REPORT ON THE EFFECT OF DROUGHT ON THE PATTERN OF
EMPLOYMENT AND UNEMPLOYMENT : A COMPARATIVE STUDY
OF THE SURVEY RESULTS OF NSS 38TH AND 39TH ROUNDS

Section One

I N T R O D U C T I O N

The third quinquennial survey on employment and unemployment was carried out by the National Sample Survey Organisation (NSSO) as a part of its thirtyeight round survey programme during January - December 1983. Under the overall work programme of the NSS 38th and 39th rounds, NSSO had planned a resurvey of the first two sub-round samples of the 38th round (January - June 1983) during the 39th round (January - June 1984), i.e., after a period of one year with a view to obtaining reliable estimates of birth, death and fertility rates through an enumeration and re-enumeration survey scheme.

1.2 While planning the 39th round survey, it was felt that the severe drought that had affected a large part of the country during the agricultural year 1982-83 might had its effects on the employment-unemployment situation obtaining for the year 1983. The indicators of employment and unemployment worked out from the 1983 survey, therefore, might be influenced by the effects of drought for those states where the drought was very severe. The Working Group set up for the planning of the 39th round survey, therefore, recommended that some key data on the activity situation of the population might also be collected along with the vital data in the 39th round re-enumeration survey.

1.3 The Governing Council of the NSSO subsequently decided that the resurvey to collect key data on employment and unemployment might be undertaken in two states - one badly affected by the drought and the other not so affected to serve as control. Accordingly, the states of Tamil Nadu and Punjab were selected for the resurvey on employment and unemployment in the 39th round. Tamil Nadu was considered the state badly affected by drought and Punjab not so affected.

1.4 This report is based on the results generated from the re-enumeration survey data (NS, 39th round) and the corresponding results obtained from the enumeration survey ^{data} (NSS 38th round) in the states of Punjab and Tamil Nadu. The report, in section two, gives the scheme of the survey. Salient results are presented in section 3. Tables giving the detailed results are presented in the Appendix.

section Two

THE SCHEME

2.1 As mentioned earlier, the 39th round survey formed a part of the enumeration and re-enumeration survey scheme for estimation of population, births and deaths. Under the scheme, both the first and second stage sample units surveyed in the first two sub-round periods (January - June 1983) of the NSS 38th round were re-surveyed in the 39th round (January - June 1984) to collect the relevant information on the changes in the household composition, occurrences of deaths, births, etc. In the 38th round, a comprehensive enquiry on employment and unemployment was carried out for the entire country. For studying the effects of drought on the employment - unemployment pattern, some core data on the activity situation of the population to workout key indicators of employment-unemployment were collected in an integrated manner with the data collection for the population, birth and death survey in the 39th round. Thus, the scheme envisaged a comparative study of the employment-unemployment indicators generated from both the 38th and 39th round survey data.

2.2 In the 39th round, for rural areas, some broad information as to whether the sample villages surveyed were affected by drought or not and if affected, the crop production for the year 1983 expressed as percentage to normal production was also collected by an enquiry at the village level from the village headman or some knowledgeable persons of the villages. This information had helped in broadly classifying the villages into three different categories based on the extent of the effect of drought on crop production so as to correlate meaningfully the results on the

activity situation of the population. further, some probing questions were canvassed at the household level ^{from} to the relevant sample households to find out whether -

- i) the household's crop out put of 1982-83 was affected by drought,
- ii) household members faced less employment opportunities for wage labour during January-June 1983 and
- iii) any household member had to work elsewhere or had to take up other than his normal work during January-June 1983

It was felt that the answers to the above questions, ^{despite their} ~~however~~ subjective ^{nature} they were, might indirectly indicate the extent of the effect of drought on the overall employment pattern.

2.3 Sample design : ~~For the survey,~~ ^{for the survey} To study the effect of drought, as mentioned earlier, only two states were selected. They were Tamil Nadu and Punjab. Both the rural and urban areas were covered in the survey. The samples were the same as those selected for the first two sub-round survey of ^{the} NSS 38th round. ^{survey} In the 38th round, a stratified two stage sample design was adopted with the first stage units as census villages for rural areas and urban blocks (urban frame survey) for urban areas. Households formed the second stage units in both rural and urban areas. Sample villages were selected with probability proportional to size (population) and with replacement. Sample blocks were selected with equal probability. From each first stage unit, 10 sample households were selected circular systematically as second stage units after arranging all the households of a first stage unit in a specified manner.

2.4 In the 38th round, the survey period was January to December 1983. The entire survey period of one year was divided into four sub-round ^{each} periods of three month's duration. The first two sub-round periods were January - March 1983 and April - June 1983, respectively. The samples were distributed over the sub-rounds in a manner so as to provide equally valid estimates for each of the sub-round periods separately. The samples surveyed in the first two sub-round ~~periods~~ of the 38th round were resurveyed in the 39th round in the same order as surveyed in the 38th round. In fact, in the 39th round, the survey period was only six months (January - June 1984), split into two sub-rounds.

- 1 -

2.5 Sample size : The sample size allotted for the first 2 sub-round period of NSS 38th round survey was :

Tamil Nadu	-	236 villages;	212 blocks
Punjab	-	136 villages;	96 blocks

Of them, only 172 villages and 172 blocks for Tamil Nadu and 120 villages and 80 blocks for Punjab were selected for the 39th round survey.

2.6 Tabulation : Since the scheme was aimed only to bring out the differentials in employment-unemployment indicators for the two periods, January - June 1983 and January - June 1984, they were worked out on the basis of sample values without resorting to estimation. For the purpose, only those ~~ix~~ first stage samples surveyed in both the rounds were considered for tabulation.

2.7 Salient features of the conceptual frame adopted for the surveys:
The enumeration and re-enumeration scheme aimed to make a comparative study of the key indicators of employment and unemployment as obtained from the two surveys - NSS 38th and 39th rounds. For the purpose, in the surveys, relevant data to generate three indicators namely,

- i) proportion of persons usually employed/unemployed on the basis of the activities pursued during a reference period of 365 days,
- ii) proportion of persons employed/unemployed on an average in a week on the basis of the activity situation obtaining during a reference period of 7 days and
- iii) proportion of person-days employed/unemployed on an average during a day on the basis of the activities pursued on each of the seven days of the reference week,

were collected, adopting three different approaches - usual status approach, current weekly status approach and current daily status approach - for classification of the population ~~as belonging to~~ different activity categories. The activity categories adopted in the survey for the purpose of classification of the population were as under :

<u>Description of the activity category*</u>	<u>Category code</u>
Working with an employer under obligation but work not specifically compensated by any wage/salary	01 - 04
Worked (self employed) in household enterprise	11
Worked as helper in household enterprise	21
Worked as regular salaried/wage employee	31
Worked as casual wage labour in public works	41
Worked as casual wage labour in other types of work	51
Did not work though there was work in household enterprise	61
Did not work but had regular salaried/wage employment	71
Sought work	81
Did not seek but was available for work	82
Attended educational institutions	91
Attended domestic duties only	92
Attended domestic duties and was also engaged in free collection of goods (vegetable, roots, fire-wood, cattle feed, etc.) sewing, tailoring, weaving, etc. for household use	93
Too young to work/to attend school/to seek employment	94
Old and disabled	95
Rentiers, pensioners, remittance recipients, etc.	96
Beggars, prostitutes, etc.	97
Others	98
Did not work due ^{to} temporary sickness (for casual workers only)	99

* The activity category codes 61, 71, 82 and 99 were used only for current status approaches.

Persons assigned any one of the activities listed under the category codes 01 to 71 were treated as 'working' (or employed). Persons assigned activity category codes 81 or 82 were treated as 'seeking and/or available for work' (or unemployed). The remaining persons, i.e., the persons assigned any of the activity category codes 91 to 99 were treated as 'not available for work' (or not in labour force). The data on activity particulars of the persons were, however, tabulated only for population of age 5 and above.

2.8 Classification according to usual status approach : According to this approach, the status of activity on which a person spent relatively longer time of the preceding 365 days prior to the date of survey was considered to be the principal usual activity status of the person. Thus, a person's principal usual status was considered 'working' (or 'employed'), if he/she was engaged relatively for a longer time during the reference period of 365 days in any one or more gainful (work) activities coded 01-51, 'seeking or available for work' (or 'unemployed'), if he/she was not working but was either seeking or was available for work (activity code 81) for a relatively longer time of the specified reference period and 'not in labour force', if he/she was engaged for a relatively longer period in any one or more of the non-gainful activities (codes 91-98). Within the two broad activity categories, 'working' and 'not in labour force', the detailed activity category was determined on the basis of time spent criterion. A person categorised as a 'worker' on the basis of his/her principal status is referred to as 'principal status worker'. Those of the 'non-workers' who pursued in a subsidiary capacity some gainful activity as well along with their principal usual activity (non-gainful) were considered to be usually working in a subsidiary capacity and are referred to as 'subsidiary status workers'. These two groups, viz., 'principal status workers' and 'subsidiary status workers' together constitute 'all workers' according to the usual status classification.

2.9 Classification according to current weekly status approach

For classification of ^{/a} person according to current weekly status, he or she had to be assigned a unique activity status with reference to a period of seven days preceding the date of survey. For a person pursuing more than one activity during the week, his/her unique status was decided by adopting a priority-cum-major time rule. Under the priority rule, the status of 'working' got priority over the status of 'not working but seeking/available for work' which in turn got priority over the status of 'not working and not-seeking/available for work'. For a person classified under the first or the last category, his/her detailed activity status was determined by major-time-spent criterion, i.e., the detailed activity on which major time was spent was considered his/her current weekly status. Further, if a person had worked for one hour on any one day of the week, he was considered 'working'. A person who had not worked during the week but was available for work even for one hour on any one day of the week was considered 'seeking and/or available for work'. Others constituted the category 'not available for work' (or 'not in labour force'). Each person was thus assigned a unique activity status for the week. Aggregate of persons under the different activity status provided the distribution of persons by activity on an average in a week of the survey period of one year.

2.10 Classification according to current daily status approach :

In adopting the current daily status approach attempt was made to account for two major activities pursued by a person on each day of the seven days' reference week allocating 'half day' to each activity. The unit of classification according to this approach, was thus, half day. In assigning the activity status on a day, a person was considered 'working' (or employed) for the entire day if he/she had worked 4 hours or more on the day, and assigned the one or two (as the case may be) work activities (01-71) to which he/she devoted the working time. But if the work was done for one hour or more but less than 4 hours, he/she was considered 'working' (or employed) for half day and 'seeking/available for work' (or unemployed) or 'not available for work' (or not in labour force) for the other half of the day depending on whether he/she was seeking/available for work or not on the day. On the other hand, if a person was not engaged in any gainful work even for one hour on the day but was seeking or available for work for

four hours or more, he/she was considered 'unemployed' for the entire day. But if the reported availability for work was for less than four hours only, he/she was considered 'unemployed' for half day and 'not in labour force' for the other half of the day. A person who was neither having any work to do nor was available for work even for half of the day, was considered 'not available for work (or not in labour force)' for the entire day and assigned the one or two of the non-gainful activity statuses which he/she had during the day. The aggregate of person-days so classified under the different activity categories for all the seven days of the week divided by seven gave the distribution of persons (strictly speaking, person-days) by activity category on an average on a day of the survey period of one year.

2.11 Definitions

(a) Gainful activity : Gainful activity (or work) is the activity pursued by persons for pay, profit or family gain or in other words, the activity which adds value to the 'national product'. Normally, it is an activity which results in production of 'goods and services' for exchange. However, the activities in 'agriculture' (i.e., all activities relating to industry div.0), in which ^athe part or the whole of the agricultural production is used for own consumption and does not go for sale, are also considered 'gainful'. Execution of household chores or social commitments, etc., however, are not considered 'gainful' activities. The activities, such as, prostitution, begging, etc., which may result in earnings, are, by convention, not considered 'gainful'.

(b) Workers (or employed) : Persons engaged in any gainful activity are considered 'workers' (or employed). They are the persons pursuing any one or more of the eight situations listed as the activity categories under the first broad activity category, i.e., 'working or employed' in para 2.7.

(c) Seeking or available for work (or unemployed) : Persons who, owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, are considered unemployed.

(d) Labour force : Persons categorised as 'working' (or employed) and categorised as 'seeking or available for work (or unemployed) together constitute the labour force.

(e) Not in labour force : Persons categorised neither 'working' nor 'seeking or available for work' are considered to be engaged in non-gainful activities and categorised 'not in labour force'. The persons falling in this category are students, those engaged in domestic chores, rentiers, pensioners, those living on alms, recipients of remittance, etc., infirm and disabled persons, prostitutes and smugglers, etc.

(f) worker (self-employed) in household enterprise-usual and current status category 11 : Persons who are engaged in their own farm or non-farm enterprise are defined as self-employed - the term used to designate their activity status. There are different kinds of self-employed. Some may operate their enterprise without hiring any labour. Some others may normally work on their own but occasionally hire a few labourers. There is also a third category who, by and large, regularly run their enterprises by hiring labour. The first two groups of self-employed are called own-account workers and the third, employers.

(g) Worked as helper in household enterprise-usual and current status category 21 : The helpers are a category of working persons who keep themselves engaged in household enterprises, working full or part time and do not receive any cash payment in return for the work performed or any share of the family earnings from the enterprise. They are household members, a large number of them being related to the household head. They are dependant members of the household working for the family enterprise and getting food and shelter like other members of the household. One may also come across persons in a household who do not receive any cash remuneration for their work in the household enterprise but have a share in the family earnings out of such enterprise. Such persons are not 'helpers' but 'self-employed'. On the other hand, if any member of the household works in the household enterprise for which he is paid wage/salary, he should be treated as employee.

(h) worked as regular salaried/wage employees-usual and current status code 31 : Persons working in others' farm or non-farm enterprises (both household and non-household) and getting, in return,

salary or wages on a regular basis(and not on the basis of daily or periodic renewal of work contract) are treated as regular salaried/wage employees. The category, salaried/wage employees, will include not only salary and wage earners getting time wage but also earners getting piece wage or salary and paid apprentices, both full time and part time.

/and

(i) Worked as casual wage labour-usual/current status codes 41 & 51 : Persons engaged in others' farm or non-farm enterprises (both household and non-household) and getting in return wages according to the terms of the daily or periodic work contract are treated as casual wage labour. In the rural areas and also in the Government project sites, a type of casual labourers can be seen who normally engage themselves in public works activities which include works taken up by the Government or local bodies for construction of roads, bunds, digging of ponds, etc., as test relief measures/employment generation schemes, etc. The casual labourers doing only such public works activities are casual labour in public works. The rest are casual wage labour in other types of work.

(j) Had work in household enterprises but did not work - current status code 61, and had regular salaried/wage employment but did not work - current status code 71 : Persons engaged in household farm or non-farm enterprises or working in others' farm or non-farm enterprises as salaried/wage employees but absenting from work temporarily due to sickness or for enjoying leave or holiday or for other reasons belong to these two categories 61 & 71 respectively depending on whether they are self-employed in household farm/non-farm enterprises or employed in others' farm/non-farm enterprises as wage/salaried employees.

(k) Attended domestic duties and was also engaged in free collection of goods, sewing, tailoring, weaving, etc., for household use - usual and current status code 93 : In the rural areas in general and particularly in the tribal areas, domestic work usually includes, among others, a lot of work for free collection of vegetables, roots, firewood, etc., and also spinning and weaving of cloth for household use. Persons found to be spending regularly some of his/her time in performing the above mentioned activities along with household chores, belong to this category.

Section Three
SUMMARY RESULTS

3.0 A comparative picture of the different employment and unemployment indicators and related characteristics as obtained from the NSS 39th and 38th rounds is presented in this section for the States of Tamil Nadu and Punjab. As mentioned earlier, the 38th round results relate to the January - June 1983 period, the period affected by drought and the 39th round results relate to January - June 1984 period which was expected to be free from the effects of the drought. The results are worked out on the basis of sample values only without resorting to estimation.

3.1 Distribution of villages by effect of 1982-83 drought on crop production : During the 39th survey, for each sample village surveyed, it was ascertained from the village headman or other knowledgeable persons, whether the village was affected by drought or not during 1982-83. For the villages reported to have been affected by drought, it was attempted to find out approximately the extent of crop production during January - June 1983 expressed as percentage to normal year's production during the January - June period. Table 1 gives the percentage distribution of villages by range of crop production during January - June 1983 compared to normal production.

Table 1 : Percentage distribution of sample villages by range of crop production during January - June 1983 compared to normal production.

state	sub-round	villages not affected	villages affected by range of crop production compared to normal production			total	sample villages
			upto 30%	31% - 60%	61% & above		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
Punjab	1(Jan-Mar'83)	90.91	5.45	1.82	1.82	100.00	55
	2(Apr-June'83)	94.64	1.97	1.97	1.96	100.00	56
	comb. (Jan-June'83)	92.79	3.61	1.80	1.80	100.00	111
Tamil Nadu	1(Jan-Mar'83)	-	32.47	50.65	16.88	100.00	77
	2(Apr-June'83)	-	31.70	53.67	14.63	100.00	82
	comb. (Jan-June'83)	-	32.08	52.20	15.72	100.00	159

It is seen that Tamil Nadu was severely affected by drought during 1982-83, whereas Punjab ~~affected~~ ^{had} almost normal crop production.

3.2 Distribution of households by effect of drought : In the 39th round survey, a few probing questions were asked to each selected sample household to find out whether the households economic activities were affected by the drought situation prevailed during 1982-83 in their area. The questions put were

- (i) Whether any member of the household worked elsewhere or took up work other than his normal work during January - June 1983 because of less than usual rainfall during 1982 monsoon or not (question was asked to all households);
- (ii) Whether household's crop output of 1982-83 was affected by less than usual rainfall during the 1982 monsoon or not (question was asked to all households engaged in cultivation activities);
- (iii) Whether there was less employment opportunities for wage labour during January - June 1983 than current year because of the drought conditions in the monsoon of 1982 or not (question was asked to all households having at least one wage labourer as a member)

Proportions of households answered in the affirmative to the above questions will be indicative of the extent of households affected by the 1982-83/ ^{drought.} In Punjab, though not affected by drought, some households answered in the affirmative. It might be that due to some reasons (other than drought), the normal activities of a few households in Punjab were affected during January - June 1983. Table 2 gives the relevant results.

It is revealed that in rural Tamil Nadu, as high as 86 per cent of the households engaged in cultivation were affected by drought. Due to drought, 80 per cent of the households having at least one wage labour had less opportunities for wage labour. The employment condition of a quarter of the total households, also got affected. Even the urban households in Tamil Nadu/ ^{were} not free from the severity of drought as can be seen from table 2.

3.3 Usual work pattern : In the NSSO surveys, usual status of a person is determined on the basis of a 'relatively longer time spent' criterion with reference to a period of 365 days preceding the date of survey. An 'usually employed' or 'usually working' person is, therefore, the one who has been 'working' for a relatively longer period during the 365 days preceding the date of survey. Such a person is referred to as 'usually employed' in the principal status. A person who is working only for a relatively minor period during the reference year is considered to be 'usually working' in the subsidiary status. Persons usually working in the principal status and persons usually working in the subsidiary status together constitute the total 'usually employed'. For the first two sub-rounds of the 38th round survey, the reference period for usual status covered the calendar period January 1982 to June 1983 and therefore, the usual status estimates/^{of}the 'employed' based on the first two sub-round survey of the 38th round will depict the employment pattern obtaining mainly for the agricultural year 1982-83. Similarly, the estimates based on the 39th round survey will depict the employment pattern obtaining for the agricultural year 1983-84. The former, being the drought affected period, is expected to throw up a lower proportion of usually 'employed' and a higher proportion of 'unemployed', compared to the results based on the latter. However, in reality, those who usually work to earn their livelihood have to undertake some work or other during the year, though they may go out of work intermittently, which naturally will not be reflected in the usual status rates of employment. Further, during severe drought, relief works are generally undertaken and as a result out of necessity, more participation in 'work' will take place. This also is not likely to be reflected by the usual status rates whereas, the additional participation, to a certain extent, is expected to be reflected by the current status employment rates. There may be also shift of workers from one sector to another which also will be brought out by current status estimates and not by usual status rates. The usual status employment rate, therefore, is not an ideal index to study the effect of drought. Table (3) however, gives the usual principal status employment rates based on the 38th and 39th round surveys for the states of Tamil and Punjab.

- 15 -

3.4 Work pattern according to current status : Current weekly status and current daily status estimates of employed reflect the average work pattern of the population during the survey period. Thus, the 38th round survey results give the average pattern of the first half of 1983 and the 39th round results give the average work pattern of the first half of 1984. As mentioned earlier, 38th round estimates also take into account the intermittent unemployment of the usually employed caused due to the drought conditions as well as the temporary participation of the population in the relief work organised, if any, during the drought period. Tables 4 and 5 give the percentages of employed (5+) according to current weekly status and current daily status respectively. In the rural areas of Tamil Nadu, it is seen that the weekly status rate of ^{or} male employment was about 63 per cent during the first half/1984 as against 59 per cent during the corresponding period of 1983, the drought affected period. The difference is more marked among the households (villages) reporting only 30 per cent of the normal crop production during January - June 1983. Similar pattern is observed among the rural females also. The difference is mainly due to the fall in the proportion of 'employed' in the agricultural activities in 'self-employed' capacity, who could not be absorbed in other sectors. In urban Tamil Nadu, the employment rates for the two periods are almost at the same level, indicating that the drought did not affect ~~seriously~~ seriously the urban parts of the State as far as the employment pattern is concerned. On the other hand, in Punjab, both in the rural and urban areas, there appear to have been a slight fall in the employment level during the first half of 1984 compared to the corresponding period of 1983. As mentioned earlier, this fall should be viewed in the background of the ~~effects of the beginning of the~~ disturbed condition in Punjab. ~~XXXXXX~~ From table 5, it is seen that the current daily status estimates also reflect the same pattern/^{as that} revealed by the current weekly status estimates. In fact, the difference between the employment levels as thrown by the two rounds is more marked in the current daily status rates compared to the current weekly status rates as the former take also into account the 'unemployment' of those who had atleast some work during the week but had become unemployed on some ~~of the~~ days of the week. Thus, it is seen that current status estimates of employment bring to light the effects of drought on the employment pattern.

-----	-------	-------	-------	-------	-------	-------	-------	------

Figures in parentheses give the percentage /of person-days self-employed in agricultural activities.

3.5 Percentage of unemployed : It has been observed that the proportion of 'usually employed' is not sensitive to the intermittent changes in the work pattern caused due to natural calamities like drought, whereas, the current status rates of employed, in a way, indicate the magnitude of withdrawal from work-force due to lack of work. On the other hand, due to scarcity conditions, some persons - both males and females - who in the normal circumstances would have opted to remain outside the labour force might report 'unemployment'. Also, those who are usually employed, due to lack of work, may become intermittently unemployed more often than normal years and therefore the reported 'unemployment' during the drought period is expected to be more severe compared to other normal years. This may be reflected by the usual status rates also. Table 6 gives the percentage of 'unemployed' (age 5 years and above) for Tamil Nadu and Punjab as obtained from the NSS 38th round (drought affected period) and 39th round (not affected period). It is seen that in Tamil Nadu, as expected, the percentages of persons/person-days reported to be unemployed during the first half of 1983 (38th round) are on the higher side of the corresponding percentages obtained for the 1984 period (39th round) in the case of all the three rates - usual status, current weekly status and current day status. The differences are, of course, much higher in the case of the current status rates. The impact of drought is reflected even in the urban unemployment pattern. Punjab state also reveals a higher proportion of 'unemployed' during 1983 compared to 1984.

	cds	9.56	6.34	3.62	1.95	3.66	2.52	1.78	0.54	

In Punjab, tabulation was not done by range of crop production.

3.6 Under employment of usually employed : As mentioned earlier, 'usually employed' are those employed for a relatively longer period during a reference period of one year. Some of them will have work throughout the year, while some others may not have work during some weeks of the year or even on some days of the weeks. ~~with some work~~ A cross classification of the usually employed by the current weekly status will give the proportion of usually employed without any work on an average in a week. Similarly, cross classification of the usually employed by their current daily status will give the proportion of the person days of the usually employed without work on an average on a day. The above proportions are two measures of 'underemployment' of the usually employed. These proportions, it is expected, would be higher during the first half of 1983 (38th round period) compared to the corresponding period of 1984 (39th round). It is, of course, possible that some of those found to have been not working according to current weekly or daily status might not be available for work during that period thereby preferring to withdraw from labour force. In a strict sense, only the proportion of those out of the usually employed reporting as unemployed will indicate the volume of the underemployed. The relevant results as obtained from the 38th and 39th round surveys are presented in table 7.

Table 7 : Percentage of usually employed (5+) 'working' (employed) and 'not working but available for work' (unemployed) according to current weekly status(cws) and current daily status(cds)

state	sector	status	employed				unemployed						
			male		female		male		female				
			38th round	39th round	38th round	39th round	38th round	39th round	38th round	39th round

	rural	cws	90.16	95.86	74.80	91.36	6.75	1.79	8.40	1.44			
		cds	78.08	87.10	60.84	78.03	15.19	9.03	16.42	9.53			
	Tamil Nadu	urban	cws	95.53	97.81	90.70	95.25	3.05	0.96	3.37	0.68		
		cds	88.72	93.11	80.46	86.13	7.72	4.18	7.57	6.50			
Punjab	rural	cws	96.16	97.13	81.24	81.83	1.68	1.09	-	-			
		cds	90.61	96.04	72.27	82.36	4.40	2.62	1.19	0.87			
	urban	cws	98.36	97.21	96.86	94.60	1.09	2.79	0.77	2.70			
		cds	95.14	95.62	93.36	94.59	2.86	2.79	1.01	2.70			

It is observed that in general, the proportions of usually employed found also to be employed according to current status are on the lower side during 1983 compared to the corresponding proportions obtained for 1984. On the other hand, the proportions of usually employed but not working according to current status and at the same time reporting as unemployed as obtained from 38th round are on the higher side of the corresponding proportions as obtained from 39th round. This clearly indicates that 'underemployment' was of a higher magnitude during the drought affected period.

3.7 General conclusion : The foregoing analyses have clearly indicated that the severe drought that had affected Tamil Nadu during 1982-83 did ^{have} had its effects on the employment-unemployment pattern obtaining for the state, particularly for its rural areas. It was also seen that the usual status rates were not sensitive to the changes in the pattern relating to usual status employment. On the other hand, current status employment rates as well as usual and current status unemployment rates could detect changes in the pattern of employment and unemployment. Further, the retabulation of the first two sub-round data of the NSS 38th round ~~data~~ on the basis of only the sample values without resorting to estimation to generate important employment and unemployment indicators has given an opportunity to compare the estimated/unestimated proportions of 'work-force' and 'unemployed'. Table 8 gives the estimated and unestimated values of some of the indicators. It is seen that in a number of cases the two sets of values - estimated and unestimated-are quite close. In this context, it may be noted that -

- (i) the ratios worked out are based on only half of the sample allotted to a state for the entire round of survey and
- (ii) the general tabulation giving the estimated ratios is based on a slightly higher number of sample villages and blocks than the samples used for retabulation -

Tamil Nadu

general tabulation	: 236	villages;	212	blocks.
retabulation	: 172	villages;	172	blocks.

Punjab

general tabulation	: 136	villages;	96	blocks.
retabulation	: 120	villages;	80	blocks.

This closeness of the estimated and unestimated values would seem to suggest that for getting as a first forecast, some overall quick results on rates, such as, employment and unemployment levels, per capita monthly expenditure, etc., which in general are stable over years, may be worked out on the basis of unweighted distributions atleast for major states and all-India for which the sample size is sufficiently large. These unweighted results may serve as a quick, first-forecast.
