NATIONAL SAMPLE SURVEY

TABLES WITH NOTES

ON

PARTICULARS OF OWNED HOUSES

32ND ROUND : JULY 1977-JUNE 1978

Section I : Introduction

1.0 The National Sample Survey Organisation conducted an enquiry on Household Consumer Expenditure in its 32nd round survey operation during July 1977 - June 1978. This survey schedule contained some items of information on 'owned houses' to meet the long felt need of data on rental value of owner occupied dwellings. Since tenant households are ^{fairly common} ~~not few~~ in the urban sector, imputation of rental value of owned dwellings on the basis of prevailing rate, was not likely to pose any serious problem there. Hence, an item was included in this schedule block to collect ~~directly~~ information on imputed rent. But renting in of residential accommodation is not a common phenomenon and the concept of prevailing rate of rent is, therefore, not very appropriate in the rural sector. So, some items of information on the structural aspects of the owned dwellings which could be useful in determining the rental value of various types of dwellings were also included in this schedule block. Whereas data on the structural aspects were canvassed in both rural and urban sectors, information on imputed rent was sought only in the urban sector.

1.1 The survey covered the whole of rural and urban India excepting Sikkim, Andaman & Nicobar Island, Lakshadweep, Dadra & Nagar Haveli and rural area of Chandigarh, Mizoram and Nagaland. 1/

(sampling)

1.2 A stratified two stage ~~sample~~ ^{sampling} design was adopted for the survey, Villages in the rural sector and blocks in the urban sector were the first stage units and households formed the second stage units in both the sectors. In the central sample, altogether 8820 villages and 4940 blocks were sampled at all India level. Number of households surveyed for the household consumer expenditure enquiry in these many first stage units exceeded 1.5 lakh. 2/

1/ Two tehsils of district Surguja and four tehsils of district Bastar of Madhya Pradesh, three tehsils of district Chandrapur and one tehsil of district Amravati of Maharashtra and Ladakh district of Jammu & Kashmir were also not covered. Although urban areas of Mizoram came under the survey coverage, the field ~~return~~ ^{returns} in respect of this area had not been received for processing and tabulation.

2/ A note on Sampling Design & estimation Procedure is given in Appendix.

1.3 All states and all union territories except Chandigarh, included in the geographical coverage of the survey, participated in it by canvassing a matching sample, called State Sample, of at least equal size, following identical concepts and definitions.

1.4 This Report is based on the data obtained through the Central Sample on particulars of owned houses collected through the block of items introduced in the survey schedule on Household Consumer Expenditure. The data relate to the portion of the buildings utilised for residential purpose by the sample households which had been dwelling in owned houses only .

1.5 Statistical tables in this Report are presented separately for rural and urban sectors. Results in respect of all households are available for each State/Union Territory and all India. Results are also presented separately for the household groups (Schedule caste and Schedule Tribe households) for all India and for those States/Union Territories for which the proportion of households in the particular household group is five percent or more of the total households. In case of schedule tribe households, however, results are not given separately for Meghalaya and Arunachal Pradesh in the rural sector in view of the fact that more than ninety five percent of the households are scheduled tribe households in these areas. In the urban sector, tables for Schedule Tribe are presented only for all India because the States which reported a sizeable proportion of such households in the sector are only the smaller states of Manipur, Meghalaya and Arunachal Pradesh.

1.6 Some summary findings of this enquiry is discussed in section II. List of tables and the tables are given in Appendix-I. Appendix-II gives an account of the concepts and definitions adopted for this enquiry. A note on the sampling design and estimation procedure is given in Appendix-III,

Section - II

Summary of Findings

2 0 It is mentioned in Section I that particulars of owned houses' collected in this inquiry were in respect of owner occupied dwellings only. Such dwellings as per this enquiry formed about 93 percent of the total dwellings in the rural sector and 46 percent in the urban sector at all India level. Some *selected* general findings of this enquiry are given in the following paragraphs.

2 1 Owner households and their expenditure levels Percentage distribution of owner households over four percapita expenditure classes are given for the states and all India in table (A). In the rural sector for all India 9.13, 31.16, 45.26 and 14.45 percent households were reported to be belonging to per capita expenditure classes below ₹ 30, ₹ 30-50, ₹ 50-100 and ₹ 100 & above respectively. The states which recorded more than 10 percent households in the lowest expenditure class were Orissa (19.36%), Madhya Pradesh (14.81%), West Bengal (12.84%), Maharashtra (11.71%), Karnataka (10.40%), and Bihar (10.19%). The states which reported less than 2 percent households in this expenditure class were Himachal Pradesh (0.46%), Jammu & Kashmir (0.72%), Punjab (1.45%), Assam (1.45%), Haryana (1.58%) and Manipur (1.89%). In most of the states larger proportion of the households were found to be in the per capita expenditure class ₹ 50-100. Orissa, Punjab and Tripura were the only exceptions. Whereas in Orissa and Tripura greater concentration of households was reported in the expenditure class ₹ 30-50, in Punjab it was in the highest expenditure class ₹ 100 & above. Seven of the states reported more than 50 percent households in ₹ 50-100 per capita class. Relatively large proportion of households in the highest class was observed in Punjab (49.15%), Delhi (40.28%), Haryana (33.44%), Rajasthan (27.49%), Goa-Daman & Diu (26.28%) and Himachal Pradesh (24.72%). Households in this expenditure class formed less than 10 percent in Assam (5.65%), Tripura (5.75%), Orissa (7.16%), Bihar (8.04%) and West Bengal (9.13%).

Table(A) : Percentage distribution of owner households by per capita expenditure class.

Goa, Daman & Diu	2.54	20.33	50.85	26.28	0.00	12.91	38.70	48.39
Pondicherry	9.43	26.42	49.05	15.10	0.00	15.00	50.00	35.00
All India	9.13	31.16	45.26	14.45	3.72	19.83	48.66	27.59

2.2

The four per capita expenditure classes in the increasing order of the expenditure level accounted for 3.72, 19.03, 48.06 and 27.59 percent of urban households respectively at all India level. The proportion of ^{urban} households in the lowest expenditure class was ~~relatively~~ ^{highest} very high in Kerala (10.28%) ~~and high in~~ ^{followed by} Orissa (6.73%), Maharashtra (5.09%), Madhya Pradesh (5.03%), Tripura (5.00%), Tamil Nadu (4.94%), Karnataka (4.70%) and Bihar (4.06%). Such households formed less than 2 percent of the total households in Assam, Gujrat, Haryana, Himachal Pradesh, Jammu & Kashmir, Manipur, Meghalaya, Nagaland, Punjab, Rajasthan, Arunachal Pradesh, Chandigarh, Delhi, Goa-Daman & Diu and Pondicherry. As in the rural sector, ~~in this sector also~~ ^{in this ~~sector~~ ^{urban} sector also}, greater concentration of ^{urban} households was in the expenditure class Rs. 50-100 in all the states except Nagaland, Arunachal Pradesh, Chandigarh, Delhi and Goa-Daman & Diu where it was in the highest expenditure class. In fact, in twelve of the states, households in the expenditure class Rs. 50-100 formed 50 percent or more of the total households. More than 40 percent of the households were reported to be in the highest expenditure class in Arunachal Pradesh (83.33%), Nagaland (80.00%), Chandigarh (76.48%), Delhi (54.85%), Goa-Daman & Diu (48.39%), Punjab (43.01%) and Himachal Pradesh (42.30%).

2.3

Pucca, semi-pucca and katcha dwellings : At all India level in the rural sector, 54.97 percent of the owner households were reported to be living in katcha dwellings and 13.07 percent in pucca dwellings. Katcha houses dominated the rural scene in most of the states. The states which recorded 70 percent or more of the owner households in katcha houses were Tripura (100.00%), Assam (94.24%), Manipur (92.93%), Arunachal Pradesh (92.13%), Orissa (91.75%), West Bengal (77.34%) and Pondicherry (71.70%). The states which recorded less than 40 percent households in such accommodation were Delhi (2.70%), Himachal Pradesh (22.20%), Madhya Pradesh (28.50%), Haryana (31.32%), Goa-Daman & Diu (32.20%), Maharashtra (33.71%), Punjab (35.57%) and Karnataka (36.37%). The states which recorded more than 20 percent owner households in pucca houses were Delhi (70.83%), Haryana (40.53%), Punjab (40.51%), Kerala (30.20%), Rajasthan (26.20%), Pondicherry (20.75%) and Himachal Pradesh (20.20%). Pucca dwellings formed less than 10 percent of the dwellings in Tripura (0.00%), Arunachal Pradesh (0.00%), Manipur (0.47%), Assam (0.80%), Orissa (2.58%), West Bengal (5.74%), Madhya Pradesh (6.19%), Meghalaya (6.31%) and Bihar (8.66%). Semi-pucca dwellings were quite numerous in Madhya Pradesh (65.31%), Himachal Pradesh (57.51%), Maharashtra (55.49%), Goa-Daman & Diu (52.55%) and Karnataka (50.06%).

Table(B) : Percentage distribution of owner households by type of structure.

state	Rural			Urban

All India	54.97	31.16	13.67	25.21	25.76	49.03

2.4

2.5

2.4 In the urban sector at all India level, 25.21 percent of owner households lived in Katcha structures and 49.03 percent in pucca structures. Percentage of owner households in Katcha structures was quite high in Tripura(75.00%), Manipur(69.23%), Orissa(60.40%), Assam(55.20%) Arunachal Pradesh (50.00) and Andhra Pradesh(40.40%), quite low in Delhi (5.36%), Himachal Pradesh(7.69%), Haryana (0.09%) and Punjab(10.70%) and virtually non-existent in Meghalaya, Nagaland, Chandigarh, and Goa-Daman & Diu. More than 60 percent of owner households in the urban sector lived in pucca structures in Chandigarh(100.00%), Delhi(84.94%), Haryana(79.41%), Punjab(77.94%), Rajasthan(69.50%) and Pondicherry (65.00%). Households living in pucca structures formed less than 30 percent in Nagaland (0.00%), Manipur(2.56%), Assam(17.39%), Tripura(20.00%), Orissa (25.69%) and Goa-Daman & Diu (29.04%). Semi-pucca houses were found to be very common in the urban areas of Nagaland(100.00%), Goa-Daman & Diu(70.96%), Himachal Pradesh(50.00%), Meghalaya(50.00%), Madhya Pradesh(47.81%) and Maharashtra(41.31%).

2.5 Independent house, chawl/bustee and flat : At all India level in the rural sector, 90.16 percent of the owner households occupied independent dwellings, 7.48 percent inhabited in chawl/bustee type accommodation and 2.36 percent were housed in flats. This predominance of independent houses was observed in all the states. Households occupying independent houses were proportionately the least in Jammu & Kashmir; they formed 76.05 percent of the total owner households in this state. Sizable proportion of xxxxxxxxxx

Table(C): Percentage distribution of estimated number of owner households by type of dwelling.

state	Rural			Urban		
	type of dwelling			type of dwelling

Chandigarh	-	-	-	100.00	0.00	0.00
Delhi	94.44	4.17	1.39	70.14	10.47	19.39
Goa, Daman & Diu	81.36	18.64	0.00	74.19	22.58	3.23
Pondicherry	90.57	9.43	0.00	90.00	10.00	0.00
All India	90.16	7.48	2.36	83.78	9.44	6.78

households were housed in chawl/bustee type accommodation in Gujrat (21.38%), Goa-Daman & Diu (18.64%), Andhra - Pradesh (17.98%), Arunachal Pradesh (17.98%), Orissa (16.14%), Maharashtra (15.60%), Tamil Nadu (13.89%), Madhya-Pradesh (12.25%) and Karnataka (10.30%). Jammu & Kashmir was the only state where a large proportion of (23.59%) households occupied flat type accommodation.

2.6

At all India level in the urban sector, among the owner households 83.78 percent were occupants of independent houses, 9.44 percent were dwelling in chawl/bustee and 6.78 percent were living in flats. Independent houses held sway in the urban sector also for all states. The proportion of independent houses was relatively small in Maharashtra (65.24%) and Jammu & Kashmir (65.60%). Variation among states in respect of percentage of households in chawl/bustee type accommodation was quite pronounced. This figure was more than 20 for Maharashtra, Goa-Daman & Diu and Gujrat, in the range of 10 to 15 in Andhra Pradesh, Karnataka, Madhya Pradesh, Orissa, Tamil Nadu, Delhi and Pondicherry and less than 3 in the remaining states. Similar striking variation was observed among states in the case of flat type accommodation also. Jammu & Kashmir and Delhi reported as high as 34.40 per cent and 19.39 percent households respectively in this type of accommodation. Flats formed 9 to 10 percent of the households in Andhra Pradesh, Rajasthan and Tamil Nadu, 5 to 6 percent in Uttar Pradesh and West Bengal and less than 4 percent in the remaining states.

2.7 Average monthly rent per owner occupied urban dwellings :
Average imputed monthly rental for owner occupied urban dwellings was Rs. 80.89 at all India level. Average rental for katcha, semi-pucca and pucca dwellings was respectively Rs. 24.65, Rs. 47.34 and Rs. 127.11. The North Eastern states generally reported relatively high average rent for all structure types. High average rent was reported also in Gujarat, Himachal Pradesh, Jammu & Kashmir, Punjab, Delhi and Chandigarh. It is observed from table (D) that the usually expected situation of least rent for katcha structure was not reported for Delhi. Here the least average monthly rent was reported for semi-pucca dwellings. The figures obtained for average monthly rent for katcha and semi-pucca structures were found to be relatively close in Madhya Pradesh, Punjab and Pondicherry. Average monthly rent for pucca dwellings was found to be very high in relation to semi-pucca structures in Goa and Pondicherry and only marginally high in Rajasthan.^{1/}

Appendix-I, Table

2.8 Scheduled caste and scheduled tribe households : *As may be seen from*
94.2 percent of the scheduled caste households and 94.0 percent of scheduled tribe households in the rural sector were reported to be owning their dwellings. The corresponding figures for the urban sector as reported are 55.9 percent and 53.7 percent respectively. It is observed from table (E) that in the rural sector, proportion of households in the lowest percapita expenditure class (below Rs. 30) was reported to be highest for scheduled tribe households ~~and least for all households~~. Whereas this proportion claimed only 9.13 percent in the case of all households, it constituted 14.34 percent for scheduled caste households and 19.36 percent for scheduled tribe households. Also percentage of households in the highest expenditure class (Rs. 100 & above) was least for scheduled tribe households. The 14.45 percent recorded for all households in this class was nearly thrice the corresponding figure for scheduled tribe households and almost double the figure for scheduled caste households.

^{1/} It may be mentioned in this connection that suspiciously high figure was reported for average monthly rent for semi-pucca chawl/bustee type accommodation in Rajasthan and this explains the narrow difference in the average rent between semi-pucca and pucca dwellings in this state.

Table (E) : Percentage distribution of owner households by household type and by monthly percapita expenditure classes, type of structure and type of dwelling.

household type	per capita expenditure class (Rs)					type of structure				type of dwelling				
	0-3	3-5	5-10	10-20	above 20	all	atc	semi-pucca	ucc	all	independent house	chawl/bus	flat	all

						<u>RURAL</u>								
scheduled caste	14.34	38.32	40.40	7.94	100.00	70.22	23.04	6.74	100.00	89.54	8.58	1.88	100.00	
scheduled tribe	19.36	41.97	33.56	5.11	100.00	66.69	31.05	2.26	100.00	88.46	11.06	0.48	100.00	
all	9.13	31.16	45.26	14.45	100.00	54.97	31.16	13.87	100.00	90.16	7.48	2.36	100.00	
						<u>URBAN</u>								
scheduled caste	6.74	29.09	48.87	15.30	100.00	47.50	26.35	26.15	100.00	81.5	15.83	2.82	100.00	
scheduled tribe	6.59	27.99	48.75	16.67	100.00	51.59	33.64	14.77	100.00	84.61	14.77	0.62	100.00	
all	3.72	19.83	48.86	27.59	100.00	25.21	25.76	49.03	100.00	83.78	9.44	6.78	100.00	

Proportion of households in katcha dwellings was relatively high and proportion of households in pucca dwellings was relatively low among scheduled caste and scheduled tribe households in the rural sector. Between these two household types, the households in Katcha structures as well as the households in pucca structures formed a larger proportion for scheduled caste households than scheduled tribe households. Irrespective of household types, most (more than 88.5%) households were living in independent dwellings. Chawl/bustee and flat type dwellings put together accounted for only around 10 percent for all the three household types.

In the urban sector also, in comparison with the share of all households, the proportion of scheduled caste and scheduled tribe owner households, was relatively higher in the lowest percapita expenditure class and relatively smaller in the highest expenditure class. Also katcha structures housed a larger proportion of scheduled caste and scheduled tribe households in the urban sector. But, while in the rural sector, the proportion of households in katcha houses was dimensionally of the same order for all the three household types, the proportion in the urban sector for scheduled caste (47.5%) and scheduled tribe households (51.6%) was almost double the proportion for all classes of households taken together (25.2%). Independent dwellings dominated the urban sector also, but to a less extent. In this respect, no marked variation was discernible among the various household types.

Appendix - II

Concepts & Definitions

1. Type of dwelling : Dwellings have been classified under three categories namely, chawl/bustee, independent house and flat.
 - 1.1 (a) Chawl/Bustee - A collection of poorly built katcha or semi-pucca huts or tenements.
 - 1.2 (b) Independent house - A separate structure with a room or rooms and having all its accessories and a separate entrance to it. In other words; if the dwelling unit and the entire structure of the building are physically coterminous, it should be considered an independent house.
 - 1.3 (c) Flat - All housing arrangements other than chawl/bustee and independent house are to be taken as flats. Flat thus includes any self-contained dwelling unit with a room or rooms provided with normal housing facilities like water supply, bath and latrine used exclusively by the family residing there or jointly with other families. It also includes detached room or rooms with or without other housing facilities.
2. Type of structure : The structures have been classified into three categories, namely, pucca, semi-pucca and katcha on the basis of the materials used for construction.
 - 2.1 (a) Pucca structure - A structure whose walls and roof at least are made of pucca materials.
 - 2.2 (b) Katcha structure - A structure which has walls and roof made of non-pucca materials.
 - 2.3 (c) Semi-pucca structure - A structure which has either the walls or the roof, but not both, made of pucca materials. [Walls/roof made partially of pucca materials will be regarded as katcha walls/roof. Materials such as oven - burnt bricks, stone, stone-blocks, cement concrete, jack-board (cement plastered read), tiles and timber are pucca materials. Corrugated iron or asbestos sheets used in the construction of roof will also be treated as pucca materials.]

Monthly rent : It is the amount of money payable per month to the owner or to some other party as per the contract between the occupier of the accommodation and the person who lets it out. Rent does not include any 'selami' or 'cess' payable to local self-Government.

Monthly per capita consumer expenditure : This will be obtained as the ratio of the average monthly household consumer expenditure (averaged over last twelve months) to the household size.

Appendix - III

Sample Design and Estimation Procedure

1. For the survey schedule on Consumer Expenditure canvassed in 32nd round, a block was introduced to collect data relating to the structural aspects of the dwelling units owned by the residents in both the rural and urban sectors and also the rental value of the . . . owned dwellings in the urban sector. The sampling design and estimation procedure adopted for this survey is discussed in the following paragraphs.
2. Sampling design and sample size : The sampling design is stratifiedⁱⁿ two stages; the first stage units were villages in the rural sector and blocks in the urban sector and the second stage units were households in both these sectors. A total of 8820 villages and 4940 blocks were planned to be surveyed in the Central Sample. [All states and all union territories except Chandigarh included in the geographical coverage of the survey participated in the survey by canvassing a matching sample- State Sample - of at least equal size following identical concepts and definitions]. From each sample village/block, a sample of 12 households were planned to be surveyed except in the rural sector of North Eastern States. Here, 24 households were planned to be surveyed from every sample cluster consisted generally of 4 villages.
3. Stratification : There were 73 agro-economic regions all over the geographical coverage of this NSS round. These regions were formed within states/union territories by grouping contiguous districts of similar agricultural profile. Strata were formed within regions. Each district with less than 1.5 million 1971 rural population were divided into two or more basic strata. Districts with more than 1.5 million rural population were divided into number of basic strata depending upon the population of the concerned districts by grouping contiguous teahills homogeneous, as far as practicable, with respect to crop pattern and density of rural population so that the rural population of each basic stratum is less than 1.5 million. The rural part of each basic stratum formed a stratum for rural sample selection and its urban part formed a stratum for urban sampling. Some basic strata having small

urban population were however merged for sample selection in the urban sector.

4. Allocation of sampling size : The total number of sample villages/blocks in each state/union territory was allocated to its constituent strata in proportion to their respective 1971 rural/urban population. (The allocation were adjusted to multiples of 4 at stratum level and multiples of 8 at regional level).

5. Selection of first stage units : For sampling in the rural sector 1971 census list of villages was the frame. From within each basic stratum, the allocated number of villages were selected with probability proportional to their 1971 census population with replacement. [A population of 25 was assigned for the depopulated villages for the purpose of sample selection]. The procedure of selection of sample villages in North Eastern States was a little different. In view of the difficulties of journey between villages situated in the hilly areas of this region, clusters of villages formed within stratum around some 'nucleous' villages were selected for survey. These nucleous villages were sampled systematically with equal probability. A cluster, in general, consisted of 4 villages.

For sampling in the urban sector, the urban frame survey (ufs) blocks in cities and towns where ufs had been done and 1971 census blocks in the remaining cities and towns were used as sampling frame. In each urban stratum the allocated number of sample blocks were selected with probability proportional to size with replacement where size is a measure of the population.

- 6 Hamlet group/sub block selection : In case the population of a sample village/block at the time of field investigation is 1200 or more, it was divided into two or more parts of roughly equal population content called hamlet groups/sub-blocks and the survey was confined to only one of them selected at random.
- 7 Revenue village selection : When a sample census village is not identifiable, one of the following procedures was adopted : (a) all revenue villages contained wholly or partly in the census village were surveyed as one unit or (b) the revenue village which contained the selected census village was wholly surveyed.
- 8 Sampling of second stage units : In the rural sector, a sample of 12 households were selected from each sample village/hamlet-group circular systematically after arranging all the households in it in the order of their means of livelihood namely (i) self-employed in non-agriculture, (ii) rural labour and (iii) the rest. In the North Eastern states, if a cluster consisted of '4' villages households were selected in the above manner from each of the villages in the cluster.

In the urban sector, a sample of 12 households were selected from each sample block/sub-block circular systematically after arranging all the households in it in order of the following household employment status cum per capita expenditure groups.

(i) self-employed and average monthly per capita consumer expenditure greater than A

(ii) self-employed and average monthly per capita consumer expenditure less than or equal to A

(iii) not self-employed and average monthly per capita consumer expenditure less than or equal to A

(iv) not self-employed and average monthly per capita consumer expenditure greater than A.

The value of A differs from state to state

9 Estimation procedure : The following notations were used in the formula for obtaining various estimates.

- r : subscript for rth region
- s : subscript for s th stratum
- i . subscript for i th village/block
- j : subscript for j th household
- k : number of regions
- m : number of surveyed villages/blocks including depopulated and zero cases
- h : number of surveyed households
- k : number of strata
- y : value of characteristic

Estimate of the state/union territory total of a characteristic y is given by the formula

$$\hat{Y} = \sum_{r=1}^R M_r \sum_{s=1}^{K_r} \frac{m_{rs}}{m_r} \sum_{i=1}^{h_{rsi}} \frac{h_{rsi}}{h_{rs}} y_{rsij}$$

where $M_r = \frac{P_r}{P}$, P_r being the projected rural/

urban population of r th region and P_r , the number of sample persons in the urban/rural areas of that region (i.e. P_r is the sum of household sizes of all the surveyed households).

10. Estimates of ratios : An estimate of a ratio of two characteristics is given by the ratio of the estimates of aggregates of the items appearing in the numerator and the denominator of the ratio.
