EMPLOYMENT - UNEMPLOYMENT SITUATION IN  
CITIES AND TOWNS DURING EARLY EIGHTIES

INTRODUCTION

1.1 The National Sample Survey Organisation (NSSO) carried out the third country wide quinquennial survey on employment and unemployment in its 38th round survey operations (January - December 1983). The tabulation scheme included also, generation of some key tables on employment and unemployment separately for each of the ten cities with 1981 census population one million and above and three other size classes of towns for each state. This report is based on the key tables thus generated from the central sample data for the different cities and size classes of towns.

1.2 The results are presented separately for the cities of Bombay, Calcutta, Madras, Delhi, Ahmedabad, Kanpur, Hyderabad, Bangalore, Pune and Nagpur and the three size classes of towns namely, those with 1981 census population less than 50,000 (size class-I) ; 50,000 - 200,000 (size class -II) ; and 200,000 - 10,00,000 (size class III).

1.3 The details of the sampling design, survey coverage, estimation procedure and salient features of the conceptual frame and data collection procedure adopted in the survey are presented in the report containing the results relating to All-India <sup>1/</sup>. A brief summary of the scope and coverage of the survey, concepts and definition etc. is given below.

---

<sup>1/</sup> A note on the third quinquennial survey on employment and unemployment (Sarvekshana, Vol XI, No. 4, April 1988).

1.4 Geographical coverage of urban areas : The survey covered the entire urban area of the Indian Union excepting the Ladakh and Kargil districts of Jammu and Kashmir.

1.5 Sampling design and sample size : A stratified two-stage sampling design was adopted in the survey for urban areas with urban blocks (urban frame survey blocks formed by NSSO) as the first stage units and households as the second stage units. In each of the selected first stage units, 10 households were selected as second stage units. Altogether the survey covered about 42300 sample households spread over about 4500 sample blocks.

1.6 Survey period and sub-round formation : The field work for the survey started in January, 1983 and was completed in December, 1983. The entire survey period of one year was divided into four sub-round periods of three months' duration coinciding approximately with the four seasons. The sub-round periods were January to March 1983, April to June 1983, July to September 1983 and October to December 1983. The sample blocks were distributed over the four sub-rounds in a manner so as to provide valid estimates for each of the sub-round periods.

1.7 Estimation procedure : The estimation procedure adopted is based on a weighted sum of the sample values. Denoting by  $\hat{Y}$ , the unbiased estimate of  $Y$  (the city/town total of any variate), it is given by :

$$\hat{Y} = \sum_s \frac{N_s}{N} \sum_i D_{si} \times \frac{H_{si}}{h_{si}} \sum_j y_{sij}$$

Where,  $S$ ,  $i$  and  $j$  are suffixes and stand for stratum, urban block and household respectively;

$N_s$  and  $n_s$  give the stratum values of number of blocks in the frame and number of sample blocks respectively;

$D_{si}$  stands for, number of sub-blocks formed,

$H_{si}$  and  $h_{si}$  stand for the total number of households listed and the number of sample households; and  $Y_{sij}$  is the observed value of the variate of a sample household.

Estimates of ratios such as percentages, average, etc., are obtained by first calculating the unbiased estimates of the numerators and denominators concerned and then by division.

1.8 Salient features of the conceptual frame and data collection procedure : The main objective of the survey was to measure, in quantitative terms, the nature and extent of employment and unemployment at disaggregated levels. To achieve this objective the attempt in the survey was to classify the population as belonging to different activity categories, independently, by using three different approaches, namely (i) the usual status approach, (ii) the current weekly status approach and (iii) the current daily status approach. Persons distributed according to the various activity categories were further classified by several meaningful correlates, such as, age, sex, general and technical education, industry, occupation, etc. The different activity categories adopted for the purpose, were, as under.

<u>Description of the activity category*</u>	<u>Category code</u>
Working with an employer under obligation but work not specifically compensated by any wage/salary	01 - 04

contd/-

Narayan/

<u>Description of the activity category*</u>	<u>Category code</u>
Worked (self employed) in household enterprise	11
Worked as helper in household enterprise	21
Worked as regular salaried/wage employee	31
Worked as casual wage labour in public works	41
Worked as casual wage labour in other types of work	51
Did not work though there was work in household enterprise	61
Did not work but had regular salaried/wage employment	71
Sought work	81
Did not seek but was available for work	82
Attended educational institutions	91
Attended domestic duties only	92
Attended domestic duties and was also engaged in free collection of goods (vegetable, roots, fire-wood, cattle feed, etc.) sewing, tailoring, weaving, etc. for household use	93
Too young to work/to attend school/to seek employment	94
Old and disabled	95
Rentiers, pensioners, remittance recipients, etc.	96
Beggars, prostitutes, etc.	97
Others	98
Did not work due to temporary sickness (for casual workers only)	99

\* The activity category codes 61, 71, 82 and 99 were used only for current status approaches.

Narayan/

Persons assigned any one of the activities listed under the category codes 01 to 71 were treated as 'working' (or employed). Persons assigned activity category codes 81 or 82 were treated as 'seeking and/or available for work' (or unemployed). The remaining persons, i.e., the persons assigned any of the activity category codes 91 to 99 were treated as 'not available for work' (or not in labour force). The data on activity particulars of the persons, were, however, tabulated only for population of age 5 and above.

1.9 Classification according to usual status approach : In the 38th round survey, the status of activity on which a person spent relatively longer time of the preceding 365 days prior to the date of survey was considered to be the principal usual activity status of the person. Accordingly, a person's principal usual status was considered 'working' (or 'employed'), if he/she was engaged relatively for a longer time during the reference period of 365 days in any one or more work activities coded 01-51, 'seeking or available for work' (or 'unemployed'), if he/she was not working but was either seeking or was available for work (activity code 81) for a relatively longer time of the specified reference period and 'not in labour force', if he/she was engaged for a relatively longer period in any one or more of the non-gainful activities (codes 91-98). Within the two broad activity categories, 'working' and 'not in labour force', the detailed activity category was determined on the basis of 'time spent' criterion. A person categorised as a 'worker' on the basis of his/her principal status is referred to as 'principal status worker'. Those of the 'non-workers', who pursued in a subsidiary capacity some gainful activity as well, along with their principal usual activity (non-gainful) were considered to be usually working in a subsidiary capacity and are referred to as 'subsidiary status worker'. These two groups, viz, 'principal status workers' and 'subsidiary status workers', together constitute 'all workers' according to the usual status classification.

Narayan/

1.10 Classification according to current weekly status approach :

For classification of person according to current weekly status, he or she had to be assigned a unique activity status with reference to a period of seven days preceding the date of survey. For a person pursuing more than one activity during the week, his/her unique status was decided by adopting a priority-cum-major time rule. Under the priority rule, the status of 'working' got priority over the status of 'not working but seeking/available for work' which in turn got priority over the status of 'not working and not-seeking/available for work'. For a person classified under the first or the last category, his/her detailed activity status was determined by major-time spent criterion, i.e., the detailed activity on which major time was spent was considered his/her current weekly status. Further, if a person had worked for one hour on any one day of the week, he was considered 'working'. A person who had not worked during the week but was available for work even for one hour on any one day of the week was considered 'seeking and/or available for work'. Others constituted the category 'not available for work' (or 'not in labour force'). Each person was thus assigned a unique activity status for the week; Aggregate of persons under the different activity status provided the distribution of persons by activity on an average in a week of the survey period of one year.

1.11 Classification according to current daily status approach :

In adopting the current daily status approach attempt was made to account for two major activities pursued by a person on each day of the seven days' reference week allocating 'half day' to each activity. The unit of classification according to this approach, was thus, half day. In assigning the activity status on a day, a person was considered 'working' (or, employed) for the entire day if he/she had worked 4 hours or more on the day, and assigned the one or two (as the case may be) work activities (01-71) to which he/she devoted the working time. But if the work was done for one hour or more but less than 4 hours, he/she was considered

Narayan/

'working' (or employed) for half day and 'seeking/available for work' (or unemployed) or 'not available for work' (or not in labour force) for the other half of the day depending on whether he/she was seeking/available for work or not on the day. On the otherhand, if a person was not engaged in any gainful work even for one hour on the day but was seeking or available for work for four hours or more, he/she was considered 'unemployed' for the entire day. But if the reported availability for work was for less than four hours only, he/she was considered 'unemployed' for half day and 'not in labour force' for the other half of the day. A Person who was neither having any work to do nor was available for work even for half of the day, was considered 'not available for work (or not in labour force)' for the entire day and assigned the one of two of the non-gainful activity statuses which he/she had during the day. The aggregate of person-days so classified under the different activity categories for all the seven days of the week divided by seven gave the distribution of persons (strictly speaking, person-days) by activity category on an average on a day of the survey period of one year.

1.12 Probing question : In the 38th round survey there were two sets of probing questions, the first set to be put to all persons of age 5 years and above excepting those categorised usually as old, disabled, etc., and the other set for those categorised as usually engaged in household duties. The first set, was aimed to get data to understand the complex dimensions of the work pattern and the extent of under utilisation of available labour time. The second set was aimed to bring out the extent of participation of women engaged in household duties in some specified activities which derive benefits to their households, availability for work in the household premises, etc. A number of suitable questions were, therefore, included in the 38th round, the answers to which, it was expected, will bring out the desired information.

Narayan/

1.13 DEFINITIONS

(a) Gainful activity : Gainful activity (or work) is the activity pursued by persons for pay, profit or family gain or in other words, the activity which adds value to the 'national product'. Normally, it is an activity which results in production of 'goods and services' for exchange. However, the activities in 'agriculture' (i.e., all activities in relating to industry div. 0) in which the part or the whole of the agricultural production is used for own consumption and does not go for sale, are also considered 'gainful'. Execution of household chores or social commitments, etc., however, are not considered 'gainful' activities. The activities, such as, prostitution, begging, etc., which may result in earning, are by convention, not considered 'gainful'.

(b) Workers (or employed) : Persons engaged in any gainful activity are considered 'workers' (or employed). They are the persons pursuing any one or more of the eight situations listed as the activity categories under the first broad activity category, i.e., 'working or employed' in para 1.7.

(c) Seeking or available for work (or unemployed) : Persons who, owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or making applications to prospective employers or ~~relatives or making applications to prospective employers or~~ expressed their willingness or availability for work under the prevailing conditions of work and remuneration, are considered unemployed.

(d) Labour force : Persons categorised as working (or employed) and categorised as seeking or available for work (or unemployed) together constitute the labour force.

(e) Not in labour force : Persons categorised neither 'working' nor 'seeking or available for work' are considered to be engaged in non-gainful activities and categorised 'not in labour force'. The persons falling in this category are students, those

Naravan/

engaged in domestic chores, rentiers, pensioners, those living on alms, recipients of remittance, etc., infirm and disabled persons, prostitutes and smugglers, etc.

(f) Worker (self-employed) in household enterprise-usual and current status category 11 : Persons who are engaged in their own farm or non-farm enterprises are defined as self-employed- the term used to designate their activity status. There are different kinds of self-employed. Some may operate their enterprise without hiring any labour. Some others may normally work on their own but occasionally hire a few labourers. There is also a third category who by and large, regularly run their enterprises by hiring labour. The first two groups of self-employed are called own-account workers and the third, employers.

(g) Worked as helper in household enterprise-usual and current status category 21 : The helpers are a category of working persons who keep themselves engaged in household enterprises, working full or part time and do not receive any cash payment in return for the work performed or any share of the family earnings from the enterprise. They are household members, a large number of them being related to the household head. They are dependent members of the household working for the family enterprise and getting food and shelter like other members of the household. One may also come across persons in a household who do not receive any cash remuneration for their work in the household enterprise but have a share in the family earnings out of such enterprise. Such persons are not 'helpers' but 'self-employed'. On the other hand, if any member of the household works in the household enterprise for which he is paid wage/salary, he should be treated as employee.

(h) Worked as regular salaried/wage employee-usual and current status code 31 : Persons working in others' farm or non-farm enterprises (both household and non-household) and getting, in return, salary or wages on a regular basis (and not on the basis of daily or periodic renewal of work contract) are treated

Naravan/

as regular salaried/wage employees. The category, salaried/wage employees, will include not only salary and wage earners getting time wage but also earners getting piece wage or salary and paid apprentices, both full time and part time.

(i) Worked as casual wage labour-usual and current status codes 41 & 51 : Persons engaged in others' farm or non-farm enterprises (both household and non-household) and getting in return wages according to the terms of the daily or periodic work contract are treated as casual wage labour. In the rural areas and also in the Government project sites, a type of casual labourers can be seen who normally engage themselves in public works activities which include works taken up by the Government or local bodies for construction of roads, bunds, digging of ponds, etc., as test relief measures/employment generation schemes, etc. The casual labourers doing only such public works activities are casual labour in public works. The rest are casual wage labour in other types of work.

(j) Had work in household enterprises but did not work - current status code 61, and had regular salaried/wage employment but did not work - current status code 71 : Persons engaged in household farm or non-farm enterprises or working in others' farm or non-farm enterprises as salaried/wage employees but absenting from work temporarily due to sickness or for enjoying leave, or holiday or for other reasons belong to these two categories 61 & 71 respectively depending on whether they are self-employed in household farm/non-farm enterprises or employed in others' farm/non-farm enterprises as wage/salaried employees.

(k) Attended domestic duties and was also engaged in free collection of goods, sewing, tailoring, weaving, etc., for household use - usual and current status code 93 : In the rural areas in general and particularly in the tribal areas, domestic work usually includes among others, a lot of work for free collection of vegetables, roots, firewood, etc., and also spinning and weaving of cloth for household use. Persons found to be spending regularly some of his/her time in performing the above mentioned activities along with household chores, belong to this category.

Narayan/

2. BACK GROUND INFORMATION

2.0 For having a meaningful correlated study of the differential in 'employment' and 'unemployment' over the various groups of population, some back ground information on various population characteristics are presented in this report. The relevant results are presented separately for the ten cities and the three other size classes of towns compared against the results for rural and urban India.

2.1 Average household size and proportion of women and children : Table 1 gives the average household size and number of women and children of age 0-14 years per thousand persons. Average household size is found to be highest (5.4) in Ahmedabad, Hyderabad and Bangalore compared to any other city. Calcutta has reported the lowest household size (4.1). Calcutta has also <sup>reported</sup> the lowest proportion of women and children-only 436 women and 259 children (0-14 years) respectively per thousand population.

Table 1: Average household size and proportion of women and children

city/size class of towns	household size	per 1000 population	
		no. of women	no. of children (0 - 14)
(1)	(2)	(3)	(4)
Bombay	4.6 (4.5)	451	316
Calcutta	4.1 (4.6)	436	259
Madras	4.9 (4.9)	481	319
Delhi	4.4 (4.6)	454	347
Ahmedabad	5.4 (4.9)	462	325
Kanpur	4.7 (4.9)	481	371
Hyderabad	5.4 (5.5)	472	381
Bangalore	5.4 (5.3)	485	372
Pune	4.3 (NA)	474	336
Nagpur	4.5 (NA)	481	348
all cities	4.7 (NA)	463	332
size class III towns	4.8 (5.0)	473	364
size class II towns	4.8 (4.9)	478	371
size class I towns	4.8 (5.0)	479	387
urban India	4.8 (4.9)	475	369
rural India	5.2 (5.2)	491	408

Figures in brackets are the corresponding estimates as obtained from NSS 32nd round survey.

2.2 Distribution of population by age : Results on employment and unemployment for the population of age 5 years and above are presented in the subsequent sections. To help as a background picture the age distribution of the population of age 5 years and above by age-group and sex is presented in table 2. The age-groups used are 5-9, 10-14, 15-29, 30-44, 45-59 and 60 & above. The table also gives the percentage of infants in the age-group 0-4 years. Proportion of infants are found to be lowest in Calcutta and highest in Hyderabad.

2.3 Distribution of population by education : Table 3 gives the percentage distribution of males and females of age 5 years and above by different levels of education. While Bombay had the lowest proportion of male non-literates during 1983, in respect of females, Calcutta stood in the first position. In that respect both Calcutta and Bombay had almost similar proportion of female non-literates, between 22 and 23 percent. Kanpur had recorded the highest proportion of non-literates in the case of both males and females, the proportions being 19 percent and 39 percent respectively. Both the cities of Calcutta and Kanpur show the existence of a relatively much higher proportion of 'literate without formal schooling' among both males and females compared any other city. Proportion of graduates was highest in Delhi followed by Ahmedabad and Pune. In this respect lowest in the rung were Kanpur in the case of males and Hyderabad in the case of females.

2.4 Distribution of population by marital status : In the survey, for each sample person, irrespective of the age, information on his or her current marital status position was collected. Percentage distributions of both males and females by their 'marital status' worked out on the basis of the data thus collected are presented in table 4.

12/1

Table (2) : Percentage distribution of population of age 5 years and above by sex for each city/size class of towns

city/size class of towns	m a l e							f e m a l e

size class I	57.90	48.12	39.83	42.83	2.27	9.05
urban India	57.66	48.27	40.18	42.67	2.16	9.05
rural India	55.51	44.57	41.22	45.91	3.27	9.52

Percentage of currently married persons was found to be lowest in Hyderabad for both the males as well as females. While Kanpur recorded the highest proportion currently married males, Ahmedabad recorded the highest proportion of currently married females. Compared to males, the proportion of widowed or divorced persons is observed to be very high among females. It was about 12 to 13 percent in Calcutta and Madras and 10 to 11 percent in Pune and Hyderabad. In the other cities, this proportion varied from 6 percent to 8 percent. In all the towns and in rural India, this proportion was of the order of 9 percent.

2.5 Current enrolment : In the 38th round survey, an additional question on 'attendance in educational institution' was asked to all sample persons. On the basis of this information, proportions of persons attending educational institutions were worked out separately for persons belonging to different age-groups by sex. Table 5 gives the relevant results for selected age-groups.

Table 5 : Number of persons currently enrolled in educational institutions for thousand persons for each city/size class of towns

city/size class of towns	m a l e			f e m a l e		
	5-14	15-19	all ages	5-14	15-19	all ages
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Bombay	876	598	292	834	488	282
Calcutta	796	477	252	716	489	241
Madras	864	449	291	818	365	249

size class II	745	494	300	658	336	243
size class I	715	495	301	608	291	227
urban India	748	500	300	664	352	246
rural India	553	324	228	348	106	123

Proportion of children attending the educational institutions is found to be biggest in Bombay in the case of boys and highest in Pune in the case of girls. At the lowest rung in this respect are the cities of Hyderabad and Calcutta for boys and girls respectively. In the case of youths (age 15-19 years), Pune has the leading position for men and Delhi for women.

2.6 Registration in Employment exchange : The number of persons on the live register of employment exchanges with all its limitations, may give a very rough idea of the magnitude of urban unemployment after necessary adjustments. In table 6, therefore, are given the proportions of registrants (age 15-59 years) in the employment exchange by sex.

Table (6) : Number of persons (age 15-59) currently on the live register of the employment exchanges for 1000 persons

city/size class of towns	m a l e			f e m a l e		
	secon- dary	graduate & above	all	secon- dary	graduate & above	all

urban India	150	140	75(64)	96	119	25(21)
rural India	193	252	33(23)	158	269	7(3)

Figures in brackets give the corresponding figures as obtained from the NSS 32nd round survey (1977-78)

In the case of males, Nagpur had the highest proportion of registrants compared to other cities indicating indirectly a higher unemployment problem. Following Nagpur were the cities of Madras and Calcutta. Proportion of male registrants was relatively much lower in Ahmedabad and Delhi. As regards female registrants, while Calcutta, Bangalore and Nagpur showed the highest proportion (54 per 1000 person), Delhi showed only a very small proportion - about 9 per 1000 persons.

For adjustment of the employment exchange data on registrants to serve as an indicator of unemployment, one important factor required is the proportion of registrants among the 'employed', 'unemployed' and the 'other' category of the population. The relevant proportions as obtained from the NSS 38th round survey are presented in table 7. The categorisation of the population into 'employed' 'unemployed' and 'others' was based on the current weekly status approach.

Table(7) : Number of registrants (age 15-59) per thousand persons, among 'employed', 'unemployed' and 'others' according to current weekly activity status

city/size class of towns	m a l e			f e m a l e

Figures in brackets gives the corresponding figures as obtained from the NSS 32nd round survey (1977-78).

### 3. EMPLOYMENT

3.1 It was mentioned earlier that in order to get a complete picture of the different dimensions of the activity situation of the Indian population, a large section of which depends on selfemployment in agriculture and agriculture based industries, where in work is seasonal and intermittent, NSSO generates four different employment rates or in other words 'work participation' rates (percentage of persons employed to total persons) from the data collected through a ~~two~~<sup>three</sup> pronged approach. The four different rates are :

- (i) percentage of persons usually working in the principal status (us-ps)
- (ii) percentage of persons usually working either in the principal or subsidiary status (us-ss)
- (iii) percentage of persons working on an average during a week (CWB).
- (iv) percentage of person-days working on an average on a day. (cds)

For the NSS 38th (1983) round, the above four rates were worked out for the population of age 5 years and above. Table 8 gives the four employment rates separately for each of the ten cities and also for the three other size classes of towns along with the corresponding rates for rural and urban India. The estimates for the year 1977-78 based on the NSS 32nd round survey are also presented in parentheses. During 1983 while city of Kanpur had shown the highest employment for males compared to any other cities, it had also recorded the lowest employment

PA.

for females. Following Kanpur, male employment was relatively more in Bombay, Delhi and Calcutta. Pune and Bangalore recorded the ~~largest~~<sup>lowest</sup> male employment. In the case of females Calcutta had the highest proportion of employed followed by Pune and Hyderabad. Comparing over period, cities of Kanpur, Ahmedabad, Hyderabad and Bombay recorded higher male employment during 1983 than 1977-78. In the case of females, while Bombay had recorded fall ~~the~~ employment over the five year period 1977-78 to 1983, Calcutta and Hyderabad had shown increase.

3.2 Looking at the age specific work participation rates given in table 9, it is seen that while the city of Hyderabad had highest proportion of working boys (age 10-14 years) during 1983 (22 percent), Ahmedabad had the lowest proportion ( 2 percent). In the case of girls, Calcutta recorded the highest child labour followed by Bangalore. Kanpur, Nagpur and Pune had only less than 1 percent of working girls of age 10-14 years.

Table(8) : Percentage of persons (age 5 years and above) working, according to usual status, current weekly status and current daily status by sex for each city/size class of towns

#### 4. UNEMPLOYMENT

4.1 As in the case of 'employed', for 'unemployed' also, four proportions of 'unemployed' were worked out from the NSS 38th round data. They are :

- (i) Percentage of usually unemployed in the principal status (us - ps)
- (ii) Percentage of usually unemployed excluding those employed in the usual subsidiary status (us - excluding ss workers)
- (iii) Percentage of 'unemployed' on an average during a week (cws) and
- (iv) Percentage of 'unemployed person-days' on an average during a day (cda)

All the four indicators of unemployment were worked out for the population of age 5 years and above separately for each of the ten cities and the three other size classes of towns. Table 10 gives the relevant indicators with the corresponding results as obtained <sup>in</sup> the NSS 32nd round (1977-78). The city of Madras has reported the highest percentage of unemployment for both males and females - the usual principal status rate being 8 per cent in the case of males and 2 per cent in the case of females. In the case of males, Madras is followed by Calcutta, Bangalore and Nagpur. Male unemployment was <sup>the</sup> lowest in Delhi. In the case of females, Ahmedabad had the lowest percentage of unemployment. In fact, the cities of Delhi, Ahmedabad, Pune and Nagpur reported only less than 1 per cent of the females of age 5 years and above as unemployed. It appears that over the period of five years, 1977-78 to 1983, there has been a reduction in the proportion of unemployed except in the case of males of Madras city.

4.2 The age specific percentages of unemployed of age 5 years and above are given in table 11. It is observed that over 2 per cent of the boys in the age-group 10-14 years have reported as unemployed in Madras, Kanpur and Hyderabad. In all other cities excepting Bombay and Delhi percentage of unemployed boys <sup>was</sup> between 1 to 2 per cent. In the case of girls (10 - 14 years) only Madras had reported any significant proportion of unemployed (about 1 per cent).

5. UNDER EMPLOYMENT

5.1 under employment of the usually employed : All the persons categorised as usually employed on the basis of the 'major time criterion' with reference to a period of one year, particularly the 'self-employed' and 'casual labour', may not have work through out the year. Thus, for a section of them, some of their days during the year may become idle due to want of work and in that sense they will be underemployed. Of those idle days some may be unemployed days and the rest may be declared as not available for work. A distribution of the days ~~of the~~ of the usually working by their current daily status will therefore, give an idea of the person-days of the usually employed without work on an average in a day. Table 12 gives the percentage distribution of the person-days of the usually employed in the principal status (age 5 years and above) by their broad current daily activity status 'employed', 'unemployed' and 'not in labour-<sup>force</sup> ~~force~~ for the different cities and the other three size classes of towns. It is observed that in the case of males only 89 percent of the person-days of the usually employed were with work in the city of Madras. On the other hand, in Delhi, 98 percent of the person-days were reported as employed. After Madras, Kanpur and Nagpur had also recorded higher percentage of days without work. In the case of females, Nagpur had recorded only 83 percent of the days of the usually employed as with work. But of the remaining days only one-quarter had been reported as available for work and the rest as not available for work. In almost all the cities excepting Bombay, Madras and Delhi a similar pattern of voluntary withdrawal by females is observed.

Table (12) : Percentage distribution of person-days of persons of age 5 years & above usually working in the principal status by broad current daily activity status for each city/size class of towns

-26-

5.2 Indirect measure of underemployment : For obtaining some idea of the extent of working population suffering from under-employment - both visible and invisible - the NSS surveys on employment and unemployment, in its survey questionnaire, had included some probing questions on the topic to be canvassed from all persons categorised as usually employed. One of the questions was "Are you available for additional work?" An answer in the affirmative to this question, however subjective it might be, would give some idea of the extent of working population who wanted additional work, indicating that they did not have enough work either in terms of quantum of work or in terms of money return in the present occupation. Table 13 gives the proportion of usually employed in the principal status reporting availability for additional work. In the case of males, under-employment was most severe <sup>in</sup> ~~at~~ Madras compared to other cities followed by Calcutta and Nagpur. Cities of Delhi, Ahmedabad, Pune and Bombay reported relatively much less proportion of underemployed. In the case of usually employed females Nagpur had the highest proportion of underemployed (30 percent) followed by Madras (21 percent) and Calcutta (16 percent). In all other cities the proportion of underemployed was less and almost of the same order about 6-10 per cent.

Table 13: Proportion of usually employed in the principal status reported availability for additional work
