**SAMPLE SECTOR : DETAILED RESULTS**

*The report \*entitled "Tables with Notes on the Annual Survey of Industries—1966: Sample Sector : Detailed Results" was prepared by the Indian Statistical Institute, Calcutta. The views contained in the report are not necessarily those of the Government of India.*

**Introductory Notes**

**1. INTRODUCTION**

1. In NSS Report No. 174 have been furnished results for 16 key items of industrial activity in India collected in the sample sector of the Annual Survey of Industries—1966. In this volume have been provided, besides a few other tables, sample sector estimates of some more detailed items of capital structure, employment and emoluments, input and output also collected in ASI-66.

2. As per agreed tabulation programme, these details furnish counterpart estimates for the sample sector corresponding to the census sector aggregates for ASI-66 brought out by the Industrial Statistics Wing of the Central Statistical Organisation. The sample size for the purpose of obtaining estimates for detailed items is not adequate, as such the results for some of them have large sub-sample divergence. In order to get an integrated picture of industrial activity it is desirable to pool up the results of the census sector with the corresponding sample sector results.

3. The total frame comprised all factories registered under sections 2m(i) and 2m(ii) of the India, Factories Act, 1948, as on 31 December 1965, including those not furnishing information on number of workers engaged or reported closed in the list of factories. Sections 2m(i) and 2m(ii) of the Act refer respectively to factories using power and employing 10 or more workers or factories not using power but employing 20 or more workers, on any day in the preceding twelve months. The sample sector generally comprised all factories in the total frame employing on an average less than 50 workers, if using power and less than 100 workers, if not using power. In fact, ASI-1966 census sector comprised some ASI-1964 and ASI-1965 census factories on repetitive basis, even though their employment strength as per C.I.F. list for 1965 was below the prescribed level. It excluded defence installations, units engaged in storage and distribution of oil, technical training institutes not producing anything for sale or exchange, as well as all units registered as hotels and cafe (industry no. 842). Through the undertaking approach, all factories belonging to the electric light and power industry (industry no. 511) were covered in the census sector on a complete enumeration basis, along with non-licensee factories, and they were thus left out of the scope of the sample sector altogether.

4. In the appended tables, the term 'industry' refers to the Labour Bureau classification of industries at the three digit level. This is in accordance with the information available in the frame as collected by the Directorate of National Sample Survey from the offices of the Chief Inspectors of Factories in the different States. Appendix I provides a statement showing Labour Bureau classification (at three-digit level) and its corresponding ASI industry classification (used in ASI-66 census sector aggregates) also at the three-digit level.

5. For the first time in this round of ASI, data were collected as per the accounting years of the factories surveyed and the specific accounting year for this purpose was that ending during April 1, 1966 and March 31, 1967. For sugar factories, however, the survey year was July 1965 to June 1966.

**2. CONCEPTS AND DEFINITIONS**

6. An idea of the conceptual coverage of some of the terms used in the survey is given below.

- (a) *Fixed capital*.—Depreciated book values of fixed assets as on the closing date of the accounting year of the factory were collected. Fixed assets covered all goods with a normal economic life of one year or more and used by the factory for its own purposes but excluded those solely used for post-manufacture distribution. These comprised land, buildings, improvements to land, plant, machinery and tools, transport equipment and other fixed assets.

\*The draft report (No. D 222) was first submitted by the Indian statistical institute, Calcutta, to the Government of India in February 1971. It was revised subsequently and resubmitted in February, 1972.

### National Sample Survey

- (b) *Working capital*.—Like fixed capital, information on working capital was collected for the closing date of the accounting year of the factory. It comprised the value of stocks of materials, products (finished, semi-finished and in-process), cash in hand and at bank as well as the net balance of amounts receivable and amounts payable. It excluded fixed deposits and long-term investments made by the factory as well as long-term loans received by it.
- (c) *Rent paid*.—It was the amount paid during the year for the use of any item of fixed asset taken on lease or rent or royalty basis.
- (d) *Number of working days*.—Working days comprised days on which any manufacturing process was carried on and included days spent exclusively on repair and maintenance of fixed assets. Estimate presented in this report is of the total number at the specified level and not the average per factory.
- (e) *Workers*.—This term was used in the same sense as in the Factories Act, 1948, and excluded persons holding positions of supervision and management or employed in a confidential position. The average number of all workers/ employees was calculated by adding all concerned persons attending and on leave with pay, including concerned persons on strike, over each shift of a working day and dividing the result by the number of working days. Total number of workers have been shown in this report separately for directly employed and employed through contractors.
- (f) *Salaries, wages etc.*.—This term included all payments made during the year in cash as compensation for work done. It included all bonuses and overtime payments but excluded the value of payments in kind and employers' contribution to social security measures.
- (g) *Value of benefits in kind*.—This was the cost value or the net cost of the concession, as the case might be, in respect of all supplies made and all services rendered whether individually or to groups, free of cost or for part payment, such as food and food articles, fuels, housing accommodation, electricity, water, sanitary services as well as subsidies involved in the operation of facilities with regard to transport, medical attention, education, recreation, entertainment and welfare projects, etc. This was exclusive of employer's contribution to provident fund, pension, gratuity or other social security measures.
- (h) *Value of fuels, or materials etc. consumed*.—On the basis of the cost of fuel, material etc. landed at the factory including inward transport cost, commission to purchasing agent, taxes or duties paid etc., this value was calculated for each item of fuel, material etc. consumed during the year in the factory. Materials consumed for manufacture of capital items for factory's own use were included. Information on materials consumed for repairs and maintenance of its fixed assets was collected separately. Intermediate products, however, *i.e.*, materials produced and further consumed in the factory, were excluded.
- (i) *Value of other input services*.—These expenses included charges on account of non-industrial services such as inward transport, purchase agency, postage, stationery, and printing and personalized and business services such as audit, accounts bank and other services which had originated outside the reporting factory and were not already included in the value of fuels, materials etc. as defined in sub-para (h) above. Also included were sundry indirect taxes paid by the factory like purchase tax, local rate and factory licence.
- (j) *Input*.—It comprised the value of fuels, materials etc. as defined in sub-para (h), the value of industrial service rendered to the factory in connection with repairs and maintenance of fixed capital of the factory or with other manufacturing processes as well as the value of other input services, as defined in sub-para (i) above. It included the value of goods to be sold in the same condition as purchased, but excluded director's fee and managing agent's remuneration and office allowance.
- (k) *Output*.—This comprised the ex-factory value, calculated on the basis of sale value minus all distributive costs, of all finished goods produced by the factory (products, by-products etc.) during the year, including the value of industrial service rendered by the factory during the year as well as the net balance of semi-finished goods as at the end of the year. Output included final products for own use as goods in the factory, capital items produced for factory's own use and goods bought and resold in the same condition as purchased. It excluded intermediate products.

### 3. PARTICULARS OF TABLES

7. In Tables (1), (2), (3) and (4) estimates by sub-samples have been provided for detailed aspects of industrial activity respectively at all-India (all-industries combined), State (all industries combined) each industry (all States combined) and State (each industry) level. According to agreed tabulation programme, total number of items for which estimates have been furnished in Tables (2) and (4) is about half

of the number as taken in for Tables (1) and (3). Besides the completely enumerated strata for which combined aggregates have been furnished, Table (4) furnishes for the sampled strata sub-samplewise estimates for only such industries as were 'major' industries within the respective States at any time during ASI-60 and ASI-66. For other sampled strata in Table (4) the respective sample size was too small to throw up usable estimates of the detailed items. This report contains two more tables bearing numbers (1.1) and (3.1). These Tables furnish sub-samplewise estimates for outstanding loans by source of finance and type of organisation (a) for all industries together at all India (Table 1.1), (b) for each industry at all India having sample size of more than 200 (Table 3.1).

8. In all tables, it has been marked with 0(zero), wherever the emerging estimate/aggregate is less than half the prescribed unit of the item in the table. Due to rounding off, the component estimates in some cases do not add upto the totals furnished.

9. The last item in all Tables—samples surveyed—refers to the samples selected as reduced by non-response factories. It comprises all surveyed factories, including those treated as blank.

10. In view of Section 7 of the Collection of Statistics Act, 1953, wherever in an industry in all-India or in an industry in a State, the no. of factories is less than three units in the universe of the sample sector as per list of factories for 1965, data for such industry have not been furnished in Table 3 or Table 4 in the report. Contributions of these cells have however been taken into consideration for building up estimates presented in this report in Tables (3), (2) and (1).

11. Wherever the estimates presented in this report differ from the summary results presented earlier, they are due to one or more of the following factors : (a) changed number of samples surveyed, (b) the rounding-off of a number of items into which a key item has been sub-divided for the purpose of this report, (c) receipt of clarifications relating to detailed items from the NSS Field since after the completion of the priority—one report, (d) summary results were prepared from summary block whereas estimates furnished in this report are based on actual detailed returns, etc.

#### 4. SAMPLING DESIGN AND ESTIMATION PROCEDURE

12. The sampling design in the sample sector was a stratified unistage one, the strata being the State x industry cells and the sampling unit being a factory. The sampling frame in any stratum consisted of all Section 2m factories in that State x industry cell except for factories belonging to the census sector and those left out of the scope of the survey, viz., technical training institutes and factories engaged in defence productions, storage and distribution of oil, hotel and restaurant business, to the extent reported.

13. In deciding upon the sample sizes for different strata, the objectives were to provide usable estimates of broad items for (i) each industry at all-India level, (ii) each State for all industries together, (iii) two major industries in each State (i.e. first two industries when arranged in order of their industrial employments in that State).

14. Accordingly, the actual allocation procedure was carried out in the following stages : A sample size of 6000 factories was first allocated to the different industries in proportion to their total all-India employment. In the case of some industries the allocations were considered more than adequate and were therefore reduced to provide larger allocation to some major industries within States. Further, when the number of factories in an industry in a State was very small (say 3, 4 or 5 etc.) all the factories were additionally included in the sample, resulting in a total sample size of 6150 factories.

15. The sample in any stratum was drawn in the form of two interpenetrating sub-samples each of size half the allocation to that stratum. The two sub-samples were selected in circular systematic manner and without replacement in such a way that there were no common units between them.

##### Estimation Procedure:

Notations :  $Y_{ijk}$  = value of a characteristic considered for the 1th factory in the ith sub-sample, jth State and kth industry;  
 $n_{ijk}$  = number of factories surveyed including zero cases (i.e., blank or treated as blank) in ith sub-sample, jth State and kth industry;  
 $N_{jk}$  = total number of factories in the jth State and kth industry as in the sample universe;

$$m_{ijk} = \frac{N_{jk}}{n_{ijk}}$$

$T'_{ijk}$  = aggregate value of the characteristic for all sample factories including substituted cases for non-response, in the ith sub-sample in the completely enumerated strata

For completely enumerated strata in the *i*th sub-sample.

$$T'_i = \sum_j T'_{ij} \quad \text{or} \quad \sum_k T'_{ik}$$

$$\text{where } T'_{ij} = 2 \times \sum_k T'_{ijk}$$

$$T'_{ik} = 2 \times \sum_j T'_{ijk}$$

and also at State X industry level combined estimate, as furnished in Table (1.4), is

$$T'_{jk} = \sum_j T'_{ijk}$$

For sampled strata in the *i*th sub-sample

$$T''_i = \sum_j T''_{ij} \quad \text{or} \quad \sum_k T''_{ik}$$

$$\text{where } T''_{ij} = \sum_k m_{ijk} \sum_{l=1}^{n_{ijk}} Y_{ijkl}$$

$$\text{and } T''_{ik} = \sum_j m_{ijk} \sum_{l=1}^{n_{ijk}} Y_{ijkl}$$

$$\text{and State x industry estimate } T''_{ijk} = m_{ijk} \sum_{l=1}^{n_{ijk}} Y_{ijkl}$$

$$\text{and State X industry combined estimate } T''_{jk} = \frac{\sum_i T''_{ijk}}{2}$$

As given in tables :

All India all industries estimate for *i*th sub-sample:

$$T_i = T'_i + T''_i$$

$$\text{and combined estimate } T = \frac{\sum_i T_i}{2}$$

State all industries estimate for *i*th sub-sample

$$T_{ij} = T'_{ij} + T''_{ij}$$

$$\text{and combined estimate } T_j = \frac{\sum_i T_{ij}}{2}$$

all India each industry estimate for *i*th sub-sample

$$T_{ik} = T'_{ik} + T''_{ik}$$

$$\text{and combined estimate } T_k = \frac{\sum_i T_{ik}}{2}$$

## 5. SUMMARY OF FINDINGS

16. The following observations relating to the sample sector of ASI-66 may be made from Table (1)1—

- Total physical capital formation in 1966 in the sample sector was about Rs. 62 crores of which new fixed assets acquired by purchase constituted more than 48%. Thus, physical capital formation was about 26% of total net closing value of all fixed assets. However, capital formation by financial approach was Rs. 108 crores.
- Rent paid was about Rs. 12 crores in the context of owned fixed capital at about Rs. 234 crores.
- Men workers were about 6 times as numerous as women workers; while contract workers were only about 10% of all direct men and women workers.
- While wages etc. for direct male workers were about Rs. 1258 per worker per annum, direct female workers received about Rs. 729 per capita per annum.

- (e) Electricity consumed through purchase was the most important fuel item, constituting about 66% of the value of all fuels consumed as estimated at Rs. 29 crores (vide Report on ASI-66 Sample Sector : Summary Results).
- (f) The value of materials consumed for manufacture was about Rs. 1006 crores, in the context of the value of all materials consumed at Rs. 1138 crores.

17. Excluding Manipur which had no unit in the sample sector, there were 37649 factories in the sample universe of which 6150 were taken as samples. Non-response factories for the detailed report numbered 175 or about 2.8% as against 372 for the ASI-66 Report on Sample Sector Summary Results.

18. Information relating to six States considered most important as regards the number of factories in the sample universe is furnished below in respect of three broad economic indicators selected from Table(2).
