ANNUAL SURVEY OF INDUSTRIES—1967

Sample Sector—Detailed Results

The report entitled "Tables with notes on the Annual Survey of Industries—1967 sample sector : Detailed results" was prepared by the NSS Organisation on the basis of the sampling design and tabulation programme approved by the standing committee on Development of Industrial statistics which was responsible for formulating the NSS programmes prior to the setting up of the Governing Council for NSSO and the views contained in the report are not necessarily those of the Government of India*.

INTRODUCTORY NOFES

1. INTRODUCTION

1.1 In NSS Report No. 194 results for 16 key items of industrial activity in India collected in the sample sector of the Annual Survey of Industries 1967 have been published. This volume provides, besides a few other tables, sample sector estimates of some more detailed items of capital structure, employment and emoluments, input and output also collected in ASI-67.

1.2 The total frame comprises all factories registered under sections 2m(i) and 2m(ii) of the Indian Factories Act, 1948, as on 31 December 1966, including those not furnishing information on number of workers engaged or reported closed in the list of factories. Sections 2m(i) and 2m(ii) of the Act refer respectively to factories using power and employing 10 or more workers or factories not using power and employing 20 or more workers on any day in the preceding twelve months. The sample sector generally comprised all factories in the total frame employing on an average less than 50 workers, if using power and less than 100 workers, if not using power. In fact ASI-1967 census sector comprised some ASI-1963 and ASI-1966 census factories on repetitive basis even though their employment strength as per C.I.F. list for 1966 was below the prescribed level.

It excluded defence installations, units engaged in storage and distribution of oil, technical training institutes not producing anything for sale or exchange, as well as all units registered as hotels and cafe (Industry No. 842). Through the undertaking approach, all factories belonging to the electric light and power industry (Industry No. 511) were covered in the census sector on a complete enumeration basis, along with non-license factories, and they were thus left out of the scope of the sample sector altogether.

1.3 In the appended tables, the term 'industry' refers to the Labour Bureau classification of industries at the three digit-level. This is in accordance with the information available in the frame as collected by the Directorate of National Sample Survey from the officers of the Chief Inspectors of Factories in the different states. Appendix II provides a statement showing Labour Bureau classification (at three-digit level) and its corresponding ASI industry classification also at the three-digit level.

1.4 In this round of ASI, data were collected as per the accounting years of the factories surveyed and the specific accounting year for this purpose was that ending during April 1, 1967 and March 31, 1968.

2. CONCEPTS AND DEFINITIONS

2.1 An idea of the conceptual coverage of some of the terms used in the survey is presented below.

(a) *Fixed capital*.—Depreciated book values of fixed assets as on the closing date of the accounting year of the factory were collected. Fixed assets covered all goods with a normal economic life of one year or more and used by the factory for its own purposes saving those solely used for post manufacture distribution. These contained land, buildings, improvement to land, plant, machinery and tools transport equipment and other fixed assets.

(b) *Working capital*.—Like fixed capital, information on working capital was collected for the closing date of the accounting year of the factory. It comprised the values of stock of materials, products (finished, semi-finished and in-process), cash in hand and at bank as well as the net balance of amounts receivable and payable. It excluded fixed deposits and long term investments made by the factory as well as long term loans received by it.

*This report was first submitted as a draft report no. 248 in March, 1974.

(c) *Gross value of plant and machinery.*—It comprised total undepreciated price for plant and machinery as at the end of the accounting year. It included book value of own constructed installed plants as well as value as at the time of renting in for the plant and machinery taken on rent. Total value of plants and machinery purchased on hire purchase basis was included here, irrespective of whether full payment had been made for them or not till the end of the accounting year. It excluded owned but rented out plants and machinery as also advance payment made for assets not received.

(d) *Rent paid.*—It was the amount paid during the year for the use of any item of fixed asset taken on lease or rent or royalty basis.

(e) *Number of working days.*—Working days comprised days on which any manufacturing process was carried on and included days spent exclusively on repair and maintenance of fixed assets. Estimates presented in this report is of the total number at the specified level and not the average per factory.

(f) *Workers.*—This term was used in the same sense as in the Factories Act, 1948, and excluded persons holding positions of supervision and management or employed in a confidential position. The average number of all workers/employees were calculated by adding all concerned persons attending and on leave with pay, including concerned persons on strike, over each shift of a working day and dividing the result by the number of working days. Total number of workers have been shown in this report separately for directly employed and employed through contractors.

(g) *Salaries, Wages etc.*—This term included all payments made during the year in cash as compensation for work done. It included all bonuses and overtime payments but excluded the value of payments in kind and employers' contribution to social security measures.

(h) *Value of benefits in kind.*—This was the cost value or the net cost of the concession, as the case might be, in respect of all supplies made and all services rendered whether individually or to groups, free of cost or for part payment, such as food and food articles, fuels, housing accommodation, electricity, water, sanitary services as well as subsidies involved in the operation of facilities with regard to transport, medical attention, education, recreation, entertainment and welfare projects, etc. This was exclusive of employers' contribution to provident fund, pension, gratuity or other social security measures.

(i) *Value of fuels or materials etc. consumed.*—On the basis of the cost of fuel, material etc. landed at the factory including inward transport cost, commission to purchasing agent, taxes or duties paid etc., this value was calculated for each item of fuel, material etc. consumed during the year in the factory. Materials consumed for manufacture of capital items for factory's own use were included. Information on materials consumed for repairs and maintenance of its fixed assets was collected separately. Intermediate products, i.e., materials produced and further consumed in the factory, were excluded.

(j) *Value of other input services.*—These expenses included charges on account of non-industrial services such as inward transport, purchase agency, postage, stationery and printing and personalised and business services such as audit, accounts, bank and other services which had originated outside the reporting factory and were not already included in the value of fuels, materials, etc. as defined in sub-para(h) above. Also included were sundry indirect taxes paid by the factory like purchase tax, local rate and factory licence.

(k) *Input.*—It contained the value of fuels, materials etc. as defined in sub-para (h), the value of industrial service rendered to the factory in connection with repairs and maintenance of fixed capital of the factory or with other manufacturing processes as well as the value of other input services, as defined in sub-para (i) above. It included the value of goods to be sold in the same condition as purchased, but excluded director's fee and managing agent's renumeration and office allowance.

(l) *Output.*—This comprised the ex-factory value calculated on the basis of sale value minus all distributive costs, of all finished goods produced by the factory (products and by-products) during the year, including the value of industrial service rendered by the factory during the year as well as the net balance of semi-finished goods as at the end of the year. Output included final products for own use as goods in the factory, capital items produced for factory's own use and goods bought and resold in the same condition as purchased. It excluded intermediate products.

3. PARTICULARS OF TABLES

3.1 In tables (1), (2), (3) and (4) estimates (sub-samples combined) have been provided for detailed aspects of industrial activity respectively at all-India (all Industries combined), state (all Industries combined), all-India (each industry) and state (each industry) level. In accordance with the agreed tabulation programme, total number of items for which estimates have been furnished in Tables (2)

and (4) is about half of the number as taken in for Tables (1) and (3). Besides the completely enumerated strata (census data) for which combined aggregates have been furnished, Table (4) furnishes for the sampled strata combined estimates only for such industries as the 'major' industries within the respective sample-size units at any time during ASI-60 and ASI-67. For the sampled strata in Table (4) the respective sample-size was too small to throw up usable estimates of the detailed items. This report contains one more table bearing number (5). These tables furnish estimates for outstanding loans by source of finance and type of organization for all industries together at all-India level.

3.2 Estimates shown as '-' (dash) indicate that the concerned surveyed factories had no contribution to report on the characteristics in all tables. It has been marked with 0(zero), when the emerging estimate/aggregate is less than half the prescribed unit of the item in the table. Due to rounding off, the component estimates in some cases do not add upto the totals furnished.

3.3 The last item in all Tables—samples covered—refer to the samples selected at reduced levels by non-response factories. It comprises all surveyed factories including those rated as blank.

3.4 In view of the provisions of Statistics Act, 1953, when the no. of factories is less than three units in the universe of the sample, no estimates per list of factor for 1966, data for such industry have not been furnished in Table (4) in the report. Contribution of these cells have however been taken into consideration for building up estimates presented in this report in Tables (3), (2) and (1). Similarly, at all-India level if the total no. of factories is less than three in any industry, data for such industry have not been presented in Table 3. However, contribution of these industries have been accounted for in building up estimates for Table 1.

3.5 Whenever the estimates furnished in this report differ from that of the summary results presented earlier, they are due to one or more of the following factors (a) changed number of samples surveyed, (b) the rounding off of a number of items into which a key item has been sub-divided for the purpose of this report, (c) receipt of clarifications relating to detailed items from the NSS Field since after the completion of the priority-one report, (d) summary results were prepared from summary block whereas estimates furnished in this report are based on actual detailed results, etc.

3.6 Excluding Manipur which had no unit in the sample sector there were 38870 factories in the sample universe of which 6187 were taken as samples. Non-response factories for the detailed report numbered 246 or about 4% as against 463 for the ASI-67 Report on sample sector summary results.

3.7 The estimates of some items viz (i) total fixed capital, (ii) total working capital, (iii) all workers, (iv) salaries to all workers, (v) value of fuels (vi) total input, and (vii) total output as furnished in the enclosed Tables (1) to (3) have been taken from the Report on ASI-1967 Sample Sector Summary Results. These estimated totals usually contain two million and above those shown in the report. Again for ready reference, estimates of five major selected items viz. (i) total man-hours, (ii) all employees, (iii) total emoluments, (iv) total depreciation, and (v) value added at all-India, State levels and all-India each industry levels have been shown respectively in Tables 2(A) and 3(A) of Appendix I. These estimates have also been reproduced from the above mentioned Report on Summary Results.

4 SAMPLING DESIGN AND ESTIMATION PROCEDURE

4.1 The sampling design in the sample sector is a stratified multistage one, the strata being the state X Industry cells and the sampling unit being a factory. The sampling frame of any stratum consisted of all section 2m factor units in that state X Industry cell except for factories belonging to the defence sector left out of the scope of the technical and factor engaged in defence production, storage and distribution of oil, hotel and restaurants business to the extent reported.

4.2 In deciding upon the sample sizes for different industries, the objective was to have suitable rates of broad items for (i) each industry at all-India level (ii) each state and all industries together and (iii) two major industries in each state (i.e., first two industries when arranged in order of their industrial employments in that state).

4.3 Accordingly, the usual allocation procedure involved in the following stages. A sample size of 6000 factories was first allocated to the different industries in proportion to their all-India employment. In the case of some industries the allocation was considered more than adequate and were, therefore, reduced to provide larger allocations for major industries within states. Further, when the number of factories in a industry was very small (say, 3, 4 or 5 etc.) all the factories were additionally included in the sample, resulting in a total sample of 6187 factories.

4.4 The sample in any stratum was drawn in the form of two inter-pretrating sub-samples each of size half the allocation to that stratum. The two sub-samples were selected in circular systematic manner and without replacement in such a way that there were no common units between them.

Estimation Procedure

NOTATIONS :

Y_{ijk} = value of a characteristic considered for the i th factory in the j th sub-sample, j th state and k th industry.

n_{ijk} = number of factories surveyed including zero cases (i.e., blank or treated as blank) in the i th sub-sample, j th state and k th industry.

N_{jk} = total number of factories in the j th state and k th industry as in the sample universe.

$$m_{ijk} = \frac{N_{jk}}{n_{ijk}}$$

T'_{ik} = aggregate value of the characteristic for all such factories including substituted cases for non-response, in the i th sub-sample in the completely enumerated strata.

For completely enumerated strata in the sub-sample

$$T'_i = \sum_j T'_{ij} \text{ or } \sum_k T'_{ik}$$

when

$$T'_{ij} = 2X_k^{\sum} T'_{ijk}$$

$$T'_{ik} = 2X_j^{\sum} T'_{ijk}$$

and also at state X industry level combined estimate, as furnished in Table (4) is

$$T'_{ik} = \sum_i T'_{ijk}$$

For sampled strata in the i th sub-sample

$$T''_i = \sum_j T''_{ij} \text{ or } \sum_k T''_{ik}$$

where $T''_{ij} = \sum_k m_{ijk} \sum_{l=1}^{n_{ijk}} Y_{ilk}$

and $T''_{ik} = \sum_j m_{ijk} \sum_{l=1}^{n_{ijk}} Y_{ilk}$

and state X industry estimate

$$T''_{ik} = m_{ik} \sum_{l=1}^{n_{ik}} Y_{ilk}$$

and state X industry combined estimate

$$T''_{ik} = \frac{\sum_i T''_{ik}}{2}$$

as given in tables.

All-India all-industries estimate for i th sub-sample

$$T_i = T'_i + T''_i$$

and combined estimate

$$T = \frac{\sum_i T_i}{2}$$

State all industries estimates for i th sub-sample

$$T_D = T'_i + T''_i$$

and combined estimate

$$T_D = \frac{1}{2} \sum_i T_i$$

All-India each industry estimate for ith sub-sample

$$T_{ik} = T'_{ik} + T''_{ik}$$

and combined estimate

$$T_k = \frac{1}{2} \sum_i T_{ik}$$

5. SUMMARY OF FINDINGS

5.1 The following observations relating to the sample sector of ASI-67 may be made from Table (1) :

(a) Total physical capital formation in 1967 in the sample sector was about Rs. 55 crores of which new fixed assets acquired by purchase constituted about 75%. Thus physical capital formation was about 21% of total net closing value of all fixed assets. However, capital formation by financial approach was about Rs. 57 crores.

(b) Rent paid was about Rs. 9 crores in the context of owned fixed capital of about Rs. 266 crores.

(c) Men workers were about 6 times as numerous as women workers; while contract workers were only about 8% of all direct men and women workers.

(d) While wages e.c. for direct male workers were about Rs. 1308 per worker per annum, direct female workers received about Rs. 696 per worker per annum.

(e) Electricity consumed through purchase was the most important fuel item, constituting about 46% of the value of all fuel consumed as estimated at Rs. 32 crores.

(f) The value of materials consumed for manufacture was about Rs. 1038 crores in the context of the value of total input at Rs. 1292 crores.

(g) The sale value of goods sold in the same condition as purchased was found to be about 7% of the total output in sample sector.

5.2 From Table (5) it is observed that outstanding loans as at the end of the accounting year in respect of proprietorship and partnership factories taken together came to about 147 crores of rupees. It constituted 57% share of total outstanding loans amounting to about 257 crores of rupees in respect of all factories together. Again, as much as about 28% of total outstanding loans was due to State Bank, Co-operative Banks and other banks together.

5.3 Information relating to six states considered most important as regards the number of factories in the sample universe, is furnished below in respect of four broad economic indicators selected from Table (2).
