EMPLOYMENT AND UNEMPLOYMENT
OF
RURAL LABOUR HOUSEHOLD*

INTRODUCTION

- 1.1 The rural labour forms an important segment of the rural society. The need for periodic data on some important socio-economic characteristics of the rural labour (including agricultural labour) households needs no emphasis. The attempt for collection of data only for agricultural labour households was made by the ministry of Labour by undertaking the first agricultural labour enquiry in the year 1950-51 with a view to building up reliable estimates relating to the socio-economic conditions of the agricultural labour. This was followed by a second agricultural labour enquiry conducted by the National Sample Survey (NSS) in the year 1956-57.
- 1.2 The Government undertook a third enquiry of this kind during the year 1963-65. The scope of this enquiry was, however, widened to cover the entire rural labour households of which the agricultural labour households, obviously, formed a part. This survey was considered the first rural labour enquiry. A second rural labour enquiry was held in 29th round of NSS in the year 1974-75.
- 1.3 The question of conducting a third rural labour enquiry came up before the working group on 32nd round Employment and Unemployment survey set up by the National Sample Survey Organisation (NSSO). On the basis of some recommendations made by the working group, the NSSO in its 32nd round survey, integrated the rural labour enquiry with the main enquiry on Employment and Unemployment.

* This is the last of the series of reports on rural labour households. In the present report, data on employment and unemployment position of rural labour households is being presented. The other two reports of the series viz. D-301/1 (indebtedness of rural labour households) and D-301/2 (wages and earnings of rural labour households) were released earlier. For details the former report may be referred to.

INTRODUCTION

1.4 The NSS - 32nd round survey was carried out during July 1977 - June 1978, which was divided into 4 sub-rounds of 3 months each.

1.5 This report is based on the central sample* data collected from 8820 sample villages. The survey covered the whole area of the Indian Union excepting Sikkim; and some small areas of Jammu & Kashmir; Madhya Pradesh, Maharashtra and the rural areas of Chandigarh, Mizoram and Nagaland; Andaman and Nicobar Island; Lakshadweep, Dadra and Nagar Haveli.

1.6 A note giving the details of sample design, the estimation procedure etc. is given in Appendix - I, Appendix II contains detailed tables for the states** and all-India. While concepts and Definitions followed in the survey are mentioned in section 2, a summary of the main findings of the report is given in Section 3.

* In the NSS usually two independent samples are drawn, one for the participating states called the 'State Sample' and the other for NSSO, called the 'Central Sample'.

** except Karnataka.

SECTION TWO

2. Concepts and definitions

The important concepts and definitions adopted for the Enquiry were as follows :-

Household : A group of persons normally living together and taking food from a common kitchen constituted a household.

Household Size : The number of normally resident members of a household constituted its size. The normally resident members included temporary stay-aways but excluded temporary visitors or guests.

The inmates (including the staff) of a mess, hostel, boarding and lodging house, hotel, orphanage, vagrant house etc. were treated as single member households. However, if a group of persons satisfying the definition of a household resided in any of the above establishments/^{and}pooled their total income (e.g. a family living in a hotel on a regular basis), then it was treated as a separate household by itself.

Rural labour : Rural labour was defined as manual labour in agricultural and/or non-agricultural occupations in return for wages either in cash or kind (excluding exchange labour). Self-employment in manual work was not treated as wage-paid manual work. The term "manual work" meant a work essentially involving physical operations. However, work essentially involving physical labour but also requiring a certain level of general, professional, scientific or technical education was not termed as manual work. On the other hand, work not involving much of physical labour and at the same time not requiring much educational (general, scientific, technical or otherwise) back-ground was treated as manual work. Thus the definition excluded the work of engineers, doctors, dentists, midwives etc. from the purview of manual work even though their work involved some amount of physical labour. The work of peons, chowkidars, watchman etc. even if their work did not involve much of physical labour, was, however, considered as manual work.

Rural labour household : A household was identified as rural labour household on the basis of its largest source of income. For this purpose, the following sources of income were considered :

1. Wage paid manual labour (agricultural and/or non-agricultural);
2. Paid non-manual employment; and
3. Self-employment (own account work and/or employment as unpaid family worker).

A household was classified as a rural labour household if its largest source of income was the first of the above three categories, i.e., if wage paid manual employment contributed more towards its income during the 365 days preceding the date of survey than each of the other two sources taken individually.

Agricultural labourer : A person was treated as agricultural labourer or in other words wage paid manual labourer in agriculture if he/she followed one or more of the following agricultural occupations in the capacity of a labourer on hire or on exchange, irrespective of the mode of payment, namely, wholly in cash or kind or partly in cash and partly in kind :

- (a) farming including cultivation and tillage of the soil etc.;
- (b) dairy farming;
- (c) production, cultivation, growing and harvesting of any horticultural commodity;
- (d) raising of livestock, bees or poultry and
- (e) any practice performed on a farm as incidental to or in conjunction with farm operations (including any forestry or timbering operations and the preparation for market and delivery to storage or to market or to carriage for transportation to market of farm products).

It might be noted that manual work in 'fisheries' was excluded from the category of agricultural labourer. Further, work relating to the transportation coming under the category(e) above referred only to the first stage of transportation from farm to the first place of disposal.

Agricultural labour households : The rural labour households which derived major portion (more than 50%) of their total income during the last 365 days preceding the date of enquiry from wage paid manual labour in agricultural occupations only were regarded as agricultural labour households.

Earnings : Earnings for the purpose of this survey included wages and salaries already received or were receivable in cash or kind or partly in cash and partly in kind for the work done during the reference week.

Households with cultivated land : The household which reported having cultivated land during the last agricultural year prior to the date of survey was considered as household "with cultivated land" and that which did not report to have such cultivated land was ~~regard~~^{regarded} as household "without cultivated land". Cultivated land was taken to mean the net area sown during the last agricultural year (July 1976 - June 1977) and included orchards and current fallow.

Land possessed : The total area of land possessed was defined as the total area of land owned plus the total area of land leased in minus the total area of land leased out. It included house and housesite.

SECTION THREE

Summary Findings

- 3.1 While detailed results of the survey are available in Appendix II, in this section some basic results exhibiting the pattern of person days per day by different agricultural operations of rural labourer households are presented.
- 3.2 Percentage distribution of person-days per day of usually gainfully occupied agricultural labourers is shown in Table(1) for agricultural and other operations by sub-rounds separately for adult male, adult female and children. In sub-round 1, (July to September) which is the season for doing preparatory work for cultivation of land, it is found that for a male worker, most of the person-days per day are accounted for by weeding (12.43 per cent), ploughing (10.37 per cent) and transplanting (9.03 per cent). In sub-round 2, harvesting (20.14 per cent) and ploughing (8.5 per cent) take most of the person days per day. Sub-rounds 3 & 4 being the time for crop harvesting - take the major proportion of person-days per day in harvesting operation. Taking the year as a whole, out of 29.20 per cent of person-days per day devoted to agricultural operations (listed ^{under} ~~and~~ srl. no.1-5) 19.3 per cent is accounted by the two major operations viz. harvesting 10.63 per cent and ploughing 9.30 per cent. A female worker is generally engaged in lighter type of agricultural operations. In sub-round 1, 20.11 per cent and 15.02 per cent of person-days per day are accounted by the two major operations weeding and transplanting respectively. In sub-rounds 2, 3 and 4 the female workers are mainly engaged in harvesting accounting for respectively 23.75 per cent, 14.87 per cent and 8.49 per cent of person-days per day. During the year, harvesting, weeding and transplanting are the main agricultural operations in which they are engaged - their contribution towards ploughing and sowing being very negligible.

3.3 For the child labourer, 19.46 per cent of person-days per day is accounted by weeding in the first sub-round against 20.28 per cent and 14.09 per cent by harvesting in the second^{and}/third sub-rounds. Considering all the seasons together, (i.e. all sub-rounds combined), their major occupation is harvesting (11.80 percent) and weeding (8.41 per cent). Taking an over-all view of the table, it is found that other occupations are not affected by seasonality.

Table (1) : Percentage distribution of person-days per day of usually gainfully occupied agricultural labour in rural labour household by type of operations and sub-round.

A P P E N D I X - I

A BRIEF NOTE ON THE SAMPLE DESIGN AND THE ESTIMATION PROCEDURE

Sampling design and sample size : A stratified two-stage sampling design was adopted in the survey with census villages as the first stage units for the rural areas and households as the second stage units. But in the rural areas of the North Eastern States viz. Mikir Hills and North Cachar Hills of Assam, Arunachal Pradesh, Meghalaya, Mizoram, Manipur and Tripura, the first stage units were clusters of villages. Altogether 8,820 villages were selected as the first stage units. In each of the first stage units 12 households were to be selected as second stage units (for the rural areas of North Eastern Region, 24 households were to be selected from each cluster of villages). The sample villages were selected with probability proportional to population and with replacement. The households were selected circular systematically with equal probability after arranging all the households of the first stage units according to their means of livelihood in the order self-employed in non-agricultural occupations, rural labour and others.

Stratification and allocation of sample : The whole of India was divided into a number of basic strata so that the basic strata did not cut across district boundaries. Each district with less than 1.5 million rural population according to census 1971 formed one basic stratum by itself except in Gujarat and Arunachal Pradesh where some districts with less than 1.5 million population had been divided into two or more basic strata. A district with more than 1.5 million rural population (according to census 1971) was divided into a number of basic strata, depending on its rural population by grouping contiguous tehsils (sub-divisions in Bihar, Orissa and West Bengal) homogenous as far as possible with respect to rural population, density and crop pattern. Districts formed after 1971 census were also considered for formation of basic strata. The total number of rural strata thus formed was 516. Within each State and Union Territory the total sample villages were allocated to the different rural strata in proportion to their 1971 rural population. The final stratum allocations were made multiples of 4.

Survey period and sub-round formation : The survey was started in July 1977 and was completed in June 1978. The entire survey period of one year was divided into four sub-rounds each of three months' duration coinciding approximately with the four agricultural seasons. The four sub-round periods were :

- sub-round 1 : July to September 1977
- sub-round 2 : October to December 1977
- sub-round 3 : January to March 1978
- sub-round 4 : April to June 1978.

The sample villages were distributed over the four sub-rounds in equal numbers so as to provide valid estimates for each of the sub-rounds respectively.

Estimation procedure : In order to reduce work-load at the tabulation level and to obtain reliable aggregate estimates at the regional level the following estimation procedure was adopted.

$$Y = y \times \frac{P}{p} \quad \text{where,}$$

Y = estimated rural total for any region for any sub-round/ all sub-rounds

y = unestimated rural total of the region for the sub-round/all sub-rounds

P = projected rural population of the region for January 1978 and

p = total sample persons in the sample villages of the region, surveyed in the sub-round/all sub-rounds.
