

THE NATIONAL SAMPLE SURVEY  
SEVENTEENTH ROUND : SEPTEMBER 1961--JULY 1962

Integrated Household Survey (Schedule 17)

NUMBER 184

TABLES WITH NOTES  
ON  
CONSUMER EXPENDITURE

*Issued by*  
THE CABINET SECRETARIAT : GOVERNMENT OF INDIA

## **Note of Caution**

Being the scanned copy of old NSS report, this document may suffer from following limitations -

- i. Poor Quality of the Scanned images.
- ii. Page(s) missing in between.
- iii. Improper sequencing/arrangement.

### ACKNOWLEDGEMENT

The report has been finalised by J. K. Aikat.

S. K. Chakrabarti, M. S. Murty, M. T. Baby and P. C. Kundu were associated in the work relating to the preparation of the report.

Supervision of manual computation was entrusted to S. S. Bose, A. K. Chowdhury and S. Palit, that of machine tabulation, to N. K. De, F. M. Rao and B. L. Banerjee and that of Punching operations, to R. Roy and S. N. Das.

The design of the survey was prepared by the Indian Statistical Institute.

The primary data were collected by the Directorate of the National Sample Survey, Government of India, in all the States except West Bengal and Bombay City in Maharashtra State where the Indian Statistical Institute collected the relevant data.

# THE NATIONAL SAMPLE SURVEY

SEVENTEENTH ROUND : SEPTEMBER 1961-JULY 1962

NUMBER 184

TABLES WITH NOTES

ON

CONSUMER EXPENDITURE

*The report entitled, "Tables with Notes on Consumer Expenditure, Seventeenth Round : September 1961-July 1962" was prepared by the Indian Statistical Institute, Calcutta. The views contained in the report are not necessarily those of the Government of India.\**

## 1. Introduction

1.1 The data on household consumer expenditure are being collected in each round of the National Sample Survey (NSS) beginning from the first round which started in October 1950. These data are generally being processed roundwise and published in the form of "NSS Tables with Notes" series. The present set of tables has been prepared from the data on household consumer expenditure collected during the seventeenth round of the survey, which was started in September 1961 and completed in July 1962. A preliminary report based on tables generated from the summary block (block 17) of the consumer expenditure schedule (schedule 1.0) has already been published as NSS Report No. 135 : Tables with Notes on Consumer Expenditure (Preliminary) : Seventeenth Round (September 1961—July 1962). The scope of the present report is however, much wider than that of the preliminary report both in respect of item coverage and types of estimates supplied. Whereas the preliminary report furnishes estimates of value of consumption for 11 broad groups of items as provided in the summary block only, the present report supplies estimates of value of consumption for 100 items (that is, 15 broad groups of items, 45 sub-groups of items and 40 individual items) selected from primary blocks (blocks 10-15 of the schedule. In addition, the present report gives estimates of quantity of consumption for 51 different items (including 3 broad groups, 13 sub-groups 35 individual items). The estimates in both the reports have, however, been given by levels of monthly household expenditures as well as by levels of monthly per capita expenditures.

1.2 The field work of the seventeenth round started in September 1961 and continued upto July 1962. The survey should have usually covered a period of one year but as the 1961 Post Census Survey (population and livestock) which were taken up by the NSS during the sixteenth round extended upto August 1961, the survey period for the seventeenth round was of 11 months duration only. The reference period for collection of data on consumer expenditure was 30 days preceding the date of survey. The estimates presented here, therefore, broadly relate to the period of one year, namely from August 1961 to July 1962.

1.3 The geographical coverage of the survey was the entire Indian Union excluding the Andaman and Nicobar Islands, the Islands of Amindevi, Laccadive and Minicoy, the North East Frontier Agency and certain disturbed areas of Manipur and Ladakh district of Jammu & Kashmir. Information was collected by interviewing one of the members (usually the head of household) of the sample households. Altogether 7173 sample households from 3639 villages in the rural areas and 5247 sample households from 2237 sample blocks in the urban areas (including 723 sample households from 362 sample blocks in the four big cities of Bombay, Calcutta, Delhi and Madras) were tabulated in this round. The estimates in all the tables are given by 3 independent and interpenetrating sub-samples and also by the combined sample. The usual technique of interpenetrating net work of samples (IPNS) had been employed both at the collection and tabulation stages.

1.4 The responsibility for field work rested with the Directorate of the National Sample Survey Department of Statistics, Government of India, in all the States and Union Territories except in West Bengal and Bombay City, where the collection of data was done by the field staff of the Indian Statistical Institute.

1.5 The report includes all tables envisaged in the tabulation programme approved by the NSS Programme Advisory Committee. The inclusion of a large number of individual items of consumption in the tabulation programme is in response to demands from several users who seemed to be in need of estimates of these items. The precision of estimates are not, however, the same in all cases as will be evident from a comparison of the sub-sample estimates. For some estimates the precision is very low. Presentation of such estimates gives some idea of their dimension which itself may be useful in some situation. These estimates together with the sample size from which they are built up, also provide national ideas as to what sample size will be appropriate to obtain estimates for similar items with higher precision.

\*The draft report (No. D 200) was first submitted by the Indian Statistical Institute, Calcutta, to the Government of India in April, 1969. It was revised subsequently and resubmitted in December, 1969.

## 2. Concepts and Definitions

2.1 The concepts and definitions adopted for the consumer expenditure inquiry of the seventeenth round of the National sample survey continue to remain the same as in the earlier rounds. Some of the important concepts and definitions are mentioned here.

2.2 *Household*.—A household is a group of persons usually living together and taking principal meals from a common kitchen. A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with his dependents or guests) forms a separate household. Households, maintained and fed directly by Government, such as those in prisons police quarters, cantonments hospitals, asylums and relief camps are, however, excluded from the scope of the survey.

2.3 *Household member*.—Any person who takes principal meals with household for at least 16 days preceding the date of enquiry is considered to be a member of the household. Such a person may be the head of the household, or a relation or a protegee of the head, or an employee or a guest of the household.

2.4 *Household size*.—The number of members (as defined above) in a household gives the household size.

2.5 *Household consumer expenditure*.—Consumer expenditure comprises all expenditure incurred by the household during the reference period (30 days preceding the date of survey) exclusively towards its non-productive purposes. Thus all expenses towards the enterprise activities of the household are excluded. While consumption by the pet animals of the household is included in the household consumption, the consumption by the livestock of the household is excluded as it is a part of the enterprise expenses of the household. A uniform concept of consumption is not available for all items in the schedule. For items belonging to the category of food, intoxicants and fuel and light (blocks 10-13 of the schedule), consumption implies actual amount consumed irrespective of the amount purchased in cash or kind) during the reference period. For clothing items (block 14), consumption implies maiden use only. So far as the items of blocks 10-14 are concerned, consumption out of transfer receipt in kind like receipt of loans, gifts, charities, fee collections etc. is included in the household consumption, while transfer payments in kind like loans (advanced or repaid), gifts, charities etc. are excluded from the scope of household consumption. Consumption of goods purchase in cash is evaluated at the actual purchase price irrespective of the period of purchase, that of goods produced by the household, at the ex-farm or ex-factory price and that of goods received by barter exchanges or by transfer receipts, at the average retail price prevailing in the locality of the sample household during the reference period. In case of items like miscellaneous goods and services, consumer rents and taxes (block 15) and durable goods (block 16), there is no separate concept of purchase or consumption as in the case of items of blocks 10-14. The actual expenditure incurred (in cash or in kind) on an item of consumption during the reference period towards its purchase, construction, maintenance, repair or use for non-productive purposes is considered to be the consumer expenditure on that item. Expenditure towards purchase of land and building or construction of building for residential purposes is excluded from the household consumer expenditure as it is considered as an expenditure towards capital formation of the household, but expenditure towards repair and maintenance of residential houses is included. Second hand purchases are, however, excluded from the scope of current consumer expenditure.

### 3. Survey Design

3.1 A broad outline of the sampling design and estimation procedure as followed in the rural and urban sectors during the seventeenth round is given below.

#### A. Sampling design for the rural sector

3.2 *General.*—A stratified two stage self-weighted sampling design was adopted in which the first stage units were villages and the second stage units were households from which information was collected.

3.3 *Stratification.*—Excepting for the Union Territories of Manipur and Tripura, the same strata which were formed in the sixteenth round were retained in the seventeenth round. The stratification formed in the sixteenth round was as follows. In each State, contiguous districts having similar crop patterns and population densities were grouped together to form 'regions'. In all 48 such 'regions' were formed in the whole of India. Within a 'region' contiguous tahsils fairly homogeneous with respect to population densities were grouped together to form compact strata such that the rural population of the strata were approximately equal. The number of strata formed in a 'region' was made one eighteenth of the total allocation of sample villages to that 'region'. This was done so because the number of sample villages selected for survey was 18 per stratum. While Manipur constituted a stratum by itself, Tripura had been divided into 5 strata by grouping contiguous sub-divisions. In the whole of rural India 216 strata were thus formed.

3.4 *Allocation.*—A total of 3888 villages were sampled in the rural sector during the seventeenth round. Excluding Manipur and Tripura, the number of villages for the different States remained the same as in the sixteenth round. These sample villages were allocated to the different States on a joint consideration of their rural population, area under food crops and available investigation strength in the NSS Blocks of the States and then rounded off to multiples of 18. Within a State, its allocation was further distributed among the different 'regions' in proportion to their rural population and the final allocations were rounded off to multiples of 18 to allow for the selection of 3 independent sub-samples of 6 villages from each stratum formed in the region. For Manipur and Tripura the number of sample villages assigned were 18 and 90 respectively. The following table gives the allocation of sample villages and sample blocks by States and cities.

NUMBER OF SAMPLE UNITS (VILLAGES/BLOCKS) ALLOTTED FOR SURVEY BY STATES AND CITIES

States/cities	sample villages	sample blocks
(1)	(2)	(3)
1. Andhra Pradesh . . . . .	306	180
2. Assam . . . . .	144	33
3. Bihar . . . . .	360	108
4. Gujarat . . . . .	144	108
5. Jammu & Kashmir . . . . .	414	144
6. Kerala . . . . .	144	72
7. Madhya Pradesh . . . . .	342	108
8. Madras . . . . .	252	216
9. Maharashtra . . . . .	288	324
10. Mysore . . . . .	180	108
11. Orissa . . . . .	180	36
12. Punjab . . . . .	144	72
13. Rajasthan . . . . .	162	108
14. Uttar Pradesh . . . . .	468	288
15. West Bengal . . . . .	234	216
16. Union Territories . . . . .	126	116
17. All India . . . . .	3,888	2,237

	States/cities	sample villages	sample blocks
18	Bombay city . . . . .	×	144
19	Calcutta city . . . . .	×	90
20	Delhi city . . . . .	×	68
21	Madras city . . . . .	×	60
22	all cities . . . . .	×	362

3.5 Selection.—In each State (excepting Tripura) and within each stratum the tahsils were first listed in a serpentine order (without breaking their geographical contiguity) and 6 villages were selected circularly systematically with a random start, constituting one sub-sample for the stratum. Three such sets of 6 villages were thus selected each with a new random start, constituting the three independent subsamples of the stratum. The three independent sub-samples in a stratum were then assigned to three investigators (one for each investigator) working in the same stratum in order to make these sub-samples party-wise independent. In Tripura, three independent balanced linear systematic samples of 6 villages each were drawn from each stratum after arranging the villages in a stratum in the increasing order of their 1951 Census population.

3.5.1 In case a stratum had a large area, it was divided into smaller groups of contiguous tahsils of roughly equal areas in order to reduce the survey area of an investigator. From each sub-divided stratum, three investigation-zones were selected with probability proportional to the number of villages in the zones and with replacement. The field work was restricted to these investigation zones only. A set of 6 villages, constituting one sub-sample, was then selected from each of the three selected investigation zones in the manner described earlier and as usual assigned to each investigator for field work. If the same investigation zone had been selected more than once, as many systematic samples of 6 villages as the number of times it was selected were drawn independently from that investigation zone. In case a sample village was too large for investigation purposes, it was divided into a specified number of groups of hamlets of roughly equal population and one such group of hamlets was selected at random with equal probability. The survey in that village was restricted to the group of hamlets thus selected so as to reduce the work load at the village level. The frame used for selection of villages was generally the village list as per 1951 Population Census excepting for the areas belonging to old Travancore-Cochin in Kerala where the 1957 list of villages was used.

3.5.2 A linear systematic sample of households was selected from each sample village using the interval supplied (which has been fixed so as to make the design self-weighting for each sub-sample at the State level), after arranging the households in two household size classes '1-4' and '5 & above'. On an average 2 households were expected to be surveyed per village.

3.6 Work Programme.—In each stratum, three investigators were posted and the same three investigators worked throughout the survey period each surveying an independent sub-sample of 6 villages. The whole period of the survey, September 1961 to July 1962, was divided into 6 sub-rounds of 8 weeks each. The investigation in a particular sample village was restricted to a particular time period. For example, in case of consumer expenditure survey, the sample villages with order of selection as 2, 5, 3, 6, 4 and 1 were surveyed in sub-rounds 1, 2, 3, 4, 5 & 6 respectively.

3.7 Estimation Procedure.—The estimates presented are, in general, estimates of ratios of two characteristics, e. g., per person expenditure on different items of consumption and consumer expenditure expressed as percentage to total consumer expenditure. These estimates have been arrived at by computing in each case the estimates of the total of the two characteristics involved and then finding their ratio. This procedure is repeated for each sub-sample. The procedure of estimation of total of a characteristic for any sub-sample is explained below.

Let,  $T$  = the estimate of the State total of any characteristic.

$M_c$  = the constant multiplier for those strata of the State where interval with code  $C$  ( $=0, 1, 2, 3$ ) has been used.

$X_c$  = sum of the values of the characteristics in all the sample households selected in those strata where interval with code  $C$  has been used.

$$\text{then, } T = \sum_{c=0}^3 M_c X_c$$

### B. Sampling design for the urban sector

3.8 *General*.—The sampling design for the urban sector was a stratified two stage one in sector 1 strata (explained later) where the urban blocks were first stage units and the households, the second stage units. In sector 2 strata the design was a stratified three stage one where the towns were the first stage units and the urban blocks and the households, the second and the third stage units respectively.

3.9 *Stratification*.—Within each State the whole of urban area was divided into two strata—stratum 1 (sector 1) consisting of towns and cities each with population 50,000 or more and stratum 2 (sector 2) consisting of the rest of the urban areas. This was done on the basis of 1951 census population except in Tripura where 1961 population figures were used. An exception was made in the case of Maharashtra where Bombay city itself constituted one stratum (sector 0). The other two strata (sector 1 and sector 2) of Maharashtra were formed following the principle described above. In all 35 strata were formed in the whole of the urban sector.

3.10 *Allocation*.—The all India allocation of the sample blocks to the two urban sectors, sector 1 and sector 2, was made approximately in the ratio of 2 : 1, and within each sector the allocation to each State (except Tripura) was made in proportion to its urban population in that sector. The final allocations to the States were rounded off to multiples of 18 after taking into account the available investigator strength.

3.11 *Selection*.—In all 2237 blocks were selected from the urban sector. In each stratum of sector 1, three independent sub-samples, each containing one third the allocated number of blocks were selected systematically with independent random starts. The frame for selection was the list of urban blocks prepared by the NSS in the Urban Frame Survey (1960). In each stratum of sector 2, the towns within each 'region' (as formed for the rural sector) were arranged according to their means of livelihood pattern. 3 independent systematic (circular) samples of towns of one third the sample size allocated to the stratum were selected with probability proportional to the number of 1951 Census blocks in them (except Tripura where number of 1961 Census blocks were taken). Within each selected town, the UFS list of blocks, or if that was not available, the 1961 Census list of blocks was used and one block was selected at random. In towns for which neither UFS nor 1961 Census list of blocks were available at the time of selection, the investigator was asked to select one block at random from each selected town using the 1961 Census list of blocks, or if that was not available, from the municipal divisions within the town. The blocks within a stratum and sub-sample were numbered serially starting from 1 according to their order of selection.

3.11.1 A linear systematic sample of households was selected from each block using the interval and random start supplied for selection of households for consumer expenditure enquiry (the interval being fixed in such a manner that the design is self-weighting separately for each State, sector and sub-sample), after arranging the households in two household size classes viz., '1-3' and '4 & above'. On an average, two households were expected to be sampled from each block.

3.11.2 If a block was very large, it was divided into a number of compact identifiable sub-blocks of roughly equal population and one of them was selected at random with equal probability. The survey was confined to the selected sub-block only in order to reduce the work-load.

3.12 *Work Programme*.—In urban sector also the whole period of the survey, September 1961—July 1962, was divided into 6 sub-rounds of 8 weeks each. Each sample block was, however, visited twice in the round at an interval of approximately 6 months according to a given programme.

3.13 *Estimation Procedure*.—The estimates presented for the urban sector are similar to those of the rural sector. The estimates of 'total' of a characteristic for the urban sector are obtained independently for each sub-sample as follows :—

Let,  $T$  = the estimate of the State total of any characteristic from a particular sub-sample.

$M_s$  = the constant multiplier for the  $s$ th sector of the State.

$X_s$  = the total value of the characteristic over all households sampled from the blocks belonging to  $s$ th sector of the State.

Then,  $T_s = \sum M_s X_s$ , the summation being extended over all the strata in the State.

#### 4. Explanatory Notes on Tables

4.1 Two different series of tables have been presented in the report, one giving estimates by monthly household expenditure levels (indicated by series A) and the other, by monthly per capita expenditure levels (indicated by series B). The tables of series A may be classified according to their nature of information in the following way :

Series 1 : Distribution of sample households.

Series 2 : Percentage distribution of estimated households.

Series 3 : Percentage distribution of estimated persons.

Series 4 : Average number of persons per household.

Series 5, 7, 9 & 10 : Consumer expenditure per person for a period of 30 days by items of consumption.

Series 6 : Percentage of consumer expenditure to total consumer expenditure by items of consumption.

Series 8 : Percentage of consumer expenditure to consumer expenditure on cereals and cereal substitutes by items of foodgrains.

Series B, however, include all the tables of series A referred above and a few more tables as mentioned below :

Series 11, 12 & 13 : Quantity<sup>1</sup> consumed per person for a period of 30 days by items of consumption.

Series 14 : Statewise indices of value of consumption per person for a period of 30 days by selected items. (base 100=estimate for All India).

4.2 The list of tables gives the actual table headings, the details of items tabulated and the regions for which the estimates have been furnished in the tables. Appendix I gives the list of items as per tabulation programme approved by the NSS Programme Advisory Committee and the corresponding identifications of such items in terms of blocks, lines and columns of the schedule prescribed for consumer expenditure enquiry.

4.3 All estimates at All India level and at the level of "cities pooled" region have been given by 3 partywise independent and interpenetrating sub-samples indicated by S1, S2 and S3 and also by the combined sample indicated by the notation "comb.". However, in order to restrict the volume of the tables within reasonable limits, such breakdowns by sub-samples have not been provided for individual States or cities except for the marginal expenditure classes. For all practical purposes, the combined sample estimate is recommended for use, since its error is smaller than that of a sub-sample estimate. The sub-sample estimates however, give a rough idea of the extent of error of the estimates. When the sample size is large, the range of the sub-sample estimates provides for a confidence interval which includes the true value with a probability of  $1 - (\frac{1}{3})^{3-1}$  or 0.75, since there are 3 sub-samples in the present case.

4.4 The expenditure class ranges used in the tabulation have been shown in the tables themselves. It may be noted that the monthly household expenditure classes in rupees "0-25", "25-50", ..... stand for "upto Rs. 24.99", "from Rs. 25 to Rs. 49.99".....respectively. Similarly, the monthly per capita expenditure classes in rupees "0-8", "8-11", .....stand for "upto Rs. 7.99", "from Rs. 8 to Rs. 10.99", .....respectively.

4.5 The estimates in tables represented by "0.00" indicate that the magnitude of the estimates is too small to be represented in two decimal places. A dash (—) in the tables represents absence of surveyed sample households or of reporting sample households. Dashes appearing in tables of series 1 (and consequently in other tables as well) represent absence of surveyed sample households. In addition to these, dashes also appear elsewhere in tables other than those of series 1. They represent cases when surveyed sample households are present but none of them reports any consumption during the reference period with regard to items for which estimates are shown in the tables. Dashes in the latter case indicate nil estimates.

<sup>1</sup>. The quantity estimates in these tables are given in terms of British and Indian standard units. The metric equivalents for these units are as follows :

1 tola	.	.	.	.	.	11.6638 grammes
1 seer (80 tolas)	.	.	.	.	.	0.9331 kilogramme.
1 pound (lb.)	.	.	.	.	.	0.4536 kilogramme
1 yard (yd.)	.	.	.	.	.	0.9144 metre

4.6 For convenience of reference, the table numbers have been coded. The meaning of the symbols A and B has been explained in para 4.1. The digit preceding the first dot stands for the sector in code 1 for the rural sector, code 2 for the urban sector and code 3 for the cities. The digit in between the two dots stands for the type of information provided in the tables as detailed in para 4.1. The digit following the second dot represents the region code. For example, code '0' stands for All India and the other codes represent the serial number of States arranged in alphabetical order. For certain tables (series 9 and 12) in which estimates have been presented by States/cities, the digit in the same position has been used to indicate the serial number of items for which the tables have been provided. It may be noted that the sector code number had to be omitted from the table number shown in the list, which serves as a common list of rural, urban and city tables. The actual number of a table will, therefore, be obtained by attaching the sector code number to the table number stated in the list. For example, the actual table number for the table A9.26 of the list is A.1.9.26 for the rural sector or A2.9.26 for the urban sector or A3.9.26 for the cities.

## 5. Summary of Results

5.1 Some of the broad findings of the consumer expenditure survey for the seventeenth round are being summarised here. The figures quoted here all relate to the combined sample estimates and to the period, August 1961 to July 1962.

5.2 The average number of persons per household, as observed during the period under reference, is 5.12 for the rural sector and 4.64 for the urban sector\* of the Indian Union. For the four big cities of Bombay, Calcutta, Delhi and Madras, the average household size is 3.87.

5.3 The percentage distribution of households (or persons) give some idea about the extent of inequality prevailing in rural, urban and city sectors. For example, the percentages of persons who could spend less than half a rupee a day are 36.03%, 19.62% and 3.54% for the rural, urban and city sectors respectively. On the other hand, the percentage of persons who could spend two and a half rupee or more per day are 1.33%, 4.93% and 15.17% for the three regions taken in order.

5.4 There is a wide variation in the level of per capita consumer expenditure (on all items taken together) in the rural and urban sectors in India. The total consumer expenditure per person per 30 days is observed to be Rs. 21.73 for the rural sector, Rs. 30.86 for the urban sector and Rs. 48.04 for the cities. The per capita expenditure on food items is Rs. 14.93 for the rural sector, Rs. 18.58 for the urban sector and Rs. 25.87 for the cities. Thus the percentage of expenditure on food to total consumer expenditure comes to 68.72% for the rural sector, 60.22% for the urban sector and 53.86% for the cities. This shows that a major part of consumer expenditure in India is incurred after food items.

5.5 There is a wide variation in the rate of consumption per person of cereals and cereal substitute in the rural and urban areas in India. The per capita expenditure on cereals and cereal substitutes is Rs. 8.71 for rural India, Rs. 7.21 for urban India and Rs. 7.15 for cities. The corresponding quantities of consumption per person for these regions taken in order are, however, 19.34, 13.49 and 11.56 seers respectively. Rice and wheat are the principal items of cereals consumed in India. The percentage of expenditure on rice and wheat to that of all cereals and cereal substitutes is observed to be 72.17% for rural India, 86.37% for urban India and 96.18% for the cities. The per capita value of consumption of pulses and pulse products is Re. 0.91 for rural sector, Re. 0.90 for urban sector and Re. 0.98 for cities.

5.6 Milk and milk products form the next item of importance in the family budget of Indian households. The per capita expenditure on milk and milk products for a period of 30 days is Rs. 1.46 for rural sector, Rs. 2.94 for urban sector and Rs. 4.70 for cities. The value of liquid milk consumed per person per 30 days is Re. 0.85 for rural sector, Rs. 1.83 for urban sector and Rs. 3.34 for cities.

5.7 The value of consumption per person per 30 days of edible oil is Re. 0.67 for rural sector, Rs. 1.11 for urban sector and Rs. 1.98 for cities. Mustard oil and groundnut oil are the principal edible oils consumed in India, while Vanaspati comes next.

5.8 The value of vegetables consumed per person per 30 days is Re. 0.59 for rural sector, Rs. 1.11 for urban sector and Rs. 1.98 for cities, while that of fruits and nuts is Re. 0.27, Re. 0.50 and Re. 0.93 respectively for these regions taken in order.

5.9 The value of consumption of meat, fish and eggs is of the order of Re. 0.61, Rs. 1.11 and Rs. 2.46 per person per 30 days for the rural, urban and city sectors respectively. The value of consumption of eggs is relatively small. It is of the order of Re. 0.03 for rural sector, Re. 0.11 for urban sector and Re. 0.25 for cities.

5.10 The value of consumption of sugar, gur etc. is Re. 0.64, Re. 0.91 and Rs. 1.19 per person per 30 days for the rural, urban and city sectors respectively. The rate of consumption of gur is higher than that of sugar in rural areas but in urban areas and cities, the rate of consumption of sugar is much higher than that of gur.

5.11 The value of consumption of salt and spices is of the order of Re. 0.61, Re. 0.74 and Re. 0.93 per person per 30 days for the rural, urban and city sectors.

5.12 The value of beverages and refreshments consumed per person per 30 days is of the order of Re. 0.45, Rs. 1.97 and Rs. 3.75 for the rural, urban and city sectors respectively. Cooked meals account for a sizeable proportion of expenditure incurred after beverages and refreshments. The value of cooked meals consumed is Re. 0.08, Re. 0.67 and Rs. 1.56 per person for a period of 30 days for the rural, urban and city sectors respectively. The expenditure per person per 30 days after tea (leaf) and coffee (powder) comes to Re. 0.15 for rural sector, Re. 0.36 for urban sector and to Re. 0.58 for cities.

\* The urban sector also includes the four big cities of Bombay, Calcutta, Delhi and Madras and these cities will be denoted by "cities" in the text.

5.13 The expenditure incurred per person per 30 days after pan, supari etc. comes to Re. 0.19, Re. 0.34 and Re. 0.45 for the rural, urban and city sectors respectively and that incurred after tobacco and tobacco products is Re. 0.43 for rural sector, Re. 0.57 for the urban and Re. 0.81 for cities. Drugs and intoxicants account for Re. 0.11, Re. 0.07 and Re. 0.04 per person per 30 days for the rural, urban and city sectors respectively.

5.14 The per capita expenditure for a period of 30 days towards fuel and light is of the order of Rs. 1.36 for the rural sector, Rs. 1.90 for the urban sector and Rs. 2.48 for the cities.

5.15 The per capita expenditure on clothing (including bedding and upholstery) for a period of 30 days is Rs. 1.94 for the rural sector, Rs. 2.09 for the urban sector and Rs. 3.14 for cities. Mill-made cotton clothing accounts for the major part of expenditure on clothing. The per capita expenditure on this latter variety for a period of 30 days is of the order of Rs. 1.53 for the rural sector, Rs. 1.45 for the urban sector and Rs. 1.95 for cities. The demand for handloom or khadi cotton clothing is relatively small. The per capita expenditure on woollen clothing is of the order of Re. 0.04 for the rural sector, Re. 0.14 for urban sector and Re. 0.25 for the cities. The per capita expenditure on art-silk or rayon is Re. 0.03 for rural sector, Re. 0.12 for urban sector and Re. 0.29 for cities. The per capita expenditure on bedding and upholstery is of the order of Re. 0.06, Re. 0.08 and Re. 0.08 for the rural, urban and city sectors respectively.

5.16 The per capita expenditure incurred after amusements and sports, education, medicine, toilet articles, sundry articles, conveyance and ceremonials amount to Rs. 1.52 for the rural sector, Rs. 3.90 for the urban sector and Rs. 7.47 for cities.

5.17 The per capita expenditure for a period of 30 days on consumer services comes to Re. 0.66, Rs. 1.41 and Rs. 2.73 and on consumer rents and taxes, to Re. 0.06, Rs. 1.37 and Rs. 4.27 for the rural, urban and city sectors.

5.18 Expenditure on durable consumer goods like furniture, utensils, ornaments, footwear, musical instruments etc. come to Re. 0.53, Re. 0.63 and Re. 0.79 per person per 30 days for the rural, urban and city sectors.

5.19 A comparison of the Statewise indices of total consumer expenditure per person per 30 days shows that, by and large, the rural areas of the States of Assam, Gujarat, Jammu & Kashmir, Mysore, Punjab, Rajasthan, Uttar Pradesh and the Union Territories report higher level of living than the rest of the States. The urban areas of the States of Assam, Bihar, Gujarat, Maharashtra, Orissa, West Bengal and the Union Territories also report better level of living than the rest of the States.

Appendix

1. The first section of the report deals with the general principles of the investigation and the methods employed. It is divided into two parts, the first of which deals with the general principles and the second with the methods employed.

2. The second section of the report deals with the results of the investigation. It is divided into two parts, the first of which deals with the results of the investigation and the second with the conclusions drawn therefrom.

3. The third section of the report deals with the conclusions drawn from the results of the investigation. It is divided into two parts, the first of which deals with the conclusions drawn from the results of the investigation and the second with the recommendations made thereon.

4. The fourth section of the report deals with the recommendations made by the committee. It is divided into two parts, the first of which deals with the recommendations made by the committee and the second with the reasons therefor.

5. The fifth section of the report deals with the conclusions drawn from the results of the investigation and the recommendations made thereon. It is divided into two parts, the first of which deals with the conclusions drawn from the results of the investigation and the second with the recommendations made thereon.

6. The sixth section of the report deals with the conclusions drawn from the results of the investigation and the recommendations made thereon. It is divided into two parts, the first of which deals with the conclusions drawn from the results of the investigation and the second with the recommendations made thereon.

7. The seventh section of the report deals with the conclusions drawn from the results of the investigation and the recommendations made thereon. It is divided into two parts, the first of which deals with the conclusions drawn from the results of the investigation and the second with the recommendations made thereon.
