MONTHLY PER CAPITA EXPENDITURE CLASS AFTER ADJUSTMENT  
(CONSIDERING ANNUAL EXPENDITURE)

Section One  
INTRODUCTION

10 The National Sample Survey Organisation (NSSO) has been conducting enquiries on Household Consumer Expenditure 1972-73 in every five years under its new ten-year programme. The third quinquennial survey in the new series on household consumer expenditure conducted as a part of the 38th round (January 1983 to December 1983) survey operation. Basic results of the survey on expenditure have been released through a series of reports from the month of September, 1985. A list of reports based on NSS 38th round sum expenditure survey data prepared so far is appended at the end of this report.

11 Apart from the information required for deriving the monthly sum expenditure for a household with respect to reference period of 30 days, additional information on expenditure also collected for certain items of consumption with respect to a reference period of 365 days with a view to studying the extent of changes in the distribution of households by monthly per capita expenditure class after taking into account the effect of adjustment on the basis of their annual expenditure. The tables in this report give an idea about the extent of households which have exhibited displacement their monthly per capita expenditure classes after adjustment by considering the annual expenditure.

2 SURVEY PERIOD AND REFERENCE PERIOD The field work of the 38th round survey carried out during the calendar year 1983 starting from January and continuing upto December - thus covering period of a complete year. The data collected on household expenditure pertained to a moving reference period of 30 days preceding the day of enquiry. For certain items of consumption a reference period of 365 days preceding the day of enquiry was also considered. Thus the

estimates presented in this report broadly relate to the period from January 1982 to December 1983

**1.3 SAMPLE SIZE** The survey covered about 1,23,000 households spread over 8035 villages and 4379 urban blocks. In rural or urban areas of some of the states the number of sample villages or blocks fell short of the respective numbers allotted. In Meghalaya, Tripura, Arunachal Pradesh and Lakshadweep quite a large proportion of samples (about 38 to 90 percent) remained unsurveyed. Due to this less coverage of the samples than what was required, the results of the survey may not exhibit the real situation obtaining in these states. Hence, the results of these states have not been presented separately in the report. They are, however, included in the all-India estimate.

**1.4 PARTICIPATION OF STATES** In the 38th round survey all the states and union territories (included in the geographical coverage) except Andaman & Nicobar Islands, Chandigarh, Dadra and Nagar-Haveli and Lakshadweep participated in the survey at least equal matching basis. The results presented in this report are, however, based on the data of central samples only.

**1.5 METHOD OF ADJUSTMENT** In the NSS 38th round survey, data were collected on the household consumer expenditure on i) food items including pan, tobacco, intoxicants, fuel and light ii) miscellaneous goods and services and iii) clothing, footwear and durable goods. While the reference period of household expenditure on (i) and (ii) above is only a period of 30 days preceding the day of survey, dual reference period of 30 days and 365 days was also used in respect of clothing, footwear and durable goods. However, the household monthly consumer expenditure vis-a-vis the monthly per capita expenditure (MPCE) classes used for working out the distributions are based on the data collected using a reference period of 30 days only. The present study is only aimed to examine how the household monthly per capita expenditure is affected when the consumer expenditure incurred by the household during the last 365 days preceding the day of survey is taken into consideration. In order to examine the impact of household expenditure averaged over last 365 days on the household MPCE classes, the following adjustment procedure has been adopted.

Denoting by C(M), F(M) and D(M) as the household expenditure in respect of clothing, footwear and durable goods (including repairs and maintenance) respectively for a period of 30 days preceding the day of enquiry and C(A), F(A) and D(A) as those corresponding household expenditure for a period of 365 days preceding the day of enquiry, the adjusted household monthly consumer expenditure ( $T'$ ) may be written as

$$T' = T - [C(M) + F(M) + D(M)] \quad [C(A) + F(A) + D(A)] \quad T = [E(M) - E(A)]$$

12

where T = unadjusted household monthly consumer expenditure

$$E(M) = C(M) + F(M) + D(M)$$

= household consumer expenditure on clothing, footwear and durable goods for the last 30 days preceding the day of enquiry

and  $E(A) = [C(A) + F(A) + D(A)]$

12

= household consumer expenditure on clothing, footwear and durable goods averaged over last 12 months preceding the day of enquiry

Now  $T' > =$  or  $< T$  depending on whether  
 $E(M) \leq$  or  $> E(A)$

or, in other words, the unadjusted household monthly per capita consumer expenditure ( $T/\text{household size}$ ) will be displaced to the right or left or will remain same if the per capita consumer expenditure on clothing, footwear, durable goods etc. for the reported reference month is less than, greater than or equal to the corresponding expenditure worked out for a month by averaging the expenditure reported for the last 365 days. It otherwise implies that the households belonging to a MPCE class will move to higher MPCE classes when expenditure incurred by them over a short reference period of 30 days is less than the average monthly expenditure obtained out of a longer reference period of 365 days preceding the day of enquiry. Similarly, the households will remain unaffected i.e. will continue to belong to the same MPCE class or will move to lower expenditure classes if the expenditure incurred during the last 30 days is equal to or more than their average monthly expenditure based on the last 365 days.

**1.6 CONTENTS OF THE REPORT :** The report contains detailed tables separately for rural and urban sectors in respect of 17 major states as also for all-India in the Appendix. Results for some of the states with small sample size in addition to those mentioned in para 1.3 have not been presented. Besides these tables, other sections of the report contain (1) Concepts and Definitions (2) Sampling Design and Estimation Procedure (3) Explanatory Notes on the Tables presented and (4) Summary of Findings.

## Section Two

### CONCEPTS AND DEFINITIONS

2.0 The concepts and definitions followed in household expenditure survey during 38th round have broadly remained same as in previous NSS rounds. Some of these concepts and definitions are explained below.

2.1 **HOUSEHOLD** A household is a group of persons normally living together and taking food from a common kitchen. A boarding house, hotel or a hostel is treated as a cluster of households, where individual boarder (with his dependent or guests) forms a separate household by itself. Households maintained and provided food directly by government, such as those in prisons, police quarters, cantonments, hospitals, asylums, relief camps are, however, excluded from the scope of the survey.

2.2 **HOUSEHOLD SIZE** The total number of members in a household is considered to be the household size.

2.3 **HOUSEHOLD CONSUMER EXPENDITURE** Household consumer expenditure comprises of all expenditure incurred by a household, exclusively domestic account, including consumption out of home-grown produce transfer receipts like gift, loan etc. The expenditure of household enterprise excluded from consumer expenditure. While consumption out of transfer receipts is included, transfer payments of all kinds (loans, gifts, charities, cash and kind e.g. grain loan etc.) excluded. Expenditure on purchase and construction of residential houses is considered to be on capital account and therefore outside the purview of the consumer expenditure, but the expenditure towards repair and maintenance of residential building is included in the consumer expenditure of the household. Monetary value of food items consumed during the reference period is taken to represent consumer expenditure on food items. This also includes consumption of food articles not performed in the household during the reference period. While quantity consumed by domestic animals like cattle etc. is not included under domestic consumption, consumption by pet animals like cats, dogs, birds etc. are included. For semi-durable and durable goods, the actual expenditure made towards purchase of these articles during the reference period is considered as the consumer expenditure of the household. For items of clothing and foot-wear the monetary value of the articles brought into first use during the reference period is taken as the consumer expenditure on the articles concerned.

2.5 **REFERENCE PERIOD** The reference period used for consumer expenditure survey is a moving one in the sense that this period is always linked with the day of enquiry. For all items of consumer expenditure the reference period is last 30 days preceding the day of enquiry. But for items of clothing and foot-wear, durable goods and some items of miscellaneous goods, data have also been

collected for a reference period of last 365 days preceding the day of inquiry in addition to that for a reference period of last 30 days. Monthly Per Capita Expenditure Classes are, however based on data pertaining to reference period of last 30 days only, which is considered as unadjusted MPCE in this report. This MPCE when adjusted considering annual expenditure as per the procedure mentioned in para 5 of section one is considered as adjusted MPCE.

## Section Three

## SAMPLE DESIGN AND ESTIMATION PROCEDURE

**3.0 SAMPLING DESIGN** The sampling design adopted in the 38th round was two-stage stratified one with census villages in the rural areas and NSSO Urban Frame Survey (UFS) blocks in the urban first stage units and households as second stage units. The sample villages selected with probability proportional to size and with replacement in the form of two independent interpenetrating samples while the sample blocks were selected with equal probability also in the form of two independent interpenetrating samples. After arranging all households of the first stage units in a specified manner ten sample households from each first stage unit were selected following a circular systematic sampling design.

**3.1 SAMPLING FRAME** The sampling frame for the rural areas was the list of villages as per 1981 decennial population census except for Assam where 1971 census list of villages had been used. In the urban areas the list of Urban Frame Survey (UFS) blocks had been used as sampling frames.

**3.2 SURVEY PERIOD AND SUB-ROUND FORMATION** The survey started from January 1983 and continued upto December 1983. The entire survey period of one year was divided into four sub-rounds each of three months duration as follows:

January 1983 to March 1983	sub-round 1
April 1983 to June 1983	sub-round 2
July 1983 to Sept 1983	sub-round 3
and October 1983 to Dec 1983	sub-round 4

The samples were equally distributed over the four sub-rounds in a ratio of 1:1:1:1 to provide equally valid estimates for each of the related sub-round period. The averages based on the pooled data for all the sub-rounds taken together would account for seasonal variations and thus would be free from seasonal effects.

**3.3 ESTIMATION PROCEDURE** The estimation procedure adopted in the 38th round is based on weighted sum of sample values. Denoting by  $\hat{Y}$  the unbiased estimate of  $Y$  (the state total of any variate) it is given by

$$\hat{Y} = \sum_s \frac{P_s}{n_s} \sum_{t=1}^{D_{st}} \frac{H_{st}}{h_{st}} \sum_j y_{sj} \quad \text{-(1) for rural sector}$$

and

$$\hat{Y} = \sum_n \frac{N_s}{n} \sum_{t=1}^{D_{st}} \frac{H_{st}}{h_{st}} \sum_j y_{sj} \quad \text{-(2) for urban sector}$$

where,  $s, i$  and  $j$  stand for stratum, village/urban block and household respectively,

$P_s$ ,  $N_s$  and  $n_s$  denote the population, number of villages/blocks in the frame and number of sample villages/blocks for the  $s$ th stratum respectively,

$D_{si}$ ,  $s_i$  and  $P_i$  denote the number of hamlet groups/sub-blocks formed, number of census villages contained in a large eve village and the population for the  $i$ th sample village in the  $s$ th stratum respectively.

$H_{si}$  and  $h_{si}$  stand for total number of households listed and number of sample households for the  $i$ th village/block in the  $s$ th stratum respectively, and finally  $Y_{sj}$  is the observed value of the variate for the  $j$ th sample household in the  $i$ th village/block belonging to  $s$ th stratum. Estimates of ratio of two characteristics  $s$  given by the ratios of the estimates of their aggregates

Section Four  
EXPLANATORY NOTES ON TABLES

4 0           The tables presented in this report give the percentage distribution of households over adjusted monthly per capita expenditure classes by unadjusted monthly per capita expenditure classes for 17 major states and all India separately for rural and urban

4 1           MONTHLY PER CAPITA EXPENDITURE CLASSES   Results in the tables shown by monthly per capita expenditure classes (Rs) The ranges have been arranged in ascending order of their magnitudes 0-30, 30-40, 40-50, 50-60, 60-70, 70-85, 85-100, 100-125, 125-150, 150-200, 200-250, 250-300, 300 & above and all expenditure classes

4 2           ADJUSTED MONTHLY PER CAPITA EXPENDITURE CLASSES   For each household the monthly per capita consumer expenditure has been adjusted by applying the appropriate adjustment factor as explained in section one para 1.b. The households within each MPCE class have been distributed over adjusted monthly consumer expenditure classes after adjustment and presented in the tables. The ranges of these adjusted MPCE classes are same as those of unadjusted MPCE classes

✓ Report No.: 357  
Subject: Tables with Notes on distribution of Households  
By Monthly per Capita Expenditure class After  
Adjustment (Considering Annual Expenditure)  
Round: 38<sup>th</sup>  
Period: January - December 1983

Section Five.

SUMMARY OF FINDINGS

5.1 The results of 38th round consumer expenditure survey cross classified by different household monthly per capita expenditure (MPCE) classes had already been released. As it has been stated in section two of this report, this household MPCE is based on the consumer expenditure on all items of household consumption viz. food (including pan, tobacco and intoxicants) and non-food including miscellaneous services, clothing, foot-wear and durable goods incurred during a period of last 30 days. The object of the present report is to study the impact on the distribution of households due to adjustment of the MPCE taking into account the annual expenditure on items of clothing, foot-wear, and durable goods etc. instead of the monthly expenditure on them.

5.2 Statements IR and IU give the percentage of households showing (i) no movement (ii) movement upward (i.e. movement to higher expenditure classes) and (iii) movement downward (i.e. movement to lower expenditure classes) after adjustment using annual expenditure, by MPCE classes and by sub-samples for rural and urban India respectively. In addition, percentage of households moving to the adjoining classes (immediately one class lower than the MPCE classes to which they belong) after adjustment are also shown in these statements. It is seen that the percentages of households moving upwards and also moving downwards are quite significant both in rural and urban India and there is also a close sub-sample agreement. While the percentages of rural households showing no movement, movement upward and movement downward are about 48, 32 and 20 respectively, the corresponding percentages in urban India have been observed to be 52, 33 and 15 respectively. Percentages of households moving towards higher expenditure classes after adjustment are found to decline with the increasing level of per capita expenditure both in rural and urban India but this decline is at a faster rate in the rural areas than in urban areas. Contrary to this, the percentage of households showing downward movement increases with the rise of per capita expenditure levels both in rural and urban India and the increase is also more dominant in respect of rural sector than in urban sector. Thus it may be stated that the extent of displacement towards lower expenditure classes after adjustment is more pronounced among the households belonging to higher MPCE classes than those belonging to lower MPCE classes. Or, in other words, purchase of durable goods is more or less spread over a year among the richer households, whereas among the poor such items are purchased as stray incidents during the year.

5.3 It is further seen from statements IR and IU that the extent of displacement is more concentrated in the adjoining MPCE classes on either side rather than on more distant classes. In rural India about 28 percent of households moved to immediately one class above the MPCE classes while movement to remaining higher classes was shown by about 4 percent of households, with total movement upwards being shown by about 32 percent households. Similarly, in urban India

STATEMENT (1R) : PERCENTAGE OF HOUSEHOLDS BY MONTHLY PER CAPITA EXPENDITURE (MPCE) CLASSES SHOWING (i) NO MOVEMENT (ii) MOVEMENT TO THE ADJACENT CLASSES (UPWARDS AND downwards) (iii) TOTAL MOVEMENT UPWARDS AND (iv) TOTAL MOVEMENT downwards AFTER ADJUSTMENT BY SUB SAMPLE

about 29 percent of households moved to their next higher MPCE class while movement to remaining higher classes was by about 4 percent - the households with total movement upward being shown by about a third of all urban households. This feature is indicative of the fact that the effect of adjustment of annual expenditure causes displacement of the households mainly around the classes adjacent to the MPCE classes to which they belong.

5 4 Though the percentages of households moving upwards decrease and those moving downwards increase with the rising level of expenditure classes both in rural and urban areas, still the extent of difference between these movements in opposite directions over different MPCE classes is found to behave differently in these two sectors. From Statements I R and I U as also from Charts 1 and 2 it is seen that for each MPCE class in urban sector the percentages of households moving upwards are always higher than those moving downwards. But as opposed to this, in rural sector, among the population belonging to MPCE class higher than Rs 100-125 percentage of households moving upwards become less than those moving downwards. Thus while in urban areas, the extent of upward shift dominates over that of downward shift though gradually on a reduced scale with the rise of MPCE levels, it is seen in rural areas that the extent of upward shift dominates over that of downward shift in respect of those households belonging to MPCE classes upto Rs 100-125. Thereafter, it narrows down steeply much below the neutral line (Chart-3) on which the extent of these two movements get perfectly balanced. So it is seen that the effect of adjustment results in having enhanced monthly per capita expenditure more in urban than in rural areas.

5 5 Statement 2 gives the unadjusted average MPCE, adjusted average MPCE, amount of adjustment and percentage increase due to adjustment of annual expenditure for 17 major states and all India. It is seen that there is always an increase of average MPCE after adjustment both in rural and urban sectors of all the states and all India except Andhra Pradesh and Punjab where the adjustment results in marginal decrease. Moreover, the extent of increase in average MPCE whether in absolute terms or in relative terms appears to be more in urban than in rural. At all India level there is an increase of about Rs 4 in rural sector while in urban it is around Rs 16.

STATEMENT 3 (R) : PERCENTAGE (0.00) OF HOUSEHOLDS SHOWING (1) NO CHANGE (II) MOVEMENT UPWARD AND (III) MOVEMENT DOWNWARD  
AFTER ADJUSTMENT BY MICE CLASSES AND BY SUB-SAMPLES FOR MAJOR STATES AND ALL INDIA
