THE NATIONAL SAMPLE SURVEY  
TWENTYFIFTH ROUND : JULY 1970-JUNE 1971

NUMBER 257

CONSUMER EXPENDITURE OF THE  
WEAKER SECTION OF THE RURAL  
POPULATION OF INDIA

I N T R O D U C T I O N

- 1.1 In its twentyfifth round (July 1970-June 1971) of countrywide survey, the National Sample Survey (NSS) laid emphasis on the survey of the economic condition of the weaker section of the rural population of India. Two ~~distinct~~ <sup>distinct</sup> categories of households viz. (a) small cultivator households and (b) non-cultivating wage earner households were covered by the survey. Out of the bottom 10 percent of the households owning cultivable land, those deriving their major income from agriculture were considered to be small cultivators.
- 1.2 Broadly, for the weaker section thus defined, information were collected on time disposition of household members, and on income, expenditure and indebtedness of the households. This report contains data on the average monthly ~~per capita~~ <sup>per household</sup> consumer expenditure during the year July 1970 - June 1971 for the two groups of population. Based on the information collected during the first three months of the survey (the first sub-round) a similiar report was presented earlier <sup>1/</sup>.
- 1.3 The geographical coverage of the survey was the entire Indian Union excepting NEFA, Ladakh district of Jammu & Kashmir, Mizo Hills district in Assam, Pal and Samarai tehsils of district Surguja and Bijapur, Dantewara and Konta tehsils of district Bastar of Madhya Pradesh, Sisoncha and Gadchiroli tehsils of district Chanda of Maharashtra, rural areas in Nagaland, Longai and Kanchanpur in Dharmanagar sub-division and Durbarnagar in Amarapur sub-division of the Union Territory of Tripura, the Union Territories of Andaman and Nicobar Islands and Laccadive, Minicoy and Amindivi Islands.
- 1.4 A total sample of 12522 small cultivator households and 8804 non-cultivating wage earner households from 8714 villages were surveyed (including the villages of state sample for Jammu & Kashmir).

1.5 The field work was undertaken by the Directorate of NSS in all States and Union Territories excepting in West Bengal and Bombay city where the field staff of the Indian Statistical Institute collected data.

1.6 All the states excepting West Bengal and Nagaland and all the Union Territories excepting Himachal Pradesh, Goa, Pondicherry and Chandigarh participated in the work of the survey on a full matching basis (states which conducted the survey with a sample size equal to that of the central sample are considered to have participated on a full matching basis). The collection of data for the State sample was the responsibility of the respective state. The estimate presented in the report are based on the central sample only. States, Union Territories and Regions for which results are presented should be identified as those existed at the time of commencement of the NSS twentyfifth round survey (July 1970).

1.7 Consumer expenditure survey on the weaker section of population had also been conducted in earlier NSS rounds. Two enquiries on the agricultural labour (ALE) in India were conducted during the years 1951-52 and 1956-57 of which the latter was conducted by the NSS. During its eighteenth round of enquiry (1963-64) the NSS conducted a survey on the economic condition of the rural labour households. Though the groups of population selected for these different surveys (including the twentyfifth round survey on weaker section) are not strictly comparable, the constituents of each of the population are mostly drawn from the landless agricultural and rural labour and the small cultivators depending heavily on wage paid employment in agriculture for their livelihood.

1.8 In section 2 some important concepts used in the enquiry on consumer expenditure have been presented, explanatory notes on the tables covers section 3 and some salient features about the pattern of consumer expenditure of the rural poor are noted in section 4. Sample design and procedure of estimation for the survey has been described in section 5.

1.9 Appendix I of this report contains the detailed tables for each of the States and Union Territories and also for each of the regions within a State/Union Territory. Tables for All-India and for Union Territories pooled have also been presented. Two sets of tables have been presented - one for the small cultivator households and the other set for the non-cultivating wage earner households.

1.10

The following five tables have been presented in the report:

1. distribution of sample households by monthly per capita expenditure classes ;
2. percentage distribution of estimated number of <sup>Households</sup> persons by monthly per capita expenditure classes ;
3. number of adult males, adult females and children by monthly per capita expenditure classes ;
4. percentage distribution of adult males, adult females and children by monthly per capita expenditure classes; and
5. consumer expenditure in rupees (0.00) per household per month by broad groups of items of consumption and monthly per capita expenditure classes.

In presenting a table, the States have been arranged in alphabetic<sup>e</sup> order of the respective names. The regionwise tables for a particular state appear first, followed by the State total and after exhausting the states, tables for Union Territories have been presented by regions in the same manner. The results for the Union Territories pooled are shown next and the all-India pooled results appear last.

(iii)

## 2. CONCEPTS AND DEFINITIONS .

2.1 Concepts and definitions used in the twentyfifth round of survey for items of information presented in the report are described in this section.

2.2. Household : A household is a group of persons normally living together and taking food from a common kitchen. A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with his dependents or guests) forms a separate household. Households maintained and fed directly by government such as those in prisons, police quarters, cantonments, hospitals, asylums, relief camps are, however, excluded from the scope of the enquiry.

2.3 Small cultivator household and non-cultivating wage earner household : "Small cultivator households" were defined as the lowest ten percent of the households having some cultivated land during the reference period July 1969 - June 1970; and 'non-cultivating wage earner households' were defined as households having no cultivated land whatsoever during the same reference period. Further, any of these households from either of these strata which might have derived its major income during the reference period, more or less on a regular basis, from sources like self-employment in trading, manufacture, mechanised transport, professions and also from salaried employment or from rent, was to be excluded.

2.4 Household member : Any persons who is a normal resident of the sample household is considered to be a member of the household. Household members are grouped into three categories viz., adult male, adult female and child. One who has already attained the age of 15 (~~is~~ completed years) is considered as an adult.

2.5 Household size : The number of members (as defined above) in a household gives the household size.

2.6 Household consumer expenditure : Consumer expenditure comprises all expenditures incurred by the household during the reference period (30 days preceding the date of enquiry) exclusively towards its non-productive domestic consumption purposes. Thus ~~all~~ expenses towards the enterprises of the household <sup>are not</sup> included in the household consumption. The consumption by the livestock of the household is <sup>also</sup> excluded as it is a part of the enterprise expenses of the household. Transfer payment in kind like

loans advanced, charities, gifts and other payments in kind, if any is not considered as consumer expenditure for the households which make such payments. But any consumption out of transfer receipts in kind like borrowings, gifts, charities, perquisites received by the household, free collections and other receipts in kind, if any, is considered for determining the total consumption of the household.

(v)

### 3. EXPLANATORY NOTES ON TABLES

3.1 In NSS consumer expenditure data are usually collected for a number of items of consumption. But for the purpose of presenting the results, similar items have been lumped together to form 21 more or less homogeneous groups, those groups are : (1) cereals; (2) gram; (3) cereal substitutes; (4) pulses and products; (5) milk and products; (6) edible oil; (7) meat, fish and egg; (8) vegetables; (9) fruits and nuts; (10) sugar; (11) salt; (12) spices; (13) beverages and refreshments; (14) pan, tobacco and intoxicants; (15) fuel and light; (16) clothing; (17) foot-wear; (18) miscellaneous goods and services; (19) rents; (20) taxes and (21) durable goods. Over and above, results are presented also for (i) food-total, (ii) non-food total and (iii) total consumer expenditure.

3.2 The groups of items of consumption as presented in the tables are defined here in terms of their constituents :

- 1) cereals : rice, wheat, jowar, bajra, maize, barley, small millets, ragi and their products;
- 2) gram : Bengal gram and its products;
- 3) cereal substitutes : cereal substitutes like tapioca, pea etc.;
- 4) pulse and products : arhar, tur, gram, moong, masoor, urd, khesari, pea and other pulses and their products;
- 5) milk and products : liquid milk [cow, buffalo, goat and other milk (condensed, powder etc.)] ghee (cow and buffalo), butter, dahi, ghol, lassi and other milk products;
- 6) edible oil : vanaspati, mustard oil, <sup>a</sup>cocunut oil, gingelly oil, groundnut oil, linseed oil, refined oil, other edible oils and oil seeds;
- 7) meat, fish and eggs : meat (goat meat, mutton, beef, pork, buffalo meat and other meat), egg, poultry, fish (fresh and dried), bird and others;
- 8) vegetables : potato, onion, tomato, brinjal, cabbage, cauliflower, root vegetables (arum, radish etc.), leafy vegetables and other vegetables;

- 9) fruits and nuts : banana, orange, lemon, mango, cocoanut, guava, pine apple, grapes, other fresh fruits, cocoanut, copra, ground-nut, cashewnut, date, raisins, other dry fruits and nuts;
- 10) sugar : sugar (factory), khandsari sugar, gur (cane and others), candy, other sugars;
- 11) salt : sea salt, rock salt and other salts;
- 12) spices : turmeric, black pepper, pepper, dry chillies, green chillies, garlic, tamarind, ginger, curry powder, other spices;
- 13) beverages and refreshments : tea (number of cups), tea leaf, coffee (no. of cups), coffee powder, other drinking beverages, biscuits, confectioneries etc., salted refreshments, prepared sweets, cooked meals, pickles, sauce, jams and jellies, other processed food items;
- 14) pan, tobacco and intoxicants : pan leaf, pan finished, supari (betel nut, other ingredients for pan), biri, cigarettes, leaf tobacco, hookah tobacco, cheroot, snuff, zarda, kiman, surti, other tobacco products, opium, ganja, toddy, country liquor, foreign liquor, other drugs and intoxicants;
- 15) fuel and light : coke, coal, firewood, electricity, gas, dung cake, charcoal, kerosene, candle, matches, methylated spirit, other fuel and light;
- 16) clothing : cotton (mill made, power loom, hand-loom, khadi), wool, art silk or rayon, pure silk and others including items of bedding and upholstery;
- 17) footwear : boot, shoe, slipper, sandal, chappal, wooden sandal etc.
- 18) miscellaneous goods and services : amusements (cinema, theatre etc.), education, medicine, toilet, articles, sundry articles, consumer services, conveyances, etc.
- 19) rents : rents on residential house, residential land and other consumer goods (No imputation of rent for residential houses, owned by the sample household was made);

(cont'd.....)

- 20) taxes : consumer taxes like road cess, choukidari taxes, municipal rates, consumer license fees and other local rates, income tax or taxes relating to household enterprise are excluded.
- 21) durable goods : furniture, musical instruments, ornaments, utensils and other equipments and their repairing expenses including the maintenance of residential houses.

3.3 Separate tables have been provided for each of the state, union territory, regions within a state/union territory, all Union Territories pooled and All-India.

3.4 The estimates in all the tables have been given by the combined sample only, although the data were collected by 2 sub-samples. Estimates have been given also by breakdown of monthly per capita expenditure classes in rupees, arranged in ascending order of magnitudes. The expenditure levels are grouped into 14 classes as follows :

sl. no.	monthly per capita expenditure class in rupees	sl. no.	monthly per capita expenditure class in rupees
(1)	(2)	(1)	(2)
1	0-8	8	24-28
2	8-11	9	28-34
3	11-13	10	34-43
4	13-15	11	43-55
5	15-18	12	55-75
6	18-21	13	75 & above
7	21-24	14	all class pooled

The groups 0-8, 8-11 stand for 0 - less than 8, 8 - less than 11 and so on.

3.5 A three tier numbering system has been adopted for the tables. The number in the left is the table number (1-5) as listed in para 1.10. The middle number is either 1 (for small cultivator households) or 2 (for non-cultivating wage earner households). The number in the extreme right position is the number assigned to the particular region/state/union territory.

#### 4. SOME FINDINGS

4.1 Some salient points on the size and composition of the households and the pattern of their consumer expenditure, observed from the results presented in the report, have been described in this section.

4.2 The observed average size of households over a few NSS rounds and for different types of households in rural areas of the country is given in Table (S.1). The agricultural labour households of 1956-57 reported an average number of 4.40 persons per households, 4.96 for agricultural labour with land and 3.98 for agricultural labour without land, and the corresponding number per rural labour and agricultural labour households of 1963-64 were 4.51 and 4.47 respectively. In 1970-71 (NSS twentyfifth round), the small cultivator households recorded an average household size of 4.52 and the non-cultivating wage earners had a still smaller household size of 4.13, It is observed from the available results that in the rural areas of the country the average household size for the weaker section was smaller than that for the general population and among the weaker section, those who possess land, form households of larger size compared to those formed by landless labourers.

Table (S.1) : Average household size for agricultural labour (1956-57), rural labour (1963-64), weaker section (1970-71) and for all rural households in respective years

type of households	NSS round (year)		
	11th & 12th (1956-57)	18th (1963-64)	25th (1970-71)
1. agricultural labour	4.40	4.47	-
2. agricultural labour with land	4.96	-	-
3. agricultural labour without land	3.98	-	-
4. rural labour	-	4.51	-
5. small cultivator	-	-	4.52
6. non-cultivating wage earner	-	-	4.13
7. all rural households	5.00	5.26	5.42

(cont'd...)

4.3 The average number of adult males, adult females and children <sup>of</sup> per household, percentage/children to total persons and child to adult ratio for rural small cultivator households, non-cultivating wage earner households and all rural households under a few monthly per capita expenditure classes are shown in Table (S.2). To get an idea about the trend, the data have been presented only for six expenditure classes. Generally, the size of a household decreases with the rise in per capita expenditure. As the per capita expenditure level increases the number of children per household decreases rapidly. Though the average size of household for small cultivators or wage earners is generally smaller than <sup>a</sup> the average size of a rural household, the child adult ratio is the largest for small cultivator households. What has been discussed here is only a commentary of the observed trend from the incomplete Table (S.2). This monotonic trend may not necessarily hold good for the complete set of consumer expenditure classes. Nevertheless, even allowing for minor fluctuations at some points, the above observations more or less remain valid. *in general.*

Table (S.2) : Average number of adult males, adult females, children and average number of persons per household (average size of household), percentage of children (less than 15 years of age) to total population and child adult ratio by a few monthly per capita expenditure classes for small cultivator and non-cultivating wage earner households

per capita monthly expenditure class (Rs.)	type of household	per household no. of adult males	per household no. of adult females	per household no. of children	average size of household	percentage of children to total population	child to adult ratio
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
1-13	small cultivator	1.05	1.29	3.00	5.34	56.18	1.28
	wage earner	1.12	1.39	1.97	5.48	54.20	1.18
	all rural	1.37	1.53	3.37	6.27	53.75	1.16
15-18	small cultivator	1.23	1.33	2.65	5.21	50.86	1.04
	wage earner	1.15	1.34	2.68	5.17	51.84	1.08
	all rural	1.45	1.54	3.00	5.99	50.08	1.00
24-28	small cultivator	1.31	1.31	2.11	4.73	44.60	0.81
	wage earner	1.31	1.33	1.84	4.48	41.07	0.70
	all rural	1.59	1.54	2.59	5.72	45.28	0.83
34-43	small cultivator	1.25	1.22	1.40	3.87	36.18	0.57
	wage earner	1.12	1.21	1.18	3.51	33.62	0.51
	all rural	1.59	1.56	2.18	5.33	40.90	0.69
55-75	small cultivator	1.09	1.02	0.96	3.07	31.27	0.45
	wage earner	1.02	0.84	0.56	2.42	23.14	0.30
	all rural	1.62	1.48	1.78	4.88	36.48	0.57
all expenditure classes	small cultivator	1.25	1.27	2.00	4.52	44.25	0.79
	wage earner	1.15	1.21	1.77	4.13	42.86	0.75
	all rural	1.55	1.52	2.35	5.42	43.36	0.77

4.4 Average monthly per capita expenditure in rupees (0.00) on food and non-food groups for various types of households are shown in Table (S.3).

Rural agricultural labour households recorded the monthly per capita expenditure of Rs. 11.69 in 1956-57 while the corresponding expenditure for the small cultivator and non-cultivating wage earner households in 1970-71 were Rs. 27.38 and Rs. 26.83 respectively. For all rural households the reported total monthly per capita expenditure was Rs. 17.14 in 1956-57 and Rs. 35.31 in 1970-71.

4.5 For the weaker section of households viz., the agricultural labour households of 1956-57, the small cultivator and wage earner households of 1970-71 the ratio of expenditure on food to total consumer expenditure assumed a steady value of 77 percent.

Table (S.3) : Average monthly per capita consumer expenditure in rupees (0.00) on food, non-food items and percentage of expenditure on food to total consumer expenditure for agricultural labour households (1956-57), small cultivator households, non-cultivating wage earner households (1970-71) and all rural households (1956-57 & 1970-71)

type of household	year	average monthly per capita expenditure (Rs. 0.00) on			percentage of expenditure on food
		food	non-food	total	
agricultural labour	1956-57	9.04	2.65	11.69	76.58
small cultivator	1970-71	20.99	6.39	27.38	76.66
wage earner	1970-71	20.61	6.22	26.83	76.82
all rural	1956-57	12.13	5.01	17.14	70.77
all rural	1970-71	25.98	9.33	35.31	73.58

4.6 Table (S.4) shows the average size of household, total monthly consumer expenditure per household and percentage of expenditure on food to total monthly consumer expenditure for small cultivator, non-cultivating wage earner and all rural households in each state and Union Territory of the country. Among the states, Tamil Nadu had the smallest (3.97) and Haryana the largest (5.59) size of household for small cultivators. For wage earners small size of household was reported for Rajasthan (3.61), Orissa and Tamil Nadu (3.64), Andhra Pradesh (3.75) and Madhya Pradesh (3.76). Larger wage earner households could be found in Jammu & Kashmir (5.18) and Kerala (5.04). For the rural households in general Tamil Nadu came out again with the lowest size of 4.38 persons while Haryana had <sup>the largest size of</sup> 6.48 persons per household.

4.7 Viewed against the <sup>All-India</sup> average monthly per household total consumer expenditure of Rs. 123.77 for small cultivator households, comparatively lower expenditure was reported by Orissa (Rs. 92.80) and Tamil Nadu (Rs. 99.48) and substantially higher expenditure was reported by Punjab (Rs. 264.96) and Haryana (Rs. 224.45). For wage earner households and also for all rural households in general a similar statewise pattern could be observed. Generally the all household average was the highest (for the rural households) followed by the small cultivators and the lowest expenditure was reported by the wage earner households. West Bengal, for all the three sets of households, had the percentage of expenditure on food to total consumer expenditure above 80 percent. Such high proportions were also reported by small cultivator households of Bihar and wage earner households of Assam and Bihar. This percentage was the lowest for small cultivator households of Punjab (69.61), wage earner households of Kerala (70.78) and all rural households of Punjab (67.85).

Table (S.4) : Average size of household, total monthly consumer expenditure per household and percentage of expenditure on food to total monthly consumer expenditure for small cultivator, non-cultivating wage earner and all households by state

State/Union Territory	average size of household			total monthly consumer exp./Chh.b.h.			percentage of exp. on food		
	small cultivator	wage earner	all	small cultivator	wage earner	all	small cultivator	wage earner	all
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1. Andhra Pradesh	4.15	3.75	4.64	117.20	108.12	159.65	74.39	74.57	72.14
2. Assam	4.77	4.47	5.88	167.94	156.13	236.79	79.09	81.12	78.10

## 5. SAMPLE DESIGN AND ESTIMATION PROCEDURE

5.1 Sample Design : The sample design of the rural survey of the NSS twentyfifth round was a stratified one with two-stage selection within each stratum. The first stage units were villages and the second stage units were households for the socio-economic enquiries. The sample design had been made self-weighting for each schedule of enquiry at the state level. The sample villages were usually selected in the form of two independent and interpenetrating sub-samples. Sub-sample 1 was surveyed by one party of investigators and sub-sample 2 by another party.

5.2 Sample size ( Central sample ) : The total sample size for household enquiries in the rural areas was 8400 sample villages and the average sample size was expected to be 2 households in a village for each of the schedules 16.1 and 16.2. <sup>2/</sup>..

5.3 Work Programme : The survey period (one year) of this round had been divided into four sub-rounds of three months duration each. In each sub-sample of a rural stratum there were 12 sample villages. These 12 villages were sub-divided into four sets of three villages each in a specified manner. For one sub-round out of these 12 villages, only three villages were selected and were surveyed in the sub-round. Thus on the whole, all the 12 villages were covered once during the full survey period.

5.4 Sampling frame : The frame was the list of villages as per the 1961 population census.

5.5 Stratification : The country had been divided into 65 agricultural regions by grouping within each state or union territory, districts having similar population density and crop pattern, Strata are formed within each region, by grouping tehsils (i) which are contiguous, (ii) <sup>having</sup> similar crop pattern and population density, and (iii) having good transport facilities amongst them. The number of persons engaged in agricultural occupation is more or less the same for each stratum within a region.

---

<sup>2/</sup> The actual number of households selected for survey was far below this expected level in the first two sub-rounds. As the design was self-weighting, the intervals for household selection were subsequently reduced to realise a larger sample in the last two sub-rounds.

5.6 Allocation : The all-India sample size had been allocated to the states on a joint consideration of their rural population, area under cereal crops and available investigator strength. This was modified to (i) ensure a multiple of 360 villages in each state (excepting Haryana and Punjab) (ii) take account of state-wise variation in work-load and (iii) make the sample size a multiple of 24 in order to facilitate an allocation of 24 villages in each rural stratum.

5.7 Selection of villages : For the central sample, in each stratum, two independent sub-samples of 12 villages each had been selected circular systematically with equal probability.

5.8 Selection of households : All the households in the sample village were divided into the following three sub-strata : (1) households having no cultivated land, (2) the lowest ten percent of households having cultivated land and (3) remaining households. Households deriving more or less regular and major income in the last year from self-employment in trading establishment, manufacture, construction, mechanised transport, professions or salaried employment or rent were excluded from both sub-strata 1 and 2 and were included in sub-stratum 3. Samples for schedules 16.1, 16.(2) & 16(R) were selected from sub-stratum 2, 1 & 3 respectively. Sample households were selected linear systematically using intervals and random start specified for this purpose so as to get about 2 sample households on an average from each sub-stratum.

5.9 Estimation Procedure :

- s : subscript for s<sup>th</sup> stratum
- i : subscript for i<sup>th</sup> sample village
- j : subscript for j<sup>th</sup> sample household
- k : number of strata in the state
- h : number of households selected for the enquiry
- y : value of the characteristic

If Y stands for the estimate of the state total for the characteristic y in the concerned schedule

$$Y = M \sum_{s=1}^k \sum_{i=1}^{12} \sum_{j=1}^{h_{si}} y_{sij}$$

Where M is the constant multiplier for the particular schedule.
