INDIA, CABINET SECRETARIAT 1966

SIXTEENTH ROUND : JULY 1960 - JUNE 1961

NUMBER 111

INDUSTRIES : 1958
SAMPLE SURVEY OF MANUFACTURING
INDUSTRIES : 1958
FACTORY ESTABLISHMENTS : DETAILED RESULTS
ACKNOWLEDGEMENT

1. The report was finalised by U. N. Banerji J. P. Roy and P. K. Ghosh were associated in the work relating to the preparation of the report.
2. Supervision of computing, punching and machine was entrusted to H. B. Chaudhury, R. Roy and N. K. De.
3. The design of the survey was prepared by the Indian Statistical Institute.
4. The primary data were collected by the Directorate of National Sample Survey, Government of India.

TABLES WITH NOTES ON SAMPLE SURVEY OF MANUFACTURING INDUSTRIES : 1958 FACTORY ESTABLISHMENTS : DETAILED RESULTS

*"This report entitled 'Tables with Notes on Sample Survey of Manufacturing Industries : 1958, Factory Establishments : Detailed Results' was prepared by the Indian Statistical Institute, Calcutta. The views contained in the report are not necessarily those of the Government India."**

EXPLANATORY NOTES

I. INTRODUCTION

1. The main results relating to 15 major items of 8th round, Sample Survey of Manufacturing Industries (SSMI) for the year 1958 have been furnished in NSS Report no. 93. This volume deals mainly with similar tables on detailed items of capital structure, input and output also collected in 8th round SSMI and a few other tables.

2. Important concepts used in the survey and in this report are as follows :

(a) *Fixed capital* : Depreciated book values of fixed assets comprising land, building, plant and machinery and other fixed assets but excluding intangible assets like goodwill were collected as on the opening and closing dates of the accounting year of the factory establishment. The accounting year beginning anywhere between 1.7.57 and 30.6.58 was considered for the purpose of 1958 data. Fixed assets excluded those for purposes other than manufacturing. Common assets used both in manufacturing and non-manufacturing activities were allocated.

Land and buildings comprised those solely used for manufacturing operations, whether at home or abroad, including those used in labour welfare activities of the factory establishment. The value of freehold land for which neither any purchase price had been paid nor any rent was being paid, was taken as zero.

(b) *Working capital* : Book values of working capital of the factory as on the opening and closing dates of the relevant accounting year were collected separately for raw-materials, fuels, etc.; finished products; semi-finished and partly-finished products; cash in hand and at bank and the net balance of sundry debtors over sundry creditors. The detailed results of the first three sub-items have been furnished

* The draft report (No. D. 126) was submitted to the Government of India in January 1963.

National Sample Survey

in this report. The last sub-item was found to have a negative value in a large number of instances, and is not shown separately in this report. It has, however, been included in the estimates of total working capital.

(c) *Depreciation* : Total value of depreciation for all the wasting fixed capital assets of the factory, used in its manufacturing operations, was collected. This was the actual amount written off to profit and loss account.

(d) *Working days* : Days on which any manufacturing operation was carried on, excluding days spent only on repair and maintenance of fixed capital, were deemed to be working days.

(e) *Value of input* : This item comprised the purchase price of raw-materials (consisting of basic materials, chemicals, packing materials, other consumable stores and inward transport charges, if paid separately); fuels, lubricants, etc. consumed for manufacture or for repair and maintenance during the year; industrial services in the nature of repairing and manufacturing processes rendered by other concerns as well as non-industrial personal or institutional services including managing agency service and indirect taxes like local rate, etc. It did not include materials or fuels manufactured and consumed by the factory for further manufacture.

(f) *Value of output* : Ex-factory value of products (including by-products and subsidiary products) and industrial services rendered to customers exclusive of excise duties, etc. was considered. Intermediate products were excluded.

3. The industry classification was the same as in the Census of Manufacturing Industries (CMI).

4. The frame for the survey comprised all factory establishments in India registered as on 31.12.1957 under sections 2m(i) and 2m(ii) of the Factories Act, 1948 except those (a) in Andaman and Nicobar Islands and (b) under the Ministries of Defence and Railways of the Government of India but included those in Jammu and Kashmir registered under the State Act. Sections 2m(i) and 2m(ii) of the Factories Act 1948 refer respectively to factories using power and employing 10 or more workers on any day and factories not using power and employing 20 or more workers on any day.

5. Detailed estimates of about 40 selected items relating to input, output and capital structure have been furnished in this report in Table 1 series separately for both types of factories, viz., those using power and those not using power. While Table 1.0 provides combined estimates for both types of factories at all India for all industries together, by sub-sample, Tables 1.1 and 1.2 give estimates for factories using power and for all industries together, at all-India and at state levels respectively, by sub-sample. As counterpart of Table 1.1, Table 1.3 furnishes for the factories not using power estimates for all industries taken together at all-India by sub-sample.

6. Table 1.4 and 1.5 provide estimates of selected items for each industry (or group of industries) at all-India by sub-sample respectively for factories using

Sample Survey of Manufacturing Industries: 1958

power and factories not using power. Table 1.6 relates to estimates of selected items for factories using power by sub-sample for selected industry in each state—the selection being made on the basis of weights assigned to the industries at the time of sampling. In 1 series tables, the estimates of total working capital (item 2.0) and total value of fuels, etc. (item 10.0) include a few items in addition to those shown in the respective item-groups (2 or 10).

7. Table 2(a) gives the estimates of quantity and value of specified raw-materials in selected industries at all India for factories using power; while for the same type of factories Table 2(b) gives estimated value of certain capital type goods produced by selected industries in 1958. Estimates presented in Table 2(b) have to be used with great caution since while these have been built wheresoever any relevant information has been furnished in the schedule, they cover up the cases where data should have been furnished but have not been reported. Estimates of capital type goods have not been supplied in Table 2(b) for ship-building and repairing (industry no. 57), aircraft assembling, repair and servicing (industry no. 60), textile machinery and accessories (industry no. 62), and unspecified industries (industry no. 63), as these have largely remained unreported in the schedule.

8. Table 3.1 and Table 3.2 show respectively for factories using power and factories not using power percentage distribution of (a) number of factories (b) total number of employees and (c) total output by size class of actual employment by sub-sample for all India all industries together. To help obtain actual estimates for any particular size class, the estimated total for each item is given at the bottom of the tables.

2. SUMMARY OF FINDINGS

9. Estimates furnished in the report relate to the original sample of 5890 factories and exclude the supplementary sample of 200 factories drawn from factories newly registered in 1958.

10. The growth in capital investment during the two years 1957 and 1958 is given below.

item	unit	1957 (opening balance)	1958 (closing balance)	increase in 2 yrs.
(1)	(2)	(3)	(4)	(5)
1 fixed capital	Rs. crores	847.00	994.92	147.92
2 working capital	„	582.33	707.37	125.04
3 total invested capital	„	1429.33	1702.29	272.96

11. It is found that in 1958 plant and machinery constituted about 60% of the total fixed capital, and raw-materials, etc. about 63% of the total working capital; while total working capital itself constituted about 41% of the total invested capital and depreciation or cost of capital consumption actually written off to profit and loss account was of the order of 8% of total fixed capital.

National Sample Survey

12. In the power-using sector the four most important industries from the point of view of fixed capital investment in 1958 as on the closing day was as follows in the decreasing order of their importance : iron and steel (Rs. 150 crores) ; cotton textiles group (Rs. 139 crores) ; electricity generation and transformation (Rs. 98 crores) and tea manufacturing (Rs. 62 crores). It is interesting to observe that in this sector while cotton textile group, electricity generation and tea manufacturing industry registered a moderate increase in fixed capital investment over 1957 opening balance figures by 9%, 5% and 15%, in the case of iron and steel industry the rise was as high as 97%. In fact, due to the substantial rise iron and steel industry became the premier industry of India in 1958 from the point of view of fixed capital investment. Also noteworthy were increases in fixed capital investment during the same period for petroleum refining industry from Rs. 8 crores to Rs. 37 crores and for the unspecified industries from Rs. 35 crores to Rs. 52 crores.

13. Statewise, for all industries together, and for factories using power, fixed capital investment in 1958 was the heaviest for Bombay with about Rs. 247 crores, while West Bengal and Bihar came close to each other with about Rs. 178 crores and Rs. 162 crores respectively. Madras came fourth with only about Rs. 70 crores.

14. The value of raw materials etc. in 1958 was about 2/3rd of the value of all products and this proportion roughly obtained in both power-using and not-power-using sectors. Fuels and lubricants constituted about 6% of the value of raw-materials etc. while all types of non-industrial service together comprised about 3% of it. The value of managing agency service at Rs. 8 crores was about 13% of the non-industrial service inputs.

15. It is found from Table (3.1) that amongst factories using power in the actual employment size range 1 to 49 lie more than 70% of the factories although the employees as well as output accounted for therein are about 14% of their respective totals.

3. SAMPLE DESIGN

16. The sampling design was that from out of frame, all big factories in zone 1 (i.e. establishments employing 250 or more workers on the average and using power) were censused and for the rest of the frame, it was a stratified unistage one. The principles of allocation, stratification and selection adopted were virtually the same as in the previous round. To provide for statewise estimates, however, from the remaining zone 1 factories strata were formed with groups of factories within a state into industry cell. For zone 2 (not using power) factories strata were formed within one industry or industry group. Within the sample sector, strata containing a few factories only were completely enumerated. Census factories and the completely enumerated ones in the sampling part were described as scheme 1 factories. From factories other than scheme 1, within each stratum, two factories were selected for zone 1 and four for zone 2, with equal probability and without replacement ; so that

only one factory was allotted to each sub-sample. The principle of interpenetrating net-work of sub-samples and batching of investigators at the field was followed.

4. ESTIMATION PROCEDURE

17. For zone 1 : N_{jkl} = total number of factories in the l -th stratum of the j -th state and k -th industry.

C_{jk} = sum of the values of a characteristic for all factories of scheme 1 in the j -th state and k -th industry.

X_{ijkl} = value of a characteristic in the i -th sub-sample, l -th stratum, j -th state and k -th industry.

$$T'_{ijk} = c_{jk} + \sum_l N_{jkl} X_{ijkl}$$

All India all industries estimate $T' = \frac{\sum T'_i}{2}$

where $T'_i = \sum T'_{ik}$ or $\sum T'_{ij}$

All India each industry estimate $T'_k = \frac{\sum T'_{ik}}{2}$

where $T'_{ik} = \sum_j T'_{ijk}$

and each state all industries estimate $T'_j = \frac{\sum T'_{ij}}{2}$

where $T'_{ij} = \sum_k T'_{ijk}$

For zone 2 : Sub-sample 1 was merged with sub-sample 3 and sub-sample 2 with sub-sample 4, to obtain two sub-samples finally.

N_{kl} = total number of factories in the l -th stratum of k -th industry or industry group.

C_k = sum of the values of a characteristic for all factories of scheme 1 in the k -th industry or industry group.

X_{ikl} = sum of the values of a characteristic for two samples in the i sample, l -th stratum, k -th industry or industry group ($i=1, 2$)

$$T''_{ik} = C_k + \frac{1}{2} \sum_l N_{kl} X_{ikl}$$

all India all industries estimate $T'' = \frac{\sum T''_i}{2}$ where $T''_i = \sum_k T''_{ik}$

and all India each industry estimate $T''_k = \frac{\sum T''_{ik}}{2}$
