NATIONAL SAMPLE SURVEY

THIRTYEIGHTH ROUND : JANUARY 1983 - DECEMBER 1983

LEVEL OF NUTRITIONAL INTAKE OF POPULATION DISTRIBUTED OVER DIFFERENT EXPENDITURE CLASSES

Section One

INTRODUCTION

1.0 The National Sample Survey Organisation (NSSO) has been conducting enquiries on Household Consumer Expenditure and Employment-Unemployment once in every five years under its ten-year programme. The third quinquennial survey in the new series on household consumer expenditure was conducted during the 38th round (January 1983 to December 1983). The first two such quinquennial surveys were undertaken during 27th round (July 1972 to June 1973) and 32nd round (July 1977 to June 1978).

1.1 The results presented in this report provide an idea about the proportions of energy intake from different food groups for the population belonging to different monthly per capita consumer expenditure classes both in rural and urban sectors of India. A similar study was undertaken for the first time in NSS at the instance of the Food and Agricultural Organisation (FAO) of the United Nations, based on the data collected in the Consumer Expenditure Survey of the NSS 26th Round (1971-1972). *1

1.2 In order to derive the results, the households were classified according to i) level of per capita monthly expenditure and ii) level of calorie intake (percentage of normal requirement) per consumer unit per day. The calorie intake was, however, derived by converting the quantity estimates of the items of food consumed by a sample household into equivalent amount of calories by using standard conversion factors.*2 The level of calorie intake per day per consumer unit was similarly derived by aggregating the total calories thus estimated for all the food items consumed by the sample household during the last 30 days preceding the day of enquiry and finally dividing this aggregate by the number of consumer units in the household multiplied by 30.

*1 Calorie and Protein Values of Food Items Per Diem Per Consumer Unit ; NSS Reports No. 238 & 239.

*2 Nutritive Value of Indian Foods; Indian Council of Medical Research (1976).

TABLE S.O.: Number of sample villages/blocks allotted and surveyed in the Central sample for NSS 38th round by state.

Sl. no.	state/union territory	no. of samples allotted		no. of samples surveyed		percent of surveyed to allotted	
		villages	blocks	villages	blocks	villages	blocks
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
1.	Andhra Pradesh	616	344	606	343	98.38	99.70

1.3 SURVEY PERIOD AND REFERENCE PERIOD : The field work of the 38th round survey was carried out during the calendar year 1983 starting from January and continuing upto December - thus covering a period of a complete year. The data collected on household consumer expenditure pertained to a moving reference period of 30 days preceding the day of enquiry and thus the results presented in this report relate to the period from December 1982 to December 1983.

1.4 COVERAGE The geographical coverage of the survey was extended over the whole of rural and urban areas of Indian Union excepting Ladakh and Kargil districts of Jammu & Kashmir and rural areas of Nagaland.

1.5 SAMPLE SIZE : The survey covered about 1,23,000 households spread over 8035 villages and 4377 urban blocks. The number of sample villages/blocks allotted and surveyed in different states is laid out in Table S.O. It is seen from this table that in Meghalaya, Sikkim, Tripura, Arunachal Pradesh, and Lakshadweep quite a large proportions of sample (about 38 to 90 percent) remained unsurveyed. Due to this less coverage of the samples than what was required, the results of the survey may not exhibit the real situation obtaining in these states. Hence, the results of these states have not been presented separately in the report. These are, however, included in the all-India estimate.

1.6 PARTICIPATION OF STATES In the 38th round survey, all the states and union territories (included in the geographical coverage) except Andaman & Nicobar Islands, Chandigarh, Dadra and Nagar-Haveli and Lakshadweep participated in the survey on at least equal matching basis. The results presented in this report are, however, based on the data of central samples only.

1.7 CONTENTS OF THE REPORT : The report contains tables separately for rural and urban sectors in respect of states and union territories of India as also for all India. In addition to these tables, the other sections of the report contain (1) Concepts and Definitions (2) Sampling Design and Estimation Procedure (3) Explanatory Notes on the Tables presented and (4) a Summary of Findings.

SECTION TWO

CONCEPTS AND DEFINITIONS

2.0 The concepts and definitions followed in household consumer expenditure survey during 38th round have broadly remained the same as in previous NSS rounds. Some of these concepts and definitions are explained below.

2.1 HOUSEHOLD : A household is a group of persons normally living together and taking food from a common kitchen. A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with his dependent or guests) forms a separate household by itself. Households maintained and provided food directly by government, such as those in prisons, police quarters, cantonments, hospitals, asylums, relief camps are, however, excluded from the scope of the survey.

2.2 HOUSEHOLD SIZE : The total number of members in a household is considered to be the household size.

2.3 NUMBER OF CONSUMER UNITS IN A HOUSEHOLD : According to the caloric requirement of a person in a particular socio-economic group in relation to that for a "reference man", the person is converted into a number termed as "consumer unit". The total number of consumer units in a sample is derived by summing consumer units obtained for each individual in the household after applying appropriate conversion factors as shown below :

Sex	Age in completed years											
	1	1-3	4-6	7-9	10-12	13-15	16-19	20-29	40-49	50-59	60-69	70 & over
Males	1.00	.85	.72	.87	1.03	.97	1.02	1.00	.95	.80	.64	.51
Females	.43	.54	.72	.87	.93	.80	.75	.71	.68	.64	.51	

2.4 HOUSEHOLD CONSUMER EXPENDITURE : Household consumer expenditure comprises of all expenditure incurred by a household, exclusively on domestic account, including consumption out of home-grown produce or transfer receipts like gift, loan etc. The expenditure on household enterprise is excluded from consumer expenditure. While consumption out of transfer receipts is included, transfer payments of all kinds (loans, gifts, charities, cash as well as in

and e.g. grain loan etc.) are excluded. Expenditure on purchase and construction of residential houses are considered to be on capital account and therefore are outside the purview of the consumer expenditure; but the expenditure towards repair and maintenance of residential building is included in the consumer expenditure of the household. Monetary value of food items consumed during the reference period is taken to represent consumer expenditure on food items. This also included consumption of food articles in ceremonies performed in the household during the reference period. While quantity consumed by domestic animals like cattle etc. are not included under domestic consumption, consumption of pet animals like cats, dogs, birds etc. are included. For semi-durable and durable goods, the actual expenditure incurred towards purchase of these articles, during the reference period is considered as the consumer expenditure of the household. For items of clothing and foot-wear the monetary value of the articles brought into first use during the reference period is taken as the consumer expenditure on the articles concerned.

2.5 REFERENCE PERIOD The reference period used for household consumer expenditure survey is a moving one in the sense that this period is always linked with the day of enquiry. For all items of consumer expenditure the reference period is last 30 days preceding the day of enquiry. But for items of clothing and foot-wear, durable goods and some items of miscellaneous goods and services data have also been collected for a reference period of last 365 days preceding the day of enquiry in addition to that for a reference period of last 30 days. The data presented in this report are, however, based on the reference period of last 30 days only.

2.6 CALORIE It is a unit for measuring energy. The calorie unit of measurement of nutrient in food is 1000 times the conventional "calorie" unit of energy. Hence in some studies, the unit of nutrient has been expressed as "KCal" (i.e. kilo calories or 1000 calories) or simply "Cal" (calorie). It may be mentioned that an intake of 2700 calories per consumer unit per day or 2160 calories per capita per day has been recommended as the normal requirement under Indian conditions.

2.7 PROTEIN : It is another nutrient derived mainly from meat, egg, fish, pulses and milk. It is usually expressed as gms. per 100 gms. of edible portion of food.

2.8 FAT It is an important source of energy in the diet and is required by the body for growth and to maintain the integrity of the skin. The optimum quantity of fat that has to be included in the diet is not known with certainty. But it is suggested *1 that daily intake of 15 gm. of fat in the form of vegetable oil appears to satisfy the minimum essential requirement. It is, however, desirable that not more than 30 percent of dietary calories should be derived from fat:

*1 Dietary Allowances for Indians (1977) : Gopalan, C and Narasinga Rao, B.S.

SECTION THREE

SAMPLE DESIGN AND ESTIMATION PROCEDURE

3.0 SAMPLING DESIGN : The sampling design adopted in the 38th round survey was a two-stage stratified one with census villages in the rural areas and NSSO Urban Frame Survey (UFS) blocks in the urban areas as first stage units and households as second stage units. The sample villages were selected with probability proportional to size and with replacement in the form of two independent interpenetrating samples while the sample blocks were selected with equal probability also in the form of two independent interpenetrating samples. After arranging all households of the first stage units in a specified manner ten sample households from each first stage unit were selected following a circular systematic sampling design.

3.1 SAMPLING FRAME : The sampling frame for the rural areas was the list of villages as per 1981 decennial population census except for Assam where 1971 census list of villages had been used. For the urban areas the list of Urban Frame Survey (UFS) blocks had been used as sampling frames.

3.2 SURVEY PERIOD AND SUB-ROUND FORMATION : The survey started from January 1983 and continued upto December 1983. The entire survey period of one year was divided into four sub-rounds each of three months duration as follows

January 1983 to March 1983	sub-round 1
April 1983 to June 1983	sub-round 2
July 1983 to Sept. 1983	sub-round 3
and October 1983 to Dec. 1983	sub-round 4

The samples were equally distributed over the four sub-rounds in a manner so as to provide equally valid estimates for each of the related sub-round period. The averages based on the pooled data for all the sub-rounds taken together would account for seasonal variations and thus would be free from seasonal effects.

3.3 ESTIMATION PROCEDURE : The estimation procedure adopted in the 38th round is based on weighted sum of sample values. Denoting by \hat{Y} the unbiased estimate of Y (the state total of any variate) it is given by

$$\hat{Y} = \sum_s \frac{P_s}{n_s} \sum_i \frac{D_{si}}{P_{si} e_{si}} \frac{H_{si}}{h_{si}} \sum_j y_{sij} \quad \dots (1) \text{ for rural sector}$$

and

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_i D_{si} \frac{H_{si}}{h_{si}} \sum_j y_{sij} \quad \dots (2) \text{ for urban sector}$$

where, s, i and j stand for stratum, village/urban block and household respectively;

P_s , N_s , and n_s denote the population, number of villages/blocks in the frame and number of sample villages/blocks for the s th stratum respectively;

D_{si} , e_{si} and P_{si} denote the number of hamlet groups/sub-blocks formed, number of census villages contained in a large revenue village and the population for the i th sample village in the s th stratum respectively;

H_{si} and h_{si} stand for total number of households listed and number of sample households for the i th village/block in the s th stratum respectively; and finally Y_{sij} is the observed value of the variate for the j th sample household in the i th village/block belonging to s th stratum. Estimates of ratio of two characteristics is given by the ratios of the estimates of their aggregates:

SECTION FOUR

EXPLANATORY NOTES ON TABLES

4.0 TABLE NUMBERING : For the sake of convenience of reference, the table numbers have been provided with codes. The digit to the left of the decimal point refers to the nature of information for a state/union territory while the digit to the right refers to the percapita monthly expenditure class for the state/union territory. This is followed by R for rural tables and U for urban tables.

4.1 Tables presented in this report give the distribution of (i) average household size (ii) number of consumer units per household (iii) average monthly per capita expenditure on food non-food as well as total and (iv) percentage distribution of calorie intake per consumer unit per day over different food groups by per consumer unit per day calorie intake classes. Tables for the states of Arunachal Pradesh, Meghalaya, Sikkim, Tripura and Lakshadweep are not presented because of non-availability of survey data for large proportions of sample villages/blocks.

4.2 CALORIE INTAKE LEVEL : Estimates have been given for each per capita expenditure class and also for all classes arranged in the ascending order of calorie intake level. Based on an intake of 2700 calories per consumer unit per day as normal requirement, the calorie intake levels (percentage of normal requirement) have been grouped into following 9 classes : i) less than 70 ii) 70-80 iii) 80-90 iv) 90-100 v) 100-110 vi) 110-120 vii) 120-130 viii) 130 and above and ix) all levels.

4.3 FOOD GROUPS : Different food items consumed by sample households have been grouped as follows :-

- I. cereals, potato, sugar, jaggery and cereal substitutes;
- II. pulses, nuts and seeds;
- III. milk and milk products; meat, egg and fish;
- IV. edible oils;
- V. fruits, vegetables, spices and prepared food.

Note : The levels "less than 70", "70-80" etc. stand for less than 1890 calories, 2160 calories and so on. Level 100 stands for 2700 calories.

① Calculation of calorie intake itself is an approximation where different varieties of a particular food item have been assigned the same calorie content

SECTION FIVE

SUMMARY OF FINDINGS

5.0 INTRODUCTION : A series of reports on the pattern of household consumer expenditure based on the 38th round survey conducted by the National Sample Survey Organisation (NSSO) was released earlier^{1/}. Some results relating to average levels of nutritional intake of proximate principles by households belonging to different monthly per capita expenditure groups have been presented in another report^{2/}. In this section some important findings of the survey are discussed to provide an idea about the extent of expenditure on food items vis-a-vis the nutritional intake derived from different food groups by the households in the rural and urban sectors of India classified over different levels of expenditure.

5.1 AVERAGE HOUSEHOLD SIZE AND AVERAGE NUMBER OF CONSUMER UNIT :- In Tables S1(R) and S1(U) are given the proportion of households, proportion of persons, average size of a household and average number of consumer units per household by per capita monthly expenditure classes for rural and urban India respectively. It is seen that the average number of persons per household was observed to be 5.04 at all India level (5.19 for rural and 4.89 for urban). The number of consumer units per household was found to be 4.14 for rural and 3.90 for urban. The ratio of number of consumer units to the size of a household was found to be around 0.80 both in rural and urban sectors of India. Eventhough the ratio slowly increased with the rise of monthly per capita expenditure level, it has been found to cluster around the value 0.80.

5.2 PERCENTAGE EXPENDITURE ON FOOD ITEMS :- In Tables S2(R) and S2(U) are given average monthly per capita expenditure on food, non-food and total consumption and average intake of calorie, protein and fat per consumer unit per diem by monthly per capita expenditure classes of rural and urban India respectively. The pattern of consumer expenditure begins to show marked difference with the rise of expenditure level. It is found that the proportion of expenditure on food items steadily declined with the increase of per capita expenditure and in the highest per capita expenditure class (Rs. 300 and above) the percentage expenditure on food item was found to be the lowest at 44 both in rural and urban areas. This otherwise implies that the households belonging to higher expenditure classes could afford to spend relatively more on their other needs than on food items alone compared to the households belonging to lower expenditure classes

1/ A Report on The Third Quinquennial Survey on Consumer Expenditure, NSS 38th Round Survey (January 1983 to December 1983) SARVEKSHANA, Vol. IX, No.4.

2/ NSS Draft Report No.348 : Per Capita and Per Consumer Unit Per Diem Intake of Calorie, Protein and Fat and Perception of the People on Adequacy of Food (1988).

- (2) For a specific comment - The trend of calorie intake level over MPCE need to be observed and this should not relate to the emities in a particular MPCEC
- (3) This comment were true ^{of} each and every household all the members were male and belong to the age group 20-39 yrs
- (4) The comment need to take other considerations. If these are ~~7~~ 7 crosses of hh below the critical points, this does not imply

That all these 7 crosses of hh are having consumer units value equal to their respective value of hh size

who were hardly left with any extra amount to spend on anything else other than food. In general, while a rural household spent about two-third of its expenditure (65 per cent) on food items, the corresponding percentage of expenditure by an urban household was little less (59 per cent). But in absolute terms a rural household on an average was found to spend less than its urban counterpart on food, non-food and hence on total consumption.

5.3 AVERAGE CALORIE INTAKE AND POINT OF CRITICAL EXPENDITURE :-

While examining the nutritional adequacy of the diet consumed it is found that the average calorie intake per consumer unit per day (2780 calories) in rural India just exceeds the normal requirement of 2700 calories per consumer unit per day or 2160 calories per capita per day. But in urban areas the corresponding average (2579 calories) was below that in rural areas and also below the prescribed norm. The average calorie intake was also found to increase with the increase of expenditure levels but this increase was at a slower rate in urban than in rural areas. It is further seen that the normal requirement of 2700 calories was reached in rural areas at a point of expenditure of Rs. 102.40 whereas in the urban corresponding point of expenditure was Rs. 199.73. Accordingly, it may be stated that the household having per capita expenditure below this point lived on diet not considered adequate in terms of calories. It is evident from the results that, about 54 percent of rural households and 60 percent of urban households lived on inadequate diet. So, in general, the incidence of under-nutrition was more pronounced in urban areas than in rural areas and in addition to this to achieve the normal requirement of 2700 calories, an urban household spent almost twice of the amount spent by a rural household.

5.4 PERCENTAGE OF CALORIE INTAKE FROM FOOD GROUPS :-

In Tables S3(R) and S3(U) are given the percentage of calorie intake per consumer unit per diem over different food groups by monthly per capita expenditure classes for rural and urban India respectively. Eventhough between 44 and 77 percent of total expenditure was spent on food, the pattern of consumption of different food groups indicates that of the total calorie intake about 82 percent in rural areas and about 69 percent in urban areas were derived from cereals, starchy roots and sugar. Moreover, while in rural the percentage of calorie intake from other food groups viz. milk products, meat, fish, oil, fruits and vegetables remained almost stable around 4.40, the corresponding percentage in urban areas varied from 5.51 to 10.16. This implies that though major intake of calorie was derived from cereals, starchy roots and sugar both in rural and urban areas, the consumption of food other than cereals etc. was not much favoured by the rural households due either to lack of their preference or local non-availability of these items because of their having more commercial value in urban areas. The pattern of distribution of calorie intake derived from different food groups was also found to markedly differ over different per capita expenditure levels, both in rural and urban India. The percentage of calorie intake from cereals, starchy roots, sugar etc. was found to decline with the rising level of

- (5) Calculations of medians: perhaps these are to be derived from the basic table on household calorie intake table (table 6) figures in absence of any explanatory note. It has not been possible to see that the said calculations have taken the account of the class boundaries.

all exp. classes	69.43	5.51	6.96	7.94	10.16	100.00

expenditure and this decline was more rapid in urban than in rural. But quite an opposite trend was observed in respect of other food groups where the percentage of calorie intake increased with the increase of expenditure level.

5.5 AVERAGE CALORIE INTAKE OVER STATES :-The pattern of consumption of different food items as also the average intake of calorie per consumer unit per day not only varied between rural and urban India but also between rural and urban areas of different states. In Table 54 are given the percentage of households consuming less than 2700 calories per consumer unit per day, the median value of calorie intake (50% of the households are below and remaining 50% above the median value) and the mean calorie intake per consumer unit per day for the rural and urban areas of major states of India. It is evident from the table that the proportions of households below the required normal level of calorie intake which has been taken to be 2700 calories per consumer unit per day were 54 and 68 percent for all-India rural and urban respectively. Rural areas of Punjab, Himachal Pradesh, Jammu and Kashmir and Haryana with high level of calorie intake (more than 3100 calorie per consumer unit per day) had respectively 27%, 21%, 21% and 35% of the households below per unit consumption of 2700 calories per day. Tamil Nadu and Kerala reported very low calorie intake of 2333 and 2358 for their respective rural areas. More than 75% of the households of these two states reported consumption less than the normal level. Per consumer unit intake of calorie was above the minimum requirement in Punjab (3235), Himachal Pradesh (3330), Jammu & Kashmir (3186), Haryana (3178), Rajasthan (3059), Uttar Pradesh (3016), Madhya Pradesh (2921), Delhi (2967), Karnataka (2830), Manipur (2867), Andhra Pradesh (2768) and Bihar (2765). On the other hand, the rural areas of Tamil Nadu, Kerala and most of the eastern states reported to have the level of calorie intake well below the normal requirement.

5.6 The pattern was, however, somewhat different in urban areas and the situation was relatively worse than what was observed in rural areas. Except the urban sectors of some of the northern and eastern states, the level of calorie intake was below the normal requirement in respect of all other states. Tamil Nadu and Kerala where the average calorie intake in rural areas was significantly lower than the norm, reported average energy intake close to the norm in their urban areas. On the other hand, both the rural and urban areas of most of the northern states reported more than the normal level of calorie intake. This broadly conforms to the results of the 26th (July 1971 to June 1972)1/ and 27th (October 1972 to September 1973)2/ rounds of NSS.

5.7 Though the major share of calorie intake was derived from cereals both in rural and urban sector, it is further found that

1/ Calorie and Protein Values of Food Items Consumed Per Diem Per Consumer Unit, NSS 26th Round; NSS Report No. 238 & 239.

2/ Per Capita Per Diem Intake of Nutrients, NSS 27th Round, SARVEKSHNA, Vol. VI, Nos. 3-4.

in respect of some of the northern states like Delhi, Punjab, Haryana, Rajasthan and Himachal Pradesh, consumption of milk was very dominant and especially in rural areas of Delhi, Punjab and Haryana a household on an average spent much more on milk products than on cereals which broadly reflects the food habits prevalent in these states, in general.
