ON STAGewise VARIANCE COMPONENTS OF A STRATIFIED TWO-STAGE DESIGN

K. SANKARANARAYANAN*

ABSTRACT

In the case of sampling designs with two-stage selection the total variance of, say, population total can be expressed in the form $\frac{A_1}{n} + \frac{A_2}{nm}$ where n stands for the number of first stage units and m represents in some way the number of second stage units per first stage unit. $\frac{A_1}{n}$ is the between fsu component and $\frac{A_2}{nm}$ is the within fsu component of the total variance. In text books on sample surveys such neat expressions are not available for stratified two-stage designs. The paper shows how similar expressions can be derived for stratified designs also and indicates the constraints for using estimates of A_1 and A_2 obtained from one survey for projecting the variances of estimates obtained from another survey.

INTRODUCTION

1. In standard text books on sample survey theory, formulae for stage-wise components of variance for multi-stage designs are generally considered only for designs with no stratification. For this reason, it would appear, some earlier writers have had some difficulty in estimating these components for the whole population for designs involving stratification. For instance, Sanyal et al. (1972) present their estimates of variance components for each stratum separately and not for the State of Punjab as a whole, Rao and Sarma (1980) have to make an unrealistic assumption of equal number of first stage units per stratum. The objective of this article is to indicate how the standard formulae for the stage-wise components of variance of a two-stage sampling design may be "extended" to the case of stratified sampling.

2. We generally follow the notation and terminology of Murthy (1967).

DESIGNS SANS STRATIFICATION

3. Consider a typical two-stage designs where n out of N first stage units (fsu) are selected by ppswr and m_i out of M_i second stage units (ssu) are selected by srswor from the i -th sample fsu. Then the unbiased estimate \hat{Y} of the population total Y of a variate y given by

$$\hat{Y} = \frac{1}{n} \sum_{i=1}^n \frac{1}{p_i} \frac{M_i}{m_i} \sum_{j=1}^{m_i} y_{ij} \quad \dots (1)$$

where p_i is the selection probability of the i -th sample fsu and y_{ij} is the variate value of the j -th sample ssu of

the i -th sample fsu and $\sum_{i=1}^N p_i = 1$ (The same Suffixes i and j are used here for the units in the sample and the population, hoping that the context will be clear from the ranges specified for them.)

4. The variance of \hat{Y} is given by

$$v(\hat{Y}) = \frac{1}{n} \sum_{i=1}^N \left(\frac{Y_i}{p_i} - Y \right)^2 p_i + \frac{1}{n} \sum_{i=1}^N \frac{M_i^2}{p_i} (1-f_i) \frac{\sigma_{wi}^2}{m_i} \dots (2)$$

where, $y_i = \sum_{j=1}^{m_i} y_{ij}$

This may be written as

$$v(\hat{Y}) = \frac{A_1}{n} + \frac{1}{n} \sum_{i=1}^N \frac{A_{2i}}{m_i} \quad \dots (3)$$

where, $A_1 = \sum_{i=1}^N \left(\frac{Y_i}{p_i} - Y \right)^2 p_i$ and $\dots (4)$

$$A_{2i} = \frac{M_i^2}{p_i} (1-f_i) \sigma_{wi}^2 \quad \dots (5)$$

Now (3) can be expressed in the form of

$\frac{A_1}{n} + \frac{A_2}{nm}$ if m_i is taken to be $r_i m$ where the value of r_i ($i = 1, 2, \dots, N$) is determined on the basis of some given rule. Then,

$$A_2 = \sum_{i=1}^N \frac{A_{2i}}{r_i} \quad \dots (6)$$

5. The point to be noted here is that when the number of ssu's per fsu is not fixed, A_2 involves factors which depend on the method of arriving at m_i ($i = 1, \dots, N$) even in the case of designs not employing stratification.

* National Sample Survey Organisation (Survey, Design & Research Division), Calcutta.

6. Whatever be the rule followed for determining m_i , it will be useful to define m as the expected value (according to the sampling design) of average number of sample ssu's per sample fsu, i.e.,

$$m = E \left(\frac{\sum_{i=1}^n m_i}{n} \right)$$

Then,

$$E \left(\frac{\sum_{i=1}^n m_i}{n} \right) = nm$$

or $E \sum_{i=1}^n m r_i = nm$

or $m \sum_{i=1}^n E(r_i) = nm$

or $E(r_i) = \frac{N}{n} \sum_{i=1}^N r_i p_i = 1 \quad \dots (7)$

In particular, for fixed $m_i = m$ for all i , r_i will be equal to 1 for all i .

7. Again, if $m_i \propto M_i$, when the design becomes self-weighting, $m_i = m r_i = K M_i$, where K is the proportionality constant.

or $r_i = K M_i / m$

or $E(r_i) = \frac{K}{m} E(M_i)$

or $K = m / \sum_{i=1}^N M_i p_i$

i.e. $r_i = \frac{M_i}{\sum_{i=1}^N M_i p_i} \quad \dots (8)$

DESIGNS WITH STRATIFICATION

8. Now suppose the sample is selected according to a stratified two-stage design with selection within strata done as before (i.e. fsu's selected with ppswr and ssu's by srswor). The formulae for the estimate of population total and its variance will be similar to those given above, but with an additional subscript, h , to represent stratum. Let there be K strata in all. Then,

$$\hat{Y} = \sum_{h=1}^k \frac{A_h}{n_h} \hat{Y}_h = \sum_{h=1}^k \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{M_{hi}}{p_{hi}} \frac{m_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} y_{hij} \quad \dots (9)$$

and the variance of \hat{Y} can be written as :

$$\begin{aligned} V(\hat{Y}) &= \sum_{h=1}^k V(\hat{Y}_h) \\ &= \sum_{h=1}^k \left(\frac{A_{1h}}{n_h} + \frac{A_{2h}}{n_h m_h} \right) \\ &= \sum_{h=1}^k \frac{A_{1h}}{n_h} + \sum_{h=1}^k \frac{A_{2h}}{n_h m_h} \quad \dots (10) \end{aligned}$$

The first term is the between fsu component and the second term, the within fsu component.

9. Now, (10) can be expressed in the form

$$\frac{A_1}{n} + \frac{A_2}{nm} \quad \text{by putting } n_h = n \cdot s_h \text{ and } m_h = m t_h, \text{ where } s_h \text{ and } t_h \text{ depends on the rule of determining } n_h \text{ and } m_h.$$

Then $V(\hat{Y})$ can be written as :

$$\begin{aligned} V(\hat{Y}) &= \frac{1}{n} \sum_h \frac{A_{1h}}{s_h} + \frac{1}{nm} \sum_h \frac{A_{2h}}{s_h t_h} \\ &= \frac{A_1}{n} + \frac{A_2}{nm}, \text{ where,} \\ A_1 &= \sum_h \frac{A_{1h}}{s_h} \text{ and} \\ A_2 &= \sum_h \frac{A_{2h}}{s_h t_h} \end{aligned} \quad \dots (11)$$

For example, if $m_h = m$ for all h and $n_h = n X_h / (\sum_h X_h)$, or, in other words, n , the total number of fsu's is allocated to the strata in proportion to some size

$$X_h, s_h = \frac{X_h}{X} \text{ (where } X = \sum_h X_h \text{) and } t_h = 1,$$

Then,

$$\begin{aligned} V(\hat{Y}) &= \frac{1}{n} \sum_h \frac{A_{1h} X}{X_h} + \frac{1}{nm} \sum_h \frac{A_{2h} X}{X_h} \quad \dots (12) \\ &= \frac{A_1}{n} + \frac{A_2}{nm} \end{aligned}$$

[Equivalently, n can be defined as the average number fsu's per stratum as well. In either case, the ratio A_1/A_2 will remain the same]. A useful way of defining n , m , s_h and t_h , especially for planning purposes, is one where n is the total number of fsu's and m is the expected number of ssu's per fsu.

ESTIMATION

10. Now, the purpose of estimating A_1 and A_2 is usually to project the variances of a planned survey for varying values of n and m on the basis of estimates of A_1 and A_2 obtained from past surveys. It is then clear that the values of A_1 and A_2 estimated from a past survey will hold good for another survey only if all factors other than n and m remain, at least approximately, unchanged. This entails that the demarcation of the strata and the procedures of determining n_h and m_h must remain the same for the two surveys.

In the unstratified case, as the fsu's are selected with replacement, an unbiased estimate of total variance of \hat{Y} is given by :

$$v(\hat{Y}) = \frac{1}{n(n-1)} \sum_{i=1}^n \left(\frac{1}{p_i} \frac{M_i}{m_i} \sum_{j=1}^{m_i} y_{ij} - \hat{Y} \right)^2 \quad \dots(13)$$

and an unbiased estimate of the within fsu component is :-

$$w(\hat{Y}) = \frac{1}{n^2} \sum_{i=1}^n \frac{M_i^2}{p_i^2} (1-f_i) \frac{s_{wi}^2}{m_i} \quad \dots(14)$$

From (13) and (14), an unbiased estimate of the between fsu component is given by :

$$b(\hat{Y}) = v(\hat{Y}) - w(\hat{Y}) \quad \dots(15)$$

now since $v(\hat{Y}) = \frac{A_1}{n} + \frac{A_2}{nm}$,

$$E(w(\hat{Y})) = \frac{A_2}{nm} \text{ and}$$

$$E(b(\hat{Y})) = \frac{A_1}{n}$$

Hence $A_2 \approx nmw(\hat{Y})$ and $A_1 \approx nb(\hat{Y}) \quad \dots(16)$

where " \approx " stands for "is estimated unbiasedly by".

11. Similarly, for stratified sampling, an unbiased estimate of the total variance of \hat{Y} is :

$$v(\hat{Y}) = \sum_h v(\hat{Y}_h) \\ = \sum_h \frac{1}{n_h(n_h-1)} \sum_{i=1}^{n_h} \left(\frac{1}{p_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} y_{hij} - \hat{Y}_h \right)^2 \quad \dots(17)$$

and an unbiased estimate of the within fsu component is :-

$$w(\hat{Y}) = \sum_h w(\hat{Y}_h) \\ = \sum_h \frac{1}{n_h^2} \sum_{i=1}^{n_h} \frac{M_{hi}^2}{p_{hi}^2} (1-f_{hi}) \frac{s_{hwi}^2}{m_{hi}} \quad \dots(18)$$

From (17) and (18), an unbiased estimate of the between fsu component is given by :

$$b(\hat{Y}) = v(\hat{Y}) - w(\hat{Y}) \quad \dots(19)$$

and, as before, if $v(\hat{Y}) = \frac{A_1}{n} + \frac{A_2}{nm}$, then,

$$\left. \begin{aligned} A_2 &\approx nmw(\hat{Y}) \text{ and} \\ A_1 &\approx nb(\hat{Y}) \end{aligned} \right\} \quad \dots(20)$$

The actual expressions of A_1 and A_2 will depend on (1) the definitions of n and m and (2) the method of determining n_h , m_h and m_{hi} .

12. Again, in order to use these estimates for projecting the variances of one survey, using the estimates of A_1 and A_2 obtained from another survey, the conditions to be satisfied are (apart from stratification, and selection procedure within the strata) that the design parameters s and t must remain the same for the two surveys and the definitions of n and m must also be the same.

13. By an application of the principles described in this paper, the relative standard errors of estimates of household consumer expenditure obtained from NSS 32nd round have been estimated using the variance estimates computed by Rao *et al.* (1980) from the data of the consumer expenditure survey of NSS 28th round. The approach and the results are given in Appendix B of the paper, "Validation of Large Scale Sample Survey Data" by B. S. Minhas. (Invited paper read at the Platinum Jubilee Session of Indian Science Congress : revised and published in Sankhya).

Acknowledgement

The author is indebted to Prof. B. S. Minhas, Chairman, NSSO Governing Council, first of all for giving him an opportunity to work on Appendix B of his paper, "Validation of Large Scale Sample Survey Data", and then prompting him to write this paper explaining the main principles based on which the estimates of relative standard errors given therein have been calculated.

MONTHLY PER CAPITA CONSUMPTION OF CEREALS FOR VARIOUS SECTIONS OF POPULATION

SECTION ONE

INTRODUCTION

1.0 Enquiries on Household Consumer Expenditure have been the most conspicuous part of the work of the National Sample Survey since the early 1950's. However, under its quinquennial work programme since the early 1970's, the NSSO have been collecting the data on household consumer expenditure together with employment/unemployment in the same set of households once in every five years. The 38th round enquiry (January—December 1983) was the third quinquennial survey of this series.

1.1 As per the usual NSS practice, in the 38th round survey information on household consumer expenditure was collected by (A) social groups to which the households belong, both in the rural and urban sector, and by (B) household type (type of occupation) in the rural sector. Social groups were identified into three categories : A (i) Scheduled Caste, A(ii) Scheduled Tribe, and A(iii) others, both in the rural and urban sector. The household type was considered in four categories : B(i) Self-employed in Agriculture, B(ii) Agricultural Labour, B(iii) Rural Labour and B(iv) others in the rural areas for each sample household. Notice that households in A(iii) belong neither to any scheduled caste nor any scheduled tribe. Similarly households in B(iv) do not belong to any of the household types in B(i) to B(iii).

1.2 Although household consumer expenditure by social groups and household (occupation) types had been collected in the earlier rounds of the NSS, it is for the first time that the 38th round survey results are being presented separately for different social groups as well as different categories of households by household type. The 38th round survey results (provisional) based on all households¹, scheduled caste and scheduled tribe households², and for self-employed households in Agriculture and of Agricultural and Rural Labour households³, were released earlier.

1.3 The present report presents the estimates of the monthly per capita consumption of cereals, grams and cereal substitutes for different sections of population by their social group and household type as identified in para 1.1 above. It is to be noted that the social group and household type are two distinct classificatory characters of households and, therefore, the sub-groups formed by social groups and those by household types are not mutually exclusive.

1.4 *Survey period and reporting period* : The field work of the 38th round started in January 1983 and continued up to December 1983, covering a period of one complete year. The reference period for collection of data on consumer expenditure was 30 days preceding the date of survey. The estimates presented in the report, therefore, broadly relate to the period December 1982 to December 1983.

1.5 *Coverage* : The geographical coverage of the survey was the entire Indian Union excluding Ladakh and Kargil districts of Jammu & Kashmir and rural areas of Nagaland.

1.6 *Sample size* : The survey covered about 1 lakh 23 thousand households spread over 8035 villages and 4379 urban blocks. In table so is shown the number of sample villages/blocks allotted to and surveyed in different states. From the table it is evident that in Meghalaya, Sikkim, Tripura, Arunachal Pradesh and Lakshadweep, large proportions of samples, ranging from about 38 to 90 per cent were not surveyed and as a result the surveyed samples fell short of the respective number of samples allotted. These omissions do not appear to be all random and therefore, the results of the survey for those states are likely to be affected on two counts : As some of these areas (strata) remained unrepresented in the survey and as the contribution of the survey data to the population estimates for these areas would be zero, the total population of these states would be severely underestimated; and secondly, if the

¹ Since the present report is based on full scrutiny and correction for coverage and content errors in the data file (by computer processing), the results, presented in the report are slightly at variance with the provisional results released in *Sarvekshana* Vol. IX, No. 4, April 1986.

² *Pattern of consumer expenditure of scheduled caste and scheduled tribe households* released in *Sarvekshana* Vol. XII No. 3 January—March, 1989.

³ *Pattern of consumer expenditure of Self-employed Households in Agriculture and of Agricultural and Rural Labour Households* released in *Sarvekshana*, Vol. XIII, No. 1, July-Sept. 1989.

affected states are having larger proportions of scheduled tribe population, this would result in severe underestimation of scheduled tribe population of those states.

1.7 The survey data for Meghalaya, Sikkim, Tripura, Arunachal Pradesh and Lakshadweep are available for less than 70 per cent of the first stage sample units, that is, villages and urban blocks. The observ-

ed proportion of scheduled tribe population to the total population for those four states, as estimated from the survey data, might not therefore be reliable. Hence, the results of those states have not been presented separately in the report. Those are, however, included in the all India estimate. The number of sample villages/blocks (a) allotted, (b) surveyed and (c) the number of sample households on which estimates are based, are presented in table S0—S9.

1.8 *Participation of states:* In the NSS 38th round, all the states and union territories, except Andaman and Nicobar Islands, Chandigarh, Dadra and Nagar Haveli and Lakshadweep, participated in the survey at least on equal matching basis. The results presented in this report are, however, based on the central sample data only.

1.9 *Contents of the report:* A series of tables on the quantity and value of average monthly per capita consumption of cereals, gram and cereal substitutes for each state and union territory of India as also for all-India relating to various sections of the population are presented in this report. However, tables have not been presented for those states/union territories where the scheduled castes or scheduled tribes in a sector (rural, urban) represent less than 5 per cent of the population of that sector of the state/union territory.

1.10 Besides this introductory Section, the remainder of the report is divided into four other Sections and one Appendix. Some of the concepts and definitions adopted in the consumer expenditure schedule are briefly discussed in Section two. An explanatory note on statistical tables and the numbering scheme of the detailed tables form Section three. The sample design and the estimation procedure is described in Section four. A summary of main findings comprises Section five of the report. The detailed statistical tables are presented in the Appendix.

SECTION TWO

CONCEPTS AND DEFINITIONS

2.0 The concepts and definitions followed in the consumer expenditure enquiries continue to remain broadly the same as in earlier NSS rounds. Some of these concepts and definitions are described below.

2.1 *Household:* A group of persons normally living together and taking food from common kitchen constitute a household. A boarding house, a hostel or a hotel treated as a cluster of household, where each individual boarder (with the dependents and guests) forms a household. Households fed directly by an institutional body, such as, those in prisons, barracks of military and para military forces, asylums, relief camps are, however, excluded from the scope of the survey. Floating population having no normal place of residence and foreign nationals' households are also excluded. But households residing in open space, road side shelter, under a bridge etc. more or less regularly in the same place are covered.

2.2 *Household members:* Any person who usually lives and takes the principal meal with the household is considered a member of the household.

2.3 *Scheduled caste and scheduled tribe:* A household was considered to belong to a particular social group (scheduled caste, scheduled tribe or neo-Budhist) provided the head of the household is a member of that group. On basis of the response to a direct question, the information was noted to indicate whether or not the household belongs to the particular social group. No attempt was however made to verify whether the reported name of caste/tribe belonged to the listed group in the schedule.

2.4 *Household size:* The total number of members (as defined above) in a household is considered to be the size of the household.

2.5 *Household consumer expenditure:* The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely (i) food, pan (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear; and (iii) miscellaneous goods and services, and durable articles.

For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed, if it is brought into maiden or first use during the reference period. The consumption may be out-of—purchases made during the reference period or earlier; home grown stock; receipt in exchange of goods and services; any other receipt like gift, charity, borrowing; and free collection. For evaluating the consumption of the items of the third group i.e. items categorised as miscellaneous goods & services and durable articles, a different approach is followed. In this case, the value of actual purchase i.e. the expenditure made during the reference period for the purchase of goods and services is considered as consumption.

It is pertinent to mention here that the consumer expenditure of a household on food items relate to the actual consumption made by the normal resident members of the household and also the guests. This also includes ceremonial feasts. To avoid double counting, transfer payments like charity, loan, advance, etc. made by the household are not considered as consumption for items of groups (i) and (ii), since transfer receipt of those items have been taken into account. However, the Item "cooked meals" is an exception to the rule. Meals

Prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or to others. Thus, to avoid double counting, cooked meals received as perquisite from employer household or as gift for charity are not recorded in the recipient household. As a general principle cooked meals purchased from the market for the consumption of the normal resident members or for the guests will also be recorded in the purchaser household.

This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite direction over the expenditure classes, the nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients). This point has to be kept firmly in mind while using the NSS consumer expenditure data for any nutritional study.

2.6 Rural labour household: A household in the rural sector was classified as rural labour household if its income during the last 365 days was more from wage paid manual labour (agricultural and/or non-agricultural) than either from paid non-manual employment or from self-employment. Rural labour households include agricultural labour households.

2.7 Agricultural labour household: Households in the rural sector which earned 50 per cent or more of their total income during the last 365 days from wage paid manual labour in agriculture are treated as agricultural labour households. Agricultural labour is a part of rural labour.

2.8 Households self-employed in agriculture: Households which earned 50 per cent or more of their total income from self-employment in the agricultural occupations during the last 365 days are treated as self-employed in agriculture.

2.9 Reference period: The reference period for collection of data on all items of consumer expenditure was last 30 days (ending on the day preceding the date of enquiry). In addition, for items of clothing & footwear,

lasting goods, educational and medical services, data have also been collected for a reference period of last 365 days. The results presented in this report are based on data of 30 days reference period only.

SECTION THREE

EXPLANATORY NOTES ON TABLES

3.0 Table 1 series give quantity and value of consumption of cereals, gram and cereal substitutes for a period of 30 days by monthly per capita expenditure class for all households in rural and urban sectors.

3.1 Tables 2 series give quantity and value of consumption of cereals, gram and cereal substitutes for a period of 30 days by monthly per capita expenditure class for scheduled tribe households in rural and urban sectors.

3.2 Table 3 series give quantity and value of consumption of cereals, gram and cereal substitutes for a period of 30 days by monthly per capita expenditure class for scheduled caste households in rural and urban sectors.

3.3 Table 4 series give quantity and value of consumption of cereals, gram and cereal substitutes for a period of 30 days by monthly per capita expenditure class for households self-employed in agriculture in the rural sector.

3.4 Table 5 series give quantity and value of consumption of cereals, gram and cereal substitutes for a period of 30 days by monthly per capita expenditure class for agricultural labour households in the rural sector. However, the results for Chandigarh are not presented in this report as the estimates are not available.

3.5 Table 6 series give quantity and value of consumption of cereals, gram and cereal substitutes for a period of 30 days by monthly per capita expenditure class for rural labour households.

3.6 Monthly per capita expenditure class: The households were classified according to the following monthly per capita expenditure classes. The expenditure classes (in rupees), have been arranged in ascending order of their magnitudes. The reported expenditure are grouped into the following 14 classes:—

srl. no.	monthly per capita expenditure (MPCE) class (in rupees)	srl. no.	monthly per capita expenditure (MPCE) class (in rupees)
(1)	(2)	(1)	(2)
1.	0— 30	8.	100—125
2.	30— 40	9.	125—150
3.	40— 50	10.	150—200
4.	50— 60	11.	200—250
5.	60— 70	12.	250—300
6.	70— 85	13.	300 & above
7.	85—100	14.	all expenditure classes

Note: The expenditure groups, 0—30, 30—40 etc. stand for Rs. 0 to less than Rs. 30/-, rupees 30/- to less than Rs. 40/- etc. and so on.

3.7 *Numbering of detailed tables:* Each table has been assigned a three digit number. The left hand digit before the decimal point refers to the nature of information provided in a table and the digits after the decimal identify the state/u. t or all-India to which the table relates. The digit number assigned to a table is followed by a suffix 'R' or 'U' to identify the rural and urban sectors respectively. The following code numbers have been assigned to different states and union territories:—

0 All India	17 Orissa
1 Andhra Pradesh	18 Punjab
2 Arunachal Pradesh**	19 Rajasthan
3 Assam	20 Sikkim**
4 Bihar	21 Tamil Nadu
5 Gujarat	22 Tripura**
6 Haryana	23 Uttar Pradesh
7 Himachal Pradesh	24 West Bengal
8 Jammu & Kashmir	25 Andaman & Nicobar Islands
9 Karnataka	26 Chandigarh
10 Kerala	27 Dadra & Nagar Haveli***
11 Madhya Pradesh	28 Delhi
12 Maharashtra	29 Goa, Daman & Diu
13 Manipur	30 Lakshadweep*
14 Meghalaya**	31 Pondicherry
15 Mizoram	
16 Nagaland***	

Note: *Figure in respect of Lakshadweep have not been presented in this report as the estimates were not available.

**Table for Arunachal Pradesh, Meghalaya and Tripura for both rural and urban areas and those of the rural areas of Sikkim have not been presented because of non-availability of data for a large proportion of villages and urban blocks.

***Rural areas of Nagaland and urban areas of Dadra & Nagar Haveli were not covered by this survey.

SECTION FOUR

SAMPLING DESIGN AND ESTIMATION PROCEDURE

4.0 *Broad Design:* The sampling design adopted in the survey was a stratified two stage one with census villages in rural areas and NSSO urban frame survey blocks in the urban areas as the first stage units and households as the second stage units. The sample villages were selected with probability proportional to the size and with replacement in the form of two independent interpenetrating samples (IPNS). Sample blocks were selected with equal probability also in the form of two IPNS. The sample households in the second stage (ten from each first stage unit) were selected circular systematically after arranging the households of the first stage units in a specified manner.

4.1 *Survey period and sub-round formation:* The survey was started in the month of January 1983 and was completed in December 1983. The entire survey period of one year was divided into four sub-rounds each of three months duration coinciding with the four agricultural seasons. The four sub-round periods were:

sub-round 1	: January — March, 1983
sub-round 2	: April — June, 1983
sub-round 3	: July — September, 1983
sub-round 4	: October — December, 1983

The sample units were equally distributed over the four sub-rounds in such a manner so as to provide equally valid estimates for each of the sub-round period. The averages based on the pooled data, taking all the four sub-rounds together, would be free from the effect of seasonality.

4.2 *Estimation procedure:* The estimation procedure adopted in 38th round is based on weighted sum of the sample values. Denoting by \hat{Y} , the unbiased estimate of Y (the state total of any variate) it is given by:

$$\hat{Y} = \sum_s \frac{P_s}{n_s} \sum_i \frac{D_{si}}{e_{si} P_{si}} \frac{H_{si}}{h_{si}} \sum_j y_{sij}$$

for the rural sector, and

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_i D_{si} \frac{H_{si}}{h_{si}} \sum_j y_{sij}$$

for the urban sector where

s, i and j are the suffixes for stratum, village/urban block and household respectively;

P_s, N_s and n_s give the stratum values of population, number of villages/blocks in frame and the sample villages/blocks respectively;

D_{ii} , C_{ii} , p_{ii} stand respectively for number of hamlet groups/sub-block formed, number of census villages contained in a large revenue village actually surveyed and population of the sample village;

H_{ii} and h_{ii} stand for the total number of households listed and number of sample households and finally Y_{ij} is the observed value of the variate for a sample household. Estimates of ratio of two characteristics is given by the ratio of the estimates of their aggregates.

SECTION FIVE

SUMMARY OF FINDINGS

5.0 The detailed results on quantity and value of consumption per person month derived from the

survey data have been given in the survey result tables separately for a number of identifiable groups of households. In this section, some important findings are presented to give a comparative picture of the composition of the consumption basket of cereals of the various section of the population.

5.1 *Consumption of cereals over year:* The per capita per month, quantity of consumption of major cereals is shown in Table S10 for the four rounds of NSS surveys on consumer expenditure—27th (1972-73), 28th (1973-74), 32nd (1977-78) and 38th (1983). It is observed that since 27th round, the overall pattern of consumption of total quantity of cereals remained stable in urban India whereas, it appears to have fallen by about 3 per cent in 1983 is the rural sector.

Table (S 10) : QUANTITY (0.00 Kg.) OF CONSUMPTION OF RICE, WHEAT AND TOTAL CEREALS PER PERSON FOR A PERIOD OF 30 DAYS BY ROUND : ALL INDIA RURAL & URBAN

NSS survey round (year)	rice		wheat		total cereals	
	rural	urban	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)
27th (72-73)	6.59	4.94	3.88	4.82	15.26	11.24
28th (73-74)	6.90	5.38	3.52	4.32	15.09	11.32
32nd (77-78)	7.12	5.48	4.05	4.87	15.25	11.62
38th (1983)	6.63	5.32	4.46	4.81	14.80	11.30

5.2 *Consumption of cereals by type of household and average price per kg. of rice, wheat, jowar, bajra and maize :* From Table S11 it is observed that at all India level, both in rural and urban areas, quantitatively rice is the major component of the cereal basket for all the sub-groups of population as well as for the total population. Compared to all other sections of population in the rural areas, the reported per capita per month consumption (MPC) of rice (7.40 kg.) of the scheduled tribes is appreciably higher. Even in urban areas the reported consumption of about 7kg. of rice by scheduled tribe households is at least 1.5 kg. more than that of any other population section. Scheduled tribes, on the other hand, consume much less quantity of wheat than the reported consumption of wheat per capita per month for any other section of the population and also that for the total population—be it in the rural or in the urban sector. Out of the next three important cereal items viz., jowar, bajra and maize, larger share of consumption is claimed by the scheduled tribe households at least for jowar and maize. Agricultural labour and scheduled tribe households consume 2.01 kg. and 2.15 kg. of jowar, households self-employed in agriculture and rural labour households, respectively consume

1.05 kg. and 0.89 kg. of bajra; scheduled tribe and households self-employed in agriculture consume 1.67 kg. and 0.90 kg. of maize which are more than the all-India rural average.

5.3 There is wide a variation in the rate of consumption of total cereals amongst the households belonging to rural and urban sectors in the country. On an average the MPC of cereals is 14.80 kg. in the rural and 11.30 kg. in the urban areas. It is observed that for scheduled caste and scheduled tribe households the MPC of total cereals is slightly less than the all-India rural average. For urban areas, the MPC of total cereals for both the groups of households is appreciably higher than the all India urban average. It is interesting to note that for the self-employed households the MPC of cereals is one kg. more and for agricultural labour it is one kg. less than the all-India rural average. For the rural labour households it is 2 kg. less than the all-India rural average. This difference may, to some extent, be real but a part of it could be due to the procedure of recording the expenditure on meals served to employees in the employers' households and ignoring that from the households of the employees who are the actual consumers.

TABLE (S 11) : MONTHLY PER CAPITA QUANTITY OF CONSUMPTION (MPC) PER PERSON FOR A PERIOD OF 30 DAYS AND PRICE PER Kg. OF RICE, WHEAT, JOWAR, BAJRA AND MAIZE FOR VARIOUS GROUPS OF POPULATION : ALL-INDIA RURAL AND URBAN

population group	rice		wheat		jowar		bajra		maize		all cereals	
	MPC (kg.)	price/kg. (Rs.)	MPC (kg.)	price/kg. (Rs.)	MPC (kg.)	price/kg. (Rs.)	MPC (kg.)	price/kg. (Rs.)	MPC (kg.)	price/kg. (Rs.)	MPC (kg.)	price/kg. (Rs.)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
rural :												
scheduled tribe	7.40	3.14	1.85	2.05	2.15	1.54	0.60	1.75	1.67	1.80	14.57	2.48
scheduled caste	6.23	3.12	4.66	1.96	1.25	1.64	0.80	1.73	0.75	1.88	14.38	2.41
self employed in agriculture	6.50	3.13	5.39	1.93	1.38	1.61	1.05	1.67	0.90	1.80	15.91	2.36
agricultural labour	6.47	3.09	3.00	2.07	2.01	1.61	0.77	1.77	0.72	1.93	13.77	2.44
rural labour	6.65	3.26	3.15	2.10	1.05	1.75	0.89	1.77	0.45	1.96	12.84	2.78
all	6.63	3.17	4.46	2.00	1.43	1.68	0.87	1.71	0.76	1.85	14.80	2.45
urban :												
scheduled tribe	6.98	3.39	3.21	2.39	1.18	1.84	0.41	1.87	0.16	1.87	12.11	2.89
scheduled caste	4.80	3.40	5.51	2.19	0.72	1.91	0.33	1.84	0.11	1.90	11.74	2.65
all	5.32	3.49	4.82	2.32	0.67	1.86	0.27	1.88	0.07	1.85	11.30	2.83

5.4 Households self-employed in agriculture, being the producers are expected to consume a large portion of cereals from their own production (which is evaluated at ex-farm price), quoted the lowest price per kg. of cereals (Rs. 2.36) in the rural areas. In general, for the comparable sections of population, the urban price of listed cereal items is higher than the corresponding rural price.

5.5 *Percentage of expenditure on cereals to total consumer expenditure of scheduled tribe, scheduled caste and all households* : Table S12 gives percentage of expenditure on cereals to total consumer expenditure and percentage distribution of cereals consumed over items of cereal for scheduled tribe, scheduled caste and all

households in rural and urban areas of the country. It is observed that expenditure on cereals, as percentage to total consumer expenditure, is about 41%, 37% and 32% respectively for the scheduled tribe, scheduled caste and all households in rural areas. In the urban areas, the corresponding percentages are 26, 24 and 19. A major part of expenditure on total cereals is, however, on rice and wheat : 27%, 21% and 19% on rice, 4%, 10% and 8% on wheat, and 10%, 6% and 5% on rest of the cereal items for scheduled tribe, schedule caste and all households respectively in the rural areas. The corresponding percentages for the urban sector are 18%, 13% and 11% on rice, 6%, 9% and 7% on wheat and 2%, 2% and 1% on all other cereals.

TABLE (S12) : PERCENTAGE OF EXPENDITURE ON CEREALS TO TOTAL CONSUMER EXPENDITURE AND PERCENTAGE DISTRIBUTION OF QUANTITY OF CEREALS CONSUMED PER PERSON FOR A PERIOD OF 30 DAYS BY ITEMS OF CEREALS FOR SCHEDULED TRIBE, SCHEDULED CASTE AND ALL HOUSEHOLDS : ALL-INDIA RURAL AND URBAN

items	percentage to total consumer expenditure						percentage distribution of quantity of cereals consumed					
	sch. tribe households		sch. caste households		all households		sch. tribe households		sch. caste households		all households	
	rural	urban	rural	urban	rural	urban	rural	urban	rural	urban	rural	urban
	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

6. barley	0.20	0.01	0.23	0.01	0.14	0.01	0.75	0.08	1.04	0.09	0.68	0.09
7. small millets	0.68	0.06	0.20	0.01	0.19	0.01	2.13	0.25	0.76	—	0.74	0.09
8. ragi	0.96	0.20	0.83	0.37	0.68	0.16	3.36	1.07	2.99	2.13	2.91	1.24
9. total cereals	41.40	26.27	36.70	24.16	33.44	19.28	100.00	100.00	100.00	100.00	100.00	100.00
10. all food items	70.12	62.95	67.08	62.05	65.56	58.69						
(i) average h.h. size	4.98	4.34	4.85	4.75	5.20	4.81						
(ii) sample villages/blocks	8035	4379	8025	4379	8035	4379						
(iii) sample households	10742	2098	14071	4623	79692	43410						

5.6 *Percentage distribution of quantity of different items of cereal consumption for the scheduled tribe, scheduled caste and for all households* : It has been seen earlier that rice is the major component of the cereal basket at the all-India level for all the social groups. Of the remaining items of cereals, wheat is found to have been consumed proportionately more in quantity by the households of each of the social groups in rural as well as in urban sectors, the exception being the S.T. households living in rural sector. In their case, the consumption of jowar is marginally more than that of wheat. Table S12 exhibits that rice and wheat together accounts for about 63%,

76% and 75% of the total cereals consumed by the S.T., S.C. and all households respectively in the rural sector. The corresponding percentages are 84, 88 and 90 respectively, for the urban sector. This shows that the percentage share of wheat and rice together in the cereal basket is more in the case of urban households. The table also reveals that both in the rural and urban sectors, the cereal basket of S.T. households is constituted with proportionately less of wheat and rice and more of other cereals as compared to the constituent items of cereal basket of S.C. households and all households.

5.7 The percentage of expenditure on total cereals is appreciably higher in rural (41%) and in urban (26%) sector for the scheduled tribe households as compared to those of scheduled caste and all households in both the sectors. But it is lowest (19%) for all households in urban areas. About 66% to 70% of the total expenditure is made on all food items in the rural areas by different social groups. The corresponding percentages in the urban areas vary from 59% to 63%.

5.8 *Percentage of expenditure on cereals to total consumer expenditure of households self-employed in agriculture, agricultural labour and rural labour households* : Table S13 shows the percentage of expenditure on

cereals to total consumer expenditure and percentage distribution of cereals consumed, separately for different groups of households in the rural sector. The groups are : households self-employed in agriculture, agricultural labour and rural labour households in the rural sector. For these households also it is observed that expenditure on cereals as percentage to total consumer expenditure is about 30%, 39% and 38% respectively, the major portions of 21%, 23% and 24% of total consumer expenditure are on rice; 8%, 7% and 7% on wheat and 1%, 9% and 6% on rest of the cereal items for the households self-employed in agriculture, agricultural labour and rural labour households respectively.

TABLE (S13): PERCENTAGE OF EXPENDITURE ON CEREALS TO TOTAL CONSUMER EXPENDITURE AND PERCENTAGE DISTRIBUTION OF QUANTITY OF CEREALS CONSUMED OVER ITEM OF CEREALS FOR HOUSEHOLDS SELF-EMPLOYED IN AGRICULTURE, AGRICULTURAL LABOUR AND RURAL LABOUR HOUSEHOLDS : ALL-INDIA RURAL

(i) average household size	5.89	4.69	4.70					
(ii) sample villages	8035	8035	8035					
(iii) sample households	34935	21827	27047					

5.9 *Percentage distribution of quantity of different items of cereal consumption for the households self-employed in agriculture, agricultural labour and rural labour households*: It is observed from Table S13 that of the total quantity of cereals consumed, rice and wheat constitute about 75%, 69% and 76% respectively for the households self-employed in agriculture, agricultural labour and rural labour households, against 89 per cent for all households. Obviously, for all these three groups, more than 20 per cent of cereals consumed are supplemented by cereals other than rice and wheat; whereas, for all households, the corresponding proportion of other cereals was only 11 per cent.

5.10 The expenditure on food items accounts for the major share of the total consumer expenditure for all the sub-groups of the rural households. However, there is some variations in the share of total expenditure on food items among the different sub-groups of households. It is observed from S13 that the percentage of expenditure on food items to total expenditure is about 66 for all households in the rural sector. The said percentage is about 3 and 2 percentage points more for agricultural labour and rural labour households respectively, while for households self-employed in agriculture it is more or less of the same order as that for all households. The pattern is found to be similar if the

Comparison is carried out on the share of total expenditure on cereal items by the different sub-groups of the population. In this case the differences between the sub-groups are more marked. The expenditure on cereal items is reported to be about 33 per cent of the total expenditure for all households in the rural sector. The said proportion is about one percentage point more for the households self-employed in agriculture, and 6 and 5 percentage points less for agricultural and labour households respectively.

5.11 *State-wise monthly per-capita quantity (MPC) of total cereals*: In Table S14 is shown the MPC of total cereals for different sections of population in rural and urban sectors of some selected states as well as for all-

India, rural and urban. It appears from the table that in general the rural MPC of total cereals is greater than the urban at the all-India as well as at the state level; Scheduled Caste (SC) households in Orissa, Scheduled Tribe (ST) households in Manipur, Orissa and Andaman & Nicobar Islands are the exceptions where urban MPC of total cereals exceeds the rural rate. It is also observed that, on an average, the MPC of total cereals in general is the highest for households self-employed (SE) in agriculture and rural labour households in almost all the states as well as all-India. For rural labour households (RL), MPC of total cereals is seen to be lower than the Agriculture labour households (AL), barring a few states.

TABLE (S14): QUANTITY OF CONSUMPTION OF TOTAL CEREALS PER PERSON FOR A PERIOD OF 30 DAYS FOR VARIOUS SECTIONS OF POPULATION IN RURAL AND URBAN AREAS

all-India	14.38	14.57	15.91	13.77	12.84	14.80	11.74	12.11	11.30

SC — Scheduled caste household
 ST — Scheduled tribe household
 SEA — Households self-employed in agriculture
 AL — Agricultural labour households
 RL — Rural labour households

5.12 *State-wise monthly per capita quantity of consumption (MPC) of rice*: The MPC of rice for different sections of population in the rural and urban sectors of some selected states and all-India is given in Table S15. Quantitatively, rice is the major component of the cereal basket for many of the states as well as sub-

groups of population. The average MPC of rice at the all-India level is although higher in the rural sector than in the urban, no uniform trend is noticed at the state level. The average MPC of rice is, in fact, found higher in the urban sector in case of SC households of Bihar, Gujarat, Karnataka, Kerala, Orissa, Punjab, Rajasthan

and Tamil Nadu; ST households of Madhya Pradesh, Manipur, Orissa and Andaman & Nicobar Islands and all households of Bihar, Gujarat, Karnataka, Maharashtra, Punjab, Tamil Nadu and Andaman & Nicobar Islands. Among the households belonging to different occupational groups, no appreciable difference in the average MPC of rice is noticed at the all-India level. However, in majority of states, it is marginally higher for self-employed households as compared with AL and RL households.

5.13 *State-wise monthly per capita quantity of consumption (MPC) of wheat:* Table S16 provides MPC of wheat for different sections of population in the rural and urban sectors of some selected states as well as for all-

India, rural and urban. It is observed that the average MPC of wheat is appreciably higher in the urban sector as compared to that of the rural sector in most of the states as well as all-India for each of the social groups. In almost all the states, ST households consume, on an average, much less quantity of wheat than that reported by any other sections of population, both in the rural and urban sectors. It is also seen that the average MPC of wheat is highest for the households self-employed in agriculture in most of the major states, barring Assam, Jammu & Kashmir, Madhya Pradesh, West Bengal and Haryana. It is higher for RL households in the first four states. In Haryana, MPC of wheat for agricultural labour households is almost of the same order as that for the households self-employed in agriculture.

TABLE (S15): QUANTITY OF CONSUMPTION OF RICE PER PERSON FOR A PERIOD OF 30 DAYS FOR VARIOUS SECTIONS OF POPULATION IN RURAL AND URBAN AREAS

 AL — Agricultural labour households
 RL — Rural labour households

5.14 *State-wise monthly per capita quantity of consumption (MPC) of jowar*: Table S17 shows the MPC of jowar for different sections of population in the rural and urban sectors of some selected states as well as for all-India rural and urban. Generally jowar is one of the items of cereals consumed by the population in the rural areas. This is also reflected from the data presented in this table. It is observed that the reported MPC of jowar of the various sections of population in almost all the states as well as all-India rural is appreciably higher compared to the urban areas. It is further observed that, for ST households and households SE in agriculture, the MPC of jowar is appreciably higher than all-India rural average. The corresponding MPC of jowar in the urban area for ST households is the highest compared to SC and All households. It is interesting to note that for all the sub-groups of population as well as for the total population in both rural and urban sectors, jowar

is one of the major items of cereal consumption in Andhra Pradesh, Gujarat, Karnataka, Maharashtra and Tamil Nadu.

5.15 *State-wise monthly per capita quantity of consumption (MPC) of bajra*: From table S18 it appears that MPC of bajra is the highest for SE households at all-India rural compared to all the sub-groups of population as well as for the total population. On an average MPC of bajra is 0.87 kg. in rural and 0.27 kg. in urban areas. It is observed that, for all the sub-groups of population in the rural areas, the MPC of bajra in Gujarat, Haryana, Maharashtra, Rajasthan and Tamil Nadu is appreciably higher than the all-India rural average. On the other hand, although the share in the MPC of bajra is insignificant at the all-India urban level for some states viz., Gujarat, Haryana, Maharashtra and Rajasthan, the MPC of bajra is high in the urban areas.

5.16 *Statewise monthly per capita quantity of consumption (MPC) of maize* : Table S19 gives MPC of maize for different sections of the population in the rural and urban sectors of some selected states as well as for all-India, rural and urban. On an average, the MPC

of maize is 0.76 kg. in the rural and 0.07 kg. in the urban areas. However, the MPC of maize is substantially higher than the all-India average in the rural areas of Bihar, Jammu & Kashmir, Madhya Pradesh, Rajasthan, Gujarat and Punjab.

PER CAPITA AND PER CONSUMER UNIT PER DIEM INTAKE OF CALORIE, PROTEIN AND FAT AND PERCEPTIONS OF THE PEOPLE ON ADEQUACY OF FOOD

SECTION ONE

INTRODUCTION

1.0 Although the Household Consumer Expenditure Surveys of the National Sample Survey (NSS) were never designed and conducted for the specific purpose of assessing the nutritional status of the Indian population, the data on food consumption available in some of these inquiries (since the 26th round) have been exploited to derive proximate estimates of the average intake of essential nutrient per capita and per consumer unit, per diem in the rural and urban sectors of different states and all-India. This report, on the intake of essential nutrients, is based on data collected in the household survey of consumer expenditure in the 38th round of the NSS; and it is the fourth report of its kind. The earlier three reports, relating to estimates of nutrient intake, were based on the data collected in the consumer expenditure surveys of the 26th 27th and 32nd round.¹

1.1 Since the present report is based on fully scrutinised data file after incorporating corrections for coverage and content errors, the results presented in this report are marginally at variance with the earlier report* prepared from the data collected in the summary block of schedule 1.0.

1.2 *Item Coverage* : The data presented in this report relate to per capita and per consumer unit per diem average intake of nutrients, namely, calorie, protein and fat in terms of unit 'K Cal' (Kilo Calorie) and grams respectively and percentage intake of the two major nutrients, calorie and protein from different groups of food items. Besides, information in respect of the views of the people regarding the adequacy of food at their disposal for consumption, has also been presented in this report. Data on the above mentioned items of information have been presented over monthly per capita consumer expenditure classes at state/union territory and all India level.

1.3 This issue of Sarvekshana contains two reports, namely, "Monthly per capita consumption of cereals for various sections of population" and per capita and per consumer unit per diem intake of calorie, protein and fat and perceptions of the people on adequacy of food". Both the reports are based on the results of consumer expenditure survey of NSS 38th round. Therefore, the details of survey period, geographical coverage, sample size etc which have been provided in the preceding report are not included in the present report, to avoid repetition.

1.4 Besides this introductory section, the remainder of the report is divided into three other sections and detailed results in survey result tables. Some of the concepts and definitions adopted in the consumer expenditure survey are briefly described in section two. An explanatory note on statistical tables forms section three. A summary of main findings comprises section five of the report. The detailed statistical tables are presented in appendix I and graphical representation of some of the surveys is given in appendix II. The sampling design and estimation procedure has not been given in this report as the same is provided in another report on the same survey subject published in this issue of Sarvekshana.

SECTION TWO

CONCEPTS AND DEFINITIONS

2.0 Some of the basic concepts and definitions adopted in the consumer expenditure survey of NSS 38th round are explained in Section two of the preceding report appearing in this issue of Sarvekshana. A few more concepts relevant to the contents of the present report are described below.

¹ (i) Report No. 238 NSS : 26th round, "Calorie and protein value of food items per diem, per consumer unit" Vol. I rural & Vol. II urban.
(ii) "A note on per capita, per diem intake of calories, survey on consumer expenditure" NSS 27th round : Sarvekshana Vol. VI No. 3-4 (1983)
(iii) NSS Report No. 329 : Per capita, per diem intake of nutrients, NSS 32nd Round.

*Pattern of consumer expenditure of scheduled cast and scheduled tribe households released in Sarvekshana Vol. XII, No. 3, January—March, 1989.

2.1 *Consumer Unit*: The Consumer Unit number for a person of a particular age-sex group is an index number representing his/her requirement of energy in relation to that for a 'reference man'. A man belonging to the age group 20—39 is considered as the 'reference man' and his per diem energy requirement level is considered as the energy requirement of one consumer unit. The age sex specific indices are as follows:—

Consumer Unit by age and sex

age group (in completed years)	sex	
	male	female
under 1	0.43	0.43
1— 3	0.54	0.54
4— 6	0.72	0.72
7— 9	0.87	0.87
10—12	1.03	0.93
13—15	0.97	0.80
16—19	1.02	0.75
20—39	1.00	0.71
40—49	0.95	0.68
50—59	0.90	0.64
60—69	0.80	0.51
70+	0.70	0.50

2.2 *Number of consumer units in a household*: The indices representing the energy requirement levels per diem of the different members of a household are added up to derive the total number of consumer units in that household.

2.3 *Calorie*: Calorie is a unit for measuring energy. The energy measure of nutrients in food items is, however, expressed as 1000 times the conventional calorie unit of energy. The unit of energy of nutrients in this report has been expressed as 'K Cal' (i.e. Kilo calories or 1000 calories), or simply as 'cal.' Food items like cereals, sugar, potato etc on digestion are converted into glucose which is burnt through respiration and is the major source of supply of energy in a human body. Similarly, most of the food items are convertible into energy equivalents. Cereals are usually the major source of energy. But, sometimes, by choice or due to scarcity, a person may not consume much of cereals or no cereal at all. The energy requirement is met by consumption of substitutes for cereals such as, tapioca, mahua, jackfruit seeds, sweet potato etc.

2.4 *Protein*: Protein is one of the vital nutrients, derived mostly from fish, meat, egg, pulses, milk and milk products. It is expressed in grams per hundred grams of the edible portion of the food items.

2.5 *Fat*: Fat is a concentrated source of energy and is considered as a necessary nutrient in the diet. It is mainly derived from ghee, butter and edible oils.

2.6 A 'meal' is composed of one or more readily eatable (generally cooked) items of food, the major constituent of which is cereal food. The meals consumed by a person twice or thrice a day provide him/her the required energy (calorie) and other nutrients for living and pursuing his/her vocations.

SECTION THREE

EXPLANATORY NOTES ON TABLES

3.1 The detailed results separately for rural and urban areas, and also separately for each state/union territory, and all India have been given in the survey result tables. The data have been presented by household monthly per capita expenditure (MPCE) classes. For each MPCE class, the expenditure being expressed in terms of rupees, the tables show.

(i) percentage of expenditure on food to total consumer expenditure and per capita and per consumer unit per diem intake of calorie, protein and fat;

(ii) percentage of total intake of calorie and protein from cereals, pulses, milk and milk products, meat, fish and egg;

(iii) percentage distribution of households by the type of response to the question whether all the members of the household get two 'square' meals a day.

3.2 The households have been classified according to the following 14 MPCE classes.

MONTHLY PER CAPITA EXPENDITURE CLASSES

sl.no.	monthly per capita expenditure (MPCE) class (in rupees)	sl. no.	monthly per capita expenditure (MPCE) class (in rupees)
1.	less than 30	8.	100 — 125
2.	30 — 40	9.	125 — 150
3.	40 — 50	10.	150 — 200
4.	50 — 60	11.	200 — 250
5.	60 — 70	12.	250 — 300
6.	70 — 80	13.	300 & above
7.	85 — 100	14.	all

3.3 *Derivation of results:* The basic data used in computing the results presented in this report have been taken from the consumer expenditure schedule 1.0 of NSS 38th round. In this survey, data were collected on quantity and value of food items consumed by the households during a period of 30 days preceding the date of enquiry in respect of 160 food items. The quantity estimates of each of the food items consumed by a household were converted into their equivalent number of calories by using the appropriate conversion factors. Aggregating the estimates of total calories for all the food items consumed by the household, the level of calorie intake per diem per consumer unit was then derived by dividing the aggregate number of calories by 30 times the number of consumer units in the household.

The process described above was also applied to arrive at the estimates of per consumer unit and per capita per diem intake of the other nutrients, namely, protein and fat.

3.4 *Numbering of the detailed tables :* The scheme of numbering the detailed tables is same as that followed in the preceding report, appearing in this issue. The number of sample villages/blocks (a) allotted and (b) surveyed, and the number of sample households on which the estimates presented in this report are based have also been provided in that report.

SECTION FOUR

SUMMARY OF FINDINGS

4.1 Some of the broad findings of the consumer expenditure survey during the period from January to December, 1983, are being summarised in this section. The figures quoted here refer to the combined sample estimates.

4.2 In this round, the average intake of calorie, protein and fat per consumer unit per diem in the country as a whole was found to be 2781 calorie, 78 gms and 34 gms in the rural areas (Table S—1) and 2574 calories, 70 gms and 46 gms (Table S—2) in the urban areas respectively; while the intake of calorie was found to be lower than the minimum requirement of 2700 calories per diem per consumer unit, the level of protein and fat consumption was considerably higher than what was considered to be the minimum requirement both at rural and urban areas.

4.3 Some states/union territories, where the average intake of calorie per consumer unit per diem was prominently higher, were Punjab (3334), Himachal Pradesh (3330), Chandigarh (3266), Haryana and Jammu & Kashmir (3196 each), Rajasthan (3051), Uttar Pradesh (3016) in rural areas and Himachal Pradesh (2929) Manipur (2885), Rajasthan (2784) and Haryana (2772) in the urban areas. On the other hand, Dadra & Nagar Haveli (2099), Pondicherry (2185), Tamil Nadu (2333), Kerala (2358), West Bengal (2513), Assam (2522) and Mizoram (2551) in the rural areas and Gujarat (2458), Maharashtra (2489) West Bengal (2491), Andhra Pradesh (2492) and Kerala (2557) in urban areas were some of the states found to have lower intake of calorie than that of all India average. The per capita per diem intake of calorie, protein and fat at all India level were 2221 calories, 62 gms and 27 gms in the rural areas; whereas these were 2039 calories, 57 gms and 37 gms in the urban areas respectively.

It is seen from A series tables in the Appendix I that the per consumer unit per diem as well as per capita per diem intake of nutrients is very low for those persons belonging to the lowest MPCE class and quite high for the persons belonging to the highest MPCE class. This could be possibly due to the accounting of cooked meals consumed by the non-members of a household in the household where the meals are cooked.

4.4 Considering the percentage intake of calorie and protein from different items of food presented in Table S-3 and S-4, it was observed that the major part of the nutrients was derived from the two food groups which were mainly composed of cereals and cereal substitutes. Of the total calorie intake, more than 75 per cent in the rural areas and 61 per cent in urban areas was derived from cereal and substitutes. From the observed results, it could be inferred that the quantity of food-grains actually consumed by the population of the country could almost meet the minimum requirement of nutrition, as this particular food group also

contributed a major portion of the vital nutrient proteins. The average intake of protein from cereals in this country as a whole was found to be 74 per cent in the rural areas and 63 per cent in the urban areas, respectively. These proportions decline progressively with the rise of per capita expenditure level, both in rural and urban areas. For other types of food groups an opposite trend was observed. In urban areas, comparatively higher proportion of the nutrients was derived from foods rich in good varieties of protein (milk, meat, egg etc.), while in rural areas the share of protein claimed by the food group 'pulses' was larger.

URBAN

4.5 Tables S-5 to S-8 show the average intake of calorie, protein and fat obtained from the survey results of 38th round along with those of the survey results obtained from 26th and 27th rounds of NSS. From Tables S-5 and S-6, it can be observed that, excepting for a slight variation in per consumer unit and per capita per diem intake of calorie in respect of a few states

between 26th round (1971-72), 27th round (1972-73) and 38th round (1985) the overall pattern of intake of calorie over the eleven-year period seemed to be fairly stable. The same pattern was also observed (Tables S-7 and S-8) in the per capita per diem intake of protein and fat. The results presented in tables S-5 to S-8 are related to major states only.

4.6 Tables S-9 and S-10 show the percentage distribution of households by type of response to the question 'whether the members of the household get two square meals a day throughout the year.' In response to this probing question, about 81.1 percent of the rural and 93.3 percent of the urban households reported that they did get adequate food (two square meals a day). Of the remaining 18.9 percent household in the rural and 6.7 percent in the urban areas, respectively 16.2 and 5.6 percentage (points) of the households reported inadequacy of food intake as they were getting two square meals a day only in some months of the year. About 2.4% of the rural and less than one percent (0.8%) of the urban households reported that they were chronically suffering from inadequacy of food, i.e., they were not getting two square meals a day throughout the year.

4.7 The proportion of households reporting inadequacy of food vary from state to state as well as between urban and rural areas. The percentage of rural households getting two square meals a day only in some

months of the year, and thus suffering from inadequacy of food for some months, is the highest in Bihar (31.81), followed by Orissa (31.80), West Bengal (31.01), Pondicherry (27.54), Karnataka (17.81), Tamil Nadu (16.06) and Kerala (15.29). The incidence of the self-perceived inadequacy of food in some months of the year, although comparatively far less in urban than in rural areas, is reported to be the highest in the urban households of Manipur (23.59), followed by Kerala (11.67), Orissa (11.33), Karnataka (10.37) and Mizoram (9.56).

4.8 It must be kept in mind that the classification of households, reporting adequacy or inadequacy of food for consumption at their disposal, on the basis of information gathered through a single probing question may not always be free from subjectivity and imprecision. Therefore the distributions presented in tables S-9 and S-10 are better regarded as very rough approximations, which give only broad ideas about the personal perceptions of people about the adequacy/inadequacy of food available to them.

TABLE S-9 : PERCENTAGE DISTRIBUTION OF HOUSEHOLDS BY THE TYPE OF RESPONSE ON THE QUESTION—WHETHER ALL MEMBERS OF THE HOUSEHOLD GET TWO SQUARE MEALS A DAY.

NOTES ON GRAPHS PRESENTING SOME KEY RESULTS ON CONSUMER EXPENDITURE SURVEY 38TH ROUND

Table S-11 presents an extract of data from NSS Report No. 332 and the Detailed Tables of this report. These data have been used for preparation of graphs in Chart I to III.

CHART I: The cumulative percentage of households by ascending order of monthly per capita expenditure is shown in the graphs of Chart I for the rural and urban areas of India. The figures appearing in Table No. 1 of NSS Report No. 332 have been used for preparing the graphs of Chart I. From the chart, it is observed that, in the rural areas, the percentage of households below the monthly per capita expenditure of Rs. 67/-, Rs. 90/- and Rs. 130/- are 25, 50 and 75. The lower 25, 50 and 75 per cent of the households in urban areas are below MPCE of Rs. 95/-, Rs. 133/- and Rs. 210/- respectively.

CHART II: The level of calorie intake per consumer unit per diem by different MPCE is presented graphically in Chart II. The graphs in Chart II show that the level of calorie intake increases continuously

with the increase in the MPCE, both in the rural and urban areas. The average intake of calories at the MPCE level of Rs. 50/- are 1950 K. Cals. and 1550 K. Cals. in the rural and urban areas respectively; where as at the higher MPCE of Rs. 300/-, the respective intake are 4400 K. Cals. and 3200 K. Cals. As the level of average caloric intake increases with the increase in MPCE, it attains the value of the normal energy requirement of a person (2700 K. Cals. per day) at a per capita monthly expenditure level of Rs. 95/- for the rural areas and Rs. 170/- for the urban areas.

CHART III: The graphs presented in Chart III show the percentage distribution of households reporting availability of two square meals a day regularly throughout the year over MPCE. It is seen that the percentage of households reporting adequacy of meals for consumption increases with the increase in MPCE. At an expenditure (MPCE) level of Rs. 95/- in the rural areas, 85 per cent of the households and at a expenditure level of Rs. 170/- in urban areas 97 per cent of the households are reporting that they get adequate food.

TABLE S-11: CUMULATIVE PERCENTAGE (0.00) OF HOUSEHOLDS PER CONSUMER UNIT INTAKE OF CALORIE (K. CALS), AND PERCENTAGE (0.00) OF HOUSEHOLDS REPORTING CONSUMPTION OF TWO SQUARE MEALS A DAY REGULARLY THROUGHOUT THE YEAR

PART II

SURVEY RESULTS

1. Results on per capita consumption of cereals for various sections of population : NSS 38th round (1983).
2. Results on per capita and per consumer unit per diem intake of Calorie, Protein and Fat and perceptions of the people on adequacy of food.

*National Sample Survey
38th Round (1983)*

**RESULTS ON PER CAPITA CONSUMPTION OF CEREALS FOR VARIOUS SECTIONS OF POPULATION—
NSS—38TH ROUND (1983)**

LIST OF TABLES

table series	description	page number	
		rural	urban
	Quantity and value of consumption of cereals, gram and cereal substitutes per person for a period of 30 days by monthly per capita expenditure classes for :		
1.	all households		
2.	scheduled tribe households		
3.	scheduled caste households		
4.	households self-employed in agriculture		
5.	agricultural labour households		
6.	rural labour households		

* tables for the states of Meghalaya, Tripura, Arunachal Pradesh and Lakshadweep and for rural areas of Sikkim are not presented because of survey data were not available for large proportions of sample villages/blocks.

RESULTS ON PER CAPITA AND PER CONSUMER UNIT
PER DIEM INTAKE OF CALORIE, PROTEIN AND FAT
AND PERCEPTIONS OF THE PEOPLE ON ADEQUACY
OF FOOD

*National Sample Survey
38th Round (1983)*

S-177 — S-178

LIST OF TABLES*

table series	description	page number	
		rural	urban
(1)	(2)	(3)	(4)
1.	Per capita and per consumer unit per diem intake of calorie, protein and fat by monthly per capita expenditure classes.	A1—A26	A79—A105
2.	Percentage of total intake of calorie and protein from cereals; pulses; milk and milk products; meat, fish and egg by monthly per capita expenditure classes.	A27—A52	A106—A132
3.	Percentage distribution of households by the type of response on the question whether all the members of the household get two square meals a day by monthly per capita expenditure classes.	A53—A78	A133—A159

* tables for the states of Meghalaya, Tripura, Arunachal Pradesh and Lakshadweep and for rural areas of Sikkim are not presented because of large proportions of sample villages/blocks survey data were not available.

*In the tables results are not presented when the sample size is less than 5 households.

जनसंख्या के विभिन्न वर्गों में प्रतिमास प्रति व्यक्ति अनाजों की उपभोग मात्रा—रा० प्र० सर्वे० 38वां दौर (1983)

निष्कर्षों का सारांश

1.0 बहुत से अभिनिर्धारणीय पारिवारिक वर्गों के लिए सर्वेक्षण संबंधी आंकड़ों से प्राप्त प्रति व्यक्ति प्रति माह उपभोग की मात्रा एवं मूल्य संबंधी विस्तृत परिणाम परिशिष्ट में अलग से दिए गये हैं। इस खंड में, जनसंख्या के विभिन्न वर्गों में अनाजों की उपभोग मात्रा के संयोजन की एक तुलनात्मक छवि प्रस्तुत करने के लिए कुछ महत्वपूर्ण निष्कर्ष प्रस्तुत किए गए हैं।

1.1 वर्षा के दौरान अनाजों का उपभोग : प्रति व्यक्ति, प्रति माह, प्रमुख अनाजों के उपभोग की मात्रा उपभोक्ता व्यय संबंधी रा० प्र० सर्वे० संबंधी सर्वेक्षणों के चारों दौरो—27वां (1972-73), 28वां (1973-74), 32वां (1977-78) तथा 38वां (1983) के लिए सारणी एस. 10 में दर्शायी गई है। यह देखा गया है कि 27वें दौर से अनाजों की कुल मात्रा के उपभोग का समग्र पैटर्न शहरी भारत में स्थिर रहा है जबकि, वर्ष 1983 में ग्रामीण क्षेत्र में यह लगभग 3 प्रतिशत तक कम हो गया है।

सारणी (एस. 10) : दौरो के अनुसार 30 दिन की अवधि के लिए प्रति व्यक्ति चावल, गेहूँ, एवं समस्त अनाजों के उपभोग की मात्रा (0.00 कि० ग्रा०) : समस्त भारत ग्रामीण एवं शहरी

रा० प्र० सर्वे० का सर्वेक्षण दौर (वर्ष)	चावल		गेहूँ		समस्त अनाज	
	ग्रामीण	शहरी	ग्रामीण	शहरी	ग्रामीण	शहरी
1	2	3	4	5	6	7
27वां (1972-73)	6.59	4.94	3.88	4.82	15.26	11.24
28वां (1973-74)	6.90	5.38	3.52	4.32	15.09	11.32
32वां (1977-78)	7.12	5.48	4.05	4.87	15.25	11.62
38वां (1983)	6.63	5.32	4.46	4.82	14.80	11.30

1.2 परिवारों के प्रकार के अनुसार अनाजों का उपभोग तथा चावल, गेहूँ, ज्वार, बाजरा तथा मक्का के प्रति किलो औसत भाव : सारणी एस. 11 से यह पता चलता है कि ग्रामीण तथा शहरी दोनों क्षेत्रों में अखिल भारतीय स्तर पर परिमाणतः जनसंख्या के समस्त उप समूहों के साथ-साथ कुल जनसंख्या के लिए भी चावल अनाज का प्रमुख घटक रहा है। ग्रामीण क्षेत्रों में जनसंख्या के अन्य सभी वर्गों की तुलना में अनुसूचित जनजातियों का चावल (7.40 कि० ग्रा०) का प्रति व्यक्ति प्रति माह सूचित किया गया उपभोग पर्याप्त रूप से अधिक है। शहरी क्षेत्रों में भी अनुसूचित जनजाति के परिवारों द्वारा लगभग 7 कि० ग्रा० चावल का सूचित किया गया उपभोग जनसंख्या के किसी अन्य भाग से कम से कम 1.5 कि० ग्रा० अधिक है। दूसरी ओर जनसंख्या के किसी अन्य भाग के लिए तथा कुल जनसंख्या के लिए क्षेत्र में भी प्रति व्यक्ति प्रति माह सूचित किए गए गेहूँ के उपभोग की अपेक्षा अनुसूचित जनजाति द्वारा सूचित किया गया गेहूँ का उपभोग बहुत कम है, चाहे वे शहरी क्षेत्र के हों अथवा ग्रामीण के। अगली तीन महत्वपूर्ण अनाज की मदों यथा ज्वार, बाजरा, मक्का में से अनुसूचित

जनजाति के परिवारों ने कम से कम ज्वार एवं मक्का के मामले में उपभोग के सबसे अधिक भाग का दावा किया है। कृषि श्रमिकों एवं अनुसूचित जनजाति के परिवारों में ज्वार का 2.01 कि० ग्रा० तथा 2.15 कि० ग्रा० उपभोग हुआ, कृषि में स्वनियोजित परिवार तथा ग्रामीण श्रमिक परिवारों में बाजरे का क्रमशः 1.05 कि० ग्रा० तथा 0.89 कि० ग्रा० उपभोग हुआ। अनुसूचित जनजाति तथा कृषि में स्वनियोजित परिवारों में मक्का का क्रमशः 1.67 कि० ग्रा० तथा 0.90 कि० ग्रा० उपभोग हुआ जो कि अखिल भारतीय ग्रामीण औसत से अधिक है।

1.3 देश के ग्रामीण एवं शहरी क्षेत्रों से संबंधित परिवारों में कुल अनाजों के उपभोग की दर में बहुत अधिक विभिन्नता है। औसत रूप से अनाजों का प्रति व्यक्ति प्रति माह उपभोग ग्रामीण क्षेत्रों में 14.80 कि० ग्रा० तथा शहरी क्षेत्रों में 11.30 कि० ग्रा० है। यह देखा जाता है कि अनुसूचित जाति एवं अनुसूचित जनजाति के परिवारों में कुल अनाजों का मासिक प्रति व्यक्ति उपभोग अखिल भारतीय ग्रामीण औसत से थोड़ा-सा कम है। शहरी क्षेत्रों के

लिए परिवारों के दोनों समूहों के लिए कुल अनाजों का मासिक प्रति व्यक्ति उपभोग अखिल भारतीय शहरी औसत की अपेक्षा पर्याप्त रूप से अधिक है। इस बात पर ध्यान देना उचित है कि स्वतः नियोजित परिवारों के लिए अनाजों का प्रति व्यक्ति प्रति माह उपभोग अखिल भारतीय ग्रामीण औसत की अपेक्षा एक कि० ग्रा० अधिक है तथा कृषि श्रमिकों के लिए एक कि० ग्रा० से कम है।

ग्रामीण श्रमिक परिवारों के लिए यह अखिल भारतीय ग्रामीण औसत की अपेक्षा 2 कि० ग्रा० कम है। कुछ सीमा तक हो सकता है परन्तु इसका कुछ भाग नियोक्ताओं के परिवारों में कर्मचारियों को दिए गए भोजन पर होने वाले व्यय को रिकार्ड करने की प्रक्रिया तथा कर्मचारियों के परिवारों, जो वास्तविक उपभोक्ता हैं, को शामिल न करने के कारण था।

सारणी (एस० 11) : 30 दिन की अवधि के लिए प्रति व्यक्ति उपभोग की मासिक प्रति व्यक्ति मात्रा तथा जनसंख्या के विभिन्न समूहों के लिए चावल, गोहूँ, ज्वार तथा मक्का का प्रति कि० ग्रा० मूल्य : अखिल भारतीय ग्रामीण एवं शहरी

जनसंख्या समूह	चावल		गोहूँ		ज्वार		भाजरा		मक्का		समस्त अनाज	
	प्रति व्यक्ति मासिक उपभोग	मूल्य/ कि०ग्रा०	प्रति व्यक्ति मासिक उपभोग	मूल्य/ कि०ग्रा०	प्रति व्यक्ति मासिक उपभोग	मूल्य/ कि०ग्रा०	प्रति व्यक्ति मासिक उपभोग	मूल्य/ कि०ग्रा०	प्रति व्यक्ति मासिक उपभोग	मूल्य/ कि०ग्रा०	प्रति व्यक्ति मासिक उपभोग	मूल्य/ कि०ग्रा०

समस्त	5.32	3.49	4.82	2.32	0.67	1.86	0.27	1.88	0.07	1.85	11.30	2.83

1.4 कृषि में स्वतः नियोजित परिवार जो उत्पादक है और जिनसे अनाज के स्वतः उत्पादन जो कि फार्मगत मूल्य पर मूल्यांकित किया जाता है, में से एक बहुत बड़ा भाग उपयोग में लाने की आशा की जाती है। इन परिवारों द्वारा ग्रामीण क्षेत्रों में अनाज का प्रति कि० ग्रा० न्यूनतम मूल्य (2.36 रुपये) निर्धारित किया गया है। आमतौर पर जनसंख्या के इन तुलनात्मक भागों के लिए सूचीबद्ध अनाज की मर्दों का शहरी मूल्य संगत ग्रामीण मूल्य की अपेक्षा अधिक है।

1.5 अनुसूचित जनजाति, अनुसूचित जाति तथा समस्त परिवार के कुल उपभोक्ता व्यय के लिए अनाजों से संबंधित व्यय की प्रतिशतता : सारणी एस-12 में देश के ग्रामीण एवं शहरी क्षेत्रों में

कुल उपभोक्ता व्यय के लिए अनाजों से संबंधित व्यय की प्रतिशतता तथा अनुसूचित जनजाति, अनुसूचित जाति तथा समस्त परिवारों के लिए अनाज की मर्दों में उपयुक्त अनाजों का प्रतिशतता वितरण प्रस्तुत करती है। यह देखा जाता है कि ग्रामीण क्षेत्र में कुल उपभोक्ता व्यय की प्रतिशतता के रूप में अनाजों से संबंधित व्यय अनुसूचित जनजाति, अनुसूचित जाति तथा समस्त परिवारों के लिए क्रमशः लगभग 41 प्रतिशत, 37 प्रतिशत तथा 32 प्रतिशत है। शहरी क्षेत्रों में संगत प्रतिशतता 26, 24 तथा 19 है। तथापि, ग्रामीण क्षेत्रों में अनुसूचित जनजाति, अनुसूचित जाति तथा समस्त परिवारों के लिए कुल अनाजों संबंधी व्यय का प्रमुख भाग क्रमशः चावल तथा गोहूँ पर 27 प्रतिशत, 21 प्रतिशत तथा 19 प्रतिशत, चावल पर 40 प्रतिशत, 10 प्रतिशत तथा 8

प्रतिशत, गेहूँ पर तथा शेष अनाज की मदों पर 10 प्रतिशत, 6 प्रतिशत तथा 5 प्रतिशत है। शहरी क्षेत्र के लिए यही प्रतिशतता चावल के लिए 18 प्रतिशत, 13 प्रतिशत तथा 11 प्रतिशत, गेहूँ पर 6 प्रतिशत, 9 प्रतिशत तथा 7 प्रतिशत तथा समस्त अन्य अनाजों पर 2 प्रतिशत, 2 प्रतिशत तथा 1 प्रतिशत है।

1.6 अनुसूचित जनजाति, अनुसूचित जाति तथा समस्त परिवारों के लिए अनाज के उपभोग की विभिन्न मदों की मात्रा का प्रतिशतता वितरण : पहले यह देखा जा चुका है कि अखिल भारतीय स्तर पर समस्त सामाजिक वर्गों के लिए अनाज की मात्रा का प्रमुख घटक चावल है। ग्रामीण क्षेत्रों के साथ-साथ शहरी क्षेत्रों में भी प्रत्येक सामाजिक वर्ग के परिवारों द्वारा ग्रामीण क्षेत्र में रहने वाले अनुसूचित जनजाति के परिवारों को छोड़कर अनाज की शेष मदों में से गेहूँ के उपभोग की मात्रा अनुपातिक रूप से अधिक पाई गई है। ग्रामीण क्षेत्र में रहने वाले जनजाति के परिवारों के मामले में ज्वार की खपत गेहूँ की अपेक्षा अधिक है। सारणी एस-12 यह दर्शाती है कि ग्रामीण क्षेत्र में गेहूँ एवं चावल दोनों की मात्रा अनुसूचित जनजाति, अनुसूचित जाति तथा समस्त परिवारों द्वारा उपभुक्त कुल अनाजों की क्रमशः लगभग 63 प्रतिशत, 76 प्रतिशत तथा 75 प्रतिशत रही। शहरी क्षेत्र के लिए संगत प्रतिशतता क्रमशः 84, 88 एवं 90 है। इससे प्रकट होता है कि शहरी परिवारों के मामले में कुल अनाजों में से गेहूँ एवं चावल दोनों का प्रतिशतता भाग अधिक है। इस सारणी से यह भी पता चलता है कि ग्रामीण एवं शहरी दोनों क्षेत्रों में अनुसूचित जाति के परिवार एवं समस्त परिवार द्वारा उपभोग की जा रही अनाज की अन्य आवश्यक मदों की तुलना में अनुसूचित जनजाति के परिवारों द्वारा उपभोग किए जा रहे अनाज में से अनुपातिक रूप से गेहूँ एवं चावल का उपभोग कम है तथा अन्य अनाजों का अधिक है।

1.7 ग्रामीण एवं शहरी दोनों क्षेत्रों में उन अनुसूचित जातियों एवं समस्त परिवारों की तुलना में अनुसूचित जनजाति के परिवारों के लिए कुल अनाजों पर होने वाले व्यय की प्रतिशतता ग्रामीण (41 प्रतिशत) तथा शहरी (26 प्रतिशत) क्षेत्र में पर्याप्त रूप से अधिक है, परन्तु शहरी क्षेत्रों में समस्त परिवारों के लिए यह कम (19 प्रतिशत) है। ग्रामीण क्षेत्रों में विभिन्न सामाजिक वर्गों द्वारा कुल

व्यय का लगभग 66 प्रतिशत से 70 प्रतिशत भाग समस्त खाद्य मदों पर व्यय किया जाता है। शहरी क्षेत्रों में यही प्रतिशतता 59 प्रतिशत से 63 प्रतिशत के बीच रहती है।

1.8 कृषि में कृषि श्रमिक तथा ग्रामीण श्रमिक परिवारों में स्वतः नियोजित परिवारों के कुल उपभोक्ता व्यय की तुलना में अनाज पर होने वाले व्यय की प्रतिशतता: सारणी एस 13 ग्रामीण क्षेत्र में परिवारों के विभिन्न वर्गों के लिए अलग कुल उपभोक्ता व्यय तथा उपयुक्त अनाजों के प्रतिशतता वितरण के मुकाबले अनाजों पर किए गए व्यय का प्रतिशतता वितरण वर्ग निम्नलिखित है: कृषि में स्वतः नियोजित परिवार, ग्रामीण क्षेत्र में कृषि श्रमिक एवं ग्रामीण श्रमिक परिवार। इन परिवारों के सम्बन्ध में यह देखा जाता है कि कुल उपभोक्ता व्यय की प्रतिशतता के मुकाबले अनाजों पर होने वाला व्यय क्रमशः लगभग 30 प्रतिशत, 39 प्रतिशत तथा 38 प्रतिशत है। कृषि में स्वतः नियोजित परिवार, कृषि श्रमिक एवं ग्रामीण श्रमिक परिवारों के लिए कुल उपभोक्ता व्यय का क्रमशः 21 प्रतिशत, 23 प्रतिशत, तथा 24 प्रतिशत प्रमुख भाग चावल पर, 8 प्रतिशत, 7 प्रतिशत तथा 7 प्रतिशत गेहूँ पर तथा अनाज की शेष मदों पर 1 प्रतिशत, 9 प्रतिशत तथा 6 प्रतिशत हैं।

1.9 कृषि में स्वतः नियोजित परिवारों, कृषि श्रमिक तथा ग्रामीण श्रमिक परिवारों के लिए अनाज के उपभोग की अलग-अलग मदों की प्रमात्रा का प्रतिशतता वितरण : सारणी एस 13 से यह देखा जा सकता है कि उपभोग किए गये अनाजों की कुल प्रमात्रा में से चावल एवं गेहूँ का कृषि में स्वतः नियोजित परिवारों, कृषि श्रमिकों तथा ग्रामीण श्रमिकों के परिवारों के लिए समस्त परिवारों के लिए 89 प्रतिशत के मुकाबले क्रमशः लगभग 75 प्रतिशत, 69 प्रतिशत तथा 76 प्रतिशत भाग है। प्रत्यक्षतः इन तीनों समूहों वर्गों को उपभोग में लाए गए अनाज का 20 प्रतिशत से अधिक भाग चावल एवं गेहूँ के अतिरिक्त अन्य अनाजों से संपूरित किया जाता है जबकि समस्त परिवारों के लिए अन्य अनाजों का संगत अनुपात केवल 11 प्रतिशत था।

सारणी (एस 12) : अनुसूचित जनजाति, अनुसूचित जाति तथा समस्त परिवारों के लिए कुल उपभोक्ता व्यय के मुकाबले अनाज पर होने वाले व्यय की प्रतिशतता तथा अनाज की मदों के अनुसार 30 दिन की अवधि के लिए प्रति व्यक्ति उपभोग किए गए अनाज की मात्रा की प्रतिशतता

1.10 ग्रामीण परिवारों के सभी उप-समूहों के लिए खाद्य मदों संबंधी व्यय कुल उपभोक्ता व्यय का प्रमुख भाग माना गया है। तथापि, परिवारों के अलग-अलग उप-समूहों में खाद्य मदों संबंधी कुल व्यय के भाग में कुछ विभिन्नताएं हैं। सारणी एस 13 से यह पता चलता है कि कुल व्यय के मुकाबले खाद्य मदों पर किए गए व्यय की प्रतिशतता ग्रामीण क्षेत्र के समस्त परिवारों के लिए लगभग 66 है। उक्त प्रतिशतता कृषि श्रमिक एवं ग्रामीण श्रमिक परिवारों के लिए क्रमशः लगभग 3 और 2 प्रतिशत है जबकि कृषि में स्वतः नियोजित परिवारों के लिए समस्त परिवारों के लिए यह न्यूनताधिक रूप में लगभग वही है जो समस्त परिवारों के लिए। यदि जनसंख्या के विभिन्न उप-समूहों के अनुसार अनाज की मदों पर होने वाले कुल व्यय के भागों की तुलना की जाती है तो इसका पैटर्न वही पाया जाता है। इस मामले में, उप-समूहों के बीच अन्तर अधिक होता है। ग्रामीण क्षेत्र में अनाज की मदों पर होने वाला व्यय समस्त परिवारों के लिए होने वाले कुल व्यय का लगभग 33 प्रतिशत सूचित किया गया है। कथित अनुपात कृषि में स्वतः नियोजित परिवारों के लिए एक प्रतिशतता प्वाइंट अधिक तथा कृषि संबंधी एवं श्रमिक परिवारों के लिए क्रमशः 6 एवं 5 प्रतिशतता प्वाइंट कम है।

1.11 कुल अनाज की राज्यवार मासिक प्रति व्यक्ति उपभोग की मात्रा : सारणी एस 14 में कुछ चुने हुए राज्यों के ग्रामीण एवं शहरी क्षेत्रों के साथ-साथ भारत के समस्त ग्रामीण तथा शहरी भागों में जनसंख्या के भिन्न भिन्न वर्गों के लिए कुल अनाजों की मासिक प्रति व्यक्ति उपभोग की मात्रा दर्शायी गयी है। सारणी से यह प्रतीत होता है कि सामान्य रूप से कुल अनाज की ग्रामीण मासिक प्रति व्यक्ति उपभोग की मात्रा अखिल भारतीय तथा राज्य स्तर पर शहरों की अपेक्षा अधिक है उड़ीसा में अनुसूचित जाति परिवार, मणिपुर, उड़ीसा एवं अण्डमान निकोबार द्वीप में अनुसूचित जनजाति परिवार इसके अपवाद हैं क्योंकि यहां कुल अनाज की शहरी प्रति व्यक्ति मासिक खपत की मात्रा ग्रामीण दर से अधिक है। यह भी पता चलता है कि आम तौर पर लगभग सभी राज्यों तथा अखिल भारतीय स्तर पर कृषि में स्वनियोजित परिवारों के लिए कुल अनाज की औसत मासिक प्रति व्यक्ति उपभोग की मात्रा कृषि तथा ग्रामीण श्रमिक परिवारों की अपेक्षा अधिक है। ग्रामीण श्रमिक परिवारों के लिए कुल अनाजों की मासिक प्रति व्यक्ति उपभोग की मात्रा कुछ राज्यों को छोड़कर कृषि श्रमिक परिवारों की अपेक्षा कम पाई गई है।

1.12 चावल के उपभोग की राज्यवार मासिक प्रति व्यक्ति प्रमात्रा : कुछ चुने हुए राज्यों और समस्त भारत के ग्रामीण और शहरी क्षेत्रों की जनसंख्या के विभिन्न वर्गों के लिए मासिक प्रति-व्यक्ति चावल के उपभोग सारणी एस-15 में दिए गए हैं। परिमाणतः बहुत से राज्यों तथा जनसंख्या के उप वर्गों के लिए अनाज का प्रमुख घटक चावल है। अखिल भारतीय स्तर पर चावल का औसत मासिक प्रति व्यक्ति उपभोग हालांकि ग्रामीण क्षेत्र में शहरी क्षेत्र से उच्चतर है, तथापि राज्य स्तर पर कोई एक समान प्रवृत्ति नहीं पाई गई। वास्तव में बिहार, गुजरात, कर्नाटक केरल, उड़ीसा, पंजाब, राजस्थान और तमिलनाडु के शहरी क्षेत्रों में अनुसूचित जाति के परिवारों में तथा मध्य प्रदेश, मणिपुर, उड़ीसा और अंडमान और निकोबार द्वीपसमूह के अनुसूचित जनजाति के परिवारों में तथा बिहार, गुजरात, कर्नाटक, महाराष्ट्र, पंजाब, तमिलनाडु और अंडमान निकोबार द्वीपसमूह के सभी परिवारों में चावल का औसत मासिक प्रतिव्यक्ति उपभोग अधिक है। विभिन्न व्यवसायिक वर्गों से संबंधित परिवारों में अखिल भारतीय स्तर पर चावल के औसत मासिक व्यक्ति उपभोग में कोई अधिक भिन्नता दिखाई नहीं दी है। तथापि अधिकांश राज्यों में कृषि

श्रमिक और ग्रामीण श्रमिक परिवारों की तुलना में यह सीमान्ततः अधिक है।

1.13 गेहूं की राज्य वार मासिक प्रति व्यक्ति उपभोग की प्रमात्रा : सारणी एस 16, कुछ चुने हुए राज्यों तथा समस्त भारत के ग्रामीण और शहरी क्षेत्रों में जनसंख्या के विभिन्न वर्गों के लिए गेहूं का मासिक प्रति व्यक्ति उपभोग प्रदान करती है। यह देखा जाता है कि अधिकांश राज्यों तथा समस्त भारत के प्रत्येक सामाजिक वर्गों में ग्रामीण क्षेत्र की तुलना में शहरी क्षेत्र में गेहूं का औसत मासिक प्रति व्यक्ति उपभोग काफी अधिक है। लगभग सभी राज्यों में अनुसूचित जनजाति के परिवार ग्रामीण और शहरी दोनों क्षेत्रों में जनसंख्या के अन्य भागों द्वारा सूचित गेहूं के उपभोग की प्रमात्रा की तुलना में औसतन काफी कम प्रमात्रा का उपभोग करते हैं। यह देखा जाता है कि असम, जम्मू और कश्मीर, मध्य प्रदेश, पश्चिम बंगाल तथा हरियाणा को छोड़कर अधिकांश प्रमुख राज्यों में कृषि में नियोजित परिवारों का गेहूं का औसत मासिक प्रति व्यक्ति उपभोग उच्चतम है। प्रथम चार राज्यों में ग्रामीण श्रमिक परिवारों में यह उच्चतर है। हरियाणा में कृषि श्रमिक परिवारों में गेहूं का मासिक प्रति व्यक्ति उपभोग लगभग उसी क्रम में है जैसाकि कृषि में स्वतः नियोजित परिवारों के लिए है।

1.14 राज्य वार मासिक प्रति व्यक्ति ज्वार के उपभोग की प्रमात्रा : सारणी एस 17 कुछ चुने हुए राज्यों तथा समस्त भारत की ग्रामीण और शहरी क्षेत्रों की जनसंख्या के विभिन्न भागों के लिए ज्वार की मासिक प्रति व्यक्ति उपभोग की प्रमात्रा दर्शाती है। सामान्यतया, ज्वार ग्रामीण क्षेत्रों की जनसंख्या द्वारा उपभोग की जा रही अनाज की एक मद है। यह इस सारणी में प्रस्तुत आंकड़ों से भी प्रतिबिम्बित होता है। यह देखा जाता है कि लगभग सभी राज्यों तथा समस्त भारत में जनसंख्या के विभिन्न वर्गों द्वारा सूचित ज्वार का मासिक प्रति व्यक्ति उपभोग शहरी क्षेत्रों की तुलना में ग्रामीण क्षेत्रों में काफी अधिक है। आगे यह देखा जाता है कि कृषि में अनुसूचित जनजाति के परिवारों तथा स्व नियोजित परिवारों के लिए ज्वार का मासिक प्रति व्यक्ति उपभोग अखिल भारतीय ग्रामीण औसत की तुलना में काफी अधिक है। शहरी क्षेत्रों में अनुसूचित जनजाति के परिवारों के लिए ज्वार का संगत मासिक प्रति व्यक्ति उपभोग अनुसूचित जाति तथा सभी परिवारों की तुलना में उच्चतम है। यह ध्यान देने योग्य बात है कि जनसंख्या के सभी उप वर्गों तथा ग्रामीण और शहरी दोनों की कुल जनसंख्या के लिए ज्वार आन्ध्र प्रदेश, गुजरात, कर्नाटक, महाराष्ट्र तथा तमिलनाडु में उपभोग की जा रही अनाज की प्रमुख मदों में से एक है।

1.15 बाजरे की राज्यवार मासिक प्रति व्यक्ति उपभोग की प्रमात्रा : सारणी एस 18 से यह प्रतीत होता है कि बाजरे का मासिक प्रति व्यक्ति उपभोग जनसंख्या के सभी उपवर्गों तथा कुल जनसंख्या की तुलना में अखिल भारतीय ग्रामीण क्षेत्र के स्व नियोजित परिवारों में उच्चतम है। बाजरे का औसत मासिक प्रति व्यक्ति उपभोग ग्रामीण क्षेत्रों में 0.87 किग्रा तथा शहरी क्षेत्रों में 0.27 किलोग्राम है। यह देखा जाता है कि ग्रामीण क्षेत्रों में सभी उप वर्गों में गुजरात, हरियाणा, महाराष्ट्र, राजस्थान और तमिलनाडु में बाजरे का मासिक प्रति व्यक्ति उपभोग अखिल भारतीय ग्रामीण औसत की तुलना में काफी अधिक है। दूसरी ओर, हालांकि समस्त भारत के शहरी स्तर पर बाजरे का मासिक प्रति व्यक्ति उपभोग नगण्य है फिर भी कुछ राज्यों अर्थात् गुजरात, हरियाणा, महाराष्ट्र, राजस्थान के शहरी क्षेत्रों में बाजरे का मासिक प्रति व्यक्ति उपभोग उच्च है।

सारणी (सूच 14) : जनसंख्या के विभिन्न वर्गों के लिए ग्रामीण एवं शहरी क्षेत्रों में 30दिन की अवधि के लिए कुल अनाज की प्रति व्यक्ति उपलब्धता का मान।

एकता : कुल (0.00 किलोग्राम)

1.16 मक्का के राज्यवार मासिक के प्रति व्यक्ति उपभोग की प्रमात्रा :

सारणी एस-19 कुछ चुने हुए राज्यों के ग्रामीण और शहरी क्षेत्रों तथा समस्त भारत के ग्रामीण और शहरी जनसंख्या के विभिन्न वर्गों के लिए मक्का

के मासिक प्रति व्यक्ति उपभोग प्रस्तुत करती है। मक्का का मासिक प्रति व्यक्ति उपभोग औसतन ग्रामीण क्षेत्र में 0.76 किलोग्राम तथा शहरी क्षेत्र में 0.07 किलोग्राम है। तथापि, मक्का का मासिक प्रति व्यक्ति उपभोग वस्तुतः बिहार, जम्मू और कश्मीर, मध्य प्रदेश, राजस्थान, गुजरात और पंजाब के ग्रामीण क्षेत्रों में अखिल भारतीय औसत से काफी अधिक था।

सारणी (एस 17) : ग्रामीण और शहरी क्षेत्रों में जनसंख्या के विभिन्न वर्गों के लिए 30 दिन की अवधि के लिए प्रति व्यक्ति ज्वार के उपयोग की प्रमात्रा

प्रति व्यक्ति और प्रति उपभोक्ता इकाई प्रतिदिन ग्रहण की जाने वाली कैलोरी, प्रोटीन और चिकनाई तथा भोजन की अपर्याप्तता पर लोगों का अंतर्विचार

निष्कर्षों का सारांश

2.1 इस अध्याय में जनवरी से दिसम्बर, 1983 तक की अवधि के दौरान किए गए उपभोक्ता व्यय सर्वेक्षण के कुछ निष्कर्षों को मोटे तौर पर सारांश रूप में दिया जा रहा है। यहां उद्धृत किए गए आंकड़े संयुक्त प्रतिदर्श अनुमान का उल्लेख करते हैं।

2.2 इस दौर में, देश में कुल मिलाकर प्रति उपभोक्ता यूनिट प्रति दिन

ग्रहण की जाने वाली औसत कैलोरी, प्रोटीन और वसा ग्रामीण क्षेत्र में क्रमशः 2781 कैलोरी, 78 ग्राम और 34 ग्राम (सारणी एस-1) तथा शहरी क्षेत्रों में 2574 कैलोरी 70 ग्राम और 46 ग्राम (सारणी एस-2) पायी गयी थी जबकि ग्रामीण और शहरी दोनों क्षेत्रों में ग्रहण की गई कैलोरी 2700 कैलोरी प्रति दिन प्रति उपभोक्ता इकाई की न्यूनतम अपेक्षित कैलोरी से भी कम थी तथापि प्रोटीन और वसा का उपभोग अपेक्षित न्यूनतम मात्रा से काफी अधिक था।

सारणी (एस-01) : राज्य और संघ राज्य क्षेत्रों के अनुसार प्रति व्यक्ति और प्रति उपभोक्ता इकाई प्रतिदिन ग्रहण की गई कैलोरी, प्रोटीन तथा वसा

2.3 कुछ राज्यों/संघ क्षेत्र जहां प्रति उपभोक्ता इकाई प्रति दिन औसत ग्रहण की गई कैलोरी अपेक्षाकृत अधिक थी वे थे पंजाब (3334), हिमाचल प्रदेश (3330), चंडीगढ़ (3266), हरियाणा और जम्मू और कश्मीर (3196) प्रत्येक। राजस्थान (3051), उत्तर प्रदेश (3016), के ग्रामीण क्षेत्र तथा हिमाचल प्रदेश (2929) मणिपुर (2885), राजस्थान (2784) और हरियाणा (2772) के शहरी क्षेत्र थे। दूसरी ओर ग्रामीण क्षेत्र में दादरा और नागर हवेली (2099), पांडिचेरी (2185), तमिलनाडु (2333), केरल (2358) पश्चिम बंगाल (2513), असम (2522) तथा मिजोरम (2551) तथा शहरी क्षेत्र में गुजरात (2458) तथा महाराष्ट्र (2489) पश्चिम बंगाल (2491), आन्ध्र प्रदेश (2492) तथा केरल (2557) कुछ राज्यों में अखिल भारतीय औसत की तुलना

में कम कैलोरी ग्रहण की गई थी। अखिल भारतीय स्तर पर ग्रामीण क्षेत्र में प्रति व्यक्ति प्रति दिन ग्रहण की गई कैलोरी प्रोटीन तथा वसा की मात्रा क्रमशः 2221 कैलोरी, 62 ग्राम तथा 27 ग्राम थी जबकि शहरी क्षेत्रों में ये 2033 कैलोरी, 57 ग्राम और 37 ग्राम थी। परिशिष्ट I की अंकमाला की सारणियों से यह पता चलता है कि प्रति दिन उपभोक्ता इकाई के अतिरिक्त प्रति व्यक्ति ग्रहण किया गया पोषक आहार निम्न मासिक प्रति व्यक्ति व्यय वर्ग से संबंधित व्यक्तियों में बहुत कम था और उच्च मासिक प्रति व्यक्ति व्यय संबंधित व्यक्तियों में काफी अधिक था ऐसा कदाचित जिस परिवार में खाना पकाया गया था के गैर सदस्यों द्वारा उपभोग किए गए पके हुए भोजन की गणना करके संभव हो सका था।

सर्वेक्षण

द्वि-14

2.4 खाद्य पदार्थों की विभिन्न मदों से प्राप्त कैलोरी और प्रोटीन का प्रतिशत सारणी एस-3 और एस-4 में प्रस्तुत किया गया है, यह पाया गया था कि पोषण का प्रमुख भाग दो खाद्य वर्गों से प्राप्त किया गया था। जो मिले-जुले अनाजों और अनाजोंके प्रतिस्थापकों से कुल ग्रहण की गई कैलोरी का 75 प्रतिशत ग्रामीण क्षेत्रों में तथा शहरी क्षेत्रों में 61 प्रतिशत अनाजों और अनाज के प्रतिस्थापकों से प्राप्त किया गया था। प्रेक्षित परिणामों से, यह अनुमान लगाया जा सका कि देश की जनसंख्या द्वारा वास्तव में उपभोग किए गए खाद्यान्नों की प्रमात्रा से अपेक्षित न्यूनतम पोषण मुश्किल से ही प्राप्त हो सका, क्योंकि यह विशेष खाद्य वर्ग जीव-नोपयोगी पोषक प्रोटीन का प्रमुख भाग भी प्रदान करता है।

कुल मिलाकर इस देश में औसत प्रोटीन का ग्रामीण क्षेत्रों में क्रमशः 74 प्रतिशत तथा शहरी क्षेत्रों में 63 प्रतिशत अनाजों से प्राप्त किया गया था। यह समानुपात ग्रामीण और शहरी दोनों क्षेत्रों में प्रति व्यक्ति व्यय स्तर बढ़ जाने के कारण उत्तरोत्तर कम हुआ है। अन्य प्रकार के खाद्य वर्गों के मामले में एक विपरीत प्रवृत्ति पाई गई थी, शहरी क्षेत्रों में, पोषण का तुलनात्मक रूप से उच्च समानुपात प्रोटीन के अच्छी किस्म वाले खाद्य पदार्थों से दूध, मांस, उंडे आदि से प्राप्त किया गया था जबकि ग्रामीण क्षेत्रों में प्रोटीन दाल खाद्य वर्गों से प्राप्त किए थे का भाग अपेक्षाकृत अधिक था।

सारणी (एस-3) : राज्य और संघ राज्य क्षेत्रों के अनुसार खाद्य मदों के विभिन्न वर्गों से प्राप्त कुल कैलोरी और प्रोटीन की प्रतिशतता

2.5 सर्वेक्षण परिणामों के 38वें दौर के साथ-साथ रा० प्र० सवै० के 26वें और 27वें दौर से प्राप्त सर्वेक्षण परिणामों की सारणी एस-5 से एस-8 औसत ग्रहण की गई कैलोरी, प्रोटीन और वसा दर्शाती है। सारणी एस-5 और एस-6 से यह देखा जा सकता है कि 26वां दौर (1971-72), 27वां दौर (1972-73) और 38वां दौर (1985) में कैलोरी ग्रहण करने के सम्बन्ध में प्रति उपभोक्ता इकाई और प्रति व्यक्ति प्रतिदिन थोड़ी-सी भिन्नता को

छोड़कर ग्यारह वर्ष की अवधि से भी अधिक अवधि के दौरान कैलोरी प्राप्त करने का समग्र पैटर्न स्पष्टतया एक समान रहा। प्रति व्यक्ति प्रतिदिन प्रोटीन और वसा ग्रहण करने के सम्बन्ध में भी इसी प्रकार का पैटर्न पाया गया था (सारणी एस-7 और एस-8) सारणी एस-5 से एस-8 में प्रस्तुत किए गए परिणाम केवल प्रमुख राज्यों से सम्बन्धित हैं।

सारणी एस-5 : राज्यों और रा० प्र० सर्वे० के दौरों के अनुसार प्रति उपभोक्ता इकाई प्रतिदिन ग्रहण की गई कैलोरी

* कालम (1) में दी गई क्रम संख्या (राज्य के कोड दर्शाने वाली) के लिए कृपया पैरा 3.4 देखें।

2.6 सारणी एस-9 और एस-10 इस प्रश्न के सम्बन्ध में कि क्या किसी परिवार के सदस्यों को पूरे वर्ष दिन में दो जून भर पेट भोजन मिलता है, इस प्रश्न के उत्तर के प्रकार के अनुसार परिवारों का प्रतिशतता वितरण दर्शाती है। इस खोजी प्रश्न के उत्तर में ग्रामीण परिवारों में से 81.1 प्रतिशत और शहरी परिवारों में से 93.3 प्रतिशत परिवारों ने बताया कि उन्हें पूरे वर्ष पर्याप्त भोजन (दिन में दो जून भरपेट भोजन) मिला। शेष 18.9 प्रतिशत ग्रामीण और 6.7 प्रतिशत शहरी क्षेत्रों में से क्रमशः 16.2 और 5.6 प्रतिशत परिवारों ने अपर्याप्त भोजन ग्रहण करने सम्बन्धी सूचना दी क्यों कि उन्हें पूरे वर्ष के कुछ महीनों में ही दिन में दो जून भरपेट भोजन मिला। लगभग 2.4 प्रतिशत ग्रामीण और 1 प्रतिशत से कम (0.8 प्रतिशत) शहरी परिवारों ने यह सूचित किया गया कि वे दीर्घकाल से भोजन की अपर्याप्तता झेल रहे हैं अर्थात्, उन्हें पूरे वर्ष दिन में दो जून भरपेट भोजन नहीं मिल रहा था।

2.7 भोजन की अपर्याप्तता सूचित करने वाले परिवारों का अनुपात एक राज्य से दूसरे राज्य में तथा ग्रामीण और शहरी क्षेत्रों के बीच भिन्न-भिन्न है। वर्ष में कुछ महीने ही दिन में दो जून भरपेट भोजन प्राप्त करने वाले और कुछ

महीने भोजन की अपर्याप्तता झेलने वाले परिवारों की प्रतिशतता बिहार में सबसे अधिक (31.81), तत्पश्चात् उड़ीसा (31.80), पश्चिम बंगाल (31.01), पाँडिचेरी (27.54), कर्नाटक (17.81), तमिलनाडु (16.06) और केरल (15.24) का स्थान रहा। यद्यपि वर्ष के कुछ महीनों में अपने स्वतः अन्तः विचारित भोजन की अपर्याप्तता के मामले यद्यपि तुलनात्मक रूप से ग्रामीण क्षेत्रों की तुलना में शहरी क्षेत्रों में काफी कम है तथापि मणिपुर के शहरी परिवारों में यह प्रतिशतता सबसे अधिक अर्थात् 23.59 प्रतिशत, तत्पश्चात्, केरल 11.67% उड़ीसा में 11.33 प्रतिशत, कर्नाटक में 10.37 प्रतिशत और मिजोरम में 9.56 प्रतिशत सूचित की गई है।

2.8 यह बात ध्यान में रखनी चाहिए कि एक खोजी प्रश्न के माध्यम से एकत्रित सूचना के आधार पर स्वपत के लिए दिए गए भोजन की पर्याप्तता या अपर्याप्तता को सूचित करने वाले परिवारों का वर्गीकरण विषयपरकता तथा अयथार्थता से सर्वथा मुक्त नहीं हो सकता। इसलिए सारणी एस-9 और एस-10 में प्रस्तुत किए गए वितरण मोटे तौर पर अनुमानित हैं जो उपलब्ध भोजन की पर्याप्तता/अपर्याप्तता के बारे में लोगों के व्यक्तिगत अन्तः विचारों सम्बन्धी स्पष्ट धारणा प्रस्तुत करते हैं।

सारणी (एस-9): प्रश्न के उत्तर के प्रकार के अनुसार परिवारों का प्रतिशतता वितरण—क्या परिवार के सभी सदस्य दिन में दो जून भरपेट भोजन प्राप्त करते हैं?
