SURVEY ON "CONDITION OF SLUM AREAS IN CITIES"
SECTION ONE

1. INTRODUCTION

1.1 A nation wide survey on 'economic condition of slum dwellers in urban cities' was conducted by the National Sample Survey Organisation in its thirtyfirst round covering a period of one year from July 1976 to June 1977. The survey was restricted to all the class I cities of the whole of India having 1971 census population one lakh or more and a few class II cities (Shillong and Pondicherry) having 1971 census population less than one lakh. Only the city proper and not the urban agglomeration was considered for the survey coverage. But it was found during survey that the class I cities Srinagar and Imphal do not have any slum. The list of cities covered by the survey has been given in Table 1.

1.2 The question of getting an adequate sampling frame to locate the slum areas in the cities was examined in the first instance. Certain areas in urban areas were declared as slums by the respective local municipality, corporation, local body or development authority. But in most of the cases these lists were prepared long back and not updated periodically. It was observed that a large number of areas which should have been considered as slum areas during planning of the survey was excluded in these lists. On the other hand, there were certain declared slums which had been upgraded due to development programmes and could not be considered yet as slum areas. Hence the list of declared slums was not considered as satisfactory for the purpose of this survey. But due to paucity of adequate time and resources to prepare a fresh sampling frame of the slum areas in all the cities the survey was restricted to declared slums only in the big cities having 1971 census population one million or more. In other cities having 1971 census population less than a million, the list of declared slums was augmented by a list of undeclared slums by going round the cities by the field investigators during the first three months of the survey period. However, the declared slums with adequate sanitary and water facilities were excluded from the survey. For identifying such undeclared slums, a 'slum' was defined as an areal unit having 25 or more katcha structures mostly of temporary nature, huddled together, or 50 or more households huddled together in katcha structures, inhabited by persons with practically no latrine and inadequate public latrine and water facilities.

DESIGN

sample design for the survey was a two-stage one with slums

as first-stage units and households residing in slum areas as second-stage units. The list of declared slums in cities having 1971 census population one million or more and the list of slums prepared by Field Staff, considering both declared and undeclared slums in cities having 1971 census population less than one million constitutes the sampling frame for the selection of sample slums. Number of sample slums for different cities have been shown in Table 1. The total number of sample slums considering all the cities together were 1922 in the central sample and 2486 in the state sample. A sample of 14 households was selected circular systematically in each sample slum for household enquiry on 'economic condition of slum dwellers'.

2.2 Within each city, slums were selected circular systematically, with probability proportional to size where size was a measure of slum population. Sample slums having large population was divided into a number of sub-divisions having nearly equal population content. One of these sub-divisions was selected at random and the survey was confined to the selected sub-division only.

3. SCHEDULES OF ENQUIRY

3.1 ~~These~~ schedules were canvassed for the survey. These are as follows:-

- (i) Schedule 0.21 : Particulars of slums in cities having population less than one million,
- (ii) Schedule 0.2 : List of households and
- (iii) Household Schedule 16.3 : Economic condition of slum dwellers. ✓

3.2 ✓ One schedule 0.21 was filled-in for each slum, both declared and undeclared, in all the cities having 1971 census population less than one million. This schedule was used to prepare the list of slums in these cities. In addition to area, number of households and population of the slum, information on general condition of the slum area as a whole regarding approach road, road within slum, water-logging, electrification, structures, drinking water, latrine facilities, sewerage and drain system, garbage disposal, developments done during last five years etc. were also collected for each slum through this schedule. ✓

3.3 ✓ One schedule 0.2 was filled-in for each sample slum in all the cities under the coverage of the survey. A list of all the households to be used as sampling frame for the selection of households was prepared through this schedule. Information on household size, house ownership, monthly rent, material of wall and roof and sanitary condition of their house were also collected in this schedule for each household. Also information about general condition of the slum area as a whole was collected in this schedule for the sample slums in cities having 1971 census population one million or more for whom schedule 0.21 were not canvassed. ✓

3.4 ✓ Household schedule 16.3 was canvassed for each sample household to know their economic condition, report of which will be separately presented.

ESTIMATION PROCEDURE

Notations : The following notations are used for obtaining various estimates :

s : sub-script of s-th city of a state/union-territory

i : sub-script of i-th surveyed urban slum/sub-block.

-: :-

j : sub-script for j-th sample household

z : slum size (used for selection)

m : number of surveyed slums

n : number of selected slums

h : number of sample households

Z : total size of urban slums

D : number of sub-blocks actually formed

y : value of characteristic

\hat{Y} : estimate of Y, the total of y

4.2 Estimates of total

(i) Schedule 0.21

The total of y over all the slums at the level of city or group of cities gives Y at that level.

(ii) Schedule 0.2

(a) An estimate for each of the cities having 1971 census population one million or more (city group A) is given by

$$\hat{Y} = \sum_{i=1}^m \frac{D_i y_i}{z_i} \quad \dots \quad \dots \quad \dots \quad (1)$$

The above formula estimates the total for all the units constituting slums or sub-divisions of slums such as hatas in case of Kanpur or sub-blocks in case of Ahmedabad and Bombay or census blocks covered by slums in case of Delhi.

(b) An estimate for a state/union territory covering all the class I cities with 1971 Census population less than one million but at least three lakh (city group B) or cities with population less than 3 lakh each in it (city group C) is given by

$$\hat{Y} = \sum_s \frac{Z_s}{m_s} \sum_{i=1}^{m_s} \frac{D_{si} y_{si}}{z_{si}} \quad \dots \quad \dots \quad (2)$$

where s stands for an individual city.

5. PRESENTATION OF RESULTS

5.1 This brochure contains detailed tables in respect of schedules 0.21 and 0.2 only. Schedules 0.21 was canvassed in half the cities by the central sample staff and the remaining half by state sample staff. The tables relating to schedule 0.21 presented here relates to all the cities under the coverage of the survey irrespective of survey being done by central or state staff. The tables relating to schedule 0.2 presented here relates to the central sample data only except for the state of Jammu & Kashmir for which the estimates relate to central and state samples combined. However, the central sample of Jammu & Kashmir only has been accounted for the estimates presented for all-India.

5.2 For the purpose of presentation of the results, all the cities in a state or union territory ^{were} grouped into three groups as follows :

City Group A : Cities having 1971 census population 1 lakh or more but less than 3 lakh.

City Group B : Cities having 1971 census population three lakh or more but less than one million, and

City Group C : Cities having 1971 census population 1 million or more.

Absence of any city group in a Table indicates that there is no city belonging to the respective group in that state or union territory.

The list of cities belonging to different city groups is given in the Appendix.

6. DEFINITIONS AND CONCEPTS

6.1 Some of the important concepts and definitions followed in the survey are noted below.

6.2 Slum area : Criterion to consider an area as slum area is ~~was~~ mentioned in para 1.2.

6.3 House : Every structure, tent, shelter etc. ~~was~~ treated as a house.

6.4 Household : A household ~~was~~ a group of persons normally living together and taking food from a common kitchen. Each individual boarder (with his/her dependants or guests) of a mess, hotel, boarding or boarding and lodging house, hotel,

orphanage, vagrant house etc. was ~~been~~ treated as a separate household. Inmates of jails, hospitals, nursing homes etc. were excluded but residential staff therein was included. Floating population, that is, persons without any normal residence was excluded but residents in footpath, open space, under a bridge etc. in the same vicinity on a regular basis was ~~been~~ included.

6.5 Household size : The number of normally resident members of a household was its size. The normally resident members ~~included~~ temporary stay aways and excluded temporary visitors and guests.

6.6 Material of wall and roof :

- (a) Katcha -made of grass, leaves, reeds, bamboo, mud, thatch, unburnt brick etc.
- (b) Semi-pucca- made of timber, wood, C.I. Sheets, tiles, galvanised sheets, asbestos etc.
- (c) Pucca- made of cement, concrete, even burnt bricks, stone blocks etc.

6.7 Approach road to slum 'other than katcha' included roads with surface made of macaden, asphalt, concrete etc. Electrified slums were those with electricity available for any use (street light and /or other use). Others category in source of drinking water include a well, river, tank, pond etc. Development made in slum areas during last 5 years included any development made in respect of road, drinking water, sanitation, drainage, electrification etc. either by public sector or by private sector.

SECTION TWO
DETAILED TABLES
CONTENT OF TABLES

Table number	Description	pages
1.	Total number of slums and sample slums, area under slums and estimated number of households and persons in slum areas of class I cities.	6-7
2.	Estimated number of households in slum areas of class I cities by house ownership and structure and sanitary condition of houses.	8-10
3.	Area and number of households and persons in slums by ownership and area type of slum areas in class I cities.	11-31
4.	Area and number of households and persons in slums by type of approach road to slum areas, waterlogging in slum areas during monsoon and electrification of slum areas in class I cities.	32-52
5.	Area and number of households and persons in slums by source of drinking water and latrine facility of slum dwellers and facilities of underground sewerage and garbage disposal systems of slum areas in class I cities.	53-94
6.	Area and number of households and persons in slums by slum included in Minimum Needs(MN) and slum clearance programme and development made during last 5 years.	95-115
7.	<u>Appendix</u>	<u>116-117</u>
<p>N.B. 1. Table 3 is numbered as 3.0 for All-India, 3.1 for Andhra Pradesh, 3.2 for Assam, and so on ... 3.20 for Pondicherry. Similar Tables 4, 5 and 6 are also numbered as 4.0 to 4.20, 5.0 to 5.20 and 6.0 to 6.20 respectively.</p> <p>2. Tables 1 and 2 are based on houselisting done in schedule 0.2 in sample slums. Tables 3 to 6 are based on information collected in schedule 0.21 about the general condition of slum areas in all the slums of the cities. However, in 8 big cities having 1971 census total population 1 million or more where schedule 0.21 was not canvassed, Tables 3 to 6 give estimates based on similar information collected in schedule 0.2 for sample slums (declared slums only).</p>
