PREFACE

The National Sample Survey Organisation (NSSO) of the Department of Statistics in the Ministry of Planning and Programme Implementation commissioned an all - India sample survey of manufacturing and repairing units employing less than six workers during the 45th round survey (July 1989 to June 1990). Based on data collected in the survey, a report giving some selected results at all-India level has recently been published by the NSSO. The present report (in two volumes) is in continuation of the all-India report and gives details at State level. The Government had appointed a Working Group for generally looking after all aspects of the survey. The membership of the group is given in appendix D of the present report.

The present report was prepared by the Survey Design and Research Division (SDRD) of the NSSO. I am grateful to the team of SDRD officers, very ably led by their Director Dr. V. Saha, for undertaking a painstaking analysis of data and then drafting the report. An earlier version of the report was examined by a number of experts. The suggestions made by them helped a lot in improving the report. I sincerely acknowledge the efforts made by various reviewers.

It is hoped that data prescribed in the all-India report earlier released together with those in the present volumes will fill an important information gap in the industrial sector of the country and will enable the economic planner to better assess the contribution of the sector to the national economy. Comments and suggestions from readers of the report will be most welcome, since they would help us in improving our future endeavours in the direction.

New Delhi
Dated 17 April 95

S.S. Srivastava
Chief Executive Officer
National Sample Survey Organisation

SECTION - I

1. INTRODUCTION

1.1 National Sample Survey Organisation, during its fortyfifth round (July, 1989 - June, 1990), undertook the survey on unorganised manufacturing and repairing enterprises in the country. The survey aimed at studying the unorganised manufacturing and repairing sector of the economy extensively by identifying its structure by enterprise type in both rural and urban areas. Attempts were made to collect information on the basic characteristics like fixed assets, working capital, outstanding loans, employments, emoluments, input, output etc. of the sample enterprises.

1.2 The coverage of the fortyfifth round of NSS was restricted to all small manufacturing and repairing enterprises which were not employing any hired worker (hereafter referred to as 'own account manufacturing enterprises (OAMEs)') and those establishments which were employing at least one hired worker with a total of five or less number of workers (hereafter referred to as 'non-directory manufacturing establishments (NDMEs)'). These enterprises/establishments were those which were covered by the two-digit NIC codes 20 to 39 and 97 classified under the revised National Industrial Classification, 1987 (henceforth referred to as NIC, 1987). It may be noted that the industry division code 99 has appeared in a number of tables of this report which has been used for invalid and not recorded NIC codes in the schedules.

1.3 The geographical coverage of the fortyfifth round was the whole of the Indian Union except two districts of Jammu & Kashmir (viz., Ladakh and Kargil) and some interior villages of Nagaland situated beyond five kilometers from the bus route. All the States/Union Territories participated in the fortyfifth round with the exception of the Union Territories of Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep.

1.4 The number of first stage units surveyed in the Central and state samples were 14,984 (7664 villages and 7320 urban blocks) and 17,080 (8352 villages and 8728 urban blocks) respectively.

The estimates presented in this report are at state level and based on central sample only.

1.5 During the one year period (July, 1989 - June, 1990) of collection of data, 1.23 lakhs manufacturing (including repairing) units were surveyed throughout the country, of which 72.08 per cent were OAMEs and the rest were NDMEs. Of the total units surveyed, 63.85% were from rural areas and the rest were from urban areas. Based on the data collected from these units, NSSO has already published a report giving information at All-India level (Report No. 396/1). This report is the second in the series of reports being published and it contains detailed results at state level. The state level results are presented in two volumes. The present report is the first volume giving detailed information on number of enterprises (by type of enterprise), persons employed (by nature of employment) and three major parameters of the manufacturing units, viz., input, output and value added in respect of all the States and Union Territories.

However information for the following States/UTs Arunachal Pradesh (NDME-Rural), Sikkim (NDME-Rural), Delhi (OAME-Rural & NDME-Rural), Lakshadweep (NDME-Rural), Pondicherry (NDME-Rural) and Daman & Diu (NDME-Urban) are not presented separately because of small number of sample enterprises. But the State level (OAME & NDME combined) results for these States/UTs and the All-India results are presented considering the data of all the sample enterprises for these States/UTs.

The second volume of the report will provide a variety of information on different aspects of the unorganised manufacturing sector, such as, distribution of enterprises by type of ownership, source of energy used, nature of operation and social group; value of fixed assets owned & not owned and addition to fixed assets, working capital, net borrowings, emoluments, input and output etc. for all the States and Union Territories separately for rural and urban areas.

1.6 The structure of the State report : Vol. - I is as follows : Important concepts and definitions adopted in the survey are explained in Section II. Major findings based on the survey data are discussed in summary form in Section III. The state level detail tables are given in Appendix--A. Appendix-B gives annote on sample design and estimation procedure followed in arriving at the estimates presented in this report. Industry division codes with corresponding description are given in Appendix - C, Appendix-D gives the list of the Working Group members of the NSS fortyfifth round.

SECTION-II

CONCEPTS AND DEFINITIONS

Important concepts and definitions followed in this survey are explained below.

2.1 Enterprise : An undertaking engaged in the production and/or distribution of some goods and/or services meant mainly for the purpose of sale, whether fully or partly, is termed as an enterprise. An enterprise may be owned and operated by a single household or by several households jointly on a partnership basis, or by an institutional body. The activities of an enterprise may be carried out by household members and/or by hiring outside labour on a fairly regular basis.

2.2 Household enterprise : A household enterprise is that enterprise which is run by one or more members of a household irrespective of whether the enterprise is located in the same premises as the household or not. An enterprise run by two or more households on partnership basis is also taken as a household enterprise. In other words, all proprietary and partnership enterprises are household enterprises.

2.3 Non-household enterprise : Non-household enterprises are those which are institutional, i.e., owned and run by the public sector (Central or State Government, local self-governments, local bodies, government undertakings, etc.), co-operative societies, corporate sector, other types of societies, institutions, associations, trusts, etc.

2.4 Own-account enterprise : An enterprise which is run without any hired worker employed on a fairly regular basis is termed an own-account enterprise. If such an enterprise is engaged in manufacturing and/or repairing activities, it is termed an own-account manufacturing enterprise (OAME).

2.5 Establishment : An enterprise which is employing at least one hired worker on a fairly regular basis is termed as establishment.

2.6 Non-directory establishment : An establishment employing less than six workers (household and hired taken together) is termed a non-directory establishment. If such an establishment is engaged in manufacturing and/or repairing activities, it is termed a non-directory manufacturing establishment (NDME).

2.7 Fairly regular basis : The term "fairly regular basis" means that the enterprise/establishment has engaged hired worker(s) during the major part of its period of operation(s) in the last one year. However, it is not necessary that the same worker(s) should be employed throughout the period.

2.8 Industrial area and conforming area : Industrial area is an area exclusively reserved for industries. Conforming area is a residential area where industries are also permitted.

2.9 Nature of operation of enterprise : It indicates the regularity with which enterprise was run. If the activity of the enterprise runs more or less regularly throughout the year it will be a perennial enterprise. When the enterprise usually operates during a particular season or fixed months of a year, it is termed a seasonal enterprise. When the activities of an enterprise are neither perennial nor seasonal in nature but are undertaken occasionally during the reference year, the enterprise is termed a casual enterprise.

2.10 Fixed assets : Fixed assets will mean assets of the enterprise in the form of land, building, plant & machinery, transport equipment, tools and other fixed assets (new or used) that have a normal economic life of more than one year from the date of acquisition i.e., through outright purchase/hire purchase/loan/mortgage and/or construction, irrespective of their use(s) at the time of survey. The present market value of the fixed assets has been considered.

2.11 Working Capital : Working capital refers to the physical and financial resources used by the enterprise for its day-to-day activities. It is therefore a constantly changing entity since resources available at a particular point of time will undergo change from day-to-day as the enterprise functions - a part of the resources getting used up in the manufacturing process or other connected activities and replenishments being made from time to time. Physical part of the working capital includes raw materials, stores, fuel, lubricants, semi-finished products and finished products & by-products. Financial part comprises cash in hand & at bank and net balance of amounts receivable and payable.

2.12 Loan : All borrowings in cash, i.e., monetary or cash loans, incurred but subsequently repaid or contracted to be repaid in cash or kind, are considered as loan for this survey.

2.13 Input : The value of raw materials, electricity, fuel, lubricants and other auxiliary materials consumed and services purchased, maintenance and other expenses incurred by the enterprise for production purposes are considered total value of input.

2.14 Output : The value of products and by-products manufactured by the enterprise together with the value of industrial services rendered to other concerns and other receipts incidental to entrepreneurial activity are considered as total value of output. The output is evaluated at ex-factory price.

2.15 Value added : This represents that part of production which is the actual contribution of the enterprise to the economy. Value added is calculated by deducting total value of input from the total value of output.

SECTION III

SUMMARY OF FINDINGS OF THE SURVEY

3. In the 45th round, 7664 villages and 7320 urban blocks were surveyed in the central sample. Data were collected from a total of 1,23,305 sample enterprises, of which 53.85% were from rural areas and the rest were from urban areas of the total enterprises surveyed, 88,877 were CAMEs and 34,428 were NDMEs. The percentages of CAMEs and NDMEs surveyed from rural areas were 59.38 and 39.56 respectively. The major findings of the survey based on the data collected from the sample enterprises are discussed below.

3.1 Number of enterprises surveyed: Out of the 1.23 lakhs manufacturing (including repairing) enterprises surveyed, spread over 7664 villages and 7320 urban blocks, Uttar Pradesh accounted for the largest share in both rural and urban samples. Other three

Statement 1: Percentage distribution of sample number of enterprises in the major states for own account enterprises and non-directory establishments taken together.

states, in descending order of the percentage share of enterprises surveyed were Bihar, Andhra Pradesh and West Bengal in rural samples and Maharashtra, Tamil Nadu and Rajasthan in urban samples. These four states, viz. Uttar Pradesh, Bihar, Andhra Pradesh and West Bengal together nearly 44 per cent of the total rural enterprises surveyed. In urban areas more than 41 per cent of the total enterprises surveyed were in the four states, viz., Uttar Pradesh, Maharashtra, Tamil Nadu and Rajasthan.

The major thirteen states accounted for about 84% of the rural and 86% of the urban enterprises in the sample. Share of sample enterprises surveyed
Statement 1 shows the percentage in these thirteen states. :

3.2 Estimated number of enterprises :

Total number of manufacturing enterprises in the country, falling within the unorganised sector covered by the fortyfifth round survey, has been estimated as 157.31 lakhs, of which 120.19 lakhs (i.e., about 76%) were in rural areas and the rest in urban areas. In rural areas, the states of West Bengal and Uttar Pradesh accounted for about 20% and 15% of the estimated rural enterprises in the country, while in urban areas about 16% and 15% of the estimated urban enterprises were accounted for by the states of Tamil Nadu and Uttar Pradesh respectively. In rural areas, the leading five states, viz. West Bengal, Uttar Pradesh, Andhra Pradesh, Bihar and Orissa together accounted for more than 62% of the estimated enterprises, whereas in urban areas the leading five states, viz. Tamil Nadu, Uttar Pradesh, West Bengal, Maharashtra and Andhra Pradesh together accounted for about 59% of the estimated enterprises. Statement 2 gives the percentage share of estimated number of manufacturing enterprises for major thirteen states separately for rural and urban areas.

Statement 2 : Percentage distribution of estimated number of enterprises in the major states for own account enterprises and non-directory establishments taken together.

13	West Bengal	20.47	9.79
14	Others	5.54	7.73
15	All-India	100.00	100.00

Total number of estimated enterprises : 1,37,30,967

Rural=120,19,425

Urban=37,11,542

3.3 Estimated employment :

The total employment provided by the unorganised manufacturing sector covered by the survey has been estimated as 296.28 lakh persons. This figure includes full-time, part-time, hired and household workers. Of the total employment 217.06 lakhs (i.e. about 73%) were in rural areas and the rest in urban areas. Of the total xxxxxxxx employment nearly 89% on full-time basis and the rest worked on part-time basis.

Statement 3 gives the percentage distribution of employment in major

states which accounted for about 95% of the total employment in rural areas and 92% of the total employment in urban areas.

In rural areas, West Bengal accounted for the highest share in estimated employment, followed by Uttar Pradesh. The leading five states in descending order of their share of total employment in rural unorganised manufacturing sector were West Bengal, Uttar Pradesh, Orissa, Andhra Pradesh and Bihar. These five states together accounted for about 65% of the total rural employment.

In urban areas, the leading five states in descending order of percentage share in employment were Tamil Nadu, Uttar Pradesh, Maharashtra, Andhra Pradesh and Gujarat, which together accounted for nearly 56% of the total urban employment.

Statement 3 : Percentage distribution of employment in the major states for own account enterprises and non-directory establishments taken together.

3.4 Estimated number of enterprises, employment and gross value added - comparative statement for all states and U.T.s.

The summary Statements 4A & 4B give comparative picture of different states and Union Territories on three essential aspects of unorganised manufacturing sector taking OAMEs and NDMEs together. These are : number of enterprises, number of employees (full-time and part-time) and gross value added. For completeness of the position of different States and Union Territories the number of enterprises surveyed and the percentage share of value added are also given in these two statements. Statement 4A relates to rural areas whereas Statement 4B relates to urban areas.

Statement 4A shows that in rural areas West Bengal has the highest number of enterprises followed by Uttar Pradesh, Andhra Pradesh and Bihar. In the urban sector (Statement 4B), top four states are Tamil Nadu, Uttar Pradesh, West Bengal and Andhra Pradesh. UTs do not have substantial number of enterprises in both areas with the exception of Delhi (urban), where 84914 enterprises are observed.

As regards the employment positions of the states/UT's, it is generally observed that full-time workers far outnumber the part-time workers in this sector of the economy. This is a common feature for rural as well as urban areas. In fact, Delhi in rural areas and Dadra & Nagar Haveli and Daman & Diu in urban areas did not employ a single part-time worker. For some states, however, substantial number of part-time workers were observed. These states were West Bengal, Uttar Pradesh, Orissa, Maharashtra and Kerala in rural areas ; and Gujarat, Maharashtra, Rajasthan, Uttar Pradesh and West Bengal in urban areas. West Bengal in rural areas was found to be employing maximum number of full-time workers. Uttar Pradesh, Andhra Pradesh and Orissa come in the next three positions for employment of full-time workers in this sector. The top 4 states in the number of full-time workers in urban areas were Tamil Nadu, Uttar Pradesh, West Bengal and Maharashtra in the respective order. Maximum number of part-time workers were employed by West Bengal in rural areas and Uttar Pradesh in urban areas.

The gross value added of a state/UT gives an idea about the contribution of the unorganised manufacturing sector of that State/ UT in the national income. The percentage distribution of gross value added also shows the share of value added of a State/UT to the total value added from this unorganised sector. It is observed that in rural areas West Bengal's share is about 21% of the total value added from this sector. The next three states in this order are Uttar Pradesh, Bihar and Andhra Pradesh. These four states account for more than 53% of the total rural value added. In urban areas, the top four states in percentage share of gross value added are Gujarat, Uttar Pradesh, Maharashtra and Tamil Nadu and they contribute more than 53% of the total urban value added. The UTs are found to be contributing merely 0.12% in rural areas and 6.89% in urban areas. Delhi (urban) is the only UT which contributes substantially (6.54%) in the total value added.

3.5 Per enterprise estimates of input, output and value added :

Statement 5 gives per enterprise estimates of three important economic parameters of an enterprise, viz., input, output and value added in major thirteen states and the Union Territory of Delhi for own account enterprises and non-directory establishments taken together. These states and Delhi accounted for almost 92% of the total value added in rural areas and 95% in urban areas.

Per enterprise value added is, as expected, higher in urban areas than in rural areas. The urban-rural difference in value added is most prominent for Gujarat (urban value added is 5.11 times of the rural value added) and least prominent for Delhi (urban value added is 1.16 times of the rural value added). While comparing the states on this particular economic parameter, it is observed that Gujarat and Delhi hold distinctive positions in both rural as well as urban areas. In rural areas, Delhi comes first and Gujarat second; and the positions are just reversed in urban areas. The next two states are Maharashtra and Punjab. The value added per enterprise in Maharashtra is little more than that of Punjab in urban areas, but in rural areas Punjab outnumbers Maharashtra.

Statement 5 : Per enterprise estimates of input, output and value added for major states for own account enterprises and non-directory establishments taken together

3.6 Structural ratios :

Statement 6 presents two important structural ratios, viz., value added as proportion of output and output as proportion of input for OAMEs and NDMEs separately for rural and urban areas. The salient features revealed by these ratios are discussed below :

Statement 6 : Structural ratios : Value added as proportion of output and output as proportion of input for own account enterprises and non-directory establishments separately for major states.

serial no.	States	value added as proportion of output				output as proportion of input			
		OAME		NDME		OAME		NDME

14.	Delhi*	-	0.58	-	0.48	-	2.42	-	1.94
All-India		0.52	0.56	0.44	0.41	2.07	2.29	1.78	1.69

* Information for Delhi (OAME-Rural and NDME-Rural) is not presented separately because of small number of sample enterprises.

Value added as proportion of Output :

This ratio gives an idea about how much value is added for a single unit of output. In other words, this ratio provides a measure of productiveness of an enterprise. It is seen from Statement 3 that the ratio varies from 0.38 (West Bengal) to 0.74 (Karnataka) for own Account enterprises and from 0.30 (Kerala) to 0.65 (Karnataka) for Non-directory establishments in rural areas. In urban areas, the ratio varies from 0.50 (Andhra Pradesh) to 0.59 (Gujarat and Karnataka) for own Account enterprises and from 0.27 (Punjab) to 0.48 (Rajasthan and Delhi) for Non-directory establishments. It is also seen that the ratios are generally higher for OAMEs than for NDMEs in both rural and urban areas. Prima facie, the OAMEs are relatively more productive than the NDMEs in both areas. It is also observed that the rural productivities are higher than the urban productivities so far as this segment of the unorganised sector is concerned. Statement 3 also reveals that the ratios for Maharashtra are very close to the All-India ratios.

Output as proportion of Input :

Here output means physical output and input means material input and both are considered in their value terms. This output-input ratio tells about how much output is produced from a single unit of input with the limitation that only the paidout costs or inputs paid for are considered and no imputation for the cost of labour is made.

It is observed that in rural areas, the output per unit of input is lowest in West Bengal and highest in Karnataka for OAMEs whereas the ratio is lowest in Kerala and highest in Karnataka for NDMEs. In urban areas, the ratio is highest in Delhi as well as in Gujarat and lowest in West Bengal for OAMEs whereas for NDMEs the highest and the lowest values are observed in Delhi and Punjab respectively. The statement also shows that the output-input ratio is, in general, higher in rural areas than in urban areas for both types of enterprises. It is also seen that the OAMEs are more productive than the NDMEs in both rural and urban areas. The statement also reveals that the ratios for Maharashtra are close to the All-India ratios.

3.7 Value added per worker :

Statement 7 shows the gross value added per worker in Rupees for OAMEs and IDMEs separately for both rural and urban areas. This statement is also given for major thirteen States and Union Territory of Delhi. Value added per worker is an indicator of the labour productivity. It is found that for OAMEs the labour productivity is highest in Punjab and Delhi for rural and urban areas respectively. For IDMEs the labour productivity is highest in Maharashtra and Gujarat for rural and urban areas respectively. The lowest productivity is reported in Orissa for OAME(rural), Rajasthan for IDME(rural), Tamil Nadu for OAME(urban) and Andhra Pradesh for IDME(urban).

Statement 7 : Gross value added per worker for own account enterprises and non-directory establishments separately in major states.

serial no.	states	rural		urban	
		value added per worker in		value added per worker in

12.	Uttar Pradesh	2503	5494	5372	9425
13.	West Bengal	2737	3032	4900	7339
14.	Delhi*	-	-	12335	17047
All-India		2331	5942	5333	11997

* Information for Delhi (OAME & IDME - Rural) is not presented separately for small number of sample enterprises.

Value added per worker is, in general, higher in NDMEs than in OMEs. This is true for urban as well as rural areas. One of the reasons for higher labour productivity in NDMEs may be the presence of hired workers in such enterprises. The hired workers are employed only when enterprise is engaged in production unlike for the household unpaid workers. In general, the labour productivity is higher in urban areas than in rural areas for both types of enterprises. While comparing the state estimates with the all-India estimates, it is seen that in rural areas estimates for West Bengal and Karnataka are close to the all-India estimates whereas in urban areas the estimates for Rajasthan are close to all-India estimates.

LIST OF STATE-LEVEL TABLES

table no.	d e s c r i p t i o n	page no.

APPENDIX - BSAMPLE DESIGN AND ESTIMATION PROCEDURE1. SAMPLE DESIGN

1.1 Broad Design : The sample design for this survey was an integrated design for both the 45th round of NSS and the DME survey of C.S.O. The design was two-stage stratified with villages/urban blocks as first-stage units (FSUs) and enterprises as second-stage units (SSUs). The sample fsus were common to the 45th round survey and the DME survey. The listing schedule (0.0) canvassed in 45th round survey was also utilised for drawing sample ssus for DME survey.

1.2 Stratification : In rural areas, each district was generally considered as a stratum. However, for Gujarat, where the NSS regions cut across some district boundaries, parts of each such district belonging to different NSS regions formed separate strata. If any district (or part thereof lying in an NSS region) had a small number of manufacturing enterprises, it was clubbed with the neighbouring district(s) within the same NSS region to form a stratum. In urban sector, strata were formed within each NSS region by grouping cities/towns according to population sizes. In all seven types of strata were formed according to population size class X type of frame used as given below :

town/city population (P)	type of frame used	
	updated EC frame	UFS frame
(1)	(2)	(3)
$P < 50,000$	-	stratum no. 1
$50,000 \leq P < 1,00,000$	-	stratum no. 2
$1,00,000 \leq P < 5,00,000$	stratum no. 3	stratum no. 4
$5,00,000 \leq P < 10,00,000$	stratum no. 5	stratum no. 6
$10,00,000 \leq P$	stratum no. 7	-

Total number of rural and urban strata formed are 358 and 246 respectively.

In order to net adequate no. of DMEs and NDMEs in the rural sample, the villages in a stratum were grouped into three sub-strata based on 1980 EC results (wherever available) as follows :

- (a) sub-stratum 1 consisted of villages having at least one DME
- (b) sub-stratum 2 consisted to those of the remaining villages in the stratum which had at least one NDME
- (c) sub-stratum 3 consisted of all the residual villages which had no DME_/NDME or no information about the number of DME/NDME was available due to incompleteness of the EC frame used.

In Arunachal Pradesh, Assam, Lakshadweep and Nagaland and in a few districts of other states (where population census frames were used for selection of fsus), no substratification was made and all the villages in a stratum were identified as sub-stratum 3.

In the urban sector, in each of the strata where EC frame was updated, three sub-strata were formed as follows :

- (a) sub-stratum 1 consisted of UFS blocks in EC-4 frame with at least one DME, where EC-4 frame was that updated frame for which information on no. of OMEs, NDMEs and DMEs were available in each UFS block.
- (b) sub-stratum 2 consisted of UFS blocks in EC-5 frame with at least one DME, where EC-5 frame was that updated EC frame for which information on no. of OAEs, NDEs and DEs for all non-agricultural enterprises taken together were available in each UFS block with indications as to whether there existed at least one DME and at least one NDME/OAME in the UFS block.

/tkb/

- (c) sub-stratum 3 consisted of all the remaining UFS blocks of the stratum.

In the rest of the urban sector, i.e., other than the 64 cities with updated EC frame, two sub-strata were formed within each stratum as follows :

- (a) sub-stratum 1 consisted of UFS blocks having area designated as "industrial area" in the UFS frame, and
(b) sub-stratum 2 consisted of all the remaining UFS blocks in the stratum.

1.3 Frame : The EC-80 frame listed all census (generally refer to 1981 population census except Assam where 1971 population census was used due to the fact that 1981 population census was not conducted in Assam) villages and towns giving (for each of them) the nos. of OAMES, NDMES and DMES, classified by the main industry divisions of NIC 1970. The EC frame thus used, an advantage over the population census frame (which gave population for each village/town), as it enabled the use of appropriate selection probabilities to render the sample more efficient for the purpose of enterprise surveys. However, considering the fact that large number of enterprises might have closed/opened since the time of the EC 1980, it was decided to use the frame after updating in the urban sector. But the updating could be done only in respect of 64 major cities. Thus updated EC frames were used for these 64 cities and for the rest of urban sector, the urban frame survey (UFS) blocks were used. For the rural sector, 1980 EC frame was used, wherever available, in preference to population census frame.

1.4 Allocation of sample fsus between rural and urban sectors :

The total sample size at the state level was allotted between the rural and urban sectors generally in proportion to the gross value added by the unorganised manufacturing enterprises in the respective sector, using the estimates of value added

thrown up by the CSO's DME survey, 1978-79 (in respect of DMEs) and the NSS 33rd round survey (in respect of NDMEs and OAMEs) for the purpose. In the state of Gujarat, Maharashtra and Rajasthan, the allocation on the above basis made the sample size tilt unduly towards the urban sector and hence the same was adjusted for ensuring a minimum sample size for the rural sector which was not less than half the size allotted to the urban sector. For Mizoram, Nagaland, Sikkim, Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep, allocation between rural and urban sectors was made in proportion to estimated number of enterprises of different types with differential weightages as 16 DME + 4 NDME + OAME on the basis of 1980 EC results since the estimates for value added were not available for these states.

1.5 Allocation of sample villages/blocks among strata and sub-strata : In the rural sector, the sample for the state/u.t. was allocated to the constituent strata in proportion to the number of manufacturing establishments (DME + NDME) in the respective strata. The sample villages falling to the share of a stratum were allocated to the three sub-strata in the following manner : A thin sample of 2 or 4 fsus, depending on whether the allocation to the stratum was 20 or less, or more than 20, was allocated to sub-stratum 3 while the remaining fsus were allocated between sub-strata 1 and 2 in the ratio 2 : 1 and rounded off to the nearest multiple of 2. Adjustments were made in cases where sufficient no. of villages were not available in the frame for sub-strata 1 and 2.

The urban sample for state/u.t. was allocated to the constituent strata in proportion to the number of manufacturing establishments (DME + NDME) in the respective strata.

(i) In the strata relating to 64 cities with updated EC frame, the allocation of the stratum sample to the three sub-strata was in proportion to the total number of UFS blocks in the sub-strata with some additional weightages for sub-strata 1 and 2.

(ii) In the rest of the urban strata, the stratum sample was allocated to the two sub-strata in the following manner : UTS blocks belonging to sub-stratum 1 were completely enumerated subject to a maximum of 50% of the stratum sample size and the rest of the sample was allocated to sub-stratum 2. Allocation for each stratum X sub-stratum was rounded to nearest even number in all cases.

1.6 Selection of village/blocks : Villages were selected in the form of two independent sub-samples from each stratum X sub-stratum using the method of circular systematic sampling with probabilities proportional to size (pps). The size was the number of DMEs/NDMEs in the villages as per frame used in case of sub-stratum 1/sub-stratum 2. Selection of villages from sub-stratum 3 was made in the same manner as for the other two sub-strata but with equal probability.

In the strata relating to 64 cities with updated EC frame, sample blocks were selected separately for each stratum X sub-stratum in the form of two independent sub-samples using circular systematic sampling with probabilities of selection as given below :

- (a) sub-stratum 1 : probability proportional to no. of DMEs
- (b) sub-stratum 2 : probability proportional to no. of non-agricultural enterprises.
- (c) sub-stratum 3 : equal probability

In the rest of the urban strata, sample blocks were selected from each stratum X sub-stratum in the form of two independent sub-samples adopting the method of circular systematic sampling with equal probabilities.

1.7 Hamlet group/sub-block selection and sampling of second stage units (ssus):

If (at the time of survey) the approximate population of a village/block was 1200 or more (600 for rural areas of Himachal Pradesh, Sikkim, Nagaland and Punc, Rajori, Udahampur and Doda districts of Jammu & Kashmir) and/ or number of non-agricultural enterprises was 201 or more in the village/block, then the village/block was divided into suitable number of

hamlet groups/sub-blocks. The minimum number of h.g.s./s.bs. formed was 4. That h.g./s.b. which had the largest proportion of manufacturing enterprises of the village/block was invariably selected and designated as h.g./s.b.'0'. From the remaining h.g.s./s.bs., one was selected randomly and designated as h.g./s.b. '1'. The second stage units were then selected circular systematically from these two h.g.s./s.bs. If there was no h.g./s.b. formation, then the whole village/block was considered for selection of second stage units. The enterprises (ssus) were selected from h.g.s./s.bs. as per the chart given below :

enterprise type	no. (ei) of enterprises to be selected from		
	village/block without h.g./s.b. formation (e ₀)	village/block with h.g./s.b. formation	
		h.g./s.b. '0' (e ₀)	h.g./s.b. '1' (e ₁)
(1)	(2)	(3)	(4)
OAME	4	2	2
NDME	10	3	2

For each of cols. 2, 3 & 4, shortfall in the no. of NDMEs/OAMEs was made up by increasing the no. of OAMEs/NDMEs in the same column.

ESTIMATION PROCEDURE :

2.1 Notation :

- s = subscript for s - th stratum;
- t = subscript for t - th stratum;
- i = subscript for i - th sample village/sample block (fsu);
- j = subscript for j - th enterprise type (j = 1 for OAME and j = s for NDME);
- k = subscript for k - th enterprise;
- d = number of hamlet groups/sub-blocks formed in a sample village/block;
- e = adjustment factor in case revenue village is surveyed instead of census village due to some practical difficulty (e=number of census villages in a revenue village wherever revenue village is bigger than a census village; otherwise, e will be taken as equal to 1);

Z = total size of a sub-stratum within a stratum;

z = village/block size used for selection;

n = number of sample villages/blocks surveyed including uninhabited and zero cases;

E_0 = total number of enterprises listed (OAMES/NDMEs) in hg/sb selected and designated as hg/sb no. '0';

e_0 = total number of enterprises (OAMES/NDMEs) surveyed in hg/sb designated as hg/sb no. '0';

E_1 and e_1 - these relate to hg/sb designated as hg/sb no. '1' in case of hamlet-group/sub-block formation and have the same connotation as their respective counterparts with subscript '0';

y_0 = value of any character under estimation in a sample village/block/enterprise taken from hg/sb no. '0';

y_1 = value of any character under estimation in a sample village/block/enterprises taken from hg/sb no. '1';

Y = estimate of population total of the character y.

2.2 Formula for estimation :

Estimation of population total of a characteristic y was obtained by the formula

$$Y = \sum_{s=1}^2 \sum_{t=1}^2 \frac{Z_{st}}{n_{st}} \sum_{i=1}^{n_{st}} \frac{1}{c_{sti}} \sum_{j=1}^2 \left[\frac{E_{ostij}}{c_{estij}} \sum_{K=1}^K y_{ostijk} + (D_{sti} - 1) \frac{E_{1stij}}{e_{1stij}} \sum_{K=1}^K y_{1stijk} \right]$$

APPENDIX - C

Industry division codes at 2-digit level of NIC 1987 and corresponding description for manufacture and repair services as adopted for tabulation in the fortyfifth round of NSS.

serial number	Industry division codes	description of industry
(1)	(2)	(3)
1	20	Manufacture of food products
2	21	
3	22	Manufacture of beverages, tobacco and related products
4	23	Manufacture of cotton textiles
5	24	Manufacture of wool, silk and man-made fibre textiles
6	25	Manufacture of jute and other vegetables fibre textiles (except cotton)
7	26	Manufacture of textile products (including wearing apparel)
8	27	Manufacture of wood and wood products; furniture and fixtures
9	28	Manufacture of paper and paper products and printing, publishing & applied industries
10	29	Manufacture of leather and products of leather, fur & substitutes of leather
11	30	Manufacture of basic chemicals and chemical products (except products of petroleum and coal)
12	31	Manufacture of rubber, plastic, petroleum and coal products; processing of nuclear fuels
13	32	Manufacture of non-metallic mineral products
14	33	Basic metal and alloys industries
15	34	Manufacture of metal products and parts, except machinery and equipment
16	35	Manufacture of machinery and equipment other than transport equipment (manufacture of scientific equipment, photographic/cinematographic equipment and watches & clocks is classified in division 38)
17	36	
18	37	Manufacture of transport equipment and parts
19	38	Other manufacturing industries
20	39	Repair of capital goods
21	97	Repair services

APPENDIX - D

LIST OF MEMBERS OF THE WORKING GROUP
FOR THE NSS 45TH ROUND

1. Prof. J. Roy, Indian Statistical Institute, Calcutta.	Chairman
2. Prof. K. Sundaram, Delhi School of Economics, University of Delhi.	Member
3. Prof. J.C. Sandesara, Department of Economics, University of Bombay.	Member
4. Shri S.P. Gothoskar, Principal Adviser, Department of Statistical Analysis & Computer Services, Reserve Bank of India, Bombay.	Member
5. Shri H.K. Bhuyan, Director, Directorate of Economics and Statistics, Assam.	Member
6. Shri V.B. Sardasia, Director, Bureau of Economics and Statistics, Gujarat.	Member
7. Shri K. Balakrishnan Nair, Director, Directorate of Economics and Statistics, Kerala.	Member
8. Dr. Ajit Singh, Economic Adviser, Economics & Statistical Organisation, Government of Punjab, Chandigarh.	Member
9. Shri R.N. Sehgal, Director, Office of the Development Commission, Small Scale Industries, New Delhi.	Member
10. Dr. M.L. Lakhera, Additional Economic Adviser, Ministry of Industry, New Delhi.	Member
11. Shri S. Krishnamurthy, Deputy Chief Executive Officer (Economic Research and Bank Finance), KVIC, Bombay.	Member
12. Shri Krishan Kumar, Deputy Adviser (V & SI), Planning Commission, New Delhi.	Member
13. Shri H.P. Nathani, Member, Executive Committee, Federation of Associations of Small Industries of India, Calcutta.	Co-opted member
14. Shri S. Ramanath Iyer, Director, FOD, NSSO.	Member
15. Shri S.K. Sanyal, Director, Central Statistical Organisation, New Delhi.	Member
16. Shri R.P. Mehta, Additional Director, Computer Centre, New Delhi.	Member
17. Shri R.P. Katyal, Head, National Accounts Division, Central Statistical Organisation, New Delhi.	Member
18. Shri A.K. Bhattacharya, Joint Director (Retd.), SDRD, NSSO, Calcutta.	Co-opted member
19. Shri A.R. Rao, Jt. Director, SDRD, NSSO, Calcutta.	Convener
