(October 1972—September 1973)**

A NOTE ON PER CAPITA PER DIEM INTAKE OF NUTRIENTS

SECTION 1 : INTRODUCTION

1.1 The data on level of nutrition, based on the NSS 26th round household consumer expenditure survey, conducted during July 1971 to June 1972, were published in NSS report number 238, separately for the rural and urban areas of each State/Union Territory of India. With the availability of tabulated results of the NSS 27th round (October 1972—September 1973) consumer expenditure data, collected from a considerably larger number of sample households, viz., 72 270 in rural India and 52 820 in urban India, the desirability of obtaining comparable estimates on the intake of nutrients from the NSS 27th round survey data became obvious.

1.2 CONTENT

The present report provides results on energy, protein and fat consumed per capita/per diem for the rural and urban areas of all the states of regional level, based on the data collected in the household survey on consumer expenditure of the NSS 27th round. In this survey, data relating to expenditure incurred by the sample households on all items which were used for domestic consumption during the period of 30 days preceding the date of survey, were collected in the different blocks of the household schedule.

1.3 GEOGRAPHICAL COVERAGE

The geographical coverage of the survey was extended over the whole of rural and urban areas of India excepting : Ladakh district of Jammu & Kashmir, rural areas of Pal and Samri tehsils of district Surguja and Bijapur, Dantewara, Kanta and Narayanpur tehsils of district Bastar of Madhya Pradesh, Rajura, Sironcha and Godh-Chiroli tehsils of district Chanda and Melghat tehsil of district Amaravati of Maharashtra, rural areas of Nagaland, disturbed villages of Tripura, rural areas of the Union Territory and Chandigarh, the Union Territories of Arunachal Pradesh, Andaman and Nicobar Islands, Mizoram, Lakshadweep, Minicoy and Amindivi Islands and Dadra and Nagar Haveli.

1.4 SAMPLE SIZE

Information was collected by interviewing one of the members (usually the head) of the sample households. Altogether 72 270 sample households from 8 626 sample villages and 52 820 sample households from 4 772 urban blocks were surveyed. The sample design and estimation procedure has been presented in Section 4.

1.5 COMPUTATIONAL PROCEDURE

The computational procedure followed for arriving at the results presented in the tables is described below:

The detailed item wise average quantity of food consumed per capita per month were converted into equivalent measures of (a) calorie (b) protein and (c) fat, for each per capita average monthly expenditure group, separately for the rural and urban areas of each State at the regional level by using the appropriate factors provided in the food composition tables. Dividing the total calorie intake, protein intake and fat intake thus obtained by 30, an estimate of per capita per diem average calorie, protein and fat intake for each expenditure group were calculated and are shown in the tables presented in Part II.

1.6 TABLE NUMBERING SYSTEM

The following system has been adopted in numbering the tables : The left hand number refers to the individual State/Union Territory which are first arranged in alphabetic order of their respective names and are assigned serial numbers in that order and the digits following the decimal point, stand for the region number within the corresponding State.

SECTION : 2 CONCEPTS AND DEFINITIONS

2.1 Some of the basic concepts and definitions used in the NSS 27th round consumer expenditure survey are ;

2.2 HOUSEHOLD

A household is a group of persons normally living together and taking food from a common kitchen. A member of a boarding house or a hotel boarder (with his dependents or guests) forms a separate household. Households maintained and fed directly by government such as those in prisons, police quarters, cantonments, hospitals, relief camps are however, excluded from the scope of the enquiry.

2.3 HOUSEHOLD MEMBER

Any person who usually lives and takes principal meal with the household is considered to be a member of the household. Such a person may be the head of the household or a relative or a protegee of the head or an employee of the household.

2.4 HOUSEHOLD SIZE

The number of members (as defined above) in a household constitutes the household size.

2.5 CASH PURCHASE

This refers to all cash purchase except those made for enterprise purposes of the household during the reference period. Only such purchases as are made for non-productive domestic consumption are considered for this purpose.

2.6 HOME GROWN STOCK

Home grown stock means commodities produced at home. This includes produce from leased in as well as from leased out land, produce from kitchen garden and livestock products and produce from household industries. Produce brought from village home is also included in this. The value of home grown stock is imputed at ex-farm price or ex-factory rate which excluded any transport or distributive cost or middlemen's profit or other trade margins.

2.7 HOUSEHOLD CONSUMER EXPENDITURE

Consumer expenditure of a household comprises of all expenditures incurred by the household during a reporting period of 30 days preceding the date of survey exclusively towards its non-productive domestic consumption. Thus all expenses towards the entrepreneurial activities of the household are excluded. Transfer payments in kind like loans advanced, charities, gifts and other payments in kind, if any, are not considered as consumer expenditure. But any consumption out of transfer receipts in kind like borrowings, gifts, charities, perquisites received by the household, free collection and other receipts in kind, if any, is considered for determining total consumption of the household.

2.8 HOUSEHOLD CONSUMPTION

Value and quantity of food and non-food items consumed by the household during a period of 30 days preceding the date of enquiry were collected in the survey. Quantity consumed by cattle, etc., were not to be included under domestic consumption. While quantity consumed out of transfer receipt was included, any such quantity disposed as gift or as transfer payment was excluded for deriving the quantity of domestic consumption. Thus the total consumption of goods is related to the actual consumption made by the normally resident members (excluding temporary stay aways) and guests. This also included consumption of food articles in ceremonies performed in the household during the reference period.

2.9 CALORIE

It is a unit for measuring energy. The calorie unit of measurement of nutrients in food is 1000 times the conventional 'calorie' unit of energy. Hence in some studies, the unit of nutrient has been expressed as 'Kcal' (i.e. Kilo calories or 1000 calories) or simply 'Cal.'. Food items like cereals, sugar, potato, etc., are normally the major source of supply of energy in a human body. Weight per weight, these food items contain larger amount of carbohydrate which is converted into glucose within the body. The glucose thus produced is burnt and the resulting heat is the energy source. Similarly most of the food consumed is transformed within the body and is converted to produce some amount of energy.

2.10 PROTEIN

Protein is taken as the foundation of human diet. It is an important constituent of the diet as it is necessary for the growth and integrity of living tissues. During the process of digestion, proteins are broken down into amino-acids. They are not stored in the body. Shortage of protein requirement causes malnutrition. Protein requirement is greater during periods of growth in children and under stress conditions such as pregnancy and lactation.

It is derived mainly from pulses and nuts, soya-bean, milk, egg, fish and meat. Animal proteins, i.e., those derived from milk, egg, fish and meat, are of higher biological value than vegetable proteins. It is usually expressed in gram(g) per 100 grams of edible portion of a food.

2.11 FAT

Fat is a concentrated source of energy and is a necessary nutrient in the diet. It is mainly derived from ghee, butter and edible oils.

SECTION : 3-SUMMARY OF RESULTS

3.1 Compared to the minimum requirement of 2200 Kcal per capita per day which is equivalent to 2750 Kcal per consumer unit per day, the average calorie intake for the population was found to be slightly higher in the rural sector and lower in the urban sector, at the all India level. It has been observed that on an average, in our country, one person is equivalent to 0.8 consumer unit¹. The said nutritional norm, based on the recommendations given in the report of a joint FAO/WHO *ad hoc* expert committee² (1973), is in agreement with the recommendations made by the Indian experts³.

3.2 AVERAGE LEVEL OF CALORIE INTAKE IN RURAL AREAS OF STATES

At the state level, per capita per diem intake of calorie was observed to be above the minimum requirement in rural areas of Punjab (3493), Haryana (3215), Jammu and Kashmir (3151), Himachal Pradesh (2954), Delhi (2913), Rajasthan (2730), Uttar Pradesh (2575), Madhya Pradesh (2423), Manipur (2310), Bihar (2225) and Karnataka (2202). On the other hand, the same was reported to be much below the minimum requirement in rural areas of Kerala (1559), Maharashtra (1895), West Bengal (1921), Tamil Nadu (1955), Goa, Daman & Diu (1973), Orissa (1995), Assam (2074), Meghalaya (2088) and Andhra Pradesh (2103). The calorie intake was found to be slightly lower than the minimum requirement in the rural areas of Gujarat (2142), Tripura (2141) and Pondicherry (2150). Thus the rural areas of most of the eastern and southern States of India reported to have the level of calorie consumption well below the minimum requirement which is in conformity with the result of 26th round (July 1971—June 1972)⁴.

3.3 AVERAGE LEVEL OF CALORIE INTAKE IN URBAN AREAS OF STATES

The pattern was different in urban areas. The per capita per diem intake of calorie at the state level was above the minimum requirement in Himachal

Pradesh (2961), Punjab (2783), Meghalaya (2598), Tripura (2511), Jammu & Kashmir (2467), Manipur (2456), Haryana (2404), Rajasthan (2357), Orissa (2276) and Madhya Pradesh (2229). On the other hand, the same was much below the minimum requirement in Kerala (1723), Tamil Nadu (1841), Karnataka (1925), Maharashtra (1971), Pondicherry (1998), West Bengal (2080) and Goa, Daman & Diu (2119). The calorie intake was slightly lower than the minimum requirement in Assam (2135), Andhra Pradesh (2143), Delhi (2157), Uttar Pradesh (2161), Bihar (2167) and Gujarat (2172).

A comparison of the level of intake of calorie for 28th round and 27th round data indicate that the level of intake in most of the States has remained unchanged during a period of one year excepting in Himachal Pradesh, Haryana, Jammu & Kashmir, Meghalaya, Punjab and Tripura where the level of intake has improved.

3.4 COMPARISON OF THE LEVEL OF CALORIE INTAKE BETWEEN RURAL AND URBAN AREAS OF STATES

Sectoral differences in respect of calorie intake has also been observed. While no marked variation is apparent between the rural and urban areas of a few States, viz., Andhra Pradesh, Assam, Bihar, Gujarat, Himachal Pradesh, Kerala, Maharashtra, Manipur, Tamil Nadu, Goa, Daman & Diu and Pondicherry, the level of intake in the rural areas of Haryana, Punjab, Rajasthan, Jammu & Kashmir, Uttar Pradesh, Delhi, Madhya Pradesh and Karnataka were considerably higher than the corresponding level in the urban areas. On the other hand, Meghalaya, Tripura, Orissa and West Bengal with low calorie intake in rural areas recorded higher intake in urban areas.

3.5 CALORIE INTAKE AT HIGHER PER CAPITA EXPENDITURE LEVELS

Calorie intake at the top per capita expenditure class is found to be conspicuously high in some regions. There is a possibility of food served to guests during ceremonies or to visitors and also food served to employees, getting mixed up and reported as domestic consumption of a household. The high rate of calorie intake reported at some places might be due to this. Some further probing is however, needed to explain the observed high rate of intake of energy.

3.6 INTAKE OF PROTEIN

The all India average per capita consumption of protein has been estimated to be 62.7g

¹ Sen Gupta, S and Joshi, P.D. (1978) : Consumption of Cereals and Energy Content of food consumed, *Sarvekshana, The Journal of National Sample Survey Organisation*, Vol. 2 No. 1.

² FAO/WHO *Ad hoc* Expert Committee (1973) : "Energy and Protein Requirement".

³ Gopalan, C and Narsing Rao, B.S. (1977) : "Dietary Allowances for Indians", *Indian Journal Medical Research Special Report No. 60*.

⁴ Government of India, National Sample Survey Organisation (1976) : "Calorie and Protein Values of Food Items Consumed per Diem per Consumer Unit", *NSS No. 238, Volumes I and II*.

per day for the rural sector and 56.7 g per day for the urban sector which is more than the recommended level. It is seen from Tables S. 1 and S. 2 that the average per capita per diem intake of protein is in general adequate at the regional and sectoral level except for rural sector of Kerala. Further the pattern of protein consumption in general for the rural and urban areas of different States at the regional level corresponds to the pattern of calorie consumption. The quantitative adequacy of protein intake may be considered only when the calorie intake is adequate.

3.7 INTAKE OF FAT

A comparison of Tables S.1 and S.2 in respect of fat intake reveals that the level of fat intake is higher in urban areas of different States except in Haryana & Jammu & Kashmir compared to their corresponding rural counterparts. The all-India average per capita consumption of fat has been estimated at 24.5 g per day for the rural sector and 36.7 g per day for the urban sector. It appears that in view of consumption of vegetable oils, the fat requirement, at least in respect of providing necessary amounts of essential fatty acids, is met on an average.

3.8 PROPORTION OF EXPENDITURE ON FOOD

It is found that the percentage of food expenditure to total expenditure in rural areas of different States is higher compared to their corresponding urban counterparts. At the all-India level, the expenditure on food works out to be 72.70% and 64.32% for the rural and urban sectors respectively. There is no marked inter-regional variation in respect of proportion of expenditure on food.

3.9 LEVEL OF INTAKE OF NUTRIENTS IN BIG CITIES

Table S.3 shows that there is no marked variation in regard to the level of per capita energy and protein intake between the four big cities—Bombay, Calcutta, Delhi and Madras but the level of per capita fat intake in Delhi is highest (55.2 g. per day). The per capita intake of calorie and protein in Madras is also less compared to the other three big cities—Bombay, Calcutta and Delhi, which may be associated with the differences in consumption habits.

TABLE S.1 : AVERAGE PER CAPITA ENERGY (KCAL,) PROTEIN (G) AND FAT (G) INTAKE PER DIEM, MONTHLY PER CAPITA EXPENDITURE AND PERCENTAGE OF EXPENDITURE ON FOOD TO TOTAL EXPENDITURE BY REGIONS FOR THE RURAL AREAS OF DIFFERENT STATES : NSS 27TH ROUND (OCTOBER 1972—SEPTEMBER 1973)

Madras	2052	51.4	29.7	69.20	57.87

SECTION 4 : SAMPLE DESIGN AND ESTIMATION PROCEDURE

4.1 SAMPLE DESIGN

The general sample design was stratified with two-stage selection within each stratum. The first stage units were villages in rural areas and blocks in urban areas; the second-stage units were households in both rural and urban areas. The sample design was self-weighting at the region and sub-stratum level in rural areas. The sample villages and blocks were usually selected in the form of two independent and inter-penetrating sub-samples.

4.2 SAMPLE SIZE (CENTRAL SAMPLE)

In the central sample there were 9088 villages in rural areas and 1832 blocks in urban areas.

4.3 WORK PROGRAMME

The survey period of 12 months had been divided into 4 sub-rounds of 3 months each.

SAMPLE DESIGN : RURAL

4.4 SAMPLING FRAME

The frame used for selection was the list of villages as per 1971 population census.

4.5 STRATIFICATION

The country had been divided into 66 agricultural regions by grouping, within each State of Union Territory, districts having similar population density and crop pattern. Then within each region, strata had been formed by grouping tehsils which were (i) contiguous (ii) having similar crop pattern, population density and altitude and (iii) having good transport and communication facilities amongst them. The rural population was about the same for each stratum within a region. The number of strata form-

ed within a State/Union Territory was given by the number of sample villages allocated to it divided by 24 except in Uttar Pradesh where each district was a stratum. The total number of rural strata was 392.

4.6 ALLOCATION (CENTRAL SAMPLE)

The all India sample size of 9088 villages had been allocated to the states on a joint consideration of their rural population, area under cereal crops and available investigator strength. This was modified (i) to ensure a minimum of 360 villages in a state excepting some smaller States and the Union Territories, (ii) to take account of state-wise variation in workload and number of investigators, and (iii) to make the sample size a multiple of 24 in order to facilitate selection of 2 sub-samples of 12 villages.

4.7 SELECTION OF VILLAGES

Two independent sub-samples of 24 villages each were selected circular systematically with equal probability in each stratum, after arranging the tehsil of the stratum in a serpentine order. In each sub-sample, the villages with odd order of selection formed the Central Sample and the rest formed the State Sample. Thus generally, each sub-sample of a rural stratum contained 12 sample villages. But a sub-sample had only 8 villages in Delhi, 3 villages in central sample of Goa, Daman & Diu. And in Uttar Pradesh, the sub-sample size varied from stratum and also between central and state samples.

4.8 SELECTION OF HOUSEHOLDS

All households in a sample village/hamlet group were divided into three sub-strata on the basis of their means of livelihood as follows : (i) self-employed in non-agriculture, (ii) rural labour and (iii) others. On an average, 12 sample households were selected in a sample village (2, 5 and 5 respectively). Sampling of households was

done linear systematically and independently from each sub-stratum using the interval and random start specified for the purpose so as to make the design self-weighting at the region level for each sub-stratum.

4.9 SAMPLING FRAME SAMPLE DESIGN : URBAN

The list of NSS Urban Frame Survey (UFS) blocks supplemented by the list of 1971 census blocks (1961 census blocks in Tamil Nadu and West Bengal) had been used as the sampling frame.

4.10 STRATIFICATION

In each State/Union Territory, town with 1971 census population less than 50,000 formed stratum 1 and the remaining towns and cities formed stratum 2 except the four big cities viz., Bombay, Calcutta, Delhi and Madras. Each one of them formed strata 3 of its respective State. The total number of urban state in all-India was 50.

4.11 ALLOCATION (CENTRAL SAMPLE)

The all-India sample size of 4832 blocks had been allocated to the states in proportion to their 1961 census urban population. The allocations had been modified (i) to ensure a minimum of 144 sample blocks in a state excepting some smaller states and Union Territories, (ii) to take account of state wise variation of work-load and number of investigators and (iii) to make the allocations multiples of 8 in order to facilitate having 2 sub-samples and 4 sub-rounds. Sample size for a state was allocated to the strata in it in proportion to their total urban population. Final stratum allocations also were made multiples of 8.

4.12 SELECTION OF BLOCKS

In each stratum, blocks had been selected circular systematically with probability proportional to size (PPS), the size of a block being taken as its population rounded off to the next multiple of 1000. Generally, the blocks had been selected in the form of two independent and interpenetrating sub-samples of equal size; within each sub-sample the central sample and the state sample were formed as for sample villages.

4.13 SELECTION OF HOUSEHOLDS

All households of a sample block/sub-block were divided into two sub-strata: (1) self-employed and (2) not self-employed. Further, the households of sub-stratum 1 were arranged in two classes viz., (a) self-employed in manufacture, and

(b) self-employed in other activities. Then from each sub-stratum households were sampled linear systematically using the interval and random start specified in the sample list. The average sample size for a block was 12 households—6 from each sub-stratum.

4.14 ESTIMATION PROCEDURE

Notations

- s : sub-script for s^{th} stratum in a state
 t : sub-script for t^{th} sub-stratum within a sample village/block
 i : sub-script for i^{th} sample village/block/selected part of village or block
 j : sub-script for j^{th} sample household
 k : number of strata in the state
 n_s : number of selected villages/blocks in a sub-sample of the s^{th} rural/urban stratum for the whole round
 h : number of households selected for the enquiry
 y : value of the characteristic

Y , the estimate of the total for the characteristic y in consumer expenditure schedule from a sub-sample for the whole round, is given by C for rural areas.) ;

$$Y = \sum_{t=1}^3 \sum_{s=1}^k M_{st} \sum_{i=1}^{n_s} \sum_{j=1}^h y_{sitj}$$

Where M_{st} is the constant multiplier for the s^{th} stratum and t^{th} sub-stratum. It may be noted that M_{st} is same for all strata within a region. For urban areas Y is given by,

$$Y = \sum_{t=1}^2 M_t \sum_{s=1}^k \sum_{i=1}^{n_s} \sum_{j=1}^h y_{sitj}$$

Where M_t is the state-wise constant multiplier for the t^{th} sub-stratum.

5.1 STATISTICAL TABLES

Tables on per capita Energy (Kcal), Protein (g) and fat (g) intake per diem, percentage of estimated number of persons, monthly per capita expenditure and percentage of expenditure on food to total expenditure by monthly per capita expenditure classes for the rural and urban areas of different States at the regional level, of four big cities and of all India have been presented in Part II of the journal.

PART II

TABLES ON PER CAPITA PER DIEM INTAKE OF NUTRIENTS

ACTIVITY (USUAL AND CURRENT) STATUS CODES USED IN TABLES 5, 6, 9 and 10.

A. STATUS

worked with an employee under obligation but work not specifically compensated by any wage/salary	01—04
worked (self-employed) in household enterprise	11
worked as helper in household enterprise	21
worked as regular salaried/wage employee	31
worked as casual wage labour in public works	41
worked as casual wage labour in other types of work	51
did not work though there was work in household enterprise (for current status only)	61
did not work but had regular salaried/wage employment (for current status only)	71
sought work (for current status only)	81
did not work but was seeking and/or available for work (for usual status only)	81
did not seek but was available for work (for current status only)	82
attended educational institutions	91
attended domestic duties only	92
attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood,cattle feed, etc.), sewing, tailoring, weaving etc. for household use	93
too young to work/to attend school/to seek employment	94
old and disabled	95
rentiers, pensioners, remittance recipients, etc.	96
beggars, prostitutes, etc.	97
others	98
casual workers who did not work due to temporary sickness (for current status only)	99

B. INDUSTRY (Division)

agriculture, hunting, forestry & fishing	0
mining and quarrying	1
manufacturing	2 or 3
electricity, gas and water	4
construction	5
wholesale and retail trade and restaurant & hotels	6
transport, storage and communication	7
financing, insurance, real estate and business services	8
community, social and personal services	9

A NOTE ON SOME SELECTED IMPORTANT RESULTS OF THE SECOND QUINQUENNIAL SURVEY (NSS 32ND ROUND) ON EMPLOYMENT AND UNEMPLOYMENT FOR THE DIFFERENT STATES

INTRODUCTION

The second country wide quinquennial survey on Employment and Unemployment was carried out by the National Sample Survey Organisation (NSSO) in its 32nd round survey operations (July 1977—June 1978). Provisional estimates of two key indicators of employment and unemployment obtained through manual tabulation of selected items of data collected in this survey for the population of age 15-59 years have been released for all India and the different States/Union Territories in the NSSO Journal¹. Detailed results for all India and some important summary results for all-India and States/Union Territories with brief notes have also been released². The results based on detailed tabulation of data relating to the various States/Union Territories are being progressively released in the NSSO mimeographed report-series numbered 298/1, 298/2, etc. In this document 10 tables giving estimates of some basic items of information on both the household characteristics and the employment-unemployment characteristics of population collected in the survey are presented separately for the States of Kerala, Madhya Pradesh, Rajasthan and Uttar Pradesh, Andhra Pradesh, Maharashtra, Bihar, Gujarat, Haryana, Punjab, Tamil Nadu & West Bengal has already been released³.

The details of sampling design, survey coverage estimation procedure and salient features of the conceptual frame and data collection procedure adopted in the survey are given in the Report² containing the all-India results. A brief summary of the scope and coverage of the survey, the concepts, definitions etc., is given below.

GEOGRAPHICAL COVERAGE

The survey covered the whole area of the Indian Union excepting Sikkim, Andaman & Nicobar

¹"Employment—Unemployment situation in India during the seventies" *Sarvekshana*, Vol. III, No. 3.

²Report on the Second Quinquennial Survey on Employment and Unemployment (all India), *Sarvekshana*, Vol. V, Nos. 1—2, July—October 1981.

³*Sarvekshana*, Vol. VI, Nos. 1-2 : July-Oct. 1982

Islands, Lakshadweep, Dadra and Nagar Haveli, Ladakh District of Jammu and Kashmir, rural areas of Pal and Samri Tehsils of district Bastar of Madhya Pradesh, rural areas of Rajura, Sironcha and Gadchiroli Tehsils of district Chandrapur and Nelghat tehsil of district Amravati of Maharashtra and rural areas of Chandigarh, Mizoram and Nagaland.

SAMPLING DESIGN AND SAMPLE SIZE

A stratified two-stage sampling design was adopted in the survey with census villages and urban blocks (Urban Frame Survey Blocks formed by NSSO) as the first stage units respectively for the rural and urban areas and households as the second stage units. But in the rural areas of the North Eastern States the first stage units were clusters of villages. Altogether 8820 villages and 4940 urban blocks were selected as the first stage units. In each of the selected first stage units, 12 households were selected as second stage units (for the rural areas of North Eastern Region, 24 households were selected from each cluster of villages).

SURVEY PERIOD AND SUB-ROUND FORMATION

The survey was started in July 1977 and was completed in June 1978. The entire survey period of one year was divided into four sub-rounds of three months each coinciding approximately with the four agricultural seasons. The four sub-round periods were, July—September 1977, October—December 1977, January—March 1978 and April—June 1978. The sample villages and blocks were distributed over the four sub-rounds in equal numbers so as to provide valid estimates for each of the sub-rounds.

ESTIMATION PROCEDURE

In order to reduce work-load at the tabulation stage and to provide estimates at the regional level, the following estimation procedure was adopted :

$$Y = y \times \frac{P}{p} \text{ where,}$$

- y = estimated rural/urban total of a characteristic for any region for any sub-round/all sub-rounds
- y = rural/urban sample total of the characteristic for the region for the sub-round/all sub-rounds
- P = projected rural/urban population of the region for January 1978 and
- p = total sample persons in the sample villages/blocks of the region surveyed in the sub-round/all sub-rounds.

The estimation was done separately for the rural and urban areas.

The values of 'P' have been arrived at using 'Estimates (provisional) based on Expert Committee projections tentatively revised in the light of 1971 Census data' [Source : Bulletin on Food Statistics, 25th Issue (1975), Table 1.2.] The estimates given in this set of projections relate to 1st July of each year. To centre them at 1 January 78 (the mid-point of the survey period covered by the 32nd round), the averages of the projected population figures for 1977 and 1978 have been used.

At the time of the preparation of this document, 1981 Census population tables have become available for each State and Union Territory, with break-down by residence status (rural/urban) and sex. Using these provisional figures and the corresponding population totals of 1971 Census, revised estimates of population as on 1 January 78 have been obtained by interpolation (assuming an exponential growth rate between the two censal time points) independently for males and females residing in urban and rural areas of each State. To make the estimates presented

here conform to the revised estimates, adjustment factors have been computed for each population group as the ratio of the revised estimates of population to the corresponding estimates given in the report. These ratios are given in the Table A. Each aggregate estimate may be multiplied by its corresponding adjustment factor (i.e. that of the population group to which it belongs) to obtain a revised estimate of aggregate.

Ratios (rates, percentages, etc.) involving distribution of any one State/Union Territory \times residence status \times sex group are unaffected by this adjustment. However, any ratio or proportion involving aggregation of more than one group will have to be built up by first computing the aggregate of its numerator and denominator separately by addition of relevant adjusted aggregates.

SALIENT FEATURES OF THE CONCEPTUAL FRAME AND DATA COLLECTION PROCEDURE

The main objective of the survey was to measure in quantitative terms, the nature and extent of employment and unemployment at disaggregated levels. To achieve this objective, the attempt in the survey was to classify the population as belonging to different activity categories, independently, by using three different approaches, namely, (i) the usual status approach, (ii) the current weekly status approach and (iii) the current day status approach. Persons distributed according to the various activity categories were further classified by several meaningful correlates, such as age, sex, general and technical education, industry, occupation, etc. The different activity categories, adopted for the purpose were as under.

DESCRIPTION OF THE ACTIVITY CATEGORY*	CATEGORY CODE
Working with an employer under obligation but work not specifically compensated by any wage/salary	01-04
Worked (self-employed) in household enterprises	11
Worked as helper in household enterprises	21
Worked as regular salaried/wage employee	31
Worked as casual wage labour in public works	41
Worked as casual wage labour in other types of work	51
Did not work though there was work in household enterprise	61
Did not work but had regular salaried/wage employment	71
Sought work	81
Did not seek but was available for work	82
Attended educational institutions	91
Attended domestic duties only.	92
Attended domestic duties and was also engaged in free collection of goods (vegetables, roots, fire-wood, cattle feed, etc.) sewing, tailoring, weaving, etc., for household use	93
Too young to work/to attend school/to seek employment	94
Old and disabled	95
Rentiers, pensioners, remittance recipients, etc.	96
Beggars, prostitutes, etc.	97
Others	98
Did not work due to temporary sickness (for casual workers only)	99

*The activity category codes, 61, 71, 82 and 99 were used only for current status approach.

Persons assigned any one of the activities listed under the category codes 01 to 71 were treated as 'working' (or employed). Persons assigned activity category codes 81 or 82 were treated as 'seeking and/or available for work' (or unemployed). The remaining persons i.e. the persons assigned any of the activity category codes 91 to 99 were treated as 'not available for work' (or not in labour force). The data on activity particulars of the persons were, however, tabulated only for population of age 5 years and above.

CLASSIFICATION ACCORDING TO USUAL STATUS APPROACH

For classification of population into various activity categories according to usual status, persons were first classified into three major activity status groups namely, 'working', 'seeking and/or available for work' and 'not available for work' on the basis of a 'major-time-spent' criterion with reference to the period of 365 days preceding the date of survey. Accordingly, one was categorised as 'working' if he was reported to be engaged for a relatively long time during the reference period in one or more of the gainful activities (category codes 01-51), 'seeking and/or available for work' if one was reported to be either 'seeking or available for work' (category code 81) for a relatively long time during the same reference period and 'not available for work' if one was reported to be not available for work during a relatively long time of the reference period. Within each of these three broad groups of categories, the detailed activity status categories were then determined by again using the 'major-time-spent' criterion.

CLASSIFICATION ACCORDING TO CURRENT WEEKLY STATUS APPROACH

For classification of person according to current weekly status, he or she had to be assigned a unique activity status with reference to a period of seven days preceding the date of survey. For a person pursuing more than one activity during the week, his/her unique status was decided by adopting a priority cum-major time rule under the priority rule, the status of 'working' got priority over the status of 'not working but seeking/available for work' which in turn got priority over the status of 'not working and not seeking/available for work'. For a

person classified under the first or the last category his/her detailed activity status was determined by major-time-spent criterion, i.e. the detailed activity on which major time was spent was considered his/her current weekly status. Further, if a person has worked for one hour on any one day of the week he was considered 'working'. A person who had not worked during the week but was available for work even for one hour on any one day of the week was considered 'seeking and/or available for the work'. Others constituted the category 'not available for work' (or not in labour force). Each person was thus assigned a unique activity status for the week. Aggregate of persons under the different activity status provided the distribution of persons by activity on an average in a week of the survey period of one year.

CLASSIFICATION ACCORDING TO CURRENT DAY STATUS APPROACH

In adopting the current day status approach attempt was made to account for two major activities pursued by a person on each day of the seven days, reference week allocating 'half-day' to each activity. The unit of classification according to this approach, was thus half-day though data were collected for all the seven days of the reference week. In assigning the activity status on a day, a person was considered 'working' (or employed) for the entire day if he/she had worked 4 hours or more on the day, and assigned the one or two (as the case may be) work activities (01-71) to which he/she devoted the working time. But if the work was done for one hour or more but less than 4 hours, he/she was considered 'working' (or employed) for half-day and 'seeking/available for work' (or unemployed) or 'not available for work' (or not in labour force) for the other half of the day depending on whether he/she was seeking/available for work or not on the day. On the other hand, a person was not engaged in any gainful work even for one hour on the day but was seeking or available for work for four hours or more, he/she was considered 'unemployed' for the entire day. But if the reported availability for work was for less than four hours only, he/she was considered 'unemployed' for half-day and 'not in labour force' for the other half of the day. A person who neither was having any gainful work to do nor was available for work

even for half of the day was considered 'not available for work' (or not in labour force) for the entire day and assigned the one or two of the non-gainful activity statuses which he/she had during the day. The aggregate of person-days so classified under the different activity categories for all the seven days of the week divided by seven gave the distribution of persons (strictly speaking, person-days) by activity category on an average on a day of the survey period of one year.

PROBING QUESTIONS

In order to understand the complex dimensions of the work pattern, the extent of under utilisation and the nature of reported preferences for additional work, etc., among those classified as employed according to usual status, the types of work desired, efforts made to get work, etc., for those classified as 'unemployed students, persons engaged in domestic duties, etc., some relevant probing questions were put to the above categories of persons to elicit the required information. These probing questions apart, a second set of probing questions were also canvassed in this round exclusively for those classified according to usual status as engaged in domestic duties with a view to eliciting information on the reasons for their usual attachment in household chores, whether they would report as available for work, if work was provided at their residences etc.

ACTIVITY CATEGORY 93

It is known that a part of the total working time of the women—particularly rural women usually engaged in household duties is spent of certain activities to meet household needs. These activities are considered gainful if the goods or services produced as a result of such work are essentially for sale it was generally felt that information on this aspect of participation in household activities of persons, mostly women, classified according to usual status as 'engaged in domestic duties' could not be obtained from the NSS. In the 32nd round survey, therefore, attempt was made to sub-divide persons who usually remain engaged in domestic duties into two sub-categories, namely, (i) engaged exclusively in domestic duties and (ii) engaged in domestic duties as well as in the activities like free collection of goods etc., listed above. The adoption of this new activity sub-category for those engaged in household chores was intended to identify separately those who along with their domestic duties also carry out the above activities from those who carry out only domestic duties.

DESCRIPTION OF THE TABLES PRESENTED

It is already mentioned that estimates of some basic items of information pertaining to house-

hold characteristics and the activity characteristics of the population for 4 States are presented. The relevant results are presented in 10 different tables. A brief description of these tables is given below :

Table (1) : The distributions of rural and urban households by household type and household monthly per-capita expenditure are presented in this table. The survey households in the rural areas were categorised under five different types. They are :

- (i) households self-employed in agricultural occupations
- (ii) households self-employed in non-agricultural occupations
- (iii) agricultural labour households.
- (iv) non-agricultural labour households
- (v) other households

For the urban areas, only two different households types were considered, namely :

- (i) self-employed households
- (ii) other households

Table 2 : The distribution of the rural and urban households by household monthly per-capita expenditure and the principal household industry, the household industry being considered as the source from which major income of the household was derived during the 365 days preceding the date of survey are presented in Table 2. Here only nine broad industrial categories have been considered. They are : agricultural, mining & quarrying, manufacturing, electricity, gas & water, construction, trade, transport, services and others.

Table 3 : The distribution of the rural and urban households by household monthly per-capita expenditure and the proportion of persons economically active to total persons are given in Table 3. The employed and unemployed together constitute the economically active population.

Table 4 : In Table 4 are presented the estimates of (i) total number of households (ii) total persons (iii) total economically active persons (iv) average household size and (v) average number of economically active persons per household for each household monthly per capita expenditure class. The estimates of 'persons' and 'economically active persons' are presented separately for each sex.

Table 5 : In Table 5 are presented the distributions of males and females of age 5 years and above by age group and usual activity status. In this table the population has been shown as distributed between five age-groups, such as, 5-14, 15-29, 30-44, 45-59 and

60 & above. The usual activity status categorise are given in terms of codes in columns (1) and (2) of the table. It is already indicated that the usual status of a person is determined on the basis of a 'major time' or a 'relatively long time' spent criterion with reference to a period of 365 days preceding the date of survey. It may be noted that according to this criterion, some of the persons categorised 'not working' may be still pursuing some gainful activities (quite likely, marginally) during the reference period of 365 days. But such of gainful activity pursued in a subsidiary capacity has not been considered in working out the distributions presented in Table 5.

Table 6 : This table gives the distribution of males and females of age 5 years and above by usual activity status taking also into consideration the subsidiary gainful status of those categorised as 'not working' during the reference year according to 'major time-spent' criterion. The distribution are presented cross classified by age-group and the activity status.

Table 7 : In Table 7 are presented the distribution of males and females of age 5 years and above categorised 'working' according to 'usual status' classification by two digit major group of the industrial classification. The estimates for both the rural and urban areas are presented in the same table.

Table 8R & 8U : The distributions of male and females of age 5 years and above categorised 'usually working' by specified groups of 'occupation' are presented in Table 8R for rural areas and Table 8U for urban areas. It may be noted that the occupation groups considered are different for the urban and rural areas as occupation pattern in rural areas is known to be different from that in the urban areas.

Table 9 : The distributions of males and females of age 5 years and above by their current weekly activity and age-group are presented in Table 9. The estimates given represent the average weekly situation obtaining for persons over the reference period of 365 days preceding the date of survey.

Table 10 : The activity situation obtaining for persons on an average day over the reference period of 365 days preceding the date of survey is presented in this table. The estimates represent the number of person days of persons of age 5 years and above occupied in various activities on an average day over the reference period of 365 days preceding the date of survey cross classified by different age-groups. These estimates are presented separately for males and females.

Note : Marginal totals between tables may not in all cases exactly agree in view of rounding of errors.

सर्वेक्षण

प्रोटीन एवं चर्बी तथा ऊष्मा के कैलोरी की प्रति व्यक्ति प्रतिदिन खपत

राष्ट्रीय प्रतिदर्श सर्वेक्षण

27वां दौर : अक्टूबर, 1972—सितम्बर, 1973

खण्ड एक

प्रस्तावना :

1.1 जुलाई, 1971 से जून, 1972 के दौरान संचालित रा० प्र० सर्वे० के 26वें दौर के पारिवारिक उपभोग व्यय सर्वेक्षण पर आधारित पोषण के स्तर के आंकड़े भारत के प्रत्येक राज्य/संघ शासित क्षेत्र के ग्रामीण और शहरी क्षेत्रों के लिए रा० प्र० सर्वे० रिपोर्ट संख्या 238 में अलग-अलग प्रकाशित किये गये। काफी बड़ी संख्या में प्रतिदर्श परिवारों अर्थात् ग्रामीण भारत में से 72270 तथा शहरी भारत में से 52820 परिवारों से रा० प्र० सर्वे० के 27वें दौर (अक्टूबर, 1972—सितम्बर, 1973) के उपभोग व्यय सम्बन्धी आंकड़ों के सारणीयन परिणामों के प्राप्त होने के कारण रा० प्र० सर्वे० के 27 वें दौर के सर्वेक्षण आंकड़ों में से पोषण के खपत के तुलनात्मक अनुमानों को प्राप्त करने की सम्भावना स्पष्ट हो गई।

1.2 अतः सामग्री वर्तमान रिपोर्ट में रा० प्र० सर्वे० के 27वें दौर के उपभोक्ता व्यय पर पारिवारिक सर्वेक्षण में एकत्रित किये गये आंकड़ों पर आधारित क्षेत्रीय स्तर पर सभी राज्यों के ग्रामीण तथा शहरी क्षेत्रों के लिये ऊर्जा प्रोटीन एवं चर्बी की प्रति व्यक्ति प्रतिदिन खपत के परिणाम लिये गये हैं। इस सर्वेक्षण में प्रतिदर्श परिवारों द्वारा सभी मदों पर किये गये व्यय से सम्बन्धित आंकड़े जोकि सर्वेक्षण की तारीख से 30 दिन पूर्व की अवधि के दौरान घरेलू खपत के लिए प्रयुक्त किये गये वे पारिवारिक अनुसूची के विभिन्न ब्लकों से एकत्रित किये गये थे।

1.3 भौगोलिक व्याप्ति : सर्वेक्षण की भौगोलिक व्याप्ति भारत के सम्पूर्ण ग्रामीण और शहरी क्षेत्रों में है। केवल जम्मू एवं काश्मीर के लद्दाख जिले, मध्य प्रदेश के जिला सुरगुजा और बीजापुर की पाल और सामरी तहसीलों, दरभंगा जिले दंतवारा, कोटा और नारायणपुर तहसीलों के ग्रामीण क्षेत्रों, महाराष्ट्र के जिला चाण्डा की राजपुरा सिरंचा और गंधारिरेली तहसीलों और अमरावती जिले की मेलघाट तहसील, नागालैण्ड के ग्रामीण क्षेत्र, त्रिपुरा के आवंटित गांव, संघ शासित क्षेत्र चण्डीगढ़, तथा अरुणाचल प्रदेश, अण्डमान तथा निकोबार द्वीप समूह, मिजोरम, लक्काद्वीव, मिजोरम और अमिनदिवि द्वीप समूह और दादर एवं नगर हवेली संघ शासित क्षेत्रों के ग्रामीण क्षेत्र इससे बाहर हैं।

1.4 प्रतिदर्श आकार : प्रतिदर्श परिवारों के एक सदस्य (आमतौर पर मुखिया) से साक्षात्कार करके सूचना एकत्रित की गई। कुल मिलाकर 8,626 प्रतिदर्श गांवों से 72270 प्रतिदर्श परिवारों तथा 54,772 शहरी ब्लकों से 52,820 प्रतिदर्श परिवारों का सर्वेक्षण किया गया।

1.5 परिणामों को प्राप्त करने के लिये अभिकल्पित कार्यविधि अपनाई गई जिसका विवरण निम्नलिखित सारणियों में दिया गया है। खाद्य संरचना सारणियों में दिये गये समुचित साधनों को प्रयुक्त करके प्रति व्यक्ति प्रति माह खाद्य की औसत मात्रा की खपत के मदवार विवरणों को उन्हीं के सममात्रा के (क) कैलोरी, (ख) प्रोटीन तथा (ग) चर्बी की प्रत्येक के लिये प्रति व्यक्ति औसत मासिक व्यय समूह की खपत प्रत्येक राज्य के क्षेत्रीय स्तर पर ग्रामीण तथा शहरी क्षेत्रों के लिए अलग-अलग परिवर्तित किया गया। इस प्रकार 30 से प्राप्त करते हुए कुल ली गई कैलोरी, प्रोटीन, चर्बी को भाग देकर प्रत्येक व्यय समूह के लिए प्रति व्यक्ति प्रतिदिन ली गई औसत कैलोरी, प्रोटीन, चर्बी के अनुमान निकाले गये और अनुलग्नक 2 में प्रस्तुत की गई सारणियों में दर्शाये गये हैं।

1.6 सारणियों को क्रम देने के लिये निम्नलिखित तरीका अपनाया गया। बायीं ओर दर्शायी गई संख्या राज्य विशेष, संघ शासित क्षेत्र को दर्शाती है जो कि पहले अपने सम्बन्धित नामों के आकार आदि क्रम में लिखे गये हैं और उसी क्रम में उनकी क्रम संख्या और तदनुरूप राज्यों में क्षेत्र संख्या के लिये दशमलव बिन्दु के बाद के अंक के रूप में संख्या दी गई है।

सर्वेक्षण

भाग दो

संकल्पनायें और परिभाषायें

2.1 रा० प्र० सर्वे० के 27वें दौर में उपभोग व्यय सर्वेक्षण में प्रयुक्त कुछ आधारभूत संकल्पनायें और परिभाषायें नीचे दी गई हैं :—

2.2 **परिवार** : परिवार से अभिप्राय है ऐसे व्यक्तियों का समूह जो आमतौर पर एक साथ रहते हैं और सांझी रसोई से खाना खाते हैं। आवास गृहों या होटलों (उन पर निर्भर करने वालों या मेहमानों के साथ) में रहने वाले सदस्य अलग परिवार माने जाते हैं। परिवार जैसे कि पुलिस के कैदखाने, क्वार्टर, कैन्टोनमेंट, हस्पताल, रिलीफ कैम्प जिनका भरण-पोषण सीधा सरकार द्वारा होता है, को जांच के क्षेत्र से बाहर रखा गया है।

2.3 **पारिवारिक सदस्य** : कोई व्यक्ति जो आमतौर पर परिवार के साथ रहता है और मुख्य भोजन करता है, को परिवार का सदस्य माना जाता है। यह व्यक्ति परिवार का मुखिया या सम्बन्धी या मुखिया का आश्रित या परिवार का कर्मचारी हो सकता है।

2.4 **पारिवारिक आकार** : परिवार में सदस्यों की संख्या (जिसकी परिभाषा ऊपर दी गई है) से पारिवारिक आकार बनता है।

2.5 **नकद क्रय** : संदर्भ अवधि के दौरान उद्यम के उद्देश्य से परिवार के लिये किए गए नकद क्रयों को छोड़कर यह सभी नकद क्रयों का उल्लेख करता है। इस उद्देश्य से केवल उन्हीं खरीदों पर विचार किया जाता है जो गैर-उत्पादक घरेलू उपयोग के लिए की जाती हैं।

2.6 **घर पर निर्मित वस्तुओं का स्टाक** : घरेलू निर्मित वस्तुओं का अर्थ है ऐसी वस्तुएं जो घर में बनाई गई हैं। इनमें पट्टे के साथ-साथ पट्टा भूमि से उत्पादन, साक वाटिका का उत्पादन एवं पशुधन उत्पाद तथा घरेलू उद्योगों से उत्पादन सम्मिलित हैं। ग्रामीण घरों में होने वाला उत्पादन भी इसमें सम्मिलित है। घरेलू निर्मित वस्तुओं के स्टाक का मूल्य गैर-फार्म भाव अथवा गैर-कारखाना दर पर आरोपित किया गया है जिसमें कोई परिवहन अथवा वितरक लागत अथवा दलालों का लाभ अथवा अन्य व्यापार उपान्त सम्मिलित नहीं है।

2.7 **पारिवारिक उपयोग व्यय** : परिवार के उपभोग व्यय के सर्वेक्षण आरम्भ होने की तारीख से 30 दिन पूर्व की अवधि के दौरान परिवारों से प्राप्त होने वाले सभी व्यय सम्मिलित हैं। इस विषय में गैर-उत्पादक घरेलू उपभोग सम्मिलित नहीं हैं। इस प्रकार इस विषय में परिवार के ठेकेदारी संबंधी कार्यकलाप सम्मिलित नहीं हैं। ऋण, अग्रिम, दान, उपहार तथा अन्य अदायगियों के रूप में हस्तान्तरण होने वाली अदायगियों पर उपभोग व्यय के रूप में विचार नहीं किया गया। परन्तु यदि कोई उधार उपहार, दान, परिवारों द्वारा प्राप्त परिलब्धि, निःशुल्क संग्रहण तथा अन्य उपलब्धियों के रूप में स्थानान्तरित आयोग में से कोई भी उपभोग परिवार के कुल उपभोग ज्ञात करने के लिए विचार-विमर्श किया गया।

2.8 **पारिवारिक उपयोग** : सर्वेक्षण में परिवारों द्वारा जांच आरम्भ होने की तारीख से 30 दिन पूर्व की अवधि के दौरान, उपभोग में लाई गई खाद्य व खाद्यांतर मदों की कीमत व यात्रा संकलित की गई। पशुओं आदि द्वारा उपयोग में लाई गई मात्रा को घरेलू उपयोग के अन्तर्गत सम्मिलित नहीं किया गया था। जबकि व हस्तान्तरित आय में से उपयोग में लाई गई मात्रा इसमें सम्मिलित की गई थी। उपहार अथवा हस्तान्तरित अदायगी के रूप में दी गई इस प्रकार की कोई भी मात्रा को घरेलू उपयोग की मात्रा को प्राप्त करने के लिये इसमें सम्मिलित नहीं किया गया है। इस प्रकार वस्तुओं का कुल उपयोग सामान्यतः आवासीय सदस्य (अस्थायी निवास को छोड़कर) तथा अतिथियों द्वारा किये गये वास्तविक उपयोग से संबंधित है। इसमें संदर्भ अवधि के दौरान परिवारों में होने वाले समारोहों में खाद्य वस्तुओं के उपयोग भी सम्मिलित है।

2.9 **कैलोरी** : यह शक्ति नापने का एक मात्रक है। भोजन पोषक तत्वों को नापने की इकाई कैलोरी शक्ति की परम्परागत कैलोरी का 10000 गुणा है। इस प्रकार कुछ अध्ययनों में पोषक तत्वों के मात्रक को "कि० कैलो०" (अर्थात् किलो कैलोरीज) अथवा केवल कैलो० के रूप में अभिव्यक्त किया गया है। सामान्यतः शक्कर, आलू आदि जैसी खाद्य वस्तुएं मानव शरीर को सशक्त करने के प्रमुख स्रोत हैं। भार, प्रति भार, इन खाद्य वस्तुओं में बहुत अधिक मात्रा में कार्बोहाइड्रेट्स निहित है जो कि शरीर में ग्लूकोज में परिवर्तित होता है। इस प्रकार ग्लूकोज जलन उत्पन्न करता है तथा इसके फलस्वरूप उत्पन्न होने वाली उष्मा शक्ति का स्रोत होती है। इसी प्रकार उपयोग में लाया गया अधिकांश भोजन शरीर में रूपान्तरित होता है तथा कुछ मात्रा में शक्ति उत्पन्न करने के लिए परिवर्तित होता है।

2.10 प्रोटीन : प्रोटीन को मानव भोजन के आधार के रूप में ग्रहण किया जाता है। चूंकि यह जीवित उत्तकों की वृद्धि एवं अखंडता को बनाए रखने के लिये आवश्यक है इसलिये यह भोजन का एक महत्वपूर्ण संघटक है। पाचन क्रिया के दौरान प्रोटीन युक्त भोजन तत्व एमिनो अम्लों में बदल जाते हैं। ये शरीर में संचित नहीं रहते। प्रोटीन की अपेक्षित मात्रा के अभाव में कुपोषण हो जाता है। बच्चों में होने वाली वृद्धि के दौरान, स्त्रियों के मामले में गर्भावस्था तथा दूध पिलाने की विकट दशा में प्रोटीन की आवश्यकता होती है।

यह मुख्य रूप से दालों व गिरियों में, सोयाबीन, दूध, अण्डा, मछली तथा मांस में पाया जाता है। दूध, अण्डा, मछली, मांस आदि से प्राप्त होने वाले पशु जन्य प्रोटीन की शाक प्रोटीन की अपेक्षा अधिक जैविक गुणवत्ता होती है। इसको प्रायः भोजन के खाद्य भाग के लिए ग्राम प्रति 100 ग्राम में अभिव्यक्त किया जाता है।

2.11 बसा : यह शक्ति का एक संकेंद्रित स्रोत है तथा भोजन में एक आवश्यक पौष्टिक तत्व है। यह मुख्य रूप से घी, मक्खन तथा खाद्य तेलों से प्राप्त होती है।

खण्ड तीन

3.1 परिणामों का सारांश : प्रति व्यक्ति प्रतिदिन 2200 कैलोरीज की न्यूनतम आवश्यकता की तुलना में जो प्रति उपभोक्ता इकाई प्रतिदिन 2750 कैलोरीज के समकक्ष है, अखिल भारतीय स्तर पर लोगों के लिये औसत कैलोरी की खपत ग्रामीण क्षेत्रों में कुछ अधिक तथा शहरी क्षेत्र में कम है। यह देखा गया है कि औसत तौर पर हमारे देश में एक व्यक्ति 0.8 उपभोक्ता/इकाई/बराबर है। उक्त पोषाहार सम्बन्धी मापदंड जो खाद्य एवं कृषि संगठन, विश्व स्वास्थ्य संगठन तदर्थ विशेषज्ञ समिति 2 की संयुक्त रिपोर्ट 1973 में दी गई सिफारिशों पर आधारित है वह भारतीय विशेषज्ञों 3 द्वारा की गई सिफारिशों के अनुकूल है।

3.2 राज्यों के ग्रामीण क्षेत्रों में ली जाने वाली कैलोरी का औसत स्तर : राज्य स्तर पर प्रति व्यक्ति प्रतिदिन ग्रहण की जाने वाली कैलोरी की मात्रा पंजाब (3493), हरियाणा (3215), जम्मू कश्मीर (3151), हिमाचल प्रदेश (2954) दिल्ली (2913), राजस्थान (2730), उत्तर प्रदेश (2575), मध्य प्रदेश (2423), मणिपुर (2310), बिहार (2225), कर्नाटक (2202) के ग्रामीण क्षेत्रों में न्यूनतम आवश्यकता की तुलना में अधिक पाई गई। दूसरी ओर वही मात्रा केरल (1559), महाराष्ट्र (1895) पश्चिम बंगाल (1921), तमिलनाडु (1955), गोआ, दमण व दीव (1973), उड़ीसा (1995), असम (2074) मेघालय (2088), तथा आन्ध्र प्रदेश (2103), के ग्रामीण क्षेत्रों में न्यूनतम आवश्यकता से बहुत कम पाई गई। गुजरात (2144), त्रिपुरा (2141) तथा पांडिचेरी (2150), के ग्रामीण क्षेत्रों में भी जाने वाली कैलोरी की मात्रा न्यूनतम आवश्यकता से कुछ कम पाई गई। इस प्रकार भारत के पश्चिमी एवं दक्षिणी राज्यों के अधिकांश ग्रामीण क्षेत्रों में कैलोरी के उपभोग का स्तर न्यूनतम आवश्यकता से काफी कम पाया जो कि 26वें दौर (जुलाई 1971—जून 1972⁴) के परिणाम से स्पष्ट हो गया है।

1. सेन गुप्ता एस० एण्ड जोशी, पी० डी० उपयुक्त खाद्य में अनाज और ऊर्जा घटकों का उपभोग रा० प्र० सर्वे० सं० की पत्रिका सर्वेक्षण खण्ड 52 सं० 1।

3. गोपालन सी० और नरसिंह राव बी० एस० 1977 भारतीयों के लिए आहार भत्ता, मा० वि० अनु० पत्रिका विशेष रिपोर्ट सं० 60।
4. भारत सरकार, राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन, सांख्यिकी विभाग, योजना मंत्रालय (18×1976) प्रति दिन प्रति उपभोक्ता इकाई द्वारा उपयुक्त खाद्य मदों उष्मांक तथा प्रोटीन महत्व रा० प्र० सं० 238, खंड-1।

3.3 राज्यों के शहरी क्षेत्रों में आहार में लिये गये उष्मांक का औसत स्तर : शहरी क्षेत्रों में यह प्रतिमान भिन्न-भिन्न है। राज्य स्तर पर प्रति व्यक्ति प्रतिदिन आहार में लिए गए उष्मांक की खपत हिमाचल प्रदेश (2961), पंजाब (2783), मेघालय (2598), त्रिपुरा (2511), जम्मू व कश्मीर (2467), मणिपुर (2456), हरियाणा (2404), राजस्थान (2357), उड़ीसा (2276) और मध्य प्रदेश (2229), न्यूनतम आवश्यकता से अधिक थी। दूसरी ओर केरल में (1723), तमिलनाडु (1841), कर्नाटक (1925), महाराष्ट्र (1971), पांडिचेरी (1998), पश्चिमी बंगाल (2080) और गोआ, दमण व दीव (2119), में न्यूनतम आवश्यकता से काफी कम थी। आहार में ली गयी कैलोरी, असम (2135), आन्ध्र प्रदेश (2143), दिल्ली (2157), उत्तर प्रदेश (2161), बिहार (2167) और गुजरात (2172), में न्यूनतम आवश्यकता से थोड़ी-सी कम थी।

28वें व 27वें [दौर के लिए उष्णक को खात] को तुलना से पता चलता है कि अधिकांश राज्यों में आहार में ली गयी कैलोरी का स्तर, हिमाचल प्रदेश, हरियाणा, जम्मू व कश्मीर, मेघालय, पंजाब और त्रिपुरा जहां आहार में ली गयी कैलोरी की मात्रा में सुधार हुआ है, को छोड़कर एक वर्ष की अवधि के दौरान, अपरिवर्तित रहा।

3.4 राज्य के ग्रामीण और शहरी क्षेत्रों के बीच आहार में ली गयी कैलोरी के स्तर की तुलना : आहार में ली गयी कैलोरी के संबंध में क्षेत्रीय अन्तरों को भी देखा गया है। कुछ राज्यों अर्थात् आन्ध्र प्रदेश, असम, बिहार, गुजरात, हिमाचल प्रदेश, केरल, महाराष्ट्र, मणिपुर, तमिलनाडु, गोआ, दमण व दीव तथा पांडिचेरी, के ग्रामीण और शहरी क्षेत्रों के बीच आहार में ली गयी कैलोरी के स्तर में कोई विशेष अन्तर नहीं है। जबकि हरियाणा, पंजाब, राजस्थान, जम्मू व कश्मीर, उत्तर प्रदेश, दिल्ली, मध्य प्रदेश और कर्नाटक में शहरी क्षेत्रों में तदनु रूप स्तर पर अपेक्षाकृत अधिक अन्तर था। इसी प्रकार मेघालय, त्रिपुरा, उड़ीसा और पश्चिमी बंगाल, राज्यों के ग्रामीण क्षेत्रों में आहार में ली गयी कैलोरी की मात्रा कम और शहरी क्षेत्रों में अपेक्षाकृत अधिक रिकार्ड की गयी है।

3.5 प्रति व्यक्ति उच्चतर वय स्तर के आधार पर आहार में ली गयी कैलोरी : प्रति व्यक्ति सर्वाधिक व्यय करने वाली श्रेणी के आधार पर आहार में ली गयी कैलोरी कुछ क्षेत्रों में विशेष रूप से अधिक पाई गयी है। ऐसा हो सकता है कि समारोहों के दौरान, अतिथियों को अथवा आने-जाने वालों को भोजन तथा कर्मचारियों को भी कराये गये भोजन की रिपोर्ट सब मिल-जुल कर दी गयी हो और उसे किसी परिवार के घरेलू उपयोग में सूचित किया गया हो। संभवतः इस कारण कुछ स्थानों पर आहार में ली गयी कैलोरी की मात्रा की दर अधिक की गई है, तथापि, शक्ति के लिए आहार में ली गयी कैलोरी की ऊंची दर को ध्यान में रखते हुए इसे संभवतः पुनः स्पष्ट करना अनिवार्य है।

3.6 आहार में लिया गया प्रोटीन : समस्त भारत में प्रति व्यक्ति प्रोटीन का उपभोग ग्रामीण क्षेत्रों में प्रतिदिन 62.7 ग्राम और शहरी क्षेत्रों में प्रतिदिन 56.7 ग्राम अनुमानित किया गया है जो अभिशंसित स्तर से अपेक्षाकृत अधिक है। सारणी एस-1 और एस-2, से स्पष्ट है कि प्रतिदिन प्रति व्यक्ति द्वारा आहार में ली गयी औसत प्रोटीन की मात्रा केरल के ग्रामीण क्षेत्र को छोड़कर क्षेत्रीय और आंचलिक स्तर पर सामान्यतः पर्याप्त है। क्षेत्रीय स्तर के आधार पर विभिन्न राज्यों के ग्रामीण और शहरी क्षेत्रों में प्रोटीन उपयोग का प्रतिमान प्रायः कैलोरी उपभोग के प्रतिमान के अनुरूप है। आहार में ली गयी प्रोटीन की पर्याप्त मात्रा केवल तभी मानी जा सकती है जब आहार में ली गयी कैलोरी की मात्रा पर्याप्त हो।

3.7 आहार में वसा : सारणी (एस-1 और एस-2) में आहार में वसा के सम्बन्ध में तुलना करने से पता चलता है कि आहार में ली गयी वसा का स्तर हरियाणा और जम्मू व कश्मीर के तदनु रूप प्रतिपक्ष ग्रामीण हिस्सों को छोड़कर विभिन्न राज्यों के शहरी क्षेत्रों में अपेक्षाकृत अधिक है। अखिल भारतीय प्रति व्यक्ति औसत वसा उपभोग ग्रामीण क्षेत्रों के लिए प्रतिदिन 24.5 ग्राम और शहरी क्षेत्र के लिये प्रतिदिन 36.7 ग्राम अनुमानित की गयी है। इससे पता चलता है कि वनस्पति तेलों के उपयोग को ध्यान में रखते हुए वसा की आवश्यकता, कम से कम अत्यावश्यक वसायुक्त अम्लों की आवश्यकता मात्रा के सम्बन्ध में औसत रूप में पूरी होती है।

3.8 भोजन पर व्यय का अनुपात : ऐसा देखा गया है कि विभिन्न राज्यों के ग्रामीण क्षेत्रों में कुल व्यय की तुलना में भोजन पर व्यय की प्रतिशतता तदनु रूप शहरी प्रतिपक्षी भागों की अपेक्षा कहीं अधिक है। समस्त भारत के स्तर पर भोजन पर व्यय ग्रामों और शहरों में क्रमशः 72.70% और 64.32% निकाला गया है। भोजन पर व्यय के अनुपात के सम्बन्ध में अन्तर क्षेत्रीय विभिन्नता नहीं है।

3.9 बड़े शहरों में पौष्टिक आहार खाने का स्तर : सारणी (एस-3) से परिलक्षित होता है कि चार बड़े शहरों—बम्बई, कलकत्ता, दिल्ली और मद्रास में प्रति व्यक्ति कैलोरी और प्रोटीन की मात्रा लेने का स्तर विशेष खपत से अधिक नहीं है किन्तु दिल्ली में वसा का प्रति व्यक्ति स्तर सर्वाधिक (55.2 ग्राम प्रति दिन) है। मद्रास से प्रति व्यक्ति, कैलोरी और प्रोटीन लेने की मात्रा अन्य तीन बड़े शहरों बम्बई, कलकत्ता और दिल्ली से अपेक्षाकृत कम है जो अलग-अलग उपयोग सम्बन्धी आदतों के कारण है।

सारणी (एस-1) प्रतिदिन, प्रति व्यक्ति द्वारा ली गयी औसत कैलोरी (के-कैलोरी), प्रोटीन ग्राम और वसा ग्राम प्रति व्यक्ति, मासिक व्यय और विभिन्न राज्यों के ग्रामीण क्षेत्रों के लिए क्षेत्रवार कुल व्यय की तुलना में भोजन पर व्यय की प्रतिशतता रा० प्र० सर्वे० 27 वां दौर (अक्तूबर, 1972, सितम्बर, 1973)।

**केरल, मध्यप्रदेश, राजस्थान और उत्तर प्रदेश
विभिन्न राज्यों के रोजगार तथा बेरोजगारी विषयक दूसरे पंचवर्षीय सर्वेक्षण
(रा० प्र० सर्वे 32वाँ दौर) के कुछ चुने हुए महत्वपूर्ण परिणाम ।**

प्रस्तावना

राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन ने सर्वेक्षण के 32वें दौर (जुलाई 1977—जून—1978) में रोजगार तथा बेरोजगारी विषयक दूसरा पंचवर्षीय सर्वेक्षण आरम्भ किया। 15 से 59 वर्ष की आयु वाली जनसंख्या के इस सर्वेक्षण में संगृहीत आंकड़ों की चुनी हुई मदों के हस्त सारणीयन के माध्यम से प्राप्त रोजगार और बेरोजगारी के दो महत्वपूर्ण संकेतकों के अनंतिम अनुमान समस्त भारत, और विभिन्न राज्यों/संघ शासित क्षेत्रों के लिए राष्ट्रीय प्रतिदर्श सर्वेक्षण संगठन की पत्रिका में प्रकाशित किये गये। समस्त भारत से संबंधित विस्तृत परिणाम और समस्त भारत तथा राज्यों/संघ शासित क्षेत्रों के कुछ महत्वपूर्ण संक्षिप्त परिणामों के साथ सारांश टिप्पणियों को भी प्रकाशित किया गया।

1. विभिन्न राज्यों/संघ शासित क्षेत्रों से संबंधित आंकड़ों में विस्तृत पर सारणीयन आधारित परिणाम रा० प्र० सर्वे० संगठन की मिनियोग्राफ रिपोर्ट की अंकमाला 298/1 298/2 आदि में क्रमिक आधार पर प्रकाशित किये जा रहे हैं, और अब तक 10 राज्यों के परिणाम प्रकाशित किये गये हैं। इस प्रलेख में सर्वेक्षण में संगृहीत जनसंख्या संबंधी आंकड़ों से परिवारिक विशेषताओं और रोजगार तथा बेरोजगारी संबंधी विशेषताओं दोनों से संबंधित सूचना की कुछ आधारभूत मदों के अनुमान दर्शाने वाली 4 सारणियां केरल, मध्य प्रदेश, राजस्थान और उत्तर प्रदेश राज्यों के लिए अलग-अलग प्रस्तुत की गयी हैं।

2. सर्वेक्षण में अपनाये गये प्रतिचयन अभिकल्प, सर्वेक्षण की व्याप्ति, आकलन कार्य विधि और संकलनात्मक संरचना के मुख्य मुख्य अंगों के व्यौरे और आंकड़ा संग्रहण की कार्यविधि इस रिपोर्ट में दी गई जिसमें समस्त भारत के परिणाम संघारित हैं। सर्वेक्षण का विषय-क्षेत्र और व्याप्ति संबंधी संक्षिप्त सार संकल्पनाएँ, परिभाषाएँ आदि नीचे दी गई हैं।

3. **भौगोलिक व्याप्ति** : सर्वेक्षण में सिक्किम, अण्डमान व निकोबार द्वीप समूह, लक्षद्वीप, दादरा व नागर हवेली, जम्मू व काश्मीर का लद्दाख जिला, मध्य प्रदेश के बस्तर जिले की पाल और समरी तहसीलों के ग्रामीण क्षेत्र, महाराष्ट्र के चन्द्रपुर जिले की राजुरा, सिरौंचा और गढ़ चिरोली तहसीलें तथा अमरावती जिले की नीलघाट तहसील के ग्रामीण क्षेत्रों और चंडीगढ़, मिजोरम तथा नागालैंड के ग्रामीण क्षेत्रों को छोड़कर भारत संघ का समस्त क्षेत्रफल सम्मिलित है।

4. **प्रतिचयन अभिकल्प एवं प्रतिदर्श आकार** :—सर्वेक्षण एक स्तरीकृत दो चरण वाला प्रतिचयन अभिकल्प अपनाया गया जिसमें गणना गांवों और शहरी खण्डों (रा० प्र० सर्वे० संगठन द्वारा निर्मित शहरी ढांचा—सर्वेक्षण खंड) को ग्रामीण एवं शहरी क्षेत्रों के लिए प्रथम चरण की इकाई माना गया है और परिवारों को दूसरे चरण की इकाई।

किन्तु उत्तर पूर्वी राज्यों के ग्रामीण क्षेत्रों में ग्राम-समूहों प्रथम चरण की इकाई थे। कुल मिलाकर 8820 गांव और 4940 शहरी खंड प्रथम चरण की इकाई के रूप में चुने गये। चुनी गयी प्रथम चरण की इकाइयों से संबंधी 12 परिवारों को दूसरे चरण की इकाइयों के रूप में चुना गया है। (उत्तर—पूर्वी क्षेत्र के ग्रामीण क्षेत्रों में से 24 परिवार प्रत्येक ग्राम—समूह से चुने गये)।

5. **सर्वेक्षण अवधि और उपदौर तैयार करना** :—यह सर्वेक्षण जुलाई 1977 में आरम्भ हुआ और जून 1978 में पूरा कर लिया गया। सम्पूर्ण सर्वेक्षण की एक वर्ष की अवधि को तीन-तीन महीनों के चार उपदौरों में बांटा गया और प्रत्येक दौर में लगभग चार ऋषि मौसम सम्मिलित किये गये। चारों उपदौरों की अवधियां थी जुलाई से सितम्बर, 1977, अक्टूबर से दिसम्बर 1977, जनवरी से मार्च, 1978 और अप्रैल से जून 1978। प्रतिदर्श गांवों और खंडों को बराबर संख्या वाले चार उपदौरों में बांट दिया गया ताकि प्रत्येक उप-दौर के लिए वैध अनुमान प्रस्तुत किये जा सकें।

6. **आकलन कार्यविधि** : सारणीयन स्तर पर कार्य भार कम करने और क्षेत्रीय स्तर पर अनुमान प्रस्तुत करने के लिए निम्नलिखित आकलन कार्यविधि अपनायी गयी :

$$y = yx \frac{p}{p}$$

जहां

y = किसी उपदौर/सभी उपदौरों के लिए क्षेत्र

की ग्रामीण/शहरी कुल विशेषताओं को अनुमानित करता है।

p = उपदौर सभी उपदौरों के क्षेत्र के ग्रामीण शहरी प्रतिदर्श की कुल विशेषताएं दर्शाता है।

p = जनवरी 1978 के लिए क्षेत्र की प्रक्षेपित ग्रामीण/शहरी जनसंख्या और उप-दौर सभी X_1 उपदौरों में सर्वेक्षित क्षेत्र के प्रतिदर्श ग्रामों/खण्डों में कुल प्रतिदर्श व्यक्तियों की संख्या दर्शाता है।

1. सातवें दशक में भारत में रोजगार—बेरोजगारी की दशा सर्वेक्षण, खण्ड III सं० 3।

2. रोजगार तथा बेरोजगारी विषयक दूसरे पंचवर्षीय सर्वेक्षण की रिपोर्ट (समस्त भारत) सर्वेक्षण खंड—

ग्रामीण और शहरी क्षेत्रों के लिए अलग-अलग अनुमान तैयार किये गये ।

P के मूल्य विशेषज्ञ समिति प्रक्षेपणों पर आधारित अनुमानों (अनन्तिम) को प्रयोग में लाते हुए तैयार किये गये हैं, जिन्हें 1971 की जनगणना के आंकड़ों को ध्यान में रखते हुए अस्थायी रूप में संशोधित किया गया है । (स्रोत :—खाद्य सांख्यिकी संबंधी विवरणिका 25वां अंक (1975) सारणी 1.2 प्रक्षेपणों के इस कुलक (समूह) में दिये गये अनुमानों का सम्बन्ध प्रत्येक वर्ष के प्रथम जुलाई से है । उन्हें 1-1-1978 (32वां दौर में समिश्रित सर्वेक्षण अवधि का मध्य काल) पर केन्द्रित करने के लिए वर्ष 1977 और 1978 के लिए प्रक्षेपित जनसंख्या सम्बन्धी आंकड़ों का काम में लाया गया है ।

इस प्रलेख को तैयार करते समय प्रत्येक राज्य तथा संघ राज्य क्षेत्र के लिए निवास स्थिति (ग्रामीण) (शहरी) तथा स्त्री-पुरुष के अनुसार विभाजन सहित 1981 की जनगणना को जन संख्या सारणियां उपलब्ध हो गई हैं । इन अनन्तिम आंकड़ों तथा 1971 की जनगणना के तदनु रूप जनसंख्या के जोड़ों का प्रयोग करते हुए प्रत्येक राज्य के ग्रामीण तथा शहरी क्षेत्रों में रहने वाले पुरुषों तथा महिलाओं के लिए स्वतन्त्र रूप से अन्तर्वेशन द्वारा 1-1-1978 की स्थिति सूचित करने वाले जनसंख्या के संशोधित अनुमान (दो जनगणना अवधियों के बीच चर छाताकी वृद्धि पर) प्राप्त किये गये हैं यहां प्रस्तुत किये गये अनुमानों को संशोधित अनुमानों के अनुरूप बनाने के लिए प्रत्येक जनसंख्या समूहों के लिए (समायोजन) कारण तथ्य परिकलित किये गये हैं जैसा कि रिपोर्ट में तदनु रूप अनुमान की तुलना में जनसंख्या के संशोधित अनुमान का अनुपात दिया गया है । इन अनुपातों को नीचे दी गई सारणी में दर्शाया गया है । समाहार के संशोधित अनुमान प्राप्त करने के लिए प्रत्येक समाहार अनुमान को तदनु रूप समंजन कारण घटक (अर्थात् इससे सम्बद्ध जनसंख्या समूह) से गुणा करना चाहिए । किसी राज्य/संघ शासित क्षेत्र आवास स्थिति स्त्री-पुरुष समूह के विभाजित वाले अनुपात (दर, प्रतिशतताएं आदि) इस समायोजन से अप्रभावित हैं ।

तथापि एक से अधिक समूह के समाहारकरण वाले अनुपात अथवा तुलनात्मक अंश को संगत समायोजित समाहारों के अलग-अलग जोड़ द्वारा इसे हर और अंश को समाहारों के प्रथम परिकलन के माध्यम से तैयार करना होगा ।

7. संकलनात्मक ढांचे तथा आंकड़ा संग्रहण कार्य विधि के मुख्य अभिलक्षण :—सर्वेक्षण का मुख्य उद्देश्य विसमोहित स्तरों पर रोजगार तथा बेरोजगारी के स्वरूप तथा सीमा विस्तार की माप करना है । इस उद्देश्य के प्राप्ति के लिए तीन अलग-अलग दृष्टिकोण अर्थात् (1) सामान्य स्थिति दृष्टिकोण (2) वर्तमान साप्ताहिक कार्य स्थिति दृष्टिकोण तथा (3) वर्तमान दैनिक कार्य स्थिति दृष्टिकोण का स्वतंत्र रूप से प्रयोग करते हुए विभिन्न कार्यकलाप प्रवर्गों से सम्बन्धित जनसंख्या को वर्गीकृत करने का प्रयास किया गया है :—

विभिन्न कार्यकलाप प्रवर्गों के अनुसार विभाजित किये गये व्यक्तियों को आर्य, स्त्री-पुरुष, सामान्य तथा तकनीकी शिक्षा, उद्योग, व्यवसाय आदि जैसे कुछ सार्यक सह-सम्बन्धों द्वारा आगे और अधिक वर्गीकृत किया गया । इस उद्देश्य से अपनाये गये विभिन्न कार्य-कलाप प्रवर्ग थे जिन्हें नीचे दर्शाया गया है ।

कार्यकलाप प्रवर्ग का विवरण

	प्रवर्ग संकेत
नियोला के अधीन नादयता के अनुसार कार्य करना किन्तु कार्य के लिए कोई विशेष रूप से मजदूरी/वेतन के रूप में परिश्रमिक न देना	01--4
पारिवारिक उद्योगों में (स्वनियोजित) कार्य किया	11
पारिवारिक उद्यमों में सहायक के रूप में कार्य किया	21
नियमित वेतन भोगी/मजदूर के रूप में कार्य किया	31
सार्वजनिक निर्माण कार्यों में आकस्मिक मजदूर के रूप में कार्य किया	41
अन्य प्रकार के कार्यों या निर्माण कार्य में आकस्मिक मजदूर के रूप में कार्य किया	51
कार्य नहीं किया गया यद्यपि पारिवारिक उद्यमों में कार्य उपलब्ध था	61
कार्य नहीं किया किन्तु नियमित वेतन/मजदूरी पर रोजगारत थी	71
काम की तलाश में था	81
कार्य के लिए उपलब्ध था किन्तु कार्य नहीं ढूँढ सका	82
शैक्षिक संस्थाओं में पढ़ता रहा	91
केवल घरेलू कार्य किया	92
घरेलू कार्य तथा वस्तुओं का मुफ्त संकलन (साग-सब्जीकंद—मूल, जलाने की लकड़ी, पशुचारा आदि) सिलाई दर्जी-गीरी, बुनाई आदि या पारिवारिक उपयोग के कार्यों में भी लगा हुआ था	93

	प्रवर्ग संकेत
इतना छोटा था कि कार्य नहीं कर सकता/स्कूल नहीं जा सकता था / कार्य नहीं ढूँढ सकता था	
वृद्ध एवं विकलांग	94
किराये पर जीने वाला, पेंशन भोगी, भेजे हुए धन प्राप्त करनेवाले आदि	95
भिखारी, वेश्यायें आदि	96
अन्य	97
अस्थायी बीमारी के कारण कार्य नहीं किया (केवल आकस्मिक मजदूरों के लिए)	98
	99

कार्य-कलाप प्रवर्ग संकेत 61, 71 और 99 केवल वर्तमान कार्य स्थिति दृष्टिकोण के लिए प्रयोग किया गया है।

प्रवर्ग संकेत 01 से 71 के अन्तर्गत सूचीबद्ध किसी एक कार्यकलाप के लिए लगाये गये व्यक्तियों को कार्यरत (या नियोजित) माना गया है। प्रवर्ग संकेत 81 या 82 के कार्यकलाप के लिए लगाये गये व्यक्तियों को कार्य ढूँढ रहे और कार्यकलाप प्रवर्ग संकेत 61, 71 और 99 केवल वर्तमान कार्यस्थिति दृष्टिकोण के लिये प्रयोग किया गया है या कार्य के लिए उपलब्ध (या बेरोजगार) माना गया है।

शेष व्यक्ति अर्थात् प्रवर्ग संकेत 91 से 99 में से किसी एक कार्यकलाप के लिए लगाये व्यक्ति को "कार्य के लिए उपलब्ध नहीं" (अथवा श्रमिक बल में नहीं) माना गया है। तथापि व्यक्तियों के कार्यकलाप संबंधी व्यौरों के आंकड़ों 5 वर्ष और उससे अधिक आयु की जनसंख्या के लिए सारणीबद्ध किये गये हैं।

8. सामान्य कार्यस्थिति दृष्टिकोण के अनुसार वर्गीकरण :—सामान्य दशा के अनुसार विभिन्न कार्यकलाप प्रवर्गों में जनसंख्या के वर्गीकरण हेतु व्यक्तियों को सर्वेक्षण की तारीख से पूर्व 365 दिनों की अवधि के संदर्भ में "अधिकांश व्यतीत समय के मानदण्ड के आधार पर" कार्यरत, 1 कार्य ढूँढ रहे और/या कार्य के लिए उपलब्ध, तथा कार्य के लिए उपलब्ध नहीं हैं, नामक तीन महत्वपूर्ण कार्य-कलाप स्थिति समूहों में वर्गीकृत किया गया है। तदनुसार—किसी व्यक्ति को "कार्यरत" के रूप में प्रवर्गीकृत किया गया है, यदि उसमें एक या एक से अधिक लाभकारी कार्यकलाप में संदर्भ अवधि के दौरान लम्बे समय तक कार्यरत रहने की सूचना दी है। (प्रवर्ग संकेत 01—51), कार्य ढूँढ रहे और या कार्य के लिए उपलब्ध" यदि उसने संदर्भ अवधि के दौरान लम्बे समय से कार्य ढूँढ रहे या कार्य के लिए उपलब्ध" होने की सूचना दी है, संकेत प्रवर्ग 81 या 82 और "कार्य के लिए उपलब्ध नहीं" यदि उस ने संदर्भ अवधि की संबंधित लम्बी अवधि के दौरान कार्य के लिए उपलब्ध न होने की सूचना दी हो। प्रवर्ग के इन तीनों विस्तृत समूहों में से प्रत्येक समूह में विस्तृत कार्यकलाप स्थिति संबंधी प्रवर्गों का "अधिकांश व्यतीत समय मानदण्ड" का पुनः प्रयोग करके निर्धारित किया है।

9. वर्तमान साप्ताहिक कार्यस्थिति दृष्टिकोण के अनुसार वर्गीकरण :—वर्तमान साप्ताहिक कार्य स्थिति के अनुसार किसी व्यक्ति के वर्गीकरण के लिए उस स्त्री या पुरुष को सर्वेक्षण की तारीख से सात दिन पूर्व की अवधि में एक खास किस्म का कार्य सौंपा जाना आवश्यक है। कोई व्यक्ति जो सप्ताह के दौरान एक से अधिक कार्यकलाप में अपने आप को लगाता है उसके कार्य विशेष का निर्धारण प्राथमिकता एवं अधिकांश समय नियम को अपना कर किया गया है। प्राथमिकता नियम के अधीन "कार्यरत व्यक्ति" की स्थिति "कार्यरत नहीं किन्तु कार्य ढूँढ रहा है। कार्य के लिए उपलब्ध है" ऐसे व्यक्ति से कहीं अच्छी है और आगे यह स्थिति "कार्यरत नहीं और कार्य नहीं ढूँढ रहा है। कार्य के लिए उपलब्ध नहीं है" ऐसे व्यक्ति से अच्छी है। प्रथम अथवा अंतिम प्रवर्ग के अधीन वर्गीकृत व्यक्ति के बारे में उसकी (चाहे वह स्त्री है या पुरुष) विस्तृत कार्यकलाप स्थिति का निर्धारण अधिकांश समय लगाया गया, मापदंड द्वारा किया गया है अर्थात् वह विस्तृत कार्यकलाप जिसमें उसका अधिकांश समय व्यतीत हुआ है, यही उसका (उस स्त्री या पुरुष) वर्तमान साप्ताहिक कार्यस्थिति है। इसके अतिरिक्त यदि किसी व्यक्ति से सप्ताह के किसी एक दिन भी कार्य किया है तो ऐसे 'कार्यरत' माना गया है। एक व्यक्ति जिसने सप्ताह के दौरान कोई काम नहीं किया किन्तु कार्य के लिए एक घंटे अथवा एक दिन भी उपलब्ध था उसे "कार्य ढूँढता और अथवा कार्य के लिए उपलब्ध" माना गया है। अन्य व्यक्तियों को "कार्य के लिए उपलब्ध नहीं (अथवा श्रमिक बल में नहीं)" प्रवर्ग में रखा गया है। इस प्रकार प्रत्येक व्यक्ति को सप्ताह के लिए किसी खास कार्यकलाप स्थिति में लगाया गया है। विभिन्न कार्यकलाप स्थिति के अधीन व्यक्तियों के समूह (समाहार) से एक वर्ष की सर्वेक्षण अवधि के एक सप्ताह में औसत रूप से कार्यकलाप के अनुसार व्यक्तियों को विभाजित किया गया है।

10. वर्तमान दैनिक कार्य स्थिति संबंधी दृष्टिकोण के अनुसार वर्गीकरण :—वर्तमान दैनिक कार्यस्थिति संबंधी दृष्टिकोण अपनाने में, संदर्भ सप्ताह के सात दिनों में से प्रत्येक दिन दो महत्वपूर्ण कार्यकलाप करने वाले किसी व्यक्ति के प्रत्येक कार्यकलाप के लिए छूट देने का प्रयास किया गया जिसमें प्रत्येक कार्य कलाप के लिए आधा दिन नियत किया गया है। इस प्रकार इस दृष्टिकोण के अनुसार वर्गीकरण की इकाई आधा दिन मानी गयी है यद्यपि संदर्भ सप्ताह के सभी सात दिनों के लिए आंकड़े संगृहीत किये गये हैं। किसी भी दिन कोई कार्यकलाप स्थिति सौंपते समय किसी व्यक्ति को 'कार्यरत' (नियोजित) पूरे दिन समझा गया है यदि उस पुरुष या स्त्री ने उस 4 घंटे का अधिक काम किया और उसे एक या दो (जैसा भी मामला हो) कार्यकलाप (01—71) सौंपा

गया जिसमें उस व्यक्ति ने अपना समय लगाया। किन्तु, यदि वह कार्य एक घंटा या एक से अधिक घंटे परन्तु चार घंटों से कम किया है तो उन्हें आधे दिन के लिए 'कार्यरत' (या नियोजित) माना गया है और बाकी आधे दिन के लिए 'कार्य ढूँढ रहे/कार्य के लिए उपलब्ध (बेरोजगार)' अथवा 'कार्य के लिए उपलब्ध नहीं है' (अथवा श्रमिक बल में नहीं)। इस बात पर निर्भर करता है कि क्या वह उसी दिन कार्य ढूँढ रही/रही है/ कार्य के लिए उपलब्ध है।

दूसरी ओर यदि कोई व्यक्ति उस दिन में एक घंटे के लिए भी किसी लाभदायक कार्य में कार्यरत नहीं है, किन्तु चार या चार से अधिक घंटों के लिए कार्य ढूँढ रहा है या कार्य के लिए उपलब्ध है, उसे पूरे दिन के लिए बेरोजगार माना गया है। किन्तु यदि काम के लिए केवल चार घंटों से कम उपलब्ध होने की सूचना दी गयी है तो उसे आधे दिन के लिए 'बेरोजगार' माना गया है और दिन के दूसरे आधे दिन के लिए श्रमिक बल में नहीं माना गया है। यदि कोई व्यक्ति जो न तो किसी लाभकारी कार्य में लगा है और न ही काम के लिए आधे दिन के लिए भी उपलब्ध है, उसे पूरे दिन के लिए 'कार्य के लिए उपलब्ध नहीं' (अथवा श्रमिक बल में नहीं) माना गया है और एक या दो अलाभकारी कार्यकलाप स्थिति के अंतर्गत रखा गया है जिसे वह दिन के दौरान करता/करती है। सप्ताह के सभी सात दिनों के लिए विभिन्न कार्यकलाप प्रवर्गों के अंतर्गत इस प्रकार वर्गीकृत सभी श्रमदिवसों को सात से भाग देकर, एक वर्ष की सर्वेक्षण अवधि के एक दिन का, कार्यकलाप प्रवर्ग के औसत से व्यक्तियों का विभाजन (जिसे दृढ़तापूर्वक श्रम दिवस कहा जा सकता है) दर्शाया गया है।

11. जांच पड़ताल संबंधी प्रश्न :—कार्य प्रतिमान के जटिल आयाम (विस्तार) को समझने के लिए 'बेरोजगारों', छात्रों, घरेलू कार्यों में लगे हुए व्यक्तियों के रूप में वर्गीकृत लोगों के लिए सामान्य कार्यस्थिति, अपेक्षित कार्य के प्रकार, कार्य पाने के लिए किये गये प्रयास के अनुसार 'नियोजित' के रूप में वर्गीकृत व्यक्तियों के बीच अतिरिक्त कार्य आदि के लिए प्रतिवेदित अधिमान्यताओं की प्रकृति तथा अल्प उपयोग की सीमा के बारे में अपेक्षित जानकारी प्राप्त करने के लिए उपर्युक्त प्रवर्ग के व्यक्तियों से कुछ जांच पड़ताल संबंधी प्रश्न किये गये। इन जांच पड़ताल संबंधी प्रश्नों के अतिरिक्त इस दौर में जांच पड़ताल संबंधी प्रश्नावली का एक दूसरा सेट एक मात्र उन व्यक्तियों के लिए तैयार किया गया है जो घरेलू कार्यों में लगे हुए व्यक्तियों के रूप में सामान्य कार्य स्थिति के अनुसार वर्गीकृत किये गये हैं जिसका उद्देश्य इन कारणों के बारे में जानकारी प्राप्त करना है जिससे ये घरेलू नीरस कार्यों से संलग्न हैं भले ही वे कार्य के लिए उपलब्ध हों यदि उस कार्य की व्यवस्था उनके घरों पर की जाती है।

12. कार्यकलाप प्रवर्ग 93 :—यह ज्ञात है कि घरेलू कार्यों में लगी हुई स्त्रियों विशेष रूप से ग्रामीण स्त्रियों का कुल कार्यकारी समय का एक अंश ऐसे कार्यों में व्यतीत होता है जो पारिवारिक आवश्यकताओं को पूरा करने के लिए अपेक्षित है। इस कार्यकलाप को लाभकारी माना जाता है यदि उनके द्वारा उत्पादित माल या सेवाएं विक्रय के लिए प्रयुक्त होती हैं। सामान्यतः इस बात का अनुभव किया गया है कि व्यक्तियों, अधिकांश रूप से स्त्रियों के पारिवारिक कार्यकलाप में सहभागिता के इस पहलू से संबंधित जानकारी, जिसे सामान्य कार्य स्थिति के अनुसार "घरेलू कार्यों में लगे हुए" के रूप में वर्गीकृत किया गया है उसे राष्ट्रीय प्रतिदर्श सर्वेक्षणों से प्राप्त नहीं किया जा सका है। इसलिए सर्वेक्षण के 32वें दौर में उन व्यक्तियों को जो प्रधानता घरेलू कार्यों में लगे हुए हैं, दो भागों में उपविभाजित करने का प्रयास किया गया है अर्थात् (1) एक मात्र घरेलू कार्यों में लगे हुए स्वतंत्र रूप से मछली पकड़ने और छोटे मोटे शिकार जैसे कार्यकलाप के साथ साथ घरेलू कार्यों में लगे हुए जैसा कि पहले सूचीबद्ध किया गया है। घरेलू कार्यों में लगे हुए व्यक्तियों के बारे में इस नवीन कार्यकलाप प्रवर्ग को अपनाने का उद्देश्य केवल घरेलू कार्य करने वाले व्यक्तियों की तुलना में उन व्यक्तियों को अलग से पहचानना है जो अपने घरेलू कार्यों के साथ साथ उपर्युक्त कार्य भी करते हैं।

प्रस्तुत की गई सारणियों का विवरण :—इस बात का पहले ही उल्लेख किया गया है कि 12 राज्यों के लिए जनसंख्या की पारिवारिक विशेषताओं और कार्यकलाप संबंधी विशेषताओं से संबंधित सूचना की कुछ मूलभूत मदों के अनुमान यहां दर्शाये गये हैं। संबंधित परिणाम दस अलग अलग सारणियों में दर्शाये गये हैं। इन सारणियों का एक संक्षिप्त विवरण नीचे दिया जा रहा है।

सारणी (1) :—इस सारणी में, पारिवारिक आकार प्रकार के अनुसार ग्रामीण और शहरी परिवारों का विभाजन और परिवार के प्रति व्यक्ति का मासिक व्यय दर्शाया गया है। ग्रामीण क्षेत्रों में सर्वेक्षण के पारिवारिक को पांच विभिन्न प्रवर्गों के अंतर्गत वर्गीकृत किया गया है। ये प्रवर्ग निम्नलिखित हैं :—

- (क) कृषि व्यवसायों में स्वनियोजित परिवार।
- (ख) गैर खेतिहर व्यवसाय में स्वनियोजित परिवार।
- (ग) कृषि मजदूरों के परिवार।
- (घ) गैर खेतिहर मजदूरों के परिवार।
- (ङ) अन्य परिवार।

शहरी क्षेत्रों के लिए केवल दो अलग अलग प्रकार के परिवारों पर विचार किया गया है। जो निम्नलिखित हैं।

(क) स्वनियोजित परिवार।

(ख) अन्य परिवार।

सारणी (2) :— परिवार के प्रतिव्यक्ति प्रतिमास व्यय तथा प्रमुख पारिवारिक उद्योग के अनुसार ग्रामीण तथा शहरी परिवारों का विभाजन सारणी (2) में दर्शाया गया है इसमें पारिवारिक उद्योग को एक साधन माना गया है जिससे सर्वेक्षण की तारीख से आरम्भ करके 365 दिनों के दौरान परिवार को प्रमुख आमदनी हुई है। यहां केवल नौ बृहद् औद्योगिक प्रवर्गों पर विचार किया गया है। ये प्रवर्ग हैं : कृषि, खनन तथा उत्खनन, विनिर्माणकारी कार्य, विद्युत, गैस एवं जल, निर्माण कार्य, व्यापार, परिवहन, सेवायें तथा अन्य।

सारणी (3) :—परिवार के प्रति व्यक्ति मासिक व्यय के अनुसार ग्रामीण तथा शहरी परिवारों का विभाजन तथा कुल व्यक्तियों की तुलना में आर्थिक दृष्टि से सक्रियाशील व्यक्तियों का अनुपात सारणी (3) में दर्शाया गया है। रोजगार प्राप्त तथा बेरोजगारों को मिलाकर आर्थिक दृष्टि से क्रियाशील व्यक्तियों की जनसंख्या का अनुमान लगाया गया है।

सारणी (4) :—सारणी 4 में (i) परिवारों की कुल संख्या (ii) कुल व्यक्ति (iii) कुल आर्थिक दृष्टि से क्रियाशील व्यक्ति (iv) परिवार का औसत आकार, और (v) प्रत्येक परिवार के प्रति व्यक्ति मासिक व्यय श्रेणी के प्रति परिवार के आर्थिक दृष्टि से क्रियाशील व्यक्तियों की औसत संख्या के अनुमान दर्शाये गये हैं। 'व्यक्तियों' तथा 'आर्थिक दृष्टि से क्रियाशील व्यक्तियों' के अनुमान स्त्रियों और पुरुषों के लिए अलग अलग दर्शाये गये हैं।

सारणी (5) :—सारणी (5) में आयु समूह के अनुसार पांच वर्ष की आयु वाले और उनसे अधिक आयु समूह के स्त्री और पुरुषों का विभाजन और सामान्य कार्यकलाप स्थिति को दर्शाया गया है। इस सारणी में जनसंख्या को 5-14, 15-29, 30-44, 45-59 और 60 तथा इससे अधिक पांच आयु समूहों में विभाजित करके दर्शाया गया है। सामान्य कार्यकलाप स्थिति प्रवर्गों को केवल सारणी के स्तम्भ (1) और (2) में दर्शाया गया है। यह पहले ही कहा जा चुका है कि किसी व्यक्ति की सामान्य कार्य स्थिति का निर्धारण 'अधिकांश समय' अथवा सर्वेक्षण की तारीख से आरम्भ करके 365 दिनों की संदर्भ अवधि सहित बनाये गये मापदंड 'संबंधित दीर्घकाल' के आधार पर किया गया है। इस बात का भी ध्यान रखा जाए कि इस माप दंड के अनुसार कुछ व्यक्ति जो, 'बेरोजगार' प्रवर्ग में रखे गये थे, अभी भी 365 दिनों की संदर्भावधि के दौरान किसी लाभकारी कार्यकलाप में नियोजित हैं। इस प्रकार का अनुसरण लाभकारी कार्यकलाप की गौण क्षमता पर ध्यान नहीं दिया गया ताकि सारणी (5) में दर्शाये गये विभाजन को स्पष्ट किया जा सके।

सारणी (6) :—इस सारणी में सामान्य कार्यकलाप स्थिति के अनुसार 5 वर्ष और अधिक आयु के स्त्री और पुरुषों का विभाजन दर्शाया गया है जिसमें अधिकांश व्यतीत किये गये समय मापदंड के अनुसार संदर्भावधि के दौरान 'बेरोजगार' के रूप में प्रवर्गीकृत व्यक्तियों की गौण लाभकारी स्थिति पर भी विचार किया जा रहा है। विभाजनों के आयु समूह तथा कार्यकलाप स्थिति के अनुसार दोहरे रूप से वर्गीकृत करके दर्शाया गया है।

सारणी (7) :—सारणी (7) में 5 वर्ष और उससे अधिक उम्र के पुरुषों और स्त्रियों का वर्गीकरण प्रस्तुत किया गया है जिन्हें औद्योगिक वर्गीकरण के दो अंक प्रमुख समूह द्वारा "सामान्य कार्य स्थिति" वर्गीकरण के अनुसार 'कार्यरत' प्रवर्गित किया गया है। ग्रामीण तथा शहरी दोनों क्षेत्रों के लिए अनुमान उसी सारणी में प्रस्तुत किये गये हैं।

सारणी (8) :—(ग्रामीण व शहरी) 5 वर्ष और उससे अधिक आयु वाले स्त्रियों और पुरुषों का विभाजन जिन्हें विशिष्ट समूहों के व्यवसाय के अनुसार सामान्यतः कार्यरत प्रवर्गित किया गया है उन्हें ग्रामीण क्षेत्रों के लिए सारणी-8 ग्रामीण, और शहरी क्षेत्रों के लिए सारणी 8 शहरी में दर्शाया गया है। इस बात पर ध्यान दिया जाए कि यहां पर दर्शाये गये व्यवसाय समूह ग्रामीण और शहरी क्षेत्रों के लिए अलग अलग हैं क्योंकि ग्रामीण क्षेत्रों में व्यवसाय प्रतिमान शहरी क्षेत्रों के व्यवसाय प्रतिमान से भिन्न हैं। 5 वर्ष और उससे अधिक की आयु वाले पुरुषों और स्त्रियों का विभाजन उनके वर्तमान साप्ताहिक कार्यकलाप तथा आयु वर्ग के आयु समूह के अनुसार सारणी 9 में प्रस्तुत किया गया है। दिये गये अनुमान सर्वेक्षण की तारीख से 365 दिनों की संदर्भावधि की तुलना में व्यक्तियों के बारे में औसत साप्ताहिक कार्य स्थिति का प्रतिनिधित्व करते हैं।

सारणी (10) :—इस सारणी में सर्वेक्षण की तारीख से पूर्व 365 दिनों की संदर्भावधि की तुलना में औसत रूप से उक्त व्यक्तियों के लिए कार्यकलाप स्थिति दर्शायी गई है। ये अनुमान विभिन्न आयु समूहों के अनुसार दोहरे रूप से वर्गीकृत सर्वेक्षण की तारीख से पूर्व 365 दिनों की संदर्भावधि की तुलना में औसत दिवस से संबंधित विभिन्न कार्यकलाप में लगे हुए 5 वर्ष और उससे अधिक आयु वाले व्यक्तियों के कार्य दिवसों की संख्या का प्रतिनिधित्व करते हैं। ये अनुमान पुरुषों और महिलाओं के लिए अलग अलग प्रस्तुत किये गये हैं।
