प्राक्कथन

राष्ट्रीय प्रतिदर्श सर्वेक्षण (एनएसएस) के परिवार उपभोक्ता व्यय संबंधी सर्वेक्षण राष्ट्रीय तथा राज्य स्तर पर आबादी के अलग-अलग वर्गों के जीवन-स्तर के विभिन्न संकेतकों के बारे में आंकड़ों के बुनियादी स्रोत हैं। इन आंकड़ों का उपयोग नियोजन, नीति निर्माण एवं निर्णय में मदद के लिए किया जाता है तथा विभिन्न सरकारी संगठन, शिक्षाविद्, शोधकर्ता और विद्वान इनका उपयोग सांख्यिकी प्रक्रियाओं में इनपुट के रूप में करते हैं। परिवारों के बड़े प्रतिदर्श आकार के साथ परिवार उपभोक्ता व्यय संबंधी एनएसएस सर्वेक्षण, 27वें दौर (अक्टूबर 1972-सितम्बर 1973) से पंचवार्षिक आधार पर आयोजित किए जा रहे हैं। जुलाई 2009-जून 2010 के दौरान किया गया एनएसएस का 66वें दौर का सर्वेक्षण, इस श्रृंखला का आठवां पंचवार्षिक सर्वेक्षण था। इसमें (i) परिवार उपभोक्ता व्यय तथा (ii) रोजगार तथा बेरोजगारी विषयों को सम्मिलित किया गया था। इस सर्वेक्षण का क्षेत्र कार्य राष्ट्रीय प्रतिदर्श सर्वेक्षण कार्यालय (एनएसएसओ) के क्षेत्र संकार्य प्रभाग (एफओडी) द्वारा किया गया था जिसमें केन्द्रीय प्रतिदर्शों को सम्मिलित किया गया था। अधिकांश राज्य सरकारों ने भी समान प्रतिदर्श आकार के आधार पर इस सर्वेक्षण में सहभागिता की थी।

केन्द्रीय प्रतिदर्श के आधार पर, एनएसएसओ ने उपभोक्ता व्यय संबंधी पंचवार्षिक सर्वेक्षण के निष्कर्ष कई प्रतिवेदनों के रूप में प्रकाशित किए हैं। एनएसएसओ ने जुलाई 2011 में परिवार उपभोक्ता व्यय, 2009-2010 के मुख्य संकेतक जारी किए थे। इसके अलावा एनएसएस के 66वें दौर के सर्वेक्षण आंकड़ों के आधार पर परिवार उपभोक्ता व्यय के विभिन्न पहलुओं पर सात विस्तृत प्रतिवेदन जारी करने की योजना बनाई गई है। इन सात प्रतिवेदनों की श्रृंखला में प्रथम प्रतिवेदन 'उपभोक्ता व्यय का स्तर और पैटर्न 2009-2010' पहले ही जारी किया जा चुका है, जिसमें राष्ट्र तथा राज्य स्तरों पर परिवार उपभोक्ता व्यय के विभिन्न पहलुओं के संबंध में अनुमान दिए गए हैं। वर्तमान प्रतिवेदन इस श्रृंखला का दूसरा प्रतिवेदन है जिसमें भारतीय आबादी द्वारा खुराक के तौर पर लिए गए पोषक तत्वों के बारे में जानकारी दी गई है। इस प्रतिवेदन में, विभिन्न पोषक तत्वों में से केवल तीन पोषक तत्वों कैलोरी, प्रोटीन और वसा की चर्चा की गई है। प्रतिवेदन में मासिक प्रतिव्यक्ति व्यय के आधार पर वर्गीकृत विभिन्न श्रेणियों में विभिन्न खाद्य वस्तुओं से इन पोषक तत्वों की खुराक के बारे में एक झलक प्रस्तुत की गई है। इस प्रतिवेदन में यह भी जानकारी दी गई है कि भोजन घर में लिया गया अथवा नहीं, और यदि घर में नहीं लिया गया तो क्या भोजन विद्यालय, बालवाड़ी, नियोक्ता से प्राप्त किया गया अथवा घर से बाहर रहने की स्थिति में खरीदकर उपभोग किया गया। राज्य/संघ राज्य क्षेत्र स्तर पर ग्रामीण तथा शहरी क्षेत्रों के लिए इस प्रतिवेदन में अलग-अलग अनुमान प्रस्तुत किए गए हैं। इस प्रतिवेदन में छह अध्याय और चार परिशिष्ट हैं। इस प्रतिवेदन में अनुमानों से संबंधित मुख्य निष्कर्ष अध्याय तीन से पांच में प्रस्तुत किए गए हैं। चूंकि यह प्रतिवेदन काफी बड़ा है, परिशिष्ट तालिकाएं इस प्रतिवेदन के साथ एक सीडी में दी गई हैं।

एनएसएसओ के विभिन्न प्रभागों द्वारा विभिन्न कार्यकलापों के बेहतरीन नियोजन और निष्पादन तथा एनएसएसओ के सहायक अधिकारियों और स्टाफ की कठिन मेहनत से यह प्रतिवेदन वर्तमान रूप में संभव हो सका है। दिल्ली स्कूल ऑफ इकानामिक्स के सेवानिवृत्त प्रोफेसर के. सुन्दरम और भारतीय सांख्यिकी संस्थान के सेवानिवृत्त प्रोफेसर डी. कुन्डू ने प्रतिवेदन के मसौदे की समीक्षा की है और इसमें सुधार के लिए उपयोगी सलाह और सुझाव दिए हैं, मैं इसके लिए उनका आभारी हूँ।

आशा है कि यह प्रतिवेदन योजनाकारों, नीतिनिर्माताओं, शोधकर्ताओं तथा अन्य निर्णय-कर्ताओं के लिए उपयोगी होगा।

Preface

The Household Consumer Expenditure Surveys of National Sample Survey (NSS) are the primary source of data on various indicators of level of living of different segments of the population at National and State levels. These are used for planning, policy formulation, decision support and as input for further statistical exercises by various Government organizations, academicians, researchers and scholars. NSS surveys on Household Consumer Expenditure with large sample size of households have been conducted quinquennially from 27th round (October 1972 – September 1973) onwards. The NSS 66th round carried out during July 2009 – June 2010 was the eighth quinquennial round in the series, covering subjects of (i) Household Consumer Expenditure and (ii) Employment and Unemployment. Field work of this survey was carried out by the Field Operations Division (FOD) of National Sample Survey Office (NSSO) in which the central samples were covered. Most of the State Governments also participated in the survey on matching sample size basis.

Based on the central sample, the results of quinquennial surveys of Consumer Expenditure are brought out by NSSO in a number of reports. The NSSO released the *Key Indicators of Household Consumer Expenditure in India, 2009-10* in July 2011. Apart from this, seven detailed reports are planned to be released on varied aspects of household consumer expenditure based on NSS 66th round data. The first report '*Level and Pattern of Consumer Expenditure 2009-10*', the first in the series of seven reports, presenting the estimates pertaining to various facets of household consumer expenditure at National and State levels has already been released. The present report, the second in the series, presents the information on nutritional intake by the Indian population. Among the different nutrients only three nutrients – viz. calorie, protein and fat – are discussed in this report. The report gives an idea about intake of these nutrients in different monthly per capita expenditure classes from different items of food. The report also presents information on whether meals were taken at home or not, and if not, whether the meals were taken from school, balwadi, employer or consumed by purchasing while away from home. Estimates are presented at the level of State/UT, separately for rural and urban sectors. This report contains six Chapters and four Appendices. The main findings relating to the estimates given in this report are presented in Chapters Three to Five. Since the report is voluminous, the Appendix Tables are given in a CD along with the report.

This report in its present form has been possible because of the efforts made by different Divisions of NSSO in meticulous planning and execution of various activities involved and the hard work done by the supporting officials and staff of NSSO. I thank Prof. K. Sundaram, Retd. Professor of Delhi School of Economics and Prof. D. Coondoo, Retd. Professor of Indian Statistical Institute who reviewed the draft report and provided valuable comments and suggestions for improvement.

It is hoped, this report will be found useful by the planners, policy makers, researchers and other decision makers.

मुख्य बातें

यह प्रतिवेदन (रिपोर्ट) 2009-10 के दौरान पूरे देश में फैले हुए 5263 नगरीय खण्डों एवं 7428 ग्रामों से एकत्र किये गये सूचनाओं पर आधारित है। उपभोग (खपत) पर सूचना एकत्र करने के लिए दो भिन्न अनुसूचियों को प्रयोग में लाया गया, पहले में 100855 परिवारों से और दूसरे में 100794 परिवारों से सूचना संग्रह किया गया।

आहार ऊर्जा अन्तर्ग्रहण (अनुसूची टाइप-2 पर आधारित)

- औसत आहार ऊर्जा अन्तर्ग्रहण प्रति व्यक्ति प्रतिदिन ग्रामीण भारत के लिए 2147 Kcal (कि. कैलोरी) एवं नगरीय भारत के लिए 2123 Kcal था। सभी प्रधान राज्यों के ग्रामीण/नगरीय क्षेत्र में प्रतिव्यक्ति कैलोरी अन्तर्ग्रहण अखिल भारतीय ग्रामीण/नगरीय औसत के + या - 10% के अन्दर था।
- प्रत्येक क्षेत्र में औसत कैलोरी अन्तर्ग्रहण प्रति व्यक्ति उपभोक्ता व्यय (एमपीसीई) वर्ग के साथ अविरत रूप से बढ़ा। निचले दशक वर्ग (एमपीसीई स्तर द्वारा निर्धारित क्रम से 10% निर्धनतम लोग) और दूसरा दशक वर्ग (दूसरा 10%) के बीच प्रति व्यक्ति कैलोरी अन्तर्ग्रहण का अन्तर नगरीय भारत में था 189 Kcal एवं ग्रामीण भारत में 176 Kcal।
- निचले दशक वर्ग के परिवारों में प्रतिदिन प्रति उपभोक्ता यूनिट 2160 Kcal (2700 Kcal, रा.प्र.स. सारणीयन में तुलना के लिए प्रयुक्त एक अन्तर्ग्रहण मात्रा का 80%) के नीचे कैलोरी अन्तर्ग्रहण 62% ग्रामीण एवं 63% नगरीय परिवारों में देखा गया। यह अनुपात एमपीसीई स्तर के साथ उत्तरोत्तर गिरा। दूसरे दशक वर्ग में यह अनुपात ग्रामीण क्षेत्र में करीब 42.5% और नगरीय क्षेत्र में 45% था। सर्वोच्च एमपीसीई स्तर में इस प्रकार परिवार का अनुपात मात्र 2.5% के करीब था।
- अनाज द्वारा अभिदत्त (देय) ऊर्जा अन्तर्ग्रहण का हिस्सा ग्रामीण भारत के लिए करीब 60% एवं नगरीय भारत के लिए करीब 50% था। अनाजों का हिस्सा प्रधान राज्यों के ग्रामीण क्षेत्र में 46-48% (पंजाब, केरल और हरियाणा) से 70% (उड़ीसा एवं आसाम) और नगरीय क्षेत्र में 43-44% (पंजाब, केरल और गुजरात) से 62-63% (उड़ीसा, आसाम और बिहार) के बीच रहा।
- कैलोरी अन्तर्ग्रहण में अनाजों (खाद्यान) का अंश ग्रामीण भारत में जनसंख्या के निचले दशक वर्ग में 73% से उच्च दशक वर्ग में 47% तक और नगरीय भारत में 66% से करीब 35% तक उत्तरोत्तर गिरता हुआ देखा गया।
- ग्रामीण भारत में करीब 40% कैलोरी अन्तर्ग्रहण अनाजेतर खाद्य ने दिया। कैलोरी अन्तर्ग्रहण के इस भाग का प्रतिशत विवरण क्रमशः- तेल एवं वसा: 23%, विविध खाद्य, खाद्य उत्पाद एवं पेय: 20%, दुग्ध एवं दुग्ध उत्पाद: 16%, चीनी एवं मधु: 11%, दाल, दृढपत (नट्स) एवं तेलहन: 11%, जड़-मूल एवं कंद (ट्यूबर): 9%, सब्जियाँ एवं फल: 7% माँस, अंडा एवं मछली: 3%।
- अनाजेतर खाद्य ने नगरीय भारत में करीब 50% कैलोरी अन्तर्ग्रहण दिया। कैलोरी अन्तर्ग्रहण के इस भाग का प्रतिशत विवरण ग्रामीण भारत के समान था, यद्यपि जड़ मूल एवं कंद का हिस्सा (6%) स्पष्टतः कम था।

- अनाजेतर खाद्य से कैलोरी अन्तर्ग्रहण का प्रतिशत विवरण राज्यों के नगरीय क्षेत्र की तुलना में ग्रामीण क्षेत्र में अधिक वैभिन्न्य देखा गया। दुग्ध एवं दुग्ध उत्पादों का हिस्सा (अनाजेतर खाद्य से कैलोरी अन्तर्ग्रहण) में सभी प्रमुख राज्यों के नगरीय क्षेत्र में 9% और 27% के बीच था। लेकिन ग्रामीण क्षेत्र में इसका वैभिन्न्य 4% से 37% के बीच था, जबकि चार प्रधान राज्यों में 8% या उससे कम और तीन प्रधान राज्यों में 30% से अधिक था।
- अनाजेतर खाद्य से कैलोरी अन्तर्ग्रहण में समृद्धतर राज्यों में “चीनी एवं मधु” का सामान्यतः अधिक भाग था जबकि “जड़-मूल एवं कंद” और “सब्जियां एवं फलों” का भाग कम समृद्ध राज्यों जैसे बिहार, झारखंड, असम, ऊड़ीसा एवं पश्चिम बंगाल में अधिक था।

प्रोटीन एवं वसा का अन्तर्ग्रहण (अनुसूची टाइप-2 पर आधारित)

- अखिल भारतीय स्तर पर प्रोटीन का प्रति व्यक्ति दैनिक अन्तर्ग्रहण करीब 59 ग्राम था। प्रति उपभोक्ता युनिट दैनिक प्रोटीन अन्तर्ग्रहण ग्रामीण क्षेत्र में करीब 73 ग्राम एवं नगरीय क्षेत्र में 72 ग्राम था।
- प्रधान राज्यों के लिए अर्न्तराज्य वैभिन्न्य की रेंज ग्रामीण क्षेत्र में प्रति व्यक्ति प्रतिदिन 48.8 ग्राम से 71.4 ग्राम था, जो कि नगरीय क्षेत्र से, जहाँ यह 54.6 ग्राम और 64.5 ग्राम के बीच था, बहुत ज्यादा है।
- कुछ कम समृद्ध राज्यों जैसे झारखंड, छत्तीसगढ़, बिहार, और असम में प्रति व्यक्ति दैनिक प्रोटीन अन्तर्ग्रहण नगरीय क्षेत्र की तुलना में ग्रामीण क्षेत्र में स्पष्टतः कम था। दूसरी तरफ उच्च स्तरीय प्रोटीन अन्तर्ग्रहण वाले राज्यों- यथा राजस्थान, हरियाना और पंजाब- के ग्रामीण क्षेत्र में नगरीय क्षेत्र से अधिक प्रोटीन अन्तर्ग्रहण था।
- प्रतिव्यक्ति दैनिक औसत प्रोटीन अन्तर्ग्रहण ग्रामीण क्षेत्र में निम्नतम एमपीसीई दशक वर्ग में 43 ग्राम से सर्वोच्च दशक वर्ग में 82 ग्राम और नगरीय क्षेत्र में निम्नतम एमपीसीई दशक वर्ग में 44 ग्राम से सर्वोच्च में 78.5 ग्राम तक अविरत रूप से बढ़ता हुआ देखा गया।
- प्रोटीन अन्तर्ग्रहण में अनाजों का हिस्सा ग्रामीण भारत के लिए 60% एवं नगरीय भारत के लिए 51% था।
- प्रोटीन अन्तर्ग्रहण में दुग्ध एवं दुग्ध उत्पादों का हिस्सा ग्रामीण भारत में 9% और नगरीय भारत में 13% था। यह हरियाना में (ग्रामीण 25%; नगरीय: 20%) पंजाब में (ग्रामीण: 23% नगरीय: 22%), राजस्थान में (ग्रामीण: 18% नगरीय: 17%) और गुजरात में (ग्रामीण: 15%, नगरीय: 16%) राष्ट्रीय औसत से स्पष्टतः ऊपर था। सभी अन्य बड़े राज्यों में दुग्ध एवं दुग्ध उत्पादों ने ग्रामीण क्षेत्र में 10% या कम और नगरीय क्षेत्र में 12% या कम प्रोटीन अन्तर्ग्रहण दिया।
- प्रोटीन अन्तर्ग्रहण में माँस, मछली एवं अंडा का हिस्सा ग्रामीण भारत में मात्र 6% और नगरीय भारत में 8% था। केवल पाँच बड़े राज्यों में 10% या अधिक हिस्सा था: केरल (ग्रामीण एवं नगरीय दोनों के लिए 24%) पश्चिम बंगाल (ग्रामीण: 14%, नगरीय: 18%) असम (ग्रामीण:

12%; नगरीय: 16%) आंध्र प्रदेश (ग्रामीण: 10%; नगरीय: 11%) और तमिलनाडु (ग्रामीण एवं नगरीय दोनों के लिए 10%) ।

- प्रोटीन अन्तर्ग्रहण में अनाजों का अंश ग्रामीण भारत के निम्नतम दशक वर्ग में 73% से उच्चतम में 47% और नगरीय भारत में 69% से 36% तक अविरत रूप से गिरता हुआ देखा गया । दूसरी तरफ दुग्ध एवं दुग्ध उत्पादों से प्रोटीन अन्तर्ग्रहण ग्रामीण क्षेत्र में निम्नतम दशक वर्ग में 3% से उच्चतम में 15% तक और नगरीय क्षेत्र में 5% से 18% तक बढ़ता हुआ देखा गया ।
- पूरे देश के लिए औसत वसा प्रति व्यक्ति प्रतिदिन अन्तर्ग्रहण ग्रामीण क्षेत्र में करीब 43 ग्राम और नगरीय क्षेत्र में 53 ग्राम था । खासकर ग्रामीण भारत में अन्तर्राज्य वैभिन्न्य काफी था, जहाँ 17 प्रधान राज्यों में से 6 का प्रतिव्यक्ति अन्तर्ग्रहण प्रतिदिन 33 ग्राम से कम था जबकि 4 अन्य प्रधान राज्यों में 60 ग्राम से अधिक औसत अन्तर्ग्रहण था ।
- नगरीय क्षेत्र के सर्वोच्च दशक वर्ग में प्रति व्यक्ति वसा अन्तर्ग्रहण 83 ग्राम से अधिक था जो कि निम्नतम दशक वर्ग का अन्तर्ग्रहण (करीब 27 ग्राम) से तीन गुना अधिक जबकि ग्रामीण क्षेत्र में उच्च दशक वर्ग का अन्तर्ग्रहण 78.4 ग्राम था जो कि निचले वर्ग (21.4 ग्राम) से करीब चार गुना ज्यादा था ।
- अखिल भारतीय स्तर पर औसत नगरीय वसा अन्तर्ग्रहण सभी दशक वर्गों में ग्रामीण अन्तर्ग्रहण से स्पष्टतः ज्यादा था । प्रति व्यक्ति वसा अन्तर्ग्रहण ग्रामीण दशक वर्ग और तत्समान नगरीय दशक वर्ग के बीच अन्तर 4-8वें दशक वर्गों में 10-12.5 ग्राम और 9वें दशक वर्ग में 15 ग्राम से अधिक था ।

अन्तर्ग्रहण में परिवर्तन (अनुसूची टाइप 1 पर आधारित)

- 66वां दौर सहित उपभोक्ता व्यय पर छः पंचवार्षिक सर्वेक्षणों से निर्मित अनुमान भारत और प्रधान राज्यों में औसत कैलोरी अन्तर्ग्रहण 1972-73 और 2009-10 के बीच में गिरता हुआ दिखाया: ग्रामीण भारत के लिए कुल ह्रास प्रयाप्त रूप से नगरीय भारत से अधिक था । यह गिरावट 1993-94 (50वाँ दौर) से तीव्रतर देखी जा रही है, खासकर नगरीय क्षेत्र में ।
- प्रतिदिन प्रति उपभोक्ता यूनिट 2700 Kcal के नीचे कैलोरी अन्तर्ग्रहणकारी परिवारों का अनुपात 1993-94 से अविरत रूप से बढ़ा है:- ग्रामीण भारत में 52% से करीब 62% और नगरीय भारत में 57% से करीब 63% ।
- कुल कैलोरी अन्तर्ग्रहण में अनाजों का हिस्सा 1993-94 से ग्रामीण क्षेत्र में करीब 7 प्रतिशत पाइन्ट्स और नगरीय क्षेत्र में 3½ प्रतिशत पाइन्ट्स गिरा है । तेल एवं वसा का हिस्सा दोनों क्षेत्रों में 3 प्रतिशत पाइन्ट्स बढ़ा है । दुग्ध एवं दुग्ध उत्पादों का हिस्सा नगरीय क्षेत्र में करीब 1.4 प्रतिशत पाइन्ट्स बढ़ गया है, लेकिन ग्रामीण में 0.6 प्रतिशत पाइन्ट ही बढ़ा है ।

- अखिल भारतीय स्तर पर 1993-94 से 2009-10 तक ग्रामीण क्षेत्र में प्रोटीन अन्तर्ग्रहण प्रति व्यक्ति प्रतिदिन 60.2 ग्राम से 55.0 ग्राम और नगरीय क्षेत्र में 57.2 ग्रा. से 53.5 ग्राम गिरा है । यह गिरावट ज्यादातर प्रधान राज्यों में हुई है, लेकिन सबसे तेज हुई है राजस्थान, हरियाना, उत्तर प्रदेश और पंजाब के ग्रामीण क्षेत्रों में, जहाँ अन्तर्ग्रहण 9-12 ग्राम गिरा है ।
- दूसरी तरफ वसा अन्तर्ग्रहण के मामले में बढ़ने की प्रवृत्ति है - हर प्रधान राज्य में वृद्धि प्रतीत है, यद्यपि इसकी मात्रा विभिन्न है । अखिल भारतीय स्तर पर ग्रामीण क्षेत्र के लिए वसा अन्तर्ग्रहण 1993-94 में प्रतिदिन प्रतिव्यक्ति 31.4 ग्राम से 2009-10 में 38.3 ग्राम हुआ है - 16 वर्ष की अवधि में 7 ग्राम की वृद्धि - और नगरीय क्षेत्र के लिए 42.0 ग्राम से 47.9 ग्राम - उसी अवधि में 6 ग्राम की वृद्धि ।
- 1993-94 और 2009-10 के बीच प्रोटीन अन्तर्ग्रहण में अनाजों का अंश ग्रामीण भारत में करीब 4½ प्रतिशत पाइन्ट्स और नगरीय भारत में 3 प्रतिशत पाइन्ट्स गिरा है । दाल के अंश में हल्की गिरावट हुई । ग्रामीण क्षेत्र में “अन्य खाद्य” प्रवर्ग के अंश में 3½ प्रतिशत पाइन्ट्स से अधिक वृद्धि हुई है और “दुग्ध एवं दुग्ध उत्पादों” के अंश में भी 1 प्रतिशत पाइन्ट की वृद्धि हुई। नगरीय क्षेत्र में “दुग्ध एवं दुग्ध उत्पादों” का हिस्सा 2 प्रतिशत पाइन्ट्स की वृद्धि देखी है ।

Highlights

The report is based on information collected during 2009-10 from 7428 villages and 5263 urban blocks spread over the entire country. Two different schedules were used to collect information on consumption, the first being canvassed in 100855 households and the second in 100794 households.

INTAKE OF DIETARY ENERGY (based on Sch. Type 2)

● Average dietary energy intake per person per day was 2147 Kcal for rural India and 2123 Kcal for urban India. All the major States had per capita rural/urban levels of calorie intake within + or -10% of the all-India rural/urban average.

● In each sector average calorie intake increased steadily with monthly per capita expenditure (MPCE) class. The difference between the bottom decile class (poorest 10% of population ranked by MPCE level) and the next decile class (the next 10%) in per capita calorie intake was as high as 189 Kcal in urban India and 176 Kcal in rural India.

● The proportion of households with calorie intake below 2160 Kcal *per consumer unit* per day (80% of 2700 Kcal, a level used in NSS tabulation for comparisons) was 62% for rural and 63% for urban households in the bottom decile class. The proportion declined progressively with MPCE level. In the next decile class, it was about 42.5% in the rural sector and 45% in the urban sector. The proportion was only about 2.5% for the top 10% of population ranked by MPCE.

● The share of energy intake contributed by cereals was about 60% for rural India and about 50% for urban India. The share of cereals varied across the major States from 46-48% (Punjab, Kerala and Haryana) to 70% (Orissa and Assam) in the rural sector and from 43-44% (Punjab, Kerala and Gujarat) to 62-63% (Orissa, Assam and Bihar) in the urban sector.

● The contribution of cereals to calorie intake was seen to fall progressively with rise in MPCE level, from 73% in the bottom decile class of population to 47% in the top decile class in rural India, and from 66% to about 35% in urban India.

● Non-cereal food contributed about 40% of calorie intake in rural India. The percentage break-up of this part of calorie intake (the part coming from non-cereal food) was: oils and fats: 23%; miscellaneous food, food products and beverages: 20%; milk and milk products: 16%; sugar and honey: 11%; pulses, nuts and oilseeds: 11%; roots and tubers: 9%; vegetables and fruits: 7%; meat, eggs & fish: 3%.

● Non-cereal food contributed about 50% of calorie intake in urban India. The percentage break-up of this part of calorie intake was similar to that in rural India, though the share of roots and tubers was noticeably lower at 6%.

● The percentage break-up of calorie intake from non-cereal food varied more across the rural sectors of States than across the urban sectors. The share of “milk and milk products” in calorie intake from non-cereal food was between 9% and 27% in the urban

sector of all the major States, but ranged from 4% to 37% in the rural sector, being 8% or less in 4 major States, and over 30% in 3 major States.

● “Sugar and honey” generally had a higher contribution to calorie intake from non-cereal food in States with higher average levels of living, while “roots and tubers”, and also “vegetables and fruits”, had a larger share in poorer States such as Bihar, Jharkhand, Assam, Orissa and West Bengal.

INTAKE OF PROTEIN AND FAT (based on Sch. Type 2)

● At the all-India level protein intake per day was about 59g per capita for both rural and urban sectors. Protein intake per consumer unit per day was about 73g in the rural sector and 72g in the urban.

● The range of inter-State variation for major States was from 48.8g per capita per day to 71.4g in the rural sector – much wider than in the urban sector, where it was between 54.6g and 64.5g.

● In some of the poorer States, protein intake per person per day was markedly lower in the rural sector than in the urban sector, as in Jharkhand, Chhattisgarh, Bihar and Assam. On the other hand, in the States with the highest levels of protein intake, viz., Rajasthan, Haryana and Punjab, the rural population had higher protein intake than the urban.

● Average protein intake per capita per day was seen to rise steadily with MPCE level – from 43g in the lowest MPCE decile class to 82g in the top decile class in rural India, and from 44g in the lowest decile class to 78.5g in the highest in urban India.

● The share of cereals in protein intake was 60% for rural and 51% for urban India.

● The share of milk and milk products in protein intake was 9% in rural India and 13% in urban India. It was noticeably above the national average in Haryana (rural: 25%; urban: 20%), Punjab (rural: 23%; urban: 22%), Rajasthan (rural: 18%; urban: 17%), and Gujarat (rural: 15%; urban: 16%). In all other major States, milk and milk products contributed 10% or less to protein intake in the rural sector and 12% or less in the urban sector.

● The share of meat, fish and egg in protein intake was only 6% in rural India and 8% in urban India. The share was 10% or more in only 5 major States: Kerala (24% for both rural and urban), West Bengal (rural: 14%; urban: 18%), Assam (rural: 12%; urban: 16%), Andhra Pradesh (rural: 10%; urban: 11%) and Tamil Nadu (10% for both rural and urban).

● The contribution of cereals to protein intake was seen to fall steadily from 73% in the lowest decile class to 47% in the highest in rural India and from 69% to 36% in urban India. On the other hand, the contribution of milk and milk products to protein intake was seen to rise from 3% in the lowest decile class to 15% in the highest in the rural sector and from 5% to 18% in the urban sector.

● Average fat intake for the country as a whole was about 43g per person per day in the rural sector and 53g in the urban sector. Considerable inter-State variation existed, especially

in rural India, where 6 out of 17 major States had an average per capita intake less than 33g per day while 4 other major States had an average intake of more than 60g.

● Per capita fat intake in the top decile class of the urban sector was slightly over 83g, more than three times that in the lowest decile class (about 27g), while in the rural sector the intake of the top decile class, at 78.4g, was nearly four times higher that of the bottom class (21.4g).

● At all-India level, average urban fat intake was noticeably higher than rural intake in all the decile classes. The difference in per capita fat intake between a rural decile class and the corresponding urban decile class was as much as 10-12.5g in decile classes 4 to 8, and over 15g in the 9th decile class.

TRENDS IN NUTRITIONAL INTAKE (based on Sch. Type 1)

● Estimates of average calorie intake for India and the major States from six quinquennial surveys of consumer expenditure including the 66th round show a decline in average calorie intake between 1972-73 and 2009-10. The overall decline is substantially greater for rural than for urban India, and appears to have been sharper in the period since 1993-94 (50th round), especially in the urban sector.

● The proportion of households with calorie intake below the level of 2700 Kcal *per consumer unit* per day has grown more or less steadily since 1993-94: from under 52% in rural India to nearly 62%, and from 57% in urban India to about 63%.

● The share of cereals in total calorie intake has declined since 1993-94 by nearly 7 percentage points in the rural sector and about 3½ percentage points in the urban. The share of oils and fats has risen by 3 percentage points in both sectors. The share of milk and milk products has grown by about 1.4 percentage points in the urban sector but only 0.6 percentage points in the rural.

● At the all-India level protein intake has fallen from 60.2g to 55.0g per person per day in the rural sector and from 57.2g to 53.5g in the urban sector over the period 1993-94 to 2009-10. The decline has taken place in most major States but has been sharpest in rural areas of Rajasthan, Haryana, Uttar Pradesh and Punjab – where intake has fallen by 9-12g.

● In case of fat intake, on the other hand, there is a rising trend, with every major State showing an increase, though the extent varies. At all-India level the increase has been from 31.4g per person per day in 1993-94 for the rural population to 38.3g in 2009-10 – a rise of 7g over the 16-year period, and from 42.0g to 47.9g for the urban – a rise of 6g over the same period.

● Between 1993-94 and 2009-10, the contribution of cereals to protein intake has fallen by about 4½ percentage points in rural India and by 3 percentage points in urban India. The contribution of pulses appears to have undergone a slight fall in both rural and urban sectors. In the rural sector there has been an increase of about 3½ percentage points in the contribution of the “other food” category, and also a rise of 1 percentage point in the contribution of “milk and milk products”. In the urban sector, the share of “milk and milk products” has seen a rise of 2 percentage points.

4.	Intake of Protein and Fat	28
4.1	Average protein intake: States and all-India	28
4.2	Average protein intake: variation with level of living	29
4.3	Percentage break-up of protein intake by food category: States and all-India	30
4.4	Percentage break-up of protein intake by food category: variation with level of living	31
4.5	Average fat intake: States and all-India	32
4.6	Average fat intake: variation with level of living	33

Chapter Five

5.	Trends in Nutritional Intake	35
5.1	Trends in average calorie intake: States and all-India	35
5.2	Trends in distribution of persons by calorie intake level: all-India	36
5.3	Trends in percentage break-up of calorie intake by food group: all-India	37
5.4	Trends in average protein and fat intake: States and all-India	38
5.5	Trends in break-up of protein intake by food category: all-India	39

Chapter Six

6.	A Note on the Sources of Meals Consumed	41
-----------	--	-----------

Summary Statements

1(A/B/C)	Average number of meals consumed per household at home and obtained elsewhere on payment or free from specific sources (as perquisite, from school, etc.) during a period of 30 days for each decile class of MPCE	43-45
2(A/B)	Average no. of meals consumed per person at home and obtained elsewhere on payment or free from specific sources (as perquisite, from school, etc.) during a period of 30 days by age and sex	46-47
2S	State-wise average no. of meals consumed per person at home and obtained elsewhere on payment or free during a period of 30 days by sex	48
3(A/B/C)	Per capita and per consumer unit intake of calorie, protein and fat per day in each decile class of MPCE	49-51
3S	State-wise per capita and per consumer unit intake of calorie, protein and fat per day	52
4(A/B/C)	Percentage of total intake of calorie and protein derived from different groups of food items for households in each decile class of MPCE	53-55
4S	State-wise percentage of total intake of calorie and protein derived from different groups of food items	56
5(A/B)	Percentage break-up of calorie intake over different food groups, and average intake of calorie, protein and fat per consumer unit per day, separately for households in different ranges of calorie intake (per consumer unit per day)	57-58
5S	State-wise percentage break-up of calorie intake over different food groups, and average intake of calorie, protein and fat per consumer unit per day	59-60
6(A/B/C)	Per 1000 break-up of households by level of calorie intake (per consumer unit per day) for each decile class of MPCE	61-63
6S	State-wise per 1000 break-up of households by level of calorie intake (per consumer unit per day)	64
7(A/B/C)	Per 1000 break-up of persons by level of household calorie intake (per consumer unit) for each decile class of MPCE	65-67
7S	State-wise per 1000 break-up of persons by level of household calorie intake (per consumer unit per day)	68
8	Per 1000 break-up of households by adjusted level of calorie intake per consumer unit per day by reported calorie intake level per consumer unit per day	69
9	Changes in average per capita intake of calorie, protein and fat per day over NSS rounds: major States	70-71

Chapter One

Introduction

1.1 Nutritional intake and its measurement from NSS survey data

1.1.1 Unlike plants, which can manufacture the foods they need from simple chemicals derived from the soil, from water and from the carbon dioxide in the air, higher organisms, including man, do not possess this capacity to manufacture food from simple chemicals and depend on plants or other animals for obtaining the food that they need. Man, however, has access to a very wide range of foods to choose from in deciding his diet. While satisfaction of hunger and palatability, subject to purchasing power, and guided by cultural traditions, are the usual factors which determine a person's choice of food, not all human beings are able to meet the dietary requirements for sustaining a healthy and active life. It is necessary, therefore, particularly in populations of developing countries that include a sizeable group who are economically deprived, to constantly monitor the nutritional intake of the people. Household surveys on consumption and consumer expenditure which collect quantitative information on the entire range of foods consumed by a household provide an opportunity to study various aspects of the nutritional intake of the population covered by the survey.

1.1.2 The main consumer expenditure surveys of the National Sample Survey Office (see next section) are conducted quinquennially with the principal objective of obtaining estimates of household monthly per capita consumer expenditure (MPCE), its distribution over households and persons, and its break-up by commodity group, at national and State level. In addition to recording consumer expenditure, the schedule of enquiry used for the survey records quantities of various items of consumption, in particular, of each food item consumed by the household during the reference period. This information on quantities of food consumed by different households enables the measurement of energy, protein and fat consumed by each surveyed household, and the estimation of household per capita intake of each of these nutrients and its distribution over households and persons. The tabulation of data on nutritional intake (though restricted to intake of energy, protein and fat) and its release in the form of a special report on nutrition has become a regular feature of the quinquennial consumer expenditure surveys.¹

1.1.3 The last three NSS reports on nutritional intake in India have been those based on NSS's 50th round (1993-94), 55th round (1999-2000) and 61st round (2004-05) surveys. The present is based on the consumer expenditure survey of the 66th round (2009-10).

1.2 The survey and its objective

1.2.1 The National Sample Survey Office (NSSO) of the National Statistical Organisation, Government of India, conducts nationwide household consumer expenditure surveys at

¹ It is worth noting, however, that the survey itself is aimed at obtaining data on household consumer expenditure and is not specially designed to serve the needs of a nutrition survey.

regular intervals as part of its “rounds”, each round normally of a year’s duration. These surveys are conducted through interviews of a representative sample of households selected randomly through a scientific design and cover almost the entire geographical area of the country.

1.2.2 The household consumer expenditure survey (CES) is generally conducted as one of the main subjects of the NSS survey at quinquennial intervals. This provides a series of CES’s. The 66th round survey (July 2009 - June 2010) was the eighth such survey of this quinquennial series, the seventh having been conducted during the 61st round (July 2004 - June 2005). Key indicators on household consumption in India during 2009-10 based on this survey have already been released².

1.2.3 The NSS consumer expenditure survey (CES) aims at generating estimates of average household monthly per capita consumer expenditure (MPCE), its distribution over households and persons, and its break-up by commodity group, at national and State/UT level, and for different socio-economic groups. These indicators are amongst the most important measures of the level of living of the respective domains of the population, and are used extensively for the study of poverty and inequality. Other uses of the CES include the use of budget shares as revealed by the NSS CES to prepare the weighting diagram for official compilation of consumer price indices (CPIs), and the measurement of elasticity or responsiveness of demand to change in total expenditure. And (as in this report) the data on quantities of consumption of different food items are used to study the level of nutrition – in terms of energy, protein and fat intake – of population of different regions and disparities therein, and trends in nutritional intake over time.

1.3 Reports of the 66th round CES

1.3.1 The results of NSS rounds are released in reports based on comprehensive tabulation of subject parameters and indicators in various cross-classifications generated from the data. Corresponding to NSS 66th round quinquennial survey on household consumer expenditure, the results are planned for release in seven reports. The tentative titles of these reports are:

1. Level and Pattern of Consumer Expenditure, 2009-10
2. Household Consumption of Various Goods and Services in India, 2009-10
3. Public Distribution System and Other Sources of Household Consumption, 2009-10
4. Energy Sources of Indian Households for Cooking and Lighting, 2009-10
5. Nutritional Intake in India, 2009-10
6. Household Consumer Expenditure across Socio-Economic Groups, 2009-10
7. Perceived Adequacy of Food Consumption in Indian Households, 2009-10

1.4 Contents of this report

1.4.1 The present report is concerned with the levels of calorie, protein and fat intake in India and their variation across States/UTs and with level of living. Both averages and

² NSS KI (66/1.0): Key Indicators of Household Consumer Expenditure in India, 2009-2010, July 2011

distributions of calorie intake over households and persons are discussed. The contributions of different food groups to calorie and protein intake is also examined. Following the present introductory chapter, Chapter Two explains the concepts, definitions and procedures of data collection and tabulation that are relevant to the study of nutritional intake. Chapter Three presents the salient findings on intake of dietary energy or calorie intake. Chapter Four presents estimates of protein and fat intake. Trends in calorie, protein and fat intake as revealed by the NSS surveys from 1972-73 onwards are examined in Chapter Five. Chapter Six discusses the sources from which meals were received apart from meals prepared at home. This is followed by some statements generated from the detailed tables for purposes of ready reference, and a statement showing trends in nutrient intake over the years. Appendix A appears in the CD enclosed with the report and gives the detailed tables generated from the survey data. Appendix B explains in detail the sample design and estimation procedure followed. In order to facilitate computation of the absolute figures of aggregate consumption of nutrients by the population, the projected populations at the mid-year reference 1st January 2010 based on the population projections by the Registrar-General of India are provided in Appendix C. (Note that the RG's projection pre-date the release of the *provisional* results of the 2011 Population Census.) Appendix D consists of the schedules of enquiry (Schedule 1.0, Type 1 and Type 2) that were canvassed in the surveyed households.

1.4.2 The detailed State-sectorwise and all-India-sectorwise tables presented in Appendix A of this report relate to 2009-10. They give

- Per capita and per consumer unit calorie, protein and fat per day for different decile classes of MPCE
- Distribution of households and persons by level of household calorie intake per consumer unit per day for different decile classes of MPCE
- Percentage break-up of calorie intake over different food groups and average intake of calorie, protein and fat per consumer unit per day for households in different ranges of calorie intake per consumer unit per day
- Percentage break-up of total intake of calorie and protein over different food groups for different decile classes of MPCE
- Distribution of households by adjusted (corrected to exclude intake of non-members and include meals received by members from other households) level of calorie intake, separately for households in each class of unadjusted calorie intake
- Break-up of average number of meals consumed per month per household by source of meals, for each decile class of MPCE, and break-up of average number of meals consumed per month per person by source, for different age groups and sexes

1.4.3 Because the survey used two schedule types with different reference period systems, all estimates presented in this report are provided separately for each schedule type. Further, since two different measurements of MPCE (called $MPCE_{URP}$ and $MPCE_{MRP}$) were made on the basis of Schedule Type 1 for each surveyed household, the tables generated by decile class of MPCE from Schedule Type 1 have, for completeness, been generated twice, once using $MPCE_{URP}$ values, and once using $MPCE_{MRP}$. (See Chapter Two, Section 2.4.)

1.5 Features of the survey: schedules of enquiry

1.5.1 The household consumer expenditure schedule (“Schedule 1.0”) used for the survey collected information on quantity³ and value of household consumption. To minimise recall errors, a very detailed item classification was, as usual, adopted to collect information, including 142 items of food, 15 items of energy (fuel, light and household appliances), 28 items of clothing, bedding and footwear, 19 items of educational and medical expenses, 51 items of durable goods, and 89 other items. The schedule also collected some other particulars of each household member, such as age, sex and educational level.

1.5.2 The schedules of enquiry used were of two types. The two types had the same item break-up but differed in reference periods used for collection of consumption data. Schedule Type 1, as far as reference periods were concerned, was a repeat of the schedule used in most quinquennial rounds. For certain categories of relatively infrequently purchased items, including clothing and consumer durables, it collected information on consumption during the last 30 days and the last 365 days. For other categories, including all food and fuel and consumer services, it used a 30-days reference period. Schedule Type 2 used ‘last 365 days’ (only) for the infrequently purchased categories, ‘last 7 days’ for some categories of food items, as well as pan, tobacco and intoxicants, and ‘last 30 days’ for other food items, fuel, and the rest. This was in line with the recommendations of an Expert Group that had been formed for the purpose of suggesting the most suitable reference period for each item of consumption⁴. The differences (in reference period) between Schedule Types 1 and 2 are shown in Table T1.

Table T1: Reference periods used for collection of consumption data in Schedule 1.0, Type 1 and Type 2

Category	Item groups	Reference period for	
		Schedule Type 1	Schedule Type 2
I	Clothing, bedding, footwear, education, medical (institutional), durable goods	‘Last 30 days’ and ‘Last 365 days’	Last 365 days
II	Edible oil; egg, fish & meat; vegetables, fruits, spices, beverages and processed foods; pan, tobacco & intoxicants	Last 30 days	Last 7 days
III	All other food, fuel and light, miscellaneous goods and services including non-institutional medical; rents and taxes	Last 30 days	Last 30 days

1.5.3 Schedule Type 1 and Schedule Type 2 were canvassed in two independent samples of matching size drawn from each stratum/sub-stratum⁵.

³ For education, medical care, and some goods and services listed in the schedule as “miscellaneous goods and services”, no data on quantity of consumption are collected in the NSS CES’s.

⁴ See NSS Report no. 475; entitled “Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption”.

⁵ See Appendix B. Note that there could be a very few cases where in the same household, both Type 1 and Type 2 schedules of Schedule 1.0 were canvassed due to some special situations encountered while actually conducting the survey in the field.

1.6 Features of the survey: scope and coverage

1.6.1 *Geographical coverage:* The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. *However, although planned, no sample could actually be surveyed in the districts of Leh (Ladakh), Kargil and Poonch of Jammu & Kashmir by NSSO.*

1.6.2 *Population coverage:* The following rules were followed:

1. Floating population, i.e., persons without any normal residence, was excluded. But persons residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place were covered.
2. Foreign nationals were excluded, as well as their domestic servants, if by definition the latter belonged to the foreign national's household (see Chapter Two, paragraph 2.2.1, for definition of household). A foreign national who had become an Indian citizen for all practical purposes was, however, covered.
3. Persons residing in barracks of military and paramilitary forces (like police, BSF etc.) were kept outside the survey coverage. However, the civilian population residing in their neighbourhood, including the family quarters of service personnel, was covered.
4. Orphanages, rescue homes, ashrams and vagrant houses were outside the survey coverage. However, the persons staying in old age homes, the students staying in ashram/hostels and the residential staff (other than monks/nuns) of these ashrams were covered. Although orphans living in orphanages were excluded, the persons looking after them and staying there were covered. Convicted prisoners undergoing sentence were outside the coverage of the survey.

1.6.3.1 *Sample size: first-stage units:* As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a "State sample" was surveyed by State Government officials in addition to the "Central sample" surveyed by NSSO. For rural India, 7,524 villages formed the Central sample for this round. Of these, 7,428 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was 5,284 blocks, of which 5,263 were surveyed. This document is based on the estimates obtained from the Central sample only.

1.6.3.2 *Sample size: second-stage units:* For the consumer expenditure survey, from each sample village and urban block, two samples of 8 households each were selected for canvassing Schedule Type 1 and Schedule Type 2. While selecting the households in each selected first-stage unit, the second-stage stratification of households is in-built in the sample design. The features of the sample design are explained in Appendix B.

1.6.3.3 Table T2 shows the numbers of villages and urban blocks allotted for survey and actually surveyed, and, for each of the two schedule types, the numbers of rural and urban sample households in which the consumer expenditure schedule was canvassed.

Table T2: Number of villages/blocks surveyed and number of households surveyed for Schedule 1.0 Type 1 and Type 2: NSS 66th round, Central sample

State/UT	no. of fsu's (villages/blocks) surveyed		no. of sample households

Chapter Two

Concepts, Definitions and Procedures

2.1 Nutrients and measurement of nutrient intake

2.1.1 **Nutrients:** Man needs a wide range of nutrients to perform various functions of the body and to lead a healthy life. The nutrients include proteins, fat, carbohydrate, vitamins and minerals. These are chemical substances which are present in the food we eat daily. Most foods contain all the nutrients, but in proportions which vary from food to food. Some foods are rich in one or more nutrients. Thus there are protein-rich foods, fat-rich foods, foods rich in Vitamin A, and so on. Some foods contain only a single nutrient – sugars are a source of only carbohydrates while oils and ghee provide only fats.

2.1.2 **Energy intake:** A living being has to expend a certain amount of energy even when at rest, to carry out essential functions such as respiration, blood circulation, digestion, etc. Activity involving manual work, light or heavy, requires additional amounts of energy. All this energy has to be supplied through food. The three components of food which provide this energy are carbohydrates, fat and proteins. Proteins normally supply 10-12% of energy in most diets; energy that carbohydrate and fat contribute may vary from diet to diet. Quantitative food requirements are usually set in terms of energy. The unit of measuring energy is kilocalorie (Kcal) which is the amount of heat necessary to raise the temperature of one kg of water by 1°C from 14.5°C to 15.5°C. This is also called 1 Calorie and equals 1000 calories – the calorie being the heat required to raise 1 g of water through the same temperature. In discussions on nutrition, the word “calorie” is often used interchangeably with the term “energy”, as in “calorie intake”. Also, in reporting quantities of energy intake, the unit Calorie is often used without the capital letter as there is little chance of confusion with the much smaller unit “calorie”.

2.1.3 **Protein:** Proteins are among the most important nutrients required by the body and should be available in adequate amounts in the diet. The protein needed by the body has to be supplied through the diet we consume. All foods except refined sugar, oil and fats contain protein in varying degrees. Some foods contain high amounts of protein and can be classified as protein-rich foods. Examples of such foods are animal foods like meat, fish and egg, and plant foods like pulses, oilseeds and nuts. Milk, too, can be classified in this category if due allowance is made for the large amount of water in it. These foods contain over 20% protein and soyabean is the richest source containing over 40% of protein. Cereals are a moderate source of protein as they contain about 10% protein. Rice contains less protein (7%) than wheat (approximately 10%) and other cereals. Leafy vegetables, fruits, roots, tubers are generally poor sources of protein as they contain less than 2% protein.

2.1.4 **Fat:** Fat is an important component of diet and serves a number of functions in the body. Fat is a concentrated source of energy and per unit weight, it supplies more than twice the energy furnished by either proteins or carbohydrates. It also imparts palatability to a diet and

retards the pace of emptying of the stomach. Presence of fat in the diet is important for the absorption of fat-soluble vitamins like Vitamin A and carotene. Apart from these functions, some fats, particularly those derived from vegetable sources, provide what are known as "essential fatty acids" (EFA) which have vitamin-like functions in the body.

2.1.5 Consumer unit: Consumer unit is a unit used as an indicator of the energy requirement of a group of persons of different sexes and ages. Taking the calorie requirement of an average male in the age group 20-39 doing sedentary work as the norm, the average calorie requirements of males and females of other age groups are expressed as a ratio to this norm (see table below). Thus a household consisting of two men aged 35 and 65 has 1.8 consumer units while a household with one woman aged 28 and a child aged 3 has only 1.25 consumer units.

sex	no. of consumer units assigned to a person											
	age in completed years											
	<1	1-3	4-6	7-9	10-12	13-15	16-19	20-39	40-49	50-59	60-69	70+
male	0.43	0.54	0.72	0.87	1.03	0.97	1.02	1.00	0.95	0.90	0.80	0.70
female	0.43	0.54	0.72	0.87	0.93	0.80	0.75	0.71	0.68	0.64	0.51	0.50

2.1.5.1 Speaking about determination of calorie requirement of a person in terms of age and/or sex is a simplification of the real situation, since the role of various other factors such as body weight, height, nature of work, state of health is ignored. The requirement of calories per consumer unit in reality is not a fixed amount but a variable depending upon all these factors. Nutritionists, attempting to assess calorie requirements per consumer unit, differ in their approaches to the problem, some specifying calorie requirement as function of body weight, while others assign requirements depending on nature of work (sedentary/ moderate/ heavy).⁶ From the 26th round, NSS tables on nutritional intake have expressed observed calorie intakes per consumer unit of different segments of population as percentages of a level of 2700 kilocalories per consumer unit per day. This practice is continued in this report for convenience in making comparisons.

2.1.6 Calculation of household intake of calories, protein and fat: The quantities of food recorded as consumed by the household are converted into the equivalent amounts of calories, protein and fat on the basis of a Nutrition Chart (pages 15-18) largely based on an ICMR publication⁷ which gives the calorie, protein and fat content per unit of different foods in the Indian diet. It needs to be said, however, that the actual intake of nutrients depends on how these foods are actually processed and/or cooked in the surveyed households.

⁶ The recommended calorie intake level for Indians set by the National Institute of Nutrition, ICMR, is profiled on age, sex, body mass and nature of work. The norm set for the reference Indian man of age 18-29 years with a normal body mass index and body weight 60 kg doing sedentary work is 2320 Kcal per day. The norms used by the Planning Commission (ref: *Eleventh Five-Year Plan, 2007-12, Vol.II, Social Sector*) are 2400 Kcal per person per day for the rural sector and 2100 Kcal per person per day for the urban sector.

⁷ C. Gopalan, et.al. (1991): *Nutritive Value of Indian Foods*. National Institute of Nutrition, Indian Council of Medical Research. Hyderabad.

2.1.7 Adjusted calorie intake: The calorie intake of a household, so derived, may not necessarily represent the ‘true’ level of intake of a household for two reasons. Firstly, there may be members of the household who might have been served meals as guests in other households. According to NSS practice (see HOUSEHOLD CONSUMER EXPENDITURE), these meals would not be recorded as consumption of the household as they would be considered part of the consumption of the meal-serving households. Hence their nutrient content would be omitted from the consumer expenditure of the recipient households. Secondly, meals served by the household to non-household-members get included in the consumer expenditure of the household. While the former phenomenon is likely to depress the *reported* per capita level of calorie intake of the household, the latter will have a tendency to inflate it. Hence, to bring the estimate of calorie intake level closer to ‘true’ intake, the following adjustment procedure is used.

2.1.7.1 Let C be the calorie intake of the household as derived from the data on quantities of food recorded in the schedule, and let

(i) number of meals consumed by the household members in the household or received through purchase or as assistance or payment (excluding meals received from other households) = M_h

(ii) number of meals consumed by non-members (guests, employees, etc.) = M_g

(iii) number of meals received free from other households by household members = M_f

2.1.7.2 Then the adjusted calorie intake of the household is defined as

$$C_a = C \times \frac{M_h + M_f}{M_h + M_g}$$

2.1.7.3 Notice that the adjustment factor would exceed unity for the poor households who would generally be recipients from free meals much more than servers of food to guests and employees. It would be less than unity for richer households who would generally serve more meals to outsiders than receive them.

2.1.8 Meal: A ‘meal’ is composed of one or more readily eatable (generally cooked) items of food, the usually major constituent of which is cereals. The meals consumed by a person twice or thrice a day provide him/her the required energy (calorie) and other nutrients for living and for pursuing his/her normal avocations. A ‘meal’, as opposed to ‘snacks’, ‘*nashta*’ or ‘high tea’, contains a larger quantum and variety of food. In rare cases, a full meal may contain a larger quantity of non-cereal food. Even then, if the quantum of food in a plate is as heavy as a usual meal, the contents of the food plate is considered as a ‘meal’.

2.1.8.1 A person rendering domestic service (like cleaning utensils, dusting and cleaning of rooms, washing linen, carrying water from outside, etc.) to a number of households during the daytime gets some food from each of the households he/she serves. Although the quantum of food received from a single household may, by quantity, be far less than a full meal, the total quantity of food received from all the households taken together would often, if not more, be at least equivalent to a full meal. In this particular situation, the person is considered to be consuming one meal every day under ‘meal taken away from home’.

2.1.9 Reference period: The consumption of any good or service by a household or person occurs in the form of a flow over time. A survey may need to record the volume of consumption over a short period such as a day, or a long period such as a year. The time period for which consumption is recorded is called the reference period. It may vary from item to item. Because the respondents are asked to recall and report the volume of consumption, the reference period is also called the recall period. Reference periods used in this survey are discussed in detail in Chapter One, paragraph 1.5.2.

2.2 Household consumer expenditure

2.2.1 Household: A group of person normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include that person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes, etc., are considered as members of the households to which they last belonged.

2.2.2 Household size: The size of a household is the total number of persons in the household.

2.2.3 Household consumer expenditure: The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Expenditure incurred towards productive enterprises of households is excluded from household consumer expenditure. Also excluded are expenditure on purchase and construction of residential land and building, interest payments, insurance premium payments, payments of fines and penalties, and expenditure on gambling including lottery tickets. Money given as remittance, charity, gift, etc. is not consumer expenditure. However, self-consumed produce of own farm or other household enterprise is valued and included in household consumer expenditure. So are goods and services received as payment in kind or free from employer, such as accommodation and medical care, and travelling allowance excluding allowance for business trips.

2.2.3.1 For articles of food (including *pan*, tobacco and intoxicants) and fuel, household consumption is measured by the *quantity of the article actually used* by the household during

the reference period, irrespective of the expenditure incurred on it. For articles of clothing and footwear, consumption by a household is considered to occur at the moment when the article is brought into maiden or first use by any household member. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate.

2.2.3.2 For evaluating household consumption of all other items, a different approach is followed: the *expenditure* made by the household during the reference period for the purchase or acquisition of goods and services, regardless of when the goods and services are used and by whom, is considered as household consumption.

2.2.3.3 It is pertinent to mention here that “consumption” of food items by a household, as recorded by the survey, relates to the actual consumption by the members of the household and also consumption of meals prepared in the household and served to non-members during the reference period. Normally, transfers of food, fuel, clothing and footwear made by a household as charity, loan advance, etc. are not considered as consumption of that household but as consumption of the recipient households. However, meals prepared in a household and served to non-household-members are an exception to this rule. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or others. Therefore, meals prepared in the household kitchen and provided to guests, employees or others are, to simplify field work, included in the domestic consumption of the household serving the meals. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests are also recorded in the purchaser household.

2.2.3.4 This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of per capita and total consumer expenditure, and also of per capita or per consumer intake of nutrients for the population as a whole. However, donors of free cooked meals are likely to be concentrated at the upper end of the per capita expenditure range and the corresponding recipients at the lower end of the same scale. Consequently, the derived nutrition intakes may get inflated for the rich (net donors) and understated for the poor (net recipients). This point has to be kept in mind while interpreting the NSS consumer expenditure data for any studies relating to the nutritional status of households. (See also ADJUSTED CALORIE INTAKE.)

2.2.3.5 To simplify data collection, consumption of food processed *in the home* from one “item” into another, such as milk converted into curd or butter, vegetables converted into pickles, and rice converted into liquor are recorded in the survey against the primary or ingredient item(s), such as milk, instead of the item in which form it is consumed (e.g. curd). For some item groups such as intoxicants, this procedure leads to an underestimation of consumption with a corresponding overestimation of the item groups of the major ingredients, such as cereals.

2.2.3.6 Value of consumption: For items of food, *pan*, tobacco, intoxicants, fuel, clothing and footwear, this term is not synonymous with expenditure incurred by the household on the item, and the following rules of valuation are specified. Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

2.3 Monthly per capita expenditure (MPCE) and its different measures

2.3.1 The NSS concept of MPCE is defined first at the household level (household monthly consumer expenditure \div household size). This measure serves as the indicator of the household's level of living.

2.3.2 Next, each *individual's* MPCE is defined as the MPCE of the household to which the person (man, woman or child) belongs. This assigns to each person a number representing his or her level of living. The distribution of *persons* by their MPCE (i.e., their household MPCE) can then be built up, giving a picture of the population classified by economic level. Further, the population can be classified into different segments each representing a particular range of MPCE, and hence ordered, as it were, by level of living. (See paragraph 2.3.7 below.)

2.3.3 In brief, the three measures of MPCE may be defined as follows.

2.3.4 **Uniform Reference Period MPCE** (or $MPCE_{URP}$): This is the measure of MPCE obtained by the NSS consumer expenditure survey (CES) when household consumer expenditure on each item is recorded for a reference period of "last 30 days" (preceding the date of survey).

2.3.5 **Mixed Reference Period MPCE** (or $MPCE_{MRP}$) This is the measure of MPCE obtained by the CES when household consumer expenditure on items of clothing and bedding, footwear, education, institutional medical care, and durable goods is recorded for a reference period of "last 365 days", and expenditure on all other items is recorded with a reference period of "last 30 days".

2.3.6 **Modified Mixed Reference Period MPCE** (or $MPCE_{MMRP}$) This is the measure of MPCE obtained by the CES when household consumer expenditure on edible oil, egg, fish and meat, vegetables, fruits, spices, beverages, refreshments, processed food, *pan*, tobacco and intoxicants is recorded for a reference period of "last 7 days", and for all other items, the reference periods used are the same as in case of Mixed Reference Period MPCE ($MPCE_{MRP}$).

2.3.7 **Deciles and decile classes of MPCE:** The first decile of the distribution of MPCE over the population of any region or domain is the level of MPCE below which 10% of the population lie, the second decile, the level below which 20% of the population lie, and so on.

Thus the population can be divided into 10 “decile classes of MPCE” as follows: those with MPCE below the 1st decile of the MPCE distribution (the bottom 10% of the population ranked by MPCE), from the 1st decile to the 2nd decile (the next 10%), from the 2nd decile to the 3rd decile (the next 10%), and so on. Averages of other variables of interest, computed separately for the 10 decile classes, help to portray the variation of such variables with variation in MPCE. In line with usual NSS practice, decile classes of MPCE are formed separately for the rural and the urban sector, both for India as a whole and for the States. However, the availability of two different measures of MPCE (MPCE_{URP} and MPCE_{MRP}) for households surveyed through Schedule Type 1 means that decile classes of MPCE formed on the basis of Schedule Type 1 can be of two kinds – decile classes of the distribution of MPCE_{URP}, or the distribution of MPCE_{MRP}.

2.4 Different reference periods used for collection of consumption data and their impact on estimates of nutritional intake

2.4.1 For the study of many socio-economic variables measurable at the household level, including health- and nutrition-related variables, it is of interest to investigate the behaviour of the variable with rise in living standards. Answers to questions such as “Does a household’s intake of dietary energy rise or fall, on average, with economic level?” or “Does the share of milk in protein intake of a household rise or fall, on average, with economic level?” can then be attempted. The NSS consumer expenditure survey, because it measures household MPCE in addition to collecting data on food consumption, is suitable for such analysis of data.

2.4.2 A complexity, however, is introduced by the fact that for one half of the surveyed households, the 66th round survey generated two different measures of MPCE – based on two methods of data collection used to collect a part of the non-food data for each surveyed household (see Chapter One, Table T1). This means that the classification of these households by MPCE might differ a little depending on which measure of MPCE is used. Although the difference in classification is not expected to substantially change the answers to any of the questions that users of the data are likely to ask, the tables cross-classifying nutrition data by MPCE levels of households have, for the sake of completeness, been generated in two sets, one set using the first measure of MPCE (called MPCE_{URP}), and the other using the other measure (called MPCE_{MRP}).

2.4.3 A more important aspect of the survey as far as nutrition is concerned is that in the other half of the sample, a schedule (called Schedule Type 2) was used with a “last 7 days” reference period for some food items and “last 30 days” for the rest, while in the first half of the sample of households surveyed, the schedule canvassed (called Schedule Type 1) had the usual reference period of “last 30 days” for all food items. (See Chapter One, Table T1.) The combination of reference periods used for food in Schedule Type 2 was expected to result in better recall and reporting, while Schedule Type 1 performed the function of providing a dataset to maintain continuity with the past series. It was fully anticipated that the average monthly quantity of a food item consumed by households, when calculated from “7 days” data, would be different from that calculated from the same households’ data, had “30 days” data

been sought from them, because the reporting errors or biases associated with the two reference periods were different. This implies that the estimates of food quantities, and therefore, of nutritional intake, from Schedule Type 2 would be different from those derived from Schedule Type 1 not only due to sampling variability but because of differentials in (non-sampling) reporting errors.

2.4.4 Bearing this in mind, tabulation of all data on nutrition has been done separately for Schedule Type 1 and Schedule Type 2. The discussion in the text on nutritional intake during 2009-10 has been based on the estimates from Schedule Type 2, in view of the fact that Schedule Type 2 was so designed because it was expected to address the problem of recall errors in data on food and allied items better than the (traditional) Schedule Type 1. The discussion on trends in nutritional intake has, on the other hand, used the Schedule Type 1 data of 2009-10 for better comparability with the past.

Nutrition Chart

Nutrient contents of different items are largely based on “Nutritive Values of Indian Foods” by C. Gopalan, B.V. Ramasastry and S.C. Balasubramanian, revised and updated by B.S. Narasinga, Y.G. Deosthale and K.C. Pant, 1991.

Generally, the total intake of calorie, protein and fat from an item is derived from the quantities reported as consumed by the sample households. The nutrient contents of each item per unit of quantity (as specified in the schedule) are shown in the table below.

For some items having variable food content, average nutrient contents per rupee are given in the table instead of per unit of quantity. For such items the unit has been shown as “Re”. These figures multiplied by the *value* of consumption give the total quantities of nutrients derived from that item.

The chart of nutrient contents remains practically the same as for the 61st round of NSS. For items for which the unit (as explained above) is “Re”, the fall in value of the rupee since the 61st round (2004-2005) has been adjusted for by deflating the nutrient contents by the appropriate consumer price index (CPI for Agricultural Labourers for rural and CPI for Urban Non-Manual Employees for urban areas). Thus for these items, there are two sets of nutrient content coefficients – one for rural and the other for urban households.

item code	item	unit	calories per unit (Kcal)	protein per unit (gm)	fat per unit (gm)	food group

Chapter Three

Intake of Dietary Energy

3.0.1 Intake of dietary energy per person continues to be the most widely used indicator of the level of nutrition of a population. Levels of calorie intake are used, in particular, as indicators of adequacy of nourishment of populations of the developing countries and of economically deprived or geographically isolated segments considered to be at risk of under-nourishment. This chapter presents estimates of various aspects of dietary energy intake – its average, its distribution over households and persons, the contributions of different food categories, etc., for India and the major States.

3.0.2 In examining the estimates of distribution of calorie intake over persons, it needs to be borne in mind that data on food consumption was collected for households as a whole and no break-up over individual household members is available. Accordingly, in line with NSS practice, the distribution of calorie intake over *persons* is derived by assigning to each person in a surveyed household the per capita calorie intake of the household. The true range of variation of calorie intake over persons would naturally be wider than the data reveals – for instance, an infant would have a lower intake than the per capita intake of its household. However, for the purpose of studying adequacy of dietary energy intake, household per capita calorie intake is expected to be a useful and illuminating tool of analysis.

3.0.3 The findings presented in this chapter are, as explained in paragraph 2.4.4 of Chapter Two, based on Schedule 1.0, Type 2. Detailed estimates are given in Appendix A. *Further, the Statements at the end of Chapter Six give State-level estimates not disaggregated by MPCE class and all-India estimates by decile class of MPCE.* The findings may be grouped as follows:

- (a) Average calorie intake: States and all-India
- (b) Average calorie intake: variation with level of living
- (c) Distribution of calorie intake: States and all-India
- (d) Distribution of calorie intake: variation with level of living
- (e) Percentage break-up of calorie intake by food group: States and all-India

3.1 Average calorie intake: States and all-India

3.1.1 As explained in Chapter Two, estimates of calorie intake are often given in this report per consumer unit as well as per capita. Expressing calorie intake per consumer unit is aimed at adjusting for difference in calorie requirements among persons on account of age and sex differences, and thereby obtaining a sharper indicator of adequacy of intake than the per capita figures provide.

3.1.2 The per capita estimates and per consumer unit estimates of *average* calorie intake usually stand in a fixed proportion to one another, determined by the number of consumer

units per 1000 (say) of population, though this is subject to age-sex composition and the changes therein over time and space.

3.1.3 For individual households, the ratio of the measure of per consumer unit calorie intake to the measure of per capita calorie intake may vary widely because of inter-household difference in age-sex composition. Thus, for a household with no children, the two measures will be much closer than for a household with a large proportion of children and babies (see table of consumer units on page 8). Hence, the per consumer unit calorie intake gives a much better idea of adequacy of calorie intake at the level of the individual household. Studies of *distribution* of calorie intake over households or persons will thus benefit from the use of per consumer unit calorie intake as the study variable rather than per capita calorie intake. For this report, distributions of calorie intake over households and persons have been generated using per consumer unit calorie intake.

Table T3: Average calorie intake per capita and per consumer unit in 2009-10: major States

State	calorie intake (Kcal) per day per capita		calorie intake (Kcal) per day per consumer unit	
	rural	urban	rural	urban
	(1)	(2)	(3)	(4)
Andhra Pradesh	2204	2223	2731	2721
Assam	2120	2176	2579	2640
Bihar	2036	2213	2481	2687
Chhattisgarh	2025	2096	2484	2583
Gujarat	2046	2096	2519	2582
Haryana	2310	2202	2842	2674
Jharkhand	2051	2226	2509	2705
Karnataka	2026	2115	2514	2600
Kerala	2110	2118	2666	2666
Madhya Pradesh	2087	2045	2553	2500
Maharashtra	2179	2099	2714	2572
Orissa	2271	2259	2796	2759
Punjab	2308	2260	2851	2759
Rajasthan	2350	2144	2884	2651
Tamil Nadu	2046	2135	2532	2649
Uttar Pradesh	2181	2072	2710	2526
West Bengal	2060	2027	2516	2493
all-India	2147	2123	2647	2604

3.1.4 Table T3 shows that all the major States had average levels of calorie intake in 2009-10 within + or -10% of the all-India average for the sector (2147 Kcal per capita for rural and 2123 for urban). Though the overall magnitudes of deviation of average calorie intake of the States from the all-India average do not tend to change substantially when per consumer unit estimates are used instead of per capita estimates, there are situations where State averages do shift from below national average to above, and vice versa. This suggests that there is some inter-State difference due to difference in age-sex composition between States. Deviations from the all-India average are a little wider in the rural sector than in the urban. At the all-India level, in both rural and urban sectors, calorie intake per consumer unit is about 23% higher than that per capita. Detailed estimates for all States and UTs (based on Schedule Type

2) are available in Table 3C of Appendix A. Detailed estimates based on Schedule Type 1 are given in Tables 3A and 3B for purposes of comparison with data from earlier rounds.

Table T4: Average calorie intake per capita and per consumer unit across MPCE decile classes in 2009-10

3.2 Average calorie intake: variation with level of living

3.2.1 At all-India level, average calorie intake across decile classes (formed separately for rural and urban sectors) of the distribution of population by MPCE_{MMRP} is shown in Table T4. In each sector average calorie intake (per capita or per consumer unit) is seen to be a monotonically increasing function of MPCE class. The difference between the bottom decile class (poorest 10% of population ranked by per capita expenditure level) and the next decile class (the next 10%) in per capita calorie intake is seen to be as high as 189 in urban India and 176 in rural India. The difference between successive decile classes then falls to less than 100 but rises to much higher levels for the highest decile classes. The relatively large increase of calorie intake for the top decile class may be because it is open-ended. It is also to be borne in mind that households in the top decile class are often net donors of cooked meals, which are accounted in the serving household even if served to non-household members. This is likely to inflate the calorie intake of many households belonging to the top decile class. In a typical decile class for rural India, the average calorie intake is slightly higher than that of the corresponding decile class in urban India. For State-level estimates by decile class of MPCE, please see Table 3 of Appendix A.

3.3 Distribution of calorie intake: States and all-India

3.3.1 The distribution of rural and urban households over 8 classes of per consumer unit calorie intake is given for the major States and all-India in Statement 6S and the corresponding distribution for persons (considering a person's per consumer unit calorie intake to be the per consumer unit calorie intake of his or her household) in Statement 7S. In Table T5, the distributions of *households* are shown using only 4 broad calorie intake classes. In all tables of distribution of calorie intake, calorie intake per consumer unit is expressed as a percentage of a level of 2700 Kcal per day per consumer unit (see Chapter Two, paragraph 2.1.5.1). Thus the calorie intake classes used in Table T5 are:

- (i) “0-80”, which means 0 to 80% of 2700 Kcal, that is, 0-2160 Kcal
(ii) “80-100”, which means 80% of 2700 Kcal to 2700 Kcal, that is, 2160-2700 Kcal
(iii) “100-120”, which means 2700 Kcal to 120% of 2700 Kcal, that is, 2700-3240 Kcal
(iv) “>120”, which means >120% of 2700 Kcal, that is, >3240 Kcal.

- At the all-India level, about 19.4% of rural households and 20.5% of urban households had a calorie intake level in the “<80” category (less than 2160 Kcal per consumer unit per day) in 2009-10.
- In the rural sectors of Madhya Pradesh, Chhattisgarh, Gujarat and Jharkhand, more than 25% of households had calorie intake in the “<80” category, while in West Bengal, Tamil Nadu, Bihar and Karnataka, the proportion of such households was 24-25%. In urban India, the major States with the highest percentage of households with calorie intake in the “<80” category were West Bengal and Madhya Pradesh (25% or more).
- The major State with the lowest percentage of rural households in the “<80” category was Rajasthan (11%), followed by Punjab, Maharashtra and Orissa (13%). In urban India, Orissa, Karnataka, Punjab and Bihar had the lowest percentages of households (14-15%) in the “<80” category; these included two states – Karnataka and Bihar – with nearly a quarter of their *rural* households in the “<80” category.⁸

Table T5: Per 1000 distribution of hhs by level of calorie intake per consumer unit per day in 2009-10: major States

252	367	213	168	Jharkhand	204	277	257	262
242	338	231	189	Karnataka	144	386	251	219
219	287	214	280	Kerala	229	257	196	317
268	312	217	204	Madhya Pradesh	258	325	207	209
131	349	266	254	Maharashtra	220	326	246	208
130	305	296	268	Orissa	139	299	266	297
129	307	269	296	Punjab	145	318	233	303
107	304	340	249	Rajasthan	157	371	244	227
249	282	226	243	Tamil Nadu	177	337	215	271
170	316	265	248	Uttar Pradesh	243	326	195	235
249	366	230	156	West Bengal	261	342	224	173
194	328	253	225	India	205	332	233	230

* expressed as a percentage of a level of 2700 Kcal per consumer unit per day

3.3.2 An important difference between Statements 6S and 7S is that in any of the lower calorie intake classes, the proportion of *persons* for any State/UT (Statement 7S) is generally greater than the proportion of *households* in the same class (Statement 6S). This is a

⁸ Note that the composition of food consumed in different States and regions of the country varies widely, as will show up in the results discussed in Chapter Four.

consequence of the fact that the lower calorie intake classes contain, in general, poorer households, which, on the average, have more members than the upper calorie intake classes.

3.3.3 The distribution of rural and urban households over 8 classes of per consumer unit calorie intake, as estimated from Schedule Type 2 data, is given for each decile class of households in each State/UT and all-India in Table 6C of Appendix A and the corresponding distribution for persons in Table 7C of Appendix A. Estimates based on Schedule Type 1 data are given in Tables 6A/6B and 7A/7B for purposes of comparison with earlier rounds.

3.4 Distribution of calorie intake: variation with level of living

3.4.1 The variation in calorie intake across different levels of living is brought out sharply in Table T6, which shows distribution of all-India rural and urban households in different decile classes of per capita expenditure over 4 broad classes of calorie intake per consumer unit. In particular, the proportion of households with calorie intake below 80% of the level of 2700 Kcal per consumer unit per day is 62% for rural and 63% for urban households in the bottom decile class (poorest 10% of population ranked by per capita expenditure level), falls to 42-45% in the next decile class (next 10%), and so on, progressively declining until it drops to only about 2.5% for the top 10% of population.

Table T6: Per 1000 distribution of hhs in different decile classes of MPCE by level of calorie intake per consumer unit per day in 2009-10: all-India

decile class of MPCE	per 1000 no. of RURAL hhs with calorie intake per consumer unit per day*				per 1000 no. of URBAN hhs with calorie intake per consumer unit per day*			
	<80	80-100	100-120	≥120	<80	80-100	100-120	≥120

10	24	127	246	603	25	159	238	578

* expressed as a percentage of a level of 2700 Kcal per consumer unit per day

3.4.2 Statements 6 (A/B/C) and 7 (A/B/C) respectively show the distribution of households and population in different decile classes of MPCE over calorie intake level per consumer unit using 8 classes of calorie intake level.

3.5 Percentage break-up of calorie intake by food group: States and all-India

3.5.1 Of all the food groups, cereals make the largest contribution to calorie intake. Table T7 (cols. 6 & 7) shows this contribution to be about 60% for rural India as a whole and about 50% for urban India. The contribution of cereals varies across the major States from 46-48%

(Punjab, Kerala and Haryana) to 70% (Orissa and Assam) in the rural sector and from 43-44% (Punjab, Kerala and Gujarat) to 62-63% (Orissa, Assam and Bihar) in the urban sector.

3.5.2 The other columns of Table T7 show the share of cereals and of all food in household consumer expenditure (MMRP).⁹ For India as a whole the share of cereals in household consumer expenditure is 13.7% for the rural sector and 8.1% for the urban. Inter-State variation in share of cereals is quite pronounced (more than variation in share of all food), especially in the rural sector, where the highest share of cereals among the major States (Bihar, 21.3%) is about three times the share for Punjab and Haryana (around 7%). In general, States with a large proportion of expenditure on cereals are seen to be more dependent on cereals for their calorie intake.

3.5.3 Table T8 shows the percentage contribution of cereals to calorie intake, as well as the percentage shares of cereals and food in total consumer expenditure, across decile classes of the MPCE distribution. With each successive MPCE class, the contribution of cereals to calorie intake is seen to fall progressively. In rural India it falls from 73% in the bottom decile class of population to 47% in the top decile class, and in urban India from 66% to about 35%. The share of food in total expenditure, too, declines steadily with rise in MPCE level, and the share of cereals plunges to 7.4% in the top rural decile class and 3.6% in the top urban decile class.

Table T7: Percentage share of food and cereals in total household consumer expenditure, and percentage contribution of cereals to calorie consumption: major States, 2009-10

State	% expenditure on food		% expenditure on cereals		% of calories from cereals	
	rural	urban	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Andhra Pradesh	58.1	44.8	13.6	9.6	60.0	52.2
Assam	64.4	52.9	20.7	12.8	70.0	62.3
Bihar	64.7	52.9	21.3	14.8	68.8	62.1
Chhattisgarh	58.2	43.7	15.4	10.4	69.0	58.6
Gujarat	57.7	46.2	10.7	7.6	50.3	44.2
Haryana	54.0	43.1	7.3	5.8	48.2	45.9
Jharkhand	60.9	51.5	19.2	11.9	65.9	57.8
Karnataka	56.5	42.3	12.3	9.0	56.6	49.7
Kerala	45.9	40.2	8.0	6.3	47.4	43.8
Madhya Pradesh	55.8	41.7	13.6	7.6	61.6	52.4
Maharashtra	54.0	41.0	11.3	6.6	53.6	44.9
Orissa	61.9	48.4	18.6	11.8	70.3	62.9
Punjab	48.2	44.3	6.9	6.2	46.1	43.0
Rajasthan	54.8	48.0	12.0	8.4	56.1	52.5
Tamil Nadu	54.7	45.0	9.0	7.7	56.1	50.1
Uttar Pradesh	57.9	46.3	15.2	9.3	63.0	55.5
West Bengal	63.4	46.2	18.3	9.1	63.7	53.2
All-India	57.0	44.4	13.7	8.1	60.4	50.4

⁹ Estimates of these shares based on UR, MRP and MMRP data are given in Table 3A/3B/3C (R&U), separately for each decile class of MPCE.

Table T8: Percentage expenditure on food and on cereals, and percentage contribution of cereals to calorie consumption across MPCE classes

MPCE decile class	% expenditure on food		% expenditure on cereals		% of calories from cereals	
	rural	urban	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1	64.9	61.8	23.6	18.5	72.7	66.4
2	64.3	59.1	21.0	15.5	68.6	61.6
3	63.4	57.6	19.1	13.7	66.5	58.3
4	63.1	55.1	18.1	12.2	65.1	56.2
5	62.1	53.0	16.5	11.0	62.5	53.8
6	60.7	51.1	15.3	10.2	61.4	51.8
7	59.8	48.6	14.3	8.9	59.5	48.0
8	57.7	45.5	12.8	8.1	57.3	46.2
9	56.3	42.1	11.4	6.4	54.3	41.7
10	46.0	31.5	7.4	3.6	47.4	34.6

3.5.4 The itemwise data on household food consumption collected in the NSS survey is grouped into nine broad food categories as follows:

- | | |
|------------------------------------|---|
| (i) cereals and cereal substitutes | (vi) meat, eggs and fish |
| (ii) roots and tubers | (vii) milk and milk products |
| (iii) sugar and honey | (viii) oils and fats |
| (iv) pulses and nuts | (ix) miscellaneous food, food products
and beverages |
| (v) vegetables and fruits | |

Accordingly, the total calorie intake of the households is also segregated into these nine categories, enabling the study of their respective shares in total calorie intake.

3.5.5 Now, with cereals accounting for over 50% of calorie intake for many States, especially in rural areas, the percentage contributions of most of the categories (ii) to (ix) for any State-sector are usually smaller than 10 and frequently as low as 0-3. For easier exposition of the relative importance of the contributions of categories (ii) to (ix), Table T9 shows the percentage break-up of calorie intake from non-cereals over the non-cereal food categories.

3.5.6 On the whole, the pattern of calorie intake from non-cereal food was similar in rural and urban areas. "Oils and fats" accounted for 23% of such calorie intake in rural areas and 25% in urban areas. The group next in importance was "miscellaneous food, food products and beverages" ("misc. food, etc." in Table T9) with a share of 20% in calorie intake from non-cereal food in rural India and 19% in urban areas. Next came "milk and milk products", contributing 16% to calorie intake from non-cereal food at all-India level in the rural sector and 17% in the urban. The shares of "sugar and honey" and "pulses, nuts and oilseeds" were around 10-12% each in both rural and urban areas. The share of "roots and tubers" was noticeably higher in rural areas (9%) than in urban (6%). The share of "meat, eggs & fish" was only 3% in both sectors.

Table T9: Percentage break-up of calorie consumption from non-cereal food over eight non-cereal food groups: major States, 2009-10

State	% share of non-cereals in calorie intake	% share of calorie intake from non-cereals contributed by food group								
		roots & tubers	sugar & honey	pulses, nuts & oilseeds	veg. & fruits	meat, eggs & fish	milk & milk products	oils & fats	misc. food, etc.	all
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)

all-India	49.6	6	10	12	8	3	17	25	19	100

3.5.7 Inter-State variation was more pronounced in rural than in urban India. Thus the share of “milk and milk products”, which was between 9% and 27% in the urban sector of all the major States, ranged from 4% to 37% in the rural sector, being 8% or less in 4 major States, and over 30% in 3 major States. In both sectors, inter-State variation was wide in case of “meat, eggs and fish”, but low for “oils and fats”, and also low for “miscellaneous food, food products and beverages”. “Sugar and honey” usually had a higher contribution in States with higher average levels of living, while “roots and tubers”, and also “vegetables and fruits”, had a larger share in poorer States such as Bihar, Jharkhand, Assam, Orissa and West Bengal.

3.6 Adjusted vs. unadjusted calorie intake

3.6.1 For each surveyed household, the unadjusted calorie intake is the figure worked out on the basis of the quantities of consumption recorded in the food blocks. As explained in Chapter Two, paragraph 2.1.7, the calorie intake figure can be improved upon so as to better reflect the consumption of household members during a period of 30 days (by adjusting for meals served to non-household members and received by members from outside sources, free).

3.6.2 In Table 8 of Appendix A, the effect of this adjustment is shown in terms of the distribution of households in each unadjusted calorie intake class by their adjusted calorie intake level. Note that, unlike the other tables, this table is generated on the basis of Schedule Type 1 data only, as adjusting the calorie intake from items for which data were collected for the “last 7 days” (in Schedule Type 2) is possible only if certain very restrictive assumptions are made.

Chapter Four

Intake of Protein and Fat

4.0.1 Like carbohydrates, proteins and fats, too, are oxidised in the body to yield energy which the body needs. The primary function of proteins, however, is to provide amino-acids for building body proteins. Again, fats, particularly the vegetable oils, besides being a concentrated source of energy, provide essential fatty acids which have a vitamin-like function in the body. Therefore the intake of proteins and fats by any population needs to be investigated separately and not merely in the context of the energy they provide. The present chapter discusses different aspects of the intake of proteins and fats in India and the major States in 2009-10.

4.0.2 The contents of this chapter are organised as follows:

- (a) Average protein intake: States and all-India
- (b) Average protein intake: variation with level of living
- (c) Percentage break-up of protein intake by food category: States and all-India
- (d) Percentage break-up of protein intake by food category: variation with level of living
- (e) Average fat intake: States and all-India
- (f) Average fat intake: variation with level of living

4.0.3 The discussion of results in this chapter, like the discussion in Chapter Three, is based on data collected through Schedule 1.0, Type 2. Detailed estimates for all States and UTs are available in Table 3C and 4C (R&U) of Appendix A, separately for each decile class of MPCE (MMRP). For the purpose of comparison with data from earlier rounds, detailed estimates based on Schedule Type 1 are given in Tables 3A/3B and 4A/4B of Appendix A, separately for each decile class of MPCE (URP/MRP). (*See also Statements 3A/3B/3C/3S and 4A/4B/4C/4S.*)

4.1 Average protein intake: States and all-India

4.1.1 Table T10 shows per capita and per consumer unit protein intake in rural and urban areas of India and the major States. At the all-India level protein intake per day was about 59g per capita for both rural and urban sectors. Protein intake per consumer unit per day was about 73g in the rural sector and 72g in the urban. The range of inter-State variation for major States was much wider in the rural sector (from 48.8g per capita per day to 71.4g) than in the urban (54.6g to 64.5g). In some of the poorer States, protein intake was markedly lower in the rural sector than in the urban; examples are Jharkhand (rural: 54g, urban: 62g), Chhattisgarh (rural: 49g, urban: 55g), Bihar (rural: 58g, urban: 62g) and Assam (rural: 55g, urban: 59g). On the other hand, in the States with the highest levels of protein intake, viz., Rajasthan, Haryana and Punjab, it was the rural population and not the urban that had higher protein intake.

4.1.2 Detailed estimates for all States and UTs based on Schedule Type 2 are available in Table 3C of Appendix A, and estimates based on Schedule Type 1 in Table 3A/3B, separately for each decile class of MPCE (MMRP). Tables 3A, 3B and 3C also give percentage of total expenditure spent on food and on cereals.

Table T10: Average protein intake per capita and per consumer unit in 2009-10: major States

State	protein intake (g) per day per capita		protein intake (g) per day per consumer unit	
	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)
Andhra Pradesh	56.9	58.8	70.5	71.9
Assam	54.4	58.8	66.2	71.4
Bihar	57.6	62.4	70.2	75.7
Chhattisgarh	48.8	54.6	59.8	67.3
Gujarat	56.0	56.4	69.0	69.4
Haryana	70.7	64.5	86.9	78.3
Jharkhand	53.6	61.7	65.6	75.0
Karnataka	53.4	56.3	66.2	69.2
Kerala	59.0	59.9	74.6	75.4
Madhya Pradesh	62.7	59.0	76.7	72.1
Maharashtra	60.2	58.8	75.0	72.0
Orissa	54.5	58.0	67.1	70.8
Punjab	67.2	64.4	83.0	78.6
Rajasthan	71.4	63.7	87.7	78.8
Tamil Nadu	52.0	55.5	64.3	68.9
Uttar Pradesh	63.3	60.1	78.7	73.3
West Bengal	53.3	55.5	65.1	68.2
all-India	59.3	58.8	73.1	72.1

4.2 Average protein intake: variation with level of living

4.2.1 Table T11 shows average protein intake per capita per day to rise steadily in rural India from 43g in the lowest MPCE decile class (poorest 10% of population ranked by per capita spending level) to 82g in the top decile class (top 10%), and in urban India from 44g in the lowest decile class to 78.5g in the highest. Average protein intake per consumer unit, too, shows a similar rise in both sectors.

Table T11: Average protein intake per capita and per consumer unit across MPCE decile classes in 2009-10

all-India				
MPCE decile class	protein intake (g) per day per capita		protein intake (g) per day per consumer unit	
	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)
1	43.3	43.9	53.6	54.6
2	48.3	48.9	60.0	60.2
3	52.0	51.5	64.3	63.5
4	54.7	54.6	67.3	67.0
5	56.8	56.3	70.1	69.2
6	59.0	59.4	72.6	72.5
7	62.3	61.1	76.4	74.8

8	64.9	64.1	79.8	78.1
9	69.5	69.3	85.5	84.5
10	81.9	78.5	100.7	95.7

4.3 Percentage break-up of protein intake by food category: States and all-India

4.3.1 The percentage break-up of protein intake over 5 food groups, viz., cereals, pulses, milk & milk products, egg/fish/meat, and other food, is shown in Table T12 for India and the major States. Detailed estimates based on Schedule Type 2 for all States and UTs are given in Table 4C of Appendix A and estimates based on Schedule Type 1 in Table 4A/4B, separately for different decile classes of MPCE.

Table T12: Percentage break-up of protein intake by food group: major States, 2009-10

State	% share of protein intake coming from					all
	cereals	pulses	milk & milk products	egg, fish & meat	other food	
(1)	(2)	(3)	(4)	(5)	(6)	(7)

Uttar Pradesh	60	9	12	3	15	100
West Bengal	48	7	7	18	20	100
all-India	51	10	13	8	18	100

4.3.2 Cereals formed the most important source of protein among the 5 food groups, the share of cereals in protein intake being 60% for rural and 51% for urban India. In the rural sector the share of cereals ranged between 50% and 68% in all major States except Kerala, where it was 40%. In the urban sector the share of cereals was 37% in Kerala and 44%-63% in all other major States. In both sectors the seven States with the largest contributions of cereals to protein intake were Bihar, Madhya Pradesh, Uttar Pradesh, Orissa, Chhattisgarh, Jharkhand and Rajasthan.

4.3.3 The share of milk and milk products in protein intake was 9% in rural India and 13% in urban India. It was noticeably above the national average in Haryana (rural: 25%; urban: 20%), Punjab (rural: 23%; urban: 22%), Rajasthan (rural: 18%; urban: 17%), and Gujarat (rural: 15%; urban: 16%). In all other major States, milk and milk products contributed 10% or less to protein intake in the rural sector and 12% or less in the urban sector.

4.3.4 The contribution of pulses to protein intake was 8% in rural India and 10% in urban India. In all major States, this contribution was in the range 5-12% in the rural sector and 6-14% in the urban sector.

4.3.5 The share of meat, fish and egg in protein intake was only 6% in rural India and 8% in urban India. The share was 10% or more in only 5 major States: Kerala (24% for both rural and urban areas), West Bengal (rural: 14%; urban: 18%), Assam (rural: 12%; urban: 16%), Andhra Pradesh (rural: 10%; urban: 11%) and Tamil Nadu (10% for both rural and urban areas).

4.3.6 The residual group "other food" accounted for 16% of protein intake in rural India and 18% in urban India, inter-State variation being relatively little.

4.4 Percentage break-up of protein intake by food category: variation with level of living

4.4.1 As MPCE levels rise, the contributions of different food categories to protein intake change. This is shown in Table T13 at all-India level separately for rural and urban sectors, using the same five food groups as were used for Table T12, and 10 levels of MPCE representing the poorest 10% to the richest 10% of the rural/urban population.

4.4.2 The contribution of cereals to protein intake is seen to fall steadily from 73% in the lowest decile class to 47% in the highest in rural India and from 69% to 36% in urban India. This fall is balanced by a rise in percentage contribution of all the other food groups with rise in MPCE level. The rise is steepest for milk and milk products: from 3% in the lowest decile class to 15% in the highest in the rural sector and from 5% to 18% in the urban sector. The contribution of egg, fish and meat, too, climbs quite noticeably across MPCE classes from 3% to 9% in rural India and from 4% to 10% in urban India. The increase is slowest for pulses (rural: 7% to 9%; urban: 8% to 11%). The variation in contribution of "other food" is more prominent in the urban sector (14% to 26%) than in the rural.

Table T13: Percentage break-up of protein intake by food group for each MPCE decile class

MPCE decile class	% share of protein intake coming from					
	cereals	pulses	milk & milk products	egg, fish & meat	other food	all
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Rural

7	49	11	14	8	18	100
8	47	11	15	8	19	100
9	43	11	17	9	21	100
10	36	11	18	10	26	100

4.5 Average fat intake: States and all-India

4.5.1 Table T14 shows per capita and per consumer unit fat intake in rural and urban sectors of India and the major States. Estimates for all States are available in Table 3C (based on Schedule Type 2) and Tables 3A/3B (based on Schedule Type 1) of Appendix A, separately for each decile class of MPCE (URP/MRP/MMRP).¹⁰

4.5.2 The average fat intake for the country as a whole was about 43g per person per day in the rural sector and 53g in the urban sector. Considerable inter-State variation, however, existed, especially in rural India, where, at the lower end of the range, there were as many as 6 out of 17 major States (Orissa, Chhattisgarh, Assam, Jharkhand, Bihar and West Bengal) with an average per capita intake of 32.9g or less per day while at the upper end as many as 4 major States (Punjab, Haryana, Rajasthan and Gujarat) had an average intake of 60.5g or more. In urban India State averages of fat intake ranged from 34.5g per person per day in

¹⁰ Tables 3A/3B/3C, besides giving average intake of calories, protein and fat, also give the share of food and of cereals in total expenditure for each MPCE decile class.

Orissa to 69g in Punjab. In Chhattisgarh and Jharkhand, urban intake per person was 14-16g higher than rural, and in Madhya Pradesh and West Bengal, it was 10g higher.

Table T14: Average fat intake per capita and per consumer unit in 2009-10: major States

State	fat intake per day per capita		fat intake per day per consumer unit	
	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)
Andhra Pradesh	44.7	50.7	55.4	62.1
Assam	28.6	36.9	34.8	44.7
Bihar	31.3	40.8	38.2	49.5
Chhattisgarh	28.1	43.6	34.4	53.7
Gujarat	60.5	68.5	74.5	84.4
Haryana	62.9	63.8	77.4	77.4
Jharkhand	30.4	44.5	37.1	54.1
Karnataka	46.4	51.8	57.5	63.7
Kerala	47.2	50.6	59.6	63.7
Madhya Pradesh	41.8	52.2	51.2	63.8
Maharashtra	55.7	60.9	69.4	74.7
Orissa	27.9	34.5	34.3	42.2
Punjab	65.8	68.9	81.3	84.1
Rajasthan	62.6	58.3	76.9	72.0
Tamil Nadu	42.1	49.4	52.1	61.3
Uttar Pradesh	40.3	45.7	50.0	55.7
West Bengal	32.9	43.0	40.2	52.8
all-India	43.1	53.0	53.1	65.0

4.6 Average fat intake: variation with level of living

4.6.1 Table T15 shows variation in fat intake per capita and per consumer unit across decile classes of MPCE formed sectorwise at the all-India level. Details for States and UTs based on Schedule Type 2 data are available in Table 3C of Appendix A and estimates based on Schedule Type 1 in Table 3A/3B of Appendix A.

4.6.2 The increase in fat intake per capita with rise in MPCE level is seen to be steeper than the corresponding increase for protein intake, discussed in Section 4.2. Per capita fat intake in the top decile class of the urban sector is slightly over 83g, more than three times that in the lowest decile class (about 27g), while in the rural sector the intake of the top decile class, at 78.4g, is nearly four times higher that of the bottom class (21.4g).

Table T15: Average fat intake per capita and per consumer unit across MPCE decile classes in 2009-10

MPCE _{MMRP} decile class	fat intake (g) per day per capita		fat intake (g) per day per consumer unit	
	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)
1	21.4	26.9	26.6	33.4
2	27.0	34.8	33.6	42.8
3	31.6	40.6	39.0	50.0
4	35.2	45.6	43.3	55.9
5	38.9	49.4	48.0	60.7
6	42.0	53.5	51.7	65.4

7	46.4	58.1	56.9	71.1
8	51.4	63.8	63.2	77.8
9	58.2	73.9	71.7	90.2
10	78.4	83.5	96.3	101.8

4.6.3 In contrast to the remarkable closeness of average protein intake across the rural-urban divide, average urban fat intake is noticeably higher than rural intake in all the decile classes. The difference in per capita fat intake between a rural decile class and the corresponding urban decile class is as much as 10-12.5g in decile classes 4 to 8, and over 15g in the 9th decile class.

Chapter Five

Trends in Nutritional Intake

5.0.1 The 66th round survey used two different schedules in two different sets of households to measure household consumer expenditure, called Sch. Type 1 and Sch. Type 2. Of these, Type 1 used a '30 days' reference period for all food items while Type 2 used 30 days for some item groups and 7 days for others. For purposes of comparison with data from earlier NSS surveys, it is better to use the data from Sch. Type 1, and not the data from Sch. Type 2, as it is generally agreed that data on food obtained using a '30 days' reference period are not comparable with data obtained by using a '7 days' reference period. On the other hand, it is the data from Sch. Type 2 on which the estimates discussed in Chapter Three are based, as Sch. Type 2 is expected to take care of the problems of reporting errors in food data better than Sch. Type 1.

5.1 Trends in average calorie intake: States and all-India

5.1.1 Tables T16R and T16U show estimates of average calorie intake for India and the major States from the 66th round and five other quinquennial surveys of consumer expenditure for which nutrition results were tabulated – the 27th (1972-73), the 38th (1983), the 50th (1993-94), the 55th (1999-2000) and the 61st round (2004-05).¹¹

Table T16R: Estimated per capita calorie intake per day in different years: major States

State	Rural						
	estimated per capita calorie intake (Kcal) per day in						
	'72-'73	'83	'93-'94	'99-2000	'04-'05	'09-'10 Sch. 1	'09-'10 Sch. 2

¹¹ For the three major States which were bifurcated in 1999, viz., Bihar, Madhya Pradesh and Uttar Pradesh, the estimates have been show separately for the parts from '04-'05 onwards, and as composite estimates up to '99-2000.

5.1.2 The all-India rows show a decline in average calorie intake in both rural and urban India during the period under consideration. The overall decline is substantially greater for rural than for urban India. The decline appears to have been sharper in the latter half of the period (i.e., after 1993-94), especially in the urban sector.¹²

Table T16U: Estimated per capita calorie intake per day in different years: major States

State	Urban estimated per capita calorie intake (Kcal) per day in

Uttarakhand	-	-	-	-	2205	1984	2141
West Bengal	2080	2048	2131	2134	2011	1851	2027
all-India	2107	2089	2071	2156	2020	1946	2123

5.1.3 At the level of individual States, too, a gradual decline is generally seen (especially if the 1972-73 (27th round) estimates are left out), with the notable exception of Kerala, where there appears to have been an increase up to 2004-05, and a decline thereafter. In case of Punjab and Haryana, the estimates are unusually high for 1972-73 but otherwise appear consistent.

5.2 Trends in distribution of persons by calorie intake level: all-India

5.2.1 Table T17 shows the all-India distribution of rural and urban households over four broad classes of calorie intake per consumer unit for each of the four years 1993-94 (50th round), 1999-2000 (55th round), 2004-05 (61st round) and 2009-10 (66th round: Sch. Type 1).

5.2.2 In both sectors the proportion of households with calorie intake below the level of 2700 Kcal per consumer unit per day has grown more or less steadily over the 16-year period spanned by the four surveys: from under 52% in rural India to nearly 62%, and from 57% in urban India to about 63%.

¹² It needs to be mentioned that the estimates of food consumption from the 55th round (1999-2000) are likely to be overestimates; the adoption of a double reference period for food items (7 & 30 days) in the 55th round is believed to be responsible for this. See also *NSS Report No.509: Household Consumption of Various Goods and Services in India, 2004-05*.

5.2.3 Among the higher calorie intake classes, it is the ≥ 120 class – what may be called the over-nourished end – that has shrunk most: by about 9½% in rural India and 5½% in urban India. The 100-120 class has experienced little change in size.

5.2.4 The increase in the number below the level of 2700 Kcal per consumer unit per day has been mainly in the 80-100 category. In the urban sector the size of the <80 category has not changed much.

Table T17: Per 1000 distribution of hhs by level of calorie intake per consumer unit per day: 1993-94 to 2009-10

year	per 1000 no. of RURAL hhs with calorie intake per consumer unit per day*				per 1000 no. of URBAN hhs with calorie intake per consumer unit per day*			
	<80	80-100	100-120	≥ 120	<80	80-100	100-120	≥ 120
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
1993-94	227	288	230	256	266	306	217	212
1999-2000	258	300	216	225	259	313	221	209
2004-05	276	337	215	172	282	349	212	156
2009-10 (Type 1)	258	362	219	160	277	357	210	156
2009-10 (Type 2)	194	328	253	225	205	332	233	230

*expressed as a percentage of a level of 2700 Kcal per consumer unit per day

5.3 Trends in percentage break-up of calorie intake by food group: all-India

5.3.1 Table T18 shows the percentage break-up of calorie intake over nine food groups – cereals, roots and tubers, sugar and honey, pulses, nuts and oilseeds, vegetables and fruits, meat, eggs and fish, milk and milk products, oils and fats, and miscellaneous food, food products and beverages – for rural and urban India for four years spanning the period 1993-94 to 2009-10.

Table T18: Percentage break-up of calorie consumption over nine food groups: 1993-94 to 2009-10

year	% share of calorie intake from food group								
	cereals	roots & tubers	sugar & honey	pulses, nuts & oilseeds	veg. & fruits	meat, eggs & fish	milk & milk products	oils & fats	misc. food, etc.
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
Rural									
1993-94	71.03	2.65	4.80	4.92	2.02	0.68	6.15	5.34	2.41
1999-2000	67.55	3.25	5.14	5.46	1.97	0.77	6.17	7.37	2.32
2004-05	67.54	2.95	4.78	4.98	2.23	0.76	6.42	7.36	2.98
2009-10	64.16	2.78	4.61	4.54	1.84	0.72	6.79	8.53	6.04
Urban									
1993-94	58.53	2.54	6.21	6.05	3.26	1.02	8.00	8.79	5.60
1999-2000	55.05	2.90	6.15	6.86	2.94	1.12	8.23	11.24	5.52
2004-05	56.08	2.82	5.69	6.68	3.17	1.05	8.61	10.58	5.32
2009-10	55.01	2.59	5.66	5.94	2.62	1.00	9.37	11.92	5.87

5.3.2 The share of cereals in total calorie intake from the nine food groups has declined over the 16-year period by nearly 7 percentage points in the rural sector and by about 3½ percentage points in the urban. The share of oils and fats has risen by 3 percentage points in

both sectors. The share of milk and milk products has grown by about 1.4 percentage points in the urban sector but only 0.6 percentage points in the rural. The contributions of vegetables and fruits, as well as sugar and honey, appear to be falling over time, especially in urban India, while the contribution of meat, eggs and fish shows a slight rise followed by a fall.

5.4 Trends in average protein and fat intake: States and all-India

5.4.1 Table T19 shows estimates of per capita protein intake (in g) per day in India and the major States over the period 1993-94 to 2009-10.

Table T19: Per capita protein intake per day in different years: major States

State	rural					urban				
	per capita protein intake (g) per day in					per capita protein intake (g) per day in				
	'93-'94	'99-2000	'04-'05	'09-'10 Sch. 1	'09-'10 Sch. 2	'93-'94	'99-2000	'04-'05	'09-'10 Sch. 1	'09-'10 Sch. 2
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)
Andhra Pradesh	50.8	49.4	49.8	50.7	56.9	49.6	50.8	50.9	50.8	58.8

Karnataka	55.1	54.2	48.8	49.0	53.4	53.1	53.5	52.2	51.8	56.3
Kerala	50.8	52.4	55.4	52.7	59.0	52.4	55.2	56.7	54.0	59.9
Madhya Pradesh	63.0	58.2	58.8	58.4	62.7	59.8	60.6	58.2	54.1	59.0
Maharashtra	54.8	56.5	55.7	56.2	60.2	55.5	55.9	52.1	52.7	58.8
Orissa	52.7	49.9	48.3	49.7	54.5	57.2	57.8	55.2	52.5	58.0
Punjab	74.7	71.7	66.7	65.4	67.2	61.8	64.8	63.4	60.4	64.4
Rajasthan	79.4	76.9	69.6	67.8	71.4	66.5	70.4	64.0	60.5	63.7
Tamil Nadu	46.8	44.9	44.9	47.3	52.0	48.7	51.7	49.2	50.2	55.5
Uttar Pradesh	70.4	69.7	65.9	60.0	63.3	63.2	62.0	65.1	56.2	60.1
Uttarakhand	-	-	61.6	58.6	-	-	-	62.8	55.5	-
West Bengal	54.8	51.6	52.0	47.9	53.3	56.6	55.5	55.1	49.0	55.5
all-India	60.2	59.1	57.0	55.0	59.3	57.2	58.5	57.0	53.5	58.8

5.4.2 At the all-India level protein intake has fallen from 60.2g to 55.0g per person per day in the rural sector and from 57.2g to 53.5g in the urban sector over the period 1993-94 to 2009-10. The decline has taken place in most major States but has been sharpest in rural areas of Rajasthan, Haryana, Uttar Pradesh and Punjab – where intake has fallen by 9-12g. Kerala shows, on the other hand, a rise in protein intake up to 2004-05 and a slight fall thereafter. Andhra Pradesh and Tamil Nadu appear to have undergone little change in protein intake levels over the period.

5.4.3 In case of fat intake, on the other hand (Table T20), there is a rising trend, with every major State showing a rise. At all-India level the rise has been from 31.4g per person per day in 1993-94 for the rural population to 38.3g in 2009-10 – a rise of 7g over the 16-year period, and from 42.0g to 47.9g for the urban – a rise of 6g over the same period. There is considerable variation among major States in the extent of rise, ranging from 1.1g (Uttar Pradesh) in both sectors to 14.8g in the rural sector and 10.1g in the urban sector. In the rural

sector, Maharashtra, Tamil Nadu and Karnataka registered increases of 11g or more since 1993-94 while in the urban sector Tamil Nadu and Karnataka had increases of 9g or more in fat intake per person per day. Over the rounds, the rising trend has been, on the whole, steady, with few cases of ups and downs even at State level, though estimates for 1999-2000 appear to be on the high side for a few States, notably, Haryana, Rajasthan, Gujarat and Karnataka.

Table T20: Per capita fat intake per day in different years: major States

State	rural					urban				
	per capita fat intake (g) per day in					per capita fat intake (g) per day in

5.5 Trends in break-up of protein intake by food category: all-India

5.5.1 Table T21 shows percentage break-up of protein intake by food group for India as a whole over the period 1993-94 to 2009-10.

Table T21: Percentage break-up of protein intake by food group: 1993-94 to 2009-10

year	% share of protein intake coming from					
	cereals	pulses	milk & milk products	egg, fish & meat	other food	all
						Rural
1993-94	69.42	9.76	8.81	3.66	8.35	100
1999-2000	67.43	10.91	9.19	4.04	8.43	100
2004-05	66.37	9.47	9.28	3.98	10.84	100
2009-10	64.87	9.06	10.02	4.04	12.01	100
						Urban
1993-94	59.41	11.54	11.66	5.29	12.10	100
1999-2000	57.03	13.10	12.43	5.98	11.46	100
2004-05	56.16	11.00	12.33	5.47	14.98	100
2009-10	56.39	11.31	13.75	5.59	12.96	100

5.5.2 Over the 16 years preceding 2009-10, the contribution of cereals to protein intake has fallen by about 4½ percentage points in rural India and by 3 percentage points in urban India. The contribution of pulses appears to have undergone a slight fall in both rural and urban sectors. The fall in the contribution of cereals has been balanced, in the rural sector, mainly by a rise of about 3½ percentage points in the contribution of the “other food” category, and also by a rise of 1 percentage point in the contribution of “milk and milk products”. In the urban sector, “milk and milk products” has seen a rise in share of 2 percentage points and “other food”, a rise of less than 1 percentage point.

Chapter Six

A Note on the Sources of Meals Consumed

6.0.0 Most meals consumed by Indians are prepared in their own households, but not all – some are obtained from hotels or restaurants on payment, some as wages in kind or perquisites from employers, some free from friends or relatives or as charity, and some by schoolchildren from school. Data collected personwise on the break-up of meals taken by source enable the estimation – at national and State level – of the break-up of meals consumed per household over these sources by decile class of MPCE (Table 1, Appendix A) and also (Table 2, Appendix A) of the average number of meals consumed per person by age group and sex. (See also Statements 1 and 2 at the end of this chapter.)

Table T22: Average no. of meals taken in 30 days by decile class of MPCE

decile class of MPCE	all-India					
	rural			urban		
	av. no. of meals taken per hh in 30 days	av. hh size	av. no. of meals taken per person in 30 days	av. no. of meals taken per hh in 30 days	av. hh size	av. no. of meals taken per person in 30 days
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1	431	5.83	74	418	5.85	71
2	401	5.47	73	380	5.29	72
3	389	5.29	74	363	5.05	72
4	378	5.13	74	339	4.74	72
5	360	4.89	74	329	4.63	71
6	350	4.73	74	291	4.15	70
7	337	4.53	74	281	3.97	71
8	323	4.36	74	254	3.64	70
9	300	4.02	75	233	3.34	70
10	256	3.37	76	187	2.73	68
all	345	4.65	74	292	4.14	71

6.0.1 Table T22 shows that the average number of meals taken per person (from all sources) does not vary appreciably with MPCE level, implying that the differences in average number of meals taken per household across MPCE classes are due to variation in average household size with MPCE. It also suggests, in view of the findings on variation in nutrient intake with MPCE level discussed in Sections 3.2, 4.2 and 4.6, that wide differences exist in *per person* intake of nutrients across decile classes of MPCE.

6.0.2 Table T23 shows the percentage break-up of meals by source, separately for males and females, by sector. The proportion of meals received from sources other than home was highest for urban males (5%), followed by rural males (4.3%), rural females (3.5%), and urban females (3.1%). The percentage of meals received from school/balwadi was higher in the rural sector while the percentages of free meals received from employer and from other sources were both higher in the urban sector.

Table T23: Percentage break-up of number of meals taken by source of meals for males and females

source of meals		percentage of total no. of meals consumed			
		rural		urban	
		male	female	male	female
(1)	(2)	(3)	(4)	(5)	
not at home	free, from school/ balwadi	2.7	2.4	0.8	1.0
	free*, from employer	0.1	0.0	0.3	0.1
	free, from other sources	0.9	0.9	1.3	1.3
	free, total	3.7	3.4	2.4	2.4
	on payment	0.7	0.1	2.5	0.7
	total	4.3	3.5	5.0	3.1
at home		95.7	96.5	95.0	96.9
all		100.0	100.0	100.0	100.0

*that is, not against payment, though the meals might themselves be in the nature of payment in kind for services rendered.

6.0.3 Table T24 shows the average number of meals received from school during a period of 30 days per male and per female child for three age-groups: 0-4, 5-9 and 10-14, in rural and urban India. The averages have been computed taking the entire population of the sex and age-group in the denominator and not only schoolgoing children. The average numbers of meals received from all sources by each sex and age-group are shown in parentheses.

Table T24: Average no. of meals received from school, balwadi, etc. per male and female child of different age groups in 30 days

age group		average no. of meals received in 30 days from school, balwadi, etc.			
		rural		urban	
		per male child	per female child	per male child	per female child
(1)	(2)	(3)	(4)	(5)	
0-4	1.2 (74.0)	1.1 (73.1)	0.5 (70.0)	0.5 (69.5)	
5-9	8.3 (84.4)	8.2 (84.9)	3.6 (81.3)	3.8 (81.5)	
10-14	6.6 (81.0)	6.6 (81.2)	2.7 (76.4)	3.2 (77.4)	

Figures in parentheses show total no. of meals received in 30 days from all sources.

6.0.4 The highest numbers of such meals were, as Table T24 shows, received by rural children in the age-group 5-9 (over 8 meals per child), followed by rural children in the 10-14 age-group (6.6 meals per child). The rural figure is more than double the corresponding urban figure for each age-sex category. Gender differences are, however, negligible, except that the figure for urban girls in the 10-14 group is a little higher than that for boys.

Statement 1A: Average number of meals consumed per household at home and obtained elsewhere on payment or free from specific sources (as perquisite, from school, etc.) during a period of 30 days for each decile class of MPCE_{URP}

Appendix A

Detailed Tables

Notes on Tables

- Schedule Types 1 and 2 use different methods of collecting consumption data (different reference periods). The consumption data from the two schedule types cannot be pooled. Accordingly, separate tables have been generated from the data of Schedule Type 1 and the data of Schedule Type 2.
- Earlier NSS reports on nutritional intake (e.g., Report No. 513, NSS 61st round) were based on a schedule that used the same reference periods as Schedule Type 1 of the 66th round. Therefore earlier results are comparable with 66th round estimates based on Schedule Type 1 but not with 66th round estimates based on Schedule Type 2.
- For Tables 2 and 5, the tables generated from Schedule Type 1 data have been numbered Tables 2A and 5A, and the tables generated from Schedule Type 2 data have been numbered Tables 2B and 5B.
- Tables 1, 3, 4, 6 and 7 have been generated by decile class of MPCE. For households where Schedule Type 1 was canvassed, two different measures of household MPCE – called $MPCE_{URP}$ and $MPCE_{MRP}$ – are available. Therefore two sets of tables have been generated from Schedule Type 1 for these tables, one taking MPCE to mean $MPCE_{URP}$ (Tables 1A, 3A, 4A, 6A and 7A) and the other taking MPCE to mean $MPCE_{MRP}$ (Tables 1B, 3B, 4B, 6B and 7B). In addition, Tables 1C, 3C, 4C, 6C and 7C have been generated from Schedule Type 2 data.
- The estimates in Tables 1A and 1B for “all classes” of MPCE are based on the same data and are identical. But the estimates in any particular decile class of MPCE in these two tables are based on sets of households that may not be identical. Hence the estimates for individual decile classes of MPCE are expected to be different in Tables 1A and 1B. The same holds for Tables 3A and 3B, 4A and 4B, 6A and 6B, and 7A and 7B.
- Table 8 is based on Schedule Type 1 only.

Table 1A-R: Average number of meals consumed per household at home and obtained elsewhere on payment or free from specific sources (as perquisite, from school, etc.) during a period of 30 days for each decile class of MPCE_{URP}

Rural														
decile class of MPCE (URP)	avg. hh size	average no. of meals consumed per household over 30 days							no. per 1000 persons reporting '0' meals	estd. no. of hhs (00)	estd. no. of persons (00)	sam-ple hhs	sam-ple per-sons

Appendix B

Sample Design and Estimation Procedure

Sample Design and Estimation Procedure

1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its sixty-sixth round from 1st July 2009 to 30th June 2010.

2. Outline of survey programme

2.1 **Subject coverage:** The 66th round (July 2009-June 2010) of NSS was for the survey on 'Household Consumer Expenditure' and 'Employment and Unemployment' and it was the eighth quinquennial survey in the series, the last one having been conducted in the 61st round (2004-2005) of NSS.

2.2 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. For Leh (Ladakh) and Kargil districts of Jammu & Kashmir there were no separate sample first-stage units (FSUs) for the 'Central sample'. For these two districts, sample FSUs drawn as 'State sample' were treated as Central sample. However, no first-stage unit was surveyed in Leh, Kargil and Punch districts of J&K due to various reasons.

2.3 **Period of survey and work programme:** The period of survey was of one year duration starting on 1st July 2009 and ending on 30th June 2010. The survey period of this round was divided into four sub-rounds of three months' duration each as follows:

- sub-round 1 : July - September 2009
- sub-round 2 : October - December 2009
- sub-round 3 : January - March 2010
- sub-round 4 : April - June 2010

In each of these four sub-rounds equal numbers of sample villages/blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempts were made to survey each of the FSUs during the sub-round to which it was allotted. *Because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep and rural areas of Arunachal Pradesh and Nagaland.*

2.4 **Schedules of enquiry:** During this round, the following schedules of enquiry were canvassed:

- Schedule 0.0 : list of households
- Schedule 1.0 : consumer expenditure
- Schedule 10 : employment and unemployment

Two variants of Schedule 1.0, called Schedule Type 1 and Schedule Type 2, were canvassed in this round. Schedule Type 1 was similar to Schedule 1.0 of NSS 61st round. Compared to

Schedule Type 1, Schedule Type 2 had a different reference period (7 days) for some items of food, pan, tobacco and intoxicants.

2.5 Participation of States: In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep participated. The scale of the survey conducted by a State/UT relative to the Central sample survey in the State/UT was as follows:

Nagaland (Urban)	: triple
J&K, Manipur, Delhi & Uttar Pradesh	: double
Maharashtra (Urban) & Kerala	: one and half
Gujarat	: less than equal
Remaining States/UTs	: equal

3. Sample design

3.1 Outline of sample design: A stratified multi-stage design was adopted for the 66th round survey. The first stage units (FSUs) were the 2001 Census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In addition, two non-UFS towns of Leh and Kargil of Jammu & Kashmir were also treated as FSUs in the urban sector. The ultimate stage units (USU) were households in both the sectors. In case of large FSUs, one intermediate stage of sampling was the selection of two hamlet-groups (hgs)/sub-blocks (sbs) from each rural/urban FSU.

3.2 Sampling frame for first stage units: *For the rural sector*, the list of 2001 Census villages (henceforth the term 'village' will mean Panchayat wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available UFS blocks was considered as the sampling frame. For non-UFS towns, the frame consisted of the individual towns (only two towns, viz., Leh & Kargil constituted this frame).

3.3 Stratification: Within each district of a State/UT, generally speaking, two basic strata were formed: i) rural stratum comprising all rural areas of the district and (ii) urban stratum comprising all urban areas of the district. However, within the urban areas of a district, wherever there were one or more towns with population 10 lakhs or more as per Census 2001 in a district, each of these formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum.

3.4 Sub-stratification: Each rural stratum was divided into 2 sub-strata as follows:

sub-stratum 1: all villages with proportion of child workers (p) $> 2P$ (where P is the average proportion of child workers for the State/UT as per Census 2001)

sub-stratum 2: remaining villages

3.5 Total sample size (FSUs): At all-India level, 12784 FSUs were allocated to the Central sample and 15132 FSUs to the State sample. Further, the data of 24 State sample FSUs of Leh and Kargil districts of J&K surveyed by DES, J&K, were included in the Central sample.

3.6 Allocation of total sample to States and UTs: The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 subject to a

minimum sample allocation to each State/UT, and subject to resource availability in terms of field investigators.

3.7 Allocation of State/UT level sample to rural and urban sectors: State/UT level sample size was allocated between the two sectors in proportion to population as per Census 2001 with double weightage to urban sector, subject to the restriction that the urban sample size for bigger States like Maharashtra, Tamil Nadu, etc. should not exceed the rural sample size. A minimum of 16 FSUs (to the extent possible) was allocated to each State/UT separately for rural and urban areas. Further, the State-level allocations for both rural and urban sectors were adjusted marginally in a few cases to ensure that each stratum/sub-stratum got a minimum allocation of 4 FSUs.

3.8 Allocation to strata/sub-strata: Within each sector of a State/UT, the sample size was allocated to different strata/sub-strata in proportion to population as per Census 2001. Allocations at stratum/sub-stratum level were adjusted to multiples of 4 with a minimum sample size of 4 and equal-sized samples were allocated to the four sub-rounds.

3.9 Selection of FSUs: For the rural sector, from each stratum/sub-stratum, the required numbers of sample villages were selected by probability proportional to size with replacement (PPSWR), size being the population of the village as per Census 2001. For the urban sector, FSUs were selected from each stratum using Simple Random Sampling Without Replacement (SRSWOR). Both rural and urban samples were drawn in the form of two independent sub-samples.

3.10 Formation and selection of hamlet-groups/sub-blocks

3.10.1 Criterion for hamlet-group/sub-block formation: Selected FSUs with approximate population 1200 or more were divided into a suitable number of geographically compact 'hamlet-groups' (having more or less equal population) in the rural sector and 'sub-blocks' in the urban sector as shown below.

approximate present population of the sample FSU	no. of hg's/sb's formed
less than 1200 (no hg/sb formation)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
... and so on	

For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except for four districts –Dehradun (Plains), Nainital (Plains), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir, and Idukki district of Kerala, the number of hamlet-groups formed was as follows:

approximate present population of the sample village	no. of hg's formed
less than 600 (no hg formation)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
... and so on	

3.10.2 Selection of hamlet-groups/sub-blocks: Hamlet-groups (hg)/sub-blocks (sb) were selected from FSUs where hamlet-groups/sub-blocks were formed, two in the following manner. The hg/sb with maximum percentage share of population was always selected and termed hg/sb 1; one more hg/sb was selected from the remaining hg's/sb's by simple random sampling (SRS) and termed hg/sb 2. Listing and selection of the households was done independently in the two selected hamlet-groups/sub-blocks.

4. Listing of households

4.1 Having determined the hamlet-groups/sub-blocks, i.e. area(s) to be considered for listing, the next step was to list all the households (including those found through local enquires to be temporarily locked). The hamlet-group/sub-block with sample hg/sb number 1 was considered for listing first, followed by sample hg/sb number 2.

5. Formation of second stage strata and allocation of sample households

5.1 Two cut-off points 'A' and 'B' (in Rs.) were determined from NSS 61st round data for each NSS region for urban areas in such a way that the top 10% of the population had MPCE more than B and the bottom 30% of the population had MPCE less than A.

5.2: For Schedule 1.0, households listed in the selected FSU/hamlet-group/sub-block were stratified into three second stage strata (SSS). Composition of the SSS and number of households to be surveyed from different SSSs for each of the two schedule types was as follows:

SSS	composition of SSS	number of households surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
Rural			
SSS 1	relatively affluent households	2	1
SSS 2	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3	other households	2	1
Urban			
SSS 1	households having MPCE of top 10% of urban population ($MPCE > B$)	2	1
SSS 2	households having MPCE of middle 60% of urban population ($A \leq MPCE \leq B$)	4	2
SSS 3	households having MPCE of bottom 30% of urban population ($MPCE < A$)	2	1

5.3 Thus, for each schedule type, a total of 8 households were selected for survey from each FSU – 4 from each selected hamlet-group/sub-block in FSUs where hg/sb's were formed.

6. Selection of households

6.1 From each SSS the sample households for each of the schedules were selected by SRSWOR. If a household was selected for Schedule 1.0 (Type 1), it was not allowed to be selected for Schedule 1.0 (Type 2) or Schedule 10. Similarly, if a household was not selected for Schedule 1.0 (Type 1) but selected for Schedule 1.0 (Type 2) it was not allowed to be selected for Schedule 10. If a household got selected for more than one schedule, only one schedule was canvassed in that household in the priority order of Schedule 1.0 (Type 1), Schedule 1.0 (Type 2) and Schedule 10 and in that case the household was replaced by selecting another household for the other schedule.

6.2 However, at least one household was to be surveyed from each SSS for each of the three schedules of enquiry. To adhere to this restriction, the condition of not canvassing more than one schedule in the same household was waived in the extreme cases where there was an insufficient number of households in the frame of a particular second stage stratum.

7. Estimation procedure

7.1 Notations:

s = subscript for stratum

t = subscript for sub-stratum (only for rural sector)

m = subscript for sub-sample (m = 1, 2)

i = subscript for FSU [village (panchayat ward)/ block/ non-UFS town]

d = subscript for a hamlet-group/sub-block (d = 1, 2)

j = subscript for second stage stratum in an FSU/ hg/sb [j = 1, 2 or 3]

k = subscript for sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/sb's formed in the sample FSU

$D^* = 0$ if $D = 1$

= (D – 1) for FSUs with $D > 1$

N = total number of FSUs in any urban stratum

Z = total size of a rural stratum/sub-stratum (= sum of sizes for all the FSUs of a stratum/sub-stratum)

z = size of sample village used for selection.

n = number of sample FSUs surveyed including 'zero cases' but excluding casualties for a particular sub-sample and stratum/sub-stratum.

H = total number of households listed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

\hat{X} , \hat{Y} = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k^{th} household in the j^{th} second stage stratum of the d^{th} hg/sb (d = 1, 2) of the i^{th} FSU belonging to the m^{th} sub-sample for the t^{th} sub-stratum of s^{th} stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

7.2 Formulae for estimation of aggregates for a particular sub-sample and stratum (for urban)/ sub-stratum (for rural)

7.2.1 Rural

(i) For j^{th} second stage stratum of a sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum (\hat{Y}_s) will be obtained by adding sub-stratum level estimates (\hat{Y}_{st}).

7.2.2 Urban

(i) For j^{th} second stage stratum of a stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Note: $N = 1$ in the above formula in the case of Leh and Kargil districts of J&K.

7.3 Overall estimate for aggregates

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples was obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

7.4 Overall estimate of aggregates at State/UT/all-India level

The overall estimate \hat{Y} at the State/UT/all-India level was obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/UT/all-India.

7.5 Estimates of ratios

Let \hat{Y} and \hat{X} be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/UT/all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) was obtained as $\hat{R} = \frac{\hat{Y}}{\hat{X}}$.

7.6 Estimates of error

The estimated variances of the above estimates were as follows:

7.6.1 For aggregate \hat{Y}

$Var(\hat{Y}) = \sum_s Var(\hat{Y}_s)$ where $Var(\hat{Y}_s)$ is given by

$Var(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$ for rural stratum, where \hat{Y}_{st1} and \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't',

and

$Var(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2$ for urban stratum, \hat{Y}_{s1} and \hat{Y}_{s2} being the stratum estimates for sub-sample 1 and 2 respectively.

7.6.2 For ratio \hat{R} :

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[(\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R}(\hat{Y}_{st1} - \hat{Y}_{st2})(\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

for rural and

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \left[(\hat{Y}_{s1} - \hat{Y}_{s2})^2 + \hat{R}^2 (\hat{X}_{s1} - \hat{X}_{s2})^2 - 2\hat{R}(\hat{Y}_{s1} - \hat{Y}_{s2})(\hat{X}_{s1} - \hat{X}_{s2}) \right]$$

for urban.

7.6.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

8. Multipliers:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a sub-sample and schedule type are given below for Schedule 1.0:

sector	formula for multipliers	
	hg /sb 1	hg /sb 2
rural	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times \frac{H_{smi1j}}{h_{smi1j}}$	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$
Urban	$\frac{N_s}{n_{smj}} \times \frac{H_{smi1j}}{h_{smi1j}}$,	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$,

(j = 1, 2, 3)

- Note: (i) For estimating any characteristic for any domain not specifically considered in the sample design, indicator variable was used.
- (ii) Multipliers were computed on the basis of information available in the listing schedule irrespective of any misclassification observed between listing schedule and detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic, $D_{smi}^* = 0$ in the relevant multipliers and there was only one multiplier for the village (see paragraph 7.2.1.1).

Appendix C

Population Projections

Table C1: Projected population (000) as on 1st March 2009, 1st March 2010 and 1st January 2010 for each State/UT

State/U.T./all-India	rural			urban			rural+ urban

Note: 1. Projected population as on 1st March 2009 and 1st March 2010 are from RGI (reference Tables 8 and 9 of the Population Projections for India and States: 2001-2026).

2. Table 8 provides projected population as on 1st March 2009 and 1st March 2010 for rural+urban combined and Table 9 provides projected population as on 1st March 2009 and 1st March 2010 for urban.

3. Projected population as on 1st January 2010 has been derived using the formula, $A = A_1 \times \left[\left(\frac{A_2}{A_1} \right)^{\frac{1}{12}} \right]^{10}$, where A_1 is the population for 1st March 2009, A_2 is the population for 1st March 2010 and A is the population for 1st January 2010.

4. Projected population as on 1st January 2010 has been derived for the rural+urban and urban separately and that for rural has been derived by subtracting these two.

Appendix D

Schedule 1.0

RURAL		*
URBAN		

CENTRAL		*
STATE		

**GOVERNMENT OF INDIA
NATIONAL SAMPLE SURVEY ORGANISATION
SOCIO-ECONOMIC SURVEY
SIXTY-SIXTH ROUND: JULY 2009 - JUNE 2010**

**SCHEDULE 1.0: CONSUMER EXPENDITURE
Schedule Type 1**

[0] descriptive identification of sample household	
1. state/u.t.:	5. hamlet name:
2. district:	6. ward/inv. unit/block:
3. tehsil/town:	7. name of head of household:
4. village name:	8. name of informant:

[1] identification of sample household							
item no.	item	code			item no.	item	code
1.	srl. no. of sample village/ block				11.	sub-sample	
2.	round number	6		6	12.	FOD sub-region	
3.	schedule number	0	1	0	13.	sample hamlet-group/sub-block number	
4.	sample (central-1, state-2)				14.	second stage stratum	
5.	sector (rural-1, urban-2)				15.	sample household number	
6.	NSS region				16.	srl. no. of informant (as in col.1, block 4)	
7.	district				17.	response code	
8.	stratum				18.	survey code	
9.	sub-stratum				19.	reason for substitution of original household (code)	
10.	sub-round				20.	schedule type	1

CODES FOR BLOCK 1

item 17: response code : informant: co-operative and capable -1, co-operative but not capable -2, busy -3, reluctant - 4, others - 9

item 18: survey code : original – 1, substitute – 2, casualty – 3

item 19: reason for substitution of original household : informant busy -1, members away from home -2, informant non-cooperative -3, others - 9

* tick mark (✓) may be put in the appropriate place.

[2] particulars of field operations										
srl. no.	item	investigator						supervisory officer		
(1)	(2)	(3)						(4)		
1.	i) name (block letters)									
	ii) code									
2.	date(s) of :	DD	MM	YY	DD	MM	YY			
	(i) survey/inspection									
	(ii) receipt									
	(iii) scrutiny									
	(iv) despatch									
3.	number of additional sheets attached									
4.	total time taken to canvass schedule 1.0 (in minutes)									
5.	whether schedule contains remarks (<i>yes-1, no-2</i>)	in block 13/14						elsewhere in the schedule		
6.	signature									

[3] household characteristics									
1. household size					during July 08 to June 09	14. land cultivated (0.000 ha)			
2. principal industry (NIC-2004)	description:					15. land irrigated (0.000 ha)			
	code (5-digit)								
3. principal occupation (NCO-2004)	description:				primary source of energy for	16. cooking (code)			
	code (3-digit)					17. lighting (code)			
4. household type (code)					18. dwelling unit code (owned-1, hired-2, no dwelling unit-3, others-9)				
5. religion (code)									
6. social group (code)					19. is any member of the household a regular salary earner? (yes-1, no -2)				
7. whether owns any land (yes-1, no -2)									
8. if yes in item 7, type of land owned (homestead only - 1, homestead and other land - 2, other land only - 3)					20. did the household perform any ceremony during the last 30 days? (yes - 1, no - 2)				
land as on the date of survey (in 0.000 hectares)									
9. owned					21. no. of meals served to non-household members during the last 30 days				
10. leased-in									
11. otherwise possessed (neither owned nor leased-in)					22. whether the household has access to internet at home on the date of survey (yes-1, no-2)				
12. leased-out									
13. total possessed [items (9+10+11-12)]									

CODES FOR BLOCK 3

item 4: **household type** : for rural areas: self-employed in non-agriculture-1, agricultural labour-2, other labour-3, self-employed in agriculture-4, others-9

for urban areas: self-employed-1, regular wage/salary earning-2, casual labour-3, others-9

item 5: **religion** : Hinduism-1, Islam-2, Christianity -3, Sikhism-4, Jainism-5, Buddhism-6, Zoroastrianism-7, others-9

item 6: **social group** : Scheduled Tribes-1, Scheduled Castes-2, Other Backward Classes-3, others-9

item 16: **primary source of energy for cooking** : coke, coal-01, firewood and chips-02, LPG-03, gobar gas-04, dung cake-05, charcoal-06, kerosene-07, electricity-08, others-09, no cooking arrangement-10

item 17: **primary source of energy for lighting** : kerosene-1, other oil -2, gas-3, candle-4, electricity-5, others-9, no lighting arrangement-6

Note: 1 acre = 0.4047 hectare
