THE NATIONAL SAMPLE SURVEY

EIGHTEENTH ROUND : FEBRUARY 1963—JANUARY 1964

NUMBER 141

TABLES WITH NOTES ON HOUSEHOLD CONSUMPTION OF FUEL AND LIGHT

*"The report entitled 'Tables with notes on household consumption of fuel and light, 18th round : February 1963—January 1964' was prepared by the Indian Statistical Institute, Calcutta. The views contained in the report are not necessarily those of Government of India."**

CHAPTER—I

Introduction

1.1 The present set of tables on consumer expenditure on items of fuel and light by levels of household expenditure were prepared from data collected in the eighteenth round of the National Sample Survey (February 1963—January 1964). Altogether 21366 sample households from 8466 sample villages in rural areas and 4177 sample households from 4571 sample blocks in urban areas (including 4 big cities of Bombay, Calcutta, Delhi and Madras) were surveyed in this round. Data on consumer expenditure on individual items of fuel and light are being tabulated for the first time¹.

1.2 The topics discussed in this chapter are : broad concepts, definitions and procedures adopted for the survey, a brief sketch of the sampling design of the eighteenth round and a few explanatory notes on the detailed tables. In chapter two a summary of the results presented with a discussion of some of the salient features thrown up by the data. In chapter three, an appraisal of the validity of the results is made with internal and external checks.

Concepts, definitions and procedures

1.3 The data on which the present tables are based were compiled from block 13, items 25 to 39 of household schedule 1.0 : Consumer Expenditure.

1.4 In schedule 1.0 data on expenditure of the household on domestic consumption are collected. A household is defined as a group of persons usually living together and taking principal meals from a common kitchen².

1.5 Any person who takes principal meals with a household for at least 16 days preceding the date of enquiry is considered to be a member of the household. Such a person may be a normal member, an employee or a guest of the household.

1.6 *Household size.*—The number of members (as defined above) in a household gives the household size.

1.7 Consumer expenditure comprises that part of the household expenditure which is incurred exclusively towards its non-productive purposes. All expenses relating to the enterprise activities of the household are excluded.

Consumption out of transfer receipt like the receipt of loans, gifts, charities, free collections etc. is included in the household consumption, while transfer payments like loans (advanced or repaid) gifts, charities etc. are excluded. Consumption of goods purchased in cash is evaluated at the actual purchase price irrespective of the period of purchase, that of goods produced by the household, at the ex-farm or ex-factory price and that of goods received by barber or by transfer receipts, at the average retail price prevailing in the locality of the sample household during the reference period.

1.8 The information was collected by interviewing one of the members (usually the head) of the sample households. The reference period for collection of data on consumption was 30 days preceding the date of survey. As the reference period was a moving one, the estimates presented here give the average picture of the whole survey period, February 1963 to January 1964.

Sampling design and estimation procedure

1.9 The survey covered the whole of the rural and urban areas of the Indian Union excepting : Andaman and Nicobar Islands, Laccadive, Minicoy and Amindivi Islands, Ladakh district of Jammu & Kashmir, NEFA, Mao, Ukhrul and Tamenlong sub-divisions of Manipur, Lungleh sub-division of Mizo hills, Pondicherry and Goa, Daman and Diu.

* The draft report (No. 171) was first submitted by the Indian Statistical Institute, Calcutta to the Government of India in May, 1967. It was revised subsequently and resubmitted in March, 1968.

¹ The tabulation was undertaken outside the normal NSS programme on a request from the Planning Commission. As the results were required in a very short time, the processing was done on IEM 1401 EPPM at the Indian Statistical Institute, on their express suggestion.

² A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with his dependents or guests) forms a separate household. Government and other public institutions such as prisons, police and military quarters, hospitals, asylums and relief camps are, however, excluded from the scope of the survey.

1.10 The design adopted for the socio-economic enquiries was a stratified two-stage design. Regions were formed within each state grouping districts having similar crop pattern and density of population. Then strata were formed for the rural sector by grouping contiguous tehsils within the same region such that the sum of the 'sizes' of the villages in each stratum was nearly equal for all strata within a State. 'Size' was taken as the census population of a village rounded off to the next higher multiple of 1000. In the rural sector, the sampling unit in the first stage were villages and those at the second stage were households. Villages were selected circular systematically with probability proportional to size. In each stratum 4 independent interpenetrating sub-samples of villages were selected. Within each village, a linear systematic sample of households was selected (actually in two steps) for canvassing schedule 1.0. The intervals and random starts for selection of households were determined such that the design became self-weighting at the State level with about 3 households on the average selected per village.

1.11 For sampling in the urban areas, strata were formed within each State by grouping the towns into 2 sectors : towns with population (1954 census) 50,000 and above falling in sector 1 and the rest in sector 2. (In Maharashtra, Bombay City was assigned sector code O and treated as a separate stratum). Each sector within a State made a stratum. In the urban sector, "Blocks" (areal units having a population of about 800 per block on the average), were the first stage units and households the second stage units. From each stratum, as in the rural sector, 4 independent and interpenetrating samples of blocks were selected. In sector 1, selection was done circular systematically with probability proportional to 'size' (same as rural 'size'). In sector 2, sample blocks were selected circular systematically but with equal probability. For canvassing schedule 1.0, a linear systematic sample of households were selected (again, in two steps) such that the design was self-weighting at the sector level of each State and the average number of sample households per block, was 1.

1.12 The procedure of estimation used may be briefly stated as follows :

The unbiased estimate of an aggregate is obtained as

$$T = \sum My$$

where y is the value of the characteristic considered for any sample household and M the multiplier for that household (owing to the self-weighting design, this is the same for all households of a State in rural areas and all households of a sector within a State in the urban areas) the summation being over all the sample households belonging to the 'set' for which the estimate is required. M is given by $I_1 \times I_2 \times I_3$ where I_1 is the interval used for selecting the first stage units and I_2 and I_3 are those used for selecting the second stage units. To obtain estimates of population and number of households, y is taken to be the households size and 1 respectively. Estimates of ratios are obtained by dividing the estimate of numerator by that of the denominator. Combined sample estimates of aggregates are given by the simple arithmetic average of the sub-sample (or half-sample estimates). Combined sample estimates of ratios are obtained always by first computing the unbiased estimates of the aggregates appearing in the numerator and denominator of the ratio for the combined sample and then at the final stage computing the ratios. Even though 4 sub-samples of villages/blocks were selected, estimates are given only by two half-samples and combined samples. Sub-samples 1 and 3 were combined to give half-sample 1 and sub-samples 2 and 4, to give half-sample 2.

1.13 *Description of tables.*—The detailed set of tables contain 85 main tables giving data on consumer expenditure on fuel and light items. In addition, a table for each of the rural and urban sectors given the distribution of sample households for each State, Union Territory and for all-India by expenditure level and half-samples including combined samples.

1.14 The 85 tables mentioned above are distributed as follows : one table for each of the rural and urban sectors for each of the 19 States/Union Territories and for all-India. They give, excepting for the first item, consumer expenditure per person for a period of 30 days by items of fuel and light by expenditure level. Estimates are given under each expenditure level for each of half-samples 1 and 2 separately and combined. The State, sector and items are indicated on the tables.

1.15 The regions are as follows :

Names of the States

- | | |
|----------------------|---|
| 1. Andhra Pradesh | 11. Orissa |
| 2. Assam | 12. Punjab |
| 3. Bihar | 13. Rajasthan |
| 4. Gujarat | 14. Uttar Pradesh |
| 5. Jammu and Kashmir | 15. West Bengal |
| 6. Kerala | 16. Union territory of Delhi |
| 7. Madhya Pradesh | 17. Union territory of Himachal Pradesh |
| 8. Madras | 18. Union territory of Manipur |
| 9. Maharashtra | 19. Union territory of Tripura |
| 10. Mysore | 20. All India. |

1.16 Two sets of tables are presented mainly in the report. One set of tables represents tables for the entire rural areas and the other set for the entire urban areas. It may be mentioned that the urban areas include four big cities—Bombay, Calcutta, Delhi and Madras, and no separate estimate for big cities is presented. Each set of tables represent quantity and value of items of consumption of fuel and light per person for a period of 30 days by monthly household expenditure levels. The expenditure levels are noted in para 1.19. The items are listed in para 1.18. The estimate in each table are given by sub-sample (indicated by s-1 and s-2) and combined sub-samples (indicated by comb.). For convenience of references, the table numbers have been coded. The left hand most digit stands for the sector to which the table belongs i.e., 1 for rural and 2 for urban. The digit following the second point refers to quantity or value in 1 for quantity and 2 for value. The third digit refers to the region or State for which the estimate is supplied. For instance Table (1.2.14) refers to value of consumption (in Rs. 0.00) of items of fuel and light per person for a period of 30 days in rural areas of Uttar Pradesh State, and Table (2.1.14) refers to quantity of consumption (in standard units) of items of consumption of fuel and light per person for a period of 30 days in urban areas of Uttar Pradesh State. The household size for each expenditure level is given in each table against line (v) below the items.

It may be mentioned that quantity estimates are given for 13 items only. Quantity for other fuel and total of items of fuel and light is not possible. On the other hand value estimates are given for 15 items including other fuel and total items of fuel and light. Besides tables for quantity and value estimates there are tables of distribution of sample villages blocks and households, and total monthly household consumption.

Table (A.1) shows the distribution of sample villages and blocks and sample households in rural and urban areas by States and all-India.

Table (A.2) and (A.3) give distribution of sample households by monthly household expenditure levels by States and all-India for rural and urban areas respectively.

Table (A.4) & (A.5) give total monthly household consumption by expenditure levels.

1.17 The sector codes are :—

code	sector
1	rural
2	urban

1.18 Item group "fuel and light" is defined so as to include all items used as fuel for cooking, heating etc. and those used for lighting purposes. The items are :—

item	
1. coke	8. kerosene
2. coal	9. candle
3. firewood	10. matches
4. electricity	11. other fuel
5. gas	12. other lighting oil
6. dungcake	13. methylated spirit
7. charcoal	14. other fuel
	15. total fuel and light

1.19 The expenditure level assigned for each sample household on the basis of the average monthly household expenditure entered as a classificatory item in block 2 of the schedule. The levels are :

class interval of total household monthly expenditure in rupees	
1	1— 50
2	51—100
3	101—150
4	151—300
5	301 and above
6	all classes.

CHAPTER II

Summary of results

2.1 Some of the important results are summarised and a discussion of them is given in this chapter.

2.2 Table (2.1) gives the value of consumption of the items of fuel and light for all-India by rural and urban sector separately.

TABLE (2.1) : Value of consumption in rupees (0.00) per person for 30 days by items of fuel and light : all expenditure levels pooled

All-India						
name of item	value of consumption in rupees (0.00)					
	rural			urban		
	s.1	s.2	comb.	s.1	s.2	comb.

electricity	0.01	0.01	0.01	0.18	0.21	0.20
gas	0.00	0.00	0.00	0.01	0.01	0.01
dungcake	0.21	0.22	0.22	0.10	0.09	0.10
charcoal	0.00	0.01	0.00	0.08	0.07	0.07
kerosene	0.23	0.24	0.24	0.39	0.38	0.38
candle	0.00	0.00	0.00	0.00	0.00	0.00
matches	0.05	0.05	0.05	0.08	0.08	0.08
other fuel	0.03	0.02	0.02	0.02	0.01	0.01
other lighting oil	0.00	0.00	0.00	0.00	0.00	0.00
methylated spirit	0.00	0.00	0.00	0.00	0.00	0.00
others	0.00	0.00	0.00	0.00	0.00	0.00
total fuel & light	1.36	1.44	1.40	1.89	1.86	1.89
total consumer expenditure	23.04	22.49	22.74	32.04	33.12	33.03

Note—Estimates of total consumer expenditure given above, having been computed from the average monthly expenditure of each sample household is only an approximation to the actual total expenditure.

2.3 Total monthly expenditure per person on fuel and light comes to Rs. 1.40 and Rs. 1.88 in rural and urban sectors respectively. The maximum amount is spent on firewood (Rs. 0.83 and Rs. 0.82 in rural and urban sectors respectively) in both the sectors. The other important items are kerosene (Rs. 0.24) and dungcake (Rs. 0.22) in rural areas. These three items account for more than 90 percent of the total expenditure on fuel and light in rural sector.

In the urban sector the pattern is more diversified. While the maximum amount is spent on firewood and kerosene (Rs. 0.38) a considerable amount of expenditure is incurred on other items like electricity (Rs. 0.20), coke (Rs. 0.10) and charcoal (Rs. 0.07).

The difference between the two sectors in respect of electricity is both striking as well as expected.

An item for which the consumption in the urban sector is conspicuously less than that in the rural sector is dungcake. The comparative figures are Rs. 0.22 for the rural sector and Rs. 0.10 for the urban sector.

Consumption of gas, charcoal, candle, other lighting oils and methylated spirit is almost nil in both the sectors.

2.4 The percentage of total expenditure on fuel and light to total consumer expenditure are 6.16 and 5.69 in the rural and urban sectors respectively.

2.5 Table (2.2) gives the expenditure on total fuel and light per person for 30 days for rural and urban sectors. Table (2.3) gives the expenditure on fuel and light expressed as percentage to total consumer expenditure for both the sectors.

TABLE (2.2) : *Expenditure on total fuel and light per person for 30 days in rupees (0.00) by monthly household expenditure levels for rural and urban sectors*

Expenditure on fuel and light rises with the expenditure level. However, its proportion to total expenditure falls as the expenditure level rises.

2.6 Tables (2.4) and (2.5) give statewise estimates. While Table (2.4) gives value estimates, Table (2.5) gives estimates of quantity in units specified against each item.

2.7 In rural sector the highest spending States are Jammu and Kashmir (Rs. 2.34), Union Territory of Himachal Pradesh (Rs. 2.63). In urban sector, maximum expenditure on fuel and light is found in Assam (Rs. 2.95). Jammu and Kashmir State and Union Territories of Manipur and Tripura come next with Rs. 2.68, Rs. 2.58 and Rs. 2.41 respectively.

2.8 There is some amount of variation to be observed between States in the pattern of expenditure by different items. In the rural sector, the pattern is approximately the same for all States, with firewood, kerosene and dungcake accounting for most of the expenditure on fuel and light everywhere. However, in the urban sector the picture is slightly different. While in most of the States firewood is the predominant item, in some States like West Bengal and Union Territory of Delhi coke and coal are important items.

Electricity is consumed in the urban sector in most of the States to some extent. In this respect West Bengal and Punjab are considerably ahead of the rest of India.

2.9 Quantity estimates presented in Table (2.5) will be of considerable interest. Taking itemwise consumption over different States it is found that firewood consumption varies between 10 and 56 seers per person per month in rural areas and between 3 and 39 seers in urban areas.

Hilly States like Jammu and Kashmir, Union Territory of Himachal Pradesh and Assam show about 50 seers of consumption. At all-India level consumption of firewood is 24.42 seers and 15.31 seers in rural and urban sectors respectively.

2.10 Dungcake consumption is quite high in rural West Bengal and Punjab (about 20 seers). In the urban sector consumption of dungcake is comparatively low. At all-India level consumption of dungcake is 9.11 seers and 3.01 seers in rural and urban sectors.

2.11 Other interesting quantity estimates are : kerosene (0.40 seers and 0.72 seers in rural and urban sectors) and match-sticks (number of match-sticks consumed 38.95 and 62.43 in rural and urban sectors). Consumption of kerosene varies from 0.20 seers to 0.57 seers in rural sector and 0.23 seers to 1.52 seers in urban sector. The range of variation for match-sticks is from 22 to 67 in rural and from 34 to 102 in urban sector.

2.12 In the foregoing paragraphs the important results have been highlighted. Next chapter contains an assessment of the reliability of the results as a whole.

CHAPTER III

Validity of results

3.1 Validity of results was judged by applying both internal and external checks. The internal checks included half sample checks. It was to be checked whether there existed consistency between the estimates of half samples 1 and 2.

3.2 For external checks it was seen, firstly whether these results are comparable with results (similar) available from other round of NSS. Such results for some items were available for 4th and 13th rounds. It was to be seen whether there was consistency between the rounds.

Secondly, it was necessary to find whether these results agree with those from any other external source. It may be mentioned that, as such data were not tabulated before this by any other agency, external checks could not be applied.

Internal checks

3.3 Consistency between the half sample estimates of each item was checked and examined. Tables (3.1) to (3.4) give half samplewise estimates. It was observed that there was agreement between estimates of half samples 1 and 2. In some cases when these estimates did not agree it was found that it was due to the small sample size or the nature of items. For instance, expenditure level-wise estimates of Himachal Pradesh in both the sectors are showing wide half sample divergencies because of the small sample size. Such estimates are, of course, to be used with caution.

External checks

3.4 Results were compared with data of NSS 4th and 13th rounds. Tables (3.5) to (3.8) give comparative estimates of NSS 4th, 13th and 18th rounds.* Consistency between the rounds was observed in most of the cases. Table (3.9) gives comparative kerosene consumption estimates from three NSS reports one from thirteenth round and two on eighteenth round.

*1. NSS Report No. 18 : Tables with notes on consumer expenditure (NSS fourth round : April-September 1952).

2. NSS Report No. 71 : Consumer expenditure by levels of household expenditure (thirteenth round : September 1957—May 1958).
