Broad Features Of Capital Expenditure Incurred
By Rural And Urban Households - During 1981-82

SECTION ONE

INTRODUCTION

1.1.0 The Debt and Investment Survey carried out in the NSS 37th round (January to December 1982) was the fourth in the series of decennial country-wide investigations on household indebtedness and investment. While the first two surveys were undertaken by the Reserve Bank of India (RBI), the third decennial survey was conducted by the National Sample Survey Organisation (NSSO) as a part of its programme for 26th round (July 1971 to September 1972) in which Land Holdings enquiry was also carried out. As in the 26th round, an integrated survey on both Debt & Investment and Land Holdings was carried out in the 37th round during the calender year 1982. Like earlier occasions, the objective of the 37th round Debt and Investment survey was to get reliable estimates of the assets, liabilities, borrowings, capital formation etc. in the household sector.

1.1.1 It was planned to bring out the main results of the survey through a series of five reports. So far three reports (NSS Draft report nos. 318, 322 and 328) were prepared, the first in July 1985, the second in December 1985 and the third in April 1986. While the first report summarised the asset and liability position of rural and urban households, the second report covered several aspects of household indebtedness, namely, aggregate number of indebted households, total amount of cash loans, rates of interest, duration of loan and credit agency. The third report was, in fact, a complementory one to the second report as it presented results on some other aspects of indebtedness like purpose of loan, type of loan, nature of interest, type of security and type of mortgage. The present report, which is fourth in the series, provides some broad

kcr.

features of gross capital expenditure, fixed capital formation and sale and loss of physical assets by the rural and urban households during the agricultural year 1981-82 (July 1981 to June 1982).

Geographical coverage

1.2.0 The 37th round survey was initially planned to cover the whole of Indian Union except (a) rural areas of Nagaland and (b) Ladakh and Kargil districts of Jammu & Kashmir. Moreover, due to the operational difficulties and shortage of staff the following areas could not be surveyed either :-

i) Andaman & Nicobar Islands and Lakhsadeep
ii) Urban areas of Dadra and Nagar Haveli
iii) Rural areas of Sikkim
iv) Rural areas of Chhatarpur district and urban areas of Guna and Jhabua of districts of Madhya Pradesh.

1.3.0 Methodology adopted for collection of data : In NSS 37th round, the survey period was the calender year 1982, while the reference period for data collection was July 1981 to June 1982. During the survey period, each sample household was visited twice - once during January to June, and again during July to December 1982. In the first half of the Calender year 1982, the asset and liability position of the households as on the date of survey as well as the transactions of the assets/liabilities which had taken place during 1st. July 1981 to the date of survey were ascertained at the time of the first visit to the sample households. Based on the stock and flow data, the assets and liabilities of the households as on 30.6.81 were derived. In a similar way, assets and liabilities of the households as on 30.6.82 were ascertained from the data collected in the second visit from the same set of households. On the other hand, information on

capital expenditure, expenditure on durable household assets and financial assets was collected for the whole of the reference year July 1981 to June 1982 in two instalments. Data for the first half of the reference year were collected in the first visit, and for the second half of the reference year in the second visit to the sample households. Hence for such items, data of both the visits pooled together would give the estimate for the entire reference year. Further details of the survey methodology, particularly changes in the methodology from those of the earlier rounds have been given in NSS Report No. 318.

1.4.0 Sample size : The all-India sample size was fixed at 8408 villages and 5300 urban blocks considering both central and state samples together. However, for the reasons mentioned in para 1.2.0 the survey could not be carried out in all the villages and urban blocks, as planned. Further, for a few samples, information for one of the visits (mainly second visit) was not available at the tabulation stage for various reasons such as shortage of field staff, non-availability of informants and rejection of schedules during scrutiny. Thus, the number of sample villages and urban blocks considered for generating various estimates relating to the agricultural year 1981-1982 were 7690 and 5145 respectively. In terms of households, the sample size was 60,905 and 30,770 in the rural and urban sectors respectively. State-wise number of sample villages/blocks and households are given in Table (0) of Appendix.

1.5.0 Content of the report : The first three reports on the subject have dealt with the stock position of assets and liabilities as on 30.6.81. The present report, on the other hand, provides estimates of gross capital expenditure and fixed capital formation during 1.7.81 to 30.6.82 under the broad classification of (a) residential plots and buildings (b) farm business and (c) non-farm business. Besides, the estimates of

sale and loss of physical assets have also been given. While the earlier reports have been prepared on the basis of visit-I data only, the present report is based on the data of visit-I and visit-II taken together. The estimates are based on the pooled data of central and state samples, unless otherwise mentiond.

1.5.1 This report consists of three sections and an Appendix. This introductory section gives the scope and content of the report followed by an elaboration of the concepts and definitions used in the survey. Section II presents the main findings of the survey alongwith comparison of some key estimates obtained from this survey (1982) with the survey conducted in the 26th round (1971-72). In section three, a note on sample design and estimation procedure of the NSS 37th round has been included. Lastly, the Appendix which is the main body of this report contains seven tables giving detailed results at the state and all-India levels.

1.5.2 With a view to studying the variations in the estimates derived independently from different sub-samples, the Appendix contains two tables (table nos. 2 and 4) which provide sub-samplewise estimates of fixed capital formation and gross capital expenditure respectively, for 'all households' in the rural and urban sectors. Estimates of these two items cross classified by household asset holding and major household type have been presented in table nos. 3 and 5. The major household types are (i) cultivator households and (ii) non-cultivator households for the rural sector and (i) self-employed households and (ii) other households for the urban sector. The estimates by combining the sectors, obviously, can not be presented by household type. The report also contains two tables giving the estimates regarding sale and loss (due to natural and other calamities) of assets under the break-ups of (a) residential plots and buildings, (b) farm business, (c) non-farm business and (d) transport equipments (for household use).

kcr.

The transport equipments used in the farm and non-farm business are included under the respective heads. While the above information in respect of "all households" is shown in Table 6 classified by household asset holding, Table 7 presents the same estimates classified by major household type only. The report provides estimates at state and all-India levels separately for rural, urban and rural and urban combined sectors.

1.5.3. The statistical tables given in the Appendix of the report contains two types of estimates, namely, (i) percentage of households reporting a specific item of information to the total number of households in a household asset holding group and/or a major household type depending upon the classification chosen for the table, and (ii) average amount (in Rs) of expenditure on a specified item per reporting household under various classifications.

1.5.4. It may be clarified here that the above mentioned estimates, as they relate to the full reference year, are based on the common set of sample households surveyed in visit I and visit II, which is generally smaller than the sample size (which relates to visit I data only) shown in the earlier reports on the subject.* Thus, there may be differences between the estimated number of households provided in this report and those presented in report numbers 318 and 322. Although the estimates relate to the reference year, the classificatory characters like household asset holding and major household type are based on the data of visit I only.

1.6.0 Concepts and definitions : The concepts and definitions of some important terms used in the survey are explained below :-

A. Definitions relating to major household type :

(i) Cultivator households : All rural households operating some land (i.e. area of 0.005 acre or more) were treated as cultivator households. For the purpose of this survey, operation of land, as per the definition of operatuonal holdings (as given in the NSS ~~xxxxxxxxxxxxx~~ report no. 318), included growing of field

* However, the difference between the two sets of sample households at the all-India level is negligible. The four cent ages of sample households surveyed in both the visits to the sample households surveyed in the first visit are 99.59 and 99.37 in the rural and urban sectors respectively

kcr.

crops, furits, nuts, seeds, tree, nurseries (except those of forest trees), bulbs, vegetables and flowers; and production of plantation crops, livestock and livestock products, poultry and poultry products, fish, honey, rabbits, furbearing animals and silk-worm cocoons.

(ii) Non-cultivator households : The rural households operating no land or land less than 0.005 acre were considered as non-cultivator households.

(iii) Self-employed households in urban areas : Persons engaged in their own farm or non-farm enterprises were treated as self-employed. A household in urban area was considered as self-employed if more than 50 per cent of its income during 365 days preceding the date of survey was derived from self-employment pursued by its members.

(iv) The major household type "others" in urban areas covered all other households including those having no gainful source of income.

B. Household asset holding : Assets were defined to include all items owned by the household which had money value such as, land, buildings, livestock, agricultural implements, non-farm business equipments, all transport equipments, durable household assets, dues receivable on loans advanced, shares in co-operative society, bank etc., national plan saving certificates and the like, deposits in companies, banks, post offices etc. However, crops standing in the fields, currency notes and coins in hand and stock of commodities held by the households were not considered as assets for the purpose of this survey. The households were classified into different household asset holding groups, depending upon the total assets held by them.

kcr.

C. Fixed capital formation and gross capital expenditure :

(i) The expenditure on capital account reflects increase in the productive capacity and constitutes a measure of capital formation. The data on capital expenditure in respect of individual items were split up into maintenance expenditure and expenditure leading to asset formation, and the latter alone was taken into account for compiling the estimates of fixed capital formation. For each of the items under capital expenditure in farm business, non-farm business and residential plots and buildings, data on new additions to existing assets through new purchase or construction and major repairs and alterations comprising of all work undertaken to increase the capacity or usefulness of the existing assets, including rebuilding of assets destroyed by fire, flood, other natural calamities and accidents, were collected to measure the asset formation.

(ii) In addition to the expenditure incurred for formation of fixed capital, gross capital expenditure included expenditure on normal repairs and maintenance of all items of fixed capital, expenditure on purchase of land, land rights and livestock.

(iii) Data on capital expenditure collected in the survey included payments in cash and kind, value of owned assets and materials used and value of work done by the household members.

(iv) The estimates published in this report are also not adjusted for sale of fixed assets and loss caused to fixed assets on account of natural and other calamities during the reference year.

D. Capital expenditure in farm business : (i) Gross capital expenditure in farm business was taken as the sum total of all expenditures incurred for the purpose of cultivation, on the following items :-

(a) purchase of land, (b) purchase of land rights, (c) reclamation of land, (d) bunding and other land improvements,

(e) orchards and plantations, (f) wells, (g) other irrigation resources, (h) agricultural impliments, machinery and transport equipments, (i) farm house, barns(golas) and cattle sheds, (j) purchase of livestock and (k) other capital expenditure in farm business. (ii) Fixed capital formation in farm business comprised of all expenditures included under gross capital expenditure in farm business excepting those incurred for normal repairs and maintenance of the existing assets, expenditure for purchase of land, land rights and livestock.

E. Capital expenditure in non-farm business : (i) Non-farm business was defined to comprise all household enterprises other than those covered under farm business. Capital expenditure in non-farm business was collected in respect of (a) land and buildings, (b) production equipments and accessories, (c) transport equipment, (d) furniture and fixtures and (e) other capital expenditure.

(ii) As in the farm business, fixed capital formation in the non-farm business also excluded the expenditure incurred for normal repairs and maintenance and also the expenditure for purchase of land and land rights.

F. Capital expenditure on residential plots and buildings :

(i) The expenditure on land and structures used for residential purposes was covered under this head. The expenditure on purchase of full ownership rights or improvement of tenurial status was also included.

(ii) The expenditure leading to asset formation through improvement to residential plots, construction and new purchase of residential houses and structures, major alterations and additions to existing houses and structures constituted fixed capital formation in residential plots and buildings.

(iii) If a farm or non-farm activity was carried out in any part of a residential building, the total capital expenditure

was shown under this head. Similarly, if both the farm and the non-farm activities were carried out in the same structure (excluding residential building), the total capital expenditure was recorded under farm business.

G. Normal repairs and maintenance : The outlays of recurring nature on fixed assets required to keep them in good working order were considered as expenditure for normal repairs and maintenance. Replacements of parts and attachments of fixed assets which were short lived (having an expected lifetime use of upto one year) and/or relatively of small value were included in this item.

H. Loss of physical assets : Loss : Information was collected in respect of the value of loss of an asset in case such loss was sustained because of natural or other calamities. The value of the loss which might be total or partial for any item was estimated as the expenditure required to be incurred to restore the asset to the same condition in which it had been prior to the damage.

kcr.

SECTION TWO

IMPORTANT FINDINGS OF THE SURVEY

2.0.0. The present report provides the estimates of gross capital expenditure and also fixed capital formation in the household sector during the agricultural year July 1981 to June 1982. These estimates under the classification of (a) residential plots and building, (b) farm business and (c) non-farm business are presented in the Appendix at the state and all-India levels separately for the rural, urban and rural & urban combined sectors. All the estimates are based on the pooled data of the Central and State samples. In addition, Tables(2) and (4) give the sub-samplewise distribution of the percentages of reporting households and average amount of expenditure for fixed capital formation and gross capital expenditure respectively. In this section the salient features of the survey results are summarised for all-India with some references to important features at the state level.

2.1.0. Capital expenditure in the household sector : Gross capital expenditure, as defined for the purpose of the survey, included all expenditures which led to asset formation together with the expenditures on normal repairs & maintenance of fixed assets and those for purchase of land, rights and livestock. Fixed capital formation, on the other hand, took into account only those expenditures which led to asset formation. The estimates of gross and fixed capital expenditures and percentages of households reporting such items of expenditure are shown in Table (I) for rural and urban India.

kcr.

Table (I) : Estimated amount of gross and fixed capital expenditure and percentages of households reporting such expenditure in rural and urban sectors of India

sector	estimated number of households (000)	amount of gross capital expenditure (Rs. crores)	amount of fixed capital formation (Rs. crores)	percentage of households reporting	
				gross capital expenditure	fixed capital formation
(1)	(2)	(3)	(4)	(5)	(6)
rural	93823	6436	3687 (57.29%)	63.58	23.22
urban	29457	2912	2274 (78.14%)	41.92	14.83

Note : The figures in the parenthesis indicate percentage of fixed capital formation to gross capital expenditure.

2.1.1. Table (I) reveals that there were in all 93.8 million households in the rural sector and 29.5 million households in the urban sector.✓ Amongst these households 64 per cent in the rural sector and 42 per cent in the urban sector reported to have incurred gross capital expenditure during the reference year. The amount of gross capital expenditure was of the order of Rs.6436 crores and Rs.2912 crores in rural and urban sectors respectively. From the estimates of households and gross capital expenditure it can be observed that the urban sector which comprised of only 24 per cent of the total households in the country had contributed about 31 per cent of the gross capital expenditure.

2.1.2. Compared to gross capital expenditure, the percentage of households reporting fixed capital formation was much lower in both the sectors; only 23 per cent and 15 per cent of rural and urban households had made some expenditures leading to formation of fixed capital. The

note: ✓ The estimated numbers of households derived from the survey data are found to be quite close to the corresponding figures of 1981 population Census. The percentage differences being 0.03 and 1.37 in the rural and urban sectors respectively.

kcr.

contribution of the urban households in this case was 38 per cent, about 7 per cent higher than what was observed in the case of gross capital expenditure. The more dominant role of the urban sector in the case of fixed capital formation is also borne by the fact that the fixed capital formation expressed as percentage of gross capital expenditure was 78 in the urban sector as against 57 in the rural sector. It may be relevant to mention here that about a decade back the said percentage was about 40 in the rural sector as revealed from the results of NSS 26th round which were published by the Reserve Bank of India under the title "Statistical Tables relating to capital expenditure and capital formation of rural households during the year ended 30th June 1972".

Table(II) : Percentage distribution of the fixed capital formation over states and average amount of the same per household for seventeen states and all-India separately for rural and urban sectors.

state	fixed capital formation			
	rural		urban	
	percentage (~~0.00~~)	average amount (Rs.)	percentage (~~0.00~~)	average amount (Rs.)
(1)	(2)	(3)	(4)	(5)
Andhra Pradesh	7.15	311	5.89	562
Assam	1.20	182	1.02	823
Bihar	4.91	162	2.67	385
Gujarat	4.61	455	12.36	1618
Haryana	3.40	849	1.81	806
Himachal Pradesh	0.81	392	0.05	154
Jammu & Kashmir	1.53	715	0.32	376
Karnataka	6.17	492	6.60	909
Kerala	9.90	1055	5.15	1629
Madhya Pradesh	4.56	248	4.88	580
Maharashtra	8.47	425	9.80	586
Orissa	1.92	173	0.59	213
Punjab	6.58	1147	2.83	809
Rajasthan	7.26	599	4.81	889
Tamil Nadu	6.87	360	26.53	1730
Uttar Pradesh	17.98	411	8.61	504
West Bengal	5.27	251	4.31	297
Other states	1.41	-	1.77	-
all-India	100.00	393	100.00	872

kcr.

2.1.3 An idea of the relative contribution of different states can be formed from the percentage distributions of fixed capital formation over the states given in Table II. As regards the rural sector, column(2) of this table shows that the contribution of Uttar Pradesh was the highest among the states, about 18 per cent of the national total. The next major contribution came from Kerala (10%) followed by Maharashtra (8%), Rajasthan (7%) and Andhra Pradesh (7%). On the other hand, the contribution was even less than 2 per cent in Himachal Pradesh (0.8%), Assam (1.2%) Jammu & Kashmir (1.5%) and Orissa (1.9%). In the urban sector, the variation among the states was even more pronounced. Tamil Nadu alone accounted for 27 per cent of the urban total. Gujarat and Mahashtra contributed 12 and 10 per cent respectively. In contrast, the combined share of Himachal Pradesh, Jammu & Kashmir and Orissa pooled together was less than 1 per cent.

2.1.4 The contribution of a state depends, besides the number of reporting households, on the average amount of fixed capital formation per household. Thus, to judge the relative performance of the states, the average amount of fixed capital formation per household was examined for seventeen states. It is observed from Table (II) that in the rural sector, the average was highest in Punjab (Rs.1147) followed by Kerala (Rs.1055) and Haryara (Rs.849). The averages, on the other hand, were quite low in the states of the eastern region, namely, Bihar (Rs.162), Orissa (Rs.173), Assam (Rs.182) and West Bengal (Rs. 251) along with Madhya Pradesh (Rs. 248). In the urban sector, the top three positions were occupied by Tamil Nadu (Rs.1730), Kerala (Rs.1629) and Gujarat (Rs1618) whereas Himachal Pradesh (Rs. 154), Orissa (Rs. 213) and West Bengal (Rs. 297) were the three lowly placed states.

Punjab and Haryana do not occupy the top positions as in the rural sector.

kcr.

Table (III) : Average amount of fixed and gross capital expenditures per household classified by major household type and household asset holding for rural and urban sectors of India

household asset holdings (in Rs.000)	average fixed capital formation (Rs.)						average gross capital expenditure (Rs.)					
	rural			urban			rural			urban		
	cultivators	non-cultivators	all households	self employed	others	all households	cultivators	non-cultivators	all households	self employed	others	all households
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
upto 1	39	39	39	50	22	28	86	64	69	170	42	70
1 - 5	82	64	73	168	39	76	187	132	158	247	73	122
5 - 10	117	143	125	224	132	157	280	243	269	323	195	231
10 - 20	204	173	199	411	195	263	417	344	406	594	263	367
20 - 50	314	546	331	1655	596	982	619	790	631	1861	781	1175
50 - 100	708	812	712	1090	958	1010	1240	1100	1234	1615	1251	1394
100 - 500	1794	963	1773	6620	1490	3897	2800	1482	2768	7774	2117	4774
500 & above	8627	2608	8558	10203	2548	7147	11878	4026	11787	13719	4436	10012
all groups	470	144	393	1590	377	772	823	243	686	1958	520	988

kcr.

2.2.0 Capital expenditure by type of households : The survey results presented in this report are generally classified by major household type. The two major household types were cultivator households and non-cultivator households in the rural sector and self-employed households and other households in the urban sector. Cultivator households were in majority in the rural sector and constituted 76 per cent of the rural households whereas only about 33 per cent of the urban households were self-employed at all-India level.

2.2.1 Table III exhibits that in the rural sector, on an average, fixed capital formation by a cultivator household was appreciably higher than that of a non-cultivator household. It is, however, noted that not much difference was there between the cultivator and non-cultivator households in the case of six lower asset holding groups. In fact, in the case of asset-groups Rs. 5000-10000, and Rs 50,000-1,00,000, Rs. 20,000 - 50,000, the average capital formation by non-cultivator households was even higher. But among the households owning assets worth Rs. 1 lakh or more, the average fixed capital formation was so high for the cultivator households in comparison to the non-cultivator households that the over all average for the former category of households became three times the average for the latter.

2.2.2 In the urban sector the self-employed households generated, on an average, more fixed capital as compared to non self-employed households uniformly in all the asset holding groups. Considering all households, in both rural and urban sectors, the average fixed capital formation was found to have an increasing trend over the successive asset holding groups.

2.2.3 In the case of gross capital expenditure, the pattern of average per household remained the same so far as the urban sector was concerned. In the rural sector, the average gross capital expenditure for the cultivator households

kcr.

was always greater than the average for the non-cultivator households in all the asset holding groups except in the case of asset group of Rs. 20,000 - 50,000.

2.2.4 With a view to studying the changes in fixed capital formation during the last decade, the percentage of reporting households and the percentage change in the stock of fixed capital derived from the surveys of NSS 37th round and NSS 26th round for the cultivator and non-cultivator households in the rural sector have been presented in Table (IV). Such comparison cannot be made for the urban sector as the results of the 26th round were not released for the urban sector.

Table (IV) : Percentage change in stock of fixed capital in the household sector derived from NSS 37th and NSS 26th rounds by major household type in rural sector of India

NSS round	reference year	cultivator		non-cultivator		all households	
		p.c. of reporting households	p.c. change in stock	p.c. of reporting households	p.c. change in stock	p.c. of reporting households	p.c. change in stock
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
26*	1971-72	23.44	4.19	7.91	2.39	19.32	4.00
37	1981-82	26.34	4.53	13.22	3.79	23.22	4.45

* source : "Assets of rural households as on June 30, 1971" and "Statistical Tables relating to capital expenditure and capital formation of rural households during the year ended 30th June 1872" published by Reserve Bank of India in 1976 and 1977 respectively.

kcr.

2.2.5 Percentage change in stock is derived by expressing the amount of fixed capital formation reported by a household type in the reference year as percentage to the amount of total physical assets (excluding land, livestock and household durable assets) held by the same household type at the beginning of the reference year. Table (IV) reveals that the change in stock of fixed capital, in terms of percentage, was more in 1981-82 for both cultivator and non-cultivator households compared to 1971-72 figures. Although the change in stock increased by a larger extent in the case of non-cultivator households, it was found to be lower than that for the cultivator households even in 1981-82. Further, the percentage of households reporting fixed capital formation increased during the decade for both the household types, the relative increase being much higher for non-cultivator households than tor the cultivator households. Still, a much larger proportion of cultivator households (26%) had participated in capital formation compared to non-cultivator households (13%) in 1981-82.

2.3.0 Distribution fixed capital formation by component items : For the purpose of presenting the detailed estimates in the Appendix, the capital expenditure, both gross and fixed, incurred on different items were classified into three broad groups, namely, (i) residential plots and building, (ii) farm business and (iii) non-farm business. However, in order to study the relative importance of different groups of items to different types of households, Table (V) presents the percentage distribution of the amount of fixed capital formation over the three item groups separately for each household type of rural and urban areas.

kcr.

Table (V) : Percentage distribution of fixed capital formation by three item groups for each household type in rural and urban sectors of India

item groups	p.c. distribution of fixed capital formation					
	r u r a l			u r b a n		
	cultivator households	non-cultivator households	all households	self-employed households	other households	all households
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. residential plots and buildings	52.23	75.70	54.20	37.30	60.64	51.55
2. farm business	37.58	9.72	35.37	7.86	4.24	6.61
3. non-farm business	10.19	14.58	10.43	54.84	35.12	41.84
4. all items	100.00	100.00	100.00	100.00	100.00	100.00

2.3.1 It is seen from Table (V) that "residential plots and buildings" was the most important item group both in the rural and urban sectors, its share in the total capital formation being 54 and 52 per cent in the two sectors. While "farm business" was the next important item in the rural sector, similar position in the urban sector was held by "non-farm business". Within the rural sector, the share of "residential plots and buildings" in the total fixed capital formation was the highest in the case of both cultivator and non-cultivator households. In fact, the share was as high as 76 per cent in the case of non-cultivator households and was about 52 per cent for the cultivator households. The percentage share of the farm business, as expected, was substantially high (about 38%) for the cultivator households compared to non-cultivator households(10%) who as per the definition adopted, did not operate any land during the agricultural year 1981-82. This

ker.

probably gives the impression that though some of the non-cultivator households had made some capital formation in farm business, they did not operate any land during the particular year for some reason of other.

2.3.2 In the urban sector, as expected, the maximum capital formation was ascribable to "residential plots and buildings" (52%) followed by "non-farm business" (42%) with a meagre residual percentage of about 6 in "farm business". However, considering the two types of households separately, it is observed that "non-farm business" accounted for the maximum capital formation (55%) for self-employed households while as high as 81 percent of capital formation was in "residential plots and buildings" in the case of non self-employed households.

Table(VI) : Percentage distribution of fixed capital formation over the component items for seventeen states and all-India separately for rural and urban sectors

state	rural				urban			
	res. plots & buildings	farm business	non-farm business	all items	res. plots & buildings	farm business	non-farm business	all items
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Andhra Pradesh	47.74	40.65	11.61	100.00	78.65	2.85	18.50	100.00
Assam	60.99	25.27	13.74	100.00	74.24	6.68	19.08	100.00
Bihar	70.37	20.99	8.64	100.00	30.65	2.34	67.01	100.00
Gujarat	34.95	56.70	8.35	100.00	85.48	0.62	13.90	100.00
Haryana	38.99	53.47	7.54	100.00	40.57	36.72	22.71	100.00
Himachal Pradesh	74.74	23.22	2.04	100.00	72.08	3.25	24.67	100.00
Jammu & Kashmir	65.45	13.85	20.70	100.00	65.96	9.31	24.73	100.00
Karnataka	52.65	39.02	8.33	100.00	34.54	6.60	58.86	100.00
Kerala	79.64	11.94	8.42	100.00	79.31	8.71	11.98	100.00
Madhya Pradesh	40.32	49.20	10.48	100.00	52.59	26.55	20.86	100.00
Maharashtra	36.00	48.71	15.29	100.00	55.12	6.83	38.05	100.00
Orissa	67.63	19.08	13.29	100.00	41.31	19.72	38.97	100.00
Punjab	31.91	52.05	16.04	100.00	74.78	3.96	21.26	100.00
Rajasthan	58.43	34.56	7.01	100.00	54.78	5.51	39.71	100.00
Tamil Nadu	59.17	32.50	8.33	100.00	18.27	1.27	80.46	100.00
Uttar Pradesh	54.26	34.30	11.44	100.00	57.54	20.04	22.42	100.00
West Bengal	74.90	17.13	7.97	100.00	86.53	1.01	12.46	100.00
all-India	54.46	35.11	10.43	100.00	51.55	6.61	41.84	100.00
	54.20	35.37						

kcr.

2.3.3 As far as the states are concerned, wide variation in the features of capital formation could be noticed from the estimates of Table(VI). While about 64 per cent of the total fixed capital formation was the share of "residential plots and buildings" at all-India level in the rural sector, Kerala (80%), West Bengal (75%), Himachal Pradesh (75%) and Bihar (71%) recorded more than 70 per cent as the share of this item. As against all-India figure of 35, the percentage share of capital formation in "farm business" was higher than 50 in Gujarat (57%), Haryana (53%) and Punjab (52%). Contribution to capital formation in "non-farm business" was highest in Jammu & Kashmir (21%) followed by Punjab (16%) and Maharashtra (15%).

2.3.4 In the urban sector, the percentage share of capital formation in residential plots and buildings was more than 70 in West Bengal (87%), Gujarat (85%), Kerala (79%), Andhra Pradesh (79%), Punjab (75%), Assam (74%) and Himachal Pradesh (72%). As regards non-farm business, the next important item at all-India level, its share in the total capital formation was highest in Tamil Nadu (80%), followed by Bihar (67%) and Karnataka (59%). Lastly, farm business being the least important sphere of capital formation in urban sector, it could make a small contribution in almost all the states. Among the states, the share of this item was comparatively large in Haryana (37%), Madhya Pradesh (27%) and Uttar Pradesh (20%).

2.3.5 Having discussed the importance of different items of fixed capital formation at state and all-India levels, an attempt is made in this paragraph to examine whether there was any shift in the importance of different items during the last decade. The percentage shares of different groups of items in the totals of fixed and gross capital expenditures as derived from the surveys of 26th round (1971-72) and 37th round (1981-82) have been presented for the rural sector of India in Table (VII).

kcr.

Table (VII) : Percentage distribution of fixed and gross capital expenditures over the component items during 1971-72 and 1981-82 for rural sector of India

items of capital expenditure	fixed capital formation		gross capital expenditure	
	26th round 1971-72	37th round 1981-82	26th round 1971-72	37th round 1981-82
(1)	(2)	(3)	(4)	(5)
1. residential plots and buildings	40.33	54.20	27.52	41.54
2. farm business	49.35	35.37	66.04	50.44
3. non-farm business	10.32	10.43	6.44	8.02
4. all items	100.00	100.00	100.00	100.00

2.3.6 From the above table it is abundantly clear that there had been a considerable shift in favour of "residential plots and buildings" at the cost of "farm business" in the case of both fixed and gross capital expenditure. Strangely, the share of non-farm business remained unchanged in the case of fixed capital formation and registered only a marginal rise in the case of gross capital expenditure.

2.4.0 Distribution of fixed capital formation by household asset holding : It may be worthwhile to study the pattern of distribution of fixed capital formation by the households of different household asset holding classes. Table (VIII) gives the percentage distribution of households, stock of fixed assets and fixed capital formation by household asset holding for rural and urban sectors at all-India level. The stock of fixed assets is built up by considering only the fixed capital part of the total physical assets (i.e. excluding land, live-stock and household durable assets) owned by the households.

kcr.

Table (VIII) : Percentage distribution of households, stock of fixed assets and fixed capital formation during 1984-82 by household asset holding for rural and urban sector of India

household asset holding (Rs. 000)	r u r a l			u r b a n		
	percentage distribution of			percentage distribution of		
	house-holds	stock of fixed assets	fixed capital formation	house-holds	stock of fixed assets	fixed capital formation
(1)	(2)	(3)	(4)	(5)	(6)	(7)
upto 1	5.74	0.12	0.57	14.47	0.06	0.52
1 - 5	18.17	2.46	3.37	17.52	0.63	1.73
5 - 10	14.58	4.29	4.64	12.87	1.45	2.62
10 - 20	18.67	9.10	9.45	15.45	4.16	5.26
20 - 50	23.80	22.72	20.06	18.79	14.03	23.91
50 - 100	11.09	21.31	20.08	11.29	30.48	14.78
100 - 500	7.60	34.44	34.30	8.96	45.25	45.18
500 & above	0.35	5.56	7.52	0.65	13.99	6.00
all groups	100.00	100.00	100.00	100.00	100.00	100.00

2.4.1 The estimates reveal that in the rural sector, the households belonging to the lowest asset group of upto Rs.1000, comprising nearly 6 per cent of the total rural households contributed only 0.6 per cent of the total fixed capital generated in the rural sector. The above contribution, though very low, was higher than that of the stock of fixed assets at the beginning of the year. The same trend was noticed upto the asset group of Rs. 10,000 - 20,000. In contrast, for the remaining higher asset groups except the group of Rs.5 lakhs and above, the percentage shares of fixed capital formation were less than the corresponding percentage shares of fixed assets. In the urban sector, the percentage share of fixed capital formation was uniformly higher than that of the stock of fixed assets in all the five asset groups upto Rs.20,000 - 50,000 while it was uniformly lower in rest of the higher asset groups.

kcr.

Table(IX) : Cumulative percentage distribution of households stock of fixed assets and fixed capital formation during 1981-82 by household asset holding for rural and urban sector of India

household asset holding (Rs. 000)	r u r a l			u r b a n		
	cumulative percentage distribution of			cumulative percentage distribution of		
	house-holds	stock of fixed assets	fixed capital forma-tion	house-holds	stock of fixed assets	fixed capital forma-tion
(1)	(2)	(3)	(4)	(5)	(6)	(7)
below 1	5.74	0.12	0.57	14.47	0.06	0.52
" 5	23.91	2.58	3.94	31.99	0.69	2.25
" 10	38.49	6.87	8.58	44.86	2.14	4.87
" 20	57.16	15.97	18.03	60.31	6.30	10.13
" 50	80.96	38.69	38.09	79.10	20.33	34.04
" 100	92.05	60.00	58.18	90.39	40.76	48.82
" 500	99.65	94.44	92.48	99.35	86.01	94.00
all sizes	100.00	100.00	100.00	100.00	100.00	100.00

2.4.2 Whatever may be the relative position of the fixed capital formation vis-a-vis the stock of fixed assets, the unevenness of the distribution of fixed capital formation both in the rural and urban sectors is evident from Table(IX). In the rural sector, the lowest 24 per cent of the households, holding assets of less than Rs. 5000, accounted for only about 4 per cent of the total fixed capital formation while the percentage share of the highest 8 per cent of the households, owning assets worth more than Rs. 1 lakh, was as high as 42. Similarly, in the urban sector, as low as 2 per cent was the share of the 32 per cent households, holding assets less than Rs. 5000. On the other hand, 10 per cent households, holding assets worth more than 1 lakh, contributed 51 per cent of the total capital formed during the reference year.

kcr.

2.4.3 The pattern of distribution discussed above can not be meaningfully compared as such with the distribution derived from the data of NSS 26th round, owing to changes in the prices during the period. To make the results comparable, the percentage shares of the bottom 30 per cent and top 10 per cent households as given in Table (X), have been derived from Table (IX) for 1981-82 and from the results of 26th round released by R.B.I. for 1971-72, using linear approximation. The 26th round figures are available for rural sector only.

Table(X) : Percentage share of fixed capital formation by the bottom 30 per cent and top 10 per cent households in rural and urban sectors of India

class of households	rural sector				urban sector	
	percentage of fixed assets		percentage of fixed capital formation		percentage of fixed assets	percentage of fixed capital formation
	1971-72	1981-82	1971-72	1981-82	1981-82	1981-82
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. bottom 30 p.c.	5.23	4.37	4.38	5.88	0.62	2.05
2. top 10 p.c.	42.00	43.94	51.04	45.53	59.95	51.69

2.4.4 A glance at Table (X) reveals that in 1981-82 the percentage share of bottom 30 per cent households was more in the rural sector as compared to urban. In the case of top 10 per cent households, it was just the opposite. It is worth mentioning that while in the rural sector the percentage share of fixed capital formation during 1981-82 was more than that of the stock of fixed assets both for the bottom 30 per cent and top 10 per cent of households, such increase was noticed in the urban sector for the bottom 30 per cent households only, the situation being opposite for top 10 per cent.

kcr.

2.4.5 The comparison of the present survey results with those of 26th round indicates that in the rural sector, the percentage share of the stock of fixed assets decreased in 1981-82 for the bottom 30 per cent, while the top 10 per cent showed a little increase. On the contrary, in the case of fixed capital formation, top 10 per cent households recorded a decrease with an increase in the percentage share of the bottom 30 per cent households.

2.5.0 Sale and loss of physical assets : This report also contains statistical tables showing sale and loss of physical assets. According to the definition adopted for this survey, both the sale and loss figures relate to all physical assets except household durables. Further, loss of assets due to natural calamities only were considered. It is seen from Table (6) of Appendix that the rural sector accounted for 81 per cent of the total sale in the country as a whole and 90 per cent of the total loss. Since the bulk of sale and loss of assets were observed in the rural sector, various features relating to these estimates are discussed here for rural households only. Table (XI) presents the per household average value of sale and loss of different items of assets during the reference year by household asset holding for the rural sector of India.

Table (XI) : Average value of sale and loss of different items of assets during 1981-82 per household by household asset holding for rural sector of India

household asset holding (in Rs.000)	average value (Rs.) of sale and loss in: residential plots & buildings		farm business		non-farm business		transport equipment (household use)		all assets		sale and loss as percentage to stock of all fixed assets	
	sale	loss	sale	loss	sale	loss	sale	loss	sale	loss	sale	loss
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
upto 1	0	3	2	1	0	0	0	0	2	4	0.71	1.41
1 - 5	2	13	12	5	0	0	0	0	14	18	0.59	0.76
5 - 10	0	25	23	11	1	2	0	0	24	39	0.38	0.63
10 - 20	4	38	47	33	1	1	0	0	52	73	0.41	0.58
20 - 50	2	37	65	42	2	1	1	0	70	80	0.24	0.28
50 -100	8	79	142	71	8	1	0	0	158	150	0.25	0.23
100 -500	8	64	255	115	5	3	5	0	273	182	0.16	0.11
500 & above	38	74	568	232	6	15	46	0	657	321	0.09	0.04
all groups	3	36	67	36	2	1	1	0	73	73	0.22	0.22

2.5.1 It is seen from Table (XI) that the average values of sale as well as of loss were estimated as Rs. 73 each. On an average, a rural household sustained equal amount of loss in "residential plots and buildings" and in "farm business" and hardly any in "non-farm business" or in "transport equipments (for household use only)". In the case of sale, of the average value of Rs. 73, about 92 per cent was the share of the farm business and the remaining 8 per cent was distributed among "residential plots and buildings" (4%) "non-farm business" (3%) and "transport equipments (for household use)" (1%).

kcr.

2.5.2 About 0.22 per cent of the total physical assets (excluding household durable assets) owned by the rural households at the beginning of the reference year, had been sold and about equal percentage was lost due to natural calamities during the reference year. Table (XI) depicts that the households of lower asset groups were more vulnerable to calamities and were more prone, though to a lesser degree, in selling assets in comparison to the households of higher asset groups. While 1.41 per cent of the value of assets were lost by the households owning assets worth less than Rs.1000, only 0.04 per cent were reported lost by the households owning assets worth Rs.5 lakhs or more. Similarly regarding sale of assets also, the households of lower asset groups reported higher percentage of assets as sold in comparison to the wealthier households.

2.6.0 Assessment of survey results : The survey results of NSS 37th round discussed so far are based on the estimates derived from the pooled data of central and state samples. To get an idea about the margin of uncertainty of the 37th round estimates of gross capital expenditure, the independent estimates based on the separate data of central and state samples are presented in Table (XII) for seventeen major states and all-India.

2.6.1 Examining the all-India level estimates first, it is seen that although the central and state sample estimates for the rural sector were quite close to each other, they were not so for the urban sector, the percentage differences being about 4 and 16 respectively. So far as the state level estimates are concerned, the percentage differences were found to have a wide range of variations. The variation was more for the urban sector than for the rural. As regards the rural sector, the two estimates were close to each other (less than 5 per cent difference) in five states, while they were wide apart (more than 30 per cent difference) in six

Table (XII) : Average amount of gross capital expenditure incurred during 1.7.81 to 30.6.82 per reporting household derived from central sample, state sample and pooled samples of central and state separately for rural and urban sectors.

state	average amount (Rs.) of gross capital expenditure on any item							
	rural				urban			
	central sample	state sample	central & state sample pooled	p.c. difference	central sample	state sample	central & state sample pooled	p.c. difference
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
1. Andhra Pradesh	1318	803	1079	+ 47.73	2407	1666	2099	+ 35.30
2. Assam	500	917	717	- 58.16	4288	2971	3741	+ 35.20
3. Bihar	546	564	556	- 3.24	1774	696	1181	+ 91.28
4. Gujarat	1416	1195	1308	+ 16.90	1188	10050	5023	-176.43
5. Haryana	2472	1678	1889	+ 42.03	1961	1631	1756	+ 18.79
6. Himachal Pradesh	1112	1657	1334	- 40.85	1670	1451	1630	+ 13.44
7. Jammu & Kashmir	1773	1563	1668	+ 12.59	1830	980	1362	+ 62.41
8. Karnataka	1354	2260	1675	- 54.09	3085	1525	2664	+ 58.56
9. Kerala	2093	3006	2491	- 36.65	3476	4770	4057	- 31.90
10. Madhya Pradesh	679	683	676	- 0.59	1317	1253	1319	+ 4.85
11. Maharashtra	1201	1147	1177	+ 4.59	1423	2589	2016	- 57.84
12. Orissa	555	551	553	+ 0.72	974	647	828	+ 39.49
13. Punjab	2817	2725	2770	+ 3.32	2920	1955	2499	+ 38.62
14. Rajasthan	1992	2298	2150	- 14.23	2301	5664	3864	- 87.03
15. Tamil Nadu	1142	899	1035	+ 23.48	6196	2284	4678	+ 83.63
16. Uttar Pradesh	907	965	938	- 6.18	1595	1298	1409	+ 21.08
17. West Bengal	811	610	722	+ 27.84	2149	1358	1674	+ 47.25
18. all-India	1107	1060	1079	+ 4.36	2477	2214	2358	+ 15.71

Note :- P.C. difference = $\frac{\text{central sample - state sample}}{\text{central \& state sample pooled}} \times 100$

kcr.

states. In the urban sector, none of the tates except Madhya Pradesh could be said to have the two estimates close to each other. However, as can be seen from Table (XII), the differences are not uniderectional. In some states the central sample estimates were higher than the state sample estimates, while it was otherwise in some other states. In this connection it may be mentioned here that the survey design had an in-built provision for building up two independent estimates each from central as well as state sample on the basis of sub-samples. It is observed from the sub-samplewise estimates for the urban sector provided in Table 4 of Appendix that some states namely, Gujarat, Karnataka, Rajasthan and Tamil Nadu, recorded large differences between the central and state sample estimates. In these states, larger of the two estimates were subject to wider variations in their sub-sample estimates. Thus, it appears that the differences between the central and state sample estimates can be partly ascribed to differences within the central/state sample values. This feature also tends to confirm the existence of large variability in the universe of urban households.

---

kcr.

SECTION THREE

A NOTE ON SAMPLE DESIGN AND ESTIMATION PROCEDURE

3.1 Sample Design

3.1.1 Broad design : The broad sample design was stratified with two stage sampling in each stratum. The first stage units in the rural sector were 1981 census villages in most districts, but in a few cases where either 1981 Census was not conducted or the frame of census villages could not be procured in time, 1971 census villages were used. In the urban areas, the first stage units were generally blocks formed in the NSS urban frame survey in all towns except those places which were declared as urban areas for the first time in 1981 Census. In such cases, the Census (1981) blocks were the first stage units. The second stage units were households in both rural and urban sectors.

3.1.2 Regions and strata : Each State/Union territory was divided into a few agro-economic regions by grouping contiguous districts similar in respect of population density and crop pattern. In Gujarat, some districts were split for this purpose, considering the location of dry areas and the distribution of tribal population in the State. The total number of regions thus formed all over India (excluding areas not covered by NSS) was 77. "Basic strata" for sampling in rural areas were formed within each region. Each district with less than 1.5 million 1971 census rural population constituted a basic stratum by itself except in Gujarat and Arunachal Pradesh where some districts with less than the above population were divided into two or more basic strata. Districts having more than 1.5 million rural population were divided into a number of basic strata (depending upon the population) by grouping contiguous tehsils similar with respect to crop pattern and density of rural population. Generally, each urban stratum was a district or a group of districts within the same region excepting the districts of Ahmedabad, Bangalore and Kanpur. In each of these cases, the district was divided into two strata, the city itself making up one stratum and the rest of the urban areas the other. With this arrangement, each city with 1971 census

population above 1 million constituted a separate stratum, the remaining cities being whole districts. Those cities were Bombay, Calcutta, Delhi, Hyderabad and Madras. The total number of rural and urban strata were 497 and 363 respectively.

3.1.3 Allocation : The state level allocations were determined on the basis of their investigator strength available and the expected work load per investigator. These were further allocated to strata in proportion to the total number of 1981 census House-listing blocks in rural sector and the total number of blocks in the frame in urban sector (in the case of Assam, rural allocation was proportional to 1971 census rural population). These were adjusted to the field strength of each FOD sub-region. Final stratum level allocations were rounded off to multiples of two.

3.1.4 Sampling of villages : The sample villages were selected with probability proportional to number of House-listing blocks and with replacement. In the case of villages selected from 1971 census frame, sample villages were selected with probability proportional to size and with replacement where size was related to 1971 census population. Selection was done in the form of two independent sub-samples.

3.1.5 Revenue village selection : When the sampled census village was not identifiable, one of the following procedures was adopted according to the situation : (a) all revenue villages contained wholly or partly in the census village where surveyed as one unit or (b) the revenue village which contained the selected census village and possibly other census villages was wholly surveyed.

3.1.6 Sampling of blocks : The urban frame survey (UFS) blocks of UFS-1977 scheme wherever available and UFS blocks of 1972-77 period for the remaining towns and 1981 census frame in case of new towns constituted the sampling frame for selection of blocks. In each urban stratum sample blocks were selected by simple random sampling without replacement in the form of two independent sub-samples.

3.1.7 Hamlet-group and sub-block selection : In case the present population of a sample village or block was 1200 or more, it was divided into two or more equal (in terms of population) sub-divisions (called hamlet groups in the case of villages and sub-blocks in the case of urban blocks), the number of sub-divisions depending on the population of the village or block at the time of the investigator's visit. One of them was selected at random for survey.

3.1.8 Sampling of households (rural) : The households of each sample village were divided into four sub-strata, by their area of land possessed. Households possessing less than 0.05 acres formed sub-stratum-1. The remaining households were ranked first by their area of land possessed and then divided into three sub-strata by determining two boundary points A and B for each village such that the total area of land possessed was nearly the same for each sub-stratum (households with land possessed : (i) from 0.05 to A (ii) A to B and (iii) above B constituted respectively sub-stratum 2, 3 and 4). Two households were selected from each sub-stratum circular systematically with a random start. The households of sub-stratum 1 were arranged by their means of livelihood (agricultural labour, artisan and others) before sample selection.

3.1.9 Sampling of households (urban) : The households of a sample block was divided into three sub-strata by their monthly per capita expenditure. The boundary points for them were fixed at state level. Two households were selected circular systematically in each sub-stratum. In both rural and urban sectors, the same sample households were surveyed in both the visits.

3.2 Estimation Procedure

3.2.1 Notations :

s : subscript for s^{th} stratum.
t : subscript for t^{th} sub-stratum(within a village/blocks)
i : subscript for i^{th} sample village/block
j : subscript for j^{th} sample household.
L : total number of rural/urban strata in the state.

z : village size (used for sampling)
Z : total size of a rural stratum.
N : total number of blocks in a urban stratum.
D : number of hamlet-groups/sub-blocks formed.
m : number of surveyed villages/blocks including depopulated and zero cases.
H : total number of households in a sub-stratum.
h : number of surveyed households in a sub-stratum.
f : adjustment factor for survey of a revenue village.
y : value of characteristic.
Y : total of y at the state level.
$\hat{Y}$: estimate of Y from the sample

The expressions for $\hat{Y}$ are given in the next part.

3.2.2 Rural sector :

$$\hat{Y} = \sum_{s=1}^{L} \frac{Z_s}{m_s} \sum_{i=1}^{m_s} \frac{D_{si}}{f_{si}\, z_{si}} \sum_{t=1}^{4} \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

Where H_{sit} was the total number of households in the tth sub-stratum of the village and h_{sit} was the corresponding number of surveyed households available for tabulation.

3.2.3 Urban sector :

$$\hat{Y} = \sum_{s=1}^{L} \frac{N_s}{m_s} \sum_{i=1}^{m_s} D_{si} \sum_{t=1}^{3} \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

3.2.4 Estimates of ratios : Let Y and X be the totals of the characteristics y and x at the state/all-India level. Then the estimates of the ratio R = Y/X will be obtained as $\hat{R} = \frac{\hat{Y}}{\hat{X}}$

Where $\hat{Y}$ and $\hat{X}$ are unbiased estimates of Y and X respectively.

3.2.5 Sub-sample wise estimates : Sub-sample wise estimates were computed on the basis of villages and blocks surveyed on the concerned sub-sample. Thus, m_s in the above formula would mean the number of surveyed villages/blocks in the concerned

sub-sample of the sth stratum. The combined estimate of the stratum total based on the whole sample was computed as the weighted mean of the sub-sample-wise estimates, weights being number of sample villages/blocks surveyed in the concerned sub-samples. The combined estimate of the state (or all-India) total of the characteristic was obtained as the sum of the estimates of relevant stratum totals. However, the combined estimates of a ratio was calculated as the ratio of the combined estimates of numerator and denominator at the state/all-India level.

The procedure same as above was adopted in pooling the central and state sample data

****
