# THE NATIONAL SAMPLE SURVEY

FIFTEENTH ROUND JULY 1959—JUNE 1960

NUMBER 99

TABLES WITH NOTES ON  
HOUSEHOLD NON-REGISTERED TRADE

सत्यमेव जयते

Issued by

The Cabinet Secretariat : Government of India

Printed by the Eka Press, Calcutta in 1965 and published  
by the Manager of Publications, Civil Lines, Delhi-8

## **Note of Caution**

Being the scanned copy of old NSS report, this document may suffer from following limitations -

- i. Poor Quality of the Scanned images.
- ii. Page(s) missing in between.
- iii. Improper sequencing/arrangement.

### ACKNOWLEDGEMENT

The report has been finalised by Sushil Goswami. Jagadish Chandra Das, N. C. Pramanik, and S. C. Basu Roy were associated in the work relating to the preparation of the report.

Supervision of computing, punching and machine tabulation was entrusted to H. B. Chowdhury, A. K. Chaudhury, S. Palit, R. Roy, I. B. Dey, K. C. Poddar, B. Banerjee, M. S. Murty, F. M. Rao respectively.

# THE NATIONAL SAMPLE SURVEY

FIFTEENTH ROUND : JULY 1959—JUNE 1960

NUMBER 99

## TABLES WITH NOTES ON HOUSEHOLD NON-REGISTERED TRADE

*This report entitled 'Tables with Notes on Household Non-Registered Trade : Fifteenth Round, July 1959-July 1960' was prepared by the Indian Statistical Institute, Calcutta and is being published in the form in which it was submitted to the Government of India and Government are not responsible for the views contained therein.\**

### CHAPTER ONE

#### INTRODUCTION

1. This report is based on data collected through household schedule on non-registered trade in the fifteenth round (July 1959-June 1960) of the National Sample Survey (NSS). The first (NSS Report Number 24) was published on the basis of data collected during seventh to ninth rounds of NSS and the second (NSS Report Number 41) on the basis of tenth round of NSS. It may be mentioned here that during eleventh to fourteenth rounds of the NSS, no schedule on non-registered trade was canvassed.

2. The survey in the fifteenth round covered the whole of the year and was divided into six sub-rounds in the rural sector and four sub-rounds in the urban sector; each sub-round covered a period of two months in the rural sector and three months, in the urban sector. The survey covered the period from July 1959 to June 1960. There were two reference periods (viz. week and month) for the collection of data for each of the items excepting the items major purchase and sales of merchandise, when week was the reference period.

3. The geographical coverage of the fifteenth round was the whole of Indian Union including Jammu and Kashmir excluding the Andaman and Nicobar Islands, the islands of Amindivi, Laccadive and Minicoy, the North-East Frontier Agency and the Ladakh district in Jammu and Kashmir.

4. A stratified multi-stage sampling procedure with two interpenetrating net work of samples (IPNS) was adopted both in the rural and urban sectors. The villages in the rural sector and blocks in the urban sector were first stage sampling

---

\* The report (No. D. 101) was submitted to the Government of India in July 1962.

### *National Sample Survey*

units, and households, the second stage sampling units. Altogether 2598 villages and 2215 blocks were surveyed. 3945 households in the rural sector and 6581 households in the urban sector were surveyed. Each village was surveyed twice, once during the first three sub-rounds and again, during the last three sub-rounds. In each sub-round, one-third of the villages was planned to be surveyed in the rural sector and one fourth of the block, in the urban sector.

5. The approach of investigation was through households which were engaged in trading activities as usual occupation at least in the subsidiary capacity. Trading is defined here as an act of actual purchase of goods and their disposal by way of sale, without any intermediate physical transformation whatsoever, of the goods during such transaction. The act of intermediaries, who do not actually purchase or sell goods but only arrange for purchases and sales and earn remuneration by way of brokerage or commission, has also come under the scope of this definition of trading which was not taken into account in the enquiries in the earlier rounds of NSS. Trading of self-manufactured goods has been excluded from definition of trading. But in case of combined activity in manufacturing and trading where commodities traded are different from the products manufactured, only the trading part of it has been included under the scope of this enquiry and the common costs have been allocated in proportion to respective gross earning. An example may be of interest. Only the sales of biscuits, cakes, cigarettes etc. should be considered in allocating the common costs borne by a teastall selling biscuits, cakes, cigarettes, etc. along with the tea.

6. Here household trading stands for trading carried on entirely by households themselves, or in co-operation with other households as joint enterprise. The non-households trading establishments and households engaged in trade registered under Sales Tax Act are excluded from the scope of the survey.

7. In the case of a household engaged in trading on partnership basis with other household or households, the percentage share of the household in the trading activity has been determined from the percentage of profit which the household earns from the joint trading.

8. The type of information sought may be seen from the facsimile of the schedule appended at the end of this report. It may be noticed that the information sought may be classified broadly under four heads, such as (i) general particulars, (ii) gross value of purchase, sales, consumption, etc., (iii) major purchase and sales of merchandise, (iv) average number of persons per working day and wages paid to hired labour. The first category of information relates to particulars about category of trade, principal or subsidiary and number of persons engaged in trade. The second category of information relates to gross value (in rupees) of sales, purchase, transaction, household consumption and wastage during last month and week. The third category covers major purchases and sales of merchandise by items during last week. The last category relates to the particulars of household and hired labour and the

### *Household Non-Registered Trade*

extent of their participation in the enterprise during the last week. All those items of information have been presented in this report.

9. The Directorate of National Sample Survey, Government of India, was responsible for the collection of the primary data in all the States and the Union Territories except in West Bengal and Bombay City, where the field work was carried out by the Indian Statistical Institute. The work relating to processing and tabulation of data was done in the Indian Statistical Institute.

10. In tables 1 and 2 (rural and urban) the distribution of estimated number of households engaged in non registered trade as principal and subsidiary means of livelihood are shown by types of trade by states and by sub-samples. In table 19 (rural and urban) distribution of estimated number of households actually operating in non-registered trade during the reference week and month are presented by sub-rounds at all India level. The other tables (rural and urban) show percentage or per household estimates by types of trade, by state and by sub-samples. Tables giving the results for the rural sector have been presented in Appendix I and Appendix II contains results for the urban sector. A note on sampling design and the procedure of estimation is given in Appendix III. The facsimile of the schedule used in this enquiry has been given in Appendix IV.

CHAPTER TWO

SUMMARY OF RESULTS

2.1. A summary of some important estimates has been presented in this chapter. The estimates based on earlier rounds have also been presented for purpose of comparisons.

2.2. Household trading has been defined as an act of actual purchase of goods and their disposal by way of sales without any intermediate physical transformation. A trading household is one in which any of the members must have been engaged in trade as a self-employed or an own-account worker at least in the subsidiary capacity. The estimates of such households engaged in trade are presented in Table (2.1).

TABLE (2.1): TOTAL NUMBER OF HOUSEHOLDS ENGAGED IN TRADE IN RURAL AND URBAN AREAS : SEVENTH TO TENTH AND FIFTEENTH ROUNDS

survey (rounds)	number of trading households					
	rural		urban		all India	
	sample house-holds	estimated (in lakhs)	sample house-holds	estimated (in lakhs)	sample house-holds	estimated (in lakhs)
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. seventh (October 1953-March 1954)	5481	31.51	3479	13.24	8960	44.75
2. eighth (July 1954-April 1955)	—	—	3820	15.41	3820	15.41
3. ninth (May 1955-November 1955)	5527	26.48	7614	14.23	13141	40.71
4. tenth (December 1955-May 1956)	8381	27.82	4035	14.22	12416	42.04
5. fifteenth (July 1959-June 1960)	6581	36.95	3945	11.70	10526	48.65

2.3. *Workers*: The number of persons engaged in trade includes persons of the trading households who actually participated in trading during the reference period as well as those persons who were employed by the households. The number was obtained as an average per working day, irrespective of hours of work. The estimates of such persons (household and hired together) engaged in trade are presented in Table (2.2).

TABLE (2.2): TOTAL NUMBER OF PERSONS ENGAGED IN TRADE IN RURAL AND URBAN AREAS : SEVENTH TO TENTH AND FIFTEENTH ROUNDS

survey (rounds)	number of persons					
	rural		urban		all India	
	sample house-holds	estimated (in lakhs)	sample house-holds	estimated (in lakhs)	sample house-holds	estimated (in lakhs)
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. seventh (October 1953-March 1954)	5481	35.03	3479	20.24	8960	55.27
2. eighth (July 1954-April 1955)	—	—	3820	23.09	3820	23.09
3. ninth (May 1955-November 1955)	5527	30.03	7614	21.16	13141	51.19
4. tenth (December 1955-May 1956)	8381	31.91	4035	21.04	12416	52.95
5. fifteenth (July 1959-June 1960)	6581	34.86	3945	14.79	10526	49.65

### Household Non-Registered Trade

2.4. *Value of purchases*: The value of purchases made by each operating household during the reference period is computed. Purchases here refer to actual acceptance and deliveries of goods and not fixing of contracts only. The estimates of such values of purchases are presented in Table (2.3).

TABLE (2.3): VALUES OF MONTHLY PURCHASES PER OPERATING HOUSEHOLD IN RURAL AND URBAN AREAS: SEVENTH TO TENTH AND FIFTEENTH ROUNDS

survey (rounds)	value of purchase per operating household per month					
	rural		urban		all India	
	sample house-holds	estimated	sample house-holds	estimated	sample house-holds	estimated
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. seventh (October 1953-March 1954)	5481	227.30	3479	1212.12	8960	541.08
2. eighth (July 1954-April 1955)	—	—	3820	716.40	3820	716.40
3. ninth (May 1955-November 1955)	5527	251.63	7614	1086.30	13141	557.28
4. tenth (December 1955-May 1956)	8381	223.30	4035	983.11	12416	488.00
5. fifteenth (July 1959-June 1960)	6581	260.18	3945	430.27	10526	307.01

2.5. *Value of sales*: The pattern of sales by trading households during the different rounds of survey are studied here. The estimates of sales have been obtained here for all merchandise items together, instead of having these estimates by items of merchandise. The sales figures in urban areas of fifteenth round can not be compared with those of earlier rounds as there was a change in concepts and definitions. Moreover in the fifteenth round survey, trading households registered under sales tax act were left out of the scope of the survey.

TABLE (2.4): VALUES OF MONTHLY SALES PER OPERATING HOUSEHOLD IN RURAL AND URBAN AREAS: SEVENTH TO TENTH AND FIFTEENTH ROUNDS

survey (rounds)	value of sales per operating households per month					
	rural		urban		all-India	
	sample house-holds	estimated	sample house-holds	estimated	sample house-holds	estimated
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. seventh (October 1953-March 1954)	5481	258.14	3479	1320.37	8960	596.59
2. eighth (July 1954-April 1955)	—	—	3820	814.46	3820	814.46
3. ninth (May 1955-November 1955)	5527	277.64	7614	1184.19	13141	609.61
4. tenth (December 1955-May 1956)	8381	255.09	4035	1098.31	12416	548.85
5. fifteenth (July 1959-June 1960)	6581	291.79	3945	480.77	10526	343.82

2.6. *Gross earnings*: Gross earnings from trading activity have been estimated as the difference of gross purchase from gross sale at all-India level, all these

*National Sample Survey*

TABLE (2.5): VALUES OF MONTHLY GROSS EARNINGS PER OPERATING HOUSEHOLD IN RURAL AND URBAN AREAS: SEVENTH TO TENTH AND FIFTEENTH ROUNDS

surveys (rounds)	gross earning per operating household per month

(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. seventh (October 1953-March 1954)	5481	30.84	3479	108.25	8960	55.50
2. eighth (July 1954-April 1955)	—	—	3820	98.06	3820	98.06
3. ninth (May 1955-November 1955)	5527	26.01	7614	97.89	13141	52.33
4. tenth (December 1955-May 1956)	8381	31.79	4035	115.20	12416	60.85
5. fifteenth (July 1959-June 1960)	6581	31.61	3945	50.50	10526	36.81

being evaluated for the same monthly reference period. It may be noted that these estimates do not take into consideration any direct consumption from stock by trading households and that these are gross of depreciation. The values of gross earnings have been presented in Table (2.5) above.

2.7. *Hired labour charges*: This refers to total payments, made during reference period, to persons hired for household trading. Payments include wages

TABLE (2.6): VALUES OF MONTHLY HIRED LABOUR CHARGES PER HIRED WORKER IN RURAL AND URBAN AREAS: SEVENTH TO TENTH AND FIFTEENTH ROUNDS

National Sample Survey

## APPENDIX III

### DESIGN OF THE SURVEY AND PROCEDURE OF ESTIMATION

#### *Design*

*Fifteenth round, rural sector* : A stratified two-stages sampling design was adopted with villages as the first stage units and households, the second stage units. The sample villages were allocated to different stages on a joint consideration of their rural population, geographical area, net cultivated area, the number of persons engaged in household enterprise on the basis of 1951 census. The allocations were rounded off to multiples of 12.

In each state, strata were formed by grouping contiguous tehsils, approximately homogeneous with respect to population density, main cereal crops grown and altitude above sea-level such that population of different states were roughly equal and the number of strata formed was one-twelfth of the allocation to that state. With these considerations, the total number of strata formed in the rural sector was 218.

In case a stratum had a large area, it was divided into two or more investigating zones and two such zones were selected with probability proportional to the number of villages in them, with replacement. Two sets of 6 villages were drawn from each of the selected investigating zones and those constitute the two sub-samples.

After arranging the tehsils with a stratum in a serpentine order, 6 villages were selected systematically with a random start.

The whole period of survey, one year, was divided into 6 sub-rounds of 2 months each. In each sub-round 2 villages of a stratum and sub-samples were visited.

All households in a village having non-registered trade as enterprise constitute the frame for this enquiry. Before selection they were arranged such that the households having wholesale trade came first and households having retail trade came later. 4 households were selected systematically within each village out of which 2 were surveyed in the first instance and the rest after 3 sub-rounds.

Altogether, 2616 villages were planned to be surveyed in this enquiry but 1276 villages in sub-sample 1 and 1271 villages in sub-sample 2 were actually surveyed. The rest of the villages were casualties.

#### *Estimation procedure*

The unbiased estimate of total value of a characteristic for a particular stratum in a state corresponding to a sub-sample was obtained as

$$\hat{T} = \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \frac{H_{si}}{h_{si}} \sum_{j=1}^{h_{si}} X_{sij}$$

where  $x_{sij}$  is the value of the characteristic for the  $j$ th household in the  $i$ th village of the  $s$ th stratum ;  $h_{si}$  is the total number of sample households in the

### National Sample Survey

$i$ th village of the  $s$ th stratum ;  $H_{si}$  is the total number of the households in the frame of the  $i$ th village of the  $s$ th stratum ;  $D_{si}$  is the number of hamlet groups formed in the  $i$ th village of the  $s$ th stratum ; when no hamlet group is formed,  $D_{si}$  assumes a value equal to 1 ;  $n_s$  and  $N_s$  are respectively the number of villages surveyed and total number of villages in the  $s$ th stratum. The state estimates were obtained by adding the estimates of all the strata belonging to the state, while the sum of the estimates of all the states gives the all-India estimates. The combined sample estimates were obtained by taking the sample arithmetic average of the two sub-sample estimates.

*Fifteenth round, urban sector :* A two-stage stratified sampling design was adopted for the urban sector, the first and the second stage units being blocks and households respectively.

Each city with a population of 300,000 and above and each capital town of the former part A and part B states (prior to States Reorganisation in 1956), except Shillong, the capital of Assam, formed an independent stratum. In the city of Calcutta, 8 sub-strata were formed, each stratum consisting of several adjoining wards (1951 census) and in Jammu and Kashmir, the town of Jammu was considered as a separate stratum. In the rest of urban areas, towns with each of the Natural Divisions (1951 census) constituted a stratum. In all 94 strata were formed in the whole of urban sector.

Out of the 2228 blocks sampled throughout the Indian Union for the fifteenth round, 216 were from Jammu and Kashmir and 12 from Chandigarh in Punjab. The remaining 2000 blocks were allocated to the different strata mainly in proportion to their respective non-agricultural population (1951 census). Preferential weights were given to the cities and towns, which were treated as separate strata, while allocating the sample blocks. This was achieved first by allocating four-fifths of these blocks to all the strata in proportion to their non-agricultural population and then one-fifth only to cities and town treated as separate strata in a similar way. In all cases, the stratum allocation were ultimately rounded off to multiple of 4 in view of the requirement of 4 independent sub-samples.

The towns and cities (except those treated as separate strata) within each Natural Division were first arranged according to their means of livelihood classes. Within each of the livelihood classes they were further arranged according to geographical nearness as far as possible. Next the blocks within each town or city were also arranged according to their geographical nearness. With this arrangement of towns and blocks, 4 circular systematic samples of blocks were drawn with independent random starts with a view to obtain 4 interpenetrating and independent sub-samples.

All households in a block having non-registered trade as enterprise constitute the frame for this enquiry. Before selection they were arranged such that the house-

### *Household Non-Registered Trade*

holds having wholesale trade came first and the retail trade came later. 2 households were selected systematically from the list.

If a selected block was found to be very large, it was divided into a number of artificial blocks, each consisting of about 100 to 200 households. One of these artificial blocks was then selected with equal probability, and two households were selected from it.

#### *Estimation procedure*

The unbiased estimate of total value of a characteristic for a particular stratum in a state corresponding to a sub-sample was obtained as

$$\hat{T} = \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \frac{H_{si}}{h_{si}} \sum_{j=1}^{h_{si}} X_{sij}$$

where  $X_{sij}$  is the value of the characteristic for the  $j$ th household in the  $i$ th block of the  $s$ th stratum;  $h_{si}$  is the number of sample households in the  $i$ th block of the  $s$ th stratum;  $H_{si}$  is the total number of households in the frame of the  $i$ th block of the  $s$ th stratum;  $D_{is}$  number of artificial blocks formed in the  $i$ th block of the  $s$ th stratum; when no artificial block is formed,  $D_{si}$  assumes a value equal to 1;  $n_s$  and  $N_s$  are respectively the number of blocks surveyed and total number of blocks in the  $s$ th stratum. The state estimates were obtained by adding the estimates of all the strata belonging to the state, while the sum of the estimates of all the states gives the all-India estimates. The combined sample estimates were obtained by taking the simple arithmetic average of the two sub-sample estimates.
