# NATIONAL SAMPLE SURVEY

Twenty Second Round : July 1967-June 1968

NUMBER : 216

## Tables with Notes on Consumer Expenditure

*The report entitled "Tables with Notes on Consumer Expenditure" N.S.S. 22nd round ( July 1967 and 1968 ) was prepared by the N.S.S. Organisation on the basis of the sampling design and tabulation programme approved by the N.S.S. Programme Advisory Committee which was responsible for formulating the N.S.S. Programmes prior to the setting up of the Governing Council for N.S.S.O. and the views contained in the report are not necessarily those of the Government of India\*.*

### I. Introduction

1.1 Statistical tables on consumer expenditure based on the data collected through Household Integrated schedule 16 of twenty-second round are presented here. The tables have been generated from block no. 9 (Summary of consumer expenditure by selected items) of the schedule. The information is thus limited to 23 broad groups† of items of consumption only.

1.2 The field work of 22nd round started in July 1967 and continued upto June 1968 covering a period of one complete year. The reference period for collection of data on consumer expenditure was 30 days preceding the date of enquiry. The estimates presented in this report therefore, broadly relate to the period June 1967 to June 1968.

1.3 The geographical coverage of the survey was the entire Indian Union excluding the North West Frontier Agency, Ladakh district of Jammu & Kashmir state, Mishmils (Lushai) district in Assam state Pal and Sari tehsils of district Surgiya and Bijapur, Dantewara and Kanta tehsils of district Bastar of Madhya Pradesh, Mao, Ukhral and Tamenlong sub-divisions of the Union Territory of Manipur, the Union Territories of Andaman and Nicobar islands and Laccadive, Minicoy and Amindivi islands.

1.4 Information was collected by interviewing one of the members (usually the head) of the sample households. Altogether 16293 sample households from 8222 sample villages in the rural areas and 8624 sample household from 4653 sample blocks in the urban areas (including 914 sample household from 550 sample blocks in the four big cities of Bombay, Calcutta, Delhi and Madras) were surveyed in this round. Though the data were collected by four sub-samples, the estimates in all the tables are given by the combined sample only.

1.5 The responsibility for field work rested with the Directorate of National Sample Survey in all states and Union Territories except in West Bengal and Bombay city where the collection of data was done by the field staff of the Indian Statistical Institute.

1.6 All the states except West Bengal participated in the work of the survey on a full matching basis (states which conducted the survey with a sample size equal to that of the Central sample are considered as having participated on a full-matching basis). The collection of data on the state sample was the responsibility of the state concerned. The estimates presented in these tables are based on the central sample only.

1.7 A broad outline of the sampling design and the method of estimation is given in appendix II.

\*This report was first submitted as draft report no. 237 in June 1973.

†Details given in para 3.2.

## 2. Concepts and Definitions

2.1 Some of the basic concepts and definitions followed in the consumer expenditure enquiry are explained below.

2.2 *Household*.—A household is a group of persons normally living together and taking food from a common kitchen. A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with his dependents or guests) forms a separate household. Households fed directly by government such as those in prisons, police quarters, cantonments, hospitals, asylums, relief camps are, however, excluded from the scope of the enquiry.

2.3 *Household member*.—Any person who takes principal meal with the household for at least 15 days during a period of 30 days preceding the date of enquiry is considered to be a member of the household. Such a person may be the head of the household or a relation or protege of the head or an employee or a guest of the household.

2.4 *Household size*.—The number of members (as defined above) in a household gives the household size.

2.5 *Household consumer expenditure*.—Consumer expenditure of a household comprises all expenditure incurred by the household during a reference period of 30 days preceding the date of survey exclusively towards its non-productive purposes. Thus all expenses towards the enterprise activities of the household are excluded. A uniform concept is not used for all items in the schedule. For items belonging to the category of food, intoxicants and fuel and light, consumption implies actual amount consumed (irrespective of the amount purchased in cash or kind) during the reference period. For clothing items consumption implied maiden use only. So far as the items of food, intoxicants, fuel and light and clothing are concerned, consumption out of transfer receipts in kind like the receipt of loans, gifts, charities, free collections etc., is included in the household consumption; while transfer payments in kind like loans (advanced or repaid), gifts, charities etc. are excluded from the scope of household consumption. Consumption of goods purchased in cash is evaluated at the actual purchase price and that of goods received by barter exchange or by transfer receipts, at the average retail price prevailing in the locality of the sample household during the reference period. The value of consumption out of home-grown products should be imputed at ex-farm (or ex-factory) price which is free from distributive cost or middleman's profit and other trade margins. In case of items like miscellaneous goods and services, consumer rents and taxes and durable goods, the actual expenditure incurred (in cash or kind) on an item of consumption during the reference period towards its purchase, construction, maintenance, repair or use for non-productive purposes is considered to be the consumer expenditure on that item. Also expenditure towards repair and maintenance only of residential house is also included in the household consumer expenditure. Second-hand purchases are excluded from the scope of current consumer expenditure.

## 3. Explanatory Notes on Tables

3.1 The tables according to the nature of information they supply, are grouped in the following way.

- (i) tables showing the distribution of sample households,
- (ii) tables showing the percentage distribution of estimated number of households and persons,
- (iii) tables showing the average number of persons per household,
- (iv) tables showing the value of consumption in rupees per person for a period of 30 days by broad groups of items and by monthly per capita expenditure classes,
- (v) tables showing percentage of consumer expenditure to total consumer expenditure by broad groups of items and by monthly per capita expenditure classes.

3.2 The items of consumption have been merged into 20 major groups. The twenty major groups are (1) cereals (2) gram, (3) cereal substitutes, (4) pulse and products, (5) milk

d prod cts, (6) edible oil, (7) meat, fish and egg, (8) vegetables, (9) fruits and nuts, (10) sugar, (11) salt and pices, (12) beverages and refreshments, (13) pan, tobacco and intoxicants, (14) fuel and light, (15) clothing (16) footwear, (17) miscellaneous goods and services, (18) rents tax (19) pet animals, and (20) durable goods. The tables also provide for additional lines relating to (i) food-total, (ii) non-food total and (iii) total consumer expenditure.

3.3 The groups of items of consumption, as presented in the tables are defined here in terms of their constituents

- (a) cereals : rice, wheat, jowar, bajra, maize, barley, small millets, ragi and their products.
- (b) gram : Bengal gram and its products.
- (c) cereal substitutes : cereal substitutes like tapioca, pea etc.
- (d) pulse and products : arhar, tur, gram, moong, masoor, urd, khesari, pea and other pulses and their products.
- (e) milk and products : liquid milk (cow, buffalo, goat and others); milk (condensed, powder etc.); ghee (cow and buffalo); butter, dahi, ghol, lassi and other milk products.
- (f) edible oil : vanaspati, mustard oil, cocoanut oil, gingelly oil, ground nut oil, linseed oil, refined oil, other edible oils and oil seeds.
- (g) meat, fish and egg : meat (goat meat, mutton, beef, pork, buffalo meat and other meat, egg, poultry, fish (fresh and dried), bird and others.
- (h) vegetables : potato, onion, tomato, brinjal, cabbage, cauliflower, root vegetables (arum, radish etc.), leafy vegetables and other vegetables.
- (i) fruits and nuts : banana, orange, lemon, mango, cocoanut, guava, pine apple, grapes, other fresh fruits, cocoanut, copra, ground nut, cashewnut, date, raisins and other dry-fruits and nuts.
- (j) Sugar : sugar (factory), khandsari sugar, gur (cane and others), candy and other sugars.
- (k) salt and spices : sea salt, rock salt and other salts; turmeric, black pepper, pepper, dry chillies, green chillies, garlic, tamarind, ginger, curry powder and other spices.
- (l) beverages and refreshments : tea (number of cups), tea (leaf), coffee (no. of cups), coffee powder, other drinking beverages; biscuits, confectioneries etc., salted refreshments, prepared sweets, cooked meals, pickles, suce, jams and jellies and other processed food.
- (m) pan, tobacco and intoxicants : pan leaf, pan finished, supari (betel nut), other ingredients for pan, biri, cigarettes, leaf tobacco, hookah tobacco, cheroot, snuff, zarda, kiman, surti, other tobacco products, opium, ganja, toddy, country liquor, foreign liquor and other drugs and intoxicants.
- (n) fuel and light : coke, coal, firewood, electricity, gas, dungcake, charcoal, kerosene, candle, matches, methylated spirit and other fuel and lighting oil.
- (o) clothing : cotton (mill made, power loom, handloom, khadi), woollen, art silk or rayon, pure silk and others including items of bedding and upholstery.
- (p) footwear : boot, shoe, slipper, sandal, chappal, wooden sandal etc.
- (q) miscellaneous goods and services : amusements (cinema, theatre etc.), education, medicine, toilet articles, sundry articles, consumer services, conveyance etc.
- (r) rents and taxes : rents on residential house, resident's land and other consumer goods. No imputation of rent for residential houses owned by the sample household was made. Consumer taxes like roadcess, chowkidari taxes, municipal rates, consumer license fees and other local rates; income tax or taxes relating to household enterprise are excluded.
- (s) pet animals : domestic animals like dog, cat, hare, birds like parrot, pigeon, peacock etc. which are distinct from domestic livestock or poultry.

(D) durable goods : furniture, musical instruments, ornaments, utensils and other equipments and their repairing expenses including the maintenance of residential houses.

3.4 Separate tables have been provided for each of the state, union territory, all India and all union territories pooled for both the rural and the urban sectors; and for each of the four big cities of Bombay, Calcutta, Delhi and Madras and all these cities pooled.

3.5 Estimates have been given by breakdown of household size class and also by monthly per capita expenditure classes in rupees, arranged in ascending order of magnitude. The expenditure classes are as follows.

srl. no.	monthly per capita expenditure class in rupees	srl. no.	monthly per capita expenditure class in rupees
(1)	(2)	(1)	(2)
1	0—8	8	24—28
2	8—11	9	28—34
3	11—13	10	34—43
4	13—15	11	43—55
5	15—18	12	55—75
6	18—21	13	75 & above all class pooled.
7	21—24	14	

The groups 0—8, 8—11 etc. stand for 0— less than 8, 8— less than 11 and so on.

3.6 The following system has been adopted in numbering the tables. The left hand most digits stand for the sector to which the tables belong i.e. 1 for rural, 2 for urban and 3 for cities. The digits following the first point from left stand for the nature of information. The digits following the second point refer to individual state, union territory or city concerned.

#### 4. Summary of Results

4.1 The detailed results relating to consumer expenditure as obtained from the survey are presented in Appendix I of the report. Some of the important findings are, however, summarised below.

4.2 Table (A) shows the average household size and percentage of estimated number of households by monthly per capita expenditure class separately for rural and urban areas of the Indian union.

*Table (A) : Distribution of sample households, average size of household and percentage distribution of estimated number of households by monthly per capita expenditure class for rural and urban areas : all India.*

monthly per capita expenditure class	number of sample households		average household size		percentage of households	
	rural	urban	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)
0—8	105	15	5.23	5.43	0.72	0.18
8—11	268	37	5.77	6.77	1.84	0.42
11—13	347	84	6.10	6.23	2.36	1.01
13—15	511	117	5.97	6.40	3.47	1.41
15—18	995	283	5.82	6.23	6.83	3.51
18—21	1291	384	5.55	6.18	8.69	4.59
21—24	1453	539	5.59	5.89	9.62	6.38
24—28	1889	762	5.22	6.01	11.84	8.95
28—34	2561	1086	5.25	5.51	15.51	12.38
34—43	2734	1213	5.20	5.49	15.31	13.65
43—55	1963	1177	4.94	4.70	10.91	13.49
55—75	1341	1151	4.61	3.81	7.85	13.45
75 & above	835	1776	3.82	2.73	5.05	20.64
all class pooled	16293	8624	5.25	4.75	100.00	100.00

4.3 The average household size for the rural and urban areas are seen to be 5.25 and 4.75 respectively. As expected the household size generally decreases with the rise in

expenditure level barring the lowest three or four expenditure classes for both rural and urban areas. The decrease becomes sharper in the top three classes.

4.4 In columns 6 and 7 of the table are given the proportions of estimated number of households for each expenditure class. A striking feature of the distribution is a relatively much higher concentration of households, for both rural and urban areas, in the higher expenditure classes. As a result only about 15 p.c. in rural areas and 7 p.c. of the households in the urban areas are distributed in the lowest five classes. On the other hand as much as 13 p.c. in rural and 34 p.c. in urban areas come under the expenditure level Rs. 55 and above per capita per month. Compared with similar distribution of households in earlier rounds, the shift noted in the present data will stand out very prominently. The distribution of households by monthly per capita expenditure groups for three earlier rounds and the present round are given in the following table.

*Table (B) : Percentage of estimated number of households by monthly per capita expenditure level and by round : all India*

round	monthly per capita expenditure level (Rs.)							
	rural				urban			
	0-21	21-43	43 & above	all level	0-21	21-43	43 & above	all level
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
17	58.59	32.73	8.68	100.00	32.53	49.39	26.73	100.00
18	55.27	36.13	8.60	100.00	29.56	49.99	29.45	100.00
19	49.59	46.21	13.20	100.00	22.87	42.62	34.51	100.00
22	23.91	52.28	23.81	100.00	11.12	41.36	47.52	100.00

4.5 17th and 18th round results show almost the same pattern of distribution for rural and urban areas. For example more than 50 p.c. in the rural areas and about 30 p.c. in the urban reported per capita expenditure of below 21 rupees per month, whereas about 9 per cent in rural and between 25 and 30 per cent in the urban areas belonged to monthly per capita expenditure group Rs. 43 & above. But this pattern of high concentration of households at the lower levels of expenditure starts getting shifted even in the 19th round, as can be seen from table (B). Coming to the 22nd round the change in the pattern is too marked to be missed. In the rural areas, from above 55 in the expenditure group 0-21, the percentage drops to 24 and the same in the urban areas comes down from about 30 to 11. But this upward shift in the distribution of households in terms of levels of per capita expenditure in current prices would hardly indicate any well-being in real terms. Rather it reflects the changes in the price index between 17th round i.e., 1961-62 and 22nd round i.e., 1967-68. This will be borne out at least by the movement of the All-India Consumer price indices for industrial workers (1960=100) and the Agricultural Labour (1960-61=100) which stood at 172 and 177 for industrial workers in 1967 and 1968 respectively and at 207 and 192 for agricultural labour in 1967 and 1968. The respective indices for industrial workers and agricultural labour in 1961-62 were about 105 and 100.

4.6 In table (C) comparative data on total consumer expenditure per capita and its distribution on food and non-food items are given for three earlier rounds and the twenty-second round.

## Consumer Expenditure

*Table (C) : Consumer expenditure (Rs. 0.00) per person for a period of 30 days by broad item group and by round : all India -*

rounds	rural				urban			
	no. of sample h. hs.	food total	non-food total	total consumer expenditure	no. of sample h. hs.	food total	non-food total	total consumer expenditure
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
17	7173	14.93 (68.72)	6.80	21.73	5247	18.58 (60.13)	12.32	30.90
18	21776	15.67 (70.06)	6.70	22.37	4296	19.65 (59.62)	13.31	32.96
19	14974	19.29 (72.96)	7.15	26.44	9943	22.68 (62.95)	13.35	36.03
22	16293	25.83 (77.34)	7.57	33.40	8624	29.82 (66.53)	15.00	44.82

NOTE : figures in brackets in col. (3) and col. (7) are percentages.

4.7 It is interesting to note that although in 22nd round there is an increase in total consumer expenditure per person from around rupees 22 in the 17th round to rupees 33 in the rural areas and rupees 31 to rupees 45 in the urban areas, this increase is attributed mostly to the consumption of food items. Thus the apparent well-being reflected in the increase in total consumer expenditure per person is more or less illusory. This can also be seen from the percentage of total expenditure spent on food which is given in brackets in cols. (3) and (7) for the rural and urban areas.

It may be noticed that for both rural and urban households the percentage expenditure on food is generally increasing from 17th to 22nd round.

4.8 It may be worthwhile to compare per capita total expenditure and its distribution on food items at state level. These results are presented in table (D) given at the end of the chapter.

4.9 It is seen from the statewise estimates that in the rural areas the lowest household size (4.33) is reported by Tamil Nadu and the highest (5.97) by Haryana against the all India average of 5.25. In the urban sector, Orissa records the lowest household size (3.80) and Jammu & Kashmir the highest (5.90), the average for the country being 4.75. The per capita total consumer expenditure is found to be the highest in Punjab in rural areas viz., Rs. 46.41 and in Assam in urban areas viz., Rs. 58.70, the per capita expenditure for Union Territories pooled being Rs. 63.48. At the lowest end of the scale is Kerala, its per capita expenditure being Rs. 28.54 and Rs. 34.81 respectively for the rural and urban areas.

4.10 In terms of percentage expenditure on food, West Bengal (rural) ranks the highest with 85.01 p.c. of the total expenditure being spent on food compared to the all-India average of 77.34 p.c. Kerala (rural) on the other hand which records the lowest average per capita total expenditure has the lowest percentage (71.69) for food expenditure. For urban areas, percentages of expenditure on food are the highest in Bihar, Haryana, Mysore and Orissa. Apart from the Union Territories pooled which shows the lowest percentage of food expenditure in the urban areas, Tamil Nadu and Maharashtra urban households also record lower proportionate expenditure on food.

Table (D) : Total consumer expenditure and expenditure on food per person for a period of 30 days by states

states	no. of sample house- holds	average house- hold size	total consumer expen- diture (Rs. 0.00)	expen- diture on food (Rs. 0.00)	perce- ntage expen- diture food (Rs. 0.00)

## **APPENDIX II**

### **A. Sampling design for the rural sector**

---

## A. SAMPLING DESIGN FOR THE RURAL SECTOR

1. *General.*—The sampling design in the rural sector was stratified two-stage in which the 1st stage units were the villages and the second-stage units were the households from which information was collected. The sampling design was self-weighting for each sub-sample at state/U.T. level.

2. *Stratification.*—In each state/union territory agricultural regions were formed by grouping contiguous districts having similar crop pattern and population density. There were 64 such regions. Strata were formed, within each region, by grouping tehsils which were contiguous, had similar population densities and altitude above sea level and were having good transport and communication facilities amongst them. The formation of strata was done in such a way that the sum of sizes of the villages included in a stratum was the same for each stratum within a state/U.T., the size of a village being defined as the ratio of its population to the average population per village of all the villages in the population class 0-499 of the state/U.T. rounded to a suitable integer. If a stratum was too large in area or if good transport facilities were not available between some segments of it, the stratum was divided into a convenient number of investigation zones so that the area of each zone was of manageable size and good transport facilities were available within each zone. Two investigation zones were selected with probability proportional to their total size. From each of the two selected investigation zones four sub-sample (sub-samples 1 & 3 from one zone and sub-samples 2 & 4 from other) of 6 villages each were selected systematically with prob. bility proportional to size. The total no. of strata formed was 356.

3. *Allocation.*—The total sample size of 8544 villages was allocated to the different states U.T. on a joint consideration of their rural population, area under cereal crops and the available investigator strength. This was modified to ensure a minimum of 360 villages in each state (except Punjab and Haryana) and 192 villages in the union territories of Manipur and Tripura. The allocations were finally rounded off to multiples of 24 in view of 4 sub-samples of 6 villages each per stratum.

4. *Selection of villages.*—The 1961 census list of villages has been used as the sampling frame for selection of villages. The tehsils within each stratum were first arranged in a serpentine order and the villages under each tehsil were further arranged by two classes namely those reporting at least one household manufacturing enterprises and others. Then 4 independent sub-samples of 6 villages each were selected circular systematically with probability proportional to size. In case a sample village was too large for investigation purposes the village was demarcated into two or more parts of nearly equal population (called hamlet groups) by grouping hamlets of that village and one of these groups was selected with equal probability. The survey for that village was restricted to the hamlet or group of hamlets thus selected.

5. *Selection of households.*—The households in the sampled village or hamlet groups were first arranged in 6 classes on the basis of their major source of income and household size. Then a 'combined sample' of households for schedules 12 (Population, births and Deaths) and sch. 16 (Integrated Household survey) was selected linear systematically using the sampling interval and random start provided in the sample list which were fixed so as to make the design self-weighting. From this combined sample a sub-sample for sch. 16 was selected by the same method with 11 as the sampling interval.

b. *Work Programme.*—The survey period for the whole round was one complete year divided into 6 sub-rounds of 2 months each. In each sub-sample of a stratum the 6 sample villages were numbered from 1 to 6 according to their order of selection. Each sample village was visited and surveyed only once in the whole round. Thus sample villages 1, 3, 5, 2, 4 & 6 were surveyed in sub-rounds 1 to 6 respectively.

7. *Estimation procedure*.— The estimates presented are, in general, estimates of ratios like per person expenditure on different items of consumption or per person expenditure of a particular item expressed as a percentage to total expenditure. These estimates have been arrived at by computing in each case, the estimates of the totals of the two characteristics involved. The procedure of estimation of the total of a characteristic is explained below.

Let,

$j$  denote the  $j$ th sample household

$i$  denote the  $i$ th sample village/selected part of village

$s$  denote the  $s$ th stratum

$k$  denote the no. of strata in the state

$h$  denote the no. of households selected

$n$  denote the no. of sample villages selected in a stratum and in a sub-sample for the whole round

$Y$  denote the value of the characteristic

$M$  denote the constant multiplier

Then, the estimate  $\hat{Y}$  of the state total of the characteristic built up from one sub-sample, is given by

$$\hat{Y} = M \sum_{s=1}^k \sum_{i=1}^{ns} \sum_{j=1}^{hsi} Y_{sij}$$

Let  $\hat{Y}_1, \hat{Y}_2, \hat{Y}_3$  and  $\hat{Y}_4$  be the estimates as in (i) above on the basis of sub-samples 1, 2, 3 and 4 respectively. Then the combined estimate of state total based on all 4 sub-samples is obtained as

$$\hat{Y}_0 = 1/4 (\hat{Y}_1 + \hat{Y}_2 + \hat{Y}_3 + \hat{Y}_4) \quad \text{(ii)}$$

The  $i$ th sub-sample estimate of a ratio  $R = \frac{Y_i}{X_i}$  is obtained as  $R = \frac{Y}{X_i}$  . (iii)

The combined estimate of  $R$  is given by

$$R = \frac{\hat{Y}_0}{X_0} = \frac{(\hat{Y}_1 + \dots + \hat{Y}_4)}{(\hat{X}_1 + \dots + \hat{X}_4)} \quad \text{(iv)}$$

## B. SAMPLING DESIGN FOR THE URBAN SECTOR

8. *General*.— A two-stage sampling design was adopted in which the urban blocks formed the first-stage units and the households the second stage units. The sampling design was self-weighting for each sub-sample at the stratum level in a state.

9. *Stratification*.— In each state and union territory towns with population less than 50,000 formed stratum 1 and the remaining towns and cities formed stratum 2 except the 4 big cities of Bombay, Calcutta, Delhi and Madras. Each one of them formed stratum 3 of their respective states. The total no. of strata was 44.

10. *Allocation*.— The total sample size has been allocated to the states in proportion to their 1961 census urban population. The allocations have been made considering the investigator strength and modified to ensure a minimum of 144 sample blocks in each state except Tripura, Himachal Pradesh, Goa, Daman & Diu and Pondicherry. The allocation of blocks to the strata within each state has been done also in the same way with the restriction that it should be a multiple of 24.

11. *Selection of blocks.*— From each stratum 4 independent sub-sample of blocks were selected systematically with probability proportional to size, the size being a measure of the block population. In case a sample block was too large for investigation purposes sub-blocks of approximately equal population were formed within the sample block and one of them was selected with equal probability. The survey for that block was confined to the group of sub-blocks selected.

12. *Selection of households.*— The households in the sample block or selected sub-block were arranged in 6 classes on the basis of the no. of self-employed, no. of unemployed and the household size. Then a 'combined sample' of households for schedules 10 (urban labour force), 12 (population, Births and Deaths) and 16 (Integrated Household survey) was selected linear systematically using the sampling interval and random start provided in the sample list which were fixed so as to make the design self-weighting at the stratum level. From this combined sample a sub-sample for sch. 16 was selected by the same method with 11 as the sampling interval.

13. *Work Programme.*— As in the rural sector, the survey period of one year was divided into 6 sub-rounds of 2 months each. In each sub-sample of a stratum the urban blocks were numbered in 1 according to their order of selection. Each block was visited and surveyed only once in the whole round according to a given programme. For example block numbers 1, 7, 13, . . . . . were to be surveyed in sub-round, 1, block numbers 2, 8, 14, . . . . . were to be surveyed in sub-round 2 and so on.

14. *Estimation procedure.*— The estimates presented for the urban sector are similar to those of the rural sector. The estimate of the 'total' of a characteristic for the urban sector is, however, obtained as follows.

Let,

$j$  denote the  $j$ th sample household

$i$  denote the  $i$ th sample block/selected part of block

$s$  denote the  $s$ th stratum

$k$  denote the no. of strata in the state

$h$  denote the no. of households selected

$n$  denote the no. of sample blocks selected in a stratum and in a sub-sample for the whole round.

$Y$  denote the value of the characteristic

$M$  denote the constant multiplier

Then, the estimate  $\hat{Y}$  of the state total of a characteristic built from one sub-sample is given by

$$\hat{Y} = M \sum_{s=1}^k \sum_{i=1}^{n_s} \sum_{j=1}^{h_{si}} Y$$

The combined estimates for aggregates and ratios are obtained in the same manner as described for the rural sector.
