NATIONAL SAMPLE SURVEY : 43RD ROUND (JULY 1987-JUNE 1988)

REPORT ON THE FOURTH QUINQUENNIAL SURVEY ON
CONSUMER EXPENDITURE : PARTICULARS OF DWELLING UNITS

SECTION ONE

INTRODUCTION

1.0 Data on household consumer expenditure were being collected in every round of the National Sample Survey (NSS), beginning from its first round of survey which started in October, 1950 through the 28th round (1973-74). After the 26th round of the survey, the Governing Council of NSSO decided that the survey on Consumer Expenditure and Employment & Unemployment, be undertaken together once in five years beginning from the NSS 27th round. Thus, the first quinquennial survey on consumer expenditure was conducted in the 27th round (September '72 - October '73). To meet some specific ad-hoc requirements, a survey on consumer expenditure was also conducted in the 28th round outside this quinquennial programme. The second and third quinquennial surveys on consumer expenditure were, conducted during NSS 32nd round (July '77 - June '78) and 38th round (January - December '83) respectively. It was decided to conduct the survey every year from the NSS 42nd round ^{1/} (July '86 - June '87) onwards, although on a relatively smaller scale compared to the quinquennial surveys, with a view to building up a time series of consumer expenditure data. The NSS 44th round (July '88 - June '89) was the second survey of the annual series^{2/}. The present report is based on

1/ Results published in Sarvekshana, Vol. XII, No. 4, Issue No. 39, April-June '89.

2/ The results of 44th round based on the first two sub-rounds were published in special report No. 2 'Key results of consumer expenditure survey' first semi-round (July '88 - December '88) of NSS 44th round; the Report No. 370/2 gives data of the whole round.

the data collected in the 43rd round, that is, the fourth quinquennial survey on consumer expenditure, carried out during the period July '87 - June '88 .^{3/} A noteworthy feature of this round is that in order to net, in the sample, sufficient number of households belonging to the upper income classes, some significant changes have been made in the sample design of the 43rd round survey.

1.1 As in the case of NSS 38th round, in 43rd round also the results are proposed to be released through a number of separate reports. The first report on the 43rd round survey is N.S.S Report No. 372 which gives basic results on pattern of consumer expenditure. The present report is the second of the series and give the results relating to housing condition including primary sources of energy used for lighting and cooking.

1.2 It is to be mentioned here that due to paucity of resources and the need for timely release of data, this report, like Report No. 372, is based on the data of sub-sample 1 only.

1.3 Report No. 372 gives, in great detail, the scope, coverage, sample design and estimation procedure in Section Two and the important concepts and definitions adopted for the consumer expenditure survey of 43rd round in Section Three. Therefore, they are not repeated in this report. However, Statement 0 giving the sample sizes given in Section Two there will be reproduced below. Besides, the concepts and definitions relevant for the housing condition results presented in this report are also given below in this Section. Some of the major findings of the survey are discussed in Section Two which gives, towards the end, also a few explanatory notes on the detailed tables presented in this report as Appendix. Finally, the detailed tables are given in Appendix.

^{3/} The results of the NSS 27th, 32nd and 38th rounds of survey on consumer expenditure have been published in Sarvekshana Vol. II, No. 3, Vol. IX, No. 3 and No. 4 respectively.

4 Statement 0 gives the number of sample villages and blocks allotted and surveyed and the number of sample households and persons surveyed in each state and union territory in 43rd round (sub-sample 1 only)

* Nucleus villages. The ultimate sample size was about four times

1.5 Some important definitions adopted in respect of the information on housing condition collected in the consumer expenditure schedule of NSS 43rd round are given below :

1.6 Dwelling house (unit) : Dwelling house (unit) is the existing house accommodation available to the household for its residential purpose. It may be the entire building, tenement, thatched house or jhopri or a portion thereof used by the household either exclusively or jointly with other households.

1.7 Type of dwelling : The dwellings have been classified into three "types", namely, "chawl/bastee", "independent house" and "flat". These are defined below.

1.8 Chawl/bastee is a collection of huts or tenements generally of katcha or semi-pucca type inhabited by a large number of households.

1.9 Independent house is a free standing structure or structures with a separate entrance. In other words, if the dwelling unit and the entire structure of the house are physically co-terminous, it is considered an independent house.

1.10 Flat is a part of the building with one or more rooms and normal housing facilities like water supply, latrine, toilet etc., which are used exclusively by the family residing therein or jointly with other families.

1.11 Type of structure : The dwellings have been also classified by their "type of structure" into three categories, viz. "pucca", "semi-pucca" and "katcha". These terms are explained below.

1.12 Pucca structure is one the walls and roof of which are made of pucca materials.

1.13 Katcha structure is one which has walls and roofs made of non-pucca materials.

1.14 Semi-pucca structure is one which has either the walls or the roof, but not both, made of pucca materials. Walls/roof made partially of pucca materials is regarded as katcha walls/roof.

Materials such as over-burnt bricks, stone-blocks, cement concrete, jack board (cement plastered reed) tiles and timber are pucca materials. Corrugated iron or asbestos sheets used in the construction of roof is also treated as pucca materials.

1.15 House category : The dwellings have been classified into 9 "house categories", each of which is a combination of a structure type and type of dwelling. They are numbered as follows :

house category number	structure type	type of dwelling
(1)	(2)	(3)
1	katcha	chawl/bastee
2	katcha	independent house
3	katcha	flat
4	all katcha structure (1 to 3)	
5	semi-pucca	chawl/bastee
6	semi-pucca	independent house
7	semi-pucca	flat
8	all semi-pucca structure (5 to 7)	
9	pucca	chawl/bastee
10	pucca	independent house
11	pucca	flat
12	all pucca structure (9 to 11)	

1.16 Covered area : This is the sum of floor area of all rooms, kitchen etc., and covered and/or uncovered verandah.

1.17 Monthly rent (actual and imputed) : Monthly rent is the amount of money payable per month to the owner or to ~~some~~ other party as per the contract between the occupier of the accommodation and the person who lets it out. For houses occupied otherwise than on rent, imputation of rent is done on the basis of the prevailing rate of rent for similar houses in the locality.

1.18 This concludes Section One. The important findings of the survey are considered in the following Section Two.

SECTION TWO

SUMMARY FINDINGS

2.0 In this section findings on some aspects of housing condition including major sources of energy used for cooking and lighting based on data collected in the 43rd round (July 1987-June 1988) survey schedule on Household Consumer Expenditure are presented.

2.1 Type of structure of dwellings : In Statements I & II per 1000 distribution of households by type of structure are presented for states, Union territories and all-India for rural and urban areas.

2.2 From Statement I it can be seen that katcha dwellings are predominant in the rural areas of the following states/u.t's : - Assam, Bihar, Manipur, Meghalaya, Orissa, Tripura and West Bengal. It is the dominant type also in Andhra Pradesh, Rajasthan, Tamil Nadu, U.P., the Bay Islands, Arunachal Pradesh, Mizoram and Pondicherry. This may be partly due to the poverty of the rural population or the cultural habits of the native tribes of these states or a combination of these two factors i.e., the poor living condition of their tribal population. Madhya Pradesh and Maharashtra seem to be exceptions to this pattern. Despite poverty (especially M.P.) and a large percentage of tribal population, the proportion of katcha dwellings is relatively small in these two states. The proportion of katcha structures is least (as regards the rural sector) in Haryana, Punjab, Chandigarh, Delhi, Goa, Daman & Diu and Lakshadweep. On the other hand in these six states/u.t's pucca structures predominate, which reflects the high standard of living of their inhabitants. Pucca houses dominate in Kerala as well.

2.3 From Statement II, one can see that the urban sector in general pucca dwellings dominate over the other two types of structure. In all states and u.t's, there is a reduction in the proportion of katcha dwellings in the urban sector compared to that in the rural sector. The fall is ^{very} steep in most cases, the exceptions being Manipur, Tripura, Arunachal Pradesh and Pondicherry. In these states, katcha dwellings dominate even in the urban sector (except in Pondicherry where proportions of katcha and pucca dwellings are nearly equal). The proportion of pucca dwellings is the highest in North-West India, Haryana, Himachal Pradesh, Punjab, Rajasthan, Delhi and Chandigarh. The tiny Lakshadweep is also in this group.

All India	177	242	577	4	1000

2.4 Type of dwellings : Statement III relates to the per thousand distribution of households over type of dwellings for each state, union territories and all-India separately for rural and urban areas. It is seen from the distribution of households over the type of dwelling units that both in rural and urban areas at the all-India as well as state levels, majority of the households live in independent houses. In the rural India, for each thousand households, 778 households are reported to be living in independent houses, 178 households in chawl/bastee type accommodation and 41 households in flats.

2.5 Majority of rural dwellings was of independent type in all the states and union territories. This type of accommodation accounts for more than 90 per-cent of rural dwellings in Haryana, Himachal Pradesh, Kerala, Meghalaya, Punjab, Dadra Nagar Haveli and Lakshadweep, 80 to 90 per cent in Assam, Jammu & Kashmir, Karnataka, Manipur, Rajasthan, Tamil Nadu, Tripura, Uttar Pradesh, Delhi, Goa Daman & Diu and Mizoram. The remaining states share less than 80 per cent of rural dwellings of this type of accommodation.

2.6 Chawl/bastee type dwellings, however, formed a sizeable portion of rural dwellings in Maharashtra, Orissa, Arunachal Pradesh and Pondicherry.

2.7 A large proportion of rural dwellings was flat type in Chandigarh. Two other states in which flat type dwellings formed more than 10 per cent of rural dwellings are Jammu & Kashmir and Andhra Pradesh.

2.8 It is also observed from Statement III that housing in urban India is also dominated by independent dwellings. In the urban India, for each thousand households, 597 households are reported to have lived in independent houses, 205 households in chawl/bastee type accommodation and 194 households in flat type dwellings.

2.9 Majority of urban dwellings are of independent type in most of the states and union territories. This type of dwellings constituted more than 90 per cent of the urban dwellings in Manipur, Lakshadweep and Mizoram, 70 to 90 per cent in Assam, Haryana, Karnataka, Kerala, Nagaland, Punjab, Rajasthan and Tripura. The remaining states and union territories share less than 70 per cent of this type of accommodation.

All India	778	178	41	3	1000	597	205	194	4	1000

2.10 Chawl/bastee type forms the majority of urban dwellings only in Maharashtra. This type of dwellings constituted 30 to 39 per cent of urban dwellings in Gujarat, Arunachal Pradesh and Pondicherry, 20 to 29 per cent in Madhya Pradesh, Nagaland, Orissa, West Bengal and Goa, Daman & Diu.

2.11 Flat type forms 70 per cent of urban dwellings in Sikkim and 58 per cent in Chandigarh. This type accounts for more than 30 per cent of the urban dwellings also in West Bengal, Andaman & Nicobar Islands, ^{Delhi and} Jammu & Kashmir, 20 to 30 per cent in Andhra Pradesh, Himachal Pradesh, Maharashtra, Meghalaya, Tamil Nadu and Goa, Daman & Diu.

2.12 Statement IV gives per thousand distribution of households over type of structure and by sector for NSS 38th and 42nd rounds for comparison with the results of 43rd round. From the Statement it is seen that the proportion of katcha dwellings shows a decreasing trend in rural areas and an increasing trend in urban areas. As regards pucca houses, their proportion shows a rising trend in rural as well as urban areas, although the increase is less marked in the latter case.

2.13 Statement V gives per thousand distribution of households over type of dwellings and by sector for NSS 38th, 42nd and 43rd rounds. The Statement does not throw any discernible trends regarding the type of dwellings obtained through the results of the three NSS surveys.

2.14 Per thousand distribution of households by type of occupancy for states and union territories is given separately for rural and urban areas in Statement VI. In the rural sector at the all-India level, out of thousand households, 930 households are reported to have lived in their own house, 29 households are found to be tenant households and 41 as other households. Majority of the rural households live in their own house except in Chandigarh where 54 per cent of the households reside in rented houses.

2.15 In the urban sector at the all-India level, for each thousand households, 527 households are reported to be living in their own houses, 362 households are found to be tenant households and 111 as other households living in neither owned nor rented premises.

2.16 Characteristics of tenancy in urban areas : Statement VII presents number of households living in rented houses per thousand households, average monthly rent (actual) per household and per thousand distribution of urban households residing in rented houses over nine household monthly actual rent classes. According to the above statement, 361 out of thousand households live in rented houses in all-India (urban sector). More than 50 per cent of urban households are found to be residing in rented houses in Himachal Pradesh Nagaland, Sikkim, Andaman & Nicobar Islands and Chandigarh and 40 to 50 per cent in Maharashtra, Meghalaya, Tamil Nadu and West Bengal.

2.17 Average monthly rent per household (living in rented house) is estimated to be Rs.130/= in urban India. The value is relatively high in Goa, Daman & Diu (Rs. 363), Delhi (Rs. 295), Chandigarh (Rs. 280), Meghalaya (Rs. 241) and Andaman & Nicobar Island (Rs. 198) and comparatively low in Uttar Pradesh and Maharashtra (each Rs. 96), Nagaland (Rs. 91), Tripura (Rs. 72) and Lakshadweep (Rs. 60).

2.18 The distribution of households living in rented houses by monthly rent class is highly skew, with a long right tail, for all-India as well as the individual states/u.t's. The mode of the distribution lies in the class Rs. 20-50 or Rs. 50-100 for most states and all-India.

2.19 Statement VIII presents the number of households living in owned house per 1000 households, average imputed monthly rent, of and per thousand distribution of households living in owned house over nine household monthly rent class for each state, union territory and all-India in urban areas. It can be seen that out of thousand households, at all-India level, 527 are found to live in their own house. Their proportion is more than 50 per cent of urban households in Andhra Pradesh, Bihar, Gujarat, Haryana, Jammu & Kashmir, Kerala, Madhya Pradesh, Manipur, Punjab, Rajasthan, Tripura, Uttar Pradesh, Goa, Daman & Diu, Lakshadweep and Mizoram.

2.20 Estimated average monthly imputed rent per household for own house is Rs. 277 at all-India level in the urban areas. The rent is very much high in urban - Chandigarh and Delhi. The value is, relatively high in Gujarat, Punjab, Sikkim, Arunachal Pradesh and Goa, Daman and Diu. It may appear strange, but the average imputed rent for

owned dwellings is invariably higher than the average rent paid by households living in rented houses for each state/u.t. as well as for all-India.

2.21 Statement IX gives an idea of the rate of appreciations of residential rents in the urban areas of India in a span of five years between 1983 (38th round) and 1987-88 (43rd round). At all-India level it has increased more than 50% most and in states the increase is between 40% and 100%. Of course this is the result of the general inflation in prices that has affected the whole economy. Whether the higher rates of increase in rent are associated with higher rates of urbanization is a subject to be investigated.

2.22 Statement X gives (a) the proportion of households (per 1000 households) living in rented houses and (b) per capita covered area for all households for 38th and 43rd rounds for major states and u.t's. From the Statement it appears that the proportion of households living in rented accommodation has marginally fallen. However, in many states, the reverse trend is also observed.

2.23 As per 43rd round, the per capita covered area available for living purposes in urban areas is 9.37 square metres at all-India level. It is in the range of 8 to 10 square metres for most states. Compared with 38th round, the per capita covered area seems to have increased, although by varying degrees, in almost all states and u.t's. The increase reported in the case of Assam from 9.42 square metres to 16.54 square metres is the largest.

2.24 The distribution of households living in own houses by imputed rent is by far less skew than that of households living in rented houses.

2.25 Fuel used for cooking : Statements XI & XII give per thousand distribution of households using different types of fuels as the source of energy for cooking for each state, union territory and all-India separately for rural and urban sectors. Barring a few exceptions, in the rural sector, firewood and chips provide fuel for cooking for an overwhelming majority of households for almost all the states. For some states, dung cake is an important second source and for some other states Kerosene is a second one. Thus, out of thousand households 528 households in Delhi, 477 households in Punjab,

STATEMENT IX : AVERAGE MONTHLY RENT PAID BY HOUSEHOLDS LIVING IN RENTED HOUSES IN URBAN AREAS FOR NSS 30TH AND 43RD ROUNDS FOR SELECTED STATES AND ALL INDIA.

428 households in Haryana, 378 households in Uttar Pradesh and 269 households in Bihar use dung cake as the second source of energy for cooking. In Chandigarh, kerosene is used by a majority of households.

2.26 In the urban sector for a good number of states as shown in Statement XII, most of the households use firewood and chips as the principal fuel for cooking. In Jammu & Kashmir, Karnataka, Meghalaya, Nagaland, Sikkim and Arunachal Pradesh both firewood and kerosene are used. In Bihar and West Bengal a large proportion of households use coke/coal for cooking. Out of each thousand households, 578 households in Chandigarh, 496 households in Delhi, 452 households in Goa, Daman & Diu, 339 households in Maharashtra, 295 households in Haryana and 278 households in Punjab prefer gas, mainly liquid petroleum gas as one of the main source of fuel for cooking.

2.27 Primary source of energy for lighting : Statement XIII presents per thousand distribution of households over primary source of energy used for lighting for each state, union territory and all-India separately for rural and urban sectors. In a majority of states/u.t.'s kerosene is the primary source of energy for lighting in rural areas. Such states are Assam, Bihar, Orissa, Rajasthan, Tripura, Uttar Pradesh and West Bengal. Electricity is the next important source of energy for those states. Electricity is the primary source of lighting for Himachal Pradesh, Jammu & Kashmir, Punjab, Chandigarh, Delhi, Goa, Daman & Diu and Lakshadweep in the rural sector. Other than the above two widely used sources, some significant proportion of households also report other sources of energy in Andaman & Nicobar Islands and Arunachal Pradesh.

2.28 In the urban areas, it is observed that in almost all the states, electricity is used by a major proportion of households; a large proportion of households also use kerosene for lighting in Bihar, Orissa, Uttar Pradesh, West Bengal and Pondicherry.

.29 Statement XIV presents per thousand distribution of households over primary source of energy for lighting and by sector for NSS 28th, 38th and 43rd rounds. For comparison of the results of 28th and 38th rounds with those of 43rd round, different sources of lighting other than electricity and kerosene have been merged.

2.30 Considering the country as a whole, the major fuel for lighting is still kerosene in the rural areas while it is electricity in the urban areas. Over the rounds, there is a definite trend of progressive replacement of kerosene by electricity. This is seen in the case of most states in both the sectors, though in varying degrees. Thus, in the following states electricity has already replaced kerosene as the major fuel over the rounds in the rural sector : - Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Punjab, Delhi and Goa, Daman & Diu. At the other end of the spectrum, the states least affected by rural electrification are the following - Assam, Bihar, Orissa, Uttar Pradesh and West Bengal. In some of the other states - notably all the four southern states - though a high proportion of villages are known to be electrified, the benefit apparently has not percolated to the mass of households. Finally there are states like Maharashtra, and to some extent Madhya Pradesh and Manipur, who, starting from a poor base, have gone far ahead in providing electricity to the rural households.

2.31 In the urban sector majority of the households use electricity for lighting purposes in all states. However, most likely due to lack of purchasing power, considerable sections of the population still do not use electricity in many states. Notable among such states are : - Bihar, Orissa and West Bengal. More than 800 out of 1000 urban households use electricity in the urban areas of the following states - Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Maharashtra, Nagaland, Punjab, Chandigarh, Delhi and Goa, Daman & Diu. It may be noted that Jammu & Kashmir, with 974 households out of 1000 in the urban sector using electricity as major energy ^{for} lighting, ranks first in this respect.

* Sarvekshana Vol. 12, No. 2, October 1988: Results on source of drinking water and energy used for cooking and lighting : 38th round (Jan. - Dec.1983).

2.32 Important results on housing condition obtained from the survey were discussed in the preceding paras of this section. Detailed tables are given in the Appendix. Table 1 - series of Appendix give the distribution of (i) number of sample households having no dwelling units (ii) estimated number of households with no dwelling units per 1000 households and (iii) per 1000 distribution of households with dwelling units by broad house category for each type of occupancy.

2.33 Table 2 - series give (i) number of households having no dwelling unit per 1000 households with the corresponding number of sample households and (ii) per 1000 distribution of households with dwelling units by broad house category for each monthly per capita expenditure class.

2.34 Table 3 - series give number of (i) all households, (ii) households reporting covered area per 1000 households and (iii) per capita covered area (in square metre) by type of structure and monthly per capita expenditure class.

2.35 The subject matter of table (i.e. the series to which it belongs, as described above) is the left-most digit of the table number. This is followed, after a period, by a running serial number, each number representing a separate state/u.t. or all-India. The sector to which the table relates is finally indicated by the letters R (for rural) and U (for urban).
