National Sample Survey : Twentyfifth Round

Tables with notes on the dimensions of the economic problems of weaker section of rural population.

CHAPTER ONE

INTRODUCTION

1.0 The socio-economic programme of the twentyfifth round of the National Sample Survey (NSS) was directed mainly towards studying of the economic conditions of the weaker sections of the rural population. In order to obtain an integrated picture of the socio-economic conditions of the rural poor, comprehensive information on demographic characteristics and time disposition, farm and non-farm in-comes, household consumer expenditure, inventory and transaction of assets and indebtedness of the sample households were collected. Some probing questions were also asked to throw more light on the problems and prospects relating to the economic life of these people. Interest in the present study, however, centres round only on the latter aspect of the enquiry mentioned above. The results presented in this report are based on the data collected in the four sub-rounds of the survey and supply a great deal of information on the subject. It may be noted, here, that a draft report based on the results of the first sub-round of the survey was submitted earlier ^{1/}.

1.1 For the purpose of the survey, two strata of rural population formed at the village namely, (i) lowest ten percent of households cultivating some land and (ii) households cultivating no land, during the agricultural year 1969-70 comprised the weaker section of the rural population provided these households did not have, more or less, regular and major income in the last year (i.e. 365 days prior to the date of listing of households in sample villages) from self-employment in trade, manufacture and construction, mechanised transport and profession or from rent and remittances or salary income and pension. Where the household's share from all these sources taken together accounted for the major part of the total household income of the last year such households were excluded from the frame constituting the weaker section of the rural population. The rural households thus sifted and selected constituted the two groups, namely, (i) small cultivator households and (ii) non-cultivating wage earner households. The two almost similar schedules of enquiry - schedules 16.1 and 16.2 were canvassed for the two groups of rural households respectively.

^{1/} Draft reports 230/1 and 230/4 were submitted in December '72 and March '73 respectively and are under printing.

1.2 The report provides the following items of information through schedule 16.1 in respect of the small cultivator households :

- (i) Possibilities of land development/repair/improvement and long-term credit requirements and supply.
- (ii) Opinion regarding economy of draught animals and medium-term credit requirements for purchase of draught animals and implements and supply.
- (iii) Adoption of new technology in agriculture and short-term production credit requirements and supply.
- (iv) Possibilities of supplementing the income of the household from ancillary agricultural and non-agricultural activities; and
- (v) Availability of member/members of the household for regular full-time wage employment within or outside the village.

1.3 For non-cultivating wage earner households items of information enumerated against serial numbers (i) to (iii) are not applicable. Information on items (iv) to (v) collected through schedule 16.2 are presented in this report.

1.4 The survey started in July, 1970 and continued upto June, 1971. The survey period of one year was split up into four sub-rounds of three months each.

1.5 The survey covered, more or less, the whole of rural India except Andaman and Nicobar Islands, Laccadive, Minicoy and Amindivi Islands, and North-East Frontier Agency (now Arunachal Pradesh).

Concepts and definitions

1.6 Household : A household was constituted by a group of persons normally living together and ordinarily taking food from the same kitchen. However, if a person resided in one place and took his food at another place, he was considered to be a member at a place where he lived. Though the determination of membership of a household was left to the head of the household, the following rules were given in special cases, namely, (i) Inmates of mess, hostel, hotels, orphanage etc., were treated as single member households, (ii) Inmates of hospitals, jails, nursing homes etc., were excluded from listing and (iii) Floating population, i.e. persons without normal residence, vagrants etc. were also excluded.

1.7 Land Cultivated : The area of land cultivated by the household during the agricultural year 1969-70 was considered in preparing the frame in respect of the weaker section of the rural population. The net area sown or planted with crops, orchards and plantation crops including land used for horticulture with crops, nursery, forestry and logging was treated as a cultivated land. Current fallows were also taken under cultivated land.

Results presented

1.8 Altogether 8588 villages in Central Sample alone were surveyed in this round in two independent and interpenetrating samples, each of which could provide valid estimates of the characteristics. The sampling design was a self-weighting one at the State level, the details of which are presented in Appendix-I. The estimates obtained from schedule 16.1 in respect of small cultivator households are shown in Appendix-II and those from schedule 16.2 in respect of non-cultivating wage earner households in Appendix-III. The results in both the Appendices are presented on the basis of the total sample combining the two independent sample estimates for each State and all India. The estimates are based on the returns of all the four sub-rounds of the Central sample.

National Sample Survey : Twentyfifth Round

Tables with notes on the dimensions of the economic problems of weaker section of rural population.

CHAPTER TWO

Summary findings

2.0 Some of the important aspects of the 'problems and prospects' relating to the weaker section of the rural population based on the results of the survey are presented below. The findings in respect of the possibilities of land development and implementation of improved farming methods as well as economy of draught animals presented below are exclusively related to small cultivator households. The remaining portion of this chapter that deals with the attitude of the households towards supplementing their income by ancillary agricultural activities and by alternative or additional employment within or outside the village are common to both small cultivator households and non-cultivating wage earner households. However, to facilitate inter-group comparisons, summary findings for the latter part are also presented separately for the two groups.

2.1 Improvements of land : The survey reveals that about 32 percent (vide table 1, Appendix-II) of the small cultivator households in rural India were reported to have possibilities of land improvement. While about 57 percent (vide table 2, Appendix-II) of these households were in need of long term loan, only slightly over 8 percent (vide table 4, Appendix-II) of them were found to have approached various agencies for getting the loan. Punjab with 66.63 percent topped among the States that reported possibilities of land development, whereas Tripura ranked the lowest with 10.78 percent. Though households needing loan among States^{1/} ranged from 32.33 percent in Uttar Pradesh to 87.38 percent in Mysore, those approaching for loan were found to vary from 1.64 percent in Kerala to 28.26 percent in Haryana.

2.2. Economy of draught animals : Coming to the problem of economy of draught animals, it can be observed that more than two-thirds of the small cultivator households in rural India (vide table 7, Appendix-II) were not

^{1/} : Union territories of Delhi & Pondicherry for small cultivator households have not been taken into account in analysing the state results as the number of sample households is very small.

possessing any draught animal at all. Many of them reported that it was uneconomical to have one. This might possibly be due to the comparatively small size of the cultivated holdings they possessed. While majority of the households owning one or no animal reported about its diseconomy, households owning one pair or more by and large found their ownership economical. But the latter group constituted only a small percentage of the small cultivator households. Given below is the percentage distribution of households owning draught animals and their views regarding the economy of owning the animals at the all-India level.

Table 1 : Percentage of households owning draught animals and their opinion about the economy of draught animals.

		All-India
details of items		percentages
Percentage of households owning draught animals		
(a) none		68.41
(b) one pair or more		17.84
(c) one only		13.75
(a) Households owning no animal		
1. not economical, present arrangement is better		62.57
2. present arrangement not satisfactory, but owning animal also not economical		11.39
3. if credit available, desires to buy one animal		11.59
4. if credit available desires to buy more than one animal		14.45
(b) Households owning one pair or more animals		
1. economical		77.23
2. not economical and make it economical by hiring		10.16
3. not economical but it is not desirable to depend on Other's animal		11.27
4. not economical and so must get rid of one or both animal and hire in animal labour		1.34
(c) Households owning only one animal		
1. not economical, hiring one is better		56.03
2. desires to buy one if credit available		43.97

As far as the States are concerned, more than 48 percent of the households did not own any draught animal. Percentage of households not owning any draught animal was found to be highest in Kerala (95.36), followed by Tripura (80.05), Bihar (78.18), West Bengal (76.80), Andhra Pradesh (74.66), Maharashtra (72.12), and Tamil Nadu (70.96) while the same index for Himachal Pradesh is the lowest (48.76 percent).

2.3 Improved methods of farming : Improved methods of farming and other technological advances in agriculture were seen to be unknown to a majority of the households. This was borne out by the fact that only 41 percent (table 12, Appendix-II) or less of the households in rural India possessed some knowledge of the new technology in respect of various items like improved seeds; chemical fertiliser etc. Even among those possessing knowledge of new technology, almost 49 percent (table 13, Appendix-II) did not adopt it in actual practice due to various reasons. Out of the remaining 51 percent only 20 percent (table 13, Appendix-II) reported to have fully adopted the recommendations of agricultural extension services in respect of at least one item. About 66 percent (table 16, Appendix-II) of the households reporting adoption of new technology fully or partially held the view that there was still room for further improvement by more intensive adoption of the techniques. On the whole, it seems that technological advances in agriculture have not made any considerable impact on small cultivator households in the rural areas.

2.4 Discussion so far has revolved round problems like improvement of land, economy of owning draught animals, improved methods of farming etc., faced particularly by small cultivator households of the weaker section. In the following paragraphs an attempt has been made to highlight the reactions of both small cultivator households and non-cultivating wage earner households^{2/} towards raising their household income by ancillary agricultural activities and also by alternative or additional employment if such opportunities were given to them.

2.5 Ancillary agricultural activities : Response received from these groups in taking up various ancillary agricultural activities for supplementing income if finance was provided to them, can not be considered encouraging. The tables in the next page provide an insight into these facts.

^{2/} : Union territories of Delhi & Himachal Pradesh for non-cultivating wage earner households have not been taken into account in analysing the state results as the number of sample households is very small.

Table 2 : Percentage of households reporting possibilities of supplementing income in ancillary agricultural activities.

	All-India				
	dairy	poultry	fishing	other animal production	others
small cultivator households	24.82	12.93	1.89	3.93	1.47
non-cultivating wage earner households	28.57	15.91	2.07	5.81	2.26

Though dairy enterprise is seen to be the most preferred of all the activities, households opting for this were found to be as low as 25 percent among small cultivator households and about 29 percent among non-cultivating wage earner households. However, percentage of households opting for a particular activity is seen to be always higher among non-cultivating wage earner households than among the small cultivator households. As far as States are concerned, wide variation exists over these different activities. Table below gives some idea about these fluctuations in some selected activities over the States.

Table 3 : Range of variations of some selected activities over States.

activity	category of households	highest/lowest	state	percentage
dairy	small cultivators	highest	Kerala	46.44
		lowest	Manipur	3.84
	non-cultivating wage earner	highest	Punjab	49.95
		lowest	Goa, Daman, Diu	1.23
poultry	small cultivators	highest	Kerala	40.79
		lowest	Madhya Pradesh	3.54
	non-cultivating wage earner	highest	Kerala	44.36
		lowest	Goa, Daman, Diu	2.47
fishing	small cultivators	highest	Manipur	14.75
		lowest	Gujarat	0.21
	non-cultivating wage earner	highest	Kerala	11.67
		lowest	Mysore	0.10

2.6 Attitude towards alternative or additional employment Reaction of these people in respect of alternative source of employment by location also did not read much different from the foregoing one. This is clear from the following figures.

Table 4 Percentage of households reporting willingness to take up regular full-time employment by location.

	All-India			
	within village	outside vil- lage/ ^{with in} guar- anteed regular employment only	outside vil- lage even without guaranteed employment	total
small cultivator households	21.41	20.48	5.94	48.08*
non-cultivating wage earner households	19.21	27.24	7.02	53.49*

The difference in total is due to some non-reporting cases.

Even though more or less same pattern of attitude was evident among these groups of people in regard to preference to employment by location, non-cultivating wage earner households were found more favourably poised in their willingness to move out of the village in the event of employment being offered to them. The same pattern was evident among States also (Table 26 of Appendix II and table 6 of Appendix III) except in Rajasthan and Goa, Daman & Diu where small cultivator households were found to be more in favour of mobility (29.40 and 43.75 percent respectively) than non-cultivating wage earner households (23.62 and 18.52 percent respectively). Among small cultivator households, the most favourable attitude towards mobility was noticed in Kerala (44.51 percent) followed by Goa, Daman & Diu (43.75 percent), West Bengal (42.13 percent), Tripura (41.49 percent) and Haryana (38.07 percent). Among wage earner households this attitude was observed on higher scale in Haryana (54.14 percent), Punjab (53.73 percent), West Bengal (46.51 percent), Kerala (45.60 percent), Assam (42.06 percent) and Tripura (41.37 percent).

2.7 The survey reveals that in rural India 7.41 percent (table 28, Appendix-II) of the population belonging to small cultivator households express their willingness to move outside the village in the event of regular full-

time wage employment being offered to them. Males reported 6.50 percent while females accounted for 0.91 percent only. As far as the States are concerned, the attitude towards mobility was most favourable in Goa, Daman and Diu (14.75 percent), followed by West Bengal (12.51 percent), Kerala (10.56 percent) and Tripura (10.06 percent). On the other hand Mysore recorded the minimum figure (4.34 percent) followed by Jammu & Kashmir (4.48 percent). In other States the percentage varied from 5 to 9. It is also noticed that in rural India the majority (6.14 percent) of people who wished to leave their villages for full-time wage employment preferred to work in public works.

2.8 The non-cultivating wage earner households showed more favourable attitude towards mobility than those of the small cultivator households. In rural India about 10.89 percent (table 7, Appendix-III) of the populations belonging to the non-cultivating wage earner households expressed their views in favour of accepting regular full-time wage employment outside the village. Males were available much more in number (9.07 percent) than the females (1.82 percent). Nine out of twenty States (including Union Territories except Delhi and Himachal Pradesh) showed index of mobility above that of the all-India average. The index of mobility was found highest in West Bengal (14.56 percent) followed by Tripura (13.61 percent) and Kerala (13.07 percent). The attitude towards mobility was most unfavourable in Pondicherry where only 5.64 percent of the population showed willingness to move outside the village in the event of full-time wage employment being offered to them. As noticed in the case of small cultivator households, people belonging to non-cultivating wage earner households at the all-India level also preferred to take up employment on public works (9.04 percent) than in other agencies.

Tables with notes on the Dimensions of the economic problems of weaker section of the rural population

APPENDIX -I

Sampling Design and Estimation procedure

3.0 General : A stratified two-stage sampling design was adopted for the rural sector. Villages and households formed the first and second stage units respectively. The design was a self-weighting one for each State and Union territory. Altogether 8588 villages in rural India were surveyed.

3.1 Stratification : The country was divided into 65 agricultural regions by grouping, within each State or Union territory, districts having similar population density and crop pattern. Strata were formed, within each region, by grouping contiguous tehsils having similar crop pattern, population density and good transport facilities amongst them. The number of persons engaged in agricultural occupations was more or less the same for each stratum within a region. The number of strata formed within a State/Union territory was given by the number of sample villages allocated to it divided by 24. The total number of strata was 350 in rural India.

3.2 Allocation : The total sample size was allocated to the States on a joint consideration of their rural population, area under cereal crops and available investigator strength. This was modified (i) to ensure a minimum of 360 villages in each state except Haryana and Punjab (ii) to take account of state-wise variation in work load and (iii) to make the sample size a multiple of 24 in order to facilitate an allocation of 24 villages in each stratum.

3.3 Selection of villages : Two independent sub-samples of 24 villages each were selected circular systematically with equal probability in each stratum. In each sub-sample, the villages with odd orders of selection formed the Central sample and the rest constituted the State sample. Thus in the Central or the State sample, 24 villages were selected from each stratum having 12 villages in each sub-sample.

contd.

3.4 Hamlet group selection : To control the work-load at the listing stage in case of large villages, hamlet selection was adopted. In such villages investigators were asked to form the specified number of hamlet groups of approximately equal population content. One of the hamlet groups was selected with equal probability for the survey.

3.5 Selection of households : All the households in the sample village/ hamlet group were divided into the following three sub-strata, (i) households having no cultivated land during the agricultural year 1969-70, (ii) the lowest ten percent of households having some cultivated land during the above period and (iii) remaining households. Households deriving, more or less, regular and major income in the last year from self-employment in trade, manufacture, construction, mechanised transport and professions or from rent and remittances or salary employment or pensions were excluded from both sub-strata 1 and 2 and were included in sub-stratum 3. Samples selected from sub-strata 1 and 2 were canvassed through Schedules 16.2 and 16.1 respectively. Sample households were selected linear systematically using the intervals and random starts specified for the purpose.

3.6 Work programme : The survey period of one year was split up into four sub-rounds of three months each. In each sub-sample of a stratum, the 12 sample villages were numbered from 1 to 12 and each village was surveyed in the specified period.

3.7 Participation of States : In this round all the State Governments (except West Bengal and Nagaland) and Union territories of Delhi, Manipur, Tripura and Himachal Pradesh participated in the survey. While Himachal Pradesh had double matching sample Gujarat surveyed additional villages.

3.8 Estimation procedure : The estimate of the State total for any characteristic from a sub-sample for a particular sub-round was derived as

$$Y = 4 \times M \sum_{s=1}^K \sum_{i=1}^{12} \sum_{j=1}^{h_{si}} y_{sij}$$

y_{sij} is the value of characteristic for the j^{th} household in i^{th} village of the s^{th} stratum,

h_{si} is the number of sample households in the i^{th} village of s^{th} stratum,

K is the number of strata in the State and

M is the constant multiplier for the State.

3.9 All-India estimates and combined estimates of sub-samples : The all-India aggregate estimate was derived by summing the state estimates. The combined estimate of the two sub-sample estimates was obtained by taking the arithmetic mean of the sub-sample estimates. The estimate of ratio was derived by dividing the aggregate estimate of the characteristic pertaining to the numerator by the corresponding aggregate estimate of the denominator.

medium term credit need			
1 for purchase draught animal	22 1	1 1	
2 for other credit need	22 1	1 2	

[21] possibilities of land development/repair/improvements

is there any possibility of development/improvement of the holding in respect of following? (yes-1, no-3)

1 new irrigation:

1 well/tube-well

2 other sources (describe)

2 existing irrigation:

1 well/tube-well

2 other sources (describe).....

3 drainage:

4 soil conservation:

1 bundling

2 any other (describe)

5 any other (describe)

[21.1] long term credit (at least 10 years)—requirement and supply

1 estimated cost to undertake land development and improvement (on the items specified above)

Rs.

2 own resources available for this purpose

Rs.

3 do you need a long term loan to finance the rest? (yes-1, no-2)

4 if so, why? (terms of repayment/interest too hard and not economical-1, other reasons (specify)-2)

5 if loan is needed for the above purpose, have you approached any agency? (yes-1, no-2)

6 if yes, which agency [govt-1, co-op. credit society-2, bank-3, private trader/money lender-4, relative-5, others (specify)-6]

7 is there any possibility of your getting the loan? (yes-1, no-2)

8 if you have not approached any agency or if you are not hopeful, reason [assets inadequate-1, assets already borrowed by other debt-2, agencies like govt/co-op./bank not within reach-3, unhelpful attitude in these agencies-4, other reasons (specify)-5]

[22] draught animal

do you own draught animals?
(yes—one pair or more-1, one animal only-2, none-3)

(if own a pair or more) whether economical for the holding size? (economical-1, not economical and makes it economical by hiring out-2, not economical but it is not desirable to depend on others animals-3, not economical and so must get rid of one or more animals and hire in animal labour-4)

(if own one only) do you need a pair?
(no—not economical, hiring one is better-1, desires to buy one, if credit available-2)

9 if no do you need pair?
(no—not economical, present arrangement better-1, present arrangement not satisfactory, but owning animal(s) also not economical-2; if credit available, desires to buy one-3, more-4)

(22) medium term credit (more than 1 year) - requirement and supply

1.1 loan needed to purchase draught animals

Yes

1.2 loan needed to purchase implements

Yes

1.3 total medium term credit needed

2.1 if loan is needed for the above purpose, have you approached any agency? (yes-1, no-2)

2.2 if yes, which agency (govt-1, co-operative credit society-2, bank-3, private trader/money lender-4, relative-5, other specify)

2.3 is there any possibility of your getting the loan? (yes-1, no-2)

2.4 if you have not approached any agency or if you are not hopeful, reason (assets inadequate-1, assets already mortgaged by past debt-2, agencies like govt/co-op/bank not within reach-3, unfavorable attitudes in these agencies-4, other reasons specify)

(23) adoption of new technology (recommended by Agricultural Extension Service)

1 do you have any knowledge about new technology? (yes-1, no-2)

1 improved seed

2 chemical fertilizer

3 green manuring

4 intercropping

5 others (specify)

2 if yes, have you adopted the recommendation? (yes-fully-1, yes-partially-2, no-3)

3.1 if fully adopted, whether satisfied with results? (yes-1, no-2)

3.2 has it led to any substantial increase in your farm income? (yes-1, no-2)

3.3 whether there is room for further improvement by more intensive adoption of recommended technology? (yes-1, no-2)

4.1 if not adopted or adopted partially, reason (you do not know enough-1, not convinced of benefits-promised production not realized-2, cost too high and hence not profitable-3, needed supplies not readily and timely available seed-4, fertilizer-5, man and fertilizer-6, others specify-7, seed and other-8, own production surplus not sufficient-9)

(24) short-term production credit (less than 1 year) - requirement and supply

Yes

1.1 if own production - finance not sufficient, loan needed

2.1 if credit is needed for the above purpose, have you approached any agency? (yes-1, no-2)

2.2 if yes, which agency (govt-1, co-op credit society-2, bank-3, private trader/money lender-4, relative-5, other specify)

2.3 is there any possibility of your getting the loan? (yes-1, no-2)

2.4 if you have not approached any agency or if you are not hopeful, reason (assets inadequate-1, assets already mortgaged by past debt-2, agencies like govt/co-op/bank not within reach-3, unfavorable attitudes in these agencies-4, other reasons specify)

[24.1] auxiliary agricultural activities

1 is it possible for you to supplement your income by taking up the following activities? (yes-1, no-2)

1 dairying

2 poultrying

3 fishing

4 other animal production (describe)

5 others (describe)

2 if no, reasons: (lack of market-1; uneconomic production cost/prices-2; others (specify)-3)

3 if yes, will you take up if initial finance is provided? (yes-1, no-2)

4 if yes, finance needed

Rs.

[24.2] non-agricultural activities

1 do you or any member of the household know enough of any trade/occupation to be able to set up an enterprise? (yes-1, no-2)

2 if yes, which trade/occupation--(describe) (to be coded later on)

3 will you take it up, if initial finance is provided? (yes-1, no-2)

4 if yes, finance needed

Rs.

[25] availability for work

1 are you or any member of the household willing to take up a regular full-time wage employment? (yes-1, no-2)

1 if yes, within the village only-1; outside the village with guaranteed regular employment only-2; outside the village even without guaranteed employ. sent 5

2 if no, reason; (no person can be permanently spared from agriculture-1; present employment in village is adequate and economical-2; any other reason (specify)-3)
