PART ONE : ALL-INDIA

TABLES WITH NOTES ON SURVEY OF UNORGANISED
MANUFACTURE NON-DIRECTORY ESTABLISHMENTS AND
OWN ACCOUNT ENTERPRISES

NATIONAL SAMPLE SURVEY ORGANISATION

DEPARTMENT OF STATISTICS

NEW DELHI

P R E F A C E

A census of all non-agricultural economic activities, the second of its kind, was conducted throughout the country by the Central Statistical Organisation in 1980. This Census had thrown up a listing of enterprises and establishments, essentially in the unorganised sector of economic activities and is being used by the NSSO as a frame for conducting a series of follow-up surveys. One such survey of units engaged in manufacturing and repairing activities was conducted by the NSSO in its fortieth round during July 1984 to June 1985. A repeat survey on the same subject was undertaken in the fortyfifth round during July 1989 to June 1990 using the same frame i.e. the one thrown up by the 1980 economic census.

The present report contains some selected results at all-India level based on data collected in the 45th round. In continuation of this report, another report No.396/2 will also be brought out in two volumes containing parallel results at state level. This report comprises three sections and four appendices. While Sections-I & II give an introductory note and concepts & definitions, Section III deals with the summary of findings from the survey. Appendix-I contains a list of tables. Appendices II & III give sample design, estimation procedure and industry division codes together with their descriptions. Members of the Working Group set up for the survey have been listed in Appendix IV.

While the field work of the survey was done by the Field Operation Division of the Organisation, collected data were processed by the Data Processing Division and tabulated by the Computer Centre of the Department of Statistics, New Delhi. The report has been prepared by the Survey Design & Research Division of the NSSO. The Report at the draft stage was examined by Members of the Working Group and the Governing Council, Officers from the Department of Statistics and Prof. P. Venkatramiah of the Gokhale Institute of Politics & Economics, Pune. The suggestions received were very helpful in improving the report. I am grateful to every one who took pains to comment on the draft report. Finally, I wish to put on record my appreciation for the team of SDRD officers very ably led by the Director of the Division Dr. V. Saha, for undertaking analysis of data, preparing the draft report and then revising it.

Comments/suggestions from the readers of the Report will be most welcome.

SECTION - I

1. INTRODUCTION

1.1. The non-agricultural sector is an important and growing segment of the Indian economy. But statistics on the unorganised part of this sector are not available regularly in usable form. To provide some basic information of the non-agricultural sector for planning, administration and compilation of national and regional accounts, the Government of India decided in 1976 to launch a country-wide economic census. Accordingly, a countrywide census of non-agricultural enterprises employing at least one hired worker on a fairly regular basis (hereafter to be referred to as 'establishments') was undertaken in 1977 by the Central Statistical Organisation in collaboration with the ^{State} Statistical Bureaus. Using the frame based on this economic census, small establishments and enterprises not employing any hired worker (hereafter referred to as 'own account enterprises (OAEs)') engaged in manufacturing and repairing activities were surveyed in the thirty-third round of NSS during 1978-79.

1.2 A second all-India Economic Census was conducted in 1980. This census had a wider coverage than the earlier one, since it covered the own account enterprises also. In this census, the establishments were further split into two categories of (i) Directory Establishments (DEs) and (ii) Non-Directory Establishments (NDEs); the former employed a total of six or more workers, while the latter employed a total of five or less number of workers. Thus, the second Economic Census dealt with three categories of enterprises viz., DEs, NDEs and OAEs. As a follow-up to this census, NDEs and OAEs engaged in manufacturing and repairing activities were surveyed by NSSO in the fortieth round during 1984-85. A similar survey was undertaken again in the fortyfifth round of NSS during July 1989 to June 1990, using the frame provided by the second Economic Census.

1.3 The coverage of the fortyfifth round of NSS is restricted to all non-directory manufacturing and repairing establishments (NDMEs) and own-account manufacturing and repairing enterprises (OAMEs). These establishments/enterprises included all the units covered by the two-digit codes (called divisions) 20 to 39 and 97 under the revised National Industrial classification (1987) (referred henceforth as NIC, 1987; the relevant extract is provided in APPENDIX-III). In its geographical coverage the forty-fifth round survey covered the whole of the Indian Union except

✓ 2

two districts of Jammu & Kashmir (viz., Ladakh and Kargil) and some interior villages of Nagaland situated beyond five kilometers from the bus route. All the States/Union Territories participated in the fortyfifth round with the exception of the Union Territories of Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep. Delhi participated on a triple matching basis; Goa, Gujarat, Haryana, Jammu & Kashmir, Manipur on a double matching basis; Maharashtra and Nagaland on one-and-a-half-times and equal matching basis in the urban and rural sectors respectively; and the rest of the States/Union Territories participated on an equal matching basis. The number of first-stage units surveyed in the central sample was 14,984 (7664 villages and 7320 urban blocks) and 17,080 first stage units (8352 villages and 8728 urban blocks) were surveyed in the state-sample. The estimates presented in this report are at the all-India level and are based on the central samples only. These estimates have been arrived at by taking into account the data collected from a total of 1.23 lakh enterprises, of which 72.08 percent were own-account enterprises and the rest were non-directory establishments; 53.85 percent of the total enterprises were from the rural sector and the rest from the urban sector.

1.4 It is pertinent to point out here that the fortyfifth round of the NSS has, as stated in the preceding paragraph, covered only the OAEs and NDEs in the manufacturing sector (including repair services). The Directory Manufacturing Establishments (DMEs) which employ 10 or more workers and use power and the DMEs which employ 20 or more workers without using power, are required by law to register themselves under sections 2m(i) and 2m(ii) respectively of the Factories Act, 1948. They are hence known as factories and fall under the so-called organised sector and they come under the coverage of the Annual Survey of Industries (ASI). The rest of the DMEs which fall in the unorganised sector, were surveyed separately by the NSSO under the technical direction of the Central Statistical Organisation during October 1989 to September 1990. In this manner, information was obtained for the whole of the unorganised sector of manufacturing and repairing for the period 1989-90.

5 Besides the listing schedule which is meant mainly for preparing the base for the second stage units (enterprises) and drawing the requisite samples therefrom, ~~another~~ schedule 2.2.2^{It} was canvassed in the fortyfifth round to survey the sampled enterprises. Inter alia, ~~it~~ collected information on the basic characteristics of sampled enterprise (both OAME and NDME) such as fixed assets, working capital, outstanding loans, employments and induzants, input, output etc. This all-India report on the fortyfifth round enterprise survey is based on the data collected through the schedule 2.2.2 and presents some selected results for rural and urban sectors at the all-India level by broad industry divisions and/or groups (2 and/or 3-digit levels respectively of NIC 1987). The industry group code 999 and industry division code 99, appearing in different tables of this report, are for invalid and not recorded NIC codes.

1.6 Important concepts and definitions adopted in the survey are explained in Section II. Major findings based on the survey data are discussed in a summary form in Section III. The detailed tables at the all-India level are given in APPENDIX-I. Since there was no stratification by industry groups, the sample enterprises are distributed ⁱⁿ ~~com~~paratively among the groups of industries (3-digit level of NIC, 1987) and the sample size for 3-digit industry groups may not be adequate in a number of cases to draw meaningful conclusions. Hence, it is not considered useful to present the estimates at higher levels of disaggregation by industry group in all cases. Sample as well as estimated number of enterprises, employment and per enterprise estimated values of input, output and value added are presented by industry groups (at-3-digit level) in the table numbers 1 & 2; and other detailed results are presented by industry division (at 2-digit level) in the remaining tables. APPENDIX-II gives a note on sample design and estimation procedure followed in arriving at the estimates presented in this report. Industry division codes with corresponding description are given in APPENDIX-III, whereas APPENDIX-IV gives the list of the Working Group members of the NSS 45th round

SECTION - II

CONCEPTS AND DEFINITIONS

Important concepts and definitions followed in this survey are explained below.

2.1 Enterprise : An undertaking engaged in the production and/or distribution of some goods and/or services meant mainly for the purpose of sale, whether fully or partly, is termed as an enterprise. An enterprise may be owned and operated by a single household or by several households jointly on a partnership basis, or by an institutional body. The activities of an enterprise may be carried out by household members and/or by hiring outside labour on a fairly regular basis.

2.2 Household enterprise : A household enterprise is that enterprise which is run by one or more members of a household irrespective of whether the enterprise is located in the same premises as the household or not. An enterprise run by two or more households on partnership basis is also taken as a household enterprise. In other words, all proprietary and partnership enterprises are household enterprises.

2.3 Non-household enterprise : Non-household enterprises are those which are institutional, i.e., owned and run by the public sector (Central or State Government, local self-governments, local bodies, government undertakings, etc.), co-operative societies, corporate sector, other types of societies, institutions, associations, trusts, etc.

2.4 Own-account enterprise : An enterprise which is run without any hired worker employed on a fairly regular basis is termed an own-account enterprise. If such an enterprise is engaged in manufacturing and/or repairing activities, it is termed an own-account manufacturing enterprise (OAME).

2.5 Establishment : An enterprise which is employing at least one hired worker on a fairly regular basis is termed as establishment.

2.6 Non-directory establishment : An establishment employing less than six workers (household and hired taken together) is termed a non-directory establishment. If such an establishment is engaged in manufacturing and/or repairing activities, it is termed a non-directory manufacturing establishment (NDME).

2.7 Fairly regular basis : The term "fairly regular basis" means that the enterprise/establishment has engaged hired worker(s) during the major part of its period of operation(s) in the last one year. However, it is not necessary that the same worker(s) should be employed throughout the period.

2.8 Industrial area and conforming area : Industrial area is an area reserved for industries. Conforming area is a residential area where industries are also permitted.

2.9 Nature of operation of enterprise : It indicates the regularity with which enterprise was run. If the activity of the enterprise runs more or less regularly throughout the year it will be a perennial enterprise. When the enterprise usually operates during a particular season or fixed months of a year, it is termed as a seasonal enterprise. When the activities of an enterprise are neither perennial nor seasonal in nature but are undertaken occasionally during the reference year, the enterprise is termed a casual enterprise.

2.10 Fixed assets : Fixed assets will mean assets of the enterprise in the form of land, building, plant & machinery, transport equipment, tools and other fixed assets (new or used) that have a normal economic life of more than one year from the date of acquisition, i.e., through outright purchase/hire purchase/loan/mortgage and/or construction, irrespective of their use(s) at the time of survey. The present market value of the fixed assets has been considered in the 45th round survey.

2.11 Working Capital : Working capital refers to the physical and financial resources used by the enterprise for its day-to-day activities. It is therefore a constantly changing entity since resources available at a particular point of time will undergo change from day-to-day as the enterprise functions - a part of the resources getting used up in the manufacturing process or other connected activities and replenishments being made from time to time. Physical part of the working capital includes raw materials, stores, fuel, lubricants, semi-finished products and finished products & by-products. Financial part comprises cash in hand & at bank and net balance of amounts receivable and payable.

2.12 Loan All borrowings in cash, i.e., monetary or cash loans, incurred but subsequently repaid or contracted to be repaid in cash or kind, are considered as loan for this survey.

2.13 Input : The value of raw materials, electricity, fuel, lubricants and other auxiliary materials consumed and services purchased, maintenance and other expenses incurred by the enterprise for production purposes are considered ^{as} total value of input.

2.14 Output : The value of products and by-products manufactured by the enterprise together with the value of industrial services rendered to other concerns and other receipts incidental to entrepreneurial activity are considered as total value of output. The output is evaluated at ex-factory price.

2.15 Value added : This represents that part of production which is the actual contribution of the enterprise to the economy. Value added is calculated by deducting total value of input from the total value of output.

SECTION - III

SUMMARY OF FINDINGS FROM THE SURVEY

3. As mentioned in Section - I, 7364 villages and 7320 urban blocks were surveyed in the central sample of the NSS 45th round. Data were collected from a total of 1,23,306 sample enterprises, of which 69,397 (56.35%) were from rural areas and 53,909 (43.65%) from urban areas. Out of 82,377 own account enterprises surveyed, 52,773 (64.06%) were from the rural areas, while out of a total of 94,428 non-directory establishments 13,321 (14.11%) were surveyed from the rural areas. The major findings of the survey based on the data collected from the sample enterprises are discussed below.

3.1 Estimated number of enterprises : The total number of unorganised manufacturing and repairing enterprises, OAMEs and NOMEs taken together, in the country has been estimated from NSS 45th round (1989-90) survey as 157,30,967 (or 157.31 lakhs). Of them, 120,19,425 (i.e., 76%) were in rural areas and the rest in urban areas. Of these total enterprises 90% were own account manufacturing and repairing enterprises (OAMEs) and the rest were non-directory manufacturing and repairing establishments (NOMEs). The percentage of rural OAMEs, among the total 141,03,807 OAMEs, was 80 as against 45 in the case of NOMEs among the total 13,27,160 NOMEs. Among the rural enterprises, the percentage of OAMEs was 94 as against 76 in the urban sector. The percentage of OAMEs among the rural enterprises varied from 43.12 in manufacture of electrical machinery and equipment (other than transport equipment) to 98.97 in manufacture of beverages, tobacco and tobacco products. In only three industry divisions viz. basic metal and alloys (33), electrical machinery and equipments (36) and transport equipments and parts (37), the percentage of OAMEs was below 65. Electrical machinery and equipments (36) is the only industry division where OAMEs

(contd. to page 9)

Statement 1 : Percentages of enterprises for different industry divisions.

Industry division (code)	Description of industry	Rural		Urban	
		percentage of		percentage of	
		GNIE	NDIE	GNIE	NDIE
(1)	(2)	(3)	(4)	(5)	(6)
20	Manufacture of food products	83.43	13.54	36.84	33.15
21		95.77	4.23	32.26	17.72
22	Manufacture of beverages, tobacco and tobacco products	93.97	1.03	96.73	3.27
23	Manufacture of cotton textiles	91.16	3.84	84.43	15.57
24	Manufacture of wool, silk and man-made fibre textiles	90.47	9.53	64.71	35.29
25	Manufacture of jute and other fibre textiles (except cotton and coir)	37.12	2.88	95.55	4.45
26	Manufacture of textile products (including wearing apparel)	89.98	10.02	82.85	17.15
27	Manufacture of wood and wood products furniture and fixtures	97.27	2.73	78.02	21.98
28	Manufacture of papers and paper products and printing, publishing & allied industries	85.36	14.34	50.92	49.08
29	Manufacture of leather and leather products, fur & substitutes of leather	98.03	1.34	77.04	22.96
30	Manufacture of basic chemicals and chemical products (except products of petroleum and coal)	95.17	4.83	86.27	13.73
31	Manufacture of rubber, plastic, petroleum and coal products; processing of nuclear fuels	85.76	14.24	59.35	40.65
32	Manufacture of non-metallic mineral products	95.47	4.53	84.03	15.97
33	Basic metal and alloys industries	34.50	95.50	43.75	56.25
34	Manufacture of metal products and parts (except machinery & equipments)	85.97	14.03	54.44	45.56
35	Manufacture of electrical and other machineries & equipments (other than transport equipment)	93.37	6.63	35.24	64.76
36		43.12	56.88	25.12	74.88
37	Manufacture of transport equipments and parts	64.03	35.97	47.06	52.94
38	Other manufacturing industries	84.43	5.54	78.79	21.21
39	Repair of capital goods	92.12	7.88	52.05	47.95
97	Repair services	92.00	8.00	75.34	24.66
99	Others (including not recorded cases)	95.37	4.33	71.88	28.12
All-Industry divisions		93.86	6.14	75.04	24.96

formed less than half of the total. However, in urban areas, OAMEs were in a minority in four industry divisions 33, 35-36 & 37, i.e., those industries relating to basic metal and alloys, manufacture of machinery and equipments (other than transport equipments) and manufacture of transport equipments & parts respectively. Among the rest of the industry divisions in urban areas the percentages of OAMEs varied from 51 in paper and paper products to 97 in beverages, tobacco and tobacco products. Statement 1 shows the percentages of OAMEs and NDMEs among the rural and urban enterprises for different industry divisions.

3.2 Employment : The employment is likely to be underestimated as the employment data were collected from the sample enterprises adopting current status approach with the reference "month" (prior to the survey), whereas the enterprises were counted if they had functioned some time or the other (even casually) for a period of not less than 30 days (15 days in case of seasonal enterprises) during a reference period of one "year". Thus the units which satisfied the criterion of having functioned for 30 (or 15) days in the reference year were enumerated but their employment was taken as '0' if they were not found to be working during the reference month. Though such cases would have been few and their effect is not likely to show up in the aggregate figures at 2-digit industry level, but at 3-digit level, particularly where small number of enterprises were surveyed, their effect cannot be ignored. For example, the estimated number of NDMEs in rural areas for industry group 225 is 909, but the estimates of persons employed for this industry group comes to be only 746. Again, for industry group 250 in urban areas, the estimated numbers of OAMEs and employment are 50 and 33 respectively (Table no. 1 of APPENDIX-I may be seen).

Another disadvantage of using two reference periods; i.e. "month" and "year" for detailed data collection and enumeration of enterprises respectively is that the hired component of employment (in case of NDMEs only) may be underestimated since the enterprises were classified as OAMEs or NDMEs at the enumeration stage according to the number of hired workers (at least one hired worker for NDME) in the reference year and detailed employment data were collected for the reference month only.

An enterprise may be classified as NDME but during the reference month it may not have any hired worker. Although such cases might have been few, yet in a particular case (industry group 225 in rural areas), the estimated number of ADMEs is 900 but the total number of hired workers was only 253 (Ref. : Table no. 1).

Subject to the above limitations, the estimate of total employment in OAMEs and NDMEs taken together is found to be 296.28 lakhs, of which 217.04 lakhs (about 73%) are in rural areas. Of the total employment, 32.60 lakhs (11%) worked on part-time basis and 30.16 lakhs (10%) are hired workers. The OAMEs accounted for 83% of the total employment and 36% (108.00 lakhs) of the total workers are found to be female workers. The number of female workers per thousand of male workers is 682 in rural areas and 323 in urban areas. The share of OAMEs and NDMEs in the total employment by nature of employment (hired and others) in rural and urban areas can be appreciated from the Statement 2.

Statement 2 Estimated number of persons employed

type of enterprise	estimated no. of persons employed (lakhs)					
	male		female		all persons	
	hired	others	hired	others	hired	others
(1)	(2)	(3)	(4)	(5)	(6)	(7)
	<u>R U R A L</u>					
OAME	0.72	109.41	0.22	84.95	0.94	194.
NDME	10.04	8.90	1.59	1.21	11.63	10.
COMBINED	10.76	118.31	1.81	86.16	12.57	204.
	<u>U R B A N</u>					
OAME	0.49	30.87	0.06	18.44	0.55	49.
NDME	16.36	11.43	0.68	0.91	17.04	12.
COMBINED	16.85	42.30	0.74	19.35	17.59	61.
	<u>COMBINED (RURAL+URBAN)</u>					
OAME	1.21	140.28	0.28	103.39	1.49	243.
NDME	26.40	20.33	2.27	2.12	28.67	22.
COMBINED	27.61	160.61	2.55	105.51	30.16	266.

3.3 Input, output and value added : For all industry divisions taken together, the per enterprise estimates of input, output and value added are higher in case of NDMEs than that of OAMEs in both rural and urban areas. This is because the NDMEs are larger units as compared to OAMEs. Further, the per enterprise estimates of input, output and value added are higher in urban areas than that in rural areas for both OAMEs and NDMEs. The urban-rural ratio of per enterprise of value added is 4.92 for OAMEs and 2.26 for NDMEs. The per enterprise estimates of input, output and value added for OAMEs, NDMEs and combined (i.e., OAME + NDME) in rural and urban areas are given in Statement 3.

Statement 3 : Per enterprise estimates of input, output and value added by enterprise type.

enterprise type	per enterprise estimates of					
	input		output		value added	
	rural	urban	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)
OAME	4635	7401	9588	16915	4953	9514
NDME	22407	57280	39925	96902	17518	39622
COMBINED	5725	19354	11452	36083	5727	16729

In statement 4, aggregates of input, output, value added, working capital and fixed assets are given for rural and urban areas. These aggregates will provide an idea of the aggregate dimensions of this segment of the unorganised manufacturing sector. In another statement (statement 5), a few aggregates and ratios are also presented.

Statement (4) : Aggregate estimates (Rs. in crores) of value added and value of input, output, fixed assets and working capital by enterprise type

enterprise type	input		output		value added		fixed assets		working capital	
	rural	urban	rural	urban	rural	urban	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)
O A N E	5229.07	2088.95	10819.89	4773.80	5587.82	2684.95	5201.55	5309.80	409.53	270.08
N D M E	1653.03	5094.55	2945.39	8518.75	1292.36	3524.10	2222.78	7819.25	219.77	1175.65
COMBINED	6881.12	7183.32	13764.65	13392.33	6883.53	6209.04	8424.33	13129.05	629.30	1445.73

Statement 5 : Some important aggregates and ratios of the unorganised manufacturing sector (CAME & NDME)

srl. no.	i t e m	aggregates/ratios			
		CAME		NDME	
		rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)
1.	Fixed assets (Rs. crores)	6201.55	5309.80	2222.78	7819.25
2.	Input (Rs. crores)	5229.67	2008.65	1653.63	5094.65
3.	Output (Rs. crores)	10816.89	4773.60	2945.39	8616.75
4.	Value added (Rs. crores)	5537.82	2684.95	1292.36	3524.10
5.	Capital*(Rs. crores)	6611.08	5579.80	2442.55	8994.90
6.	Outstanding Loan (Rs. crores)	315.89	161.42	260.94	557.23
7.	Value added per worker** (Rs.)	2861.00	5305.84	5942.40	11997.42
8.	Ratio of value added to fixed assets	0.90	0.51	0.58	0.45
9.	Ratio of value added to capital	0.85	0.48	0.53	0.39
10.	Capital* per worker	3385.00	11193.00	11231.00	30622.00

* here capital means total of working capital and fixed assets.

** here worker means total of hired workers and others.

3.4 Structural ratios : Statement 6 shows the structural ratios, viz., value added as proportion of output and output as proportion of input for different industry divisions at all-India level. It is seen from the statement that the ratio of value added to output for all industry divisions taken together varies from 0.41 to 0.56 depending on the type of enterprise and rural/urban location. In rural areas, the above ratio varied from 0.30 (industry division 20) to 0.80 (industry division 39) for OAMEs and 0.25 (industry division 21) to 0.73 (industry divisions 39 & 97) for NDMEs. Whereas in the urban areas, the value added - output ratio varied from 0.33 to 0.79 (for industry divisions 29 and 97 respectively) for OAMEs and 0.17 to 0.77 (for industry divisions 25 and 39 respectively) for NDMEs. It is also observed that value added - output ratio is higher in OAMEs than in NDMEs for rural as well as urban areas. This could be so mainly due to the fact that output per unit of input is relatively higher in OAMEs than in NDMEs.

Coming to output - input ratio, it is seen from Statement 6 that the ratio is significantly high in OAMEs as well as NDMEs in both rural and urban areas for the manufacture of paper and paper products industry (28), repair of capital goods industry (39) and repair services industry (97). In fact for industry divisions and belonging to repair of capital goods and repair services the ratio is more than 4 for OAMEs (for both rural and urban) and around 4 for NDMEs (for both rural and urban). In the industry divisions belonging to manufacture of beverages tobacco and related products (22) the output-input ratios for OAMEs are 4.56 and 4.54 in rural and urban areas respectively, whereas the ratios are 1.83 and 1.97 for rural and urban NDMEs respectively. Though there is no specific pattern in the output-input ratios of different industry divisions, all the ratios are significantly higher than 1 and in general the ratios of OAMEs are in the higher side as compared to the ratios of NDMEs in both areas. However, it is better to exercise caution in interpreting these figures, because of the inherent variation in the data and other unavoidable limitations in the collection of data in the absence of proper books of accounts in a very large number of cases.

Statement 6 • Structural Ratios - value added as proportion of output and output as proportion of input for own account enterprises and non-directory establishments by industry division

3.5 Labour productivity : Value added per worker (household as well as hired) provides a rough measure of the productivity of labour utilisation. Statement 7 shows these structural ratios by industry division for OAMEs and NDMEs. The statement also gives the ratios of value added to emoluments (salary/wages) for NDMEs only where emoluments are paid to workers.

It is seen from the statement that the productivity of labour is significantly higher in NDMEs than in OAMEs for all the industry divisions in both areas except for repair services industry division (97) in rural areas where reported labour productivity appears to be marginally lower in NDMEs than in OAMEs. In the case of NDMEs, the value added per unit cost of labour (as measured by salary/wages paid) gives some idea about the returns per Rupee spent on labour. The productivity of labour cost is found to be minimum in paper and paper products industry division (28) and maximum in leather and leather products industry division (29) in rural areas. The minimum and maximum productivity in urban areas is observed in jute and other fibre textile industry division (25) and food products industry division (20) respectively. The productivity of labour is generally higher in urban areas than in rural areas except a few industry divisions where rural productivity is found to be higher than the corresponding urban productivity. These industry divisions are : leather and leather products (29), electrical machinery and equipments (36), cotton textiles (23), jute and other fibre textiles (25), wood and wood products (27), rubber and plastic including coal products (31), metal products and parts (34), manufacture of wool, silk and man-made fibre textiles (24) and repair services (97).

3.6 Enterprises by type of ownership : As is evident from statement 8 in both rural and urban areas almost all the enterprises are under proprietary ownership for OAMEs (990 and 987 per thousand in rural and urban areas respectively) as well as NDMEs (965 and 928 per thousand in rural and urban areas respectively). As expected, partnership enterprises are relatively higher in urban areas than in rural areas in the case of both OAMEs and NDMEs. The enterprises run by co-operative societies and other public/private corporate bodies (shown as "others" in the statement) and found to be negligible.

Statement 7 : Gross value added per worker for own account enterprises and non-directory establishments and ratio of value added to emoluments for non-directory establishments only by industry division

3.7 Distribution of household enterprises by social group : Statement 8 shows the percentage distribution of household enterprises by social group. It may be noted that the proprietary enterprises and the partnership enterprises having partners from the same household only have been considered as household enterprises for the purpose of this statement. It is seen from this statement that 24.77% and 6.29% of the rural household enterprises (OAMEs and NDMEs taken together) are owned by the people belonging to the social groups Scheduled Caste (SC) and Scheduled Tribes (ST) respectively, as against 10.21% and 1.49% in urban areas. So far as household enterprises are concerned, in rural areas 67.73% of OAMEs and 87.59% of NDMEs are owned by the people of 'other' categories i.e., other than S.C. & S.T., and in urban areas corresponding percentages are 86.22 and 95.00 for OAMEs and NDMEs respectively.

Statement 9 : Percentage distribution of household enterprises by social group and enterprise type.

social group	percentage distribution of enterprises					
	rural			urban

Total	100.00	100.00	100.00	100.00	100.00	100.00

To have an idea about the share of ownership^{of} manufacturing enterprises among different social groups in a particular industry division and over the industry divisions, two more statements are presented here. Statement 10 reveals the basic pattern of the distribution of household enterprises in a particular industry division for the three social group (i.e., ST, SC and others), whereas Statement 11 shows the percentages of household enterprises over the industry divisions for the social groups.

3.8 Per enterprise estimates of a few selected characteristics: Statement 12 gives in summarised form the number of sample enterprises, estimated number of enterprises, number of persons employed and per enterprise estimates of a few selected characteristics, viz., working capital, outstanding loan, input, output and value added by industry division for GAMEs and NDMEs separately. Information regarding emoluments (salary/wages) per hired worker is provided for NDMEs only.

Statement 10 : Percentage distribution of household enterprises
by social group and industry division for OMEs
and NDMEs taken together.

APPENDIX - ILIST OF ALL-INDIA TABLES

table no.	description	page no.
(1)	(2)	(3)
1.	Estimated number of enterprises and sex-wise employment by industry division/group	28 - 81
	(i) OAME - Rural	28 - 42
	(ii) NDME - Rural	43 - 54
	(iii) OAME - Urban	55 - 67
	(iv) NDME - Urban	68 - 81
2.	Per enterprise estimates of input, output and gross value added by industry division/group	82 - 126
	(i) Rural - OAME, NDME, COMBINED	82 - 105
	(ii) Urban - OAME, NDME, COMBINED	106 - 126
3.	Per enterprise estimated value of different items of fixed assets owned by industry division	127 - 130
4.	Per enterprise estimated value of different items of fixed assets not owned by industry division	131 - 134
5.	Estimated number of enterprises by size-class of fixed assets owned and by industry division	135 - 142
6.	Estimated number of enterprises by size-class of fixed assets not owned and by industry division	143 - 150
7.	Per enterprise estimated value of net additions to fixed assets including land by industry division	151 - 154
8.	Per enterprise estimated value of different items of working capital by industry division	155 - 162

table no.	description	page no.
(1)	(2)	(3)
9	Per enterprise estimated value of net borrowings by source of loan and by industry division.	163 - 169
10	Per worker estimated value of emoluments and other benefits (Rs.) in NDMEs by industry division	170 - 171
11	Per thousand distribution of enterprises by nature of operation and by type of enterprise and industry division	172 - 175
12	Estimated number of household enterprises by industry division, social group and by enterprise type	176 - 179
13	Estimated number of enterprises by industry division and type of ownership	180 - 187
14	Estimated number of enterprises by industry division and authority/agency of registration	188 - 195
15	Estimated number of enterprises by location of premises and industry division	196 - 199
16	Estimated number of enterprises by source of energy used and by industry division	200 - 207

APPENDIX-II

SAMPLE DESIGN AND ESTIMATION PROCEDURE

1. SAMPLE DESIGN

1.1 Broad Design : The sample design for this survey was an integrated design for both the 45th round of NSS and the DME survey of C.S.O. The design was two-stage stratified with villages/urban blocks as first-stage units (FSUs) and enterprises as second-stage units (SSUs). The sample fsus were common to the 45th round survey and the DME survey. The listing schedule (0.0) canvassed in 45th round survey was also utilised for drawing sample ssus for DME survey.

1.2 Stratification : In rural areas, each district was generally considered as a stratum. However, for Gujarat, where the NSS regions cut across some district boundaries, parts of each such district belonging to different NSS regions formed separate strata. If any district (or part thereof lying in an NSS region) had a small number of manufacturing enterprises, it was clubbed with the neighbouring district(s) within the same NSS region to form a stratum. In urban sector, strata were formed within each NSS region by grouping cities/towns according to population sizes. In all, seven types of strata were formed according to population size class X type of frame used as given below :

town/city population (P)	type of frame used	
	updated EC frame	UFS frame
(1)	(2)	(3)
$P < 50,000$	-	stratum no. 1
$50,000 \leq P < 1,00,000$	-	stratum no. 2
$1,00,000 \leq P < 5,00,000$	stratum no.3	stratum no. 4
$5,00,000 \leq P < 10,00,000$	stratum no.5	stratum no. 6
$10,00,000 \leq P$	stratum no.7	-

Total number of rural and urban strata formed are 358 and 246 respectively.

In order to net adequate no. of DMEs and NDMEs in the rural sample, the villages in a stratum were grouped into three sub-strata based on 1980 EC results (wherever available) as follows :

- (a) sub-stratum 1 consisted of villages having at least one DME ;
- (b) sub-stratum 2 consisted of those of the remaining villages in the stratum which had at least one NDME ;
- (c) sub-stratum 3 consisted of all the residual villages which had no OAME/NDME or no information about the number of DME/NDME was available due to incompleteness of the EC frame used.

In Arunachal Pradesh, Assam, Lakshadweep and Nagaland and also in a few districts of other states (where population census frames were used for selection of fsus), no substratification was made and all the villages in a stratum were identified as sub-stratum 3.

In the urban sector, in each of the strata where EC frame was updated, three sub-strata were formed as follows :

- (a) sub-stratum 1 consisted of UFS blocks in EC-4 frame with at least one DME, where EC-4 frame was that updated frame for which information on no. of OAMES, NDMEs and DMEs were available in each UFS block.
- (b) sub-stratum 2 consisted of UFS blocks in EC-5 frame with at least one DME, where EC-5 frame was that updated EC frame for which information on no. of OAEs, NDEs and DEs for all non-agricultural enterprises taken together were available in each UFS block with indications as to whether there existed at least one DME and at least one NDME/OAME in the UFS block.

- (c) sub-stratum 3 consisted of all the remaining UFS blocks of the stratum.

In the rest of the urban sector, i.e., other than the 64 cities with updated EC frame, two sub-strata were formed within each stratum as follows :

- (a) sub-stratum 1 consisted of UFS blocks having area designated as "industrial area" in the UFS frame, and
- (b) sub-stratum 2 consisted of all the remaining UFS blocks in the stratum.

1.3 Frame : The EC-80 frame listed all census (generally refer to 1981 population census except Assam where 1971 population census was used due to the fact that 1981 population census was not conducted in Assam) villages and towns giving (for each of them) the nos. of OAMES, NDMEs and DMEs, classified by the main industry divisions of NIC 1970. The EC frame thus used, had an advantage over the population census frame (which gave population for each village/town), as it enabled the use of appropriate selection probabilities to render the sample more efficient for the purpose of enterprise surveys. However, considering the fact that large number of enterprises might have closed/opened since the time of the EC 1980, it was decided to use the frame after updation in the urban sector. But the updating could be done only in respect of 64 major cities. Thus updated EC frames were used for these 64 cities and for the rest of urban sector, the urban frame survey (UFS) blocks were used. For the rural sector, 1980 EC frame was used, wherever available, in preference to population census frame.

1.4 Allocation of sample fsus between rural and urban sectors:
The total sample size at the state level was allotted between the rural and urban sectors generally in proportion to the gross value added by the unorganised manufacturing enterprises in the respective sector, using the estimates of value added

thrown up by the CSO's DME survey, 1978-79 (in respect of DMEs) and the NSS 33rd round survey (in respect of NDMEs and OAMEs) for the purpose. In the states of Gujarat, Maharashtra and Rajasthan, the allocation on the above basis made the sample size tilt unduly towards the urban sector and hence the same was adjusted for ensuring a minimum sample size for the rural sector which was not less than half the size allotted to the urban sector. For Mizoram, Nagaland, Sikkim, Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep, allocation between rural and urban sectors was made in proportion to estimated number of enterprises of different types with differential weightages as 16 DME + 4 NDME + OAME on the basis of 1980 EC results since the estimates for value added were not available for these states.

1.5 Allocation of sample villages/blocks among strata and sub-strata: In the rural sector, the sample for the state/u.t. was allocated to the constituent strata in proportion to the number of manufacturing establishments (DME + NDME) in the respective strata. The sample villages falling to the share of a stratum were allocated to the three sub-strata in the following manner: A thin sample of 2 or 4 fsus, depending on whether the allocation to the stratum was 20 or less, or more than 20, was allocated to sub-stratum 3 while the remaining fsus were allocated ^{between} sub-strata 1 and 2 in the ratio 2:1 and rounded off to the nearest multiple of 2. Adjustments were made in cases where sufficient no. of villages were not available in the frame for sub-strata 1 and 2.

The urban sample for state/u.t. was allocated to the constituent strata in proportion to the number of manufacturing establishments (DME + NDME) in the respective strata.

(i) In the strata relating to 64 cities with updated EC frame, the allocation of the stratum sample to the three sub-strata was in proportion to the total number of UFS blocks in the sub-strata with some additional weightages for sub-strata 1 and 2.

(ii) In the rest of the urban strata, the stratum sample was allocated to the two sub-strata in the following manner : UFS blocks belonging to sub-stratum 1 were completely enumerated subject to a maximum of 50% of the stratum sample size and the rest of the sample was allocated to sub-stratum 2. Allocation for each stratum X sub-stratum was rounded to nearest even number in all cases.

1.6 Selection of village/blocks : Villages were selected in the form of two independent sub-samples from each stratum X sub-stratum using the method of circular systematic sampling with probabilities proportional to size (pps). The size was the number of DMEs/NDEs in the villages as per frame used in case of sub-stratum 1/sub-stratum 2. Selection of villages from sub-stratum 3 was made in the same manner as for the other two sub-strata but with equal probability.

In the strata relating to 64 cities with updated EC frame, sample blocks were selected separately for each stratum X sub-stratum in the form of two independent sub-samples using circular systematic sampling with probabilities of selection as given below :

- (a) sub-stratum 1 : probability proportional to no. of DMEs
- (b) sub-stratum 2 : probability proportional to no. of non-agricultural enterprises.
- (c) sub-stratum 3 : equal probability.

In the rest of the urban strata, sample blocks were selected from each stratum X sub-stratum in the form of two independent sub-samples adopting the method of circular systematic sampling with equal probabilities.

1.7 Hamlet group/sub-block selection and sampling of second stage units (ssu)

If (at the time of survey) the approximate population of a village/block was 1200 or more (600 for rural areas of Himachal Pradesh, Sikkim, Nagaland and Panch, Rajori, Udhampur and Doda districts of Jammu & Kashmir) and/or number of non-agricultural enterprises was 201 or more in the village/block, then the village/block was divided into suitable number of

hamlet groups/sub-blocks. The minimum number of h.g.s./s.bs. formed was 4. That h.g./s.b. which had the largest proportion of manufacturing enterprises of the village/block was invariably selected and designated as h.g./s.b. '0'. From the remaining h.g.s./s.bs., one was selected randomly and designated as h.g./s.b. '1'. The second stage units were then selected circular systematically from these two h.g.s./s.bs. If there was no h.g./s.b. formation, then the whole village/block was considered for selection of second stage units. The enterprises (ssus) were selected from h.g.s./s.bs. as per the chart given below :

enterprise type	no. (ei) of enterprises to be selected from		
	village/block without h.g./s.b formation (e ₀)	village/block with h.g./s.b. formation h.g./s.b. '0' (e ₀) h.g./s.b. '1' (e ₁)	
(1)	(2)	(3)	(4)
OAME	4	2	2
NDME	10	8	2

For each of cols. 2, 3 & 4, shortfall in the no. of NDMEs/OAMEs was made up by increasing the no. of OAMEs/NDMEs in the same column.

ESTIMATION PROCEDURE :

2.1 Notation :

s = subscript for s-th stratum;

t = subscript for t-th sub-stratum;

i = subscript for i-th sample village/sample block (fsu);

j = subscript for j-th enterprise type (j=1 for OAME and j=2 for NDME);

k = subscript for k-th enterprise;

d = number of hamlet groups/sub-blocks formed in a sample village/block;

c = adjustment factor in case revenue village is surveyed instead of census village due to some practical difficulty (c=number of census villages in a revenue village wherever revenue village is bigger than a census village; otherwise, c will be taken as equal to 1)

- Z = total size of a sub-stratum within a stratum;
- z = village/block size used for selection;
- n = number of sample villages/blocks surveyed including uninhabited and zero cases;
- E_0 = total number of enterprises listed (OAMES/EDMES) in hg/sb selected and designated as hg/sb no. '0';
- e_0 = total number of enterprises (OAMES/EDMES) surveyed in hg/sb designated as hg/sb no. '0';
- E_1 and e_1 - these relate to hg/sb designated as hg/sb no. '1' in case of hamlet-group/sub-block formation and have the same connotation as their respective counterparts with subscript '0';
- y_0 = value of any character under estimation in a sample village/block/enterprise taken from hg/sb no. '0';
- y_1 = value of any character under estimation in a sample village/block/enterprises taken from hg/sb no. '1';
- Y = estimate of population total of the character y.

2.2 Formula for estimation :

Estimation of population total of a characteristic y was obtained by the formula

$$Y = \sum_{s=1}^S z_s \sum_{t=1}^T \frac{z_{st}}{n_{st}} \sum_{i=1}^{n_{st}} \frac{1}{e_{sti}} \sum_{j=1}^2 \frac{E_{ostij}}{e_{stij}} \sum_{k=1}^{E_{ostij}} y_{1stijk} \quad J$$

$$+ (D_{sti} - 1) \frac{E_{1stij}}{e_{1stij}} \sum_{k=1}^{E_{1stij}} y_{1stijk} \quad J$$

dustry division codes at 2 digit level of NIC 1987 and corresponding description for manufacture and repair services as adopted for tabulation the fortyfifth round of NSS.

Sl No	Industry division codes	description of industry
	(2)	(3)
	20	Manufacture of food products
	21	
	22	Manufacture of beverages, tobacco and related products
	23	Manufacture of cotton textiles
	24	Manufacture of wool, silk and man-made fibre textiles
	25	Manufacture of jute and other vegetable fibre textiles (except cotton)
	26	Manufacture of textile products (including wearing apparel)
	27	Manufacture of wood and wood products; furniture and fixtures
	28	Manufacture of paper and paper products and printing, publishing & allied industries
	29	Manufacture of leather and products of leather, fur & substitutes of leather
	30	Manufacture of basic chemicals and chemical products (except products of petroleum and coal)
	31	Manufacture of rubber, plastic, petroleum and coal products; processing of nuclear fuels
	32	Manufacture of non-metallic mineral products
	33	Basic metal and alloys industries
	34	Manufacture of metal products and parts, except machinery and equipment
	35	Manufacture of machinery and equipment other than transport equipment (manufacture of scientific equipment, photographic/cinematographic equipment and watches & clocks is classified in division 30)
	36	
	37	Manufacture of transport equipment and parts
	38	Other manufacturing industries
	39	Repair of capital goods
	97	Repair services

List of members of the Working Group
for the NSS 45th Round

1.	Prof. J. Roy, Indian Statistical Institute, Calcutta.	Chairman
2.	Prof. K. Sundaram, Delhi School of Economics, University of Delhi.	Member
3.	Prof. J.C. Sandesara, Department of Economics, University of Bombay.	Member
4.	Shri S.P. Gotboskar, Principal Adviser, Department of Statistical Analysis & Computer Services, Reserve Bank of India, Bombay.	Member
5.	Shri H.K. Bhuyan, Director, Directorate of Economics and Statistics, Assam.	Member
6.	Shri V.B. Sardesai, Director, Bureau of Economics and Statistics, Gujarat.	Member
7.	Shri K. Balakrishnan Nair, Director, Directorate of Economics and Statics, Kerala.	Member
8.	Dr. Ajit Singh, Economic Adviser, Economic & Statistical Organisation, Government of Punjab, Chandigarh.	Member
9.	Shri R.N. Sehgal, Director, Office of the Development Commission, Small Scale Industries, New Delhi.	Member
10.	Dr. K.L. Lakhera, Additional Economic Adviser, Ministry of Industry, New Delhi.	Member
11.	Shri S. Krishnamurthy, Deputy Chief Executive Officer (Economic Research and Bank Finance), KVIC, Bombay.	Member
12.	Shri Krishan Kumar, Deputy Adviser (V & SI), Planning Commission, New Delhi.	Member
13.	Shri H.P. Nathani, Member, Executive Committee, Federation of Associations of Small Industries of India, Calcutta.	Co-opted member
14.	Shri S. Rameshath Iyer, Director, FOD, NSSO.	Member
15.	Shri S.K. Sanyal, Director, Central Statistical Organisation, New Delhi.	Member
16.	Shri R.P. Mehta, Additional Director, Computer Centre, New Delhi.	Member
17.	Shri R.P. Kalyal, Head, National Accounts Division, Central Statistical Organisation, New Delhi.	Member
18.	Shri L.K. Bhattacharya, Joint Director (Retd.), SIRD, NSSO, Calcutta.	Co-opted member
19.	Shri A.R. Rao, Joint Director, SIRD, NSSO, Calcutta.	Convener
