THE NATIONAL SAMPLE SURVEY  
TWENTYSIXTH ROUND : JUL 1971 - SEP 1972  
SURVEY ON LAND HOLDINGS

Introduction

1. With the decision of the Government of India to participate in the world agricultural census, 1970, sponsored by the Food and Agriculture Organisation of the United Nations, the Ministry of Agriculture desired that the NSS Organisation may organise, as in the past, a sample survey of land holdings with the object of obtaining comparable information on the structure of agriculture in the country. The survey was undertaken in 1971-72 as a part of the 26th round of the NSS in conjunction with the debt and investment survey proposed by the Reserve Bank of India. It may be mentioned that the enquiry into land holdings in the 26th round was the third extensive survey on land holdings carried out by the NSS Organisation, the first having been undertaken from Jul 1954 to Jun 1960 as a part of the 8th round and the second from Jul 1960 to Jul 1962 as part of 16th and 17th rounds of the NSS.

Period of the survey

2. In order to meet the requirements both of the Ministry of Agriculture and the Reserve Bank of India, the survey period of the 26th round was extended to 15 months from July 1971 to Sep 1972. The period of the survey was divided into three phases and during each phase the same set of sample households was canvassed.

Geographical coverage

3. The survey extended to the whole of India excluding Andaman Nicobar Islands, Arunachal Pradesh, Dadra and Nagar Haveli, Laccadive, Minicoy and Amindivi Islands, Ladakh district of Jammu and Kashmir and a few districts of Madhya Pradesh, Maharashtra and Tripura.

Participation of States

4. All the States except those of West Bengal, N and Himachal Pradesh participated in the 26th round on matching basis in so far as the enquiry into land holding was concerned. The Union Territory of Delhi participated with a double matching sample. The Union Territory Chandigarh, Goa, Daman and Diu and Pondicherry did not participate.

## Schedules prescribed

5. As the survey on land holdings and the debt and investment survey had many items of information in common, the two surveys were integrated and a common set of schedules was designed for the joint enquiry. Separate schedules were prescribed for rural and urban areas and for each of the three visits to the sample households. In all six schedules were canvassed as per details given below:

Sl.No. of visit	Period of visit	Schedules canvassed	Broad contents of schedules
1.	2.	3.	4.
1.	Jul 71 to Dec 71	Schedules 18.1 (R) 18.1 (U)	Land holdings and inventory of assets and liabilities
2.	Jan 72 to Jun 72	Schedules 18.2 (R) 18.2 (U)	Production and sale of crops, receipts from non-farm business and transactions of assets and liabilities during Jul 71 to Dec 71
3.	Jul 72 to Sep 72	Schedules 18.3 (R) 18.3 (U)	Production and sale of crops, receipts from non-farm business and assets and liabilities during Jan 72 to Jun 72

6. It will be seen from the above data on land holdings collected through schedules 18.1(R) and 18.1(U) during the first visit from Jul 1971 to Dec 1971. Schedules 18.2 (R) and 18.3 (R & U) were meant for obtaining information relating to debt and investment situation for specified periods during the two successive visits.

## Sampling Design

7. The sampling design, for the rural and urban sectors each, was self-weighting at State level. In the case of rural sector, it was self-weighting at regional and sub-stratum levels also. The sampling design for the rural area was mainly a stratified two-stage one. The first stage units were villages which were selected circularly systematically with equal probability in the form of two independent interpenetrating sub-samples. The sampling design for the urban area too was a stratified two-stage one with urban blocks as the first stage units. The sample blocks were also selected systematically with probability proportional to size in the form of two independent and interpenetrating samples. The second stage unit in the case of rural and urban sectors each, were households.

8. For the purpose of stratification in the rural areas, the country was first divided into 66 agricultural regions by grouping, within each State or Union Territory, districts having similar population density and crop pattern. Strata were formed in each region by grouping tehsils, which were (1) contiguous (2) having similar crop pattern and population density and (3) having good transport facilities amongst them. In all, there were 350 strata; and within each stratum two independent sub-samples of 12 villages each were selected. In each sub-sample, the villages with odd orders of selection formed the central sample and the rest State sample. The 1961 census list of villages was used as sampling frame for selection of villages.

9. The central sample consisted of 4200 villages in all. The allocation of these villages to each State and Union Territory was based on joint consideration of its rural population, area under cereals crops and available investigator strength. This was modified to ensure a minimum of 180 villages in each State with the exception of some small States and Union Territories.

10. In the case of urban sector, the 4 cities of Bombay, Calcutta, Delhi and Madras formed strata by themselves. Further, within each State and Union Territory towns with population of less than 50,000 formed stratum one and the remaining towns and cities formed stratum two. A total of 4640 blocks in the Central sample was allocated to the States in proportion to their 1961 Census urban population with a minimum of 144 blocks in each State excepting some small States and Union Territories. The selection of blocks in each stratum was done in the form of two independent sub-samples of equal size.

11. For selection of sample households, all the households in a sample village were first divided into four sub-strata on the basis of land operated. Households with no land formed sub-stratum one. The cut off points among the remaining three sub-strata were made roughly by equalising area operated among them. These points varied generally from

one region to another even within a State. Further, in sub-stratum one consisting of households with no land, for drawing the sample, the households were arranged by their means of livelihood into three classes, namely, (i) (i) agricultural labourer, (ii) artisan and (iii) others. On an average, three households were selected from each sub-stratum in each sample village giving thereby more weight to the households operating larger areas of land. Within each sub-stratum, sample households were selected linear systematically.

12. In the urban sector, the households in each sample block were divided into four classes on the basis of land owned and employment status as shown below:

- i) Class I : households owning land less than one acre and self-employed.
- ii) Class II : households owning one acre and more of land and self-employed.
- iii) Class III : households owning land one acre and more but non-self employed.
- iv) Class IV : households owning less than one acre of land and non-self-employed plus households with no land.

Households were then arranged in increasing order of household class codes and linear systematic sample was selected for canvassing schedule 18.1 (U). On an average, four households were selected from each sample block.

#### Item coverage

13. The main items of information collected through schedules 18.1 (R) and 18.1 (U) were :-

- i) demographic and activity particulars of the members of the households;
- ii) land owned, land leased out and land leased in under different terms of tenancy;
- iii) inventory of livestock and their value;
- iv) inventory of agricultural machinery and other equipments used in non-farm business, and their value;
- v) inventory from transport equipments and their value;
- vi) value of other assets and liabilities;
- vii) details about operational holdings; and
- viii) use of chemical fertilisers, manures and pesticides on land operated.

## Concepts and definitions

The concepts and definitions adopted in the survey of holdings are given below:-

- i) Household: A group of persons normally living together and taking food from a common kitchen constitutes a household.
- ii) Ownership of land: The ownership right over a plot of land is defined as the right of permanent heritable possession with or without the right to transfer the title. Land held in ownership like possession under a long term lease or assignment is also considered as land owned by the household. The total of land owned by all the members of the household is taken as land owned by the household.
- iii) Land leased in: Land taken on lease from others without any permanent right of possession for the lessee is considered as land leased in. The aggregate of land leased in by all the members of the household gives the total of the land leased in by the household as a whole.
- iv) Land leased out: Land given out on lease to others by owners of the land is defined as land leased out. The aggregate of the land leased out by all the members of the household constitutes the total of land leased out by the household as a whole.
- v) Land possessed: Land owned by the household together with land leased in by it minus land leased out by it constitutes the land possessed by the household.
- vi) Agricultural labour: A person is considered to be an agricultural labour if he follows one or more of the following agricultural occupations in the capacity of a labourer on hire or on exchange:- (a) farming, (b) dairy farming, (c) production of any horticulture commodity, (d) raising of livestock, bees or poultry, and (e) any work performed on a farm in connection with the farm operations.
- vii) Parcel:- A parcel is all land surrounded by land of other holdings or by land not forming part of any holding. It might consist of one or more cadastral units, plots or fields.
- viii) Land holding:

Household operation holding is a land holding possessed by a single household.

Operational holding is a land holding operated under a single management. In a major of cases, a household operational holding will be an operational holding operated under a single management of the household. But this may not always be the case. For instance, a household operational holding may consist of two operational holdings separately managed by two brothers or by a father and a son who are members of a single household. In such cases,

there may have been a separation in the matter of land holding but not in the household. On the other hand, a household may have a share in an operational holding jointly managed by two or more households such as the separate households of two brothers or a father and his son who may have separate households but a joint operational holding. In such cases the household's operational holding will consist of only the share of the household in the joint operational holding plus any land holding which the household may have under its single management.

The definition as prescribed in the instructions to field staff is reproduced below :-

A holding is all land which is used wholly or partly for agricultural production and is operated (directed/managed) by one person alone, or with the assistance of others, without regard to title, or location. The holding may consist of one or more parcels of land provided they are located within India and these as a whole form part of the same technical unit. By technical unit will be understood, in the context of agricultural operation, a unit with more or less independent technical resources etc. covering items like land implements, livestock, etc. Thus, an operational holding will be considered (among other things) (a) operated by a 'person' and (b) constituting one technical unit. A 'person' in the definition, for the purpose of this survey, will be either a single household or more than one household operating jointly. Since the investigator has to get hold of the operational holdings through the sample households, it is important to identify the 'person' who operates and the technical unit under such 'person'. The distinctive essence of the technical unit and existence of distinct management will be probed into for arriving at the number of operational holdings. Thus, more than one 'person' (signifying distinct management/direction/operation) who operate will not be regarded to have the same technical unit, even if most of the technical resources used by them are shared. On the other hand, under the 'person' the holding could be more than one operational holding provided there are distinct technical units.

The following holdings will be excluded from the scope

(a) Land put to non-agricultural uses only such as housing sites etc.,

and

(b) co-operative farms.

Individual and joint operational holdings \* Any operational holding managed by one household is  
 held by one individual holding and it is held by one household holding

x) Attached farm workers \* Attached workers who of the amount the continuation of employment not under contract the period of employment.

Report on period

15. Details of crop, live stock, land leased out and land leased in, inventory, live stock, agricultural-transport and other equipment and other of the of the households and other operational holdings of the household reference period and the agricultural : 1970-71.

Results presented

16. In order to expose the scope of the survey, the Government Survey Organisation decided that rough annual statistics. Accordingly, the purpose of survey on land holdings at seven states. The Central State tabulation of data.

17. All, 21 tables prepared. The covered items like holding, partnership holdings (also individual household), household operational holding, particulars of land, inventory, live stock, machinery, the value of business transport equipment, the value of operational holdings, the value of agricultural holdings of the holdings.

18. The tables presented here are all the tables of Central Sample Survey Organisation. The tables are as follows:  
 (i) Urban sector only  
 (ii) Rural sector only  
 The result is provided

19. The brochure Volume-I : Part I of the series with the 21 tables. Volume-II : Part II of the series with estimates at State level, similar estimates at regional level.

## Note on Estimates of Aggregates

The principal results of the 26th Round Survey on Land Holdings for the State are presented in this brochure in the form of ratio estimates (percentages, averages, etc.). The main focus of these tables is not on the aggregate estimates. Nevertheless, this section presents, in the enclosed table, estimates of three variables, viz. number of households area owned and area operated by household sector at the all-India level as well as the State level, and compares them with estimates available from other official sources.

2. Table I gives for each State/Union Territory the estimates of number of households, area owned and area operated as per NSS survey in columns 2, 5 and 6 respectively. Column 3 gives the number of households based on the 1971 census and column 4 the percentage of the NSS figure over that of the Census. Similarly, the estimate of area operated as obtained from the NSS has been compared in column 8 with the figure of 'net area sown' for 1970-71, as supplied by State Agricultural Statistics Authorities (SASA). The all-India estimates given in the last row relate only to the 23 States/Union Territories listed in column 1; Nagaland and Chandigarh are excluded because the survey covered only the urban sector.

3. Column 4 of Table I clearly shows that at the all-India level the difference between the NSS estimates of the number of households and that of the 1971 Census is negligible (only 0.42%), the respective figures being 100.61 and 100.19 million. At the State level, however, the NSS estimates are higher than the 1971 Census figure in 10 out of the 23 States/Union Territories listed in the table and lower in the case of 13. The States showing plus differences are Maharashtra, Uttar Pradesh, Orissa, Karnataka, Delhi, Punjab, Tamil Nadu, Gujarat, Meghalaya and Andhra Pradesh. The maximum percentage difference on the plus side was 11.63 in respect of Maharashtra, minimum of 1.59 in respect of Andhra Pradesh and in five of them (viz. Gujarat, Meghalaya, Punjab, Tamil Nadu and Delhi) the percentage difference ranged between 2 to 5. Out of the 13 States/Union Territories where the NSS estimates were lower than the comparable figures from the Census, (excluding the Union Territories of Goa and Pondicherry, where the sample size was small), the maximum difference of 20.26% was observed in respect of Himachal Pradesh and the minimum difference of 3.78% in respect of Haryana. For Himachal Pradesh, the sample size (36 villages and 24 blocks) for the 26th Round may not, perhaps, have been adequate.

4. In understanding these differences, it is pertinent to note that the reference periods to which these two sets of figures relate are not exactly identical. The 1971 Census relates to 1st April 1971 while the NSS estimates relate to the 1st April 1971 while the NSS estimates relate to the moving reference period of a day during July 1971 to December 1971. Considering the fact that the reference period of the NSS was later than that of the Census, the NSS estimates of number of

households are expected to be slightly higher than the 1970-71 figure and this indeed found to be true at the all-India level. But larger plus differences and the minus differences must be mainly due to the sampling error to which the NSS estimates are subject.

5. Column 7 of Table I gives the 'net area sown' for 1970-71 as per nine-fold land-use classification. Column 8 shows that at the all-India level, the 'area operated' are lower than the 'net area sown' by about 7.2%. At the State level also, the NSS estimates are lower except in the case of Meghalaya, Himachal Pradesh and Maharashtra where the NSS estimates are higher. In Uttar Pradesh and Karnataka they are more or less the same. Of the remaining States/Union Territories differences of the order of 10 per cent are noticed in the case of Assam, Haryana, Kerala, Meghalaya, Orissa, Punjab, Tamil Nadu, Tripura, West Bengal, Delhi, Goa and Pondicherry. The conspicuous differences are Kerala (-43%); Haryana (-35%); Punjab (-31%); Meghalaya (+26%); Orissa (-24%); West Bengal (-22%) and Tamil Nadu (-20%), if we leave out the small States/Union Territories. On the other hand, the NSS estimates of Bihar and Madhya Pradesh, tally well with the figures of 'net area sown', the difference being only about 3 percent.

6. While analysing the variations between the figures of 'area operated' of the NSS and 'net area sown' supplied by the States, one should bear in mind the following differences in the concepts and definitions adopted as well as the procedures utilized in arriving at the two sets of figures:

- (i) 'Net area sown' by the non-household like cooperative farms, government agricultural farms, land under temples, etc., included in the figures of 'net area sown' but this is not covered in the NSS Round on individual holdings. This gives a small down-ward pull to the NSS estimates.
- (ii) Area under each of the land use classifications (viz., forest, land put to non-agricultural uses, barren and unculturable land, permanent pastures and other uses; land, land under miscellaneous tree crops, culturable waste, fallow land other than current fallow and current fallow) is included in the NSS estimates of area operated whenever such area formed part of an operational holding, which is used partly for agricultural purposes whereas these are wholly excluded from the 'net area sown' figures. This gives considerable upward pull to the NSS estimates.

- (iii) There is also difference in the agency adopted. In the case of all States excepting Kerala, and West Bengal, Statistic land classification are collected by the revenue agency through the land records. On the other hand, the NSS data on land holdings were collected through oral enquiries from selected households by deploying trained investigators under adequate field supervision but without any reference to the land records.
- (iv) In the of Kerala, Orissa and West Bengal, Statistics of 'net area sown' are obtained not by complete enumeration through land records but estimated on the basis of sample surveys conducted by the State Governments. To that extent both the estimates of 'net area sown' and the NSS 'area operated' are subject to sampling errors.

7. Thus among the conspicuous differences the three States Kerala, Orissa and West Bengal are states where the 'net area sown' figure is also a sample estimate. The difference found in the case of Punjab, Haryana and Tamil Nadu are a matter of over-estimation. Looking at column 4 of Table I, in these States one does not notice underestimation of households in the NSS round (except Haryana where it is marginal) as against the Census. The differences between estimates of households and estimates of 'net area sown' are not in all cases in the same direction. Therefore, if 'area operated' is estimated on the basis of 'operated area per household' on the basis of NSS Round multiplied by the 1971 Census number of households (as is given in column 10 of Table I) one does not achieve any substantial reduction in variation between the NSS figure so derived and 'net area sown' estimates. With a view to presenting a overall picture in this regard showing the reduction or increase achieved in the percentage deviation from 'net area sown' by the adoption of the estimate of 'operated area' based on Census number of households a separate Table II has been prepared and attached to the Note. Table II gives full details of States falling under the following four categories:-

- (i) States having overestimation of number of households and increase in percentage deviation from 'net area sown'
- (ii) States having overestimation of number of households and decrease in percentage deviation from 'net area sown'
- (iii) States having underestimation of number of households and increase in percentage deviation from 'net area sown'
- (iv) States having underestimation of number of households and decrease in percentage deviation from 'net area sown'

would be seen from columns 1 to 5 of Table I. The divergence from the net area sown figures increases in the case of 8 States/Union Territories where the NSS estimates of number of households are on the higher side. Of these Karnataka, Orissa and Pradesh Gujarat and Delhi have shown more divergence than the other States. Of the States where the estimates of number of households were less than the Census number of households, Madhya Pradesh has shown maximum increase in divergence. At all levels, the divergence has not reduced substantially and can be seen from columns 6 and 11 of Table I.

6. It is, however, true that in the case of about 10 States/Union Territories variation between the two estimates is reduced. Even for the estimates as given in column 10, Table I, leaving aside small States/Union Territories, significant improvement is shown only in Maharashtra Rajasthan, Jammu & Kashmir Assam, West Bengal, Haryana and Kerala. Except for Maharashtra, these are also the States where the number of households in the NSS was under estimated (Table II).

Thus, so far as the estimate of aggregate households in 1970-71 in different States are concerned, the reader will have to choose between the following three: (a) the estimates as given in column 6 of Table I; (b) NSS estimates based on 1971 Census number of households, as given in column 10 of Table I; and (c) 'net area sown' given by State Agriculture Statistics Authorities and shown in column 7 of Table I. The National Sample Survey Organisation is trying to investigate possible reasons for large differences between these estimates in some States. In the meantime, the choice between the estimates must be left to the discretion of the reader.

10. In the case of such differences in the estimates of aggregate operations, it is suggested that the reader will find the results presented in these volumes in the form of averages and percentages useful. Many of the results presented here are not available from any other source. Some of the results, which show the distribution of the operations holdings by their size, will also become available from the Agricultural Census 1970-71. The results of the Agricultural Census are derived by a method of the type of the basic data from the land records. Before comparing them with the estimates of the net area sown, the reader should first check them with the aggregate estimates of the net area sown. Apart from the fact that the total area of aggregated area does not agree with the total area of the net area sown in some States, there is a large variation in the way the States report the results of the Agricultural Census are compiled. As mentioned above, the results of the Agricultural Census are derived by a method of the basic data from the land records and cover both the household and non-household operators. The results of the NSS are derived by enquiries from a sample of households and cover only the household sector. The check between the two sets of results must be left to the reader.

TABLE II

STATES SHOWING INCREASE/DECREASE IN THE DIFFERENCE  
(IN PERCENTAGE TERMS) OF N.S.S. OPERATED AREA  
(WITH NET AREA SOWN) OVER THAT OF N.S.S. ESTIMATE  
OF AREA OPERATED BASED ON CENSUS HOUSEHOLDS

(a) : STATES SHOWING OVERESTIMATION OF NUMBER OF HOUSEHOLDS  
AND INCREASE IN PERCENTAGE DEVIATION FROM NET AREA SOWN

State	Extent of N.S.S. overesti- mation of household (%)	Percentage deviation from net area sown of		Absolute increase in the percentage deviation in col.4 from col.3.
		N.S.S. per- cented area	Original area based on census households	
1	2	3	4	5
Uttar Pradesh	2.05	+ 0.73	+ 6.30	5.52
Andhra Pradesh	1.59	+ 0.99	+ 10.77	1.90
Gujarat	2.70		+ 7.95	2.44
Karnataka	5.56	+ 0.07	5.5	5.27
Orissa	7.75	+ 23.32	+ 27.73	5.91
Punjab	2.97	+ 30.77	+ 32.75	1.98
Tamil Nadu	2.92	+ 20.05	+ 22.00	1.97
Delhi	4.70	+ 33.91	+ 40.62	6.71

(b) STATES SHOWING OVERESTIMATION OF NUMBER OF HOUSEHOLDS  
AND DECREASE IN PERCENTAGE DEVIATION FROM NET AREA SOWN

State	Extent of N.S. over- estimation of households (%)	Percentage deviation from net area sown of		Absolute decrease in the percentage deviation in col.9 from col.8.
		N.S. oper- ated area	Original area based on households	
6	7	8	9	10
Meghalaya	2.33		+ 24.0	2.37
Maharashtra	11.63	+ 7.12	+ 3.90	3.22

Note: Figures in columns 5 & 10 are absolute increase/decrease  
worked out as the difference between figures as in the preceding  
two columns without considering their signs.

TABLE II (CONTD.) STATES SHOWING INCREASE/DECREASE (IN PERCENTAGE TERMS) OF N.S.S. OPERATED (WITH NET AREA SHOWN) OVER THAT OF N.S.S. ESTIMATE OF AREA OPERATED BASED ON CENSUS HOUSEHOLDS

(c) STATES SHOWING UNDERESTIMATION OF NUMBER HOUSEHOLDS AND INCREASE IN PERCENTAGE DEVIATION FROM NET AREA SHOWN

State	Extent of under-estimation of household (%)	Percentage deviation from net area shown		Absolute deviation in the percentage deviation in col. 14 from col. 13
		N.S.S. operated area	Operated area based on census households	
11	12	13	14	15
Himachal Pradesh	28.28	+7.12	+49.68	42.56
Bihar	6.41	2.57	3.56	0.99
Madhya Pradesh		-2.05	+4.92	1.97
Manipur	21.91		+18.64	11.35

(d) STATES SHOWING UNDERESTIMATION OF NUMBER OF HOUSEHOLDS AND DECREASE IN PERCENTAGE DEVIATION FROM NET AREA SHOWN

State	Extent of N.S.S. under-estimation of households (%)	Percentage deviation from net area shown		Absolute decrease in the percentage deviation in col. 19 from col. 18
		N.S.S. operated area	Operated area based on census households	
16	17	18	19	20
Assam	8.26	-10.20	-2.51	7.69
Haryana	78	-32.94	-30.13	2.81
Jammu & Kashmir	92	-5.60	+3.21	
Kerala	7.04	-13.06	-38.05	5.01
Rajasthan	13.38	27		
Tripura	25.70	-39.38	-16.17	21.21
West Bengal	6.73	-21.67	-15.72	9.5
	42.16	-80.09	-6	14.82
Andicherry	39.71	-38.73	0.95	37.76

Note: Figures in columns 15 & 20 present the absolute increase/decrease worked out as the difference between the figures in the preceding two columns without considering their sign.
