NEW DELHI

REPORT ON THE THIRD QUINQUENNIAL SURVEY
ON CONSUMER EXPENDITURE

1. INTRODUCTION

1.0 Data on household consumer expenditure were being collected in every round of the National Sample Survey(NSS), beginning from the first round which started in October, 1950 through the 28th round (1973-74). After the 26th round of the survey, the Governing Council of NSSO decided that the survey on consumer expenditure and on Employment & Unemployment, be undertaken together once in every five years beginning from the 27th round. Thus, the first quinquennial survey on consumer expenditure was conducted in the 27th round (Sept. 1972 - Oct.1973). To meet some specific ad-hoc requirements, a survey on consumer expenditure was also conducted in the 28th round, outside this quinquennial programme. The present report has been prepared from the data collected during the 38th round, that is, the third quinquennial survey on consumer expenditure, carried out during the period January - December 1983*.

1.1 In this report, some of the basic results of the survey have been presented. Incidentally, it may be mentioned that in this round the Rural Labour Enquiry(RLE) was integrated with the consumer expenditure survey as per decision of the Governing Council. The present report, however, does not contain separate estimates relating ^{to} the rural labour households.

1.2 The field work of the thirtyeighth round started in January 1983 and continued upto December 1983, covering a period of one complete year. The reference period for collection of data on consumer expenditure was 30 days preceding the date of survey. The estimates presented in the report, therefore, broadly relate to the period December 1982 to December 1983.

*The results of the NSS 27th and 28th rounds of survey on Consumer Expenditure were published in Sarvekshana Vol.II, No.3 and in Vol.I, No.1 respectively.

1.3 The geographical coverage of the survey was the entire Indian Union excluding Ladakh and Kargil districts of Jammu & Kashmir and rural areas of Nagaland.

1.4 The survey covered about 1 lakh 18 thousand households spread over 7799 villages and 4327 blocks.

1.5 In this round all the states and Union territories (included in the geographical coverage) except Andaman & Nicobar Islands, Chandigarh, Dadar & Nagar Haveli and Laksha-dweep participated in the survey on at least equal matching basis. The results presented in this report are based on central sample data.

1.6 The concepts and definitions, explanatory notes on tables, sampling design and estimates^{let} procedure and a summary of findings of the survey are given in the following paragraphs.

2. CONCEPTS AND DEFINITIONS

2.1 The concepts and definitions followed in the consumer expenditure enquiry continue to remain broadly the same as in earlier rounds. Some of these concepts and definitions are explained below.

2.2 Household : A household is a group of persons normally living together and taking food from a common kitchen. A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with his dependents or guests) forms a separate household. Households maintained and fed directly by government, such as those in prisons, police quarters, cantonments, hospital, asylums, relief camps are, however, excluded from the scope of the survey.

2.3 Household member : Any person who is a normal resident of the sample household is considered to be a member of the household. Household members are grouped into three categories viz., adult male, adult female and child. One who has already attained the age of 15 (in completed years) is considered as an adult.

2.4 Household size : The total number of members (as defined above) in a household is considered to be the size of the household.

2.5 Household consumer expenditure : Consumer expenditure comprises all expenditure incurred by the household, exclusively on domestic account, including consumption out of home-grown produce or transfer receipts like gift, loan etc. The expenditure on household enterprise is excluded from consumer expenditure. While consumption out of transfer receipts is included, transfer payments of all kinds (loans, gifts, charities, monetary as well as in kind, like grain loan etc.) are excluded. Expenditure on purchase and construction of residential houses are considered to be expenses on capital account and hence are excluded from the consumer expenditure; but the expenditure towards maintenance of residential building is included in the consumer expenditure of the household. Monetary value of food articles consumed during the reference period is taken to represent consumer expenditure on food articles. For semi-durable and durable goods, the actual expenditure incurred towards purchase of these articles acquired during the reference period is considered as the consumer expenditure of the articles. For items of clothing & foot-wear there is a slight ^{use} ~~departments~~ from earlier round. Monetary value of articles acquired and brought into first use during the reference period is taken as the consumer expenditure on the articles concerned.

2.6 Reference period : The reference period for collection of data on all items of consumer expenditure is last 30 days (ending on the day preceeding the date of enquiry). In addition, for items of clothing & footwear, durable goods and some items of miscellaneous goods & services, data have been collected for a reference period of last 365 days also. The results presented in this report are based ^{on} data of 30 days reference period only.

3. EXPLANATORY NOTES ON TABLES

3.1 The report contains ~~two~~ distinct types of tables for each state and union territory of India as also for all-India. Separate sets of tables are presented for the rural ~~and~~ ^{and} urban areas. The contents of the tables are described below ^{below}.

2.4 Household size : The total number of members (as defined above) in a household is considered to be the size of the household.

2.5 Household consumer expenditure : Consumer expenditure comprises all expenditure incurred by the household, exclusively on domestic account, including consumption out of home-grown produce or transfer receipts like gift, loan etc. The expenditure on household enterprise is excluded from consumer expenditure. While consumption out of transfer receipts is included, transfer payments of all kinds (loans, gifts, charities, monetary as well as in kind, like grain loan etc.) are excluded. Expenditure on purchase and construction of residential houses are considered to be expenses on capital account and hence are excluded from the consumer expenditure; but the expenditure towards maintenance of residential building is included in the consumer expenditure of the household. Monetary value of food articles consumed during the reference period is taken to represent consumer expenditure on food articles. For semi-durable and durable goods, the actual expenditure incurred towards purchase of these articles acquired during the reference period is considered as the consumer expenditure of the articles. For items of clothing & foot-wear there is a slight ^{we} ~~departs~~ from earlier round. Monetary value of articles acquired and brought into first use during the reference period is taken as the consumer expenditure on the articles concerned.

2.6 Reference period : The reference period for collection of data on all items of consumer expenditure is last 30 days (ending on the day preceeding the date of enquiry). In addition, for items of clothing & footwear, durable goods and some items of miscellaneous goods & services, data have been collected for a reference period of last 365 days also. The results presented in this report are based/^{on} data of 30 days reference period only.

3. EXPLANATORY NOTES ON TABLES

3.1 The report contains ~~two~~ three distinct types of tables for each state and union territory of India as also for all-India. Separate sets of tables are presented for the rural and urban areas. The contents of the tables are described below.

3.2 Table 1 series give the distribution of (i) no. of sample households, (ii) percentage of estimated no. of households, persons, and (iii) average household size (adult male, adult female and children) by monthly per-capita expenditure classes.

3.3 Table 2 series give value of consumption of broad groups of items per person for a period of 30 days by monthly per-capita expenditure classes. Estimates are given for 19 broad groups of items. The groups are (1) cereals; (2) gram; (3) cereal substitutes; (4) pulse and products; (5) milk and products; (6) edible oil; (7) meat, egg and fish; (8) vegetables; (9) fruits and nuts; (10) sugar; (11) salt; (12) spices; (13) beverages and refreshments; (14) pan, tobacco & intoxicants; (15) fuel and light; (16) clothing; (17) foot-wear; (18) miscellaneous goods and services (including rents and taxes); and (19) durable goods. Apart from this, estimates on (20) rents and (21) taxes have been shown separately also. The results are presented also for (i) food-total; (ii) non-food total and (iii) total consumer expenditure.

3.4 Monthly per capita expenditure classes : Estimates have been given by monthly per-capita expenditure classes in rupees, arranged in ascending order of magnitude. The expenditure levels are grouped into the following 14 classes :-

srl. no.	monthly per-capita expenditure classes (in rupees)	srl. no.	monthly per-capita expenditure classes (in rupees)
(1)	(2)	(1)	(2)
1.	0 - 30	8.	100 - 125
2.	30 - 40	9.	125 - 150
3.	40 - 50	10.	150 - 200
4.	50 - 60	11.	200 - 250
5.	60 - 70	12.	250 - 300
6.	70 - 85	13.	300 & above
7.	85 - 100	14.	all expenditure classes

Note : The groups 0-30, 30-40 etc. stand for Rs.0 to less than Rs.30/-, Rs.30/- to less than Rs.40/- and so on.

3.5 For convenience of reference the table numbers have been coded - the digit to the left of the decimal point refers to the nature of information and the digits to the right refer to the state/union territory, followed by R for rural tables and U for urban tables.

The code numbers assigned to the states/union territories are as follows :-

0. ✓ All-India	14. ✓ Nagaland
1. Andhra Pradesh	15. Orissa
2. Assam	16. Punjab
3. Bihar	17. Rajasthan
4. Gujarat	18. Sikkim
5. Haryana	19. Tamil Nadu
6. Himachal Pradesh	20. ✓ Tripura
7. Jammu & Kashmir	21. Uttar Pradesh
8. Karnataka	22. West Bengal
9. Kerala	23. ✓ Andaman & Nicobar Islands
10. Madhya Pradesh	*24. Arunachal Pradesh
11. Maharashtra	25. Chandigarh
12. ✓ Manipur	26. Dadar & Nagar Haveli
13. Meghalaya	27. Delhi
	28. Goa, Daman & Diu
	29. ✓ Laksha-dweep
	30. Mizoram
	31. Pondicherry

* Arunachal Pradesh/ and Laksha-dweep are not represented in the present report as the estimates/ ^{for them} were not available.

4. ✓ SAMPLING DESIGN AND ESTIMATION PROCEDURE

4.1 Broad design : The sampling design adopted in the survey was a stratified two-stage one with census villages in the rural areas and NSSO urban frame survey blocks in the urban areas as first stage units and households as second stage units. The sample villages were selected with probability proportional to size and with replacement in the form of two independent interpenetrating samples (IPNS). Sample blocks were selected with equal probability also in the form of two IPNS. The sample households in the second stage (ten from each first stage unit) were selected circularly systematically after arranging all the households of the first stage units in a specified manner.

4.2 Survey period and sub-round formation : The survey was started in the month of January 1983 and was completed in December 1983. The entire survey period of one year was divided into four sub-rounds each of three months duration coinciding approximately with the four agricultural seasons. The four sub-round periods were :

- sub-round 1 : January - March 1983
- sub-round 2 : April - June 1983
- sub-round 3 : July - September 1983
- sub-round 4 : October - December 1983

The samples ^{units} were equally distributed over the four sub-rounds in a manner so as to provide equally valid estimates for each of the related sub-round period. *The averages based on the pooled data, taking all the four sub-rounds together, would be free from the effect of seasonality.*

4.3. Estimation procedure : The estimation procedure adopted in 38th round is based on a weighted sum of the sample values. Denoting by \hat{Y} the un-biased estimate of Y, (the state total of any variate) it is given by :

$$\hat{Y} = \sum_s \frac{P_s}{n_s} \sum_i \frac{D_{si} e_{si}}{P_{si}} \frac{H_{si}}{h_{si}} \sum_j y_{sij} \quad (1)$$

for the rural sector, and

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_i D_{si} \frac{H_{si}}{h_{si}} \sum_j y_{sij} \quad (2)$$

for the urban sector, where,

s i and j are suffixes for stratum, village/urban block and household respectively;

P_s , N_s and n_s give the stratum values of ~~selection~~ population, number of villages/blocks in frame and number of sample villages/blocks respectively;

D_{si} , e_{si} , P_{si} stand respectively for, number of hamlet-groups/sub-blocks formed, number of census villages contained in a larger revenue village actually surveyed and the ~~selection~~ population of the sample village;

H_{si} and h_{si} stand for the total number of households listed and number of sample households;

and finally y_{sij} is the observed value of the variate for a sample household.

Estimates of ratio ^{of} two characteristics is given by the ratio of the estimates of their aggregates.

5. SUMMARY OF FINDINGS

5.1 The detailed results of the survey have been given in the Appendix. In this section some important findings are presented to give a broad comparative picture of the consumption pattern of the households.

5.2 Pattern of consumer expenditure In what follows, the pattern of consumer expenditure has been studied under three different aspects. Firstly, the change in pattern over rounds at quinquennial intervals has been discussed followed by presenting a comparative picture of the total consumer expenditure by states. Lastly, the pattern of consumer expenditure at all India level under different monthly per capita expenditure classes has been studied for the current round.

(i) Consumer expenditure over time : The consumer expenditure on broad groups of items and their percentage to total consumer expenditure are presented in Tables (1) and (2) at all-India level, for the four NSS rounds 22, 27, 32 and 38. These four annual surveys were carried out during July '67 - June '68, October '72 - September '73, July '77 - June '78 and January - December 1983 respectively. The last three surveys were in the NSS quinquennial survey programme while the NSS 22nd round has been selected from the earlier annual NSS survey programme to demonstrate the improvement in consumer expenditure pattern at the end of successive quinquennia. On looking at these estimates, it is found that the expenditure of all the items have increased over the round*, beginning from the 22nd round for both the rural and urban areas, as may be expected due to the price-rise; in general. Thus the consumer expenditure on total food has risen from Rs.26 in 22nd round to Rs.32 in 27th round to Rs.44 in 32nd round to Rs.74 in 38th round in the rural areas. The corresponding rise in urban areas has been from Rs.30 in 22nd round to Rs.41 in 27th round to Rs.58 in 32nd round to Rs.97 in 38th round. In terms of percentage, there has been a substantial fall in the proportion of expenditure on cereals / ^{over} the 5 year range from 45 percent in 22nd round to 41 percent in 27th round to 33 percent in 32nd round to 32 percent in 38th round. The corresponding figures for urban areas are 25 percent, 23 percent, 21 percent and 19 percent. In the food group, the items attracting more expenditure are milk and milk products, pulses, vegetables and

Observed break in the trend for some items in NSS 32nd round might not be real. These results are provisional and require some basic checks and detailed scrutiny.

edible oil in both the rural and urban areas. It may be noted, however, that while, in general, there is a fall in percentage expenditure on the items of food; for vegetables, fruits and nuts and meat, fish and egg, there is rise in the percentage expenditure ^{over} ~~the~~ rounds. NSS 22nd and 27th rounds approximately centre round 1970 and the other two rounds around 1980. The results thus indicate a perceptible fall in the proportion of expenditure on cereals and total food from 1970 to 1980; it remained almost ~~the~~ same over the whole period for milk and milk products; and the proportion of expenditure on fuel and light, clothing, miscellaneous goods and services and on durable goods appear to have gone up during 1970 to 1980. These observed differentials over time need not necessarily be considered as real. The differentials in the movement in price of different commodities over time might have influenced their pattern.

(ii) Consumer expenditure over states : The total consumer expenditure for rural and urban areas separately is presented in Table (3) for the states and union territories. In the rural sector, states reporting very high consumer expenditure are Delhi (Rs.217.14) followed by Punjab (Rs.170.52), Goa, Daman & Diu (Rs.169.11), Andaman & Nicobar Islands (Rs.156.24) and Himachal Pradesh (Rs.150.81) against the national average of Rs.112.42. And those reporting very low expenditure are Dadra & Nagar Haveli (Rs.93.05), Bihar (Rs.93.75), Pondicherry (Rs.96.01), Orissa (Rs.98.75), Uttar Pradesh (Rs.104.49) and West Bengal (Rs.104.59). In the urban sector, states reporting high consumer expenditure are Chandigarh (Rs.288.30), Himachal Pradesh (Rs.258.62), Delhi (Rs.228.81), Sikkim (Rs.223.27) and Goa, Daman & Diu (Rs.222.45) against the national average of Rs.164.03. On the other hand, states where the total consumer expenditure is comparatively low are Uttar Pradesh (Rs.135.48), Manipur (Rs.138.25), Bihar (Rs.138.53), Madhya Pradesh (Rs.144.87) and Orissa (Rs.151.42).

Consumer expenditure

(iii) by monthly per capita expenditure classes : Consumer expenditure as percentage to ^{total} consumer expenditure by broad groups of items has been presented, at the all-India level, separately for the rural (Table 4) and urban (Table 5) areas. The average expenditure on food for these two areas are found to be 66 percent and 59 percent respectively. The percentage expenditure on cereals and salt and ~~a~~ spices is found to fall gradually with the rise in expenditure class. All other items of food show an increasing trend in

the beginning at least and in some cases fall after a certain expenditure level. The percentage expenditure on pulse, oil and vegetables show an increasing tendency upto the expenditure class 100-125 after which it gradually decreases. For other items like milk, meat, egg & fish; fruits and nuts and beverages & refreshments, the percentage expenditure goes on increasing with the rise in expenditure class. The same can also be said of sugar but for urban areas, its percentage share declines from the expenditure class 125-150.

For non-food items, the proportion of expenditure on clothing, miscellaneous goods and services and durable goods has an increasing trend throughout whereas for fuel and light, it is just the opposite. The percentage expenditure on intoxicants goes on increasing till it reaches the expenditure class of Rs. 50-60, after which it begins to fall in rural areas, but for the urban areas it shows a continuously decreasing trend.

The different patterns of percentage of expenditure on different consumed items over monthly per capita expenditure classes is generally due to the ^{variation in Engel} ~~variability of demand~~ elasticity of different commodities over expenditure classes. Demand being relatively inelastic for cereals and salt, their share to total expenditure should naturally decline. Similarly, one would spend more on less essential and luxury items if there is money to spare. The demand for such commodities would be highly elastic. The rising proportion of expenditure on miscellaneous goods and services and on durable goods, over expenditure classes clearly brings out this consumption behaviour and relatively higher elasticity of demand of those commodities.

5.3 Concentration ratio of total consumer expenditure : The concentration ratio of total consumer expenditure, for the calendar year 1983, at all India level, has been found to be 0.296 for rural and 0.325 for urban.
