ACKNOWLEDGEMENT

The report was finalised by Sudhir Bhattacharyya. Ardhendu Roy Chowdhury, Asok Dasgupta, M. T. Baby and S. Mukherjee were associated in the work relating to the preparation of the report.

Supervision was entrusted to H. B. Chowdhury, S. Palit and A. K. Chowdhury in computing; Rajen Roy, S. N. Das in punching and K. C. Poddar, B. L. Banerjee and F. M. Rao in Machine Tabulation.

The design of the survey was prepared by the Indian Statistical Institute.

The primary data were collected by the Directorate of the National Sample Survey, Government of India, in all the states except West Bengal and Bombay city in Maharashtra State where the Indian Statistical Institute collected the relevant data.

THE NATIONAL SAMPLE SURVEY

SIXTEENTH ROUND : JULY 1960—JUNE 1961

NUMBER 114

TABLES WITH NOTES ON EMPLOYMENT AND UNEMPLOYMENT IN RURAL AREAS

This report entitled "Tables with Notes on Employment and Unemployment in Rural Areas, Sixteenth Round, July 1960—June 1961" was prepared by the Indian Statistical Institute, Calcutta. The views contained in the report are not necessarily those of the Government of India.*

CHAPTER ONE

INTRODUCTION

1.1. Employment and Unemployment Survey in rural areas was taken up as a part of usual NSS programme in the 16th Round also. Unlike the previous NSS rounds the information on employment and unemployment for the urban areas was collected for the first time through a separate survey entitled URBAN LABOUR FORCE SURVEY in this round. Though the concepts and definitions remained basically the same for the survey in rural areas, some terminological change had mainly been made in activity status categories meant for labour force classification. The introduction of these new terminologies was intended to substitute the usual activity status categories which were more meaningful in urban economy by some new terminologies easily understood in our rural agrarian pattern. This change would not, however, impair any comparability.

1.2. The survey covered the whole of the rural areas of India as defined in the 1951 census excluding islands. Altogether a sample of 3798 villages which constitute the central sample, were selected for the enquiry. The total number of sample households was 22979. The design was a stratified two-stage one, in which the villages were the first-stage units and households, the second-stage units. A note on sample design and estimation procedure is given in Appendix I.

1.3. The states of Andhra Pradesh, Assam, Bihar, Gujarat, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab and Uttar Pradesh participated in this round in the programme of work of the NSS on a full-matching basis. This means that each of the aforesaid states conducted the survey on a sample whose size was equal to that of the central sample allotted for that state. The State of Rajasthan partici-

* The draft report (No. D. 121) was submitted to the Government of India in April 1963.

National Sample Survey

puted on a half-matching basis, meaning thereby that the size of the sample in the state was half the size of the central sample. This report is based on the data collected in the central samples only.

1.4. The statewise distribution of sample villages belonging to the central sample was as follows :

state	number of villages
(1)	(2)
1. Andhra Pradesh	306
2. Assam, Manipur, Tripura	162
3. Bihar	360
4. Gujarat	144
5. Kerala	144
6. Madhya Pradesh	342
7. Madras	252
8. Maharashtra	288
9. Mysore	180
10. Orissa	180
11. Punjab, Delhi, Himachal Pradesh	162
12. Rajasthan	162
13. Uttar Pradesh	468
14. Jammu and Kashmir	414
15. West Bengal	234
16. all India	3798

1.5. The important concepts and definitions adopted in the survey are given in Chapter Two and the statistical tables in Chapter Four. A note on sample design and procedure of estimation is contained in Appendix I. Sub-sample-wise estimate for a few selected items is given in Appendix II. Appendix III is the facsimile of the schedule of investigation.

CHAPTER TWO

CONCEPTS AND DEFINITIONS

2.1. The important concepts and definitions adopted in this survey and mainly those used for the classification of population have been explained in this section.

2.2. *Household*: The normal resident member concept of household was adopted in this survey. Persons who normally pass nights under the same roof and normally take food from the same kitchen were considered as members of household. Guests are thus excluded and temporary stay-aways are included.

2.3. The classification of persons into gainfully employed, unemployed and not in labour force was done on the basis of information on their activity during the reference week. While determining the nature of activity a person may be found to be either working or not-working, but seeking and/or available for work or not available for work. The first of the above activity categories can be equated to the already familiar category 'gainfully employed', the second to the category 'unemployed' and the third to 'not in labour force'.

2.4. *Working*: A person, who is directly or indirectly occupied in a type of work or with a job in an establishment on at least one day during the reference week, was treated as 'working'. The participation in work need not always result in the production of goods and services. As for example, a doctor sitting in his chamber without having any patient for treatment, a barber sitting in a market place without any customer and a locksmith out on his professional rounds without any demand for his services at the moment, though not actually engaged in the production of goods and services, will still be considered as 'working'.

2.2. A person might be having some work to do but did not actually perform the work during the reference week. In such cases the reason why he did not work will be ascertained. If he did not work because of reasons such as illness, injury, vacation, holiday, festival, inclement weather, etc. he was treated as 'working'.

2.3. Detailed status of activity of persons reporting 'working' during the reference week was also collected to determine as to whether they were self-employed (i.e. employer or own account worker), wage or salary earners (i.e. employee) or dependent members of household working in family enterprise (i.e. unpaid family enterprise worker).

2.7. The following six sub-categories were used to classify 'working' persons into the detailed status of activity :

- (a) working in household enterprise :
 - 1) as owner-operator hiring labour in current week

National Sample Survey

- 2) as owner-operator not hiring labour in current week
- 3) as working partner hiring labour in current week
- 4) as working partner not hiring labour in current week
- 5) as dependent member of household.

(b) working for salary or wages.

The above category a(1) and a(3); a(2) and a(4); a(5) and (b) will respectively constitute the usual activity status categories-employee, own account worker, unpaid-family enterprise worker and employer.

2.8. *Seeking and/or available for work* : The term is self-explanatory and stands for persons reporting not working during the reference week and either seeking or available for work. The nature of job seeking and availability of work was determined by putting the following probing questions to persons who reported as seeking and/or available for work :

- (a) whether seeking work for the first time
- (b) whether seeking work not for the first time
- (c) whether not seeking but available for full time work
- (d) whether not seeking but available for part time work.

Persons reported 'seeking or available for work' constitute what is familiarly known as 'unemployed' persons.

2.9. *Not available for work* : Persons reporting not working and neither seeking nor available for work during the reference week were considered as persons 'not available for work' and they were the same persons who were classified as persons 'not in labour force' in earlier NSS rounds. Reasons of non-availability was ascertained under the following seven categories :

- (1) too young, (2) too old, (3) infirm, disabled, (4) engaged in studies, (5) living on past savings, rent or interest, (6) domestic work, (7) others.

Persons classified as 'working' and 'seeking or available for work' together constituted 'labour force'.

2.10. *Priority scale* : To obviate the difficulty of classifying a person under unique activity status when the person was engaged in more than one activity during the reference week a system of priority scale was also adopted as in the previous NSS rounds. The status of 'working' got priority over the status of 'not working' and the 'status of seeking work' and/or 'available for work' got priority over the status of 'not available for work'.

2.11. *Industry* : The nature of establishment, undertaking or service in which the gainful work was done was denoted by 'industry'.

2.12. *Occupation* : The nature of work which the person had to perform was denoted by 'occupation'.

CHAPTER THREE

SUMMARY OF FINDINGS

3.1. A summary of some of the important findings of the survey is presented in this chapter. As background material some broad demographic characteristics of the rural population is highlighted in the beginning before their employment and unemployment characteristics are discussed.

3.2. *Age*: The NSS sixteenth round survey was conducted during July 1960–June 1961 and hence the survey period may be considered to be broadly comparable with the period of 1961 census operation. Comparison of the distribution of rural population by age-groups as obtained from the NSS with that of the 1961 census will, therefore, be quite relevant and interesting. The age-groups adopted for the tabulation purposes both in the census and the NSS, being the same, comparison will become all the more meaningful. The distribution of rural population by age-group and sex is given in Table (3.1).

TABLE (3.1): PERCENTAGE DISTRIBUTION OF POPULATION BY AGE-GROUP AND SEX

age-group (in years)	16th round			1961 census		
	male	female	all persons	male	female	all persons
(1)	(2)	(3)	(4)	(5)	(6)	(7)
0—4	15.45	15.75	15.50	15.10	15.63	15.36
5—9	14.99	15.14	15.07	14.97	14.89	14.94
10—14	11.81	10.69	11.28	11.70	10.85	11.19
15—19	7.77	7.68	7.73	8.01	7.97	7.99
20—24	7.58	8.71	8.14	7.01	8.84	8.21
25—29	8.02	8.55	8.28	7.99	8.40	8.19
30—39	13.12	12.19	12.66	12.78	12.53	12.65
40—49	9.10	8.87	8.99	9.59	9.10	9.35
50—59	6.24	6.35	6.29	6.49	6.00	6.25
60 and above	5.90	6.04	5.98	5.71	5.95	5.89
not recorded	0.02	0.03	0.03	0.05	0.04	0.04
total	100.00	100.00	100.00	100.00	100.00	100.00
number of sam- ple persons	59315	57050	116371	—	—	—

3.3. *General education*: The distribution of the rural population by general education is given in Table (3.2) below. Compared to the 14th round estimates, the 16th rounds estimates do not show much of change in so far as the level of general education among the rural population is concerned. The change, of course, is not likely to occur since the gap between the two rounds is only one year. The small difference that is observed in the percentage estimates, between two rounds in each

National Sample Survey

of the different categories of general education, may not be a reflection of some real change in the level of education but may be due to some other factors (e.g. sampling and non-sampling errors) connected with the operation of large-scale sample survey.

TABLE (3.2): PERCENTAGE DISTRIBUTION OF POPULATION BY GENERAL EDUCATION AND SEX

general education	16th round			14th round		
	male	female	all persons	male	female	all persons
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. illiterate	70.40	90.33	80.29	68.60	90.32	79.49
2. literate but below matrix	28.22	0.40	18.95	30.38	9.56	20.03
3. matrix and above	1.23	0.12	0.67	0.90	0.09	0.50
4. not recorded	0.16	0.16	0.15	0.03	0.03	0.03
5. total	100.00	100.00	100.00	100.00	100.00	100.00
6. number of sample persons	59316	57056	116371	27152	26216	53368

3.4. *Activity*: In the Table (3.3) below is presented the percentage distribution of rural population by activity as obtained from the survey results of 14th and 16th rounds. Though the terms used for broad activity categories adopted in the 16th round for the classification of individual household members according to

TABLE (3.3): PERCENTAGE DISTRIBUTION OF POPULATION BY ACTIVITY AND SEX

activity	16th round			14th round		
	male	female	all persons	male	female	all persons
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. working population	54.23	25.92	40.20	54.81	24.04	39.51
2. persons (not working) but available for work	1.44	1.80	1.62	2.07	2.42	2.24
3. persons in labour force	55.67	27.72	41.88	56.88	26.56	41.85
4. student	10.47	3.90	7.27	11.94	4.63	8.21
5. houseworker	0.95	25.00	14.50	0.84	32.89	16.77
6. too old or too young persons	29.83	35.29	32.53	27.09	32.11	29.57
7. retirees and pensioners	0.18	0.39	0.28	0.22	0.24	0.23
8. others not in labour force	2.83	3.55	3.14	2.78	3.12	2.96
9. persons not in labour force	44.09	71.82	57.77	42.87	73.09	57.84
10. not recorded	0.24	0.46	0.35	0.25	0.55	0.30
11. total	100.00	100.00	100.00	100.00	100.00	100.00
12. number of sample persons	59316	57056	116371	27152	26216	53368

Employment and Unemployment in Rural Areas

their activity remained the same as they were in the 14th round, those for the detailed activity categories had been different in the 16th round. Hence for purposes of comparison the estimates by broad categories only have been presented. It is observed that the proportion of labour force in rural areas remains almost unaltered (41.88 per cent) in the 16th round when compared with their proportion (41.85 per cent) in the 14th round. The proportion of persons available for work (unemployed), however, changes considerably with the consequential change of the proportion of working population (gainfully employed). The 16th round NSS results reveals that the persons available for work (unemployed) constitute 1.62 per cent and the working population (gainfully employed) 40.62 per cent of the rural population, while the corresponding proportion thrown up in the NSS 14th round are 2.34 per cent and 39.51 per cent respectively. The overall proportion of persons not in labour force, again, remains almost the same (57.77 per cent) in the 16th round as it was (57.84 per cent) in the 14th round.

3.5. *Marital status* : Among the total rural population 46.11 per cent are never married, 45.63 per cent are married and only 8.20 per cent are either widowed, divorced or separated. But the population in labour force among never married people is only 16.41 per cent while among married and widowed, divorced and separated combined the proportion in labour force are 66.60 per cent and 47.63 per cent respectively. This is quite natural since unmarried people usually belong to the lower age-groups and a bulk of them do not go in for economic activity because of their low age. The proportion of working population and unemployed will obviously therefore be comparatively high in the latter categories than in the former. The Table (3.4) below will show that the proportions of working population among never

TABLE (3.4) : PERCENTAGE DISTRIBUTION OF POPULATION
BY ACTIVITY AND MARITAL STATUS

activity	marital status		
	never married	married	widow, divorced and separated
(1)	(2)	(3)	(4)
1. working population	16.66	64.24	45.20
2. persons available for work	0.78	2.36	2.43
3. persons in labour force	16.41	66.60	47.63
4. persons not available for work	83.26	33.04	51.95
5. not recorded	0.33	0.36	0.42
6. total	100.00 (46.11%)	100.00 (45.63%)	100.00 (8.20%)
7. number of sample persons	54716	52175	9426

National Sample Survey

married, married and widowed, divorced and separated combined are respectively 15.68 per cent, 64.24 per cent and 45.20 per cent. The proportions of unemployed are respectively 0.73 per cent, 2.36 per cent and 2.43 per cent among those marital status groups.

3.6. *Labour force participation*: The crude participation rate of rural areas as observed from the 16th round survey results is 41.88 per cent of the rural population, 55.67 per cent of the males and 27.72 per cent of the females. Since participation rates are not the same for all age-groups, the age-specific participation rate, i.e. the rate of labour force participation among the population in each of the age-groups is more meaningful. The labour force participation rate in each of the age-groups by sex is presented in Table (3.5) below.

TABLE (3.5): PERCENTAGE OF LABOUR FORCE
IN THE RURAL POPULATION BY AGE-GROUP
AND SEX

age-group (in years)	labour force		
	male	female	all persons
(1)	(2)	(3)	(4)
0—4	—	—	—
5—9	3.28	2.40	2.85
10—14	32.73	22.97	28.16
15—19	76.80	37.81	57.41
20—24	93.09	41.03	65.59
25—29	95.52	45.87	70.14
30—39	96.03	52.01	75.13
40—49	94.54	50.90	73.46
50—59	90.64	40.60	65.72
60 and above	63.79	17.64	40.75
total	55.67	27.72	41.88

3.7. *Pattern of activity by industry*: In Table (3.6) below is shown the distribution of working population in rural areas by industry, i.e. the sectors of economic activities in the country. It is observed that agriculture, which includes live-stock, forestry, fishing, etc. provides employment to more than 82 per cent of the working population in rural areas. Next in order of importance are those in manufacturing (6.40 per cent). Among the rest, the proportions in services (4.62 per cent) and trade and commerce (3.16 per cent) are worth mentioning.

Employment and Unemployment in Rural Areas

TABLE (3.6): PERCENTAGE DISTRIBUTION OF WORKING POPULATION BY INDUSTRY-GROUP AND SEX

industry-group	male	female	all persons
(1)	(2)	(3)	(4)
1. agriculture, livestock, forestry, fishing and hunting	80.92	86.25	82.21
2. mining and quarrying	0.65	0.35	0.56
3. manufacturing	8.50	6.19	6.40
4. construction	1.67	0.75	1.38
5. electricity, gas, water and sanitary services	0.11	0.16	0.12
6. trade and commerce	3.87	1.66	3.16
7. transport, storage and communication	1.38	0.48	1.10
8. services	5.03	3.74	4.63
9. activity not adequately specified	0.43	0.41	0.42
10. not recorded	0.04	0.03	0.08
11. total	100.00	100.00	100.00

3.8. *Pattern of activity by occupation*: The occupational pattern of the working population in the rural areas is given in Table (3.7) below:

TABLE (3.7): PERCENTAGE DISTRIBUTION OF WORKING POPULATION BY OCCUPATION-GROUP AND SEX

occupation-group	male	female	all persons
(1)	(2)	(3)	(4)
1. professional, technical and related workers	2.69	2.00	2.46
2. administrative, executive and managerial workers	0.41	0.05	0.30
3. clerical and related workers	0.71	0.04	0.49
4. sales workers	3.69	1.49	2.99
5. farmers, fishermen, hunters, loggers and related workers	79.99	85.89	81.83
6. miners, quarrymen and related workers	0.66	0.35	0.56
7. workers in transport and communication occupations	1.07	0.03	0.74
8. craftsmen, production process workers and labourers not elsewhere classified	6.36	6.90	7.92
9. service, sport and recreation workers	1.95	2.78	2.22
10. workers not elsewhere classified	0.34	0.33	0.34
11. not recorded	0.12	0.14	0.13
12. total	100.00	100.00	100.00

3.9. It is only natural that persons pursuing agricultural occupations (81.85 per cent) will head the list followed by craftsmen and production process workers (7.92 per cent), sales workers (2.99 per cent) and service workers (2.22 per cent) if the occupation groups are arranged according to the proportion of working population pursuing a particular occupation when agriculture, manufacturing, trade and commerce and services only are the most important sectors of economy in the rural areas.

3.10. *Intensity of employment*: This intensity of employment of working persons has been studied here on the basis of information on 'weekly days at work' and 'weekly hours at work' collected in the survey. In the Table (3.8) below is given the distribution of working person by days at work.

TABLE (3.8): PERCENTAGE DISTRIBUTION OF WORKING PERSONS BY DAYS AT WORK

days at work	male	female	all persons
(1)	(2)	(3)	(4)
0	0.59	0.87	0.68
1	1.32	2.21	1.60
2	1.85	2.65	2.10
3	2.72	3.49	2.96
4	4.36	4.82	4.51
5	5.65	5.09	5.47
6	9.74	8.31	9.29
7	73.07	71.82	72.68
not recorded	0.70	0.74	0.71
total	100.00	100.00	100.00

3.11. It is observed that an overwhelming majority of working population (72.68 per cent) work for all the seven days in a week. Among males and females separately the proportion is 73.07 per cent and 71.82 per cent respectively. However, persons working for 4 days or less and up to 1 day, are not negligible, 11.17 per cent of the total working population (10.25 per cent among males and 13.17 per cent among females) work for 4 days or less and up to 1 day only in a week.

3.12. The intensity of work in rural enterprises by 'days at work' will be an interesting study. The Table (3.9) below gives the average number of days at working during the week by enterprise/service.

3.13. It is observed that in most of the rural enterprises including agriculture, work is carried on for at least six days in a week. In agricultural enterprises the average number of days for which the work is carried on is slightly more than 6 whereas in non-agricultural enterprise, it is slightly less than 6. It is relevant to

Employment and Unemployment in Rural Areas

mention here that since this is yearly average, the seasonal fluctuations, if there are any, have not been reflected in these averages.

TABLE (3.9): AVERAGE NUMBER OF DAYS AT WORK
DURING THE WEEK BY ENTERPRISE/SERVICE
AND SEX

enterprise/service	average 'days at work'		
	male	female	all persons
(1)	(2)	(3)	(4)
1. agriculture	6.42	6.20	6.34
2. livestock	6.79	6.86	6.82
3. construction	5.39	5.35	5.55
4. weaving	6.28	6.32	6.30
5. blacksmithy	6.88	6.28	6.58
6. goldsmithy	5.82	6.08	6.20
7. carpentry	5.95	6.86	6.08
8. cobblery	6.23	6.24	6.23
9. pottery	5.95	6.06	6.16
10. trading	5.95	5.91	5.94
11. other non-agricultural enterprise	6.37	6.37	6.37
12. domestic services	6.06	6.06	6.06
13. other services	6.06	6.06	6.06
14. total	6.27	6.25	6.33

3.14. Intensity in terms of 'days of work', however, does not truly reflect the actual condition in the country in so far as the quantum of work actually performed by working persons during the day since the amount of work measured in terms of 'hours' in a day varies from person to person. So the measure of intensity of work by 'hours at work' in a week will make a more realistic appraisal of the work content of the working day in the rural areas. In Table (3.10) is given the percentage distribution of working population by 'hours at work' and the 'availability for additional work'. It will be seen that 27.69 per cent of the working population in the rural area, 12.22 per cent among males and 29.44 per cent among females, work for 4 hours or less in a day. The proportion of working population working for more than 4 hours but not above 6 hours is 20.59 per cent, the corresponding proportions among males and females respectively are 17.43 per cent and 27.35 per cent.

3.15. *Measurement of underemployment*: The condition of our rural economy is such that quite a substantial portion of the working population work only for few hours in a week. But all these people cannot be termed underemployed since a section of them are not available for work even if work is made available to them. So only those working persons are treated as underemployed in this report who

Employment and Unemployment in Rural Areas

work below some normal working hours and are at the same time available for additional work. The fixation of suitable norms has not been ventured here, but only some arbitrary norms have been used for illustrative purposes. A person who works 28 hours or less during the week or on an average 4 hours or less per day and reports as available for additional work may be treated as severely underemployed. Similarly persons who work 29 to 42 hours per week and report as available for additional work may be called moderately underemployed. According to the above definition, the severely underemployed comes to 4.70 per cent of the total working population in the rural area; 3.84 per cent among males and 6.55 per cent among females. Similarly the proportion of moderately underemployed among rural working population is 3.53 per cent, 1.48 per cent among males and 3.64 per cent among females.

3.16. *Incidence of unemployment*: It has been noted earlier that 1.62 per cent of the rural population (1.44 per cent among males and 1.80 per cent among females) are not with any gainful employment and available for work, i.e. unemployed. But perhaps the incidence of unemployment of the total or any segment of the population should be studied in relation to the total number of persons in the labour force or the number of persons in the labour force in that segment of population. The measure of the proportion of unemployed as percentage of labour force is used here with a view to studying the incidence of unemployment. The percentage may be termed the rate of incidence.

TABLE (3.11): THE RATE OF INCIDENCE OF UNEMPLOYMENT BY AGE-GROUP AND SEX

age-group (in years)	rate of incidence		
	male	female	all persons
(1)	(2)	(3)	(4)
0—4	—	—	—
5—9	2.94	1.83	2.47
10—14	2.68	6.46	4.13
15—19	3.42	8.80	5.08

30—39	2.06	6.99	3.32
40—49	2.55	5.11	3.41
50—59	2.44	6.11	3.57
60 and above	2.33	4.75	2.85
total	2.58	6.50	3.86

National Sample Survey

3.17. It is observed that the incidence of unemployment is 3.86 per cent of the labour force in the rural areas, the rate being relatively much higher (6.60 per cent) among females in the labour force compared to the rate (2.58 per cent), among the males. It is also to be noted that the labour force belonging to the age-groups 15-19, 20-24 and 25-29 are comparatively more affected by the unemployment incidence than those belonging to other age-groups.

APPENDIX I

SAMPLE DESIGN AND PROCEDURE OF ESTIMATION

01.1. The sample design is a stratified two-stage one for this survey in rural sector, the villages being the first-stage units and the households the second-stage units.

01.2. *Stratification* : In each state, 'regions' were formed by grouping contiguous districts having similar crop pattern and population densities. 48 such regions were formed in the whole of India, within a region, contiguous tehsils fairly homogeneous with respect to population densities were grouped together to form compact strata such that the rural population of the strata were approximately equal. The number of strata formed in a region was one eighteenth of the allocation (number of villages) to that region.

01.3. *Allocation* : The allocation of the total sample size (number of villages) to the various states was done on a joint consideration of the rural population, area under food crops and the investigating strength in the NSS blocks of the states. The allocation was rounded off to multiples of 18 within a state, its allocation was further distributed among the different regions in proportion to their rural populations and the final allocations were rounded off to multiples of 18 to allow for the selection of 2 independent sub-samples of 9 villages from each stratum formed in the region.

01.4. *Investigation zone* : If a stratum had a very large area the following procedure was adopted to reduce the area covered by the investigator. The stratum was divided into two or more investigation zones (groups of contiguous tehsils) of roughly equal areas. Two investigation zones were selected with probability proportional to the number of villages in the zone with replacement. Two sets of 9 villages (central and state samples) were drawn from each of the selected investigation zones and these constituted one sub-sample.

01.5. *Selection of sample villages* : After arranging the tehsils in a serpentine order within a stratum (or investigation zone) 18 villages were selected circularly systematically with the interval I ($=$ integer nearest to $V/18$, $v =$ total number of villages in the stratum or investigation zone) and with random start T_1 , from 1 to V . While 9 villages with sampling serial numbers $R_1, R_1+2I, \dots, R_1+16I$ (taking R_1+KI-V if $R_1+KI > V$ for some K 's) constituted the sub-sample 1 of the central sample, the other 9 villages with sampling serial numbers $R_1+I, R_1+3I, \dots, R_1+17I$

National Sample Survey

constituted the sub-sample 1 of the state sample. With another random start R_2 , 18 villages were selected as before; these formed sub-sample 2 of the central and state sample. In the strata of those states which did not participate, the interval I was the integer nearest to $V/9$ and two sets of 9 villages with two independent random starts were selected to constitute the sub-samples 1 and 2 of the central sample. Within each stratum and sub-sample the villages are numbered 1 to 9 in their order of selection. It is to be noted that the two sub-samples are independent for both the central and state samples. Two investigators one for each sub-sample are working in each stratum. The frame used for selection was the list of villages as per the 1951 census.

01.6. Census village constituted the sample village. To reduce the workload in a large sample village, the investigator is allowed to divide the village into a specified number of hamlet groups of roughly equal population and to select one of them at random with equal probability and the survey was confined to the selected hamlet group.

01.7. *Selection of sample households*: All the households in a selected village (or hamlet group) were listed by the investigator. They were then grouped according as the household size is "1 to 4" or "5 and above" and the sampling serial number will be given starting from the first household falling in the group of household size "1 to 4". The first household falling in the group "5 and above" will get the next serial number to the serial number attached to the last household of the household size group "1 to 4". The first household belonging to the household size group "5 and above" will receive the last serial number. The required number of household (which is already fixed) to the selected will be drawn in circular systematic way with a random start.

01.8. *Substitution of sample household*: If at the time of detailed investigation for any household schedule, it is found that a sample household has left the village and will not be back during the period of stay of the investigator in that village, the sample household will be substituted by the household having the next sampling serial number in the frame meant for selection of sample for this survey.

01.9. *Estimation procedure*: \hat{T}_1 , the estimate of the total of any characteristic from a particular sub-sample is given by

$$\hat{T}_1 = \sum_{s=1}^K \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \frac{H_{si}}{h_{si}} \sum_{j=1}^{h_{si}} X_{sij}$$

where s = subscript for the s -th stratum,
 i = subscript for the i -th sample village (or hamlet group),
 j = subscript for j -th sample household,

Employment and Unemployment in Rural Areas

- k = number of strata,
 N = total number of villages,
 n = number of sample villages,
 D = number of hamlet groups
($D = 1$ if no such hamlet groups are formed),
 H = total number of households in the frame,
 h = number of households surveyed,
 x = value of characteristic,

01.10. The above procedure produces two independent estimates from the two sub-samples. The simple average of these estimates is the pooled estimate. In this report, estimates have been presented in percentages. The percentages have been calculated after obtained the denominator and numerator by the application of the above formula.

APPENDIX II

INDEPENDENT SUB-SAMPLE ESTIMATES

02.1. Independent sub-sample-wise estimates for a few selected items of information, considered to be representative, are given in this appendix so as to provide some idea about the margin of error associated with the estimates.

02.2. It has been mentioned earlier, that the total sample for this survey was divided into two independent and interpenetrating sub-samples—surveyed by two different parties of investigators. Results presented here show side by side the sub-sample-wise estimates and the combined estimates.

02.3. In NSS report No. 5 and in other NSS publications the theoretical aspects of the technique of splitting the total sample into a number of independent sub-samples have already been discussed.

02.4. If there are a number of sub-samples (say n) the probability that the true value of the characteristics lies between the largest and the smallest of these sub-sample estimate is $\left(1 - \frac{1}{2^{n-1}}\right)$, so that the absolute value of the different between the two sub-sample estimates immediately provide a 50 per cent confidence interval.
