in Punjab (87) followed by Kerala (79) and Haryana (76) and is lowest in Bihar (31), then in Orissa (35), West Bengal (38) and Assam (40) in that order. Some of the States showing high MPCE are Punjab (212), Haryana (199) and Kerala (196). The states showing relatively low MPCE are Orissa (114), Bihar (117), Madhya Pradesh (122) and Karnataka (129).

5.7 *In urban areas, the range of expenditure on food items varies from Rs. 112/- (Uttar Pradesh) to Rs. 145/- (Punjab). Punjab (115) has also reported highest consumer expenditure on non-food items. The other states reporting high expenditure on non-food items are West Bengal (103), Maharashtra (102) and Tamil Nadu (94). Some of the states reporting high MPCE in urban areas are Punjab (260), Maharashtra (243) and West Bengal (243).*

STATEMENT S-2 : PER THOUSAND DISTRIBUTION OF PERSONS BY PER CAPITA EXPENDITURE CLASS IN RURAL AREAS

5.12 On a close examination of these estimates it is found that the expenditure of the items has increased over the years in both the rural and urban areas, as may be expected due to the price rise in general. Thus, the consumer expenditure on total food has risen from Rs. 32 in 1972-73 to Rs. 93 in 1986-87 in rural areas, the corresponding figures in the urban areas being Rs. 41 in 1972-73 to Rs. 129 in 1986-87. In terms of percentage, there has been a substantial fall in the proportion of expenditure on cereal over the years, from 41 per cent in 1972-73 to 27 per cent in 1986-87 in the rural areas. The corresponding percentages for urban area are 23 and 15 respectively for 1972-73 and 1986-87. In almost all other food items, there is a rise in the expenditure in terms of percentage, over the years. The item attracting attention is the milk and milk products. In the non-food group of items, there is a fall in case of clothing in both the sectors and miscellaneous goods and services in the rural sector in 1986-87 over 1983. So far as the ratio of food total to non-food total is concerned, the pattern which has been exhibited in 1983, has been continuing in 1986-87 as well. In the rural areas, the share of food total in the total expenditure has declined from 73 per cent in 1972-73 to 64 per cent in 1983 and has remained at 66 per cent both in 1983 and 1986-87. In urban areas, the said percentage has been found to be falling over the years from 64 in 1972-73 to 60 in 1983 and from 59 in 1983 to 57 in 1986-87. However, these observed differences over time need not necessarily be real. The differentials in the price movement of different commodities over time might have been reflected in the pattern.

#### 5.13 Comparison of the quantity of consumption of selected cereals :

As has been seen earlier, cereals constitute the major part of consumer expenditure on food. The comparison of the expenditure on cereals in two different years are affected by the changes of price over time. The average quantities of rice, wheat and total cereals consumed per capita per month as obtained from the survey results of NSS 38th and 42nd round and presented for 15 major states in statement S-11 for rural and urban areas respectively, may be considered good indicators of the relative levels of energy intake as cereals alone provide 80-90 per cent of the total intake of energy. It is observed that the overall pattern of consumption of total quantity of cereals remains stable in rural and urban India over the two NSS rounds. At the all-India levels, there is not much variation in the average quantity of consumption of price and wheat—the two

major constituents of cereals. At the state level, however, some differences are observed. Andhra Pradesh, Assam, Gujarat, Karnataka, Maharashtra and Punjab are the states where a household on an average has consumed almost a kg. less in 1986-87 than the average quantity of total cereals consumed in 1983. West Bengal, on the other hand, has recorded consumption of more cereals in 1986-87 compared to that in 1983. There is little evidence of change in the cereal consumption basket in any state except rural areas of Rajasthan during the years. In rural areas of Rajasthan, average consumption of wheat is found to be about 3.5 kg. more in 1986-87, compared to the average quantity of wheat consumed in 1983. However, there is no significant change over the years in the average quantity of total cereals consumed.

5.14 Changes in the average price from 1983 to 1986-87 for some selected commodities : A comparative statement of the movement of the average price of some selected items of cereals and gram from 1983 to 1986-87 as derived from the NSS consumer expenditure data and Wholesale Price Index has been presented in statement S—12. The NSS consumer expenditure survey has not as such collected any information on the prices of various commodities. The implicit prices of different commodities have been derived by dividing the value of consumption of an item by the corresponding quantity. The consumption may be out of (i) homegrown stock (ii) purchase, (iii) receipt in exchange of goods and services and/or (iv) quantity received as charities, loans, free collection etc. That part of the consumption which is made out of homegrown stock is evaluated at the exfarm's price, while the remaining part is evaluated at the local retail price. Thus, the implicit price of NSS consumption data is a mixture of exfarm's price and retail price. It is seen from the statement that the prices of all the commodities have increased in 1986-87 over 1983. This is also exhibited by the changes in the average wholesale price indices of 1983 and 1986-87, the years corresponding to two NSS rounds. However the movement of price is not uniform for all the items. In the rural areas while the change is marginal for rice, wheat, maize and ragi, an increase of more than 50 per cent is reported in case of gram. In the urban areas, there is no change in the price of barley and even a fall is noticed in the price of maize. On the whole, the ratios of prices as derived for the rural and urban areas and also for wholesale price indices are found to be more or less close. Generally, the price ratios in the rural area are equal or less than the ratios

of wholesale price indices. However, the movement of average price of barley and gram over the period 1983 to 1986-87 are found to be more than this corresponding whole-sale price index in the rural areas. Compared

to urban areas, the price ratio is found to be more in the rural areas in case of bajra, maize, barley and grain.

STATEMENT S-11 : MONTHLY PER CAPITA QUANTITY (IN KG) OF CONSUMPTION OF RICE, WHEAT AND TOTAL CEREALS BY NSS ROUNDS IN RURAL AND URBAN AREAS SEPARATELY.

5.15 Type of structure and type of dwelling units : Besides the particulars of consumer expenditure discussed above, the report also contains tables showing the distribution of households by house categories. From the statements S—13 and S—14, it is observed that the usual pattern of housing structures in rural areas is of Katcha type, whereas in the urban areas, the structure type is predominantly of pucca type. It is observed from statement S—13 that in the rural sector at the all-India level, for each thousand households, 493 households are reported to have Katcha structures, 329 with semi-pucca structures and another 171 with pucca structures for their habitat. Katcha structures are predominant in the states of eastern region such as Orissa, Assam, West Bengal and Bihar. The proportion of households living in katcha structure is also high in Uttar Pradesh, Andhra Pradesh, Madhya Pradesh, Tamil Nadu and Rajasthan, though it is not as high as in the states of the eastern region. On the other hand, Punjab, Karnataka and Haryana have reported highest proportion of households against pucca structure.

5.16 The statement S—14 reveals that in the urban sector at the all-India level, for each thousand households, 568, 255 and 169 households have their dwellings in pucca, semi-pucca and katcha structures respectively. The dominance of pucca structures is observed in all the major states, Assam being the only exception.

5.17 It is seen from the distribution of households over the types of dwelling units that both in the rural and urban areas, at the all-India as well as state levels, majority of the households live in independent houses. In all the major states except in Kerala, the independent house as dwelling unit is more common in the rural areas than in urban. Although, at the all-India level, 'chawl/bustee' as dwelling unit is proportionately more in the urban areas as compared to that of rural areas, there are number of states such as Andhra Pradesh, Bihar, Kerala, Orissa, Rajasthan and Tamil Nadu where percentage of households having dwelling units in chawl/bustee is more in the rural than in the urban areas.

बयालीसवाँ दौर : जुलाई, 1986—जून 1987

### 1. प्रस्तावना :

1.0 पारिवारिक उपभोक्ता व्यय सम्बन्धी आंकड़े 26 वें दौर (1973-74) के माध्यम से अक्टूबर 1950 में शुरू किए गए पहले दौर से आरम्भ करके राष्ट्रीय प्रतिदर्श सर्वेक्षण के प्रत्येक दौर में एकत्रित किए जा रहे थे। 26 वें दौर सर्वेक्षण के बाद राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन की शासी परिषद् ने निर्णय किया कि उपभोक्ता व्यय और रोजगार एवं बेरोजगारी सम्बन्धी सर्वेक्षण 27वें दौर से शुरू करके प्रत्येक पांच वर्ष में एक बार साथ-साथ किया जाये। अतः उपभोक्ता व्यय सम्बन्धी प्रथम पंचवर्षीय सर्वेक्षण 27 वें दौर (सितम्बर 1972—अक्टूबर, 1973) में आयोजित किया गया। कुछ विशिष्ट तथ्य आवश्यकताओं को पूरा करने के लिए पंचवर्षीय कार्यक्रम के अतिरिक्त उपभोक्ता व्यय सम्बन्धी एक सर्वेक्षण 28 वें दौर में भी आयोजित किया गया। पारिवारिक उपभोक्ता व्यय सम्बन्धी तीसरा पंचवर्षीय सर्वेक्षण राष्ट्रीय प्रतिदर्श सर्वेक्षण के 38वें दौर (जनवरी-दिसम्बर, 1983) में किया गया। एक समय अंकमाला के निर्माण हेतु उपभोक्ता व्यय सम्बन्धी सर्वेक्षण आंकड़ों की निरन्तरता को बनाए रखने के लिए पंचवर्षीय बड़े पैमाने के सर्वेक्षणों के अतिरिक्त राष्ट्रीय प्रतिदर्श सर्वेक्षण के प्रत्येक दौर में एक छोटी प्रतिदर्श जांच करने का भी निर्णय किया गया। राष्ट्रीय प्रतिदर्श सर्वेक्षण का 42वाँ दौर पंचवर्षीय सर्वेक्षणों के अतिरिक्त अंकमाला का प्रथम सर्वेक्षण था। जबकि अनुसूची में एकत्रित मौलिक सूचना वही थी फिर भी अनुसूची के आकार को सूचना के कुछ गौण खण्डों को हटा कर प्रभावकारी रूप से कम कर दिया गया था। अनुसूची को केवल 30 दिन की संदर्भ अवधि सहित प्रत्येक प्रतिदर्श गांव और शहरी खण्ड में दो परिवारों में भरा गया।

1.1 उपभोक्ता व्यय सम्बन्धी सर्वेक्षण आंकड़ों अथवा 42 वें दौर जांच से प्राप्त परिणामों के आधार पर तैयार की गई यह पहली रिपोर्ट है। इस रिपोर्ट में पारिवारिक आकार सम्बन्धी परिणाम, अनाजों के उपभोग की मात्रा एवं मूल्य, मदों के प्रमुख समूह सम्बन्धी व्यय, औसत मासिक प्रति व्यक्ति कुल उपभोक्ता व्यय और मकान श्रेणी के अनुसार परिवारों का वितरण समाविष्ट है। सभी परिणामों को राज्य एवं अखिल भारतीय स्तर पर प्रस्तुत किया गया है।

1.2 42 वें दौर का क्षेत्र कार्य जुलाई, 1986 में शुरू हुआ और एक वर्ष की अवधि को पूरा करते हुए जून, 1987 तक जारी रहा। उपभोक्ता व्यय सम्बन्धी आंकड़े

एकत्र करने की संदर्भ अवधि सर्वेक्षण की तारीख से 30 दिन पूर्व थी। अतः इस रिपोर्ट में प्रस्तुत किए गए अनुमान मुख्यतः कृषि वर्ष 1986-87 से सम्बन्धित हैं।

1.3 सर्वेक्षण की भौगोलिक व्याप्ति में जम्मू व कश्मीर के लद्दाख और कारगिल जिलों, नागालैण्ड के ग्रामीण क्षेत्रों और दादरा व नागर हवेली के शहरी क्षेत्रों को छोड़कर समस्त भारत संघ शामिल था।

1.4 सर्वेक्षण में 8379 गांवों और 4566 शहरी खण्डों में फैले हुए लगभग 25,746 परिवार शामिल थे।

1.5 राष्ट्रीय प्रतिदर्श सर्वेक्षण के 42वें दौर में अण्डमान व निकोबार द्वीपसमूह, चण्डीगढ़, दादरा और नागर हवेली और लक्षद्वीप को छोड़कर (भौगोलिक व्याप्ति में शामिल किए गए) सभी राज्यों एवं संघ शासित क्षेत्रों ने कम से कम समान बराबरी के आधार पर सर्वेक्षण में भाग लिया। फिर भी इस रिपोर्ट में प्रस्तुत किए गए परिणाम केवल केन्द्रीय प्रतिदर्श आंकड़ों पर आधारित हैं।

### 2. संकल्पनाएं एवं परिभाषाएं :

2.0 उपभोक्ता व्यय जांच में अपनाई गई संकल्पनाएं एवं परिभाषाएं मुख्य रूप से वे ही रही जो पहले के राष्ट्रीय प्रतिदर्श सर्वेक्षण दौरों में थी। इनमें से कुछ संकल्पनाओं एवं परिभाषाओं का नीचे उल्लेख किया गया है।

2.1 परिवार : सामान्यतः एक साथ रह रहे और सामान्य रसोईघर से भोजन कर रहे व्यक्तियों का समूह परिवार का निर्माण करता है। छात्रावास, होस्टल अथवा होटल को परिवारों का समूह माना जाता है जहां प्रत्येक आवासी (अपने आश्रितों एवं अतिथियों के साथ) एक परिवार का निर्माण करता है। किन्तु कुछ संस्थागत निकायों द्वारा सीधे रूप से भोजन कराए जाने वाले परिवारों जैसे जेलों, पुलिस क्वार्टरों, छावनियों, अस्पतालों, आश्रयगृहों राहत शिवरों को सर्वेक्षण के कार्यक्षेत्र में शामिल नहीं किया

2.2 परिवार का सदस्य : कोई व्यक्ति जो सामान्यतः प्रतिदर्श परिवार का निवासी है उसे परिवार का सदस्य माना गया है। परिवार के सदस्यों को तीन श्रेणियों अर्थात् वयस्क पुरुष, वयस्क महिला और बच्चे में समूहीकृत किए गए हैं। कोई व्यक्ति जिसने 15 (पूर्ण वर्षों में) की आयु प्राप्त कर ली है उसे वयस्क माना गया है। कोई व्यक्ति जो सामान्यतः परिवार के साथ रहता है और मुख्य भोजन करता है उसे परिवार का सदस्य माना जाता है।

2.3 परिवारिक आकार : किसी परिवार में सदस्यों की कुल संख्या (जैसे की ऊपर परिभाषित किया गया है) को परिवार का आकार माना गया है।

2.4 पारिवारिक उपभोक्ता व्यय : उपभोक्ता व्यय में घर में उगाए गए उत्पादों के उपभोग अथवा हस्तान्तर प्राप्तियों जैसे उपहार, और दान, ऋण आदि सहित घरेलू समान पर परिवार द्वारा किए गए सभी व्यय शामिल हैं। जबकि हस्तान्तरण प्राप्ति में से उपभोग को शामिल किया जाता है किन्तु सभी प्रकार के हस्तान्तरण भुगतान (ऋण, उपहार, दान आदि) को शामिल नहीं किया जाता। खाद्य मदों का कुल उपभोग सामान्यतः निवासी सदस्यों और अतिथियों द्वारा किए गए वास्तविक उपभोग से सम्बन्धित है इस में संदर्भ अवधि के दौरान परिवार में सम्पन्न हुए समारोह में खाद्य मदों का उपभोग भी शामिल है। आवासीय मकानों की खरीद और निर्माण पर हुए व्यय को पूंजी लेखे पर होने वाला खर्च माना गया है और इस प्रकार उपभोक्ता व्यय में शामिल नहीं किया गया है किन्तु आवासीय भवन के रखरखाव पर हुए व्यय को उपभोक्ता व्यय में शामिल किया गया है संदर्भगत अवधि के दौरान उपभोग की गई खाद्य वस्तुओं पर व्यय का द्योतक माना जाता है। अर्ध टिकाऊ और टिकाऊ माल के संबंध में संदर्भ अवधि के दौरान प्राप्त की गई वस्तुओं की खरीद पर हुए वास्तविक व्यय को वस्तुओं का उपभोक्ता व्यय को वस्तुओं व्यय माना जाता है। बस्त्र और जूतों की मदों के संबंध में संदर्भ अवधि के दौरान प्राप्त की गई और प्रथम उपभोग में लाई गई वस्तुओं के मेट्रिक मूल्य को संबंधित वस्तुओं का उपभोक्ता व्यय माना जाता है।

2.5 संदर्भ अवधि : उपभोक्ता व्यय की सभी मदों के संबंध में आंकड़ा संग्रहण की संदर्भ अवधि (जांच की तारीख से पहले दिन को समाप्त) अन्तिम 30 दिन थी।

3. सारणियों के संबंध में व्यय ख्यात्मक टिप्पणियां  
3.0 निम्नलिखित चार सारणियों को रिपोर्ट में प्रस्तुत किया गया है :

(i) सारणी 1 परिवारों एवं व्यक्तियों की अनुमानित संख्या की प्रतिशत वितरण और प्रतिमास प्रति व्यक्ति व्यय के संबंध में प्रति परिवार व्यक्तियों की औसत संख्या को दर्शाती है।

(ii) सारणी 2 की अंकमाला मद के अनुसार अनाजों के उपभोग की मात्रा एवं मूल्य दर्शाती है, प्रतिमास प्रति व्यक्ति व्यय वर्ग के संबंध में 30 दिन की अवधि के लिए प्रति व्यक्ति चना और अनाज प्रतिस्थापित करता है।

(iii) सारणी 3 की अंकमाला प्रतिमास व्यय वर्ग के संबंध में प्रति व्यक्ति मदों के प्रमुख समूहों के उपभोग मूल्य को उपलब्ध कराती है। अनुमान मदों के 19 प्रमुख समूहों के लिए दिए गए हैं

समूह इस प्रकार हैं:- (1) अनाज, (2) चना (3) अनाज के प्रतिस्थापित (4) दालें और दाल उत्पाद, (5) दूध और दूध उत्पाद, (6) खाद्य तेल, (7) मांस, अण्डे और मछली, (8) सब्जियों, (9) फल और मेवे, (10) चीनी, (11) नषक, (12) मसाले, (13) पेय पदार्थ और अल्पाहार (14) पान, तम्बाकू और मादक पदार्थ (15) ईंधन और बिजली, (16) वस्त्र, (17) जूते, (18) विविध वस्तुएं और सेवाएं, किराया और घर सहित (19) टिकाऊ माल। इनके अतिरिक्त (20) किराया और (21) करों संबंधी अनुमानों अलग-अलग भी दर्शाया गया है।

(iv) सारणी 4 की अंकमाला मकान श्रेणी के अनुसार मासिक प्रति व्यय वर्ग की तुलना में परिवारों के प्रतिशत वितरण को दर्शाती है।

3.1. मासिक प्रति व्यक्ति व्यय वर्ग : परिवारों को उनके मासिक प्रति व्यक्ति व्यय के अनुसार वर्गीकृत किया गया है। व्यय वर्ग (रुपए में) को उनके महत्व के बढ़ते क्रम में व्यवस्थित किया गया है। सूचित व्यय स्तरों की प्रत्येक राश्यासंध शासित क्षेत्र और सपस्त भारत के ग्रामीण एवं शहरी दोनों क्षेत्रों के संबंध में निम्नलिखित 14 श्रेणियों में समूह-बद्ध किया गया है :

क्रम सं०	मासिक प्रति व्यक्ति व्यय वर्ग (रुपए में)	क्रम संख्या मासिक प्रति व्यक्ति व्यय वर्ग (रुपए में)	
		1	2
1.	0-30	8.	100-125
2.	30-40	9.	125-150
3.	40-50	10.	150-200
4.	50-60	11.	200-250
5.	60-70	12.	250-300
6.	70-85	13.	300 और उससे अधिक
7.	85-100	14.	समस्त व्यय

टिप्पणी :—व्यय समूह 0-30, 30-40 आदि 0 रुपए में 30 रुपए से कम, 30 रुपए से 40 रुपए से कम इत्यादि के लिए प्रयुक्त होते हैं।

3.2 सारणी संख्या : संदर्भ की सुविधा के लिए, सारणी संख्याओं के कोड दिए गए हैं। दशमलव के बिन्दु का बायें से दायें अंक सूचना के प्रकार का उल्लेख करता है तथा दायाँ अंक राज्य/संघ शासित क्षेत्र दर्शाता है। इसके पश्चात् ग्रामीण सारणियों के लिए आर० तथा शहरी सारणियों के लिए यू० शब्द का उल्लेख किया गया है। राज्यों/संघ शासित क्षेत्रों के लिए निर्धारित कोड संख्या निम्नानुसार है :—

0. अखिल भारत
1. आंध्र प्रदेश
2. अरुणाचल प्रदेश
3. असम
4. बिहार
5. गुजरात
6. हरियाणा
7. हिमाचल प्रदेश
8. जम्मू कश्मीर
9. कर्नाटक
10. केरल
11. मध्य प्रदेश
12. महाराष्ट्र\*
13. मणिपुर
14. मेघालय
15. मिजोरम

16. नागालैंड
17. उड़ीसा
18. पंजाब
19. राजस्थान
20. सिक्किम
21. तमिलनाडू
22. त्रिपुरा
23. उत्तर प्रदेश
24. पश्चिम बंगाल
25. अण्डमान व निकोबार द्वीप
26. चण्डीगढ़
27. दादरा वह नगर हवेली
28. दिल्ली
29. गोआ, दमन व दीव
30. लक्षद्वीप
31. पांडिचेरी

\*चूंकि अनुमान उपलब्ध नहीं हुए हैं, अतः अरुणाचल प्रदेश के परिणाम प्रस्तुत नहीं किए गए हैं।

3.3 इस रिपोर्ट में प्रस्तुत किए गए विभिन्न राज्यों को आबंटित तथा सर्वेक्षित किए गए प्रतिदर्श गांवों/खण्डों की संख्या विवरण पत्र एस०-0 में दी गई है।

विवरण पत्र एस०-0 राज्य/संघ शासित क्षेत्र द्वारा आबंटित तथा सर्वेक्षित प्रतिदर्श गांवों/खंडों की संख्या

राज्य/संघ शासित क्षेत्र	आबंटित प्रतिदर्शों की संख्या		सर्वेक्षित प्रतिदर्शों की संख्या	
	गांव	खंड	गांव	खण्ड
1	2	3	4	5
आन्ध्र प्रदेश	624	344	619	343
अरुणाचल प्रदेश	30	30	उ० न०	उ० न०
असम	368	120	368	119

समस्त भारत*	8546	4656	8379	4588

—इसमें अरुणाचल प्रदेश शामिल नहीं है।

4. प्रतिचयन अभिकल्प एवं आकलन पद्धति :

4.0 बृहत् अभिकल्प : सर्वेक्षण में अपनाया गया यह प्रतिचयन अभिकल्प स्तरीकृत दो चरणों वाला था पहला एक चरण वाली यूनिटों के रूप में ग्रामीण क्षेत्रों में जनगणनाकृत गांवों तथा शहरी क्षेत्रों में रा० प्र० सर्वे० सं० शहरी ढांचा सर्वेक्षण में खंड तथा दूसरे चरण की यूनिटों के रूप में परिवार थे। जनसंख्या के सम्भाव्यता अनुपात में तथा दो स्वतन्त्र अन्तर्निवेशन प्रतिदर्शों के रूप में प्रतिस्थापन सहित प्रतिदर्श गांवों का चयन किया गया। याधारण यादृच्छिक प्रतिचयन द्वारा दो स्वतन्त्र अन्तर्निवेशी प्रतिदर्शों के रूप में प्रतिस्थापन किये बिना प्रतिदर्श खण्डों का चयन किया गया। दूसरे चरण (पहले चरण की यूनिटों में से प्रत्येक से दो) प्रतिदर्श परिवारों का एक यादृच्छिक प्रारम्भ सहित वर्तुल क्रमबद्धानुसार किया गया।

4.1 सर्वेक्षण अवधि एवं 34 दौर निर्माण : जुलाई, 1986 के महीने में सर्वेक्षण आरम्भ किया गया तथा जून, 1987 में पूरा किया गया। एक वर्ष की सम्पूर्ण सर्वेक्षण, अवधि को चार उप दौरों में विभाजित किया गया था, इसमें तीन-तीन महीने की अवधि के चार कृषि मौसम थे। चारों उप-दौरों की अवधियां निम्नलिखित थी :

- उप-दौर : जुलाई, 1986—सितम्बर, 1986।
- उप-दौर 2 अक्टूबर, 1986—दिसम्बर, 1986।
- उप-दौर 3 : जनवरी, 1987—मार्च, 1987।
- उप-दौर 4 : अप्रैल, 1987—जून, 1987।

इन प्रतिदर्श यूनिटों को चारों दौरों में इस प्रकार बराबर वितरित किया गया ताकि सम्बन्धित उप दौर की प्रत्येक अवधि के लिए बराबर संख्या में वैध अनुमान प्रदान किये जा सकें। पूरे चारों दौरों को लेकर एकत्रित किये गए आँकड़ों पर आधारित औसत सामयिकता के प्रभाव से मुक्त होंगे।

4.2 आकलन पद्धति : 42 वें दौर में अपनाई गई आकलन पद्धति प्रतिदर्श मूल्यों के भारित योग पर आधारित है  $Y$ ।  $Y$  द्वारा निर्दिष्ट,  $Y$  का निष्पक्ष अनुमान (किसी चंराक का प्रतीक जोड़) यह निम्नलिखित के द्वारा प्रस्तुत किया गया

$$\hat{Y} = \sum_s \frac{P_s}{n_s} \sum_{i=1}^{M_s} \frac{D_{si}}{e_{si} p_{si}} \frac{H_{si}}{h_{si}} \sum_{j=1}^{h_{si}} y_{sij} \quad \dots (1)$$

ग्रामीण क्षेत्रों के लिए एवं

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{M_s} D_{si} \frac{H_{si}}{h_{si}} \sum_{j=1}^{h_{si}} y_{sij} \quad \dots (2)$$

शहरी क्षेत्र के लिए जहां  $s, i, j$  एक क्रमशः संस्तर, गांव/शहरी खण्ड एवं परिवार योजक हैं।  $P_s, N_s$  एवं  $M_s$  क्रमशः जनसंख्या के संस्तरीय मूल्य, ढांचे में गांवों/खण्डों की संख्या तथा गांवों एवं खण्डों की संख्या प्रस्तुत करते हैं।

Dsi Esi एवं Psi क्रमशः बनाए गए खेड़ा समूहों/उप खण्डों की संख्या, वास्तव में सर्वेक्षित बड़े राजस्व गांव में निहित जनगणना कृत गांवों की संख्या तथा प्रतिदर्श गांव की जनसंख्या के प्रतीक हैं ।

Hsi एवं hsi सूचीकृत परिवारों की कुल संख्या एवं प्रतिदर्श परिवारों की संख्या के प्रतीक हैं तथा अन्ततः ysjj प्रतिदर्श परिवार के लिए चरोंक का प्रेक्षित मूल्य है । दो विशेषताओं के अनुपात के अनुमान उनके समाहारों के अनुमानों के अनुपात द्वारा प्रस्तुत किये गये हैं ।

### 5. निष्कर्षों का सार :

5.0 इस खण्ड में पारिवारिक उपभोग पैटर्न की विस्तृत तुलनात्मक छवि दर्शाने के लिए सर्वेक्षण के कुछ मुख्य निष्कर्ष प्रस्तुत किए गए हैं । इसके अतिरिक्त, ग्रामीण तथा शहरी क्षेत्रों में प्रचलित आवासीय ढांचे के पैटर्न पर भी चर्चा की गई है ।

5.1 औसत पारिवारिक आकार : सारणी एस-1 ग्रामीण तथा शहरी क्षेत्रों सम्बन्धी राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन के 42वें एवं 38वें दौर में अवलोकित प्रति परिवार व्यक्तियों की औसत संख्या दर्शाती है । अखिल भारतीय स्तर पर प्रति ग्रामीण परिवार में व्यक्तियों की औसत संख्या 38वें दौर में 5.20 की तुलना में 42 वें दौर में 5.26 रही । दोनों दौरों में उक्त औसत सबसे कम (42 वें तथा 38 वें दौर में क्रमशः 4.25 व 4.35) तमिलनाडु में तथा सब से अधिक (क्रमशः 6.34 तथा 6.11) हरियाणा में है । शहरी क्षेत्र में अखिल भारतीय स्तर पर औसत पारिवारिक आकार 42 वें तथा 38 वें दौर में, क्रमशः 4.79 तथा 4.81 पाया गया है । राज्यों के मामले में दोनों दौरों में परिवार का उच्चतम आकार जम्मू तथा कश्मीर द्वारा सूचित किया गया जबकि 42 वें तथा 38 वें दौर में क्रमशः न्यूनतम आकार पश्चिम बंगाल (4.36) तथा पंजाब (4.47) द्वारा सूचित किया गया है । राष्ट्रीय प्रतिदर्श सर्वेक्षण के दोनों दौरों के मध्य औसत पारिवारिक आकार में परिवर्तन सभी राज्यों में समान नहीं है । कुछ राज्यों ने 38 वें दौर की तुलना में 42 वें दौर में उक्त औसत में कमी दिखायी जबकि कुछ ने वृद्धि दर्शायी ।

5.2 उपभोक्ता व्यय का पैटर्न : उपभोक्ता व्यय पैटर्न का विभिन्न पहलुओं के अन्तर्गत निम्नलिखित रूप में अध्ययन किया गया था । प्रथमतः मासिक प्रतिव्यक्ति व्यय वर्ग के अनुसार जनसंख्या वितरण तथा विभिन्न राज्यों में औसत मासिक प्रति व्यक्ति व्यय पर विचार विमर्श किया गया । इसके बाद राज्यवार उपभोग किए गए खाद्य पदार्थों की प्रमात्रा तथा मूल्य की एक तुलनात्मक झांकी प्रस्तुत की गयी है । इसके पश्चात् बृहत मद समूहों के अनुसार उपभोक्ता व्यय के पैटर्न पर विचार विमर्श किया गया और अन्त में

इस अवधि के दौरान उपभोक्ता व्यय के पैटर्न में परिवर्तनों का अध्ययन किया गया है ।

5.3 मासिक प्रतिव्यक्ति व्यय वर्ग तथा औसत प्रति व्यक्ति व्यय के अनुसार जनसंख्या वितरण: 17 मुख्य राज्यों तथा अखिल भारत स्तर पर मासिक प्रतिव्यक्ति व्यय वर्गों के अनुसार ग्रामीण एवं शहरी क्षेत्रों के लिए व्यक्तियों का प्रति हजार पर वितरण क्रमशः सारणी एस-2 तथा एस-3 में दर्शाया गया है । आंध्र प्रदेश, तमिलनाडु, उत्तर प्रदेश और पश्चिम बंगाल के ग्रामीण क्षेत्रों के सम्बन्ध में औसत मासिक प्रति व्यक्ति व्यय लगभग अखिल भारतीय ग्रामीण औसत मासिक प्रति व्यक्ति व्यय 140 रु० के समान ही है । जबकि महाराष्ट्र, कर्नाटक, मध्य प्रदेश, बिहार तथा उड़ीसा में उक्त औसत अखिल भारत की तुलना में लगभग 4 रुपये से 26 रुपये तक कम है । अखिल भारतीय मासिक प्रति व्यक्ति व्यय 140 रु० की तुलना में गुजरात, जम्मू व कश्मीर, राजस्थान, केरल, हरियाणा तथा पंजाब के सम्बन्ध में यह औसत 13 रुपये से 72 रुपये तक अधिक है । मासिक प्रति व्यक्ति व्यय वर्गों में जनसंख्या का वितरण बिल्कुल भिन्न पैटर्न प्रदर्शित करता है । 100 से कम मासिक प्रति व्यक्ति व्यय वाली जनसंख्या का प्रति हजार अनुपात पंजाब तथा केरल के सम्बन्ध में क्रमशः 89 और 176 है, जबकि मध्य प्रदेश तथा उड़ीसा के मामले में यह अधिक से अधिक क्रमशः 518 तथा 522 है । इसके विपरीत अखिल भारत के सम्बन्ध में उक्त अनुपात 367 है । दो सौ रुपये एवं अधिक के मासिक प्रति व्यक्ति व्यय वर्ग में हरियाणा तथा उड़ीसा ने पुनः क्रमशः उच्चतम एवं न्यूनतम 382 और 81 प्रति हजार जनसंख्या अनुपात दर्शाया है । प्रमुख राज्यों के शहरी क्षेत्रों के सम्बन्ध में उत्तर प्रदेश जिसका मासिक प्रति व्यक्ति व्यय 100 रुपये से कम है, ने प्रति हजार जनसंख्या पर उच्चतम अनुपात 234 सूचित किया है । अधिकतम मासिक प्रति व्यक्ति व्यय 260 रुपये, पंजाब द्वारा दर्शाया गया है और उसके पश्चात महाराष्ट्र तथा पश्चिम बंगाल प्रत्येक ने औसत प्रति व्यक्ति व्यय 243 रुपये दर्शाया है । 300 रुपये और उससे अधिक के औपन मासिक प्रति व्यक्ति व्यय वर्ग में पंजाब 297 प्रति हजार जनसंख्या अनुपात सहित सबसे ऊपर रहा और उत्तर प्रदेश मासिक प्रति व्यक्ति व्यय वर्ग प्रति हजार जनसंख्या पर केवल 138 व्यक्ति होने के कारण सूची में सबसे नीचे है ।

5.4 अनाज खपत की मात्रा : खाद्य खपत का मुख्य भाग अनाज को माना गया है । अनाज की घटक मदों का संयोजन प्रत्येक राज्य में अलग-अलग है । जबकि, विवरण पत्र एस-4 में सूचीबद्ध सभी अनाज प्रति यूनिट मात्रा करीब-करीब समान ऊर्जा यूनिट प्रदान करते हैं, फिर भी इनकी कीमतों में काफी अन्तर है । (मूल्य प्रति यूनिट मात्रा) सारणी एस-4 तथा सारणी एस-5 में 16 प्रमुख राज्यों तथा अखिल भारत सम्बन्धी ग्रामीण तथा शहरी क्षेत्रों

के बारे में प्रति व्यक्ति औसत मात्रा तथा प्रतिमाह उपभोग किए गये अनाज की विभिन्न मदों सम्बन्धी मूल्य प्रदर्शित किये गण हैं। ग्रामी क्षेत्रों के मुकाबले शहरी क्षेत्रों में अपेक्षाकृत अधिक मात्रा में अनाज की खपत की गयी है। ग्रामीण क्षेत्रों के सम्बन्ध में अनाज की खपत की मात्रा सबसे अधिक जम्मू व कश्मीर और उसके बाद राजस्थान में पायी गयी है। केरल तथा उसके पश्चात् गुजरात द्वारा न्यूनतम खपत दर्शायी गयी है। इसी प्रकार शहरी क्षेत्र के मामले में जम्मू व कश्मीर ने अधिकतम खपत दिखायी है। मात्रा के सम्बन्ध में उड़ीसा व राजस्थान दो राज्यों ने अनाज की अधिक खपत की सूचना दी है। गुजरात, महाराष्ट्र तथा तमिलनाडु राज्यों ने अनाज की अपेक्षाकृत कम खपत दिखाई है। हरियाणा, पंजाब, राजस्थान और उत्तर प्रदेश में शहरी तथा ग्रामीण दोनों क्षेत्रों में गेहूं प्रमुख अनाज है जबकि आंध्र प्रदेश, असम, बिहार, जम्मू व कश्मीर, केरल, उड़ीसा, तमिलनाडु तथा पश्चिम बंगाल में प्रमुख अनाज चावल है। सामान्यतः चावल की खपत वाले राज्यों में गेहूं बहुत कम खाया जाता है केवल बिहार तथा जम्मू व कश्मीर के शहरी व ग्रामीण क्षेत्रों के तथा पश्चिम बंगाल के शहरी क्षेत्र के अलावा जहां कि गेहूं 25 प्रतिशत से अधिक कुल अनाज का पूरक है, दूसरी तरफ पंजाब, राजस्थान, तथा हरियाणा में विशेषतः ग्रामीण क्षेत्रों में यदा-कदा ही चावल की खपत होती है। राजस्थान तथा गुजरात में कुल अनाज की खपत का 20 प्रतिशत से अधिक बाजरे से सम्पूरित किया जाता है।

5.5 अनाजों की खपत का मुख्यः चावल की खपत वाले राज्यों में अनाज की कुल खपत का मूल्य अपेक्षाकृत अधिक है। यद्यपि केरल में अनाज (मात्रा) की मासिक प्रति व्यक्ति खपत न्यूनतम है तथापि गेहूं की खपत वाले बहुत से राज्यों जैसे उत्तर प्रदेश तथा राजस्थान जिन्होंने अनाज (मात्रा) की मासिक प्रति व्यक्ति खपत काफी अधिक बताया है, की तुलना में उसका संगत मूल्य अधिक है। मात्रा की तरह ही अनाजों की खपत का मूल्य अखिल भारतीय स्तर पर शहरी क्षेत्रों की तुलना में ग्रामीण क्षेत्रों में अधिक है। किन्तु यह भी पाया गया है कि अखिल भारतीय स्तर पर अनाज की खपत का कुल अस्पष्ट मूल्य शहरी क्षेत्र (रु० 3.04) के मूल्यों के मुकाबले ग्रामीण क्षेत्र में (रु० 2.64) कम है।

5.6 बृहत वस्तु समूह के अनुसार उपभोक्ता व्यय सारणी एस०-6 तथा एस०-7 क्रमशः ग्रामीण तथा शहरी क्षेत्रों के सम्बन्ध में बृहत वस्तु समूह के अनुसार औसत मासिक प्रति व्यक्ति उपभोक्ता व्यय दर्शाती हैं। खाद्य वस्तुओं में सभी राज्यों के ग्रामीण तथा शहरी दोनों क्षेत्रों में उपभोक्ता व्यय का प्रमुख भाग सम्मिलित किया गया है। ग्रामीण क्षेत्र में खाद्य वस्तुओं पर अपेक्षाकृत अधिक व्यय दिखाने वाले राज्यों में पंजाब (125), हरियाणा (123), जम्मू व कश्मीर (116), केरल (116), तथा राजस्थान

(104) हैं। मध्यप्रदेश (79), कर्नाटक (84), बिहार (87), आन्ध्र प्रदेश (87), तथा महाराष्ट्र (87) राज्यों द्वारा खाद्य पदार्थों पर अपेक्षाकृत कम व्यय दर्शाया गया है। गैर खाद्य पदार्थों पर पंजाब में (87) सबसे अधिक व्यय हुआ है उसके पश्चात् केरल में (79) तथा हरियाणा में (76) है और सबसे कम बिहार (31) में है इसके बाद क्रम में उड़ीसा (35), पश्चिम बंगाल (38), तथा असम (40) है। मासिक प्रति व्यक्ति व्यय अधिक दिखाने वाले कुछ राज्य हैं पंजाब (212), हरियाणा (199), तथा केरल (196), उड़ीसा (114), बिहार (117), मध्य प्रदेश (122), तथा कर्नाटक (129) अपेक्षाकृत मासिक प्रति व्यक्ति कम व्यय दिखाने वाले राज्य हैं।

5.7 शहरी क्षेत्रों में खाद्य मदों पर व्यय की रेंज 112/- रुपये (उत्तर प्रदेश) से लेकर 145/- रुपये (पंजाब) तक बढ़ती रही है। गैर खाद्य मदों पर अधिकतम उपभोक्ता व्यय भी पंजाब ने (115) की सूचना दी है। जिन अन्य राज्यों ने गैर खाद्य मदों पर अधिक व्यय की सूचना दी वे हैं, पश्चिम बंगाल (103), महाराष्ट्र (102) और तमिलनाडु (94)। कुछ राज्यों ने शहरी क्षेत्रों में अधिक मासिक प्रति व्यक्ति व्यय की सूचना दी वे हैं, पंजाब (260), महाराष्ट्र (243) और पश्चिम बंगाल (243)।

5.8 जहां तक खाद्य की खपत का सम्बन्ध है, सारणियां विभिन्न क्षेत्रों में खान-पान की प्रवृत्ति को स्पष्टतः प्रस्तुत करती है। उदाहरणतया चावल खाने वाले कुछ राज्यों अर्थात् असम, उड़ीसा, पश्चिम बंगाल और केरल से मांस, मछली, अण्डे तथा सब्जियों पर अधिक व्यय होता है। उत्तर प्रदेश, पंजाब, गुजरात, हरियाणा, मध्य प्रदेश और महाराष्ट्र में दालों पर अधिक व्यय होता है और पंजाब, राजस्थान, हरियाणा, गुजरात और जम्मू व कश्मीर में दूध और दूध के उत्पादों पर अधिक व्यय राशि दर्शाती है। केरल के ग्रामीण और शहरी दोनों क्षेत्रों में पेय पदार्थों और अल्पाहारों, जिसमें खरीदे हुए पके पकाये भोजन का मूल्य भी शामिल है, पर अधिकतम व्यय पाया गया है। अन्य राज्यों में तमिलनाडु और पंजाब दोनों क्षेत्रों तथा महाराष्ट्र में केवल शहरी क्षेत्र में इस मद पर अधिक व्यय की सूचना दी गई है।

5.9 मासिक प्रति व्यक्ति व्यय वर्गों के अनुसार उपभोक्ता व्यय : प्रति मास प्रति व्यक्ति व्यय वर्ग की मदों के बृहत समूहों के अनुसार कुल व्यय की उपभोक्ता व्यय की प्रतिशतता की तुलना में ग्रामीण (विवरण पत्र एस०-8) और शहरी (विवरण पत्र एस०-9) दोनों क्षेत्रों के लिए अखिल भारतीय स्तर पर उपभोक्ता व्यय प्रस्तुत किया गया है। इन दोनों क्षेत्रों में खाद्य पर औसत व्यय क्रमशः 66 प्रतिशत और 57 प्रतिशत पाया गया है। यय वर्ग में वृद्धि हो जाने से अनाजों, नमक, मसालों और खाद्य

पर व्यय की प्रतिशतता, कुल मिलाकर क्रमिक रूप से गिरावट आई है। दूसरी ओर दूध और दूध के उत्पाद व्यय वर्गों की बढ़ती हुई प्रवृत्ति को दर्शाते हैं। ग्रामीण क्षेत्रों में लगभग इसी प्रकार की प्रवृत्ति चीनी के मामले में भी देखी गयी है।

5.10 गैर खाद्य मदों के मामले में व्यय की प्रतिशतता, विविध समूहों और सेवाओं, पहनने के वस्त्रों और जूते चप्पलों के बारे में दिए गए कुछ अन्तरालों सहित व्यय-वर्ग में वृद्धि के कारण बढ़ती जा रही है। दोनों क्षेत्रों में ईंधन और प्रकाश और ग्रामीण क्षेत्र में पान, तम्बाकू और मादक पदार्थों की प्रवृत्ति इससे बिल्कुल विपरीत है।

5.11 इस अवधि के दौरान व्यय पैटर्न में परिवर्तन : इस अवधि के दौरान उपभोक्ता व्यय के पैटर्न में परिवर्तन दर्शाने के लिए चार रा० प्र० सर्वे० दौर 27, 32, 38 और 42 के अनुसार कुल उपभोक्ता व्यय की तुलना में बृहत्तम मद समूहों पर उपभोक्ता व्यय, समस्त भारत स्तर पर विवरण पत्र एस०-10 में प्रस्तुत किए गए हैं। ये चारों सर्वेक्षण अक्टूबर 1972, सितम्बर 1973, जुलाई 1977, जून 1978, जनवरी से दिसम्बर, 1983 और जुलाई 1986 से जून, 1987 के दौरान किये गये थे। पहले तीन सर्वेक्षण राष्ट्रीय प्रतिदर्श सर्वेक्षण के पंचवर्षीय सर्वेक्षण कार्यक्रम में थे जबकि अन्तिम एक पूर्वोक्त अनुसार रा० प्र० सर्वे० सं० की शासी परिषद् द्वारा प्रवर्तित वार्षिक सर्वेक्षण कार्यक्रम की अंकमाला का पहला था।

5.12 इन अनुमानों के अवलोकन से पता चलता है कि पूरे वर्ष में ग्रामीण और शहरी दोनों क्षेत्रों में सभी मदों के व्यय में वृद्धि हुई है जैसा कि सामान्यतया मूल्यों में वृद्धि के कारण संभावना थी। अतः कुल भोजन सम्बन्धी उपभोक्ता व्यय ग्रामीण क्षेत्रों में 27वें दौर में 32 रुपये से बढ़कर 42वें दौर में 93 रुपये हो गया। प्रतिशत के सम्बन्ध में, पूरे वर्ष में अनाज सम्बन्धी व्यय के समानुपात में पर्याप्त गिरावट आई, ग्रामीण क्षेत्र में यह 27वें दौर के 41 प्रतिशत की तुलना में 42वें दौर में 27 प्रतिशत हो गई। शहरी क्षेत्र के लिए संगत प्रतिशतता 27वें और 42वें दौर में क्रमशः 23 और 15 है। पूरे वर्ष में, लगभग सभी खाद्य मदों में प्रतिशत के सम्बन्ध में व्यय में वृद्धि हुई है। जिस मद ने ध्यान आकर्षित किया है वह है दुग्ध और दुग्ध उत्पाद। गैर खाद्य वर्ग की मदों में पहनने के वस्त्रों के मामले में दोनों क्षेत्रों और विविध वस्तुओं और सेवाओं के सम्बन्ध में ग्रामीण क्षेत्र में रा० प्र० सर्वे० के 38वें दौर की तुलना में 42वें दौर में कमी आई। ग्रामीण क्षेत्र में वस्त्र सम्बन्धी व्यय के प्रतिशत में रा० प्र० सर्वे० के 32वें दौर की तुलना में रा० प्र० सर्वे० के 38वें दौर में ह्रास की प्रवृत्ति पाई गई। जहां तक खाद्य के अनुपात का प्रश्न है : गैर खाद्य के कुल : कुल का सम्बन्ध है, रा० प्र० सर्वे० के 32वें दौर में जो पैटर्न दर्शाया गया है

वही रा० प्र० सर्वे० के 42वें दौर में जारी रहा। कुल व्यय में से खाद्य पर कुल व्यय के भाग में कमी हुई यह 27वें दौर में 73 प्रतिशत से घटकर 32वें दौर में 64 प्रतिशत हो गया तथा 38वें और 42वें दौर दोनों में 66 प्रतिशत रहा। शहरी क्षेत्र में, उपयुक्त प्रतिशत वर्ष दर वर्ष घटता गया 27वें में 64 से 32वें में 60 तथा 38वें में 59 से 42वें में 57 तक रह गया। तथापि समय की आवश्यकतानुसार दिए गए, ये अंतराल यह आवश्यक नहीं कि वास्तविक ही हो। सम्भवतः इस अवधि के दौरान विभिन्न वस्तुओं के मूल्यों के उतार-चढ़ाव में अंतर, पैटर्न में प्रतिबिम्बित किया गया हो।

5.13 चुने हुए अनाजों की खपत की मात्रा की तुलना :—जैसाकि पहले भी देखा गया है, उपभोक्ता व्यय का प्रमुख भाग अनाजों से बना है। इस अवधि के दौरान मूल्यों में परिवर्तन के अनुसार दो अलग-अलग वर्षों में अनाजों सम्बन्धी व्यय की तुलना की गई है इसे ध्यान में रखते हुए 16 प्रमुख राज्यों के ग्रामीण और शहरी क्षेत्रों के लिए रा० प्र० सर्वे० के 38वें और 42वें दौर के सर्वेक्षण परिणामों से यथा प्राप्त चावल, गेहूं और कुल अनाजों की मासिक प्रति व्यक्ति प्रति मास खपत की औसत मात्रा जैसे कि क्रमशः विवरण-पत्र एस०-11 और एस०-12 में प्रस्तुत है। यह देखा गया कि रा० प्र० सर्वे० के दो दौरों में समस्त भारत, ग्रामीण, और शहरी क्षेत्र में अनाजों की कुल मात्रा के उपभोग के सम्पूर्ण पैटर्न के में कोई परिवर्तन नहीं हुआ। समस्त भारत स्तर पर, अनाज की दो प्रमुख किस्मों—चावल और गेहूं के उपभोग की औसत मात्रा में बहुत अधिक भिन्नता नहीं है। राज्य स्तर पर, कुछ भिन्नता रही है। आन्ध्र प्रदेश, असम, गुजरात, कर्नाटक, महाराष्ट्र और पंजाब राज्य ऐसे हैं जहां औसतन एक परिवार ने रा० प्र० सर्वे० के 38वें दौर में कुल अनाजों की खपत की औसत मात्रा से 42वें दौर में लगभग एक किलो कम अनाज की खपत हुई। दूसरी ओर, पश्चिम बंगाल में 42वें दौर में ज्यादा अनाजों की खपत दर्ज की है। वर्ष के दौरान किसी भी राज्य में अनाजों के उपभोग में बहुत कम परिवर्तन हुआ।

5.14 कुछ चुनी हुई वस्तुओं के लिए 1983 से 1986-87 तक औसत मूल्य में परिवर्तन : रा० प्र० सर्वे० उपभोग व्यय आंकड़े तथा थोक मूल्य सूचकांक से प्राप्त 1983-1986-1987 तक कुछ चुनी हुई वस्तुओं के औसत मूल्य के उतार-चढ़ाव का एक तुलनात्मक विवरण एस-13 विवरण पत्र में प्रस्तुत है। इस तरह की कोई रा० प्र० सर्वे० उपभोक्ता व्यय सर्वेक्षण ने विभिन्न वस्तुओं के मूल्यों के संबंध में किसी जानकारी को एकत्र नहीं की है। विभिन्न वस्तुओं के अस्पष्ट मूल्य, किसी मद के खपत मूल्य को संगत मद की खपत की मात्रा से भाग करके प्राप्त किया गया। खपत निम्नलिखित से हो सकती है यथा (I) घर में उत्पादित वस्तुओं के स्टॉक (II) खरीद (III) वस्तुओं के विनिमय या सेवाओं

से प्राप्त (IV) दान, ऋण या निःशुल्क संग्रहण प्रभाग आदि। घर में उत्पादित वस्तुओं का स्टॉक खपत का वह भाग है जिसका मूल्यांकन एक्स फार्म मूल्य पर किया जाता है, जबकि शेष भाग का मूल्यांकन स्थानीय खुदरा मूल्य से किया जाता है। अतः रा० प्र० सर्वे उपभोग आंकड़ों के अस्पष्ट मूल्य उत्पादक के मूल्य और खुदरा मूल्य का मिश्रण है। विवरण-पत्र से यह देखा गया है कि रा० प्र० सर्वे के 42 वें दौर में सभी वस्तुओं के मूल्यों में वृद्धि हुई है। यह 1983 और 1986-1987, रा० प्र० सर्वे के दौरों के संगत वर्षों के थोक मूल्य सूचकांकों में हुए परिवर्तन से भी स्पष्ट होता है। तथापि सभी मदों के मूल्यों में परिवर्तन एक समान नहीं है। हालांकि ग्रामीण क्षेत्र में चावल, गेहूं मक्का और रागी में मामूली सा परिवर्तन हुआ है, चने के मामले में 50 प्रतिशत से अधिक वृद्धि सूचित की गई है। शहरी क्षेत्र में, जौ के मूल्य में कोई परिवर्तन नहीं हुआ है और न ही मक्का के मूल्य में कमी देखी गई। कुल मिलाकर ग्रामीण और शहरी क्षेत्रों से प्राप्त और थोक मूल्य सूचकांक से प्राप्त मूल्यों का अनुपात भी लगभग समान पाया गया है। सामान्यतया, ग्रामीण क्षेत्र में मूल्य अनुपात या तो बराबर रहा या थोक मूल्य सूचकांकों के अनुपात से कम रहा। तथापि, ग्रामीण क्षेत्र में "जौ" और "चना" के मूल्यों में परिवर्तन, 38 वें दौर तक थोक मूल्य सूचकांकों से अधिक है। शहरी क्षेत्र की तुलना में, ग्रामीण क्षेत्र में बाजरा, मक्का, जौ और चना के संबंध में मूल्य अनुपात अधिक पाया गया।

5.15 ढांचे का प्रकार तथा आवास यूनिटों का प्रकार : ऊपर चर्चित उपभोक्ता व्यय के ब्यौरों के अलावा, रिपोर्ट में मकानों की श्रेणियों के अनुसार परिवारों के विवरण को दर्शाने वाली सारणियां भी निहित हैं। विवरण-पत्र एस-14 और एस-15 से यह पता चलता है कि ग्रामीण क्षेत्र में आमतौर पर मकानों के ढांचे का पैटर्न "कच्चा" प्रकार है,

जबकि शहरी क्षेत्र में अधिकांशतः पक्के मकान हैं। विवरण-पत्र से यह पता चलता है कि ग्रामीण क्षेत्र में समस्त भारत स्तर पर प्रति 1000 परिवारों में से, 493 परिवारों के मकान कच्चे हैं, 329 के अर्ध-पक्के तथा अन्य 171 परिवारों के आवास पक्के हैं। पूर्वी क्षेत्र के राज्यों में जैसे कि उड़ीसा, असम, पश्चिम बंगाल और बिहार में कच्चे मकान सर्वाधिक हैं। कच्चे कच्चे मकानों में रहने वाले परिवारों का समानुपात उत्तर प्रदेश, आंध्र प्रदेश, मध्य प्रदेश तमिनाडु और राजस्थान में भी अधिक है किन्तु ये पूर्वी क्षेत्र के राज्यों से अधिक नहीं हैं। दूसरी ओर, पंजाब, कर्नाटक, हरियाणा में पक्के मकानों में रहने वाले परिवारों का समानुपात अधिकतम है।

5.16 विवरण एस-15 से पता चलता है कि समस्त भारत के शहरी क्षेत्र में प्रति हजार परिवारों में से क्रमशः 568, 255 और 169 परिवारों के पास उन पक्के, अर्ध पक्के और कच्चे आवास हैं। असम को छोड़कर सभी प्रमुख राज्यों में पक्के मकानों की प्रमुखता पाई गई।

5.17 समस्त भारत के साथ-साथ राज्य स्तर पर ग्रामीण और शहरी क्षेत्रों दोनों में परिवारों के आवास यूनिटों की किस्म के विवरण से यह पता चलता है कि अधिकांश परिवार अलग-अलग मकानों में रहते हैं। केरल को छोड़कर सभी प्रमुख राज्यों में शहरी क्षेत्र की तुलना में ग्रामीण क्षेत्रों में अलग-अलग मकान आवास यूनिट में अधिक लोकप्रिय है। ग्रामीण क्षेत्रों की तुलना में शहरी क्षेत्रों में आवास यूनिट के रूप में चाल बस्ती का समानुपात अधिक है। कई राज्य जैसे कि आंध्र प्रदेश, विहार, जम्मू व कश्मीर, केरल, उड़ीसा, राजस्थान और तमिलनाडु ऐसे हैं जहां चाल/बस्ती, आवासीय यूनिट में रहने वाले परिवारों का प्रतिशत शहरी क्षेत्र के अपेक्षाकृत ग्रामीण क्षेत्र में अधिक है।
